ACTIVITY: ENFORCEMENT

	rem.		
Domestic Enforcement	Pos.	FTE	Amount
2000 Appropriation Enacted	2,194	2,134	\$ 376,984
2001 Base	2,194	2,154	397,561
2001 Estimate	_2,218	2.166	400,906
Increase/Decrease	24	12	\$ 3.345

<u>LONG RANGE GOAL</u>: Through effective enforcement efforts, DEA will disrupt/dismantle the leadership, command, controt, and infrastructure of major drug syndicates, criminal organizations, and violent drug trafficking groups that threaten Americans and American interests.

BASE PROGRAM DESCRIPTION: The Domestic Enforcement Program includes the investigative operations of DEA's 21 field divisions, the operational coordination functions located at DEA Headquarters, DEA's Special Enforcement Programs, Title III intercept operations, the Domestic Cannable Bradication/Suppression Program, and the Special Operations Division (SOD). Specifically, the Domestic Enforcement Program employs the majority of the Special Agent work force and is responsible for conducting investigations of drug production and trafficking activities within the U.S. Domestic enforcement personnel use a variety of investigative tools including electronic surveillance, informants, and undercover operations to acquire intelligence information that aids in dismantling, prosecuting, and eliminating drug production and trafficking organizations. SOD's capability to genérate pertinent and valuable intelligence, combined with its information sharing mechanisms, enables DEA to increase its understanding and knowledge of drug trafficking activities in this country.

2001 Estimate	1.678	1.685	_241.257
Increase/Decrease	<u>_</u>		\$ 0

LONG RANGE GOAL: Ensure a maximum contribution to state and local law enforcement agencies and foster intergovernmental cooperation in order to reduce drug availability and immobilize major trafficking organizations at all levels.

BASE PROGRAM DESCRIPTION: The State and Local Task Force Program enlists the resources and support of state and local law enforcement agencies in federal drug enforcement efforts through the following actions:

- Improves the quality of drug investigations and prosecutions and provides a diverse, creative, and all-encompassing federal
 response to the multi-faceted and complex drug problem;
- Increases the work force under DEA's supervision by utilizing state and local officers and providing them with special
 equipment and conveyances when needed for use in DEA operations; and
- Expands DEA's intelligence databases.

Additionally, funds the Mobile Enforcement Team (MET) program organized within the State and Local Task Force Program. The MET program was established to assist state and local law enforcement by providing an immediate infusion of Special Agents and resources to penetrate and eliminate violent gangs and local trafficking organizations. This program places DEA in a supportive role in Investigations that are targeted by state and local agencies based on their own local priorities. The mission of the METs is to assist in the elimination of drug organizations by securing the conviction and incarceration of those individuals dealing drugs and causing violence in these communities.

LONG RANGE GOAL: Work to enhance coordination with host nation counterparts and increase collection of foreign-source drug intelligence.

BASE PROGRAM DESCRIPTION: DEA's overseas efforts are directed toward advising, assisting, and encouraging foreign governments to reduce the trade and supply of illicit drugs within their countries. DEA also works with foreign governments on the Investigation of high-level international trafficking organizations which have a direct impact on the U.S. In pursuing these aims, DEA coordinates drug intelligence collection and drug investigations with foreign law enforcement agencies, and participates in bilateral and multilateral drug suppression programs.

LONG RANGE GOAL: To prevent legitimately manufactured controlled substances and chemicals from being diverted from their lawful purpose to illicit drug trafficking and drug production activities.

BASE PROGRAM DESCRIPTION: DEA is responsible for enforcing the Chemical Diversion and Trafficking Act of 1988, Article 12 of the United Nations Convention Against Hilcit Drug Traffic of 1988, the Methamphetamine Control Act of 1996, and the Anabolic Steroid Control Act of 1991, which mandates commodity control for those chemicals identified as most often used in the manufacture and synthesis of abusive drugs and the Methamphetamine Control Act of 1996 that places additional controls on precursor chemicals related to methamphetamine production

Under this mandate, DEA utilizes Diversion Investigators, Special Agents, Chemists, Pharmacologists, Program Analysts, and others to monitor legal and lilegal movement of controlled drugs and chemicals across U.S. borders. Activities under the Diversion Control Program include: 1) analyzing past data from diversion control activities to help develop work plans and priority objectives for current operations; 2) oversight of all drug and chemical diversion control activities to ensure they are responsive to, and/or consistent with the drug and chemical diversion control mission of DEA; 3) supporting the U.S.'s drug enforcement position at national and international forums that address the control of legitimate drugs and at diplomatic events that address drug and chemical diversion control issues, and 4) formulating legislation and regulations that curtail the diversion of controlled substances and listed chemicals from legitimate channels.

ACTIVITY: INVESTIGATIVE SUPPORT

LONG RANGE GOAL: By effectively developing and exploiting investigative intelligence, DEA with support the Intelligence needs of U.S. law enforcement managers and policy makers and identify the major drug threats, and define the criminal activities of drug organizations and gangs that threaten Americans.

BASE PROGRAM DESCRIPTION: DEA's Intelligence program is comprised of several components that are responsible for collecting, analyzing, and disseminating drug-related intelligence worldwide. Intelligence information obtained through this program is essential to DEA operations and facilitates seizures and arrests, strengthens investigations and prosecutions of major drug trafficking organizations, and provides policy makers with drug trend information upon which tactical and strategic decisions are based. DEA's intelligence units are located in all domestic field divisions and in the major drug cultivation, production, and transit countries around the world.

This program also funds the El Paso Intelligence Center (EPIC), a multi-agency facility that serves as a clearinghouse for tactical intelligence and a central point for the collection, analysis, and dissemination of information related to worldwide drug movement and alien smuggling. EPIC provides support for drug law enforcement interdiction operations and is accessible 24 hours a day, 7 days a week

LONG RANGE GOAL: Provide drug law enforcement support through the timely analysis of drug evidence and the presentation of expert forensic testimony in courts of law. DEA's labs will also provide assistance to investigators on clandestine laboratory investigations, diversion investigations (drugs and chemicals), as well as to intettigence analysts who conduct analyses to determine the origin of controlled substances and drug distribution patterns.

BASE PROGRAM DESCRIPTION: This program provides laboratory services for Enforcement, Intelligence, and Diversion Control activities within DEA. The following provides a synopsis of the supporting efforts provided to each activity:

- Enforcement activities are supported through the timely analysis of drug evidence and the presentation of expert forensic
 testimony in court. This program provides field assistance to Special Agents on clandestine laboratory investigations and
 conducts crime scene searches for trace drug evidence. Additionally, lab services perform toolmark and signature analyses
 on evidence tinked to suspected conspiracy cases.
- Intelligence activities are supported through laboratory analyses that show the origin of controlled substances and highlights
 of foreign drug distribution patterns. Intelligence programs are also aided through signature analyses applied to the Domestic
 Monitor Program, which assists in tracking domestic drug distribution patterns, price/purity at the retail level and identifying the
 geographic source areas of the heroin.

Diversion Control activities are provided information on illegal drug distribution through the examination of tablets, capsules
and papers.

In addition to lab services, this program provides forensic drug laboratory support to the Interagency Crime and Drug Enforcement Program, the Washington, DC Metropolitan Police Department, and to the Federal Bureau of Investigation, which has concurrent jurisdiction in enforcement of federal drug laws. This program also provides support to other federal, state and local law enforcement agencies that do not have their own forensic drug examination capability, or require the special expertise of DEA forensic scientists.

LONG RANGE GOAL: To establish, maintain, and enhance the mission-related skills of DEA personnel to improve and/or sharpen the knowledge, skills and abilities necessary to fulfill the various work responsibilities.

<u>BASE PROGRAM DESCRIPTION</u>: The objective of DEA's Training Program is to provide employees and law enforcement counterparts with the skills and knowledge necessary to support DEA's anti-drug efforts. DEA has aggressively developed a comprehensive training program that reflects the diversity and sophistication of the agency's complex mission.

The following examples describe the specialized training courses offered to DEA employees:

Basic and Field Agent Training: Basic training provides instruction to Special Agents on all facets of drug law enforcement operations including the hazards of undercover work, financial manipulations associated with money laundering, and the tegal intricacles inherent in conspiracy law. Field training provides on-the-job training to new Special Agents by pairing them with senior agents for a 26 week period.

Clandestine Laboratory Training: Instruction is provided to DEA personnel on techniques for safety setzing and dismantling clandestine laboratories; and

International and State and Local Training: Drug law enforcement instruction is provided to foreign counterparts and state and local law enforcement officers.

In addition to these specialized courses, DEA also provides ongoing training to employees on a variety of topics including basic orientation, in-service training, and supervisory and management training.

LONG RANGE GOAL: To provide efficient and effective information technology resources and telecommunications support that maximizes the ability of the agency to accomplish its mission.

BASE PROGRAM DESCRIPTION: The Automated Data Processing (ADP) Program is responsible for providing information technology services and lelecommunications support to DEA operations worldwide. This includes the oversight of DEA's Data Base Management System (DBMS) and systems applications which manage the vital information that supports DEA intelligence and enforcement operations. These systems include but are not limited to: FIREBIRD; Narcotics and Dangerous Drugs Information System (NADDIS); Controlled Substances Act System (CSA); System to Retrieve information from Drug Evidence (STRIDE); Automation of Reports and Consolidated Orders Systems (ARCOS I and II); and DEA's accounting system Federal Financial System

(FFS). Much of the information maintained in these systems requires secure communication system capabilities (secure voice, facsimile, and teletypewriter capabilities) worldwide, and therefore, is managed by the ADP Program.

LONG RANGE GOAL: To develop, maintain, and provide effective and efficient management, executive direction and control, and administrative support functions to ensure maximum achievement of DEA's mission.

BASE PROGRAM DESCRIPTION: The Management and Administration functions within DEA are responsible for formulating agency-wide policy, providing oversight to all field management functions, monitoring internal controls, and ensuring effective and efficient resource utilization.

The programs and operations included under Management and Administration are as follows:

Staff Operations: The Staff Operations Program is responsible for responding to Congressional, media, and public inquiries; providing DEA officials with reports on Congressional activities; Issuing press releases; preparing speeches, talking points, and Congressional demand reduction testimony. Additionally, this program also prepares legal briefs, opinions, and presentations; provides technical legal training in regulatory and criminal matters, civil litigation, seizures, forfeiture of assets, personnel, equal employment opportunity, procurement, and international matters; and advises management on matters pertaining to planning, policy analysis, and statistical systems;

Financial Management: Under the direction of the Chief Financial Officer, the financial management offices within DEA are responsible for planning, formulating, and executing DEA's budget; developing and maintaining resource allocation plans; and managing and maintaining DEA's accounting system;

Inspections: The Inspections Program is responsible for management and oversight of all matters pertaining to integrity and misconduct;

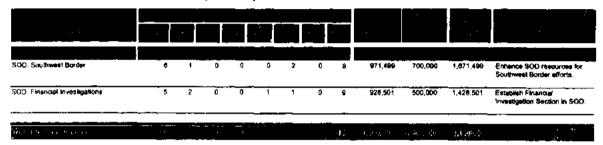

Security: The Security Program is responsible for worldwide management and oversight of DEA's personnel, physical, and information security programs:

Personnel Operations and Equal Employment Opportunity (EEO): The Personnel Operations Program is responsible for agency wide position management; employee relations, employee benefits; recruitment and placement; health and safety; and implementation of personnel policies and regulations. The EEO Program is responsible for ensuring the equitable treatment of all DEA employees. Specifically, the EEO Program provides advice and guidance to managers and employees on a variety of EEO matters including, workforce diversity, discrimination in the workplace, affirmative action, and special emphasis programs; and

General Services: The General Services Program is responsible for oversight of all DEA administrative support functions including: space management; permanent change of station orders; relocation benefits; procurement of supplies, equipment, and furniture, and fleet management.

71.1.1

FY 2001 Congressional Budget Estimate Special Operations Division Initiative

SPECIAL OPERATIONS DIVISION INITIATIVE

Decision Unit	Pos.	FTE	Amount (\$000)
Special Operations Division (SOD) Total	<u>18</u> 18	_ <u>9</u>	<u>\$ 3,100</u> \$3,100

DEA requests 18 positions (including 11 Special Agents) and \$3,100,000 (including \$1,200,000 in non-personnel funding) to expand SOD, a comprehensive enforcement approach designed specifically to combat the surrogates of major drug trafficking organizations operating within the U.S. and their command and control centers based throughout the world. This initiative includes increases exclusively for the Special Operations Division (SOD), specifically, for Southwest Border Operations and Financial Investigations. Increasing the amount of resources available to SOD for these vital DEA initiatives is essential to DEA's ability to safeguard the lives, health, and safety of American citizens.

Background

The wealth, power, and influence of international crime syndicates continue to pose significant challenges to drug taw enforcement in this country. Today's drug trafficking organizations are using technologically advanced communications and surveillance equipment to conduct their operations, and sophisticated drug production, shuggling, and money laundering methods to develop higher purity products, expand their markets, and funnel profits to foreign-based command and control centers. These organizations rely upon systematic corruption, violence, and intimidation to expand their global and regional operations. In order to successfully respond to this threat, to impede their expansion into new areas, and to safeguard the lives, health, and safety of Americans from drugs and drug-related violence, DEA must have the necessary tools and resources to effectively identify, target, investigate, and dismantle these organizations.

SOD is Central to DEA's Enforcement Approach

DEA's enforcement approach for targeting the major drug trafficking syndicates is to initiate high impact investigations utilizing a combination of SOD intelligence and investigative support, and the efforts of diligent Special Agents,

Intelligence Analysts, Diversion Investigators and Task Force Officers based throughout the country. The synergistic relationship between these enforcement and support elements is easential in bringing down today's sophisticated drug trafficking organizations. Thus, an increase in SOD funding and staffing is vital to enhancing DEA's drug law enforcement capabilities.

The SOD program utilizes sophisticated technology and the investigative and intelligence resources of the DEA, the Federal Bureau of Investigation (FBt), the U.S. Customs Service (USCS), and the Internal Revenue Service (IRS) to specifically target the highest levels of drug trafficking groups. Among federal drug law enforcement programs, SOD remains preeminent in its ability to:

- provide up-to-date, real-time intelligence to field investigators;
- coordinate and support complex, multi-jurisdictional investigations;
- focus significant Title III technology and assets against specific targets; and
- tink and transform isolated, local investigations conducted by single agencies into multi-agency coordinated enforcement operations against multiple targets, operating at the regional, national, and international tayels.

SOD-coordinated investigations enable DEA and its drug law enforcement counterparts to attack the command and control infrastructure of major drug trafficking organizations at their most vulnerable point, i.e., communications. Since drugs are (primarily) foreign-produced, international drug trafficking syndicates must transport their product from oversees production areas, over thousands of mites and across international borders to the U.S. This requires extensive coordination and communication within all levels of drug syndicate operations. DEA's capability to intercept drug syndicate communications has produced vital intelligence and information, revealing the identities and methods of operations employed by these international drug organizations and their U.S.-based surrogates.

SOD's capability to generate pertinent and veluable intelligence, combined with its information sharing mechanisms, enables DEA to increase its understanding and knowledge of drug trafficking activities. Information is shared with a wide range of intelligence and operational entities expanding the scope and magnitude of current investigations, and serving as the nexus for such multi-agency, nationwide investigations of major drug trafficking organizations as Operation Reciprocity, Limelight, Rio Blanco, and Impunity. The element critical to the success of these investigations was the ability of DEA field offices to conduct Title III intercepts to identify, target, and arrest major drug violators and selze their assets and drugs.

The intelligence and information developed and the evidence gathered can be used to generate additional high impact investigations. For example, intelligence developed and evidence gathered during Operation Reciprocity assisted in the initiation of Operation Limelight. The intelligence and evidence gathered during Operation Limelight directly ted to the initiation of Operation Impunity. Operation Impunity was also enhanced by intelligence and evidence gathered during Operation Rio Blanco. Thus, SOD-coordinated nationwide investigations form the strategic basis for targeting additional, significant drug trafficking organizations. This demonstrated capability of the SOD program to maximize technology, utilize its expanding intelligence base, and synergize with field elements and develop edditional investigations of drug trafficking syndicates represents enormous potential for drug law enforcement.

Although the SOD program has only been in existence since 1995, it has become one of the most effective means of obtaining valuable information and intelligence in a timely manner to target the command and control of major drug trafficking organizations. The unique investigative support provided by SOD allows the program to act essentially as a "force multiplier" for drug law enforcement because it provides an effective and efficient medium for communication, intelligence sharing, and coordination among America's major drug law enforcement agencies.

In order to optimally employ the unique capabilities and real-time intelligence that SOD generates, criminal investigators based in the field must take action and move quickly against targeted trafficking groups. When field resources are directed against specific threats using SOD's precise, intelligence driven targeting methods, DEA's ability to conduct and support high impact, multi-jurisdictional investigations is significantly increased.

THE SPECIAL OPERATIONS DIVISION INITIATIVE

Given the threat posed by international drug syndicates; their vast wealth, propensity for violence and innovation, and intent to further expand their drug marksts throughout the country, DEA's FY 2001 enforcement approach must respond to the major drug threats affecting the U.S. As a result, DEA's request focuses exclusively upon the successful investigative techniques and capabilities of DEA's SOD program.

Special Operations Division — This request includes the positions and funding necessary to allow DEA's SOD
program to continue its role as the focal point for all multi-jurisdictional, major drug law enforcement Title III
investigations. This enhancement will enable SOD to support a greater number of field investigations and
generate additional leads against new targets. Specifically, DEA's Special Operations Division Initiative for

FY 2001 includes resources to support the Southwest Border Initiative and financial investigations,

This initiative utilizes the full potential of SOD's innovative investigative support programs, emphasizing the synergistic relationship between SOD and field investigative elements critical to effectively capitalize on real-time intelligence. In addition, this initiative fully supports the Office of National Drug Control Policy's (ONDCP) and the Department of Justice's drug control strategies. The resources DEA requests for these initiatives will be assigned exclusively to SOD to continue their efforts to effectively target and disrupt major drug trafficking organizations in the U.S. and their command and control centers overseas. The following justification is provided for the two components of DEA's Special Operations Division Initiative.

SPECIAL OPERATIONS DIVISION

DEA requests \$3,100,000 and 18 positions (including 11 Special Agents and \$1,200,000 in non-personnel funding) to support SOD operations in the following areas: Southwest Border and Financial Investigations.

SOD is a multi-agency program comprised of elements from the DEA, FBI, IRS, USCS, and DOJ's Criminal Division. SOD's mission is to establish seamless law enforcement strategies and operations aimed at dismantling entire national and international trafficking organizations by attacking the command and control communications of major drug trafficking organizations that operate across jurisdictional boundaries on a regional, national, and international level. SOD integrates trafficker command and control communications information into participating agency databases, as well as other federal agencies. For example, the Narcotics Enforcement Data Retrieval System (NEDRS) is used by all SOD participating agencies and provides real-time intelligence data to investigate and target sophisticated drug trafficking groups. A significant portion of the information obtained and analyzed by SOD originates from law enforcement Title III operations in the field.

Accordingly, SOD operates at a classified level and provides criminal investigators with the capability to fully exploit federal law enforcement's investigative authority under Title III of the U.S. code. SOD is unique in its role and mission, serving as the designated program manager for Title III investigations. In this capacity, SOD actively supports cases throughout the country, and works jointly with multi-agency counterparts to coordinate investigations, share vital intelligence, and thoroughly support and follow up on investigative leads.

Title III investigative support is one of the most effective means of obtaining valuable information and intelligence in a

timely manner to target the command and control of international drug syndicates. Specifically, Titte Itls enable investigative personnel to gain a more comprehensive picture of drug operations by anabling them to hear conversations between the command and control elements and their celt members. By monitoring the communications of drug traffickers, DEA is able to obtain intelligence and evidence that is vital to dismantle entire organizations. The most critical investigative information is obtained by tracking the activity of the highest echelons of drug trafficking organizations, which are extremely, if not impossible, to infiltrate through the use of human sources. As a result, the Title III support provided through SOD continues to be an integral facet in the process of targeting and dismantling sophisticated, highly organized drug trafficking groups.

SOD Case Successes: As DEA's Title III program continues to grow, the size, scope, and complexity of SOD-supported investigations will expand rapidly. This increased demand is based largely on the success of such notable operations as Operations IMPUNITY, META, RECIPROCITY, LIMELIGHT and RIO BLANCO; investigations where DEA's ability to conduct Title III wiretaps was critical to successfully targeting, investigating, and arresting major drug violators. The following provides details on the Rio Blanco investigation.

Operation Rio Blanco This SOD investigation targeted a trafficking and smuggling group based in Mexicall, Mexico. Six members of the gang, including the syndicate leader, were arrested on June 26, 1998. This organization has been linked to the smuggling and distribution of cocaine, methamphetamine, and marijuana. In addition, the organization provided transportation services for Colombian groups that operated distribution cells in New York and New Jersey. During this investigation, more than 5,000 telephone calls were intercepted by law enforcement. The operation resulted in the seizure of roughly 4,300 kilograms of cocaine, 150 pounds of methamphetamine, 1,413 pounds of marijuana, and \$17 million in U.S. currency. More than 1,000 individuals were arrested as a result of this investigation.

A unique aspect about the SQD program is that it provides DEA with the intelligence and investigative leads to initiate cases against new targets, as they materialize. Given the inter-connectivity of major drug syndicates, DEA and its partners in drug law enforcement can exploit their communications to identify whole new organizations and trafficking cells through the course of an existing investigation. This capability is extremely effective in disrupting the operations of major drug trafficking syndicates.

SOD Program Requests: As drug trafficking in the U.S. has continued to increase, so has the need for more Title III investigations. Currently, investigative and intelligence requirements exceed the level of support which can be provided by SOD. In addition, as DEA addresses emerging drug threats, requests for Title IIIs and intelligence assistance are

expected to increase. DEA requires additional resources for SOD to collect, evaluate, interpret, and disseminate critical intelligence which targets the command and control centers of major drug trafficking organizations. The areas of increased demand include the Southwest Border and financial investigations. The requested increases in resources will enhance DEA's capability to support investigations by providing the latest intelligence to field agents, resulting in focused, multi-jurisdictional, comprehensive investigations.

Southwest Border -- DEA requests \$1,671,499 (including \$700,000 in non-personnel funding) and nine positions (including six Spec -- Agents and one Intelligence Analyst) to support the reduction in the amount of drugs destined for the U.S. via the Southwest Border. SOD's Southwest Border request seeks to counter drug activity by identifying, penetrating, disrupting, and dismantiling major Mexican and Colombian drug trafficking organizations that are using the border to smuggle illegal drugs into the U.S.

SOD supports the Southwest Border Initiative through coordination of multi-jurisdictional Title III investigations, in which sensitive and classified enforcement information and intelligence is analyzed and converted into usable tips and leads for dissemination. Successful investigative efforts directed at major drug trafficking and transportation organizations depend upon the use of Title III investigative tools and the timely dissemination of intelligence capabilities. In order to vigorously combat the increasing drug threat from organized crimo syndicates utilizing the Southwest Border, DEA's SOD program must be provided with additional resources to support the growing number of investigations which target the drug syndicates using the 2,000 mile border with Mexico. DEA will dedicate these additional personnel, including six Special Agents and one Intelligence Analyst, to coordinate additional multi-division Title III investigations along the border. These personnel will analyze sensitive information and intelligence derived from classified and unclassified sources and disseminate this information to field personnel. In addition, DEA requests \$700,000 in non-personnel funding for operational expenses, travel, and case-related expenses that support these Title III and multi-jurisdictional cases.

<u>Financial investigations</u> -- DEA requests \$1,428,501 (Including \$600,000 in non-personnel funding) and nine positions (including five Special Agents and two Intelligence Analysts) to establish a Money Laundering/Financial investigations Section within SOD. These resources will provide nationwide oversight and coordination of Title ill field investigations that identify and target money 'aundering operations.

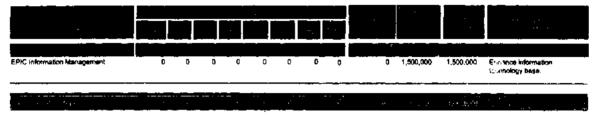

Drug traffickers have teamed that lax and ineffective financial regulatory systems, inattentive enforcement, and corruption make certain jurisdictions particularly attractive for laundering illicit proceeds. In an effort to address this problem, DEA requests the resources to establish a money laundering/financial investigations section within SOD to

provide nationwide oversight and coordination on Title til investigations that identify and target the money laundering operations of major drug trafficking organizations. This section will coordinate all multi-division and/or multi-agency Title III investigations, analyze sensitive and classified enforcement information and intelligence, and convert this information into usable tips and leads for dissemination to field investigators. DEA has had success in the past using Title III investigative resources to identify and combat money laundering operations. For example, SOD is currently supporting an ongoing money laundering operation that targets South American and Caribbean drug traffickers. This multi-purisdictional investigation has resulted in the arrest of nine individuals who were attempting to move their drug profits from the U.S. to the Caribbean.

DEA will dedicate these additional personnel, including five Special Agents and two Intelligence Analysts, in support of Title III investigations aimed at Identifying money laundering operations. DEA will work in conjunction with the FBI, USCS, IRS and the United States Postal Service (USPS) to utilize a variety of sources (both classified and unclassified) to obtain financial intelligence which promotes the investigation of SOD money laundering targets. In addition, DEA requests \$500,000 in non-personnel funding for operational expenses, travel, and case-related expenses incurred in support of financial Title III and multi-jurisdictional cases.

FY 2001 Congressional Budget Estimate

Intelligence Initiative

INTELLIGENCE INITIATIVE FY 2001 CONGRESSIONAL BUDGET

Decision Unit	Pos.	FTE	Amount _(\$000)
Intelligence	<u>o</u>	<u>0</u>	<u>_1,500</u>
Fotal	0	0	\$ 1,500

DEA requests \$1,500,000 in non-personnel funding to provide vital investigative support in identifying, developing, and exploiting information and intelligence necessary to enhance the effectiveness of drug law enforcement. Without these resources, DEA will be unable to exploit and disseminate tactical, real-time intelligence efficiently and effectively to DEA domestic offices, foreign offices, and other law enforcement agencies worldwide.

The collection, collation, analysis, and dissemination of strategic, investigative, and real-time tactical intelligence are critical to DEA's ability to target international drug syndicates. This initiative focuses on providing DEA's intelligence program with the tools necessary to support virtually all facets of DEA's investigative requirements. Further development of DEA's drug intelligence and information sharing capabilities is vital in the effort to maximize federal, state, and local anti-drug assets. The resources requested through this initiative will provide additional support to drug law enforcement intelligence through the El Paso Intelligence Center's Information System (EIS).

EL PASO INTELLIGENCE CENTER

DEA requests a permanent base enhancement of \$1,500,000 in non-personnel funding to operate, maintain, and enhance the El Paso intelligence Center's (EPIC) information System (EIS). Without these funds, EPIC cannot effectively maintain and support the EIS, which collects, distributes, and analyzes reported data on worldwide drug trafficking trends and organizations.

EPIC supports federal law enforcement interdiction components (DEA, INS, FBI, U.S. Customs Service, and U.S. Coast Guard) through the timely analysis and dissemination of intelligence on illicit drug and alien movements within the United States, on both sides of the U.S-Mexican border, across the Caribbean and from other points of origin within the Western Hemisphere en route to the United States.

EPIC's Information Technology (IT) infrastructure supports this mission by facilitating information sharing with federal, state, and local law enforcement agencies, and by targeting drug activity that has an impact on the U.S. EIS is EPIC's primary IT component and is the customized operations system platform that supports EPIC's immediate intelligence information processing operations.

To maintain and enhance the EIS, and to address the increasing requirements of the EPIC Advisory Board member agencies, EPIC has identified IT resource needs, along a projected five-year IT plan. However, the current budget allows only for funding of mandatory costs, restricting EPIC's ability to respond to new program requirements. As a result, as of FY 2000, EPIC has a backlog of approximately 1,000 IT issues. Due to limited base funding, only the most critical projects have been initiated.

EPIC's Resources Must Be Reinvigorated

For each of the last five fiscal years, EPIC's annual IT budget of \$2,854,000 has supported a customer base of thousands of federal, state, local, and foreign law enforcement users. In order for EPIC to operate at a level consistent with its program requirements, a baseline IT funding increase of \$1,500,000 (\$4,354,000 total) is required. The baseline IT funding will allow EPIC to plan projects more efficiently and to support recurring functional and technical requirements. Components of the \$1,500,000 increase are:

Systems Operations and Technical Support Contract: \$1,100,000

This will allow EPIC to acquire the "best value" support contract to ensure that its IT operations support EPIC's mission adequately. If the funds for this support contract are not received, all computer software application systems at EPIC, including the EIS, will not be supported and maintained by the necessary contract personnel to ensure data integrity. Without dependable automated systems, EPIC with not be able to effectively collect, disseminate, and analyze reported data on worldwide drug trafficking trends and organizations.

Software Systems Support: \$400,000

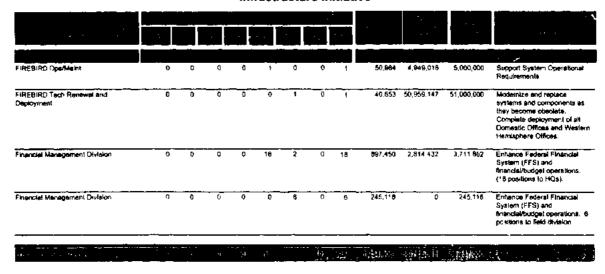

To make the EPIC databases such as TECS II and NADDIS accessible to analysts, DEA Special Agents and representatives of the 15 member agencies, it is essential that user software licensing agreements be executed. In addition, various other software products that provide services ranging from system security to office automation and communications require the purchase of software licenses and regular software upgrades. Given EPIC's IT-oriented mission and the variety of operations supported by the program, these payments are costly. Every year approximately 12% of EPIC's IT budget is sperit on software maintenance and licensing alone. As EPIC takes responsibility for new missions and databases such as the National Clandestine Laboratory Database, these costs will continue to escalate.

Without proper upgrades, commercial-off-the-shelf (COTS) software and other proprietary software on both stand-alone machines and servers will be outdated. Workstation and database servers will become inefficient in running sophisticated programs and other memory/processor intense systems. EPIC's response to Watch inquiries, and bulk queries from participating High-Intensity Drug Trafficking Area (HIDTA) agencies, will slow as system demands increase.

Given EPIC's critical mission, the program must have the financial means necessary to respond to the needs of its member agencies and allow drug law enforcement intelligence efforts to adapt to changes in trafficking activity.

FY 2001 Congressional Budget Estimate

Infrastructure initiative

INFRASTRUCTURE INITIATIVE FY 2001 CONGRESSIONAL BUDGET

Decision Unit	Pos.	FIE	Amount _(\$000)
Domestic Enforcement	6	3	\$ 245
Automated Data Processing	2	1	56,000
Management & Administration	18	9	3.712
Total	26	13	\$ 59,957

DEA requests \$59,957,000 and 26 positions (including 0 Special Agent positions and \$58,722,595 in non-personnel funding) to provide critical support to DEA's enforcement operations.

DEA's operational support programs are vital to the ultimate success of important criminal investigations. Given DEA's increasing operational and enforcement requirements, DEA must request resources to expand its infrastructure base accordingly in the key support areas of information Systems and Financial Management. This resource enhancement is vital to enable DEA to effectively support its investigative workforce charged with combatting drug trafficking and drug-related violence, supporting prosecution efforts, and obtaining and safeguarding critical information.

FIREBIRD

DEA requests an enhancement of \$56,000,000 and 2 positions (including \$55,908,163 in recurring, non-personnel funding) to establish sufficient infrastructure base that supports FIREBIRD Operations and Maintenance (O&M), Technology Renewal, and Deployment requirements of DEA's Firebird Automated Data Processing system.

FIREBIRD is the primary "work horse" office automation infrastructure that supports the full spectrum of DEA's global operations. Initiated in FY 1994, this project is a unique synergy of Special Agent "know how" and advanced computer technology designed specifically to support DEA's drug enforcement mission. FIREBIRD is a client server-based network that, once fully deployed, will link all DEA offices and components worldwide. This will allow all DEA components to

function interactively with one another through enhanced communication and business process reengineering. Tools that all modem businesses must have (e.g., E-mail, uniform word processing and other forms of office automation) are combined with DEA specific requirements such as an electronic investigative file room and the Narcotics And Dangerous Drugs Information System (NADDIS), to create a low cost, highly effective system model for other federal law enforcement agencies. Essentially, FIREBIRD acts as a force multiplier, allowing DEA components scattered around the world to act as one cohesive unit through the instantaneous access of critical law enforcement and intelligence information. Perhaps more importantly, FIREBIRD has been designed to "evolve" to suit the needs of DEA personnel, particularly through its support of unique projects like MERLIN and MERCURY, which are critical tools representing the future of drug law enforcement.

BACKGROUND

Phase I of FIREBIRD deployment, the installation of network equipment at DEA Headquarters and all 20 Field Division offices, was completed in December 1997. Although DEA has already begun the work-Intensive task of joining DEA's 350 plus district, resident and foreign field offices and laboratories into the FIREBIRD network (Phase II), without additional resources completion will not occur until at least calendar year (CY) 2002.

Although Firebird is not yet fully deployed, DEA is already witnessing the benefits of FIREBIRD technology, as countless investigations, conducted in different geographic regions throughout the world, are linked through improved communication. As FIREBIRD applications are perfected and new tools, like the proposed IMPACT or Ejectronic File Room, are added to DEA's investigative arsenal, agency productivity and operational flexibility will continue to improve. FIREBIRD brings the essential tools for all of DEA's business processes to the users via one unified, network system. Put simply, FIREBIRD represents a major investment into DEA's IT infrastructure that has revolutionized the way that this agency conducts business.

FIREBIRD OPERATIONS AND MAINTENANCE (O&M)

DEA requests an enhancement of \$5,000,000 and 1 support position (costing \$50,984) to support the system's operational requirements.

The \$5 million enhancement will fund additional O&M costs associated with keeping the FIREBIRD system operational, mainly for telecommunications costs. O&M costs include labor for program management, system monitoring (alerts, alarms and fault correlation); sustaining global telecommunications access to investigative, financial, property, and

maintenance information; supporting worldwide communications services among employees (E-mail); collecting and formatting system metrics to support Clinger-Cohen performance measures; supporting security monitoring required to maintain security certification and accreditation; and ensuring Continuity of Operations capability and ensite contractor support personnel (Field Information Resource Specialists-FIRS). O&M costs also include funding for associated travel, maintenance tools, spare parts and recurring software license support. The O&M dollars are used to keep the system in working order and are expected to recur for each year of operation. They neither prevent the system from becoming obsolete (Technology Renewal funds), nor pay for system enhancements (FIREBIRD Exploitation funds).

FIREBIRD TECHNOLOGY RENEWAL AND FIREBIRD DEPLOYMENT

DEA requests an enhancement of \$51,000,000 and 1 position (costing \$40,853), including \$23,000,000 for Technology Renewal and \$28,000,000 for continued FIREBIRD Deployment.

Technology Renewal funds are required to modernize and replace systems and system components as they become obsolete. Each system and system component has a defined life cycle, and software needs to be refreshed yearly. Based on accepted industry standards, PC systems should be replaced no later than every 4 years. Beyond that life cycle, it becomes more cost effective to replace or update the obsolete system/component rather than continue to operate and maintain it. Currently, DEA has no dedicated technology renewal base.

Technology renewal costs should be scheduled across the life cycle in even payments. This keeps required resource levels fairly consistent. Beginning in the 5th year, 25 percent of the already deployed equipment should be replaced each year for continuous updates throughout a 4-year cycle in order to keep the system from obsolescence.

By 2001, the FIREBIRD baseline design will be 7 years old and as much as 35 percent of the already deployed system will be over 5 years old and overdue for replacement. Servers, printers, and workstations, in addition to wiring components and wide area routers, encryptors, and switches will be nearing the end of their maintainable life cycle. Offices that first received FIREBIRD, such as Los Angeles and Chicago, detected degradation in system performance and would have been unable to receive some new DEA and COTS software applications without a Technology Renewal (TR). Other offices will become equally outdated over the following few years. Current versions of spere parts and software ilcenses will become unavailable or cost prohibitive. Maintenance costs will exceed purchase costs for modern equipment. Without updates to technology, DEA will be hampered by an architecture that is rapidly becoming out of data, and will not easily integrate with other enforcement entities and DOJ components. Unacceptable system performance

translates into lost DEA staff productivity in applications which may be mission critical. The additional \$28 million for deployment enables DEA to complete Domestic Offices and Western Hemisphere Offices. The funding will be used for equipment purchases, travel, engineering, installation, and training services.

Industry introduces new microprocessors every 2 months. The 4-year life cycle plan would mean that as many as 48 generations of PC workstation products will pass before a single DEA PC is replaced. DEA must stay within the mainstream of IT technology to maintain compatibility with the marketplace. In that mainstream, current products and services are most widely maintained at the lowest risk and cost. With the deployment of FIREBIRD over a 4-year plus cycle, more than 1/3 of the system will need to be technically renewed even before deployment is completed.

FINANCIAL MANAGEMENT DIVISION

DEA requests a permanent base enhancement of \$3,957,000 and 24 positions (including \$2,814,432 in non-parsonnel funding) to enhance DEA's financial and resource management oversight functions. These resources are vital to improving internal controls, establishing heightened financial policy capabilities and allowing DEA's Financial Management Division to keep pace with the dynamic growth of the agency.

As America's premier drug law enforcement agency, DEA's primary focus is on its field enforcement operations; however, the agency's support operations are a crucial factor to its success. The main role of DEA's Financial Management Division is to support DEA operations by providing traditional financial and resource management services; including accounting, budget development and execution, management, and performance measurement.

In safeguarding the integrity of DEA programs, the oversight of financial and resource management programs is a clear priority. DEA is very concerned about improving its performance in virtually all resource and financial management areas, particularly with regard to budget reprogramming activity, audit performance, day-to-day accounting and payment activities, financial statement development, budget and financial policy, training, and performance measurement.

The results of the 1998 Financial Statement Audit parformed by KPMG, LLP, the Price Waterhouse Coopers (PWC) review of DEA's Financial Operations Section, and the recent joint JMD/DEA review of DEA's budget formulation and execution programs have highlighted particular areas where the need for additional staffing and funding has become apparent. In fact, the summary statement of the PWC review states that DEA requires "additional investments in people, systems, and in improving basic processing of information."

Essentially, DEA has identified resource shortfalls in three key areas within its resource and financial management

programs that must be addressed to maintain and improve its financial oversight functions. The areas of concern are as follows:

- Base funding for DEA's Federal Financial System (FFS).
- Provide increased staffing to DEA's financial management activities including payment operations and for areas including budget policy, development and performance management
- Increase training base for financial and resource management

DEA requests \$2.2 million to fully fund base requirements for its Federal Financial System (FFS)

In FY 1998, DEA migrated from its 25-year old Drug Enforcement Administration Accounting System (DEAAS) to FFS, an accounting system managed by the Department of Interior. After only one year of operation, FFS has dramatically improved DEA performance in financial management and in tracking DEA resources by budget program. This is done specifically through FFS' program structure and the additional tools it provides to improve internal controls and track funding.

DEA initially Implemented the core components of FFS to provide the agency with the ability to be fully compliant with the Federal Financial Management Improvement Act (FMFIA) and generally accepted financial management practices. However, DEA has recognized the advantages of implementing additional components of FFS and plans to initiate the following FFS programs: Procurement Deaktop, the Fixed Asset Subsystem, and Commitment Accounting. Furthermore, plans are underway to implement automated interfaces with the U.S. Department of Treasury, U.S. Department of State, and DEA's official purchasing card (i.e., Impact Card), and to develop additional automated budget formulation capabilities. All of these tools will work to provide DEA with an improve difficultion, allow for more accurate and timely tracking of budgeted resources, and Improve out year budget projection capabilities.

Initial implementation of FFS in FY 1998 was funded through a combination of existing DEA resources and the allocation of Working Capital Fund (WCF) funding. For FY 2001, DEA has identified a total requirement of \$2.72 million to fully support FFS operations and provide the additional tools necessary to expand agency tracking capabilities for budgeted resources, capital assets and property and more fully automate DEA's budget formulation processes. Given DEA's current base of \$0.5 million for FFS, a short fall of \$2.22 million exists that must be addressed through new resources.

Without the resources necessary to fully optimize FFS' capabilities, DEA will continue to operate at a higher level of risk with regard to its financial management operations. There is clear relationship between effective financial management, agency integrity and the ultimate effectiveness of DEA's drug law enforcement mission. Fully funding the FFS base

requirement will go a long way in providing DEA with the tools necessary to practice sound financial and budget management.

DEA requests 24 positions to allow DEA and its Financial Management Division to keep pace with the rapid agency growth and to provide additional oversight over critical financial/budget policy, internal control, budget development and performance measurement issues.

Since 1985, DEA's current budget of roughly \$1.5 billion has increased by 300 percent. The corresponding growth in agency personnel, coupled with additional reporting and heightened internal control requirements are placing significant pressures on DEA's financial management program.

In fact, the PWC review specifically raised staffing as a primary issue in its recent report on DEA's Financial Operations Section (FNO). According to the report, DEA "could also benefit from additional resources to improve and stabilize operations. DEA has grown over the years with respect to employees and appropriations while the FNO staff level has changed minimally." As a further highlight to this area, the PWC review states that during FY's 1990 through 1996, DEA's appropriated funding increased by 50 percent; its accounting staff increased by only 2 percent during this time frame. The results of DEA's FY 1998 Financial Statement audit conducted by KPMG, LLP and the Identified material weakness and reportable conditions are further evidence that additional resources are required to improve DEA's financial condition.

In an effort to maximize the staffing available and provide additional oversight over its financial and budget operations, DEA has taken steps using its existing resources. In FY 1996, DEA Headquarters reorganized to establish the Financial Management Division under the new position of Chief Financial Officer. DEA's previous Office of the Controller was split into two effices, the Office of Finance (FN), which manages overall accounting functions and the Office of Resource Management (FR), which oversees budget planning, formulation and execution, manpower, and performance measurement. This reorganization went a long way towards providing the agency with a more focused managerial approach to financial and resource management. It also provides a better framework for supporting future staffing growth in these areas. Unfortunately, the additional staffing resources available for FN and FR have been minimal, since other DEA elements have also required additional staffing to support field enforcement operations and other major operational objectives of the appency.

During FY 1999, DEA initiated action to meet the mandates of the Debt Collection Improvement Act of 1996 which requires electronic payments to vendors and employees. To comply with this mandate, DEA elected to replace the third party payment system with a decentralized payment function capable of electronically transmitting payments through

FFS. When fully deployed, twenty-five field sites will be performing payment activities. Additional positions are required to complete the deployment and ensure that adequate personnel resources are available to meet DEA's internal control requirements over the payment process, including proper segregation of duties.

FY 1999 has also been a period of Intense review of DEA budget formulation and execution programs. At the direction of the House Appropriations Committee, DEA worked with the JMD and Office of Management and Budget (OMB) to resolve a major under-reporting of DEA's reprogramming activities since FY 1996. This review also highlighted the fact that there are shortfalls in DEA's budget development and execution processes. Although new procedures and work processes are being put into place, DEA is concerned about the level of staffing that is required to fully document and account for its revources. Specifically, DEA is in need of additional staffing to perform budget policy and appropriations review, budget execution oversight and strategic budget planning.

Due to staffing limitations and the significant workload associated with supporting four separate appropriations, numerous reimbursable funding sources, and the level of detail required to specifically manage special programs of significant Congressional Interest, it is clear that the positions currently allocated to DEA's budget and financial statement programs must be increased.

The 24 positions requested by DEA for improved financial management will provide the resources necessary to provide FN (14 positions). FR (4 positions) and key field locations (6 positions) with the additional staffing necessary to improve internal controls, financial statement development, and budget formulation/execution oversight, and strengthen procurement activities.

DEA requests \$500,000 to fully fund base requirements for mandatory financial management training.

Financial management integrity in the Federal Government has been mandated by legislative action. This legislation includes the Federal Managers Financial Management Integrity Act (FMFIA) of 1992, the Chief Financial Officer's (CFO) of 1990, the Government Performance and Results Act (GPRA) of 1993, the Government Management Reform Act (GMRA) of 1994, and the Federal Financial Management Improvement Act (FFMIA) of 1998.

All of these Congressional initiatives include Increased and more sophisticated reporting requirements and collectively, the Acts are intended to increase accountability and raise the level of professionalism in Federal financial management. In order for personnel working in the financial management arena to maintain and improve their proficiency, and to develop the necessary skill sets required to keep current with new accounting, budgeting and reporting requirements, continuing professional education (CPE) in financial management must be mandatory in DEA. The Human Resources

Committee of the Chief Financial Officers Council and the Joint Financial Management Improvement Program (JFMIP) have developed a series of documents recommending professional development. These documents identify the "core competencies" required for financial managers, accountants, budget analysts and program managers. JFMIP supports the need for continuing education to assist financial management personnel in acquiring the requisite knowledge and skills required to meet the mandates of enected financial management legislation. DEA's ability to provide CPE for financial management personnel will also assist in our efforts to recruit and retain qualified financial management personnel.

As referenced in the PWC report, DEA financial operations staff "receive little formal training" and further states that "training is needed on a regular basis to maintain existing skills and develop additional skills for career development." Despite the development of training plans, the lack of funding prevents implementation. Based on current training requirements, to include financial management personnel based at DEA Headquarters and corresponding field personnel, DEA is requesting a \$600,000 base enhancement to establish a dedicated financial training base. These funds would be managed by the Chief Financial Officer in coordination with DEA's Office of Training to ensure improved financial management and oversight over agency resources.

1. House Report 106-283 (page 24), directed the Drug Enforcement Administration (DEA) to work with DoD and other Federal agencies to develop a proposal to address the needs of law enforcement personnel assigned to Puerto Rico and report back to the Committee with a proposal for quality of life enhancements.

Report has been submitted to Congress.

2. House Report 106-283 (page 24), directed the Drug Enforcement Administration (DEA) to consult with Secretaries of Treasury and Transportation on Drug Strategy for Caribbean and Mexico Corridors and report on the status of implementation of enhancements provided for Caribbean in prior fiscal years (FY 97, 98, 99) and to outline additional requirements necessary to successfully narrow the seizure gap.

DEA is analyzing the seizure gap to determine a course of action.

3. House Report 106-283 (page 25), directed the Drug Enforcement Administration (DEA) to report on full program plan to complete Phase II of FIREBIRD, which fully accounts for deployment and operations and maintenance costs for FY 2000 and 2001. Report to be submitted by 9/1/99; extended to 1/15/2000.

Report submitted to OMB on January 31, 2000.

4. House Report 106-283 (page 26), directed the Drug Enforcement Administration (DEA) to report on plans to convert some provisional task forces to permanent task forces in FY 2000.

Report has been submitted to Congress.

Status of Congressionally Requested Studies, Reports, and Evaluations (continued)

In addition, the House expects the DEA to continue providing quarterly reports on the investigative workhours and funding, by type, within major drug source and transit countries, including the Caribbean, with the first such reports to be provided to the Committee by October 15, 1999.

First quarterly report submitted to Congress on January 18, 2000.

 Senste Report 106-76 (page 35) directed the Drug Enforcement Administration (DEA) to conduct a feasibility study of DEA actively participating with State law enforcement on highway interdiction stops and report the results of the study to the Committee.

DEA is developing this report.

Drug Enforcement Administration FY 2001 Congressional Budget Submission Construction

SUMMARY STATEMENT

DEA requests \$5,500,000 to replace the agency's deteriorating laboratories and to repair and maintain DEA offices and other facilities.

A total of \$5,500,000 in base funding will be used to continue the replacement of DEA's aging laboratory facilities. DEA's forensic laboratories provide critical operational and analytical support to drug law enforcement at the federal, state, local, and international level. A number of DEA's laboratory facilities, averaging 21 years old, no longer meet DEA's operational requirements and are severely overcrowded and, because of the poor environmental conditions in these laboratories, DEA is being forced to operate at an unacceptably high level of liability risk. DEA cannot afford to remain in substandard facilities that do not meet standard laboratory design criteria and the agency's requirements for the health and safety of its employees. Failure to replace the laboratory facilities could ultimately affect the ability of the laboratories to provide high quality, timely, and effective support to enforcement operations. The long lead time required to relocate facilities mandates that urgent attention be given to this problem now. The facilities in the greatest need of replacement include: the Southwest Laboratory (San Diego); the Mid-Atlantic Laboratory (Washington, D.C.); the Southeast Laboratory (Milami); the Special Testing and Research Laboratory (McLean, VA); and the Western Laboratory (San Francisco).

Drus Enforcement Administration FY 2001 Congressional Budget Submission Construction Austrification of Proposed Changes in Appropriation Language

The 2000 budget estimate includes proposed changes in the appropriation language listed and explained below. New language is itselficized and underscored.

DEA Construction

For necessary expenses to construct or acquire buildings and sites by purchase, or as otherwise authorized by law (including equipment for such buildings); conversion and extension of federally owned buildings; and preliminary planning and design of projects; \$5,500,000, to remain svallable until expended.

P.L. 108-113, Section 1000(s)(1), Department of Justice Appropriations Act, 2000.

Explanation of Changes

No substantive changes proposed.

<u>LONG RANGE GOAL</u>: To ensure that DEA's forensic drug laboratories meet all operational requirements to provide the timely analysis of drug evidence necessary for dismantling/disrupting trafficking organizations.

BASE PROGRAM DESCRIPTION: The DEA Construction Appropriation provides resources (\$5,500,000) for a multiyear project to reconstruct at least five of the agency's deteriorating laboratory facilities. DEA has eight forensic drug laboratories with unique requirements in terms of physical design and layout for conducting analysis of drug evidence. The labe provide a key service of timely analysis of drug evidence produced by field agents of the DEA, Federal Bureau of investigation and other federal law enforcement agencies. However, at least five of the eight laboratories are facing severe space shortages, lease expirations and environmental conditions that pose health risks. Failure to improve these facilities could adversely affect the ability of the laboratories to provide quality, timely and effective support to enforcement operations and subsequent prosecution efforts.

BASE PROGRAM DESCRIPTION: The Comprehensive Drug Abuse and Prevention and Control Act of 1970 (Public Law 91-513) authorizes DEA to enforce this law as it applies to the registration of handlers of controlled substances. The purpose of DEA's Drug Diversion Control Program is to prevent, detect, and investigate the diversion of controlled substances from legitimate channels while, at the same time, ensuring that there is an adequate uninterrupted supply of controlled substances to meet legitimate needs. In addition, DEA's Drug Diversion Control program serves as the only responsible action office for the International monitoring and control of legitimate pharmaceuticals. In compliance with U.S. law and International treaty obligations, DEA's Diversion Control Program advises management on all matters pertaining to the formulation, direction, and coordination of worldwide programs associated with the diversion of legally produced controlled substances to include the following:

Criminal Diversion Investigations: DEA identifies the highest level violators responsible for large scale diversion and conducts high quality, timely criminal investigations of their diversion activities.

Public Interest Revocation Investigations: DEA may deny an application for registration, or revoke or suspend a registration if it is determined that registering the applicant would be inconsistent with the public interest.

CSA Mandated Cyclic Investigations: Investigations to ensure that diversion does not occur at the manufacturer, distributor, or wholesale level.

Pre-registrant Investigations: Ensure that only qualified individuals or companies are authorized to acquire or dispense controlled substances.

State and Local Assistance: DEA assesses state programs aimed at suppressing the diversion of controlled substances from scientific, medical research, and legitimate distribution channels. In addition, the State Assistance Program provides expertise, leadership, and guidance to the states consistent with national objectives. There are approximately more than 1,000,000 handlers of controlled substances. Each registrant is a potential source of diversion. Though the majority of the diversions occur at the practitioner and retail pharmacy level, the Drug Diversion Control program must remain vigilant on all fronts, monitoring manufacturers, distributors, practitioners, and pharmacists.

Diversion Control Fee Account
Justification of Adjustments to Base (Continued)
(Dollars in thousands)

	Within-grade Increases (WGI).	Perm. Pos.	Wye	Ати	puret
•	This request providue for the expected increase in costs of within-grade increases for store- or no- growth components in FY 2000. This increase is based on an accurate model of the Department's employee population. The Departments model incorporates numerous factors, including emiliciated pay mises, adjustments for tyres-year station and separation rates, and career ladder series reflecting organizational promotion policies. This request includes \$103,000 for pay and \$34,000 for benefits.	-	•		137
5.	General Services Administration (GSA) Rent. GSA will continue to charge venter rates that approximate those charged to commerced tenents for equivalent space and related services. The requested increase of \$573,000 is required to reset our contributions to GSA. The costs associated with GSA rant were derived through the use of the automated system, which uses the latest invaniony date and rates retcom a 6 percent increase over FY 2000 tevels.	٠	•		373
6 .	General Prioring Lavel Increasing. This request applies Oldiff prioring guidence to selected exprime categories. This increased costs identified result from applying a factor of 2.0 percent against these sub-object classes where the prices that the Government pays are established through the methal system instead of by two or regulation. Generally, the factor is applied to expeties, relativistic, equipment, contracts with the private sector, printing costs, immeportation costs and utilities.	-	•	•	174

Immigration and Naturalization Service Summary Statement Fiscal Year 2001

Enclosed is the FY 2001 Immigration and Naturalization Service's (INS) hudget request to Congress. INS is requesting a total of \$4.8 billion, 33,122 positions, and 33,065 workyears to continue the work of protecting the nation's borders and serving legal immigrants. This budget request is composed of 9 budgets: Salaries and Expenses (S&E), Construction, Examinations Fee, Immigration Services Capital Investment Account, User Fee, Immigration Enforcement, Land Border Inspection Fee, Breached Bond/Detention, and H1B Immigrant Petitioner.

From FY 1993 to FY 1999, INS has realized a 164 percent growth in resources. As an agency, we have also grown from 17,163 employees on-board to 30,944 employees on-board. This extraordinary growth has caused some growing pains, but INS is turning the corner and meeting the goals and missions it has set forth. With the resources requested in this FY 2001 budget, INS will continue and improve its work of protecting the nation's borders, removing illegal aliens from the country, cracking down on illegal immigrants in our workforce, reducing service backlogs, providing benefits for legal aliens and providing a safe haven for those seeking shelter from oppression in their native countries.

Over the past several years INS has set and met many goals. We adjudicated 1.2 million Naturalization (N-400) applications last year, significantly reducing the backlog. In FY 2000, the Immigration Services Division will tackle the backlog in the Adjustment of Status area. The Determined program has brought more beds online, leading to the detainment of more criminal aliens. And the Border Patrol has continued to make great strides in securing our borders. This budget allows INS to build on its successful efforts to date and supports the immigration goals and strategies that the Administration and agency have pursued over the past several years. These include improving customer service, facilitating legal immigration while deterring illegal immigration, and removing criminal and other aliens from the United States.

Immigration and Naturalization Service Saturies and Expenses Suramary Statement Fiscal Year 2001

The Immigration and Naturalization Service (INS) is requesting a total of 22,960 permanent positions, 22,380 workyears, and \$3,420,280,000 in its Salaries and Expenses (S&E) appropriation. This request represents an increase of 631 positions, 1,013 workyears, and \$2,91,80,000 over the FY 2000 enacted level of 22,329 positions, 21,469 workyears, and \$2,891,100,000. The requested increases in the S&E appropriation, complete with INS' Fee accounts and Construction appropriation, will enable INS to manage the nation's immigration system more effectively and implement its major initiatives. The separate enhancement initiatives requested in this appropriation are described below.

Border Management

The INS is dedicated to the basic terms that the busices of the United States should be characterized by the rule of law, and that the physical integrity of those borders is essential to defining our national sovereignty. At the same time, it is equally imperative that the flow of lawful commerce and the passage of legitimate travelers he encouraged and assisted to the greatest extent practicable. In deterring and denying our border areas to the lawless, INS recognizes that it must not comprostise or ignore the rights and needs of the lawful. As we enter a new millennum, the INS will continue to focus its FY 2001 efforts to the tasks of Border Enforcement (both domestic and overseas) and Border Facilitation. In all areas, emphasis has been placed on increasing not only the number, but also the effectiveness of INS personnel through force-multiplying technology and first-rate equipment. The FY 2001 request also continues the integration of all INS' enforcement activities, both overseas and at the immediate border area, and into those interior areas of our nation that have been targeted by illegal immigrants and criminal organizations. To accomplish these challenging tasks will require additional resources consisting of 545 positions, 273 workyears, and \$82,095,000. This will include 430 additional Border Patrol Agents and 115 Immigration Inspectors.

BEST AVAILABLE COPY

Interior Enforcement

In January 1999, INS adopted a new interior Enforcement Strategy to respond more effectively to the changing patterns and consequences of illegal immigration. These new patterns and consequences arise from several dimensions and underlying causes of the illegal flow. First, progress made under the Border Patrol National Strategy has significantly shifted illegal crossing patterns along the border. Second, international illegal nugration has become increasingly coordinated through organized criminal smuggling operations. Third, these organized networks support the recruitment and transportation of illegal workers to places of employment, often with the full knowledge and active participation of middle and lower-level managers. Fourth, illegal immigration is also drawing on more sophisticated and higher quality counterfeit documents often used to support fraudulent applications for legal immigration benefits. Fifth, INS enforcement is encountering, to a greater degree, sliegal immigration that has a harmful impact both on local communities and often on the migrants themselves. The primary strategic goal of INS interior enforcement is to reduce the size and annual growth of the illegal resident population, to deter the flow of temporary illegal migrants, and to tighten controls on the applications for immigration benefits based on fraud. The strategy includes five core priorities: 1) Identification and Removal of Criminal Aliens; 2) Detection, Disruption, and Dismantling of Organized Smuggling and Trafficking, 3) Respond to Local Reports and Complaints; 4) Prevent Benefit Fraud and Other Document Abuse; and 5) Block and Remove Employers' Access to Unauthorized Workers. For FY 2001, INS has adopted a two-tiered approach to support these priorities: 1) refocus existing enforcement resources; and 2) enhance certain activities with new resources.

For FY 2001, the Interior Enforcement Strategy has four elements which address the goals of the Interior Enforcement Strategy. They include: 1) Enhance the National Transportation System; 2) Expand Juvenile Bed Space; 3) Expand State and Local Bed Space; 4) Implement Detention Standards in IGSAs; and 5) National Crime Information Center. To accomplish these goals, INS has requested resources for Interior Enforcement consisting of 250 positions, 125 workyears, and \$82,000,000, including 90 Deportation Officers, 107 Detention Enforcement Officers, and 53 Detention Support positions.

Infrastructure and Professionalism

For FY 2001, the INS continues its commitment to improving institutional development and infrastructure. This priority provides critical services to support the services and enforcement missions of the agency. It also ensures that a motivated and diverse workforce is well-trained and empowered to do us job. The Infrastructure and Professionalism initiative focuses on increasing staffing support in both the Regions and Headquarters, developing and implementing employee support requirements, upgrading financial management systems, and achieving integration of the various mission areas and strategies. The initiative continues to focus on sustaining and improving the INST facility infrastructure, and commits resources for the improvement of the Legal Proceedings program by addressing the staffing shortfall. To achieve these institutional improvements. INS is requesting 140 positions, 70 work years, and \$50,076,000.

Pzy Reform

A total of \$40,900,000 is requested as part of a pay reform militative requested for Border Patrol Agents in the Salaries and Expenses Appropriation beginning in FY 2001. This pay reform includes (1) position upgrades, and (2) the substitution of law enforcement availability (LEA) in the place of standard and uncontrollable overtime pay, as well as the establishment of special salary rate authority for the Attorney General's administration to ensure fair and effective compensation for the Border Patrol workforce.

A total of \$15,100,000 is also requested as part of a pay reform initiative requested for Immigration Inspectors in the Salaries and Expenses Appropriation beginning in FY 2001. The role of the Immigration Inspector has evolved from one that primarily focused on facilitating the legal entry into the United States of properly documented aliens and U.S. citizens to one with an increased emphasis on the detection/identification and apprehension of persons attempting to enter the country illegally. In addition, the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 has increased knowledge requirements, authorities and responsibilities of Immigration Inspectors to include the ability to remove immediately from the United States aliens attempting to enter by fraud or without proper documentation. The raising of the journey level for Immigration Inspectors to GS-11 will recognize changes in the basic nature of the work and changes in legislation, and with enable the INS to recruit and retain employees who are critical to mission accomplishment.

To achieve this pay reform, INS is requesting resources totaling \$56,000,000.

INS Mission

The mission of the INS, an agency of the Department of Justice, is established by the immigration and Nationality Act, as amended, which charges the Attorney General with the administration and enforcement of its provisions and other laws related to the immigration and naturalization of noncitizens. The Attorney General has delegated authority to the Commissioner of the INS to carry out national policy that provides for selective immigration and for controlled entry and stay on nonimmigrants. The overall purpose is to promote the reunification of families, the entry of immigrants possessing needed skills, the temporary admission of specific classes of noncitizens, and to provide refugee status to those subject to persecution in other countries.

INS' mission is to determine the admissibility of persons seeking entry and to adjust the status of and provide other benefits to legally entitled noncitizens within the country with proper regard for equity and due process. This includes assistance to those who seek permanent resident status and those who wish to become citizens through naturalization.

Related responsibilities of the INS are to ensure appropriate documentation of aliens at entry, to deny entry to those who are not legally admissible whether they attempt to enter through Ports-of-Entry (POE) or surreptitiously across the border, and to determine the status of those in the country. Among the enforcement strategies, INS uses criminal sanctions against those who act or conspire to promote illegal entry and stay, including the apprehension and removal of those whose entry or presence here is illegal.

Component Mission and Goals, and relationship to DOJ Strategic Plan

INS' FY 2001 plans and budget directly support the overall immigration mission priorities, goals and strategic approaches that are included in the Department of Justice (DOJ) Strategic Plan. FY 1997-2002, dated September 1997. The INS Annual Performance Plan for FY 2001 incorporates revisions to previous performance activities and measures to better measure and achieve results in line with Departmental objectives. The INS Annual Performance Plan links to specific Core Functions within the DOJ Strategic Plan, particularly the Immigration, Detention and Incarceration, Investigation and Prosecution of Criminal Offenses, and the Management core functions.

Specific linkage between INS' Annual Performance and the Core Functions in the DOI Strategic Plan (1997-2002) is as follows:

DOJ CORE FUNCTION: <u>IMMIGRATION</u>

Goal 1: Enhance the integrity and integration of data and data systems operated by the INS in order to establish fully integrated data systems supporting the enforcement and service functions of the INS; enhance the sharing of relevant data with other Federal agencies; and support INS management and decision making processes. (a.k.a., Data and Data Systems Integrity)

Goal 2: Deliver services to the public in a timely, consistent, fair and high quality manner. [a.k.a., Immigration Services]

Gent & Secure the land border, Ports-of-Entry and coasts of the United States against illegal migration through effective use of sechnology and personnel resources focused on enhancing the deterronce to entry and apprehending and removing those who attempt to enter allegally. [a.k.a., Border Enforcement]

Good 4: Factitate fawful travel and commerce across the borders of the United States. [a.k.a., Border Facilitaton]

Goal 5: Maximize deterrence to unlawful migration and enforce immigration laws in the interior through effective and coordinated use of resources to reduce the incentives of unauthorized employment and assistance; remove deportable/madmissible aliens expeditiously; address interior amuggling and benefit and document fraud; and increase inter-governmental cooperation and the integration of activities among to enforcement entities at all levels of government. [a.k.a., interior Enforcement]

Gent 7: Improve the development and implementation of immigration related policies and practices by incorporating input from a broad range of internal and external contacts. (a.k.a., Community Impact)

Note: Goal 6 of the DOJ Strategic Plan is focused on the independent adjudicatory operations of the Executive Office for Immigration Review (EOIR). Goal 6 is "Expedite the adjudication of immigration cares while insuring due process and fair treatment for all parties".

The INS Annual Performance Plan (APP) mirrors this goal structure which provides a direct link to the DOJ-level objectives. The only variation between the DOJ strategic goal construct and the INS APP goal structure lies in the addition of a "Infrastructure and Professionalism" goal in INS' APP that addresses various mission-support activities critical to overall mission accomplishment. These latter activities align with DOJ's Management core function in the DOJ Strategic Plan. In FY 2001, both the INS APP and the annual DOJ Summary Performance Plan (DOJ-SPP) address Goal 7 objectives within the context of the other mission-direct goals, as an inherent method or approach to conducting INS activities. In contrast to previous years, Goal 7 does not appear discreetly in either annual plan.

DOJ CORE FUNCTION: DETENTION AND INCARCERATION

Goal 1: Provide for the safe, secure and humane confinement of persons who are detained while awaiting trial or sentencing, a hearing on their immigration status, or deportation.

As in past plans, INS' Goal 5 (Interior Enforcement) in the FY 2001 APP addresses the objectives contained in this core function.

DOJ CORE FUNCTION: INVESTIGATION AND PROSECUTION OF CRIMINAL OFFENSES

Goal 1: Reduce violent crime, including organized crime and drug and gang-related violence.

Through various inter-Departmental and interagency task force activities (e.g., Violent Gang Task Porce, Organized Crime and Drug Enforcement Task Porce) the INS provides direct support to these departmental activities. Removal activities and measures in INS' Goal 5 (Interior Enforcement) are end-outcomes which benefit by this involvement.

Gest 2: Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts.

Both INS' Border Enforcement (Goal 3) and Interior Enforcement (Goal 5) are supportive of these efforts. As a by-product of INS people inspection efforts at Ports-of-Entry (POEs) and Border Patrol interdiction of aliens illegal crossing the horder between POEs, drug seizures result, or based on the deterrent effect of INS activities illegal drug entry is thwarted. Given the linkage between drug-trafficking and illegal alien crossings and smuggling, INS Intelligence operations to deal with the latter invariably and often directly support success in the war against drugs. INS performance measures generally focus on apprehensions and arrests of individuals as agency outcome measures, however, reporting is provided on the number and level of drug confiscation's that result as the by-product.

Gent 2: Reduce espionage and terrorism (sponsored by foreign or domestic groups in the United States and abroad when directed at U.S. citizens or institutions).

INS investigations and intelligence activities, both independent and as part of the Joint Terrorism Task Force (JTTF) fink to these departmental objectives. As in the case of Goal 1 under this core function, INS' Removal activities and measures (in INS' Goal 5 -- Interior Enforcement) are end-outcomes which benefit by and reflect the results of this involvement.

Goal 5: Coordinate and integrate DOJ law enforcement activities wherever possible, and cooperate fully with other Federal. State and local agencies that are critically linked to improved operation of the Nation's justice system.

INS' investigations and prosecutions activities, and its intelligence activities, resulting from INS' Goal 5 (Interior Enforcement) and Goal 3 (Border Enforcement) efforts are supportive of these objectives. The operation of INS' Law Enforcement Support Center (LESC) and the conduct of operations under the new Quick Response Team (QRT) offices throughout the United States are particularly focused on supporting and cooperating in State and local law enforcement efforts. INS activities to integrate and share biometrics information, make booking information available to all law enforcement agencies (e.g., JABS), and post information on the National Criminal Information Center (NCIC) law enforcement network are all exemplary of improvement and support of nationwide justice system operations. These automation based activities are addressed under both INS' mission-direct goals and to some extent within the Information Technology activities covered by INS Goal 1 (Data and Data System Integrity).

DOJ CORE FUNCTION: MANAGEMENT

Goal 2: Meet or exceed the expectation of our customers

INS' support for the recipients/customers of immigration benefits is directly addressed in INS Goal 2 (Immigration Services) with directly applicable performance measures. Likewise, institutional customers (e.g., employers and benefit providers) using INS' alien status verification services are directly addressed under Goal 2 activities and measures. As regards law enforcement customers, INS' previously independently identified Goal 7 activities, which are now included within the respective mission-direct goals (e.g., Border Enforcement and Interior Enforcement), focus on meeting these unique customer law enforcement needs. Out-reach activities with State and local law enforcement entities as well as specific services and activities (e.g., LESC and QRT) are included in INS FY 2001 plans.

Gool 4: Make effective use of information technology

INS' Goal ! (Data and Data Systems Integrity) provides central focus for INS' key IT systems activities. Also, within specific mission-direct goals automation is addressed, as appropriate. For example, in INS' Goal 4 (Border Facilitation) the "Use of automated inspections systems" is a major FY 2001 objective with specific targets.

Goal 5: Ensure a motivated and diverse workforce that is well trained and empowered to do its job.

The infrastructure and Professionalism Goal within INS' APP directly links to these Departmental objectives.

FY 2001 ANNUAL PERFORMANCE PLAN

Introduction

The mission of the Immigration and Naturalization Service (INS) provides for enforcing provisions of the law which govern lawful entry and presence with the United States, and providing immigration benefits and services to individuals and entities (e.g., employers) entitled under law. The mission is accomplished through INS' operational offices located on the border, in the interior and overseas, and through a numerous special facilities for g. telephone representations processing centers, national records repository, training centers) throughout the United States. Accomplishing the mission-lined enforcement and benefits-services activities of the INS requires significant investment in physical infrastrictors and equipment, administrative support services, and maintenance of a competent, diversified, motivated and productive workforce.

The Immigration and Naturalization Service is proposing a 3 Y 2001 Annual Performance Plan (APP) that is altainable within the requested level of base and enhancement resources. The FY 2001 Plans are developed based upon input from INS Headquarters and Field managers and other INS stakeholders, both within and outside the Department of Justice. Border Management activities particularly reflect coordination with the activities of the Customs Service the Department of State, and State and local entities.

The INS FY 2001 APP supports the core Immigration and Management Goals of the Department of Justice (DOI) Strategic Plan 1997-2002, which was developed with thorough consultation with Congress. The INS Performance Plan meets the Federal Government's obligation to manage the immigration system and laws, and attends to the needs of the various customers served and impacted by the operations of the INS.

Overview of IMS' FY 2001 Performance Plan

In addition to continuation the critical activities funded under our have hudget, the Immigration and Naturalization Service's (INS) Annual Performance Plan (APP) for FY 2003 identifies new program activities that will be undertaken in support of the DOJ Strategic Plan and INS' strategic planning efforts. The focus of the Annual Performance Plan (APP) is the accomplishment of the mission objectives of the INS and the specific strategic goals and objectives outlined in these plans. The INS' overall program activities with appropriate summary-level performance indicators are outlined below within the context of the below-cited goal areas which address the immigration and Management core function goals established in the IDOJ Plan. More detailed information on FY 2001 program activities is provided in the accompanying hudget documentation.

The APP addresses six distinct Goals or Goal Areas. Data and Data Systems Integrity: Immigration Services; Border Enforcement, Border Facilitation; Interior Enforcement; and Infrastristure and Professionalism. The Border Enforcement and Border Facilitation goals, which exist separately in both the INS APP and the DOD Strategic Plan, are managed as a combined goal area by an assigned INS Executive, recognizing the integrated nature of the programs/components and their activities.

Standard Notations for Tables

Standard notations used throughout all Gost tables area as follows. NA = Not Applicable; NC = Not Counted; TBD = To Be Determined, Not Projected = target not established per Department policy not to set targets in law enforcement activities that could be received as quotas, and Report = Report of results that may include quantitative anchor qualitative information. Finished as company such notations to provide explanation, where required.

Verification and Validation of Date

Improvements in data reliability and accuracy have been explicit priorities of the Service for several years. In 1997 and 1998, each of the INS priorities had a data integrity component and, beginning in 1998, "Gata integrity" also became a centralized, cross-cutting activity under our "Data systems Integrity" goal. Inforts will be concentrated on ensuring appropriate data reporting for fiscal year 2000 and fiscal year 2004, and pursuing efforts required to maximize effectiveness and efficiency, in complying with Restats Act performance management requirements and for satisfying either fong-term data needs. An attachment to the enclosed GPRA tables, which lists the measures for each INS Goal area, provides for information on the data collection, data validation and data limitations associated with the respective measures.

Monocrament and Evaluation

The INS Performance Plan recognizes the important complementary role for performance measurement and program evaluation. Consistent with GPRA guidance, INS' program evaluation component will directly link program activities, strategies, and essuits achieved with future reasured requests and provide sound information for the formulation of immigration policy as well as strategic directions. Be Evaluation of INS programs is critical to identify and overcome weaknesses before programs are more widely implemented and to build upon and expand those initiative, that work well as the agency grows and is the subject of continued public scritical to determine program effectiveness are horder control, automated exit-entry control, immigrant sponsorship, parole, and pilot programs on employment eligibility verification, new immigrant public charge

bonding, the regulation of foreign students, and port of entry facilitation and effectiveness. INS will initiate evaluations of new and pilot programs, including those mandated by the filegal limitigration Reform and Immigrant Responsibility Act (IIRIRA), and expand its evaluation of the neveral employment verification pilot programs mandated by Congress.

In addition to the types of program evaluations mentioned above, INS planners will utilize the resources and evaluation results available from the Office of Internal Audit (OIA). OIA conducts functional reviews, as well as the comprehensive, top-to-bottom evaluations of District Offices, Sector Headquarters, and Service Processing Centers operations under the auspices of the INS Program for Excellence and Comprehensive Tracking (INSPECT). These reviews help us frame improvements and goals for our annual and strategic outcomes now and in the years to come. OIJ Office of Inspector General audit and inspection reports, as well as General Accounting Office reports are also useful for planning purposes.

Unking Performance Goals to Responsible Organizational Components

INS' annual performance goals align generally with the operational responsibilities of its major organizational components and the Executive Associate Commissioners for those components have responsibility for their development and management. On the "Data and Data Systems Integrity" goal, which is more cross-ceating in nature, a designated Executive manages activity on behalf of all components with appropriate cross-program representation on the management team. In terms of execution, goal activities that require field office activity are segmented into assignable targeted pintions for the affected field offices. For most mission-direct goals (e.g., Border Enforcement, immigration Services) regional office tevel targets are established, which are then further segmented and apportioned to District Offices, Border Patrol Sectors and other major components. For some goal activities, performance requirements are established for other types of major field office components (e.g., Administrative Centers, Service Centers (Benefits), Asylum Offices). This approach results in specific performance plans and goals being established at all major office levels within the agency.

DATA AND DATA SYSTEMS INTEGRITY

Enhance the integrity and integration of data and data systems operated by the INS in order to: establish fully integrated data systems supporting the coloresment and service functions of the INS; enhance the sharing of relevant data with other Federal agencies; and to support INS management and decision-making processes.

Data and Data Systems Interrity Means and Strategies

In FY 2001, INS will maintain data management, automated data systems, and related support to ensure that mission-critical data is available for mission operations, sharing with particle agencies, and for providing information to our clients, customers and other interested and affected parties. Given the significant, accelerated expansion of the IMS automated systems infrastructure base, INS will focus attention on the support of operations and effective use of the currently deployed systems, and on the maintenance of interritying sechnical networks and systems infrastructure needs expirited for these operations. Further development and deployment for critical mission-direct and for administrative and operational support automated systems will occur on a selective basis. In FY 2001, INS will increasingly focus on ensuring that systems and versions currently deployed are fully operational and are being used constantedly and effectively Service-wide.

In support of the automation and data quality improvements for the aliministrative and operational support systems, INS with continue to modernize its alien-files (A-files) Record System and the recently mistalled automated financial management system (FPMS) within resource availability! Progress toward centralization and modernization of the A-file Record System, undertaken within the Department-approved 5-year-plan, will lead to faster and more reliable access to alien files (A-files) information in both electrosic and hardcopy form. Limited improvements will be made to interface the newly implemented automated financial management system with other systems in order to support increased operational effectiveness and enhance dua quality. Other systems-based effectiveness and data quality improvements for administrative and operational support systems with be addressed within resource availability. Data Quality improvements outside those inhorest in, and as a hy-product of ADP systems improvements will be pursual. In particular, systematic, review, and evaluation of data collection and reporting requirements will continue to ensure that data is collected and reported accurately and timely, and that such data and data activities are appropriate for managing Service operations and satisfying mission requirements.

Available resources may include a proposed Shared Services Operations revolving fund in addition to base resources.

1. ADP Infrastructure Support and Operational Integrity

In FY 2001, INS will particularly focus on ensuring that deplayed ADP technology can be used effectively by providing technical support for the underlying systems and network sofrastructure requirements, and by providing technical training and assistance to users. However, INS will not initiate a refreshment cycle program in EV 2001 to upgrade and maintain the operational capability for its bins Office Automation platform throughout the Service thankware, software, LANs, etc.). This is a follow on necessity to maintain current operational levels realized through the multi-year deployment of the basic ADP platform that will be completed in EV 2001.

2. ADP Technology Development, Deployment and Integration

In PY 2001, INS will continue limited development, deployment and further integration of ADP technology systems used to support operations. Other critical needs in the areas of financial and administrative support systems arena will be addressed within base resources as available.

3. ADP Systems Utilization and Impacts

INS investments in automated systems to enhance its ability to carry out its mission will be increasingly monitored and measured to ensure most effective and full utilization and to identify the impacts and hencias of use. In FY 2001, INS' formal performance insulamentation for deployed systems will be expanded, and activities to address and resolve problems and issues affecting one will continue. Activities will focus on completion of monitoring and measurement for key mission-critical systems (e.g., ENFORCE, CLADIS, etc.) and expanding to other mission-direct and critical administrative and operational support systems.

4. Alter files (A-files)Records Medernitation and Integrity

In FY 2001, INS will maintain its partial centralization and modernization of its A-file record system. However, the additional inffrastructure support (e.g., shalving, facilities requirements), contractor support of operations, and further compaction of Federal Resourds Canter (FRC) holdings will not be pursued to complete the establishment of the National Records Center. The improvements achieved in FY 2000 for management of INS' paper and electronic A-file information.

5. Dans Ossilty

Within base resources, INS will continue to take actions to ensure that information in INS' databases is accurate, timely, and appropriate for managing, monitoring, and reporting in Service operations, and for providing needed data required for information dissemination and formal external reporting. These actions include not only continuing improvement of manual and automated processes, but also taking advantage of opportunities for integration and automatic sharing of data across systems and agencies.

Date and Date Systems Interrity Performance Goals:

1. ADP Infrastructure Support and Operational Integrity

in FY 2001, INS will effectively support the deployed ADP infrastructure and the level of operational capability by:

- Maintain the ratio of ADP sechnical support personnel to user personnel at 1:110
- Establishing a multi-year reptacement cycle program to appraise the base ADP technology infrastructure platforms throughout the INS office and program operations structure. No appraises will be accomplished in FY 2001.
- Establishing a multi-year program for increasing of the overall fevel of the security infrastructure underlying INS' automated systems and network environment. None of the upgrade requirement will be addressed in FY 2001.

2. ADP Technology Development, Deployment and Integration

In FY 2001, INS will continue to develop, deploy and integrate ADP technology by:

- Continuing relacted deployment of ENPORCE/IDENT to 9 additional sites, which will meet 72% of the overall deployment goal.
- Continuing deployment of CLAIMS 4.0 versions to provide for processing of 2 additional Naturalization forms/applications.
- Implementing 2 interfaces of other automated systems (e.g., procurement) with the new automated financial system (FTMS).

3. ADP Systems Utilization and Impacts

In FY 2001, INS will maintain utilization and mercase assessment of the utilization and impacts realized from deployment by:

- Maintaining 88% unligation of IDENT and ENFORCE IDENT at sites where deployed.
- Identifying, reporting and analyzing the impacts derived from use of ENFORCE and IDENT. Report of results to be provided.
- Maintaining IBTS utilization rates of 95% (Air) and 10% (Land) for primary inspections at airports and land ports.
- Identifying, reporting and analyzing the impacts of IRIS and DataShare use. Report of results to be provided.

A Alien files (A-files) Record System Modernization and Integrity

In FY 2001, INS will maintain the turnaround time on providing about the based information through faster transfers of physical files to requestors, and will increase use of alternative access methods such as use of electronic databases or through enhanced workstations.

 Maintain the 3-day average turnsround time to transfer physical files to requestors for files housed at the National Records Center.

5. Date Quality

In FY 2001, TNS will improve Data Quality.

 Improvements in data quality in terms of availability, occurring timeliness of availability, and usefulness of data. Report of results to be provided identifying improvement in terms of quantitative and qualitative information.

DATA AND DATA SYSTEMS INTEGRITY PERFORMANCE INDICATORS:

- ADP Infrastructure Support and Operational Integrity
 Ratio of ADP technical support personnel to over personnel.

 Number of sites receiving upgradestreplacements of their Technology Infrastructure platforms.

 Percent of the systems network infrastructure security requirements addressed.

 Percent of end users who rate Help Desk support as "good" or "serv good."
- ADP Technology Development, Deployment and Integration
 Number of sites with ENFORCE/IDENT installed

 Number of applications forms covered by CLAIMS 4 Opiniossing
 Number of systems interfaced with the new financial management system (IPIMS)
- ADP Systems Utilization and Impacts
 Percent utilization of ENPORCE-IDENT and IDENT where deployed

 Quantitative and qualitative impacts resulting from the use of ENLORGE-IDENT and IDENT
 Percent utilization of EBIS for primary inspections at air PDEs and land PORS
 Quantitative and Qualitative impacts resulting from use of IBIS and DataShare
- A-files Records Modernization and Integrity
 Average time for physical A-files to be transferred to requestors
- Data Quality
 Quantitative and qualitative improvements in Data Quality

DATA AND DATA SYSTEMS INTEGRITY

Enhance the integrity and integration of data and data systems operated by the INS in order to: establish fully integrated data systems supporting the enforcement and service functions of the INS; enhance the charing of relevant data with other Federal agencies; and to support INS management and decision-making processes.

Performance Information	Type of Indicator	Outa Sources	FY 1998 Actual [Target)	FY 1999 Target	FY 1909 Actual	Fy 2000 Target	FY 2001 Torpet
ADP infrastructure Support and Operational Integrity	<u> </u>						
ia. Ratio of ADP technical support personnel in user personnel.	Омри	Office of Personnel database	[1 100]	1133	1.107	()33	1:110
Ih. Number of sites receiving cycle replacements of INS' basic Technology Infrastructure platforms (percentage of total planuad sites)	Chitpui	O)RM Report	II INAI	NA	O	n	TBD' nites
<u>Prior Indicator</u> ; Number of sixes where INS employees have basic computer hardwatelooftware available (percentage of total planned sixes!	Output	OIRM Report	760 (91%)	778 (93%)	808 (96%)	#33 (100%)	NA

² Ratio previous to FY 2001 built on number of INS user staff personnel only, now also in , sides mission-appear contractor personnel being managed.

Technologies from the new leaning ration Services Capital Investment Account (ISCIA) will support 2000 work nations in FY 01 for Examinations Program sites. Sites to be determined by 2nd querier of FY 2003. Measure shown replaces previous measure which addressed initial approach/deployment of the new Technology Infrastructure platforms (hardware, self-ware, teleconvanisations) for INS offices and programs, which will be completed in FY 2000.

Due to consisted office growth, FY 96 site number total requirement was 760 (adjusted from 750) and FY 99 total was \$33.

I-Y 2001 Annual Performance Plan - January 2000 Data and Data Systems Integrity

Performance Information	Type of indicator	Data Sources	FY 1998 Actual [Target]	FY 1999 Target	FY 1999 Actual	FY 2000 Target	FY 2001 Tarpet

IMMIGRATION SERVICES

Deliver services to the public in a timely, consistent, foir, and high quality resoner.

<u> Institutation Services Meure and Strategies:</u>

The INS will continue re-engineering efforts aimed at delivering services that are timely, consistent, fair, and of high quality, with continued emphasis on ensuring the integrity of applications for immigration benefits. "Lessons learned" from Naturalization process re-engineering in FY 1997-2000 will be shared and consiste to be incorporated into all applications processes. Major enhancements, begun in previous years, to automate processes and improve automated systems supporting applications processing such as fingerprinting, telephone-based information services, and firms destribution for extensers, will continue. The 1MS will continue to increase customers satisfaction with its services programs. The Asylum Program plans to maintain processing standards established through FY 2000 for Expeditual Removal and Asylum (1-589) case processing, while addressing and stabilizing production for the new NACARA (1-181) case work that arose just prior to the start of FY 2000.

DIS will continue the standardization and integration of its procedures for determining aliens' eligibility for temporary residence, permanent residence and naturalization. The automation of the supporting information systems will continue. INS will continue to make major improvements to the system for verifying aliens intergration status. FY 2001 will continue continuation of all previously started critical tasks and systems efforts, fine-tune such elforts and begin to take limited well-defined initiatives to expand activity, particularly in dualing with fraud.

BNS proposes to establish a Premium Service for Business Cases, to begin in FY 2001, with an appropriate fee to meet the needs of BNS' business ellipsosts who require higher levels of applications service for specific cases (e.g., H-IB). This service will be established in a measure that will protect the service levels provided to INS' other individual and institutional clients. The anticipated revenues from any such fee, estimated to be S80 million, will focus on the premium service expanded anti-fraid activity, and providing assurer for capital invagaments.

In FY 2001, INS also proposes to establish a limingration Services Capital Investment Account (ISCLA) to be used for funding infrastructure, upgrading automated systems, and activities to reduce applications processing backlogs. The proposal includes capitalizing the ISCLA at \$127 million with funds from the new Premises Service for Business Cases for, a re-authorization of 245(1)

edjustment of entre geogram fees, and direct appropriations. Proposed initiatives from this funding would include: expension of authorists survices via the National Contourer Service Contex; enhanced functionality for the electronic fingerprinting of applicants; continued development and expension of digital photography and signature expubility in the Application Support Contex; replacement of CLAB6S 3 level of automation which reprint all applications processing effect than Naturalization; replacement of ADP workstations, postage applicant and cash registers in field offices; completion of CLAB6S 4 level automation deployment to support all Naturalization case processing; and various space, equipment and automated systems support initiatives for the National Records.

INS. WHE Continue Re-majorarium Efforts in Journal Customer Service and the Delivery of Information Services in and Continues, and Controller on Private Energetics to Improve Customer Service.

- BIS will continue to implement number/lization initiatives concerning application processing (lens, forms delivery, quality spaces and adjustication procedures.
- PAS will expand re-engineering efforts to other benefit applications (e.g. 1-130, 1-751), as funding permits, while continuing to implement re-engineering processes in naturalizations and adjustment of status.
- PUS will ersure full implementation of achesholed enhancements and optimize the electronic and telephonic systems and related processes (Telephone Center, Forms Center, status impriries, use of internst, and address controlization). Alien-files (A-files) Records controlization and recotenization, impressive of henefit application processing, will continue (reported through the "Data and Data Imagrity" Coal).
- DIS will encourage private, public and reher external sources to help improve our delivery of services by disaminating business requirements and levicing external sources to refler creative improvements. (for example, development of an IRS-type telephonic and electronic forms submission system).
- PIS will continue deployment of anomated care processing support systems for all major form types, drawing on a continue alucironic detabase for all transactions with each alien, and complete deployment of automated support systems for fingerprinting and other external record checks.
- PVS will continue implementing a comprehensive plan for ensource information utilizing a wide range of current and new communication methods, organized through a specific functional structure national, regional and total levels.

- INS will continue incorporating regular measurements of customer service into all benefits programs and information efforts, and regularly publish results.
- -IRS will making the manufacturing of the new generation of IRS cards within the framework of approved investments in production capacity.

2. INS Will Leverage Technology to Enhancy Sepretits System Support

INS will enhance the standardization, integration, and integrity of benefits processes by ensuring migration of the business process from legacy systems to one systems platform, maximizing accuracy of data, and incorporating positive identification (automated biometries).

J. INS Will Improve Verification Server

 - PMS will expand participation in the use of verification services, incorporate verification services into BMS' overall deterrence meaning, and explore the potential for sharing hometries data with other Federal, state and focal agencies.

4. INS Will Maintain Arrian Processing Standards

INS will maintain processing standards for Expedited Removabilization for referrals, new Asylum reform casework, and
migaticate newly filed I-881 auspension of deportation, or special rule casestlation of removal cases.

5. INS WILL Expend Anti-Franci Efforts

- B4S will continue to increase the effectiveness of henefit fraud investigations by: developing policy guidance concerning high risk applications, including individual instances of fraud (e.g., 1-90, 1-130, 1-140, 1-589); addressing breader document problems; and by developing information sharing with exter Federal, state and local agencies to improve fraud desection and to independently verify certain application accuracy, such as employment-related records and birth certificates.
- BHS will develop a HQ-level staffing plan to ensure coordination between froud units in Service Centers, District Offices, and HQ-Offices of Intelligence and Teventigations; explore additional uses of technology, such as image comparison software, and

links to databases, such to IDENT, develop reporting successions and cuteria; and publicine successes to magnify deterrence effect

- INS will continue to expand and evaluate anti-front initiatives with the Department of State.

IMMOGRATION SERVICES PROFUMANCE GOALS:

- 1. In FY 2001, INS will continue to maintain processing standards by completing 75 percent of capedited removal/credible fear referrals within 14 days, complete 75 percent of new Asylum reform referrals within 60 days, achieve 50,000 mythm care completions, and adjudicate (#TBD) newly likel NACARA (I-RH); suspension of deportation, or special rule cancellation of removal cases.
- 2. In FY 2001, INS will continue re-engineering efforts aimed at delivering and ensuring the integrity of nervices that are timely, consistent, fair, and of high quality, especially in the area of autovirient of status (AOS) case work. INS will complete 600,000 AOS cases and reduce average processing time to 14 months.
- 3. In FY 2001, INS will maintain fingerprint processing (from capture through receipt of FB1 determination) by maintaining the processing time of) week, and maintaining the rejection rate of 3 percent.
- 4. In PY 2001, INS will implement customer-oriented husiness practices by: centralizing public forms delivery in order to respond to 100 percent of requests for forms within 5 days; improving service at the National Customer Service Center by reducing busy rates to 3%, customer hold time to 1 minute and sheedownest rates to 8%; and increasing the overall customer satisfaction rate to 74%.
- 5. In FY 2001, INS will improve constoyment verification nervices by expanding the availability, timelianus, and effectivement of verification services to an additional 500 mers, while maintaining the average 1-day response time on automated inquiries. Average response time for automated inquiries from henefit providers will be maintained at the 3-day level.
- 6. In FY 2001, INS will increase quatoract satisfaction with the PCHA/PA program by reducing the number of backlog cases (over 20 days) by 33 percent.

1888

Immegration Services

7 In FY 2001, INS will develop a long-term approach to deter anti-heneful frault by explaining additional uses of technology, evaluating and expanding anti-fraud initiatives with the District Offices, Service Centers, and HQ Offices of Intelligence and Investigations.

Innuiteration Services

¹⁶ The Green Card Replacement Program will begin in 3rd Quarter of FY 99. INS expects a significant increase in the number of requests for new cards which may exceed current production capacity and which would affect our shifty to meet targets.
¹⁷ FY 90 targets maintain FY 99 target levels despite FY 99 Actual accomplishments. FY 99 Actuals based on unique situation wherein saceas capacity existed at end of the year which will be absorbed in FY 00 by INS* multi-year program for Replacement of old version Cards that commences in the FSI of 1999.

RORDER ENFORCEMENT

Secure the land harder, Ports of Entry and coasts of the United States against illegal sugration through effective our of including and personnel resources focused on enhancing the deterrence to entry and apprehending and removing those who attempt to enter illegally

Berder Enforcement Meson and Siral colon:

In FY 2001, the INS will continue to focus is citizen to the tasks of horder enforcement through several Border Management and Control strategies. The first such strategy is Port inforcement, where enforcement efforts at the Ports-of-Entry (POE) target more sophisticated methods of illegal immigration and alon strateging, and expand implementation of the expedited removal authority granted under the Illegal Immigration Reform and Immigratio Responsibility Act of 1996 (IRRRA). The second strategy focuses on the Observation of unlawful horder crosses who seek to order between Ports of-Entry.

The INS National Border Control Concept is in achieve control of the horder at and hetween Ports-of-Entry. An additional 430 Border Patrol against and sechnology resources are requested in FY 2001 to maintain and extend council along the border. The primary control focus with be in the border zones, that can be brught under control in FY 2001, with the added resources, as identified by the operational assessments performed in FY 2000. Additional impacts on operational effectiveness and deterrance levels within identified zones will be achieved by the continued systematic deplication of technology and other resources that directly support enforcement operations. THS will continue developing an intelligence infrastructure with the goal of supporting all enforcement efforts, and creating againsts border coverage that integrates horder and interior enforcement efforts. Border management operations will be unbiaseed prior to and ofter entry by transactional and discretic investigations, anti-armaggling and intelligence and interior and affairs intrinsional affairs intrinsional affairs intrinsions.

Berlitz Enlersment Perferences Gook:

In PY 2001, INS will increase the effectiveness in apprehending and deterring persons exceeping illegal entry or measured by the
percentage of INTEX pessengers found to be inadmissible. INTEX data used to undergo a thorough and complete statistical
validation and verification review by INS Statistics and Inspections prior to noting surgests for PY 2001 and PY 2001. The continue
date that this is possible in the end of Pebruary 2000. The INTEX process is additional, but more rigorous, supplementary
immediate involving a detailed review of traveler decuments, daubance, and personal items. The INTEX process is administrated.

to a random number of travelers who are insercepted after inspection, but before they exit the Federal Inspection Service (PIS) area.

Depending upon the size of the POE, no less than use and no more than five INTE's are conducted per day at each POE. Using INTEX, the INS will improve the infercement effectiveness at selected Portage Figure.

- Through overnous enforcement operations (Global Reach). INS will disrupt organized criminal movement of aligns to the border
 by increasing small fide traveler and offshore ingrant interceptions on made to the United States by one purcent over the previous
 year. Additionally, INS will increase the number of inverces investigations completed by three percent over the previous year.
 Through DNS manifement, best and trained eventures will continue their absorbered/sanction efforts and princentions at the same rule
 is in FY 1999 and FY 2000.
- 3. FY 2000 and FY 2001 targets for "operational effectiveness," will be defined and set for each zone that we will maintain or target the improvement on the tending to the end of February 2000. In order to determine performance in each zone, the INS will complete an magazinest of zones where content has been established and three that will be targeted for improvement. Enforcement effectiveness will be determined by the rates of altern apprehended to the member of slegal entries attempted. Some operational assess along the border will not have achieved a capability to be measured by the performance matric prior to FY 2001. In some zones, due to remote location and/or scarce brader control resources, an operational effectiveness measure is not figurible at alt. The objective of continuing to apply increased levels of fluider Patrol resources is in increase the level of description of the content press and increase the level of description in national lates the effectiveness models will be integrated into the contentic planning process to make resonances in remove, developing alternatives and evaluating operational effects.

The Bender Parrol will use the Information gleaned from a short-term operation conducted in Patrio Rico (projected to be completed in PY 2000) and trake on assessment relating the increased level of resources to an improvement in enforcement, capability in their areas of sparation. The key clements of the National Border Patrol strategy will be reviewed in PY 2001, including the Newton Burder and Coastal Society.

4. IPS activities will have an impact on crime rates in selected U.S. cities located near the nouthwest border. An evaluation (Report) will be produced amounting the impact of border management operations on bey nouthwest border eities based on data collected on various crime categories, including violent crimes, property crimes, and total crimes. Many factors externel to INS hander operations influence crime in duste cities. Nonetheless, this form of "impact may be evidenced by a declining, stabilized, or less steep rise in crime rates that steep and hower presents of the place.

1940

Border Raftermant Performance Indicators:

- Improve effectiveness in apprehending persons attempting illegal entry and expand overseas enforcement activities under the Global Reach umbrella (anti-imaggling, benefit fraud, and auxiliary investigations, as well as fraudulent document training) to detect main fide travelers and dismantle alien smuggling organizations.
 - Effectiveness in apprehending persons attempting (liegal entry through Posts of-Entry)
 - Strengthen host and transic countries' ability to deter-diegal managration to the United States through support of abatement/sanction of idegal activity and prosecution of fraud purpoyers and after smagglers.
 - ⇒ Number of male fide traveler and offshore migrant interceptions on male to the United States Overseas Investigations.
 - completed (unuggling, benefit fraud, and auxiliary investigations)
 - Offshore prosecutions/sanctions assisted by INS personnel
- Level of operational effectiveness within identified zines on the Southwest Border.
 Number of aliens apprehended to the number of illegal entries alterapted.
- Impact on crime rates in U.S. cities located near the horder (impact on cities and selected FB1-index crime categories related to illegal immigration to be reported based on horder enforcement operations).
- Strengthen Operational Effectiveness through the use of Intelligence Number of special operations predicated on intelligence

1879

Border Enforcement

Socure the fund barder, parts of entry and counts of the United States against illegal migration through effective use of technology and personnel resources formed on enhancing the deterrence in entry and apprehending and removing these who attempt to enter Hegal

BORDER FACILITATION

Facilitate learns travel and commerce across the borders to the United States

Border Excitination Manne and Strategies:

In FY 2001, INS will maintain the traveler processing times attained in FY 2000 about Land and Air Proto-of-Entry (POEs), as an increase in numbers of travelers is experienced. The use of automation and technologies to facilitate processing time performance, such as distincted commuter lance and accelerated processing times, will continue. INS will continue coordinating and integrating facilitation efforts with other Federal Inspections (FIS) approach at PNEs, with particular emphasis or INS.—Customs efforts Both alone and in cooperation with these agencies. INS will continue efforts to facilitate lawful traffic and commerce by increasing the pre-accessing of parameters, sorting parameters and which legitime traffic and corrected in FY 2001 to meet increasing which facilitate traffic without docreasing enforcement. Additional Insingration Inspections in requested in FY 2001 to meet increasing workload related to the expedited removal process at land broder Ports-of-Eurry. Inspections positions are also requested for Inspections operations in land POEs that will continue improving energy and call systems controls to more easily identify individuals violating imminimizing laws.

Rattler Pariffiction Performance Gooks

- In FY 2001, INS will maintain weir time and traveler satisfaction standards at air and land Ports-of-Entry. The target is to clear 72
 percent of commercial air flights through primary inspection in 30 minutes and have the wait times less than 20 minutes 30 percent
 of the time at land border Ports-of-Entry.
- The IRS will remintain traveler survey estisfaction rates relative to wait times to 95 percent for travelers at airports and 96 percent for land border crossers, and maintain inspector professional and counterest ratings at air and land border ports at 95 and 96 percent respectively, (target percentages may change based on PY 3999 and PY 2000 results).

J Y 2001: Annual Performance Plan - January 2000

Border Excellenteen

Border Facilitation Performance Indicatory:

- · Waiting times at air and land Ports-of-hintry
 - Percent of commercial air flights to clear printing inspection in 30 numities or less
 - Percent of time land horder wait times easierds 20 minutes
- · Use of automated inspection systems
 - Percent of travelers inspected by automated inspection systems at ports equipped with INSPASS or SENTRI
- * Traveler Satisfaction with inspection services
 - Traveler satisfaction with Inspections was times
 - Traveler satisfaction with the professionalism and countesy of inspectors

INTERIOR ENFORCEMENT

To meet the complex chollenges posed in the interior of the United States, the Immigration and Naturalization Service (INS) has established the following priorities to be executed through effective and coordinated use of himsed consucress and increased inter-governmental cooperation; identify and remove criminal above, and minimize recidivism; deter, dismandle and diminish amongpling or trafficking of aliens; respond to community reports and complaints about illegal immigration mel build partnerships to solve local problems; minimize immigration heacelft fraud and other document abuse; and black and remove employers' access to andocumented workers.

Interior Enforcement Means and Strategies:

Fiscal Year (FY) 2001 is the second year of implementation at a comprehensive integrated interior enforcement strategy. In FY 2001 INS will continue to concentrate and increase entorcement resources for criminal removal activities, targeting incarcerated aliens, through institutional removal programs, and through increased cooperation with state and local authorities. INS will maintain control of existing corridors and continue pursuit of investigations and asset forefaiting to dismantle major smuggling and illegal employment-related organizations. INS will focus on anti-fraud operations to identify and disrupt major document fraud ventures and detect and deter large-scale benefit fraud using cross-component detection strategies. INS will continue worksite enforcement targeting criminal prosecution of employers who intentionally violate the law, exploit workers, or engage in related criminal activities. In addition to the removal emphasis and reliance on criminal prosecution of smuggling, fraud and employer violators. INS will conditionate community response activities in support of Internot Inforcement operations and to liaison with law enforcement emitties. INS enforcement and community components will seek to build close cooperating relationships with other federal, state, and local law enforcement entities. INS will continue to emphasize cross-regional planning with border and oversoon operations as it minimal negative impact of aliesal national security and public safety.

Refinements to goals, strategies, targets, and projected nutcomes are being set forth in specific implementation plans for each of the key compensates in the Interior Enforcement Strategy. The NNS will use the targets identified in this APP together with these implementation plans to not only support the Interior Enforcement Strategy, but to assess overall agency performance and results.

Identify and Remove Criminal and Terrorist Aliens and Manuage Their Reculosism

The INS will target incarcerated aliens through the Jederal Institutional Removal Program (IRP). INS will also emphasize alternative, non-hearing removals, responsiveness to state and local law enforcement officials, and early and continuous monitoring of all types of detention and transportation resource availability and utilization INS will use technological and intelligence analysis and National Crime Information Center (NCIC) records to identify criminals and recidivists, and in conjunction with the Office of U.S. Attorneys, will pursue prosecution for re-entry after deportation to deter receptivism.

INS will increase and effectively manage bedspace in support of incrior and border removals and to meet Congressionally mandated is quirements under the Immigration Reform and Immigrant Responsibility Act of 1996. By providing resources for the highest mandations detention categories, INS will accomplish adherence to guidelines and shifts to facilities that have the lowest per diem costs. In addition to responding to detention space needs in "bot space" for initiatives such as amaggling or fraud operations or the Quark Response Teams (QRT), INS will need helt space for unplanted events such as large smuggling operations (e.g., Chinese bost cases). Increased use of Joint Prisoner Also Transportation System (JPATS) will ensure that transportation resources support national priorities, law enforcement requirements, remivals acusts, and effective use of hedapace.

Veter Dismanule and Diminish Sementing and Traffictions of Alican

In FY 2001 the INS will continue the implementation of the National Anti-Smuggling Strategy in order to disrupt and dismantle alien saturgating organizations. The INS will aggressively pursue alien saturgating investigations that are complex, long-term, and international in scope. In FY 2001 that INS will continue to utilize lifte III, wire intercepts, and investigations which utilize business proprietations and easet forficitive. INS will continue to utilize lifte III, wire intercepts, and investigations which utilize business proprietations and easet forficitive. INS will also establish liaison with surrounding communities through community relations offlows. INS will refine and expand targeting to new geographic areas through extensive use of a centralized, coordinated flow of intelligence analysis and force amonggling organizations to seek alternate routes of travel. INS, in alliance with the FBI, will continue to negationisty target cophisticated alien saturgating organizations that are international in scope. These activities will prevent the recurrence of amonggling, artifictions, and transporting of illegal aliens.

Respond to Community Reports and Complaints About Fileral Immeration and Build Perspersion to Solve Local Problems

INS will continue initiatives in response to the recels of federal, state, and local law enforcement entities including wider use of Law Enforcement Support Center (LESC) identification and referrals, NCIC, and leadership of and participation in task forces (e.g. Joint Testvorism Task Force and Organized Crime and Drug Enforcement Fask Force) to reduce threats to public safety. In coordination with consummity impact goals and strategies, INS will support community-policing institutives with orientation and information

Interior Enforcement

exchange and will address detention essues most notably through the ORT program. Such intergovernmental operations, intelligence sharing, and linison will achieve the objectives of public safety, improved quality of life in communities, and removal of criminal and terrorist alterns.

Minimize Immigration Benefit Fraud and Chlice One innerest Abuse

INS will continue its emphasis on major, large-scale benefit fraud investigations, including those identified from Service Center detection strategies and intelligence assessments. INS will further domestic and international efforts in order to significantly impact the document fraud. INS, in coordination with the US Attorney's Office, will also coordinate anti-fraud efforts in the Benefits program to supplement case-level identification with development of national investigations and emphasize the use of asset forfeiting.

Block and Remove Employers: Access to Undersmonted Barkers

INS will focus on criminal investigations against employers who intentionally violate the employment provisions of the Immigration and Nationality Act (INA) and related statutes. Employers will be placed on employers who engage in alien smuggling and immigration-related fraud ventures. Investigations will be conducted of industries with a retrance on unauthorized labor in targeted geographic areas. INS will continue involvement with Department of Labor to change hiring practices.

Interior Enforcement Performance Goals:

- In FY 2001, INS will increase the total number of non-expedited final order removals from the U.S. to 100,000, including 70,300 criminal removals and 29,700 non-criminal removals. INS will month the number of expedited removals.
- 2. In FY 2001 INS will remove 25,700 aliens via the Institutional Removal Program (IRP).
- 3 In FY 2001, INS will present for prosecution long-term, complex alien smuggling cases that are interregional and/or worksite-related. INS will also present principals for prosecution for alien smuggling-related violations in order to disrupt and dismantle smuggling organizations.
- 4. In FY 2001, INS will strengthen operational effects eness through the use of intelligence

1/24/00

- In FY 2001, INS will build partnerships to solve local problems by strengthening the QRTs deployed in FY 1999 and FY 2000 as well as by increased task force cooperation.
- In FY 2001, INS will focus on the number of forge-scale heacht and document fraud cases and principals presented for prosecution that target major organizations and tacilitators.
- In EY 2001, INS will continue to emphasize the prosecution of criminal cases against employers who intentionally hire unauthorized workers or violate other employment-related criminal statutes.
- In FY 2001, in cooperation with the U.S. Attorney's Office, INS will increase the number of fraud, imagaling, and employment
 conspiracy cases presented for prosecution with inclusion of forfeiture or a parallel civil forfeiture above the FY 2000 projection.

Interior Enforcement Performance Indicators:

- Number of Removals
 Criminal and non-criminal atiens
 Institutional Removal Program
- Number of cases and principals presented for protection under the National Anti-Smuggling Strategy.
- Number of special operations predicated on melligence
- Number of Law Enforcement Agency (I.E.A) referrals to the Quick Response Teams (QRTs), alien apprehensions occurring as a
 result of these referrals, and individuals presented for prosecution as a result of LEA referrals to QRTs.
- Number of apprehensions of aliens with a nexus to organized conic, violent gangs, and/or drug-trafficking gangs by federal, state, and local law enforcement agencies on task force operations and number of apprehensions of aliens with a nexus to terrorist-related affiliations by participating agencies of the form ferrorism task Force (FTTF)
- Number of cares and principals presented for procedation to getting major benefit application and document froud organizations and facilitators.

7691

Interior Unforcement

- Number of criminal cases presented for prosecution of conflowers who intentionally hire unauthorized workers or violate other criminal statutes relating to the hiring and/or community employment of unauthorized workers.
- Number of cases in which forfeiture authornies were pursued against employers, singglers, and fraud vendors and organizations

2. Increase the number of removab receiving from the Institutional Removal Program (IRP) ³	Outcome	DACS	 	16 800	23.9331	25,700 ^{3 & 2}	25.700°

Interior Enforcement

In addition to traditional IRP removals (decision before release from memoration), FY 1994 Actuals and FY 2000 and FY 2001 Targets also include "fast-track" IRP removals (an order of removal is issued in the day of, or the day after release from incarceration). The efficiency measure, "percentage of deportable inmates released to 1NS from institutions who received a final order via IRP" and the disaggregated sub-categories for "numbers of federal and state prison IRP removals, county/only sail IRP removals, and Voluntary Returns Under Safeguards originating in correctional institutions" were moved to lower-level internal operational plan tracking. Since detention resources directly support removals targets, the detention inputs and output measures for "hedspace available" and accreditation were moved from APP-layer monitoring to lower level internal operational plan tracking.

INFRASTRUCTURE AND PROFESSIONALISM

Enhance and maintain the administrative support services and infrastructure required to accomplish INS' mission-direct upgrations and goals, through which a motivated, well-trained and diverse workforce is empowered to do its job.

Infrastructure and Professionalism Means and Strategies:

INS must provide an extensive institutional infrastructure that includes facilities, vehicles, seconly, health and safety policies, training, support staff, and planning - to support a mission that has grown significantly during the past 10 years and will continue to grow Because of the rapid growth experienced by the INS infrastructure support has not kept pace with the service and enforcement missions. In FY 2001, INS will continue to address the deliciences to ensure that the INS workforce can perform efficiently and effectively. There are three major computed to this choil (1) supporting and principing the workforce with a safe, secure, and adequate working environment, including facilities, vehicles, training workfide and career development initiatives, (2) supporting the mission objectives with timely and efficient administrative prospects and support for personnel, physical and financial assets, procurement, budgeting, and planning, and (3) pronoting and maintaining a protessional, motivated and diverse workforce with includes institling productive attitudes into the workforce such as those dealing with teamwork, empowerment, and communication

INS will improve its infrastructure support over several years through the implementation of a "standards" approach. The standards approach involves establishing the comprise answint of space for employees, compliance with security requirements, compliance with health and safety requirements, age and safety of velocies, promptiess of training for employees, and adequacy of worklife initiatives. Activities include involvement in OSHA programs, the climination of backlogs in facility construction, maintenance and repair, compliance with Federal security requirements, their replacement and maintenance schedules, and career development and work-life initiatives.

To ensure that infrastructure and professionalism support continues at appropriate levels in the future, INS will increasingly integrate administrative and infrastructure support requirements into mission initiatives through changes in the planning and budgetary process. This will provide a clear articulation of the relationship between mission infrastructure support and the INS' ability to effectively and efficiently perform mission-related tasks. INS will also expand the strategy planning and budgeting processes to provide multi-year site-specific deployment plans to assist resource planning and programming. Finally, the basic management initiatives that allow the catisting workforce to be productive (Empowerment, Teamwork, and Communication) will continue to improve.

Protect and Support the INS Workforce

Over a period of several years, INS will meet standards of protection and support for new initiatives and for additions to the INS workforce, as well as reduce resource backlogs that prevent standards from being achieved for the existing workforce. The four aspects of protecting and supporting the workforce are: at ensuring adequate and occure facilities in which to work; b) ensuring health and safety for employees and others tensionmental health despressions, officer safety); and c) ensuring that employees have appropriate volucles and other engagineer and that their use is properly controlled.

Workspace and Facilities

The INS will protect and suppose the INS workforce by funding backlinged repairs and alterations for INS facilities and by allocating additional space for staff under the enguing One Time Cost Program funding. The Office of Administration's localities strategy remains the same of FY 2001; maintain existing infrastructure, house new missions, optimize public, and private resources, support quality of life; and improve environmental stewardship. Infrastructure that protects and supports the INS workforce and integrated administrative and resource support requirements into mission initiatives through changes in the planning and budgetary process are included in the FY 2001 budget.

An independent evaluation of the INS Programs determined an annual requirement of about \$21.5 million per year exists in major unfunded Repair and Attention (R&A) requirements. In addition, the study concluded the projected maintenance and repair backlog at INS to be between \$140-\$191 million, spanning FY 1999-2003. Based on standardized industry measures, buying-out the maintenance and repair projected backlog would bring the Service up to commonly accepted standards for facility R&A. Decreasing the critical backlog of facilities R&A projects hinges on receiving vital funding in FY 2001.

DNS is required to implyment and sustain secure work environment for all employees in compliance with Federal Security States rds. (7) the current 417 INS locations only 32 are fully compliant with Federal Building Security requirements for In FY 2001. INS will increase compliance with Federal Building Security requirements by 2% with the addition of 45 facilities in house new interior enforcement Quick Response Teams (QRTs).

FY 2001 Annual Performance Plan - January 2000

Infrastructure and Professionalism

h Space Allocation/One-Time Construction

The intent of this goal is to provide appropriate facilities and space at sites where INS staff will be deployed in the future. A combination of factors have created in enormins backing of needed lease space through the General Services Administration (GSA) due to the shurtage of One-Time Cost construction funds. Current practices of using program funding and lapse resources cannot adequately support the size of this shortfall. The factors contributing to this backing include. (1) this one space shortages: (2) current requirements for lease renewals, forced moves, consolidations and other implanted actions; and (3) the impact of the new growth which the agency has been experiencing in recent years.

The known backlog of One-Time Cost requirements in FY 2001 is approximately \$210 million. An internal INS analysis of the \$210 million requirement shows that about eighty percent of the needed space supports the strategic goals of the agency. The remaining twenty percent of space equally supports space for the BP or participation, however, the mapping of BP space requirements are met with new construction. Interm facilities solutions are being implemented where possible at this time, but they do not satisfactorily address all of the needs for enabling the guidactor adequately access many INS facilities.

c. <u>Flees/Vehicle Quality and Sufety</u>

ONS will consider projects to improve facet management and operations. Activities include the replacement of the flora module of the Asset Management Information System, centralization of vehicle retrofitting; and arrangements for major maintenance and rebuilding of interurban busses.

4 Healthful Work Environment

INS will provide a productive, safe, and healthy work environment for its employees, customers and various other entities. This will be achieved through improved compliance with various standards and requirements established by Federal statutes, regulations, or policy. [NS will continue to conduct site visits, training, analysis and review to identify opportunities for improvement of processes and the reduction of costs associated with work-related injuries.

Intrastructure and Professionalism

Support the INS Mission with Timely and I fficient Administrative Processes and Services

The recent growth of INS has strained the administrative resources that keep the Service functioning similarly and effectively. These resources support ongoing activities such as recording, hinny security elemances, promotions, travel, personnel actions, procurement, maintenance, planning and budgeting.

3 Promote and Maintoin a Professional, Motivated and Diverse Workloner

INS will continue to improve the quality and effectiveness of the INS workforce through recruiting and natinging for diversity. This will include affirmative employment activities, establishing alternative means of dispute resolution, and institling core values that reduce the potential for complaints and disputes. INS has made significant progress in the past several years in increasing diversity or its workforce. This progress has led to greater challenges in managing a diverse workforce for maximum effectiveness, and increases and increased claims of discrimination based on non-merit factors. Failure to make the work place more responsive to the increases in diversity will reduce INS' ability to attract and retain high performance employees.

INS will focus attention on changing attitudes required a working environment that eliminates barriers to hiring, mobility, advancement, and productivity. INS will also strive to reduce incidents of employment discrimination through proactive training and elarification of policies, by responding quickly to complaints of discrimination, and by using afternative means to resolve complaints at the lowest possible level.

4 Border Patrol Hirans

In an effort to extend border enforcement success, the Immigration and Naturalization Service with continue to deploy Border Pitrol Agents in accordance with the Attorney General's border management institute and to support the INS Border Patrol strategic plan. For FY 2001, INS has projected that 430 new Agents will be deployed in key operational zones along the southwest border and at northern border sites. The National Hiring Center (NHC) with continue is the centralized processing facility for thiring entry-level Border Patrol Agents. The NHC assumes full responsibility for the Border Patrol Register, oral board scheduling, pre-approximent processing, entry-on-dusty and attendance at the Border Patrol Academy, and the Border Patrol Reinstatement Program.

Available resources may include a proposed Shared Services Operations revolving fund in addition to base resources.

FY 2001 Annual Performance Plan - January 2000

Infrastructure and Professionalism Performance Goals:

- 1. In FY 2001, INS will maintain effectiveness of workspace and facilities through:
 - Maintaining the percentage of INS employees that are boosed in facilities which are in compliance with GSA workspace standards.

Infrastructure and Professionalism

- Maintaining compliance with Federal building security requirements at 17%
- Improving compliance with health and safety policies and guidelines for INS work environment, (Improvements to be reported based on "on-site" visits and analyses)
- Decreasing medical attention claims in Workers' Compensation to 17.5 per 100 employees.
- Maintaining the percent of INS vehicles in compliance with the Federal replacement cycle standards
- 2. In FY 2001, INS will actively pursue the acquisition and allocation of space by:
- Allowing Field and Regional personnel, working in conjunction with the Regional Facilities Boards and their respective Administrative Center, to establish a priority list of approved projects for submission and prioritization into a single Service-wide priority list by the Headquarters Facilities Securing Committee
- Ensuring updated INS Space Allocation Standards (SAS) are uniformly applied in the space acquisition and allocation process to meet the existing mission requirements of INS, FY 2001 Annual Performance Plan, INS Strategic Plan, and provide INS decision makers and customers a tool to determine equity of facility used allocation within their respective areas.
- Implementing the Computer Aided Facilities Management System (CAFM) data base by FY 2001. The CAFM with allow tracking and analysis of program needs and activities on that recommendations can be provided to the Regional Pacifities Boards and Headquarters Facilities Stooring Committee so that the INS can get the maximum return on its real property result investment.
- Ensuring the timely biring of newly appropriated enhancement positions for the field to immediately address One-Time Cost program support. Administrative Center support to focus and concentrate on planning, programming, requirements analysis and

FY 2001 Annual Performance Plan - January 2000

Infrastructure and Professionalism

development, and facility operation and maintenance support to hence deliver the INS program and mission requirements to the field.

- 3. In FY 2001, INS will maintain timely and efficient administrative support through
 - Improving the timeliness and efficiency of its administrative processes, through resources commensurate with the size of the workforce and through strategic investments in process automation and reengineering.
 - Increasing the staff support and funding at two Administration Centers (Dallas and Burlington)
- 4 In FY 2004, INS will promote and maintain a professional, monorated and diverse workforce through:
 - · Maintaining the number of employees who receive advanced training
 - Improving the recruiting, retention, development, and deployment of INS employees
 - Increasing the hiring and advancement of women and minorities throughout at all grade levels
 - Increasing the hiring of qualified entry-level Border Patrol Agents

Infrastructure and Professionalism Performance Indicators:

- Percentage of DNS employees that are housed in facilities which are in compliance with GSA workspace standards
- Percentage of INS buildings that are in compliance with Federal Security standards
- Percentage of INS vehicles in compliance with the replacement cycle standard
- Reduction of the number of man-hours lost associated with workers' compensation injuries
- Number of medical attention claims in workers' compensation per 100 employees.
- Improvements in health and safety compliance (various measures to be reported)
- Percentage of women and minorities hired and promoted throughout all grade levels
- Number of EEO complaints over 180 days old
- Number of Border Patrol Agents On-Broard

Enhance and maintain the administrative support services and infrastructure required to accomplish INS' mission-direct operations and goals, through which a multivaird, well-trained and diverse workforce is empowered to do its job.

Performance information 5. INS will improve and maintain a safe working ouvironment.	Type of Indicator	Data Source	FY (998 Actual [Farget]	by 1999 Target	FY 1999 Actual	FY 2000 Torqui	FY 2001 Target
Percentage of INS employees that are housed in facilities which are in compliance with GSA workspace standards.	Intermed Outcome	Cacility Data	(NV) Zikt	NA .	NC NC	Baseline	180
th. Percentage of INS huildings that are in compliance with Federal security standards.	(Autput	Security Data	H/3 MA	NA .	¥æ	15/2	1791
tc. Percentage of INS vehicles in compliance with the replacement cycle standard.	Омран	Fleet Mgt Data	NC NA	NA	525	45%	57%

Accounts figures will out be available qualithe beaches analyses of INS facility data in complete in FY 2000.

Target will be based on baseline analysis to be completed in FY 2000.

At the end of PY 1999, 34 of 419 existing locations (or 2%) were in compliance with Federal security standards. In PY 2000 and PY 2001 45 facilities, monty very small, will be coming on line to support Quick Response Tearns and other new model; these will most the standards, but no resultating of existing facilities will be done.

⁶ Health and Safaty Compliance Report - This report will present information, analysis, and trends on the full range of environmental health and safaty areas that are covered by few, regulation, or policy. Where possible, factors that contribute to improve compliance with he shown along with the impact on PCS of improvement.

There are no plane to mean the Organizational Climate Survey in FY 2/5/0, both because it would be too close in time to the previous survey, and because the Connec Bureau has requested agencies to limit their survey activities during the census year. There are no funds to can the survey in FY 2001.

¹¹ Baseline date from the Organizational Survey currently under review. Results to be provided March 1, 2000.

¹² The training indicator has been changed to one that focuses more on results restend of activity or outputs.

Women and Minority Promotion Report - The report will present basic data on patterns of biring and advancement compared with demographic information from the civilian labor force and INS.

M. Rassurces for an INS Diversity Survey will not be available.

General

Mixed automated and manual data collection environment. As an agency with a large number of nationwide and worldwide programs and office structures. TNS uses a mixture of data provided through both automated capture of transactions (as they occur) and manual recording or counting of transactions, which are then reported either manually or through automated means. Since 1995, INS has been investing significantly in the development and deployment of two nationwide case/incident-based automated systems to capture information on, respectively, enforcement actions (ENFORCE) and benefit/application services transactions (CLAIMS). In addition, significant investments in various Service-wide, mission supporting systems have been and continue to be in process that provide direct performance measurement for certain goal activities (c.g., biring Border Patrol Agents, processing alien-file records) or provide information critical to GPRA-based performance management (e.g. financial management—FFMS). INS also has a significant number of other case-based systems that address both mission-direct and mission supporting activities necessary for effective performance management, which continue to need upgrading to g., Asylum case activity through RAPS—Refugee and Asylum Program System). As these systems become fully deployed, data relevant to performance will increasingly be provided through increasingly verifiable automated means, decreasing the potential for human error. Pending any further INS efforts to collect data centrally on an increasingly automated system-to-system basis. INS: Performance Analysis System (PAS) is used to monthly collect and aggregate workload data and data on staff hours devoted to certain INS activities (system activity addressed below). Together with specific reports from case-based systems and from data reported from various local operations sites. INS collects and aggregates performance data on a monthly and quarterly basis relative to INS main performance measures and performance management concerns. As required and directed, selective collection occurs on a weekly, bi-weekly or daily basis for specified Service programs or activities. Under the Commissioner's Annual Performance Management Process, meeting and reporting from these sources is reviewed periodically throughout the business year (lymcally on an adjusted Quarterly basis) on INS' main performance management activities and measures.

Performance Applysia System (PAS): RNS' automated PAS is a data reporting tool and centralized database used for information pertinent to many of INS' performance indicators/measures. PAS captures data on workload and staff hours devoted to designated activities.

Data Collection -- PAS is a central repository of data applied on a monthly cycle by automated input via the Service's nationwide program office structure. Monthly figures are input at field sites from manual and automated tracking maintained by the input offices, and in cases represents the numerical counts from national systems which capture case-based activity.

Data Validation — Given the central importance of this database to tracking workload accomplished and hours devoted to activities, a substantive review by the Statistics Office staff is conducted during each cycle, in addition to the built in edits which prevent certain kinds of erroncous data entry (e.g., incompatible alpha-numeric coding). In addition to logic, range and computational edits, the staff reviews input to identify and investigate data that appears out of pattern given past reporting or is otherwise noteworthy. During the monthly input cycle, approximately 05% of field office records are entered within the first eight workdays of each month. The remaining 5% are subsequently obtained during the submission audits conducted by the Statistics Office staff during the month-ded compilation and review process.

Data Limitations - The potential for local data coeffection to be incomplete, untimely or erroreous exists, except where data values can be compared with the automated data available from national systems. Future establishment of automated interfaces between PAS and various automated systems will perinn increased accuracy as well as timeliness.

DOI Summary Performance Indicators (DOI-SPIs). Out of the totality of macro-level performance indicators used annually by the INS, the Department of Justice selects those of departmental-level interest and focus. These measures are so identified in this document INS performance indicators documented herein focus primarily on those indicators of performance of strategic importance at the departmental level (the DOI Summary Performance Indicators (IDOI-SPIs)).

Data and Data Systems Interrity Goal

Increase Data Systems Danlovment, Usage and Impacts

- Number and % of sites with ENFORCE/IDENT deployed (DOJ-SPI)
- Number and 9 of sites with CLAIMS4 (Naturalization N-400 form module) deployed.
- Number of application forms converted to CLAIMS4 processing

1/24/00

- % ENFORCE utilization at sites where deployed (DOE-SPI)
- % IDENT utilization at sites where deployed (DOJ-SPI)
- Number of sites with CLAIMS.
- Number of FFMS interfaces with other systems deployed
- % IBIS system utilization for primary inspections at air and land POEs.
- Impacts realized from ENFORCE, IDENT, and DataShare

Data Collection and Storage. To measure use rates for the ENFORCE and IDENT/moments admitted arms systems, INS utilizes the Performance Analysis System (PAS) to capture information on total apprehensions. Transaction counts from the IDENT and ENFORCE automated by series activity are used to identify the number of individual apprehensions recoving subject-case processing and biometrics identification enrollment/comparison through these systems. For Deployment of ENFORCE/IDENT software and any related equipment, contributor records will be maintained unidar to the records automated to rechables upgrades.

Duta Validation and Verification: The adapted manager under the INS Annual Performance Management with review subtrained data and reports relative to use rates on a quarterly basis. Formul reporting and review will occur quarterly under the INS Commissioner's reviews.

Data Limitations: Current issues regarding types of cases to exclude from the counts are being reviewed to improve accuracy of performance measurement.

ADP Infrastructure Support and Operational Integrity

- Number of sites receiving technology upgrades
- · Percent compliance with systems network infrastructure security requirements
- Rutio of ADP technical support personnel to user personnel.
- . % of end-users that rate Help Desk support as Good or hetter

Data Collection and Storage. To truck and measure progress for these goals. Office of Information Resources Management (OIRM) project exports will be used. To ensure appropriate tracking and reporting on the equipment/affind nature pagades, a new consprehensive review and inventory of equipment project is currently underway to verify the base and to undate and ensure the accuracy of the INS equipment inventory. The replacement of equipment/infrastructure (a.k.a., to himbury "refresh" project) work will be monitored by site reports that indicate exact

numbers and kinds of workstations removed, and the exact numbers and kinds of replacements installed. Data will be available on both the equipment/infrastructure affected, and on the sacs impacted. Tracking of this activity will be accomplished using reporting procedures adopted during the original Technology Infrastructure Process (1993 deployment, which provided for the mittal appraise and expension to equip BS offices.

Data Validation and Verification. A contractor festing on a central standalone software database prevides the information for sites acceiving technology upgrades. Data is entered on a continuous basis as deployments occur, and it is reviewed on a monthly hous by INS monagers, and econocide with expenditures for such activities. Misosver, this institute is an element in quarterly reporting to the Department of Justice, as well as under the Continuissioner's quarterly reviews of Gual performance status. To support data systems integrity, INS also will increase the overall level of the necunty infrastructure underlying its unionisted systems and network environment by entablishing a multi-year program for acceptly inhomogeneous. INS plans to address NP4 of the identified security infrastructure needs in EY 2001, as part of a 3-year negation.

<u>Data Limitations</u>: The new indicator for "compliance with systems network uscarity infrastructure requirements" will be a report and data capture yet to be developed by the Office of Information Resistances Management. Both numeric and normalive information will be captured to indicate the number, nature and extent of security activities accomplished. It will be compared against a master last of security imprisonments to to meet and it will be reviewed formulty at the Communicator's quarterly review meetings, and will become part of the quarterly reporting to DOI.

Alien-files (A-files) Records modernization and integrity

Average time for physical A-files to be transferred to requesting source

Data Collection and Statemy: Under current decorationed securely operationed in formation on A-files transferred from one office location to another within the local office or anywhere in the INS' nation-wide structure is captured by recording transfers in the IRAPACS automated system (Receipts and Alies-Piles Accountability and Created System) and updating the formation in INS' Control Sedies System (CIS). Under the new National Records Control (being established in IrY 99-FY 60), controlled control or records will be initially recorded in RAPACS, prior to implementation of a new National Piles Tracking System (NPTS). Data fields in both RAPACS and NPTS indicate the data in fife was required and the data in File was interpret and received. A specialized report will be used to calculate the specific someter of the transfer.

<u>Data Vuldation and Verification</u>. Currently, a periodic reconcidation of RAFACS and CTS reports with the actual files on-hand at various locations occurs. In FY 1999, INS conducted a nationwish review of A-(rices) National File Audit) and conducted specific review of A-(rices) National File Audit) and conducted specific review of A-(rices) National File Audit) and conducted specific review of A-(rices) National File Audit) and constitution files. Outstanding, outdated file required in error were accuracy of outsite of the later part of FY 2000, controls and more stable minimum goal (review) in integrated accuracy of data relative to transfers.

<u>Data Limitations</u>. File records are sometimes transferred without appropriate use of the RAFACS procedure resulting in no record to compute the transfer time. The committeed NRC operation will integrate we eliminate much of that problem.

Improvements in Data Quality

· Data Quality improvements

Data Collection and Storage. The key measure of maintaining and improving the functiones and accuracy of monthly reporting through the PAS (Performance Annlysis System) involves tracking the automated imputs of the various nation-wide offices providing information. Specialized automated reports are generated from the PAS database showing the number of offices submitting on various dates. The Office of Statistics then generates a report that indicates the number and particulate of face submitted with provides information on the quality of the data submitted by offices. Specifically, the results of an automated, otherwise indicates the number of croots identified. For both timeliness and quality the current south is reflected against the past month experience and PY-to-date percentages and sumbers are provided. Reports are discentinated to representatives of the submittene offices.

<u>Data Validation and Verification:</u> In addition to the automated capture of edit-errors. Office of Statistics staff, review data submitted by offices and programs for anomalies or potential problems (e.g., data that appears out of pattern with past data reporting). In some cases data issues identified result in data corrections, and in others the data is validated.

Data Limitations: The second data quality review by the Office of Statustics staff is currently not represented in the reporting.

Immigration Services Good

Improve Immigration Benefit Applications Processing Services

Service-wide average projected case processing time (months) for Naturalization cases (DOJ-SPI)

1/24/00

- Service-wide average projected case processing time (months) for Adjustment of Status cases
- Number of Naturalization cases adjudicated (millions) (DO) SP()
- Number of Adjustment of Status cases adjusticated athorographs
- Level of compliance with Naturalization case quality review procedures (NOP3, NOP4).

Data Collection and Storage: Data on case production and activity Natigalization (Note) and Adjustment of Status (AUS) case work are collected and reported using a raix of automated and manual case counts. Conventy, some data are collected locally under manual counts and reported monthly and some counts are provided from various automated systems supporting community et a. CLAIMSS, CLAIMSS, RNACS).

Data Validation and Verification. 1985 has established standard data entry and reporting procedures for all offices and Service Content to follow for N-400 naturalization cases, and reviews the data on a monthly have for occuracy. Audit information regarding N-400 naturalization case processing is collected through the Naturalization (hadny link celtures 1909) and reviewed on a monthly basis. Similar data entry and reporting procedures are being implemented for 1-485 Adjustment of Status cases.

Data Limitations: INS currently tracks betwies cases through several different (100 systems, which are not yet synchronized. Additionally, several focal offices unit track and process benefits cases manually, and report their largeful processing activities through manual counts.

frencove the Effectiveness of Alica Status Verification

- Response time for status verification (DOJ-SPI)
- Number of employers participating in Employment Verification Prior programs (DOJ-SPI)

Data Collection and Startage The response time data focuses on services provided through automated submission and verification requests. For the number of employers currently enrolled in the employment status verification pilots, the Pilot Tracking System maintains individualistic data on such employer enrolled.

Data Validation and Verification: The initial automated request (primary verification) for states verification is responded to almost intenditately beard on information contained in INS' Alsen Status Verification Index (ASVI) database. The response time for each case is automatically calculated and averaged by the system at any given exporting point. Requests where primary verification did not provide administrate answer often results in a requests for further review of INS records (secondary verification). Beards on automated transaction requests for according verification amplies the ASVI database, an automated record of the date-in and date-of-response for according

ζ,

maintained in the Status of Verification System (SVS). An inverage response time for secondary request responses for a set of cases over a period of time is computed by the system. In those cases where secondary requests are submitted to fNS via the manual G-84S form, the fNS status Verifier inputs the dute-in-and date-in-exponse for each case, and an average response time is computed, as ened above. For date on employers enrolled in the employment verification piles, unly a formal request for removal from the pilot by the employer allows adjustment of the database maintaining the enrollment conference.

Data Limitations. Data is complete and accurate given the automated basis for capturing and reporting data

Avylum case work

- Expedited Removals/Credible Fear Referrals -- % completed within 14 days.
- . Sof new Reform cases processed within 60 days
- Number of Asylum case (1-589) completions
- Number of NACARA (1-881) cases adjudicated

Data Collection and Storing: The Asylum Pre-Screening System (APSS), implemented for PY 99, is a case-based system that collects data for Expedited Removal cases. Prior to its implementation on ACCESS database was used to collect data on the cusework that began in Aphil 1997 with stabblishment of the new layer. AR ACCESS cases were subsequently transferred into the new APSS database to provide for a complete historical record. The automated, case-based Refupee, Aylum and Evole Systems (RAPS), implemented in 1991, is used to process all Asylum caseswork (1-59a) including the new NACARA casework arising at the end of EV 99 with establishment of the new requirement. Both the Reform case and Expedited Removals are processing times are calculated by the respective systems generated data.

Data Validation and Varification: Monthly, quarterly and annual reporting is review by the Headquarters program office for both APSS and RAPS data. Additionally, reporting of data is available for RAPS on a weekly basis. For NACARA casework, mudifications to RAPS are still containing to flam-mon data capture and FY 2000 represents a verification and validation year. However, results to date indicate accurate and timely data reporting.

<u>Data Limitations</u>: At this stage, panding any problems arising with the new NACARA case capture, it appears quality data is available for purformance immagenance.

Finesterint processing papers of applications processing

- Processing time for fingerprint (grint capture through FIRI communicated findings)
- · Rejection rate for prints taken

Date Collection and Storage:

All Communication in the PB1 is tracked from submission through the 141 348 144. Each 1-10 258 submission to the PB1 is tracked from submission through PB1 response. This is an automated data collection system half after the MRD and IAPIS process. The information is stored in FD 256 Tracking.

Data Validation and Verification:

Reports on Engagement activity are generated monthly or as respected. This information is compared to actual Engagement production reports for verification.

Data Limitations: FD 258 cards that are in transit from the fingerpoint site (ASC) to the Service Center are included in the production data, but not in the PD 258 Tracking Report.

Contours information assistance services for immeration benefits

- . Phone call busy mire
- Customer hold-time after connection
- Overall call shouldenment rate
- Customer satisfaction rate for call phone assistance
- Average time to respond to customer requests for applications forms
- · Number of customer interact transactions.

Data Collection and Statege: Busy rates, hold times and absolutement rates corner from two primary sources: metopasted network data. In

narvey that nees statistically valid sampling for however to cancernity which by callers to be called back and surveyed with respect to their especials.

Data Validation and Verification: INS analyzes production information we in integring basis, including comparing automated information collected at various states of cell handling.

Data Limitations: Data is considered highly accurate at this time

INS benefits identification cards production

- Time to produce EADs (Employment Authorization Documents)
- . Time to produce Permanent Resident Cards (a.k.a., Green Cards)
- Tirms to produce Laser Visas/Border Crossing Cards
- · Number of cards produced

<u>Date Collection and Storage</u>: Production information is collected electronically from the ICPS manufacturing plotforms. Independent manual quality assumptor information is iracked manually and incorporated into the clear. Processing times are projected by comparing pending with both production beyon mile manufacturing the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property

Data Validation and Verification: DCS reconciles presidents information duity with consumable inventories.

Data Limitations: Card production information does not truck earlier steps in application processing, but focusts on the actual time from whom a card is ordined seem the application in approved and the Service Confer completes scanning and data entry until the time the card is enabled. In the care of LV manufacturing for the Department of State, it reflects the latter from when INS receives the DOS electronic order until the card in residue to DOS.

Border Enforcement Goel

Thwart International Alien and Drug Smuggling

- Interception of mala fide and offshore travelers on route to the US (DOLSPI).
- Offshore prosecutions assisted by INS (DOI-SPI).
- Overseas investigations completed

Onta Collection and Storage: Data on the "number of interceptions" at each foreign location are compiled daily on the G-992 Intelligence Report. The data on the "master of offshore presecutions" and "overages presugations completed" are take one collected by the INS offices in the respective foreign countries and reported to the Douriet Office level. Each INS foreign office maintains memorandum-style records in the their files that provide information on the status of cases undergroup gross many in foreign courts. The District Offices provide a monthly summary number for inclusion in the Performance Analysis System (PAS database) is

Data Similarions: Data is funed on both manual and automated reports from overseas INS offices that comprise the PAS database for this menture, in addition to foreign officer encubral report subsession collected by the Office of International Affairs. As FAS captures agriculte workload data, the data cannot be reconstructed form individual files.

Data Validation and Verification: The G-102 Intelligence Report, indicates the individuals and nature of the circumstances involved and its reviewed and certified by the nation officer. On a monthly basis, overseas district offices report a summary of the number of interceptions union the service's PAS detabase.

Effectiveness in apprehending persons attemption illegal entry at Ports-of-Entry

Inspections Travelers Examination (INTEX) rates

Data Collection and Stormer Data on INTEX rates are compiled at the respective food and six Ports of Entry, where the INTEX process has been implemented and submitted to the DIS Office of inspectures on a daily bases.

Data Validation and Verifications Date is validated by the IRES Office of Inspections for commissions and accuracy as reported by the respective land and air PGEs. IPS Office of Statistics has reviewed the methodology used for determining the INTEX rates.

1/24/50

Data Litratations: INTEX rates are based on a sampling of travelers at those PCH-s where the INTEX process has been implemented, hence the data is nabyed to an acceptable "statistical margin or error."

Effectively Control the Border between Ports-of-Unity

Increase operation effectiveness within identified southwest border zones (DOI-SPH)

Data Collection and Statems: Data on the commercial persons apprehended are local counts compiled duily by individual Border Patrol Stations. A record as created of all such apprehensions. Manual or automated 1-215 forms are used for processing certain apprehensions, and the automated ENFORCE subject-case processing software is used where deployed. In wome instances the IDENT hometries identification system and notware, which has limited subject-case processing capability, is used postular the replacement by the ENFORCE capability. For the denominator of the manuare, the "number of illegal entries attempted" (the numbers connected with the number of persons who "from back south," and the numbers for "gravings,"), the numbers are determined by reports from Border Patrol agents in the field using information from visual slightings or equipment tracking counts (e.g., whice currents, infrared scopes (ground and automate), betterquer patrol suglatings, inground sensor hits, tracks left by aliene, etc.). These there have "ground sensor hits, tracks left by aliene, etc.). These there have "ground are not effected duity and entered into foots databases.

Data Validation and Verification: On a monthly basis, summatured notion-wide reporting of apprehension numbers from these sources occurs through INST contralized, automated Performance Analysis System (PAS) database. Monthly reviews and editing of apprehension numbers reported in PAS in conducted not only at the Sector keek, but also by the centralized INS Statistics Division, which maintains the PAS database. Increasingly, review and obtting involves using systems counts from ENFORCE, (DENT and the automated compilation of 1-213 data from the centralized processing activity in the Texas Servey Century.

Data Limitations: Currently, a process to standardize recenting and reporting of attempted entries is being implemented across all Border Petrol Sections to entage consistency and validity, and use of an introcet approach for reporting is being targeted for implementation in the 2nd Quarter of P2 2000.

Impact of border operations on oriminal activity

Impact on criminal activity in selected U.S. cities located along the Southwest Border

Data Collection and Storage. Data is collected using standardized till crime index definitions, for eight case along the noutboost broader from the local law enforcement agencies (LEA) and quantumed on a recently bases at the regional level and reported to breadquarters quantity.

Qua Validation and Verification: Date is valuabled by the INS regions and Headquarters Border Patrol for consistency and accuracy as reported by the LEA's

Data Limitations: INS has no control over the quality or functions of the data obtained from the LEA's.

Surgauthen operational effectiveness through the use of intelligence

Number of Special Operations predicated on intelligence.

Data Collection and Storage: INS Hendquarters Intelligence Thresson collects that remembelly from the Regional offices and Border Patrol.

Data Vehidation and Verification: Information is verified by INS Headquarters Intelligence Division. For consistency and accuracy as reported by the Field.

Data Limitations: Data is based on manual reports from the Regional inflines and Beeder Patrol. Manual reprinting maybe subject to a greater degree of error than untertained reporting.

Border Facilitation Gos

Pacilitate Part-of-Betry Travelors/Reduce wast-times for Travelors

- . % of total commercial flights to clear Primary Inspection within 30 minutes. (DQI-SPI)
- . . % of Land Border wait-times that do not exceed 20 minutes. (DO)-SPI)

Date Collection and Storage: Given the variance in tend POS; operational situations, wait-time data for each is collected marriedly based on unique electronistances and reported through INS regional officers.

1/34/8

Data Validation and Verification: This data is collected locally and calidated disply. Throughout FY 1999, processes were implemented at the local level for affected communities and users to review results to create that purity validation of these unique measurements requirements.

<u>Date Limitations.</u> Land horder POE utilize one of this approved methodologies to calculate want since, hence variance in data commency may occur among the land POE.

Increase use of automated facilitation technologies at Ports of Lotey

- % of travelers inspected with INSPASS (DO)I-SPI)
- 4 of travelers inspected with SENTRI (DOJ-SPI).

<u>Data Collection and Storage</u>: Data on use of automations and technologies to facilitate traveler inspections are reported on a monthly basis using the Performance Analysis Symem (PAS) and system-generated counts to identify the number of travelers portroporting. INS collects data in the PAS workload and resource tracking system that contains aggregate case data and workyours for specific categories of activities. The field consolidates monthly office-level statistics and enters data into PAS on-line at the end of the reporting month. PAS terminals are available at 624 locations.

<u>Data Validation and Verification</u>: PAS verification is conducted by the Statistics Office of the Office of Policy and Planning. The matistics are corroborated through submission audito, edits, data validation and logic checks, and conject with field offices for missing information. The Office of Statistics produces monthly statistical and production reports.

Data Limitations; PAS records are complete with 95% of inverted within fit working days of the close of the reporting month. One weakness, as OIQ and GAO antitions have cried, is due to the nature of the database. PAS data cannot be audited for accuracy since it cannot be reconstructed from individual files.

Maintain high traveler satisfaction rates

- . To of travelers rating Inspections wait times as "reasonable" or hetter
- . % of travelers rating the Inspectors as "professional" and "countenus"

1/24/00

Onta Collection and Storage Surveys are designed by a contractor and administered through the last month of the fiscal year. The contractor designs a sample of land and air POHS to survey, collects and solutions on see results to INS, inspections Office.

Data Validation and Verification. Surveys are designed and administered by a compactor to ensure statement validity and non-bias of INS personnel.

Data Limitations: Survey sampling is subject to an acceptable. "statistical acaign of error"

Interior Enforcement Conf

increase the number of alten removals

- Total number of Final order aften removals.
- Number of Criminal alien removals (DOJ-SPI)
- Number of Non-criminal alien removals (DOJ SPI)
- Number of Expedited removals
- Number Institutional Removal Program (IRP) removals

Data Collection and Storage: Removals projections are linked to use of detention resources and lengths of-stay. INS collects removal and detention data to the Deportable Alien Control System (DAC'S) case tracking system. Data is input to DAC'S daily from physical A-files, perturnily by INS Deportation Program staff, and to a lesser extent, inspectors and agents. DAC'S is available on terminals throughout INS, stellading Ports-of Energy, Service Processing Centers, and SHP laciations. TAC'S is updated throughout the life cycle of the case.

Data Validation and Verification: DACS verification review through the headquarters DACS quality team. File reviews, comparison with monthly statistical tesports, INSPECT team reviews, and district status reports and call-up lists. The Statistics Office of the Office of Policy and Planning conducts monthly quality reviews of DACS data for internal reconsistencies and missing data and produces monthly INS Removals Reports and statistics for quantity Courts and Removals Reports.

Data Limitations: DACS removal records are complete, with 99% of removals records entered within 6 months of the close of the fineal year. A small but significant number of detention records (approximately 7% of over one hundred thousand records) are incomplete and cannot be

1921

used to calculate langths of stay in detention. This is that the transplant of the calculate langths of stay in detention. This is that the calculate the case may remain open because it tacks the receded balancing entries showing the alien was booked out of one tocation and booked into mother location of was termovelfectorical. After EV 2001, DACS will magnate to the Enforcement Case Tracking System (ENPORCE) which will have the capability to track those desention cases. INS will also resulted data entry deficiencies for incomplete records.

implement the National Anti-smutating Strategy

- Smuggling and Fraud cases presented for prosecution.
- Smuggling and Fraud principals presented for prosecution (DO)-SPD.
- Criminal cases on Employers intentionally violating couployment statutes (DOF-SPI).

Data Collection and Secreta: INS collects data on the cases and print spals presented for prosecutions in the Performance Adalysis System (PAS) and through nome minimal macking. INS collects data for criminal cases against employers in LYNX. INS collects investigations data in the PAS which contains aggregate case data and work-years for specific categories of activities. The field consolidates monthly office-level statistics and enters data into PAS on-line at the end of the exporting month. INS collects work-size enforcement data in the LYNX case tracking system. Investigations data, employer data, and inspation informations is captured by officers and field control. The forms are submitted to a contractor for data entry. LYNX is enclosed the regions the life cycle of the case.

Data Validation and Varifications: PAS verification is conducted by the Statestics Office of the Office of Policy and Planning. The statistics are corroborated through submission models, and logic, range and computational edits. The Office of Statistics produces stooghly statistical and groduction reports. Some manual tracking is required for visuageling and fraud since performance consports for types of cates to longer exactly match the definitions and methodology of the existing PAS congenters. This remails care information is collected and varified by Molfinia he headquarters Office of Field Operations. As programming hypotroporters, funding, or migration to ENPORCE becomes available, this manual component of tracking will be eliminated. A degree of LYMX verification occurs through comparison with management reports, regional review or verification with district offices or periodic audits in response to Attorney General reporting requirements and the system will be migrated to ENPORCE.

<u>Data Limitations</u>. PAS records are complete with 95% of field office records entered within the first eight working days of the reporting month. The remaining 5% are subsequently obtained through submission and its. However, since PAS data are monutally consolidated at an office level, audits of individual case records cannot be performed.

Strengthen operational effectiveness through the use of intelligence

Number of Special Operations predicated on intelligence.

Data Collection and Storage (INS Headquarters intelligence Division collects data manually from the Regional offices and Border Patrol

Data Validation and Verification: Information is verified by INS Headquarters Intelligence Division for consistency and accuracy as reported by the Field.

Data Lamitations: Data is based on minutal reports from the Regional offices and Border Patrol. Manual reporting may be subject to a greater degree of error than automated reporting.

Build Partnerships to solve local problems

- Law Enforcement Agency (LEA) referrals to Quick Response Teams (QRT) and apprehensions and prosecutions resulting from referrals
- Apprehensions of aliens with nexus to task force operations, e.g., terrorist-related affiliations, organized crime, etc.

Data Collection and Storage: BNS Quick Response Tearns (QRT) were implemented by the FY 1999 appropriation. 'QRT data about operations and individual apprehenders is measually collected from QRTs to establish base lines in FY 2000. INS collecte data on task force cases and individuals in the Performance Analysis System (PAS) and through some manual tracking. The PAS task force data contains appropriate cases data and workyours for specific categories of activities. The field encoolidates monthly office-level statistics and enters data into PAS on-line at the and of the reporting month.

Date Validation, and Varification: QRT information is verified by the Headquarters Office of Field Operations through comparison with regional reports or verification with districts and field staff. PAS verification is conducted by the Office of Statistics, Office of Policy and Planning. The statistics are corroborated through submission audits, and logic, range and correposational edits. The Office of Statistics

produces monthly stationed and production repairs. Some automatives to required to identify the type(s) of task force that resulted in the apprehensions and cases. This manual case information is collected and verified by staff in the headquarters. Office of Field Operations. As programming opportunities, funding, or magnation to INM MCT becomes available, this manual component of trucking will be eliminated.

One Lampageon: QRT brocking data will be reviewed to standardize recording and reporting and improve the accuracy of information in subsequent years. PAS records are complete with 1974 of Jield of fixe records entered within the first cight working days of the reporting month. The remaining 5% are subsequently obtained though submissions and its However, since PAS data are manually consolidated at an office level, another finds days days for records cannot be performed.

Asset Forfeiture

Smuggling, fraud or worksite enforcement cases accepted for prosecution with inclusion of forfeiture or parallel civil forfeiture

Data Collection and Sterring: PMS collects data on uses service, disposition and distribution in the DOI Convolutated Asset Tracking System CATS). Asset forfeiture data inhoust inskage to investigations operations and cases and presentation to the US afficiency Office is manufally collected from the Regional Asset forfeiture Office. HMS also collects aggregate asset forfeiture recarries and dollar value in the Performance Analysis System (PAS). The PAS data contains aggregate data for specific cutegories of assets for Border and Interior Enforcement operations. The field controlled enveloped office-level statistics and enters data min PAS on-line at the end of the reporting munth. DUS collected benefits after this intercent in PY 1990.

Day Artification, and Agrifications, CATS verification occurs through review of management reports and statistics. Inventigation-related information is verified by the Headquarties Asset Encleature (Mac or the Office of Field Operations between comparison with regional reports of verification with districts and field staff. PAS verification is verificated with districts and field staff. PAS verification is verificated with districts and field staff. PAS verification is verificated by the Similatica Office of the Office of Policy and Planning. The statistical and production reports. Some manual tracking is required to identify the type(s) of cases that included pursuit of forfeiture and those in which forfeiture was accomplished. This verification is collected and verified by staff in the landquarters Office of Field Operations. As programming opportunities, funding, or magration to ENFORCE becomes available, this manual component of tracking will be eliminated.

Data Limitations: Asset forfeiture baseline data will be reviewed to standardize recording and reporting and improve the accuracy of information in subsequent years. PAS records are complete with 95% of field office records entered within the first eight working days of the

reporting month. The remaining 5% are subsequently obtained through submission midds. However, since PAS data are manually consolidated at an office level, audits of individual case records cannot be performed

Infrastructure and Professionalism Goal

Promote and maimain a professional, motivated and diverse worklonge

- Number of Border Patrol Agents On-Board (EXI) SPh
- . The of women and minorities hired and promoted
- Number of EEO complaints over 180 days old.

Data Collection and Statume: Data reflecting the number of agents hared is compiled monthly by the National Haring Center. An informated personnel fite is created of each new agent hered at the INS Headquarters Human Resources (Mice: An additional automated personnel file is created to the National Payroll Center for payroll and benefit processed. The data (including all personnel actions) is moved in the Servicewide personnel database that is operated and maintained by the INS Differe of Human Resources

Data Validation and Varification: To measure the marker of agents on board, INS produces a monthly INS training report categorisad by pity periods during the freed year. The total member of agents on board are aggregated each pay seriod by the Offices of Human Resources and Budget and reported by projected/actual accessions, projected/actual lower, and projected/actual on-board. The data is reconciled each pay period through payoull date at the National Payroll Center to covere consistency. The National Payroll Center is the controlland processing county where all ING employee payrolls are processed

Data Contractions: There are no data limitations. The monthly INS-HRD transping report is based the number of Border Patrol Agents included in the INS data or the National Povedi Contet

Improve and Maintain a Safe Working Environment

- % of compleyees beyond in facilities in compliance with GSA works pace standards
- S of buildings in compliance with Pederal necestity standards

- . Sof vehicles in compliance with the replacement cycle standard
- Number staff-hours lost based on workers compensation marries.
- Improvements in health and safety compliance

Date Collection and Storage: The data for the "standards" measures are collected by components within the Office of Management and stored in an internal desktop database maintained by the Office of Management. The workers compensation data is collected by the Office of Human Resources and stored in the 118D database. For health and safety issues, the Office of Management produces a report that reflects the improvements that INS has mode in health and safety compliance with OSFIA and other registations. Data for the report is collected quarterly, by regional and field components and analyzed at the end of the fixed Pear.

Data Validation and Verification. The data on the ratios of employees/facilities, buildings/security, and vehicles in compliance with INS standards is compared with the established standards profused by the General Services Administration (GSA). INS compounds report on netwities against these standards and the Office of Monagement reports the status of each during the INS gamently performance review meetings. For the worker's compensation and health/safety compliance measures, INS was manual calculations to produce the data. Data for worker's compensation is verified through a comparison of work-related injuries and the "real" time that employees mins nethodoled work times. Health and Safety compliance is verified using a qualitative analysis of INS causal INS ratios compared with the OSHA and/or other industry standards. The improvements in health and safety compliance is a qualitative report that presents information, or policy. Where possible, the report details fagtors that contribute to improved compliance along with the overall impact on INS of improvements.

Data Limitations: The ratios for the standards measures and number of staff hours are calculated manually (no feeder database system). Calculation flaws are possible, but unlikely due to the samplestic nature of the data gathering.

Major FY 2001 Initiatives

INS' requested program increases total 935 positions and \$230,171,000, and are targeted in four categories and three initiatives, each of which supports a key component of 1003's Strategic Plan and the Administration's commitment to resolve long-standing immigration issues.

Initiative: Border Management (545 positions and \$82,095,000). This proposed initiative directly supports DOJ Core Function 6: Immigration, Gonlo 3 and 4. This initiative also supports INS' Strategic Finn goals: Border Management and Coordination. The INS is dedicated to the basic teners that the hyders of the United States should be characterized by the rule of law, and that the physical integrity of those budges is essential to defining our national sovereignty. At the same time, it is equally imperative that the flow of lawful commence and the passage of legitimate travelers be encouraged and assisted to the greatest extent practicable. In deterring and denying our border areas to the lawless, INS necognizes that it must not compromise or ignore the rights and needs of the lawful. As we enter a new millermium, the INS will continue to focus its FY 2001 efforts to the tasks of Border Enforcement (both donestic and overness) and Border Facilitation. In all areas, emphasis has been placed on increasing not only the number, but also the effectiveness, of INS personnel through force-maltiplying technology and first-tage equipment.

Initiative: Interior Enforcement (250 positions and \$82,000,000) This initiative directly supports DOJ Core Function 4: Immigration; Core Function 5: Detection and Encorporation and also supports INS Stratugic Flor goods: Interior Enforcement Strategy sets forth five broad strategic goals and a series of related initiatives that plot the course for INS law enforcement efforts in the interior of the U.S. over the next five yeags. The proposed strategy recognizes the dynamic nature of international inigration, and its effects on communities within the U.S. Therefore, the goals and objectives of this proposed Strategy will evolve over time as conditions change, new irrards emerge and new capabilities and tections are developed. INS also has developed this proposed Strategy within the context of its inminimizational core values, which include fair and effective enforcement of the immigration laws, a continuing commitment to increase the competency and professionalism of its law enforcement personnel and a fundamental and enduring respect for the Constitutional Rights and Herman Dignity of all the people with whom it comes in contact. These core values serve to guide all the law enforcement activities in which the INS engages.

The INS vision of its Interior law enforcement Strategy expresses itself in the three words, Protect, Preserve, and Promote. INS will protect public safety, national security and the general welfare from the consequences of activities involving attempted or actual illegal entry; INS will preserve the integrity of the legal immigration system through prevention of feated and abuse; INS

will promote the common good by building trust with local communities in solving problems involving illegal immigration. The Strategy has established five goals: Investigate, disrupt and prosecute smuggling, trafficking and transporting by aliens and/or involving aliens; identify and remove incarcerated illega. Thens, and minimize the chances of recidivism; Investigate and prosecute efforts to commit visa and other document fraud and aduse; Assist federal, state, and local law enforcement entities through criminal taskforces and effective community policing efforts; and, Investigate, deter and prosecute employers involved in criminal violations, including illegal employment and abuses.

Initiative: Professionalism and Infrastructure (140 positions and \$66.076,000). This proposed initiative directly supports DOJ Core Function 4: Immigration, Goal 2. This initiative also supports INS' Strategic Plan goals: Professionalism and Infrastructure. INS is dedicated to the provision of institutional infrastructure and employee professionalism—which includes facilities, support staff, and planning—to support a mission that has grown significantly during the past 10 years and will continue to grow. Because of the rapid growth experienced by INS, the infrastructure and professionalism support has not been able to keep pace with the service and enforcement missions. IN FY 2001, INS will continue to address these serious deficiencies and backlogs to ensure that the workforce can perform efficiently and efficiency. There are three major components to this effort: (1) supporting and protecting the workforce with a safe, secure, and adequate working environment, including facilities, vehicles, career development, along with relevant policies; (2) supporting the mission objectives with timely and efficient administrative processes and support for personnel, physical, and financial assets, procurement, budgeting, and planning; and (3) instilling productive attitudes into the workforce such as those dealing with teamwork, empowerment, and communication.

Immigration and Naturalization Service Salaries and Expenses Justification of Proposed Changes in Appropriation Leaguese

The FY 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is italicized and underlined, and language proposed for deletion is bracketed.

Salaries and Expenses

For expenses necessary for the administration and enforcement of the laws relating to immigration, naturalization, and alien registration, \$3,120,280,000, as follows:

Enforcement and Border Affairs

For salaries and expenses for the Border Patrol program, the detention and deportation program, the intelligence program, the investigations program, and the inspections program, including no to exceed \$50,000 to meet unforescen emergencies of a confidential character, to be expended under the direction of, and to be accounted for solely under the certificate of, the Attorney General; purchase for police type use (not to exceed (3,075) 3,010, of which (2,266) 2,215 are for replacement only), without regard to the general purchase price limitation for the current fiscal year, and hire of passenger motor vehicles; acquisition, leane, maintenance and operation of aircraft; research related to immigration enforcement; for protecting and maintaining the integrity of the borders of the United States including, without limitation, equipping, maintaining, and making improvements to the infrastructure; and for the care and housing of Federal detainees held in the joint framigration and Naturalization Service and United States Marchala Service's Buffalo Detention Facility; [\$1,107.429,000] \$2,580,890,000 of which not to exceed \$10,000,000 shall be available for costs associated with the training program for basic officer training, and \$5,000,000 is for payments or advances arising out of contractual or reindurnable agreements with State and local law enforcement agencies while engaged in cooperative activities related to immigration; and of which not to exceed \$5,000,000 is to fund or retrainment other Pederal agencies for the costs associated with the core, maintenance, and repartiation of strenggled illegal aliens: [and of which not less than \$18,500,000 shall be for the costs of conversion to narrowband communications and for the operations and maintenance of legacy Land Mobile Radio systems: Provided, That such amount shall be transferred to and administrated by the Department of Justice Wireless Management Office:) Provided, That now, of the funds available to the Immigration and Naturalization Service shall be available to pay any employee eventime pay in an amount in excess of \$30,000 during the calendar year beginning January 1. [2000] 2001, arount in each instances when the Commissioner determines that enforcing this overtime provision, would have geforcement or service activities: Provided further, That uniforms may be purchased without regard to the general purchase price himitation for the current fiscal year [: Provided further. That none of the funds provided in this or any other Act shall be used for the continued operation of the San Clemente and Temocula checkpoints unless the checkpoints are open and traffic is being checked on a continuous 24-hour basis].

Citizenship and Benefits, Immigration Support and Program Direction

For all programs of the Immigration and Naturalization Service not included under the heading "Enforcement and Border Affairs". [\$535,0]1,000] \$539,390,000, of which not to exceed \$400,000 for research shall remain available until expended: Provided. That not to exceed \$5,000 shall be available for official reception and representation expenses: Provided further, That the Attorney General may transfer any funds appropriated under this heading and the heading "Enforcement and Border Affairs" between said appropriations notwithstanding any percentage transfer limitations imposed under this appropriation Act and may direct such fees as are collected by the Immigration and Naturalization Service to the activities funded under this heading and heading "Enforcement and Border Affairs" for performance of the functions for which the fees legally may be expended: [Provided firsther, That not to exceed 40 permanent positions and 40 full-time equivalent workyears and \$4,150,000 shall be expended for the Offices of Legislative Affairs and Public Affairs: Provided further. That the latter two aforementioned offices shall not be augmented by personnel details, temporary transfers of personnel or either a reimbursable or non-reimbursable basis, or any other type of formal or informal transfer or reimbursement of personnel or funds on either a temporary or long-term basis: Provided further, That the number of positions filled through non-career appointment at the Immigration and Naturalization Service, for which funding is provided in this Act or is otherwise made available to the Immigration and Naturalization Service, shall not exceed four permanent positions and four full-time equivalent workyears:) Provided further. That none of the funds available to the Immigration and Naturalization Service shall be used to pay any employee overtime pay in an amount in excess of \$30,000 during the calendar year beginning January 1, [2000] 2001, except in such circumstances when the Commissioner determines that subscribe this overtime provision would harm enforcement or Service activities. Provided further. That funds may be used, without limitation, for equipping, resintateing, and making improvements to the infrastructure and the purchase of vehicles for police type use within the limits of the Enforcement and Border Affairs appropriation: <u>Provided further</u>. That the notwithstanding any other provision of law, during fiscal year [2000] 2001, the Attorney General is authorized and directed to impose disciplinary action, including termination of employment, pursuant to policies and procedures applicable to employees of the Federal Bureau of Investigation, for any employee of the Immigration and Naturalization Service who violates policies and procedures set forth by the Department of Justice relative to the greating of citizenship or who willfully deceives the Congress or department leadership on any matter.

(Violent Crime Reduction Programs)

[in addition, \$1,267,225,000, for such purposes, to remain available until expended, to be derived from the Violent Crime Reduction Trust Fund.: <u>Provided</u>, that the Attorney General may use the transfer authority provided under the heading "Citizenship and Benefits, Immigration Support and Program Direction" to provide funds to any program of the Immigration and Naturalization Service that heretofore has been funded by the Violent Crime Reduction Trust Fund. (Department of Justice Appropriations Act, 2000, P.L. 106-113.)]

193

Explanation of Changes

- 1. This change in the Enforcement and Border Affairs appropriation language is needed to delete language regarding the transfer of \$18,500,000 in funding to the Department of Justice Wireless Management Office. This funding has been transferred and the language if no longer required.
- 2. This change in both Enforcement and Botder Affairs and Citizenship and Benefits, Immigration Support and Program Direction is needed to provide the Commissioner with the authority to authorize overtime above the catendar year \$30,000 limitation in instances where enforcement or service activities would be adversely affected.
- 3. This change in the Enforcement and Border Affairs appropriation language is needed to delete language regarding the operation of the San Clements and Temecula Border Patrol checkpoints. These checkpoints are being operated in a manner which addresses Congressional concerns regarding their operation. In view of this, the language is no longer needed.
- 4. This change in Citizenship and Benefits, Immigration Support and Program Direction appropriation is needed to delete language regarding the staffing level of the Offices of Legislative Affairs and Public Affairs and resources budgeted for their operation. The office's combined staffing level remains within the Congressionally established limit. In view of this, the language is no longer needed.

BASE PROGRAM DESCRIPTION:

- The Impactions program staffs 136 land border ports of entry on the Conadian and Mexican borders through which 85 percent of the persons who enter the United States each year are admitted. The number of persons entering the United States through land border ports exceeds four hundred million per year. Inspectors at land border ports administer impaignation and other federal laws, civil and criminal, to all applicants. They carry out enforcement actions such as expedition removals, prosecutions, scizare of property, interdiction of narcotics, and levy and collect bonds posted as a condition of entry. Land border Inspectors also serve as canine handlers interdicting smuggled aliens and drugs, serve as intelligence officers, and as autional Interiorism Response Team members.
- At land ports, Inspectors operate several special facilitation programs, such as dedicated commuter lanes (including Secure Electronic Network for Travelers' Rapid Inspection (SENTR!) lanes on the Mexican border) for pre-cleared estrollers, entomated permit ports, which extend the hours of small remote ports on the Canadian border, and remote video inspection on the Canadian border that links low volume ports, through interactive video connections, to an open port, allowing real time inspections after hours. Some of the cost of providing special services is defrayed by levying fees for pre: "suing nonimentigrant permits and corollyment in special programs.
- Additionally, many land border inspectors service nearby general aviation airports for private international aircraft arrivals, antall vessels and ferries on the Great Lakes and connecting waterways, and international train arrivals. Besides being specially

trained in the application of immigration law and skilled in the detection of fraudulent documents and malafide applicants.

Inspectors are cross-designated to perform Customs checks. At land horder ports, INS Inspectors carry out the primary inspection duties for INS, Customs, and Department of Agriculture's Animal and Plant Inspection Service.

INS Inspectors exercise a new responsibility, formerly assigned to immigration judges, to remove inadmissible applicants to their countries of origin. During these formal expedited removal proceedings, inspectors apprehend, investigate, create records of proceeding and remove inadmissible alices. In excess of 70,000 cases are processed annually.

Increase/Decrease	430	285	92,900

BASE PROGRAM DESCRIPTION

- The Border Patrol's primary mission is to apprehend illegal aliens and alien smugglers that enter the U.S. illegally. As such,
 the Border Patrol is responsible for ensuring that the entry of persons into the U.S. between ports-of-entry is controlled in a
 manner that is consistent with national interests.
- Border Patrol agents deter encontrolled entry into the interior of the U.S. by: the rapid detection, interception, and
 apprehension of illegal entrants at or near the border; interdicting or deterring illegal aliens, drug smugglers, potential terrorists
 and criminals from attempting illegal entry between ports-of-entry; and causing persons seeking admission into the United
 States to present themselves at designated ports for inspection.
- Border Patrol officers engaged in surveillance activities to prevent entry or apprehend those who have illegally crossed the
 borders are supported by computer-monitored electronic ground sensors. Additional support is provided by observation
 aircraft, low light level television systems, and infrared viewing devices. Border Patrol officers use a wide assortment of
 vehicles adapted to local terrain and operational requirements, including bicycles, motorcycles, all-terrain vehicles, bouts, and

horses. Traffic check operations are conducted along major-routes of travel to restrict access to the interior by illegal aliens. Transportation centers are placed under surveillance for the same reason.

- The Border Patrol arrests thousands of undocumented aliens, non-deportable aliens, and U. S. Citizens for violating
 Immigration laws, and other criminal offenses. Border Patrol Agents use the Automated Fingerprint Identification System
 (IDENT) to collect and record fingerprint and hiographical data on all apprehended aliens, and the Enforcement Case Tracking
 System (ENFORCE) to process undocumented aliens arrested for voluntary departure or removal from the United States.
- The Border Patrol has primary responsibility for drug interdiction between the land ports-of-entry. The Border Patrol participates in numerous interagency drug task force operations with other federal, state and local law enforcement agencies through its participation in Operation Alliance along the southern horder. The Border Patrol also works closely with Joint Task Force Six (TTF-6), Department of Defense, in support of the Patrol's border enforcement operations. To further assist the Border Patrol in this endeavor, all Border Patrol Agents receive Drug Enforcement Administration Title 21 cross-designated authority as part of their basic training.
- The Border Patrol conducts border control activities from the decks of various sized marine craft along the constal waterways
 of the United States, Puerto Rico and the interior waterways common to the United States and Canada. The marine patrol
 consists of 55 vessels in 16 Border Patrol sectors, nationwide.
- The Border Patrol canine program was implemented in 1986 in response to escalating alien and drug smuggling activities along the Mexican and Canadian borders. The canines are trained to locate nidden persons, marijussa, heroin and cocaine. The canines are used in nearly every enforcement activity of the Patrol including linewaych, traffic operations, and train and bus checks. The canine program is responsible each year for the detection of record numbers of smuggled aliens and large narcotic loads, including the apprehension of the criminals involved in smuggling activities.

BASE PROURAM DESCRIPTION:

- The Investigations program represents the interior enforcement component of the INS charged with investigating violations of the
 criminal and administrative provisions of the INA, and other related provisions of the United States Code. The program's staff of
 Special Agents, immigration agents, and support personnel perform their duties at INS district offices, and their respective suboffices, Border Patrol sector offices, and domestic and foreign detail posts.
- There are six broad investigative objectives. 1) support national drug interdiction and reduction efforts and counter criminal alien activity by participating in federal (ICDE, OCRSF), State and local task forces; 2) identify and remove incarcerated criminal aliens, 3) counter immigration fraud; 4) counter alien smuggling; 5) enforce alien employment provisions of the INA; and 6) investigate aliens who are determined to be national security or terrorist threats.
- Although there are distinct differences between each of the investigative objectives, there is also a relationship and overlap. For example, it is not unusual for a Worksite Enforcement investigation to lead to a fraud or alien smuggling organization.
- Violent Gang and Drug-Related Activity: One area in which the INS is focusing its efforts is violent criminal alien gangs in designated cities where INS Special Agents, in coordination with other law enforcement agencies, are working to dismantle criminal organizations through the identification, apprehension, conviction, and removal from the country of alien members in these criminal groups. The Investigations program will continue its commitments to the task force activities funded by the Interagency Crime and Drug Enforcement appropriation, (previously known as the Organized Crime Drug Enforcement appropriation) and Violent Gang Task Force (VGTP) efforts, and work in coordination with other federal, state and local law enforcement agencies.

Criminal Allens: The Criminal Alien Program has responded to the various statutes in recent years that have directed INS to
identify and process aliens convicted of deportable offenses through different approaches:

identified during their incarceration in state and federal prisons, or who were placed on probation in lieu of incarceration.

- (1) The Institutional Removal Program (IRP) was developed in order to identify criminal aliens within Federal, State, and local correctional institutions, who are subject to removal once they have completed their sentences, and commence removal proceedings while they are still serving their sentences. The IRP process makes possible the immediate removal of aggravated felons and other criminal aliens at the completion of their sentences. This process eliminates the need for an agent to locate an alien after his release, and eliminates the need for INS detention after release from a State, Federal, or local correctional institution.

 (2) The Probation and Parole Program was developed in order to identify, process, and remove criminal aliens that are living in the community. Special Agents work closely with Probation and Parole Officials in order to process criminal aliens that were not
- (3) County Jail Projects were developed in order to identify, process, and remove criminal aliens within a county or local jail. Investigators visit large county jails on a regular basis in order to identify and process criminal aliens for removal from the United States.
- (4) The Reentry After Deportation Prosecution Program was developed in order to prosecute commal aliens reentering the United States after deportation.
- Fraud: The Fraud program focuses on the detection and deterrence of immigration fraud, which falls into two broad categories document fraud and benefit application fraud. Document fraud involves the illegal manufacture, sale, purchase, or use of identity documents to circumvent immigration laws. Benefit application fraud involves the willful misrepresentation of material fact to gain an immigration benefit in the absence of lawful entitlement. Alien criminals and terrorists employ both document and application benefit fraud to facilitate expansion of their illegal activities, which often includes violence, vice, narcotics trafficking, welfare fraud and terrorism. The investigation and prosecution of complex fraud cases is both labor and time intensive, often requiring many months of work by several agents who conduct undercover operations to identify principal conspirators. Agents utilize available technology to review hundreds of documents, conduct interviews, and gather and assemble evidence necessary to bring a case to trial for successful prosecution.
- Samugaling: The INS Anti-Smuggling program is engaged in disrupting and dismantling organizations that traffic in human cargo. There are unprecedented social, political and economic pressures that have created extensive changes in human migration patterns. Anti-Smuggling agents conduct investigations in source and transit countries, at the border and at ports-of-entry, and in the interior, aggressively pursuing criminal organization members domestically and internationally. These agents also are engaged in the identification and prosecution of contractors involved in the recruiting and transporting of illegal workers, organizations that rely on illegal aliens for prostitution, the distribution of weapons and marcotics, and those that facilitate the entry of possible terrorists and/or criminal aliens.

- Workalte Enforcement: The Worksite Enforcement program enforces the employer sanctions provisions of the Immigration Reform and Control Act of 1986 (IRCA), which require employers to hire only U.S. citizens or authorized aliens, and to verify the employment eligibility of all workers. The program results in civil and criminal penalties against employers who violate these provisions. INS officers investigate employers, verify cligibility documents, determine the nature and degree of employer compliance, and remove unauthorized aliens from the worksite effectively opening job upportunities for legal workers. The resources for worksite enforcement are primarily directed to lead-driven investigations that involve alien smuggling, human rights abuses, other criminal offenses and substantive administrative violations.
- Counter-terrorism: The Investigations program, with its authority to enforce immigration law, is in a unique position to assist in counter terrorism efforts. The INA and related laws, including new provisions contained in IIRIRA (including one establishing the Aben Ferrorist Removal Court), allow INS to arrest and detain suspects both criminally and administratively. In order to enter into and remoin within the U.S., terrorists often violate immigration have by smuggling aliens, providing false statements, claiming asylum, and committing other forms of immigration fraud. Through its participation on the FBI's Joint Terrorism Task Forces and other proactive efforts with members of the Intelligence community, INS targets and aggressively pursues members of these organizations, which can lead to the identification of their leaders and thereby disrupt the organization as a whole.
- Asset forfeiture is one of the most effective tools available to law enforcement to dismantle criminal organizations, deter-criminal
 activity, and attack organizations by seizing the proceeds of the criminal enterprise. It fosters a closer working relationship with
 State and local law enforcement agencies. Through the use of the equitable sharing program INS can share the forfeited assets or
 proceeds from the sale, with agencies that participated in the investigation.
- The Law Enforcement Support Center (LESC) is responsible for identifying and tracking criminal aliens in the United States. The LESC works in cooperation with State, local and other federal enforcement agencies that encounter foreign-born individuals during the conduct of criminal investigations or arrests. As part of this investigative assistance, the LESC provides access to information contained in INS databases to these agencies. The LESC also provides access to the United States Marshals Service, the Federal Bureau of Investigation, the Drug Enforcement Administration, and the Department of State, Bureau of Diplomatic Security. The LESC also participates in the investigation of all individuals who INS has previously encountered and fingerprinted who are subsequently arrested anywhere in the United States and whose fingerprints are submitted to the FBI. Based on the results of these investigations, INS can ensure that individuals whose detention by INS is mandatory are detained and either prosecuted or processed for removal from the United States.

Increase/Decrease	250	125	*2,000

BASE PROGRAM DESCRIPTION.

- The Detention and Deportation (D&D) program is a critical element in the structure of the INS. Its functions are to detain, exclude, remove, and deport aliens. INS uses Service Processing Centers (SPCs), contract facilities. Joint INS/BOP Federal Facilities, and State/local facilities to detain those aliens subject to deportation, exclusion or removal proceedings who are likely to abscond, or whose freedom at large would clearly represent a danger to public safety and security until they are ready for removal. To perform these functions, the INS maintains a system of controls that ensures that a case involving an alien is efficiently and correctly processed and, if necessary, the alien's removal from the country is effected promptly.
- The D&D program removes deportable, excludable and removable aliens, and avoids detention to the greatest extent possible. The D&D program: (1) tracks the cases through the IHP: (2) updates the necessary data bases; (3) provides case status updates to immates and their attorneys; (4) obtains required travel documents; (5) makes the necessary travel arrangements, including notification to foreign governments; (6) executes the warrants of deportation and removal; and (7) physically removes criminal alters from the country, including providing overseas escorts, when necessary, to protect the traveling public or to ensure the criminal's arrival at the intended destination.
- The D&D program ensures that an adequate alicn detention capability is available by detaining aliens through nine SPCs, seven INS contract facilities, four joint INS/BOP Federal facilities, and by utilizing State/local facilities that meet INS detention standards.
- The D&D program is responsible for making sure that human, statutory, and regulatory rights are consistently respected. The program provides a health care program staffed by Public Health Service Commissioned Corps officers who provide or arrange for health care for aliens in INS custody. The program also provides humane juvenile shelter care programs in coordination.

with INS International Affairs and through direct INS contracting. In addition, the D&D program conducts a jail inspections program to ensure appropriate detention standards are met in INS contract facilities.

- The D&D program allows other enforcement programs to operate effectively by detaining and removing aliens. Absconder
 Removal Teams further support efforts to remove aliens with final orders of deportation or removal, and by locating and
 removing absconders. This with become more crucial due to provisions contained in IIRIRA, which mandate the detention of
 every alien with a final removal order during the 90-day removal period.
- Initiatives which have significantly changed D&D operations include use of contract detention facilities; long-range detention resource planning; and major long-term, multi-year detention space augmentation efforts. Other examples are the Institutional Hearing Program under which hearings are conducted while after immates serve their sentences and the use of video teleconferencing in hearings to reduce the need to take alien immates and detainees to hearings outside prisons and detention facilities. Yet another example is criminal alien contralization at sites with enough detention space and personnel for processing cases, for expediting removal hearings.
- The nationwide D&D transportation system has been restructured to make more efficient use of transportation and detention resources. New resource multiplier technology, to further maximize utilization of D&D resources, continues to be developed Legislation since 1986, in large part emphasizing structer criminal provisions, has similarly transformed the way D&D does its work. These and other initiatives to remove criminal and other illegal aliens from the U.S. communities, supported by enhanced resources, have recently produced record numbers of removals.
- The Administration's policy is to interdict smuggled illegal aliens at sea prior to entry into our Nation's tetritorial waters. Over
 the past few years, INS, working with the Departments of Defense and State, and with the U.S. Coast Guard, have cooperated
 on numerous operations that have resulted in the swift interdiction and repatriation of hundreds of aliens attempting to be
 smuggled into this country illegally.

BASE PROGRAM DESCRIPTION:

- The Intelligence program provides strategic and tactical intelligence support to INS offices enforcing the provisions of the INA, and assists other federal agencies in addressing national security issues. Intelligence program activities contribute support to: preventing the entry of illegal ations, terrorists and inspections traffickers; identifying alien smuggling operations; detecting fraudulent documents and false claims to U.S. citizenship, and detecting other individuals or organizations involved in the manufacture and sale of counterfert/decuments, in application and benefit fraud schemes, and other related criminal activity.
- The Intelligence program provides strategic intelligence assessments to INS management that have long-term importance/relevance to the mission of the agency in terms of operations, planning and policy.
- The Intelligence program maintains communication with appropriate U.S. and foreign government agencies on immigration
 and national security matters, including the identification and monitoring of known or suspected international terrorists and
 alien smugaling operations.
- The Intelligence program provides personnel on a full time basis to various national multi-agency task forces including the CIA
 Counterterrorism Center, the CIA Counternarcotics and Organized Crime Center, the FBI Counterterrorism Center,
 INTERPOL, and the El Paso Intelligence Center.
- The Intelligence program provides assistance to international law enforcement agencies and international air carriers to detect frusdulent identity documents.
- The Intelligence program provides technical support and assistance to prosecute major document counterfeiters, alien amugglers and other violators of the INA.

- The DNS Intelligence program supports the Commissioner's unnual priorities in the areas of border and interior enforcement. This is accomplished through provision of specialized training in the areas of intelligence and document fraud to INS officer corps personnel at all levels, through dissemination of investigative leads, through development of threat assessments covering a range of enforcement topics, and through distribution and targeting of smuggling organizations, especially those smugglers involved in the death or inhumane treatment of smuggled aliens.
- The Forensic Document Laboratory (FDL) is the only federal crime laboratory dedicated exclusively to the forensic examination of travel and identity documents. It provides a wide variety of forensic document analysis and other law enforcement support services to INS offices, as well as other federal, state, and local agencies and foreign government entities. The FDL works closely with law enforcement officials to detect, interdirt, disrupt, apprehend and remove from the United States individuals and organizations involved in the production and distribution of counterfeit documents that facilitate acts of terrorism, snuggling, and other criminal activities.

2001 Estimate	42	38	12,488
Increase/Decrease			

BASE PROGRAM DESCRIPTION

- Enforcement Activities: In coordination with the Department of State, the U.S. Coast Guard, and components of the Department of Justice, the Office of International Affairs actively participates in working with foreign governments to monitor and disrupt the movement of groups being smuggled into the U.S. Through the program's operations, the three overseas district offices work closely with other countries, host country officials, and air and sea carriers in planning, directing, advising and implementing plans that are targeted towards individuals and organizations attempting to move persons it regally into the U.S. through third, or transit, countries, resulting in the repatriation of those persons who do not articulate a fear of return and the prosecution of smugglers. A 1999 smuggling disruption activity in Central America resulted in more than 2,400 individuals, headed towards the U.S., being returned to their country of origin.
- The placement of INS staff overseas allows the INS to establish and maintain an effective long-term working relationship with host country migration authorities, consular officers, and enforcement organizations. This relationship, coupled with a working knowledge of cultural, social and economic conditions in the area, enables officers to gather intelligence information and coordinate enforcement operations, which have a significant positive impact on INS domestic operations.
- INS Overseas personnel, through coordination with domestic INS offices, other U.S. Government agencies, host country governments, airline officials, and other non-government entities, pursue proactive international enforcement strategies such as operation Global Reach. These strategies are aimed at identifying, investigating, deterring, disrupting and reducing illegal activities at their source, as well as identifying key overseas transit locations used by smugglers and main fide aliens bound for the U.S. As greater diplomatic relations between foreign governments and immigration enforcement officials are forged, INS will more effectively identify iflegal migrants seeking to transit to the U.S., as well as to define more collective approaches to deter illegal migration worldwide.

ACTIVITY: IMMIGRATION SUPPORT

	i.scm		
	Pos.	FIR	Amount
Training			
2000 Appropriation Enacted	134	122	\$17,936
2001 Base	134	1.34	18,251
2001 Estimate	1,34	1.34	18,251
Increase/Decrease			

BASE PROGRAM DESCRIPTION

- The Training program provides the staff and the resources necessary to maintain an employee development program that meets the diverse training needs of the INS workforce. Training requirements are identified annually and are revised, as needed, due to new regulations, legislation, or organizational needs. The program operates in a variety of ways: through residential training at the Federal Law Enforcement Training Center (F) ETC) at Glyuco, Georgia (basic officer training); at Artesia, New Mexico (advanced/journeyman/specialized training), at the Leadership Development Center in Dallas, Texas (supervisory/management training), through programs conducted by other federal agencies; by private contractors; or in combined presentations using INS and non-INS resources.
- The INS activated a satellite training facility at Charleston Naval Base, South Carolina in April 1996. Beginning in August 1996, the Charleston facility has been used exclusively for Border Patrol training. All other INS officer training, both basic and journeyman, will be conducted at one of the FLETC facilities at Glynco, Georgia, or Artesia, New Mexico, or will be provided via exportable modules at or near employee's duty stations.
- The Training program ensures basic training for all new officers, and advanced and technical training for journeyman officers. It also periodically updates curricula for the basic and advanced training programs. The INS must ensure that its workforce is being utilized to its full potential and this is achieved through the provision of basic and advanced training. Timely training will ensure that the INS Officer Corps is kept current with policies and procedures, thus reducing potential liability costs; (an under-trained workforce would increase the Service's liability exposure).
- The Training program provides mandatory training for fNS supervisors, managers, management officials and executives, and technical and specialized training for professional, administrative, technical, clerical and other personnel who support agency operations.

New training technology will afford the INS an opportunity to provide continuous training for all INS employees at or near their duty station, reducing travel costs, and internal and external costs that come with having to train off-site. White certain requirements such as basic training, firearms and driver training, and other courses involving group interaction and practical exercises may justify a group/residential learning environment, many learning objectives can be addressed by distanced learning packages using video consectes, workbooks, training pamphlets, and computer-based instruction and, in certain instances, video conferencing. This training can be learner based, self-paced, ongoing, and reusable. Distanced learning technology promotes the dissemination of information, mercuses certain desired skill levels, strengthens efficiency, and changes entereded attitudes.

BASE PROGRAM DESCRIPTION:

The Data and Communications program provides the linkage of confittives to information and information technology. There are seven major technology programs included under the Data and communications program plus the functions collectively known as Information Resources Management (IRM) Operations. The seven program areas, each of which consist of one or more projects in addition to the normal operations and maintenance required for existing systems and technologies, are:

1) Infrastructure 2) Examinations Systems, 3) Inspections Systems, 4) Biometric Identification Systems, 5) Corporate Information Systems, 6) Management Systems (financial and administrative), and 7) Enforcement Systems. IRM Operations include the functions necessary to support the activities of the Data and Communications program. Through development and implementation of these initiatives, the Service will improve the effectiveness and efficiency of Service functions through the use of automation, provide for the operation of data and communications networks, and provide radio communications, telephone call handling, intrusion detection sensors, and electrosic security equipment and systems. INS automation efforts are designed to directly support efforts to control the borders of the United States, reduce incentives for unauthorized employment and benefits, and remove criminal and non-criminal aliens. The INS will continue to place an emphasis and priority on its role as a repository of the Nation's records on immigrants, visitors, and illegal entrants, as well as on meeting the customer needs for enhanced technology services and information. A brief description of each of the seven major automation programs follows.

- Infrastructure The IRM Infrastructure Program provides standard office automation hardware and software to support improved communications and interoperability between INS sites. Through the use of these products, the INS workforce will effectively and efficiently communicate, share data, and provide professional products and services that support customer requirements. The Infrastructure Program encompasses three significant IRM activities. The first and most significant of these activities is Infrastructure Deployment in which the primary goal is to equip each INS office with standard integrated sets of office automation hardware, software, and LAN configurations, along with the telecommunications backbone through which remote and centralized systems and the corporate database are accessed. The second activity, Infrastructure Support, encompasses the full range of ongoing services to support the technology and systems architecture. Included are hardware maintenance, Field Operations Support (FOS), help desk operations, training, and data communications. Hardware maintenance provides the necessary services to ensure ADP equipment is maintained in operating order consistent with manufacturer specifications. The FOS contract provides on-site over support to INS facilities throughout the United States FOS also provides INS help desk operational support and computer operations and production control services for Headquarters. The training element includes training in the use of the office automation hardware and software, and computer network training to the field to support the moderanced computer systems that have been and continue to be installed at INS field offices. Data Communications provides data communication circuits that allow operational users to access INS centralized ADP systems from office, worldwide. The flord activity is the Video Teleconferencing (VTC) initiative in support of the Service's Institutional Hearing Program (HIP). The VTC provides for audio and video connectivity between distant INS locations to support INS hearings and legal proceedings
 - Examinations Systems The Examinations Systems Program provides for an integrated set of functions that incorporates all individual casework-oriented subsystems used to support the processing of applications and petitions for immigration benefits, and associated processes, such as the production of immigration documents. These functions and processes include employment authorization, asylum, resident alten processing, and citizenship application and processing for naturalization.
- Inspections Systems The Automated Inspections Systems Program supports efforts to manage admissions at ports-of-entry white facilitating passenger travef. Three major automation efforts included under this program are the Interagency Border Inspection System (IBIS), the INS Passenger Accelerated Services System (INSPASS), and the SENTRI/Dedicated Commuter Lane (DCL) and Pilot.

IBIS, a project operated jointly with the U.S. Customs Service, Public Health Service, and Departments of State and Agriculture, is used at ports-of-entry to facilitate inspection and to identify criminals. IBIS provides the deployment, configuration, installation, and support for the personal computers, servers, gateways, and controllers that service these ports-of-entry. INSPASS is an automated inspection system for low-risk, frequent travelers using automated inspection kiosks. This system is currently installed at several of the Nation's major international airports. DCL allows border crossers, pre-enrolled

and authorized by INS, to use automated verification instead of manual inspection. This program develops and deploys machine readable travel documents, which will allow for positive identification of air travelers destined for the United States.

A combination of technology and advanced production techniques will produce entry documents that are fraud resistant and easy to use. Profile scanning and a sophisticated worldwide law enforcement network will quickly and accurately identify persons of interest. Smart card technology, with positive identification features, will facilitate the quick and accurate inspection of low-risk, frequent land travelers. Technology will allow for improved service to the public while increasing the number of inspection hours devoted to high-risk activities.

- Biometric Identification Systems The INS is developing a single-fingerprint identification system enables the Service to rapidly and accurately identify persons of interest. Work is proceeding to integrate the INS fingerprint identification system with that of the FBI (IAFIS). IDENT is the current INS fingerprint-based identification subsystem that is used by Service IAW enforcement and benefit systems to assist in the positive identification of persons who are arrested, as well as those who apply for benefits, including the identification of travelers referred to secondary inspection processing, and for automated inspection.
- <u>Corporate Information Systems</u>. This program seeks to integrate and consolidate INS information and records management capabilities in a secure, open system environment. As a part of this program, the Verification Information System (VIS) supports the confirmation of an alien's immigration status, eligibility for certain entitlement benefits, and authorization to work. The INS has continued to re-engineer its dula repository systems to streamline and improve its corporate information systems and the data contained in those systems.
- <u>Management Systems</u> The Management Systems Program includes the development, implementation, and maintenance of financial and administrative applications providing decision support information on INS workload, personnel, and financial resources.
- Enforcement Systems The INS has continued deployment of the ENFORCE/IDENT capability to designated INS sites, as well as implementing the Encrypted Voice Radio Program (EVRP), in conjunction with the Department's Wireless Management Office. The INS continues providing services to support and maintain the applications systems that support the Enforcement Systems Program (i.e., ENFORCE and ICAD), and the radios, scopes, sensors, and night vision equipment deployed.
- Information Resource Management (IRM) Operations IRM Operations consists of the planning, policy development, acquisition management, computer security, field and program support, and management activities required to support the technology requirements of the Service. IRM Operations provide the strategic direction and sactical implementation strategies for the effective and efficient development, deployment, and majotenance of automated information resources.

BASE PROGRAM DESCRIPTION:

- The Information and Records Management program maintains and manages alien records and files, provides information from
 those files to fulfill requests, controls and mointors the release of information through the SAVE program and the
 Congressionally mandated verification pilot programs, the Freedom of Information/Privacy Acts program, it oversees the
 Service mail management program, and delivers forms and applications to internal and external customers.
- The program develops, implements, and monitors generals policy and procedures, promulgates regulations, plans and executes
 the budget, and carries out operational support functions to support the responsibilities described above.
- Every operational entity in INS refies on accurate, timely and complete data and records, as well as the day-to-day records support operations that make it possible to conduct law enforcement activities, adjudicate benefits, facilitate foreign travel, and support administrative functions. It is the responsibility of the Information and Records Management program to ensure the high level of support demanded by our internal customers. In addition, the program represents the public's interest as the custodian of records and information. The safeguarding of immigration related information, and the appropriate dissemination of that information including its provision to the public and other governmental entities, is a primary objective of this program.

BASE PROGRAM DESCRIPTION

- INS attorneys represent INS before the Immigration Courts, the Board of Immigration Appeals, the Office of the Chief Administrative Hearing Officer, the Ment Systems Protection Board, the Equal Employment Opportunity Commission, and Boards of Contract Appeals. The attorneys review charging documents for legal sufficiency, prepare for hearings, represent INS in court, prepare appellate briefs, train INS officers, and provide legal advice. The Legal Proceedings program provides litigation support in agency litigation conducted in U.S. District Courts and U.S. Courts of Appeals. Its attorneys provide advice to the Commissioner, Regional Directors, District Directors, Border Patrol Sector Chiefs, and to their respective staffs, on legal matters arising at all levels of agency operations.
- The success of the Service in its responsibilities is intrinsically field to the effectiveness of its legal representation. Recently-enacted legislation and new Congressional mandates, powers, and resources granted to the Service require expanded enforcement activities, increased arrests, criminal alien removal programs, Institutional Hearing Programs, anti-smuggling efforts, conveyance seizures, expedited removal proceedings, and mandatory detention and removal of undesirable aliens.
- Between FY 1998 and FY 1999, the number of cases received by the Board of Immigration Appeals increased by 23 percent.
 Indeed, the number of cases received has increased dramatically every year for at least the past five years. Between FY 1994 and FY 1999, the workload increased by 129 percent.
- The number of INS cases received by the Merit Systems Protection Board has increased by 207 percent in just three years -from 27 cases in FY 1996, to 43 cases in FY 1997, and to 83 cases in FY 1998.
- The additional legal personnel dedicated to labor-related matters will more than pay for themselves by saving the Service tremendous sums of money in attorneys (see and compensatory damages. From FY 1997 through FY 1999, the Service paid over \$6.8 million in adverse settlements -- an average of almost \$2.3 million per year.

The U.S. Army Manpower Analysis Agency (USAMAA) recently completed a comprehensive review of the staffing needs of the Legal Proceedings Program. As part of its study, the USAMAA visited the General Counsel's Office in Washington, D.C., the three Regional Counsel Offices, and 29 of the 32 District Counsel Offices. In a 600-page report, the USAMAA thoroughly documented each office's staffing shortfalls and concluded as follows.

Our study clearly demonstrates that the Legal Proceedings Program is vasily understaffed and underfunded. Its attorneys cannot adequately perform their assigned from those without significant increases in personnel

The Legal Proceedings program at Headquarters provides the Inflyowing legal support

- Examinations Division: This division provides legal assistance to INS program offices as well as to INS and DOJ attorneys on
 issues related to immigrant and non-immigrant benefits, naturalization, denaturalization, and inspections. In providing such
 assistance, the division issues legal opinions, diafts and/or reviews regulations, field guidance, and legislative proposals,
 responds to inquiries/correspondence from non-agency sources, and provides hitigation support.
- Refugee and Asylum Law Division. This division provides formal legal opinions and other legal advice to INS components on issues arising in connection with the Service's asylum, refugee, and temporary protected status programs, takes a major role in devising and carrying out procedures to implement [BRRA provisions, such as expedited removal, supervises, along with the Office of International Affairs, various programs for screening persons interdicted at sea; drafts and reviews regulations, field instructions, and guidance to the agency, legislative propissals, and management initiatives concerning asylum and effugee processing; represents INS in dealings with other 11S. government agencies, the United Nations, non-government organizations, the media, and foreign governments, overvices efforts to carry out U.S. non-neturn obligations under the Torture Convention; and participates in the training of INS attorneys, Asylum Officers, Refugee Officers, and other officers throughout the Service and the Executive Branch.
- Enforcement Division: This division provides legal advice related to the Service's enforcement operations. A primary focus is the removal of criminal aliens, including aliens convicted of aggravated felonies and aliens involved in terrorist activities. INS aftomeys are stationed in all district and regional offices to coordinate and help ensure the effectiveness of the efforts to remove criminal aliens, including the Institutional Hearing Program. This division also supports and monitors removal proceedings against aliens, litigation in the federal courts, primarily as it relates to removal matters, and the development of Service enforcement operations including undercover matters, enforcement policies, and implementation of the enforcement related provisions of AEDPA and IRRRA legislation.
- Commercial Law Division: Conducts litigation of all contract matters and complex personnel cases for INS. Oversees POIA.
 Privacy Act, ADA, and personnel (EEO, MSPB, and OSC) litigation nationwide. Drafts, reviews, and advises on implementation of interagency agreements, MOUs with state and local governments, and audits by the OIO and GAO. Initiales

financial collection efforts from air and sea carriers, as well as bond sureties, and supports district court litigation of such matters by DOJ

ACTIVITY: PROGRAM DIRECTION

Increase/Decrease	90	45	5,272

BASE PROGRAM DESCRIPTION

- The Management and Administration program provides management direction and support for the implementation and operation of regional and field activities and functions to those managers and supervisors who are responsible for and exercise authority over multiple programs;
- Executes the provisions of the INA and related policies through the development and implementation of immigration programs and the management of resources.
- Provides for the development, implementation, direction, operation and evaluation of administrative support systems and services that rect internal operational and managerial needs, as well as externally mandated requirements;
- Responds to congressional and public inquiries, performs audits, conducts internal investigations, provides informational
 responses to inquiries from GAO, OIG, OMB and Departmental offices, and develops and evaluates policies and procedures to
 improve the effectiveness of INS' programs.
- The major administrative functions within the program include: personnel, budget; accounting; internal controls; equal
 employment opportunity; procurement; property management; fleet management; security; safety and health; and other
 miscellaneous general services that support all programs.

Strategy

The INS is dedicated to the basic tenets that the borders of the United States should be characterized by the rule of law, and that the physical integrity of those borders is essential to defining our national sovereignty. At the same time, it is equally imperative that the flow of tawful commerce and the passage of legitimate travelers be encouraged and assisted to the greatest extent practicable. In deterring and denying our border areas to the lawless, INS recognizes that it must not compromise or ignore the rights and needs of the lawful. In FY 2001, the INS will continue to focus its efforts to the tasks of Border Enforcement and Border Facilitation. The FY 2001 request also continues the integration of all INS' enforcement activities, and into those interior areas of our nation that have been targeted by illegal immigrants and criminal organizations.

INS: multi-faceted aspects of the Border Management and Control Strategy is separated into several distinct elements. First, the special requirements of the Ports-of. Entry (POE) are addressed under Part Enforcement, where enforcement efforts must target not only more sophisticated methods of illegal immigration and alicn smuggling but, also, implement the expedited removal authority granted under IRRRA. INS, in response to the Attorney General's and Treasury Secretary's Border Coordination Initiative (BCI), is starting to formalize its joint agency efforts with the United States Customs Service (USCS). The BCI outlines a major strategic plan for INS, developed with the USCS, to build a Stronger platform of cooperation based on six core initiatives: Port Management Model, Intelligence, Investigations, Technology, Communications, and Aviation and Marine. By creating enforcement and facilitation strategies that prioritize inspections by security risk, INS can expedite the inspection of U.S. citizens and legal aliens, and dedicate more resources to the detection and apprehension of aliens attempting to enter the country illegally. Second, the request speaks to the Deterrence & Apprehension of unlawful border crossers who seek to enter between the POEs.

These requests specifically support the National Border Control Strategy, as well as the FY 2001 Strategy Statements addressing Officer Safety and the Border Coordination (nitiative (BCI). BCI has been so successful, that it has expanded from its original 6 initiatives (Port Management, Intelligence, Investigations, Air/Marine, Technology and Communications) to B. The two new initiatives are Performance Measurements and Integrity. The goals that have been achieved with BCI include: increased cooperation among agencies; joint intelligence sharing, unified intelligence reporting, joint enforcement efforts at the POEs, joint community outreach efforts; jointly working on investigations, implementation of a coordinated effort on controlled deliveries; exchange of seizure and investigative information; improved coordinated processing of INS documents to allow for a smoother transition of controlled deliveries; expanded use of Interagency Border Inspection System, progress in improving radio communications; joint operations provided knowledge of method and best practices for use by both USCS and USBP; numerous joint field operations were conducted; and with the Air/Marine initiative, joint fuel usage, training, landing pads and safety mission effort sharing.

Element: Border/Port Enforcement and Facilitation

Program	Positions	Workyears	Amoun
Inspections	115	SR	\$10.095

Narrative Description:

Included in this element are two pieces—1) Port Enforcement. 28 additional Immigration Inspectors to support expedited removal workload requirements, and 2) Port Facilitation: 87 immigration Inspectors to staff (backfill staffing) the three new ports-of-entry along the southern border.

- 28 Immigration Inspectors. 14 workygan, and \$2,458,000 are requested for the Inspections program, in order to meet the increased workload related to the expedited removal process at land border POEs in FY 2001. Under Section 302 of IRIRA, INS inspectors are now authorized and required to process inadmissible aliens for expedited removal, rather than send these cases through the Executive Office for Immigration Review (EOIR). The expedited removal process is very labor intensive (1-2 hours on the average) for Inspectors in secondary inspection, requiring an increased amount of time spent in alien interviews, completion of required paperwork and entries into the Deportable Alien Control System (DACS), and supervisory reviews of the case. After its first full year of activity, expedited removals at the land borders continue to generate a tremendous workload for the Inspections program. In FY 1998, INS Inspectors removed approximately 76,000 aliens at land border ports who previously would have been acheduled for a hearing with an Immigration Judge or simply asked to withdraw their applications. The mumber of expedited removals continue to grow and show no signs of reversing this pattern. For example, just in the span of one month's increase (Dec 1998 to Jan 1999), expedited removals surged over 4,000.
- To conform with the law, expedited removal workload cannot be deferred or backlogged, but is performed by existing inspections staff. Additional overtime has been authorized to allow extra officer hours to be available at the heavy processing location. This is perticularly so at regions where expedited removal authority was used to complement Border Patrol enforcement strategies. Also, officer hours have been moved from other important primary and secondary functions to alleviate the long waits for expedited processing. Finally, a significant segment of the aliens have been allowed to withdraw applications for admission who otherwise would have been processed as expedited removals had sufficient staff resources been available.

 With an additional 28 immigration inspectors, about 24,000 additional expedited removals would be completed annually (based on 2 hours per completion).

- 87 Immigration Inspectors 44 workyears, and \$7.637.000 are requested in the Inspections program to staff (backfill staffing) the opening of three new POEs along the southern border. Section 121 of HRIRA mandates that INS eliminate undue delays in the inspection of persons and vehicles lawfully entering the United States over land borders via increases in INS and USCS: inspectors. To avoid delays, POEs must be appropriately staffed for the volume of traffic. INS was authorized to open three new southern ports but did not receive any FY 2000 staffing enhancements. USCS received comparable staffing for these ports in FY 2000. The requested positions will allow INS, in conjunction with USCS, to ensure that primary inspection lanes at these new POEs will be staffed for peak travel times. Eagle Pass II and Los Tomates, Texas have already opened their ports, and the requested positions would backfill staffing needs. Laredo, Texas is scheduled to open in June of FY 2000.
- Pacilitation of [awfu] travel and commerce through northern and southern land POE serves as a major component of the INS'
 overall Border Management and Coordination and Control strategy. Under the auspices of treaties and accords between the
 United States, Canada, and Mexico, such as the North American Free Trade Agreement (NAFTA) and the Canadian Accords on
 our Shared Borders, INS has a responsibility to assist in the free movement of persons and goods between countries.
- In FY 1996, INS total inspections at land POEs numbered just over 400 million. In FY 1997, INS received 150 additional land border Inspectors to address a growing workload but has not received any more since that time. Land border traffic in FY 1998 was approximately 420 million inspections and then increased to aimost 440 million in FY 1999. INS ariticipates that total inspections will increase to approximately 460 million in FY 2001. Currently, INS' Workload Analysis Model indicates that there still remains a large unmet need for additional land border Inspectors at the northern and southern borders.

Program	<u>Positions</u>	Workyears	Amount

Total .	430	215	\$72,000

Narrative Description

Border Enforcement Operations. This request pertunis to the full range of strategie, tactical and support activities designed to sustain and expand INS' continuing commitment to controlling all our nation's borders. However, there is a clear emphasis on the Agency's determination to gain control and manage the Southwest border - a continuing, focused, but as yet unfinished effort. Over the past several years, the INS, the Administration and the Congress have invested extraordinary efforts and resources in the National Border Control Strategy and the concept of "Prevention through Deterrence." Both the San Diego and the El Paso areas have achieved and are maintaining control. The Rio Grande Strategy, that has evolved from Operation Rio Grande as a subset of INS' National Border Control Strategy, has significantly improved border control in the McAllen, Laredo and Del Rio Sectors of South Central Texas during the past two years. These are only some of the most visible of the many stretches of the Southwest border that have experienced an unprecedented improvement in their quality of life and economic well-being, in part as a result of the Border Patrol and other INS enforcement programs. But there are 1,900 miles of border between theorial basch, California and Port Isabel, Texas, and whenever one section is brought under control, another area is pressured. Furthermore, as the migration patterns and entry corridors are pushed from the urban and suburban areas into the more desolate and less hospitable lands, the incidents of human suffering and tragedy increase. Much of the staffing, equipment and technology employed along the border by INS serves the double duty of enforcing the law and preserving life.

Beyond the Southwest border, the problems of the Northern and maritime borders are presenting new challenges. Reinforced by recent Congressional mandates, awareness of the troublesome potential of this area requires directing some of the requested resources in FY 2001 toward the deployment of staff, force-multiplying technology and infrastructure improvements to the Northern and maritime borders depending on migration patterns analyzed at the time of deployment. One of the most important lessons learned from our operations and deployments in the Southwest is that the Border Patrol must ensure that agents are provided with the necessary equipment and technology, shelter and support facilities, to do their job properly. Agents must have the tools to do the job for which they have been trained and assigned.

A total of 430 positions, 215 workyears, and \$52,000,000 is requested to provide enhanced Border Patrol operations in FY 2001.

The number of apprehensions made by the Border Patrol have exceeded 1.5 million annually for three of the past four years. The number of other than Mexican nationals apprehended in 1999 was nearly 45,000, the highest level since 1993. Only in a limited number of border areas where a decisive level of agent staffing his been built up since 1993, such as San Diego, El Paso and the Brownsville area of the McAlten Sector, has a decline in the number of apprehensions occurred along with noticeable positive effects on the border communities in those becames. Unfortunately, many other areas of the border have not reached the same decisive levels of staffing necessary to bring about the same dramatic deterrorit effects on illegal entry attempts. The 430 new agents in FY 2001 will also have a positive effect in the intersection of drugs being smuggled across the border. The Border Patrol continues to make record numbers of drug setzures including nearly one million pounds of marijuana and nearly 30,000 pounds of cocaine seized along the border in FY 1999. The increase in drup smuggling letween the land POE is expected to continue as additional resources and new detection equipment is deployed at and between the major ports of entry.

Closely following the vision and recommendations of the National Border Control Strategic Plan, the Border Patrol Five-Year Staffing Plan, and the 1997 INS Anti-Smuggling Strategy, the greatest portion of the new agents will augment existing forces along the Southern land border. However, as in the past, the FY 2001 deployment will be dependent upon the shift in migration patterns and organized smuggling activities, as well as the need to proactively place resources in areas of highest anticipated activity, before the illegal elements can become entrenched

Border Enforcement Force-Multipliers: In performing its mission, the Border Patrol cannot and does not function on staffing resources alone. There are simply too many miles of border, and too many ways to circumvent human senses and abilities. As a result, the Patrol has learned to enhance the capabilities of its personnel with "force-multipliers." This is the term that has come to be applied to that technology and specialized equipment that makes a single Border Patrol Agent, or a small group of agents, many times more effective and efficient. In effect, the technology and equipment "multiplies" the number of agents. Notwithstending this, it must be remembered that technology and equipment do not replace Agents: equipment does not make apprehensions. It does, on the other hand, improve the capability of our agents to protect the border.

Integrated Surveillance Intelligence System (ISIS): The budget requests \$20,000,000 to support the deployment of an additional 60 ISIS systems along the Northern and Southern border and to fund an operations and maintenance program to ensure system quality. The program mission of ISIS is to provide a capability to effectively monitor and manage wast portions of the border from remote facilities and permit officer responses to known incursions.

The deployment of the ISIS technology along the border provides day and night visual coverage of the border through high resolution color and infrared cameras. Major component systems of ISIS include, the Intelligent Computer Aided Detection (ICAD) systems, unattended ground sensors, portable infrared scopes and a comprehensive system of fixed camera along the border (i.e. the Remote Surveillance System(RVS)). Each RVS system consists of a pole with one to four cameras. A site consists of a fixed monitoring point for an area covered by many of these systems. By the end of EY 1999, INS had deployed 76 ISIS systems and expects to add 74 additional systems in EY 2000. In focutions along the Mexican and U.S. border in New Mexico. Arizona and Texas, this technology has had a dramatic effect on border control and management and is credited with increasing the safety of officers who must respond to border incursions. Because this technology can be deployed to vast, open areas and to rugged terrain not easily accessible by Border Patrol agents it serves as an effective deterrent to potential illegal border crossers.

The border enforcement request of 430 Border Patrol agents and 60 ISIS systems will permit INS to enforce the rule of law and enhance border management over larger portions of the border. In support of the 2001 request for Border Patrol agents and technology, INS will deploy these staff and technology resources in a manner that will permit their combined performance and the results from the deployment to be measured. The performance of the agents and surveillance technology will help develop an "optimum mix" of staff, border barriers and technology and assist in determining what future resources are needed to gain control over specific border locations.

	11 1119 241 511	11 6 109 54 80 40 50 25

Strategy

For FY 2001, INS has adopted a two-tiered approach to support these princities: 1) refocus existing enforcement resources; and 2) enhance certain activities with new resources. The resources requested will directly support the first of the strategic princities as follows:

Priority 1: Identification and Removal of Criminal Aliens

Identify criminal aliens as they are processed through the criminal pistice system and remove them as appropriate. These activities will direct resources to state and tederal prisons where criminal aliens are currently incarcerated, to programs in which aggravated felons currently on parole or probation are apprehended, and to activities actively seeking out absconders convicted of a crime and subject to removal.

- Enhance the National Transportation System
- 2 Expand Juvenile Bed Space
- Expand State and Local Beds
- Implement Detention Standards in IGSAs.
- 5 Improve Unitzation of the National Crime Information Center

Priority 2. Detection, Disruption, and Dismantling of Organized Smuggling and Trafficking

INS is changing the emphasis of its law enforcement efforts. The focus is now on disrupting and dismanthing the criminal infrastructure that encourages and benefits from illegal migration including smugglers, counterfeit document producers, transporters and employers who exploit and benefit from illegal migration.

Priority 3: Respond to Local Reports and Complaints

Of special concern to local communities and law enforcement has been the impact of criminal alien activity, unauthorized employment of illegal aliens, the movement of smuggled aliens along interior transportation routes, and its effect on the economy and the quality of life in local communities.

Priority 4: Benefit Fraud and Other Document Abuse

Maintaining the integrity of the legal immigration system requires an aggressive investigation and prosecution strategy against immigration benefit fraud and document abuse

Priority 5: Block and Remove Employers' Access to Unauthorized Workers.

The INS will maintain a sustained and comprehensive approach to denying employers access to unauthorized workers, thus reaffirming the crucial role played by the employer in creating an effective deterrent to illegal migration. INS will identify and target notorious and egregious employers

Element: Ephance the National Transportation System

Programs	Positions	Workycars	Vinorini
Detention and Deportation			\$10,000

Narrative Description

- With 275,000 illegal aliens annually entering the U.S. (INS) Detention and Deportation Program continues to face a growing workload
- Detention and Deportation patterns shift along with the flow of alien traffic. As INS infuses more enforcement resources along the southwest border, illegal aliens adjust their movements accordingly. These shifting detention patterns impact various jurisdictions throughout the country whereby Detention and Deportation staff provide air and ground transportation to move deportable aliens to and from limited nationwide detention facilities, medical facilities, Courtroom hearings, non-U.S. destinations, and other such locales. Over the years, the requirements to transport, escort, and execute alien removals have resulted in the evolution of a Detention and Deportation "National Transportation System." Expedited deportation of illegal aliens is a crucial component for an effective enforcement of the Nation's immigration laws.
- Enhance JPATS Resources for 85,000 Total JPATS Movements
- This request includes the following resources for JPATS movements:
- Detention and Deportation: A total of \$10,000,000 -- and 5,550,000 in the Breached Bond Detention account -- to fund 16,000 additional domestic and reputriation JPATS movements. This request, combined with the \$5,550,000 requested in the Breached Bond Detention Fund will enable INS to fund a total of 85,000 total JPATS movements in FY 2001.
- In October 1995, the Attorney General directed INS and the United States Marshals Service (USMS) to merge their respective
 air transport operations into the Justice Prisoner and Alien Transportation System (JPATS), under the management of the
 USMS. This system incorporates air operations of the INS, Federal Bureau of Prisons (BOP), and USMS into a safe, secure,
 and efficient network for the transportation and/or removal of INS deportable aliens, BOP prisoners, and USMS detainees.

- Air transport operations via JPATS are a critical component of the National Transportation System. JPATS movements serve
 as one of the more economical means of transporting large numbers of aliens from various staging areas around the country to
 those locations where they may be removed from the United States. From EY 1996 to EY 1999, ENS increased its use of
 JPATS by 117 percent.
- Resources requested for increased JPATS movements are based on projected Service-wide usage. The FY 2001 request includes resources for repatriation Bights to Central America, the Caribbean, and parts of Africa. The FY 2001 request is an 18 percent increase over the FY 2000 projected target. Increased INS JPATS movements were determined using the following factors: 1) DOJ recommendations to eliminate prolunged but trips thereby improving treatment of aliens as well as safety compliance; 2) compensation for a lack of available local just space in certain areas; 3) accommodation of several INS worksite special operations and Border Patrol highway operations simultaneously: 4) Congressional and DOJ recommendations to decrease the transportation of INS detainees in commercial girlines; and 5) a priority to increase the removal of aliens.

Element: Expand Juventle Bed Space, and State and Local Bods

Programs	Positions	Workyears	Amount
Detention and Deportation	200	100	\$64,000

Narrative Description

Increasing bed space is linked to increased removal numbers. Implied in efforts to increase the number of formal removals is an appropriate increase of detention capabilities. In practice, increased removal targets and increased detention capabilities do not always move hand in hand. Few cases are uncontested, making it hard to gauge an alten's length of stay in INS custody. Certain types of alters necessitate more bed detention resources due to the complexity of the docket case as is the case with unaccompanied minor illegal aliens and long-term detainces; and even after INS invests its resources, for many of these aliens removals are not imminent. This initiative, combined with the funding for beds requested in the Breached Bond Detention Fand, requests funding to increase INS average daily detention beds by 1,167 above the FY 2000 base level for a total of 19,702 beds.

Enhanced Juvenile Bed Space

The request for an increase in beds for unaccompanied numers includes the following components

- Detention and Deportation: (1 positions of Deportation Officers, 3 Detention I mforcement Officers, and 1 Procurement
 Analyst to be based at Headquarters). 6 workyears, and \$3,465,000. This includes \$2,270,000 for alien detention, \$114,000
 for detention vehicles and \$40,000 for laptup computers, pagers, and cellular telephones. This initiative, when fully
 implemented in FY 2002, will result in the removal of 190 additional juvenile aliens supported by 38 average daily beds
 funded with \$&E resources.
- As stated in INS' Annual Performance plan, Management Core Innection Goals, INS needs to provide increased bed space for unaccompanied minors to support the growing influx of accounteritiegal alrens apprehended by INS Enforcement Officials. Also, F18' Detention and Incarceration Goal addresses the critical importance of providing a safe, secure, and humane confinement for persons detained. Jenny Lisette Flores, et al. os. Junet Reno was a class action lawsuit filed against INS that challenged INS' policy regarding the arrest, processing, detention, and release of minors in INS custody. The settlement actions, effective February 1997, resulted in structer policies concerning twentle illegal aliens. In support of these goals and responding to the Flores settlement, INS implemented a new, comprehensive unaccompanied minor alien program in April 1997, providing national standards to ensure the safety and welfare of unaccompanied minors who are in the United States illegally. This request supports INS' strategic goals by increasing the number of bed spaces available for detaining juvenile aliens white also supporting INS' efforts to promote Federal, States and local cooperation to expedite the removal of unaccompanied minor detainees.
- INS' Enforcement Officials have experienced a steady mercase in the illegal alien traffic flow of unaccompanied minors since fiscal year 1995. The number of juveniles taken into INS custoity increased 34 percent from FY 1995 to FY 1997. In FY 1998, the number of unaccompanied minors taken into custody reached 4,457, an increase of 61 percent over FY 1997. This rate of increase is continuing: 5,644 juveniles were taken into custody in FY 1999.
- To address increasing numbers of unaccompanied minor illegal aliens, this S&E funded initiative will fund 3B critically needed detention bed spaces for juveniles nationwide in both contract and shelter care facilities. Detention space for unaccompanied minors is procured through INS: Unaccompanied Minors Shelter Care Program (UMSCP) and through a number of Intergovernmental Service Agreements (IGSAs) with State and local governments nationwide. After unaccompanied minors are apprehended, like their adult counterparts, some are removed immediately; others are held for short periods (under 72 hours), and the remaining require longer delicition periods. Both shelter care and contract facilities are

required to address the different no. its of the inaccompanied minor illegal aliens

- This initiative also requests Detention and Deportation staff to perform services associated with the processing, detention, and release of unaccompanied minors. Given the high level of scrutiny placed on juvenile aliens in INS custody by advocacy groups, INS requires resources to hire, train, and equip INS Enforcement Officers so that they learn how to apply and comply with the stringent constraints associated with Elores, as well as keeping abreast of new developments and trends in immigration law regarding unaccompanied minors. Increased staff for the unaccompanied minor program is based on the following factors: guidance from the Flores settlement, INS' Escort and Restraint Policy for unaccompanied minors, which in some categories is 1:1; and INS' new detention standards developed for inventic alterns in its custody.
- Resources for Detention and Deportation Docket Clerks will provide the necessary support for the processing of the juvenile
 detainers. Advocacy groups have long held unaccompanied minor detention cases under a microscope, and with the Flores
 settlement the INS has committed uself to managining a high level of care for juvenile alters and their interests.

Increase Funding for State and Local Bed Space

- INS requests 109 positions (25 Deportation Officers, 67 Detention Enforcement Officers, and 17 support) 54 workyears, and \$51,891,000 to support an additional 1,000 funded average stally State and local beds. This innount includes \$22,375,000 for alien detention, \$13,500,000 for removals, and \$1,870,000 for vehicles to transport aliens. This initiative will facilitate the removal of an additional 10,000 illegal aliens. This enhancement will add 1,000 new detention beds enabling INS to reach an average annual funded bed level in FY 2001 of 19,702.
- INS has been faced with an explosion in its need for detention heds. In FY 1994, INS had funding for 5,532 detention bed spaces. This number of funded bed spaces grow 172 percent, an annual average of almost 2,400 bed spaces per year, to 15,050 bed spaces from FY 1994 to FY 1998. The INS detained population grow with the beds. In FY 1999, due to an increase in mandatory spending on personnel costs, on JPATS movements, and on Public Health Service costs. INS was faced with funding 801 less bods than it had in FY 1999. INS was, therefore, unable to adhere to its plan for bed space expansion as outlined in the Federal Detention Plan 1997-2001. Faced with this situation, with the end of the Temporary Period Custody Rules (TPCR), and coupled with the destruction caused by Hurricane Mitch in four Central American countries, INS found itself detaining permanent residents that it now was required by HRIRA to detain, and that it formerly had released based on the unlikelihood that they would abscood. Furthermore, INS was unable to remove criminal stiens in its detention facilities to those Central American countries affected by Hurricane Mitch while those countries theorems in its detention facilities to those Central American countries affected by Hurricane Mitch while those countries theorems from the hurricane. Indeed, INS scrambled to make bed spaces available for criminals being released from prisons who had completed the Institutional Removal Program. However, they could not be removed until travel documents and clearances had been obtained.

Furthermore, Hurricane Mitch had the effect of causing tens of thousands of people to begin the trek northward foward the United States border.

- Although INS bed space requirements for LY 1999 were estimated by the Federal Detention Plan as for back as 1997 to be 18,200, INS did not have funding for this number of beds and was forced to request a supplemental appropriation and a reprogramming to deal with the cascading effects of the end of TPCR and the destruction of Hurricane Mitch. INS must continue to expand its detention bed space of LY 2001 to meet its mandatory detention requirements.
- INS is required by law to detain aliens subject to mandatory detention. In 1 Y 1999, approximately 97% of INS' detention beds were devoted to the detention of mandatory detainees, thereby leaving very few beds for the detention of non-mandatory detainees. As a result, 4NS enforcement ofbox suffered. INS was compelled to bond out of eastedy most of the non-mandatory detainees it apprehended in enforcement operations including aliens. INS believed would abscond and never appear for their hearing before an immigration judge. Thus, 1NS enforcement suffered without the ability to detain non-mandatory aliens. INS has determined that, given the current level of enforcement resources, an appropriate number of average daily detention beds for non-mandatory detainees is 2,500. Anything less would not enable INS to enforce the Immigration and Nationality Act in regards to non-mandatory administrative cases. INS projects a need of 19,702 detention beds in FY 2001 in order to comply with the mandatory detention provisions in ITRIBA. With this enhancement, INS should at least be able to address its detention requirement for mandatory detainees.

Detention Standards for IGSAs

- As INS' detainee population has grown since I-V 1994, INS has been forced to expand its funded bed space levels by purchasing detention space in State and local gails through intergovernmental Service Agreements (IGSAs). Indeed, INS' IGSA average daily bed space usage rate of 1.654 had grown to 7.430 by FV 1998. INS is projecting an average daily IGSA bed space usage rate of 11,050 in FY 2001. Hecause INS is compelled to rapidly expand IGSA utilization in a vast and varied number of non-Federal facilities, INS cannot rely on obtaining IGSA bed space that is always completely compliant with INS' detention standards. The INS, therefore, proposes implementing a program in which its detention standards will be administered, implemented, and maintained with a dedicated staff and funding for upgrading both small and large IGSA facilities. Phase I of this three phase implementation plan will be implemented with funds provided in FY 2000. A total of 80 positions (40 Deportation Officers, 37 Detention Enforcement Officers, and 3 Procurement Officers), 40 workyears, and \$8,644,000 will be needed in FY 2001 to pay for the second phase of this implementation plan.
- The detention standards consist of four services for detannees. First, detannees will attend a Group Legal Rights video
 presentation in which their legal rights are outlined, this will require the purchase of a television and video cassette recorder.

for the IGSAs. Second, detainess will have access to Legal Materials; this will require the initial purchase of Legal Reference material, the maintenance of the legal material, the purchase of updates to the legal material, the replacement of the legal material when necessary, office supplies, and miscellamenus costs to include envelopes, stamps, notary services, certified mail, and interpreters. Third, detainees will have access to telephones, which will meet a one phone per 25 detainees standard, assuring reasonable privacy for detainees when using the telephones, alternate means to meet the telephone standard when telephone use is needed outside telephone contracts (cell phones, transportation of attens to an INS District Office to make certain phone calls); provisions for detainees in make inter-facility calls to family members; and establishment of detainee messaging systems. Finally, detainees will have visitation in provide consultation, rooms for attorney/client meetings.

- The INS potentially has access to IGSA bed space in approximately 900 state and local facilities. The INS has IGSAs with 538 facilities, and access to another 400 facilities through IGSAs with the U.S. Marshals Service. The INS will concentrate its efforts and resources in Phase I by implementing the detention standards in those facilities actively in use. In the first half of FY 1999, INS was actively utilizing a total of 227 IGSA facilities. By the end of FY 1999, INS will implement the detention standards and operating procedures in its Service Processing Centers and Contract Detention Facilities within its base level of resources; these hold more than 45% of INS detainees. In Phase I, during FY 2000, detention standards will be implemented in the 25 local facilities with the most INS detainees (an average daily population of 100 or more detainees), holding approximately 35% of all INS detainees; counting persons held in SPCs and CDFs, the cumulative total will be 75-80% of all detainees. In FY 2001, during Phase II, 100 more facilities (those with an average daily population of 10-100 detainees), holding approximately 20% of INS detainees, will receive upgrades in compliance with the detention standards. Phase II will be completed by the end of FY 2001, and a study of INS detainees will be covered by the detention standards.
- In FY 2001, 37 deportation teams are requested to implement and administer the detention standards. Each deportation team will consist of a single Deportation Officer and a single Detention Enforcement Officer. In implementing the detention standards at IGSAs, the following distribution of positions was applied: 1) One deportation team was assigned to every facility with 100 or more detainees and currently without any INS liainon; 2) One deportation team was assigned to every 6 facilities within a district that detain 100 or fewer detainees each; 3) Regional Office supervision of the program will require two Procurement Officers and two Regional Deportation Officers at each Regional Office; 4) Headquarters administration of the program will require one Procurement Officers, one Program Analyst, and two Supervisory Deportation Officers.

Element: Improve Utilization of the National Crime Information Center (NCIC)

Programs		Positions	Workycars	Amount
Detention and Deportation	•	50	25	\$8,000

Narrative Description

Expand NCIC Capabilines to Address Serious Backlog of Inputting INS's Criminal Alien Records into Nationwide Database

- This request totals 50 positions (18 Depurtation Officers, and 32 support), 25 workyears, and \$8,000,000 for expanding NCIC data entry. This includes \$1,286,625 for alten detention (75 total detention beds), \$1,000,000 to install terminal connections through State and local systems, \$344,000 for detention vehicles, \$175,000 for an NCIC/CJIS Expert Contractor, \$310,000 for travel costs, and \$1,494,375 for alten removals. INS requests resources for the National Crime Information Center (NCIC)/Criminal Justice Information Services (CJIS) to improve and expedite its capability to locate altens on the Wanted Persons File and the Deported Felon File, (rack stolen property, and to obtain criminal history records.
- The NCIC is a centralized automated database of information which is entered primarily over a nationwide telecommunications system to the FBE's central computer. All authorized criminal justice agencies can effer records and make inquiries regarding individuals and property which they encounter on a day-to-day basts. In fact, NCIC databases are accessed by hundreds and thousands of law enforcement officers in their routine investigations of law violators. This technology provides an excellent opportunity for INS to nost aloris to law enforcement officers that the detained person may be a deportable criminal alien. When law enforcement officers become more aware of INS' use of the NCIC System and make additional innuiries that are not being made now, they will become a considerable asset in identifying criminal aliens. INS will then have the opportunity to process the alien for removal. To obtain any benefits from the NCIC System, the NCIC System records must first be entered into the System. Thereafter, all encounters of individuals by the criminal justice system, which are run through the System, can be harnessed to locate records subjects thus avoiding more resource-intensive investigative efforts.
- Presently, INS is not using NCIC to its full potential and is in proparty of losing its NCIC privilege if it cannot maintain its
 database records in full compliance. Over the past 6 years INS has grown tremendously and is now close to becoming the
 largest user of NCIC but does not have the necessary program management structure in place, nor the resources to enter
 records and respond to confirmed record matches of criminal aliens. INS cannot afford to succumb to bigger backlog

problems. In 1974 INS lost the privilege to enter records into the NCIC System as a result of failing to properly maintain the database and, 17 years later, after providing assurances to the LBI, INS was permitted to make inquiries of the NCIC system again.

- In 1991, INS pursued a cautious limited approach to participating in the NCIC System, which was to centralize the entry of records at INS Headquarters. All qualifying information was required and sent from the field to Headquarters via mail or facsimile. The Headquarters staff performs quality control and enters the record. INS received a budget enhancement in FY 1996 to meet the workload criteria at that time. Subsequently, the criteria for records entry has increased dramatically. In December of 1996 the Attorney General mandated that all qualifying wanted persons information had to be entered into the NCIC Wanted Person File, and within 24 hours. As of September 10, 1999, 230,929 cases qualified for entry in the Wanted Person File but only 8.925 qualifying records were contained in the File. INS is unable to enter all qualifying records within the mandated 24 hours. Also in 1996, with FBI's approval, INS created and implemented a new NCIC file exclusively for INS to enter records on deported aggravated felons. HRIRA expanded the definition of aggravated felons whose records qualify for entry into the File. As of September 10, 1999, only 29,625 qualifying records were contained in the Deported Felon File. resulting in a backlog of 170,375 remaining to be entered. Given the serious backlog of data entry, INS is further restricted from performing other mandated NCIC System requirements such as adequate periodic validation/quality control checks of records, and resources to verify that records match is confirmed. INS must have sufficient staff and equipment in the field to ensure that the record subject and individual being detained are the same, that the arrest process is still outstanding or the deportee has re-entered illegally, to make a detention decision, and to transport, process, and then remove the individual. The NCIC System requires that INS provide records confirmation 24 hours a day, seven days a week.
- This initiative proposes to decentralize the record entry back to the field where the initial qualifying information is developed. This is absolutely necessary to avoid delays in the entry of records and ensure timely updating and removal of records. This model of decentralized entry adopts the national approach to entry of NCIC records. Following the FBE model, INS would connect INS District Offices to local, regional, and State computer systems, which interface to the FBE NCIC System. Requested resources would permit the field to respond to the growing demand placed on this to administer its NCIC System, and result in the entry of 54,000 qualifying records per year into the Deported Felon File. This request is based on the number of positions and growth in the program that INS can absorb in a single fiscal year. Requests for resources to further address the need to enter qualifying records may be made in future years.
- Resources for Detention and Deportation Program Specialists, and administrative staff, will provide the necessary support for
 data entry of the thousands of records, validation and quality control checks on the records, and legal support, necessary to
 gain the full benefits the NCIC database provides to law enforcement.

In addition, the \$1,000,000 for Data and Communications program is needed to install terminal connections through local, regional, and State systems to NCIC INS will stall the NCIC System at INS Field Offices. This funding will also be used for leasing and/or purchasing terminals required for the connections, as well the purchase of some telecommunication and modem equipment. Telecommunications cost requirements vary by State.

Infrastructure and Professionalism

Salaries and Expenses (Dollars in thousands)

Initiative Summary

Programs	Positions	Workycary	<u>Атючиі</u>
Legal Proceedings	50	25	\$4,804
Management & Administration	90	46	\$5,272
Total	140	71	\$10,076

^{*}Note: infrastructure and Professionalism elements are also in the Construction Account.

Strategy

For FY 2004, the INS continues its commitment to improving the institutional development and infrastructure needed to sustain the enormous growth in the workforce over the past several years. This priority provides critical services to support the service and enforcement missions of the Agency. It also ensures that a motivated and diverse workforce is well-trained and empowered to do its job. The Infrastructure and Professionalism intitative focuses on restoration of base resources, improving personnel management and accountability, increasing staffing support in both the Regions and Headquarters, developing and implementing employee support requirements, and achieving integration of the various mission areas and strategies. This initiative will improve the INS' ability to support its operational requirements and the FY 2001 Infrastructure and Professionalism strategies. DNS' strategy under this initiative is to:

- reduce backlogs and increase vehicle replacement;
- Improve professionalism and motivation through effective management of diversity in our workforce, and through more flexible career development and geographic mobility strategies.
- improve organizational discipline and responsiveness by establishing more effective modes of internal communication, and by better integrating strategic planning across the various complex service areas.

Infrastructure and Professionalism

Salaries and Expenses (Dollars in thousands)

Element: Floancial and Debt Management Services

Program	Positions	Workyears	Amount
Management & Administration	(d)	31	\$3,312

Narrative Description

- INS requests 60 positions, 31 workyears, and \$3.33,2,000 to stall the Burlington Debt Management Center and the Dallas Finance Center. Twenty-five positions will go to Burlington, 25 to Dallas, and 10 to the Headquarters. With the requested positions, INS will have a fully independent and operational Debt Management Center (DMC) that will report to the Office of Financial Management (OFM). This center will perform all duting and responsibilities relating to the servicing of deposits, bond receipt administration, as well as the collection and administration of other account receivable services (ie., administrative fines, in-collectable checks, etc.).
- Under Congressional approval of the BNS finance restructuring, a debt management center was approved for Burlington,
 Vermont, as well as the Dallas Finance Center, this request is the first step in implementing the restructuring. This increase in data entry capabilities will benefit INS through the production of better financial reports and systems control. The Burlington Center will be a revenue producer for INS, and will more then pay for itself annually, through improved debt collections and other receivables.
 - Aggressively pursue outstanding debt after 45 days (prior to referral in Treasury), and collect money that would otherwise be uncollectible or cost INS a fee for collection
 - b. Bond audits The DMC could provide the field with timely reports and follow-up on bond breaches that have not been finalized. This would result in breaches being collected and recorded in the financial system more timely.

11.2

- The mission of the Dallas Finance Center has evolved from a regional support staff to a national payments management center, which in conjunction with the Debt Center in Builington and the National Hiring Center. Twin Cities, results in a consolidated financial operation at three locations. The additional positions requested herein will support a strategy of integration of budgetary, financial and property systems. This center also allows INS to be compliant with the Prompt Pay Act and to process travel vouchers within 5 days.
- The additional support at the Dallay Finance Center along with additional support at other OFM sites will give INS the ability
 to obtain and maintain a "clean" audit opinion by directing accounting resources to the reconciliation of accounting records
 such as open obligations and the fund bulance with Treasury. Additional resources will also be used to update financial records
 accurately and timely.
- The beadquarters positions are for accountants to fell current visits that contribute to INS' mahility to obtain a clean audit opinion. The OFM's fack of accountant positions was recognized in the FY9R Financial Statement Audit Report. The report stated that INS facks adequate staff resources (motably accountants) to perform the reconciliation of financial transactions. In October of 1998, a Clean Audit Team (CAT) was formed using employees from various offices within INS. This group was convened because of the lack of resources within the Office of Finance. The implementation of the CAT Team confirmed that if OFM is given the proper resources (skill level & numbers), girl it strikes can be made in producing accurate financial data.
- This enhancement request, provides the staffing and financial requirements to continue operations beyond FY 2001.

Element: Administrative Center Staffing

	Stoktwii	Positions	Work years	Amount	,
-	Management & Administration	¥0	15	\$1,960	

Narrative Description

INS requests 30 positions, 15 workyears, and \$1,960(000) (o restore service to an acceptable level that meets customers needs and expectations. These positions directly support (seld operation, administering a full range of administrative support services as provided by each of the Administrative Centers.

- As the Administrative Centers' customer have has increased, so too has the demand for the personnel services, including: the
 Labor Management Relations caseload, EEO complaints, payroll, employee benefits, personnel actions, and awards. Each
 branch within the Administrative Centers' Human Resources Division has seen between a 30-5096 increase in their workloads.
 The permanent staffing levels in the Administrative Centers have remained static 147 for Burlington, 146 for Dallas, and 160
 for Laguna Niguel, while the officer corps has grown by over 75%.
- In February 1996, the Justice Management Division issued a Report, Management Review of Administrative Services. In the summary of Chapter 1, Overview of INS, the report states

"During the last five years, INS has experienced considerable growth in funding and staff resources in response to policy emphases on better controlling illegal immigration and serving legal immigrants more efficiently. The agency has naturally been required to adjust its organizational design, not without some "growing pains." For a number of reasons, INS administrative resources have not kept pace with enforcement and immigration service enhancements. This has been particularly true in the case of management and administration resources within the large direct Salaries and Expenses appropriation. The overall decline in INS staffing in almost every major administrative activity suggests a disturbingly weak administrative infrastructure which has been hard pressed to support achieving the agency's mission effectively."

Flement: Legal Proceedings Base Shortfall

Program	Pasitions	Workyears	Amount
Legal Proceedings	50	25	\$4,804

Nacrotive Description

- INS is requesting 50 positions, 25 workyears, and \$4,804,000 for the Legal Proceedings program.
- These positions are requested to ensure BNS can meet its legal representation requirements, without the requested positions. BNS will have: (1) delayed removal of illegal aliens, including aggravated felons and other criminal aliens; (2) prolonged detention of aliens; (3) escalated detention costs; (4) inadequate representation before the Immigration Courts and the BIA; (5) an ineffective employer sanctions program, (6) an ineffective enforcement program, (7) delayed naturalization revocations; (8) delayed legal advice to BNS personnel; (9) an escalation in the number of subponess issued against BNS; (10) an escalation in

the number of Preedom of Information Act and Privacy Act requests; (11) delayed services to the public;; (12) adverse decisions in labor-related litigation; (13) delayed promulgation of regulations; (14) the issuance of mandamus orders against INS; (15) the issuance of injunctions against INS; (16) class action suits resulting in additional work for INS; (17) adverse federal court decisions; (18) unfavorable public scrutiny and Congressional oversight; (19) inadequately trained immigration officers; (20) payment of EAJA fees and other costs; and (21) a significant degradation of our ability to effectively litigate sensitive cases involving terrorism and national security.

- Several other recently-enacted laws require significant additional attorney consultation support, including: (1) a new statute requiring reinstatement of prior deportation and removal orders. (2) amended statutes emphasizing the need for administrative removal proceedings by the INS and judicial removal proceedings by district court judges. (3) new statutes eliminating relief from deportation or removal and restricting waivers available to madmissible and deportable aliens, and (4) a new statute requiring the expedited removal of certain madmissible arriving aftens. In addition, recent legislation eliminates or severely restricts judicial review of removal orders and INS detention determinations involving criminal aliens. These statutes are generating a significant increase in judicial review proceedings, requiring more attorney representation and consultation support.
- The U.S. Army Manpower Analysis Agency (USAMAA) recently completed a comprehensive review of the staffing needs of the Legal Proceedings Program. As part of its study, the USAMAA visited the General Counsel's Office in Washington, D.C., the three Regional Counsel Offices, and 29 of the 32 District Counsel Offices. In a 600-page report, the USAMAA thoroughly documented each office's staffing shortfalls and concluded as follows.

Our study clearly demonstrates that the Legal Proceedings Program is vasify understaffed and underfunded. Its attorneys cannot adequately perform their assigned functions without significant increases in personnel. Based on its FY 1997 workload, the program needs ... an additional 444 employees -- 293 attorneys and 151 support personnel -- above and beyond its current authorized staffing levels. This analysis does not include the additional manpower that will be necessitated by future increases in the program's workload.

Element: Fluorcial Management System

Program Positions Workycars Amount
Management and Administration | 154,200]

Narrative Description

- INS requested \$4,200,000 for the Financial Management System implementation, interfaces, improved system functionality, and additional modules. Funding for this initiative is proposed from DOI's Asset Forfeiture Fund. This enhancement is vital for the organize improvement of INS' financial system.
- This request for FFMS will further INS' ability to become compliant with requirements imposed by the Chief Financial Officers Act of 1990, and the Government Management Reform Act of 1994, for audicable financial statements that more accurately track the status and use of funds. These resources will also allow INS to become compliant with the requirements imposed by the Government Performance and Results Act (GPRA) by tracking and interrelating performance and cost information. These initiatives support the President's and the Commissioner's priorities to enhance professionalism and improve accountability within the INS financial management process. It also supports a Chief Financial Officers audit which states, "INS' financial management systems are not integrated, resulting in significant delays and burdensome reconciliation efforts; contain significant internal control weaknesses, affecting the accuracy and reliability of financial information; and limit, rather than enhance, effective decision making." Another finding in the CFO's audit was that, "accounts payable balances were not properly determined and recorded in the general ledger." Corrective action would be achieved, according to the audit, "in conjunction with the implementation of the new core financial system." The implementation of added systems functionality, new systems modules and interfaces will improve productivity and efficiency by automating manual functions. It is also imperative that manual functions are automated to improve processing controls and to maintain an appropriate financial infrastructure for an increasing INS budget that supports expanded immigration goals and strategies.
- The Office of Finance has provided a brief history of the FFMS, as well as future plans for the system:
 - FY 97: Obtained FFMS software through an interagency agreement with the Department of Treasury.
 - FY 98: Implemented system with a limited number of transactions (5-10%)
 - FY 99: Initiated first system stress test system was unable to support adequate number of simultaneous users.
 Unable to identify problem as to whether it was a software or hardware issue.

- FY 99: Initiated second system stress test (dentified problem as platform capacity.
- FY 00: Department of Commerce upgraded platform capacity
- FY 00: Initiated System Design Review and Functional Test to address whether system actually contains functionality in documentation and to address what remaining requirements need to be designed into the system.
- FY 00/01: Deployment of system modifications and full implementation of system

Pay Reform Satories and Expenses (Dollars in thousands)

Initiative Summery

Programa	Positions	Workers	Amount
Inspections			\$15,100
Border Patrol	50	•	40,900

inesections.

A total of \$15,100,000 is requested as part of a pay reform initiative requested for immigration Inspectors in the Salaries and Expenses Appropriation. Additional resource funding is requested in the User and Exams Fee Accounts. This pay reform includes the appraising of the journey grade of the immigration Inspector position from GS-9 to GS-11.

Straiger

UPGRADING THE JOURNEY GRADE OF THE IMMIGRATION INSPECTOR POSITION

The role of the Immigration Inspector has evolved from one that primarily focused on facilitating the legal entry into the United States of properly documented aliens and U.S. citizens to one with an increased emphasis on the detection/identification and apprehension of persons attempting to enter the country illegally. In addition, ItRIRA has increased knowledge requirements, authorities and responsibilities of immigration inspectors to include the ability to remove immediately from the United State aliens attempting to enter by freed or without proper documentation. The raising of the journey level for immigration Inspectors to GS-11 will recognize changes in the basic nature of the work, changes in legislation, and will enable the INS to recruit and retain employees who are critical to mission accompilishment.

Sector Patrol

A total of \$40,900,000 is requested as part of a pay reform initiative requested for Border Patrol Agents in the Salaries and Expenses Appropriation. This pay reform includes (1) position apprades, and (2) the substitution of law enforcement availability (LEA) in place of standard and ancontrollable overtime pay, as well as the establishment of special salary rate authority for the Attorney General, to ensure fair and effective conscensation for the Border Patrol workforce.

POSITION UPGRADES

The nature of Border Patrol work has evolved to the point that Border Patrol Agents continually deal with refined smuggling schemes, advanced technology, and sophisticated fraudulent document rings requiring the agents to engage in investigative and intelligence work on a regular and recurring basis. In addition, IRRA has imposed increased knowledge requirements, work complexities, and authorities on Border Patrol Agents in the pursual of law enforcement objectives. The raising of the journey level for Border Patrol Agents to GS-11 will recognize changes in the basic nature of the work, changes in legislation, and will INS to recruit and retain employees who are a vital part of the goal to control illegal immigration into the United States.

SPECIAL SALARY RATES AND LEA FOR BORDER PATROL

Legislation is proposed to amend Title 5. United States Code, to create a new subsection 5545a(k), making border patrol agents and certain other specified law enforcement officer positions in INS clightle for law enforcement availability pay.

Border patrol agents, and the other smedified law enforcement officer positions, currently receive annual premium pay for administratively uncontrollable overtime work (AUO pay) under 5 U.S.C 5545(c)(2). AUO pay has proven to be complex, prone to grievances and difficult to administer. By contrast, administration of law enforcement availability pay under 5 U.S.C. 5545a has been relatively trouble-free. This proposal would substantially reduce the enforcement availability pay under 5 U.S.C. 5545a has been relatively trouble-free. This proposal would substantially reduce the enforcement availability pay under 5 U.S.C. 5545a has been relatively trouble-free. This proposal would substantially reduce the enforcement availability pay under the premium pay system easier to understand. Nearly all of the employees in the specified categories receive AUO pay equal to 25 percent of their rate of basic pay. Over 80 percent of the employees in the specified categories also receive overtime pay under the Pair Labor Standards Act (PLSA) of 1938.

Law enforcement availability pay is paid at a rate equal to 25 percent of an employee's rate of basic pay. However, since employees receiving law enforcement availability pay are also exempt from the overtime pay provisions of the FLSA, FLSA overtime payments to non-exempt law enforcement officers would be discontinued. It is estimated that INS pays \$18 million per year in FLSA overtime payments to the specified law enforcement positions.

The discontinuance of FLSA overtime pay for horder patrol agents would be addressed and overcome by granting the Attorney.

General sutherity similar to that energized by the Office of Personnel Management (OPM) in establishing special salary rates.

However, the Attorney General would not be required to demonstrate significant recruitment and retention problems. The Attorney General would exercise this authority by granting border patrol agents the minimum basic pay rates necessary to prevent, on average, a loss in total pay due to the discontinuance of FLSA overtime pay. The levels of these special salary rates might therefore vary by grade level and reographic locality.

Pilots, deportation officers, and detention and deportation officers would not be covered by Subsection (c). The journey grade level of these occupations parallels the journey grade level of criminal investigator positions in the Immigration and Naturalization Service. When law enforcement availability pay became applicable to those criminal investigator positions, FLSA overtime pay was discontinued. The special salary rates would be administered in a manner similar to OPM-administered special salary rates. Border Patrol Agents would be paid comparable to other INS law enforcement officers.

Immigration and Naturalization Service Salaries and Expenses

Status of Congressionally Requested Studies, Reports, and Evaluations

- 1 The FY 2000 Conference report directs the Attorney General submit recommendations on a Department-wide strategy to plan for and manage its detention needs. The report was transmitted to the Congress on October 14, 1999.
- 2 The FY 2000 Conference report directs the INS to subrait a report on the status of Border Patrol hiring, plans for recruitment, and a detailed plan of its expenditures of fiscal year 1999 hards provided for Border Patrol agents. The report was transmitted to the Congress on December 14, 1999.
- 3 The FY 2000 Conference report requests the INS to submit any document containing policy directives or instructions, including training manuals, on stopping or detaining individuals thought to have violated O.S. immigration laws. The report was transmitted to the Congress on December 14, 1999.
- 4. The FY 2000 Conference report directs the INS to submit a report on the problems in the Tucson sector, the measures that INS has taken and plans to take to address the problems, including a date by which each measure is expected to be implemented. The report was transmitted to the Congress on December 27, 1999.
- 5 The FY 2000 Conference report requests INS/DOJ submit a plan to integrate INS 1DENT and the FBI IAFIS systems. The plan should address concerns that current environment does not provide other Federal. State, local law enforcement agencies with access to fingerprint identification information captured by INS BoP agents, nor does it provide the BP with the full benefit of FBI criminal history records when searching criminal histories or persons apprehended at the border. DOJ has the lead on this report. The report is being finalized within the DOJ.
- 6. The FY 2000 Conference report directs the INS to revise its strategy to comply with the original Committee directive to focus on the end-outcome of deportation and resultmit the report. The revised report should include details of the specific steps necessary to implement this goal. The report is being finalized within the INS.

- The FY 2000 Conference report directs the INS to assess the overall detention needs to support this effort and to report to the Committee as to the number of heds and associated costs estimated to be needed to support Operation Vanguard. The report is being finalized within the INS.
- The FY 2000 Conference report directs the INS to provide a status on the obligation of funds for night vision technology. The
 report is being finalized within the INS.
- 9. The FY 2000 Conference report directs the Assistant Attorney General for Administration to submit a proposed spending plan on the use of existing base funds available for IDENT for the following studies: a system design effort; a joint INS-FBI criminality study, involving a matching IDENT recidivist records against the Criminal Master (IIe; a study to determine the operational impact of 10-printing apprehended illegal crossers at the border; an engineering proposal for the first phase to determine the validity of the systems development costs that have been estimated by the FBI, and other related expenditures. Upon completion of the studies, results should also be provided. The report is being finalized within the INS.
- 10. The FY 2000 Conference report directs D()J to provide a report on the status of the lawsuit filed against the INS and the Army Corps of Engineers challenging the major drug interdiction effort known as Operation Rio Grande and its impact on the environment. DOJ has the lead on this report. The report is being finalized within the DOJ.
- 11. The FY 2000 Conference report requests that the INS submit a report on the feasibility of expanding the pilot project begun in fiscal year 1998 to implement section 563 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 to the Tueson Sector in Arizona. The report is being finalized within the INS.
- 12. The FY 2000 Conference report directs the INS to identify new additional locations for future Quick Response Teams, including Alabama, and report its findings. The report is being finalized within the INS.
- 13. The FY 2000 Conference report directs the INS to report on the results of program to identify and deport criminal aliens in local and county jails, pursuant to P.L. 105-141. The report is being finalized within the INS.
- 14. The FY 2000 Conference report directs the INS to fully fund the records centralization and redesign activities in Harrisonburg. VA and Lee Summit, MO and provide a progress report on records centralization. The report is being finalized within the INS.

- 15. The FY 2000 Conference report directs the INS to provide a detailed assessment of its current and projected detention needs for the next three years. This report was originally due May 1, 1999. The INS was granted an extension to March 1, 2000. The report is being finalized within the INS.
- 16 The FY 2000 Conference report directs the tNS to report on the lightweight, hand-held, night-vision range-find hinocular system technology. The Committee has learned this technology may be of use to Border Patrol agents and directs the INS to investigate this technology for possible use by the Border Patrol in the future. The report is due to the Congress March 1, 2000.
- The FY 2000 Conference report directs the INS to evaluate a low-cost, all weather, and all light level ground surveillance
 capability and report to on its findings. The report is due to the Congress March 1, 2000.
- 18 The FY 2000 Conference report requests the INS to report on the additional 71,413 unreviewed cases processed during the Citizenship USA initiative. The report is due to the Congress March 1, 2000.
- 19. The FY 2000 Conference report requests that the INS provide a report on the cost, security, and logistical assessment of providing a Secure Electronic Network for Travelers Rapid Inspection (SENTRI) dedicated commuter lane at San Luis, New Mexico. The report is due to the Congress March 1, 2000.
- 20. The FY 2000 Conference report directs the INS to provide a feasibility study and implementation plan for utilizing the Justice Prisoner and Alien Transportation System (JPATS) for a greater number of deportations. The report is due to the Congress Murch 1, 2000.
- 21. The FY 2000 Conference report directs the INS, in consultation with the Executive Office of Immigration Review (EOIR), to report on IRP caseload, by case type, for fiscal years 1997-1999. If the IRP caseload does not give priority to aliens imprisoned for serious violent felonies or drug trafficking, the INS is directed to explain why and to outline steps it will take to focus IRP efforts on the most dangerous incarcerated aliens. The report is due to the Congress March 31, 2000.
- 22. The FY 2000 Conference report directs the Executive Office of Immigration Review (EOIR) to consult with the INS and the private bar on the feasibility of electronic filing of documents, such as Notices to Appear, etc. with the Offices of Immigration Judges and with the Board of Immigration Review. The report is due to the Congress April 1, 2000.

- 23 The FY 2000 Conference report directs the TNS to conduct a pilot program to collect dentographic data on persons referred to secondary inspection at 3.1° Kennedy airport in New York. The data should be collected beginning January 1, 2000, for a sixmonth period. The report is due to the Congress August 1, 2000.
- 24 The Conference report directs the INS to continue its consultation with the Committees on Appropriations before deployment of new Border Patriol agents included in the conference report. The conference expect that the proposed deployment plans will include an appropriate distribution to address the needs in and around I I Centro, California; Tuesan, Arizona; the Southeastern states, and the Northern border. This report is due prior to determining final allocation.
- 25. The FY 2000 Conference report directs the fNS to provide a fiscal year 1999 Border Patrol aviation final report. This report is due, as information becomes available.
- 26 The FY 1999 Conference report requires the AG/INS, among others, to conduct a joint review and report to the Congress on a plan to improve coordination of Federal agencies with responsibility to protect borders against drug trafficking, including coordination with State and local agencies and assessment and or action plan. A draft report was transmitted to ONDCP in May. DOJ has requested an official response on the report from ONDCP.
- 27 The FY 1999 Conference report requires a report on the fearobility of locating permanent INS detention center at Saft Lake City and the resources and training needed to address the overall INS mission in Utah, with specific reference to detention space and the number and distribution of agents assigned to the State.
- 28. The FY 1999 Conference report directs the INS to evaluate and report on existing technical infrastructure and the quality and integrity of the data used in the System for Alich Verification of Flighbility (SAVF) system, or any comparable INS system, and recommend how INS can meet the needs of States seeking to comply with Title IV of P.L. 104-193. The report is being finalized within the INS.
- 29. The FY 1999 Conference report directs the INS to report on the feasibility of expanding the local ambulance pilot program. The report is being finalized within the INS.

- 30 The FY 1999 Conference report requires the INS to report on efforts to improve response rates to State/local calls to remove illegal aliens, including the number of calls, the number of aliens determined removable, and actual disposition of each case. The fourth quarter 1999 report is being finalized within the INS.
- 31 The FY 1998 Conference report requires a written monthly report addressing INS' status in processing applications for naturalization adjustment of status, and employment authorization documents. The October 1999 report was transmitted to the Congress on December 9, 1999.
- 32 The FY 1998 Conference report directs the INS provide a quarterly report on the status of the revocation proceedings and any actions that follow for deportation of those individuals improperly naturalized in 1996. The third quarter 1999 report was transmitted to the Congress on October 18, 1999.
- 33. The FY 1998 Conference report requires the INS to conduct an analysis of current resources among district offices to determine whether an appropriate staffing model is being used to address the application workload requirements and report the findings. The report was transmitted to the Department of Justice on January 3, 2000.
- 34. The FY 1998 Conference report directs the INS to provide a report which addresses how INS intends to fully implement section 563 of Hegal Immigration Reform and Immigrant Responsibility Act (HRIRA) and recommend solutions with respect to providing ambulance services even when the injured undocumented immigrant is not formally under the custody of the State or local government. The report is being finalized within the INS.
- 15 The FY 1998 Conference report directs the INS to provide a report outlining the number of removals as follows: criminal aliens, non-criminal aliens, expedited removals, and the number of outstanding final orders of deportation or exclusion. The fourth quarter 1999 report is being finalized within the INS.

Adjustments to Base.	<u>Pos</u>	Work- years	Amount
Base Restorations/Transfers of Funding Sources			
Realignment of Naturalization Ingitative This action reflects the realignment of the recurring elements of the Naturalization finitiative from the Salanes and Expenses - Citizenship and Benefits, Immigration Support and Program Direction account to the Immigration Examinations Fee account	(304)	(404)	(\$124,000)
Total, base restorations and transfers	(304)	(404)	(\$124,000)
Increases.			
Adminiment of FTE Based on current FTE utilization, an analysis shows an achievment in work years is necessary for the INS		641	
2001 pay raise This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$30,706,000, represents the pay amounts for three-quarters of the fixed year plus appropriate benefits (\$37,977,000 for pay and \$12,731,000 for benefits totaling \$50,708,000).			50,798

Annualization of 2000 pay raise \$19.863

This pay annualization represents first quarter amounts (October through December) of the 2000 pay increase of 4.8 percent effective January 2000, and, for three quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and the approved increase of 4.8 percent. The amount requested, \$19.863,000, represents total annualization of nay amounts for the fiscal year plus appropriate benefits (\$14,863,000 for compensation and \$5,165 000 for benefits).

Annualization of additional positions approved in 2000.

This provides for the annualization of 6.66 additional positions required in the appropriate and 2000.

This provides for the annualization of 616 additional positions requested in the anticipated 2000 appropriation for the Border Patrol and Detention and Deportation programs. Annualization of new positions has been extended to 3 years in order to provide for entity level furching in the first year with a two-year progression to the journeyman level. This request includes a decrease of \$22,923,000 for one time items associated with the increased positions, and an increase of \$24,550,000 for full year costs associated with these increases, for a net increase of \$1,022,000.

Annualization of 1,510 additional positions approved in 1999

This provides for the annualization of 1,510 additional positions approved in the 1999 President's budget for the Border Patrol, Investigations, Detention and Deportation, and Management and Administration programs. Annualization of new positions has been extended to 3 years in order to provide for entry level founding in the first year with a two-year progression to the journeyman level. This request includes an increase of \$29,125,000 for pay and benefits associated with the increased positions at their journeyman grade.

	Perm <u>Pas.</u>	Work- years	Amount
Transfer of CSRS employees FERS retirement system. This request provides for the increase in Federal Employees Retirement System (FERS) costs, based on the transfer of Civil Service Retirement System (CSRS) employees to MERS, as authorized by the FERS Open Enrollment Act of 1997, and the open season that ran from July 1, 1998 through December 31, 1998. This increase is based on the number of employees who have transferred to FERS, the grade of employees, and the increased Government cost of FERS benefits. This request includes \$391,000 for benefits.			\$391
Increased Feb;(a) Health Insurance Costs This request provides for the increase in agency contributions to Federal employees health henefits. In 1999, Federal Fealth insurance premiums, including agency contributions, increased approximately 10-2 percent. Because the Government absorbed a larger proportion of the total costs, up to 75 percent, the total cost to the Government has increased substantially. This increases is based on the "increased" Government cost of Health Insurance. This request includes \$9,316,000 for these costs.			9,316
General Services Administration (GSA) rent GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested increase of \$3,912,000 is required to meet our commitment to GSA. The costs associated with GSA tent were derived through the use of the automated system, which uses the latest inventory data, and rates reflecting a 5 percent increase over 2000 levels.			3,912
Lease Expirations. GSA now requires all agencies to pay relocation costs associated with leuse expiration. Based on prior experience the Department anticipates that 20 percent of all lease expirations will result in relocations. This request provides for the cost associated with new office relocations caused by the expiration of leases in FY 2001. No funding is requested for any build-out costs associated with lease expirations. Funding of \$1,722,000 is requested for INS.			1.722
Antenna Fees QSA will charge the Department antenna fees in FY 2001. The fees include all current antenna's utilized by Justice components that have antenna's atop their buildings. Funding of \$1,714,000 is requested for the Immigration and Naturalization Service.		•••	1,714
Accident compensation This increase reflects the estimated billing from the Department of Labor for the actual costs in 1999 of employees' accident compensation, which will be billed in 2001. The 2001 increased cost will be \$2,786,000.		. ***	2,786

	PETHI.	MANAGEM P		
	<u>Pos</u>	Years	Amount	
International Cooperative Administrative Support Services (ICASS) Under the ICASS, an annual charge will be made by the Department of State (IXOS) for administrative support based on the overseas staff of each Federal agency. This request is based upon the actual 1999 ICASS invoice billing for post invoices and other ICASS costs from IXOS. Funding of \$1,448,000 is requested for the Immigration and Naturalization Service.			\$1,448	
General Services Administration (GSA) Blue Pages Previously, GSA has paid for all nationwide Government telephone book lestings through the GSA 8 percent FTS overhead rate. As a result of the National Partnership for Reinventing Government INPRIGSA Blue Pages Project, the funding for these listings has been removed from the overhead rate, and agencies are being billed for actual costs incurred. The Department's FY 2001 estimated costs total \$282,000. Funding of \$26,000 is requested for the Immigration and Naturalization Service.		٠	26	
Medical Hospital Service costs The Department of Health and Human Services is projecting an increase in health care costs. The Department is applying a factor of 3.8 percent against medical services. An increase of \$9,000 will be required for 2001.			9	
Travel Management Center Foca. In the past, travel management services were provided at no cost, and the Department received rebates based upon ticket sales. However, current practices in the travel industry have ended this process. The new contracts will not provide rebates and will carry fees for each ticket, hotel, car and other reservations made. The Department's cost for travel management center fees is estimated at \$2,500,000. Funding of \$185,000 is requested for the Immigration and Naturalization Service.			185	
National Archives and Record Projections (NARA) The Office of Management and Budget directed NARA to convert its direct-funded records center program to a fully reimbursable program by FY 2000. This proposed legislation mandates that NARA is to remain the sole source for agency records center services, through FY 2002, for agencies currently using its services. In 2001, NARA advises that these charges will be increased by 2.5 percent. The Department's FY 2001 estimated costs total \$6.599,581, an increase of almost \$100,000, based on current records maintained by NARA. Funding of \$177,000 is requested for the Immigration and Naturalization Service.	쁘	: 	177

Immigration and Naturalization Service Construction Account Summary Statement Fiscal Year 2001

The Immigration and Naturalization Service (INS) requests 93 permanent positions, 81 workyears, and \$111,135,000 in its Construction account. This request represents a total increase of 21 positions, 10 workyears, and \$11,473,000 above the FY 2000 appropriation level of 72 positions, 71 workyears, and \$99,062,000

The INS Construction account was established in the FY 1995 Appropriations Act for the Department of Justice (P.L. 103-317). Section 34 of the law provided an initial \$50,000,000 to fund prioritized horder infrastructure requirements of the INS. The Construction account includes requested funding for enhancements for Border Patrol and Detention facilities, Operations and Maintenance (O&M), Repairs and Alterations (R&A), and Ucase acquisition (One-Time Costs).

During the FY 1998 budget cycle, the INS implemented a major change concerning construction planning and budget requests. Prior to FY 1998, the INS requested the entire amount required to design and construct a new facility in one fiscal year. This practice resulted in low obligation rates during the first two years of the project—the planning and design phases. To correct this problem, a Construction Program Steering Committee was established to review requirements and approve a single set of INS construction priorities. Each approved project has been segmented into a multi-year construction plan in order to best estimate when each phase of the construction will require funding. The INS now generally requests all planning, environmental, site acquisition, and design funds in the first year of the cycle, while the actual construction funds are requested in the following fiscal year. This phased approach to construction budgeting allows for close alignment of requests by construction phase.

In FY 2001, the Service will continue to address infrastructure weaknesses by: 1) implementing a maintenance and repair system to address operations and maintenance costs; 2) constructing new facilities to replace exiting structures which are obsolete and overcrowded; and 3) improving and modifying existing INS facilities

Immigration and Naturalization Service Construction Justification of Proposed Changes in Appropriation Languages

The FY 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is italicized, and language proposed for deletion is bracketed

Construction

For planning, construction, renovation, equipping and maintenance of buildings and facilities necessary for the administration and enforcement of the laws relating to immigration, naturalization, and alien registration, not otherwise provided for, [\$99,664,000] \$\frac{\pmaintenance}{\pmaintenance}\$ (Department of Justice Appropriations Act, 2000.)

Explanation of Changes

No substantive changes are proposed.

BASE PROGRAM DESCRIPTION:

- The functions of the Construction and Engineering Program include the acquisition, environmental compliance, design, construction, alteration, repair, maintenance, and management of all buildings, structures, facilities, and other infrastructure for which the INS is the owning or leasing agency. Space is acquired through the General Services Administration (GSA), by lease, by INS construction, and through assignment by airport authorities. New inspection facilities are coordinated as necessary with the U.S. Customs Service, Public Health Service, Department of Agriculture, GSA, and with State, county, local, and foreign authorities.
- These resources are in addition to resources that may be made available in the S&E appropriations, which could be used to support construction related projects. These projects include but are not limited to, tactical enforcement support such as border roads, fence and vehicle barriers, communication equipment shelters/stations, additional border lighting, emergency maintenance and repairs to existing infrastructure.
- The Construction and Engineering Program also is responsible for preparing an annual workspace management plan and related rent and obligation estimates for submission to GSA and the Office of Management and Budget

Stretegy

For FY 2001 the INS National Facilities Strategy remains unchanged 1) Maintain Existing Infrastructure; 2) House New Missions, 3) Support Quality of Life; 4) Improve Environmental Stewardship, and 5) Optimize Public and Private Resources

In FY 2001, the INS will continue to address infrastructure weaknesses by 1) continuing to implement a maintenance and repair system to address operation and maintenance requirements. 2) constructing new facilities to replace existing structures which are obsolete and overcrowded; and 3) improving and modifying INS' existing facilities.

As of September 30, 1999, the INS had an estimated requirement for over \$1,015,000,000 in facilities and construction projects. This includes \$530,000,000 in Border Patrol; \$254,000,000 in Detention; \$21,500,000 in major unfunded Repair & Alterations requirements; and approximately \$210,200,000 in GSA lease projects (one-time/buildout). These figures exclude projected, but not yet requested, repair and alteration projects, and does not include the additional facilities and construction that may be required with new increases in the number of Border Patrol agents. It is impossible to rectify this situation in a single year; but the INS is continuing to address these requirements in this budget.

INITIATIVE: Border Management and Coordination

ELEMENT: Real Property Repairs & Alterations (R&A) Program

	<u>Positions</u>	Work years	<u>Amount</u>
Construction and Engineering	21	aı	\$2,000

This request addresses the funding shortfall for maintenance and repair costs for INS-owned buildings, roads, grounds, janitorial services, utility systems, border roads and fences, studium lights, and communication towers. The request provides an additional 21 positions and \$2,000,000 to provide preventive, multic, and recurring maintenance at INS District offices, Service Processing Centers (SPCs), and Border Patrol facilities.

The resources requested provide funding to continue climinating the 5-year backlog of INS maintenance and repair projects, which carry an anticipated cost of between \$140,000,000 and \$191,000,000. These backlogged projects, represent the most serious safety and health problems within the INS. The INS began addressing these long-standing backlog items in FY 1999. The increase will provide additional facilities management personnel to each of the INS' award and operated facilities as recommended by a recent staffing study conducted by the Logistics Management Institute (LMI). These additional resources will enable the INS to bridge the gap between the new construction planned for these facilities, and the normal maintenance and repair programs, which are required to keep these facilities in operational condition.

Narrative Description

The INS requests 21 positions, 10 workyears, and \$2,000,000 to address severe backlogs in the maintenance and repair of INS-owned facilities. This request will provide additional facilities management personnel at major INS facilities for the preventive maintenance work necessary to maintain the original anticipated life of a facility or real property installed equipment, and to restore damaged or worm-out facilities in order to provide a safe, quality work environment.

The distribution of positions will ensure one professional facility person/position at each of the INS service locations that have responsibility for INS-owned facilities, and at each Border Patrol Sector along the Southwest border.

- The maintenance and repair dollars support the INS' close to 2.11 million square feet of space. This space houses close to thirty-five percent of the INS' work force. This thirty-five percent of the workforce represents almost sixty-five percent of the INS' Officer Corps employees. The maintenance and repair money also supports in excess of 762 miles of border roads and 82 miles of border fencing. Of the \$19 million appropriated in FY 2000, \$7 million is dedicated solely to supporting existing INS controlled network of roads and fences. The remaining \$12,250,000 supports the buildings and facilities owned by INS. Approximately forty percent of the repair and maintenance dollars (\$7.68 million) are used for temporary alterations/expansion of these older facilities, or the purchase of modular buildings to house new employees. These "quick-fixes" and modular buildings result in higher mannenance and utility costs incurred by INS. Subtracting maintenance for burder roads and fences, along with modular structurer to support additional employers, only around \$6,000,000 remains to perform preventive maintenance and repair. Emergency main enance aromally surns a significant portion of the remaining furding.
- The INS budget at trently provides about fifty percent of the funds required to address the backlog over the next five years. Without the additional resources requested, it will take eight to ten years for INS to eliminate the backlog, based on LMI's projections. The FY 2001 request will provide, in the outgars, resources dedicated to performing the routine maintenance and repair necessary to ensure the operability of INS facilities -- the preventive work necessary to maintain the original anticipated life of a facility, and its real property installed equipment.

Footnotes:

Requirements for repair & alteration projects are developed under the following standards:

- (a) "Required Facility Funding Levels for the U.S. Immigration and Naturalization Service", Logistics Management Institute. June 1997.
- (b) Many Repair & Alters tion projects are identified by the INSpect program during facilities reviews. The INSpect reviewers often cite or ercrowding, and violation of National standards and the Occupational Safety Health Act (OSHA)
- (c) All Repair & Alteration projects are undertaken to comply with the Uniform Building Code, or local building codes, if more stringent.

INITIATIVE: Border Management and Coordination

ELEMENT: New Construction - Border Patrol Facilities

Positions Westyears Amount

Construction and Engineering \$50,302

This FY 2001 request conforms to changes implemented in the INS hudget process, which requires that projects be segmented into multi-year construction plans in order to better estimate when each phase of construction will require funding. Only Planning/Site Development/Design (P/S/D) funds are requested in the first year of the multi-year cycle, with actual construction funding being requested in the following fiscal year. This phased approach to construction budgeting allows for a closer arighment of resources.

The INS requests \$45,778,000 for the construction of EY 2001 planned and funded projects, and \$4,524,000 for new P/S/D projects in EY 2001 to support future construction initiatives.

Narrative Description

Construction Projects have been identified for FY 2001 request based on the projected size of the Border Patrol staff, and in relation to the shortage of required space on hand. On average, Border Patrol stations identified for new construction projects in FY 2001 have experienced a 400 percent increase in staff since FY 1994, increasing from an average of 61 personnel per station in FY 1994, to an average of 250 personnel per station in FY 1999.

- In the majority of the Sectors that have received new staff, new facility construction is the only option at these locations, due to the magnitude of the staff increase and because of the age of existing facilities. Additionally, many of these sites have space restrictions and cannot be expanded to provide the necessary additional space.
- These projects are it. line with the Department of Justice and INS initiatives for Phase I and Phase II of the Southwest Border Control Strategy. The resources for FY 2001 construction projects are based on approved FY 2000 space requirements and support the P/S/D funding requested in the FY 2000 budget.

The FY 2001 budget will continue testing the effectiveness of multi-tier border barriers in San Diego, California, as part of
developmental efforts in support of the Tactical Southwest Border Barriers program. With the project approximately 65 percent
complete, initial results indicate that this integrated system of urban corridor tactical border controls is very successful in
sustaining deterrence once border control has been achieved. The 1994 Border Patrol National Strategy has been expanded to
include border barrier systems for border operations in critical urban areas all along the Southwest border. Once the final plan for
Tactical Southwest Border Barrier program has been completed, resources to implement the plan in other high traffic sites will be
necessary.

* SEE ATTACHED BORDER PATROL CONSTRUCTION PROJECT SUMMARY SHEETS *

Footnotes:

- 1. The development of new Rorder Patrol facilities is required to comply with the following:
 - (a) Functional standards for all Border Patrol Facilities are required to comply with the Border Patrol Station Facilities Design Guide, dated 1996, and the Border Patrol Sector Headquarters Design Guide, dated 1998.
 - (b) All Border Patrol Pacifities are required to comply with the National Environmental Protection Act, and nationally recognized building codes, local soning laws, and State and local government recommendations, pursuant to U.S. Code Title 40. Changer 12. Section 619.
- 2. The development of new Border Barriers is required to comply with the following:
 - (a) Conceptual configuration of Border Barriers are required to comply with the Draft Southwest Border Strategic Master Plan, dated March 1999, by the U.S. Army Corps of Engineers.
 - (b) All Border Barriers are required to comply with nationally recognized building codes, local zoning laws, and State and local government recommendations, pursuant to U.S. Code Title 48, Chapter 12, Section 619.

INITIATIVE: Border Management and Coordination

ELEMENT: New Construction - New Detention Facilities

Positions Workvears Amount Construction and Engineering S24.833

The INS requests \$24,833,000 for the construction of new determine facilities in LY 2001. This request includes \$20,700,000 for construction projects in EY 2001, based on approved LY 2000 space requirements and associated P/S/D funding, and \$4,133,000 for planning resources (F/S/D) to support future construction.

Narrative Description

- This request will add detention space to detain criminal and non-criminal aliens subject to removal, replace old, antiquated dorms and buildings that have not been adequately upgraded, and allow the INS to meet congressionally mandated requirements to increase the number of ilegal aliens detained under the immigration Reform and Immigrant Responsibility Act of 1996 Act (IIRIRA). Additionally, detention facility improvements and upgrades have been requested to improve the safety and health standards for both detained aliens and INS personnel.
- INS anticipates that its average daily population will increase from 8,279 in FY 1996 to 19,702 in FY 2001. To meet this growing population the INS needs to drastically increase its available detention space. Over the last several years as the number of detainees has risen from under 8,000 to over 17,000 the percentage of FNS detainees actually in INS-owned facilities has shrunk to 20%, down from approximately 70% in FY 1995. The impact of this trend on the Detention and Deportation Program's operational expenses is fremendous. Currently, projected daily costs per detainee in contract facilities can run up to three times higher than the cost for equivalent space in INS-owned facilities.

- The Antiterrorism and Effective Death Penalty Act (AEDPA), and HRIRA, greatly expanded both the numbers and types of
 aliens to be detained by the BNS. HRIRA requires mandatory detention during removal proceedings for most inadmissible and
 deportable criminal/subversive aliens. Congress has already expressed serious concern over the great difficulties the INS has
 had complying with the mandatory provisions of the law, due to insufficient bed-space for an increasingly more violent and
 criminal alien population.
- Overall, AEDPA and IIRIRA increase the percentage of altens detained who may not have been previously detained during the removal process.
- The budget request will add 400 beds expected to come on line by 2003 and supports the renovation and expansion of 6
 additional facilities.

* SEE ATTACHED DETENTION CONSTRUCTION PROJECT SUMMARY SHEET. *

Poatnotes:

Requirements for new Detention facilities and requirements for repair & afteration projects are developed under the following standards:

- (a) INS Service Processing Center Design Guide, dated November 17, 1992, and the INS Hold Room Design Guide, dated January 1993. Both of these design guides are now being updated by the A-E firm of Henningson, Durham & Richardson (HDR).
- (b) Standards for Adult Local Deteution Facilities by the American Correctional Association (ACA).
- (c) Aff detention projects are constructed to comply with the National Environmental Protection Act, and nationally recognized building codes, local zoning laws, and State and local government recommendations, pursuant to U.S. Code Title 40, Chapter 12, Section 619.

PROPOSED FY 2001 BORDER PATROL CONSTRUCTION PROJECTS

ALASED CONSTRUCTION

TUCSON, ARIZONA, BORDER PATROL STATION. The Tueson Border Patrol Station is collocated with the Sector headquarters and housed in a total of 7,562 square feet of space consisting of a small building and four modular trailers. Currently, the station is staffed by 93 agents and 4 support staff, and operates 24 hours per day seven days a week. The most recent review of the facility identified almost total non-compliance with the Uniform Building and Fire Codes. In addition, the facility was over crowded, and functionally obsolete. Of the total construction funds requested in FY 1996, \$3,500,000 was earmarked to begin the design and construction of a modern replacement station. An additional \$3,000,000 was appropriated in FY 1998, to complete the project Subsequently, project 3 agent staffing levels have risen to approximately 240 agents. As a result, the revised cost estimate for the replacement station has risen to approximately \$7,000,000. The EY 2001 funds (\$500,000) will serve to complete fit-out of the Station in the second quarter of FY 2001.

RIO GRANDE CITY, TIXAS, BORDER PATROL, STATION. The existing Rio Grande City Station is a Service-owned 1,320 square foot cinder block building built in 1956 to support a stall of six agents. There is little or no area for processing and detaining aliens or criminal defendants. The armory, supply, locker, and communications (radio) noise are inadequate. Parking space on the property is very limited and it encroaches upon adjacent property. A substantial portion of the station's operations are housed in a trailer which is located adjacent to the station building. The station's area of responsibility extends over 1,640 square miles, which includes 41 miles along the Rio Grande River. The station has long since surpassed its ability to support the staff and workload, and the physical condition of the permanent structure is documenting rapidly. The end of the trailer's life cycle, which was added to the station in 1985, has been reached

the project consists of a new Station and Vehicle Maintenance Building built on seized asset forfeiture land. In addition, 245 parking mades covered parking for 90 Service vehicles, parking for all terrain vehicles, a fuel island, wash rack, emergency generator, and smoot kennel will be constructed. The project has been divided into multiple phases. The initial phase included PISID. The next phase includes the administration portion of the Station and site development. The final phase includes the processing area of the Station, whiche Maintenance and any remaining site work such as paying. EY 2001 funding will be used for construction and items such as cabling, security and furniture.

ESTIMATED TOTAL COST: \$ 8.527,000 FY 2001 REQUEST: \$ 3,837,000

FUNDING TO DATE \$ 4,690,000

HEBBRONVILLE, TEXAS, BORDER PATROL STATION - The current facility is a 1,200 square foot cinder block building that was constructed in the 1950s to support eight agents. The station is currently staffed by 63 agents and is projected to grow to 100 agents. This request provides resources to construct a new 17,000 square foot building with fuel island, car wash canopy, parking for 150 vehicles, and covered parking for INS-owned vehicles. The FY 2001 construction request builds upon the resources appropriated in FY 98 and FY 99 for land acquisition, site development and design and construction. The project has been phased to allow the site work to be built in the first phase. The second phase will include all other work including the vehicle maintenance building and kennels. The FY 01 toquest will be used for construction completion and support items including cabling, security and furniture.

ESTIMATED TOTAL COST: \$ 5,989,000 FY 2001 REQUEST: \$ 1,955,000

FUNDING TO DATE \$ 4,034,000

EL CENTRO, CALIPORNIA, BORDER PATROL STATION - The El Centro Border Patrol Station is located with the El Centro Border Patrol Sector Headquarters and the El Centro SPC. Recent expansion and renovations at the SPC have made it necessary that both the Station and Sector buildings he relocated to another site, the present location will not accommodate the expansion needed to support the additional Border Patrol Agents anticipated at the Station. This facility has out-grown the deteriorating wooden modular buildings that were provided as an interim solution in 1985 to accommodate the Station's 77 personnel. There are currently 168 Agents, plus support personnel assigned to the Station, with an activity level of 367 apprehensions per day. The life expectancy of this facility was surpassed many years ago, detention space is inadequate to support the Station's activity level, and it is unsuitable for the anticipated staffing level increase, which is projected to reach over 400 personnel. The project is to be co-located with the Sector Headquarters.

TOTAL COST: \$12,269,000 FY 2001 REQUEST: \$4,000,000

FUNDING TO DATE \$ 6,269,000

YUMA, AR1ZONA, BORDER PATROL SECTOR HEADQUARTERS - This facility consists of four separate buildings totaling 13,000 square feet, was built in 1955. These facilities house the anti-smuggling unit, communications center, electronics shop, maintenance shop and a small garage. The FY 1999 resources, which build upon the 5922,000 requested in the FY 1998 budget for land acquisition, site development and design, will be used to construct approximately 30,000 square feet of Headquarters office and support space. The project will include a 38,000 square foot vehicle maintenance facility and warehouse, maintenance shop, radio tower, 283 parking spaces, an emergency generator, fuel island, and a car wash rack. The project is being phased: Phase 1, Vehicle maintenance facility and warehouse, this phase is currently under construction with estimated cost at \$7,672,000.00; Phase II, Administration and communication building. This phase is estimated at \$4,000,000,000 requested under FY 2001.

ESTIMATED TOTAL COST: \$ 13,672,000

FY 2001 REQUEST: \$ 4,000,000

FUNDING TO DATE \$ 7,672,000

DOUGLAS, ARIZONA, BORDER PATROL STATION (New and Existing) - The existing Station was built in 1987, and is located on a site in the town of Douglas. The current facility was designed for 60 agents. The station is currently staffed by 290 agents, with anticipated growth to 550 agents. There is little or no area for processing or detaining aliens or criminal defendants. The armory, supply room, locker rooms, and communications (radio) room are all very inadequate. Parking space on the property is very limited and it encronches upon adjacent property. This request provides resources for a new 47,000 square foot Station building to be constructed on a 30 acre site. The project consists of providing a new 500 Agents station and renovating the existing station to support 50 Agents. In addition to the station huilding, this request includes resources for parking, a fuel island, wash rack, emergency generator, and a 14,000 square foot vehicle maintenance shop. The estimated cost of \$19,107,000 for this project includes approximately \$4,500,000 for site development and \$14,607,000 for design and construction. The estimated construction completion date of phase I of the project is the third quarter of FY 2001. Phase I will consist of the site work and a portion of the Station. The second phase will complete the Station. The third phase will complete the project.

ESTIMATED TOTAL COST: FY 2001 REQUEST:

\$19,107,000 \$ 8,000,000

FUNDING TO DATE:

\$ 7,107,000

PROPOSED FY 2001 BORDER PATROL CONSTRUCTION PROJECTS

TEMECULA, CALIFORNIA BORDER PATROL. STATION: The existing Temecula Border Patrol Station was built in 1981 to support a staff of 40 agents. The station is currently staffed by 145 agents, with anticipated growth to 250 agents. The existing 5,000 square foot tacility is a leased facility with an annual cost of approximately \$100,000. There is little or no area for processing or detaining alters or criminal defendants. The locker rooms, armory, parking, and supply room are inadequate. The station lacks an adequate communications (radio) room and the physical condition of the permanent structure is deteriorating rapidly. The Temecula station supports traffic checkpoint operations on Interstate Route 15, and on a secondary highway in Oak Grove, California. This request will support the construction of a 23,000 square foot building on 10 acres of land and build upon the PS/D resources appropriated in FY 00. In addition to the station hittling, 328 parking spaces, covered parking for 147 Service vehicles, a fuel island, wash rack, emergency generator, vehicle maintenance area, and kennel will be constructed. Phase I, Administration and holding processing will be constructed with FY 2001 funding

ESTIMATED TOTAL COST:

\$ 9,820,000 \$ 5,373,000

FY 2001 REQUEST: FUNDING TO DATE

\$ 447,000

CAMPO, CALIFORNIA, BORDER PATROL STATION - The original Campo Station was built in 1940 to support 22 agents. An interim expansion project was completed in FY 1998 to increase capacity to 75 agents. The station is currently staffed by 272 agents. There is little or no area for processing or detaining alicins or crimical defendants. The tocker rooms, armory, parking, and supply room are all inadequate. The station lacks an adequate communications (radio) from and the physical condition of the permanent structure is deteriorating rapidly. Parking space on the property is very limited. The station encreaches on adjacent property for secure parking of Service, employee-owned vehicles, and serzed vehicles. The station has long since surpassed its ability to support the required workload. This request will provide for a 49,077 square font building to be constructed on corrotimately 10 acres of land. In addition to the station huilding, 495 parking spaces, covered parking for Service vehicles, a fuel island, wash rack, emergency generator, vehicle maintenance area, and kennel will be constructed. The estimated cost of \$12,400,000 for the project includes \$600,000 for Planning Site and Design appropriated in FY 00 and \$11,800,000 for design completion and construction, phased over multiple years.

ESTIMATED TOTAL COST:

\$12,400,000

FY 2001 REQUEST:

\$ 5,000,000

FUNDING TO DATE:

600,000

YUMA, ARIZONA, RORDER PATROL STATION. The existing Yuma Border Patrol Station was constructed in 1978 to support a complement of approximately 70 agents and supervisors. It encompasses 7.842 square feet of floor space. Anticipated future growth is expected to reach between 250 to 280 agents. Office space is unavailable for any supervisory personnel in the station building. The current floor space and interior design is inadequate for the number of agents and the processing of aliens. The existing Station building can be modernized, extending the useful life of the building well into the next century. This request will provide a 28,000 square foot addition to be constructed on the existing site. The facility will accommodate additional personnel, providing office space, training rooms, locker rooms and showers for both male and female officers, station dispatch, secure armory, storage space and alien processing areas. The plan also calls for emergency generators, limited vehicle maintenance facilities, and additional paved and covered areas for parking vehicles. The project will be phased over multiple years.

ESTIMATED TOTAL COST:

\$9,820,000

FY 2001 REQUEST

\$5,133,000

FUNDING TO DATE:

\$ 687,000

SANDERSON, TEXAS, BORDER PATROL STATION - The existing Sanderson Bordet Patrol Station was built in 1964. The current facility is sufficient for 5 agents, with anticipated growth to 50 agents. There is little or no area for processing and detaining aliens or criminal defendants. The armory, supply room, tocker rooms, and communications (radio) room are severely inadequate. Parking space on the property is very limited, and it encroaches upon adjacent property. The station has long since surpassed its ability to support the staff and the physical condition of the structure is deteriorating rapidly. The FY 2001 request includes resources for a 8,834 square foot building to be constructed on approximately 10 acres of land. In addition to the station, the project will include 87 parking spaces, a fuel island, wash rack, emergency generator, vehicle maintenance area, and kennet. The project is divided into two phases. Phase one consists of environmental studies, site acquisition, and concept design and is supported with the resources appropriated in FY 2000. Phase two will complete the design and construction of the Station. The estimated construction completion date is the first quarter FY 2002.

ESTIMATED TOTAL COST: \$4,118,000 FY 2001 REQUEST: \$3,880,000

FUNDING TO DATE \$ 238,000.

LAREDO, TEXAS, CHECKPOINT SYSTEM. The Laredo Sector Checkpoint System is required to check and intercept north bound traffic that runs through the major transportation routes in the State. The total project consists of five sites on major Texas highways within the Laredo Sector. The project includes three sites located on Highways 59 East, 16 and 359, and two new sites are required because of the construction of the Camino Colombian Toll Road. The sites will be contained within the right of way of the highway. The checkpoint will consist of a new building, canopy, and primary and secondary inspection areas. The site will include a well for water, septic, electricity, and communications needs and site improvements include paving, lighting and signage. The project will be divided into multiple phases. The initial phase consists of Planning, Site and Design work supported with resources appropriated in FY 2000. The next phase will continue the P/S/D process. The following phase will be for the construction of the checkpoints. The land for the sites will be leased from the State of Texas. The estimated construction completion date is the first quarter FY 2004.

ESTIMATED TOTAL COST: \$5,000,000 FY 2001 REQUEST: \$5,000,000

FUNDING TO DATE: \$ 34,000

DEL RIO, TEXAS, CHECKPOINT SYSTEM - The Del Rio Checkpoint System is required to check and intercept north bound traffic that runs through the major transportation routes in the State. The total project consists of five sites on major Texas highways within the Del Rio Sector. The five sites are located on Highways 90 West, 90 East, 277 North, 277 South and 57 North. The sites will be located within the right of way of the highway. The checkpoint will consist of a new building, canopy, and primary and secondary inspection areas. The site will include a well for water, septic, electricity and communications needs and site improvements include paving, lighting and signage. The land for the sites will be leased from the State. The project will be divided into multiple phases. The initial phase consists of Planning, Site and Design work supported with resources appropriated in FY 2001. The next phase consists of the construction of multiple checkpoints. Phase three consists of the construction of any remaining checkpoints. The estimated construction completion date of the second phase is the first quarter FY 2003 and the third phase is the first quarter FY 2004.

ESTIMATED TOTAL COST: \$ 5,000,000 FY 2001 REQUEST: \$ 400,000

FUNDING TO DATE: \$ 34,000

PROPOSED FY 2001 BORDER PATROL CONSTRUCTION PROJECTS

MERIER CONSTITUTE

SAN DIEGO, CALIFORNIA, STRATEGIC BORDER BARRIER PROGRAM - This request continues development of the San Diego Border Barrier System. The 14 miles of border adjacent to San Diego, California, is a desirable border location for illegal drug and alien smuggling due to proximity to major U.S. highways, urban, and developed areas. A major west-coast highway system, U.S. 5 and Mexico 1, connecting major coastal urban centers, crosses the international border in this area. The variety of terrain throughout this area has made it difficult to detect and apprehend aliens attempting to cross the horder illegally. Aliens use the deep canyons and vegetation in the western end, and developed areas in the eastern end of the 14 mile area, as cover for illegal entry into the U.S. The barrier system currently under development provides a dedicated corridor for border control using a continuous system of fences and roads. This project was begun in 1996 as a multi-year, phased effort to construct an integrated system of barriers, lights, and roads for all 14 miles of border from the Pacific Ocean to the Otay Mountain foothills. The completed system will provide a continuous enforcement zone from the Pacific to Otay Mountain.

Work to be performed through Fiscal Year 2000 provides for all areas except those at the far west end and the far east end of the project areas. This request provides site development resources for the Borderfield Park, the Tin Can Hill area, and for installation of roughly 2 miles of fencing and road between Smuggler's Gulch and the Sewer Treatment Plant.

FY 2004 DETENTION CONSTRUCTION PROJECTS

PORT ISABEL, TEXAS, SERVICE PROCESSING CENTER—PHASE 3 PROCESSING/INFIRMARY/SECURITY
COMMAND: The existing facilities at the Port Isabel SPC are in an advanced state of deterioration and are inadequate to support the mission of the INS. The existing facilities are widely dispersed, operationally inefficient, and security is severely impaired. Phase I the design and construction of a new 200-Bed Open-Bay Dormstories, completed and placed into service in June 1998. Phase I the design and construction of three additional 200-Bed Open-Bay Dormstories, completed and placed into service in January 2000. The FY 2001 request- Phase III of the construction initiative-includes the Processing/Intimary/Command Center stage of the new Administration Building. This project will provide needed processing, health care, and operational support facilities. Out-year projects defined by the Port Isabel SPC Long-Range Master Plan will include demolition of existing support buildings; construction of follow-on stages of the new Administration Building, a 200-Bed Secure Dormitory, Remodeling Building 4 into Pre-Clearance Bousing, a new Laundry Facility, a new high-security permoter tence, patrol road and safty ports, 600 parking spaces, and utility & site improvements.

ESTIMATED TOTAL COST: \$ 4,350,000 FY 2001 R1 (2UEST: \$ 4,000,000 INVESTMENT TO DATE: \$ 350,000

PORT ISABEL, SERVICE PROCESSING CENTER – TWO 200-BED OPEN-BAY DORMITORIES: Phases 1 & 11 of a completed construction initiative provided four 200-bed open-bay dormitories at the Port Isabel SPC. Design is underway for Phase III which will construct an administrative/infirmary building in FY-2001 and a 200-bed secure dormitory & Building 4 remodel in follow-on years. The Port Isabel SPC Master Site Plan has defined additional detained housing, support buildings, and utility infrastructure projects for future years that would support an ultimate population of 2,000 detaineds.

The Port Isabel SPC has a continuing need for additional bedspace in order to help offset a national detention bedspace shortage, and to respond to rapid detainee influx situations. This project provides for the site-adaptation of two 200-Bed Open-Bay Dormitories similar in design to the completed Phase L& H open-bay durinteries. The site-adapted dornitories, each of which have four 50-bed housing pods, and may be staffed with only five officers, will be the 7th and 8th dormitories based on an original design developed for the ELPaso SPC.

ESTIMATED TOTAL COST: 56,400,000
FY 2001 REQUEST 56,400,000

KROME, PLORIDA, SERVICE PROCESSING CENTER - PHASE ONE-B, ADMINISTRATION BUILDING AND SITE INFRASTRUCTURE: The Krome SPC existing administrative & support facilities are very crowded operationally inefficient, and do not meet INS design standards. The existing administrative & support facilities (SPC Administration, Deportation, INS Court Attorneys, Central Laundry, Asylum Office, and firing Range) must be replaced in order to support the increased level of detainees at the facility. The existing buildings are in an advanced state of disrepair and are difficult to clean and be maintained in an effective manner. Because the SPC was not originally a detention facility, the wide dispersion of buildings on the site creates many blind spots, which present security risks to the detriment of both INS officers and the detainees. The FY 2001 request of \$9.500,000 will be used for the construction of Phase One-B of the Administrative/Support Building, a parking lot, and associated utility infrastructure and site development. The FY 2001 request for \$1.184,000 for PSD, detailed elsewhere in this budget, will be used for the design of Phase One-B.

ESTIMATED TOTAL COST: \$23,787,000 FY 2001 REQUEST: \$ 9,500,000

SAN PEDRO, CALIFORNIA, SERVICE PROCESSING CENTER - MAINTENANCE/ELECTRONIC SHOP UPGRADE: The existing San Pedro SPC maintenance and electronic shops are not large enough to accommodate the necessary maintenance and repair activities to support the staffing and detained levels of the SPC. Further, the shops are outdated, inefficient, and do not meet INS design standards. The FY 2001 request will be used for a Design/Build contract to upgrade the maintenance/electronic shops.

ESTIMATED TOTAL COST: \$800,000 PY 2001 REQUEST: \$800,000

FY 2001 DETENTION CONSTRUCTION PROJECTS

PORT ISABEL, TEXAS, SERVICE PROCESSING CENTER - PHASE ONE-A ADMINISTRATION BUILDING: The existing support facilities (administration, processing, medical, I OIR court, dining, and maintenance facilities) are inadequate in size and layout to support operations for the current detained population, and for the planned 2,000 detained capacity. The FY 2001 request provides for the design of Phase #1 of the construction initiative as defined in the Port Isabel SPC Long-Range Master Plan Phase #1 will initiate a two-year construction phase (possibly in FY 2002 and FY 2003), which will include: demolition of the existing support buildings, the infirmary, an EOIR court trailer, FOIR storage buildings, and other miscellaneous storage buildings; construction of the second stage of the new administration/processing building, a new laundry facility, a new perimeter fence, patrol road and sallyports, 600 parking spaces, and utility and site improvements.

ESTIMATED TOTAL COST: \$40,750,000 FY 2001 REQUEST: \$ 1,500,000 INVESTMENT TO DATE. \$19,250,000

KROME, FLORIDA, SERVICE PROCESSING CENTER - EXPANSION PROJECTS PHASE ONE-B:

The existing administrative and support facilities are very crowded and operationally inefficient, and do not meet INS design standards. The existing administrative and support facilities (SPC Administration, Deportation, INS Court Attorneys, Central Laundry, Asylum Office, and Firing Range) must be replaced in order to support the increased level of detainees at the facility. The existing buildings are in an advanced state of disrepair, and are difficult to clean and maintain. Because the SPC was not originally a detention facility, the wide dispersion of buildings on the site creates many blind spots which present security risk detrimental to both INS officers and detainees. The FY 2001 request for \$1,184,000 will be used for the design of Phase One-B, which will complete the construction of the Administrative/Support Building (supplementing the requested Phase One-A resources of \$9,500,000), a parking

ESTIMATED TOTAL COST: \$2,384,000 FY 2001 REQUEST: \$1,184,000 \$1,200,000

lot, and associated utility infrastructure and site development in FY 2002.

EL CENTRO, CALIFORNIA, SERVICE PROCESSING CENTER - EXPANSION PROJECTS PHASE ONE-A:

The El Centro SPC has experienced an enormous increase in workload in the past 5 years without the benefit of additional facilities. The proposed relocation of the El Centro Border Patrol Sector Headquarters will more than double the existing 3-acre site to 7 acres to accommodate the expansion of the SPC administrative, 5:018, deportation, and trial attorney functions. The existing buildings are in an advanced state of disrepair and are difficult to maintain. The current layout of the buildings creates many blind spots which present security risks detrimental to both INS officers and detainness. The existing maintenance and warehouse facilities are inadequate in size and not properly located on the site to support the SPC as it expands.

The FY 2001 request for \$300,000 will be used for the design of Phase One-A to include alteration of vacated Border Patrol buildings for SPC operations, additional administrative, FOIR, deportation and trial attorney spaces, additional secure and open-bay detained housing, and associated site development and utility infrastructure to support expansion onto Border Patrol land. This work is being tone in accordance with the new El Centro Service Processing Center Long-Range Master Plan. Follow-on phases possibly as early as FY 2003/2004 will provide for the design and construction of additional detained housing, and for further expansion of support facilities.

ESTIMATED TOTAL COST: \$24,000,000 FY 2001 REQUEST: \$ 300,000 INVESTMENT TO DATE. \$ 200,000

EL PASO, TEXAS, SERVICE PROCESSING CENTER - SECURE AND ISOLATION DORMITORIES: The two original open-bay dormitories are outdated and were not designed to accommodate direct-supervision management of detainees. The SPC also needs to accommodate the increasing number of aggravated felons with secure housing (single and double cells), and to rehabilitate the existing isolation dormitory, which is in disrepair and does not meet INS design standard. The FY 2001 resource request will be used to situ-adapt a secure dormitory design analogous to the Port Isabel SPC secure down project. Construction has already been completed on new dining, processing, laundry, depontation/EOR court, and security command support facilities.

ESTIMATED TOTAL COST: \$13,114,000
FY 2001 REQUEST: \$1,149,000
INVESTMENT TO DATE: \$11,965,000

Immigration and Naturalization Service Construction Juntification of Adjustments to Base (Dollars in thousands)

Adjustment-to-Bese Increases;	Pos.	Work- years	Amount
2001 pay raise This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for FY 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$139,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$107,000 for pay and \$32,000 for benefits \$139,000).			\$139
Amusilization of 2000 pay raise. This pay annualization represents first quarter amounts (October through December) of the 2000 increase of 4.8 percent effective in January 2000, and, for three-quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and the approved increase of 4.8 percent. The amount requested \$51,000, represents the pay amounts for three quarters of the year plus appropriate benefits (\$37,000 for compensation and \$14,000 for benefits).			51
Annualization of 26 positions approved in 1999. This provides for the additional annualization of 36 additional positions requested in the enacted 1999 appropriation for INS Construction. This request includes an increase of \$278,000 for full year costs associated with these positions at the journeyman grade level.			278

Approved Annualization 2000 Resources Required in 2001

Annual salary rate of 36 approved positions	\$1,218	
Other personnel compensation		
Less lapse (50%)		
Net Compensation	1,238	\$212

Immigration and Naturalization Service Immigration Service Capital Investment Account Summary Statement Fiscal Year 2001

In FY 2001, the Immigration and Naturalization Service (INS) proposes to establish an Immigration Service Capital Investment Account (ISCIA) to fund service infrastructure, system upgrades and immigration benefit backlogs initiatives. By establishing the ISCIA, INS will have a mechanism for tracking investment spending for improving the delivery of immigration services. The \$127,300,000 in the ISCIA will be capitalized from Premium Service Fee (\$55 million); re-authorization of a permanent 245(i) adjustment of status program (\$37.5 million); and \$34.8 million in direct appropriations. INS estimates that for FY 2001 the Premium Service Fee could generate approximately \$80 million in additional revenue. Of the \$80 million generated from the "Premium Service" fee, only \$55 million will be used for capital investment items and the remaining \$25 million will remain in the Exams Fee account.

The resources in the Immigration Services Capital Investment Account (ISCIA) would be used to fund the following initiatives:

Backlos Reduction

INS surpassed its FY 1999 target for naturalization applications processing. Targeted backlog reduction funding provided in FY 1999 was critical to INS' success, and this new account will be a continuing source for such improvements. INS requests \$43.4 million for this effort. This increase will support INS' backlog reduction efforts through:

Contractor Support - This request includes an increase of \$13 million to allow INS to completely support the National Records Center (NRC) in support of backlog reduction. The investments that these resources will support full development and deployment of a single-tier national records tracking system to complement the NRC, and the upgrade of associated equipment. Resources will also be used to update the functional requirements study for the INS' Central Index System; the central repository for information on all files; recover and rebuild space in INS field offices currently being used to store records; and reconfigure mail rooms so that they will be able to function in a centralized records environment.

Naturalization Systems Upgrades - An increase of \$10.4 million is included in this request to conclude the deployment of CLABMS 4. This will mean that all naturalization case tracking will be accomplished in one automated system, and eliminate the need for other second generation systems that INS is currently using for some case tracking thereby helping to reduce the backlog. The ungrade will also improve the statistical and financial reporting.

Fingerprinting for the FBI - An additional \$20 million investment is being requested to enhance fingerprinting function for the FBI for electronic criminal background checks. These resources will be used for software and hardware improvements in the ASC's, to develop a system to store and retrieve electronic fingerprint images to support immigration benefit processing.

Remote Customer Service

A capital investment totaling \$30 million will be used for the National Customer Service Center to maintain and enhance telephone customer service enhancements. These services will include expansion of the National Customer Service Center to build infrastructure for anticipated increases in telephone call volume and expanded services. It will also support national implementation of the Change of Address initiative to allow applicants for immigration benefits to update addresses by phone. Live assistance will be provided to customers on case status information around the clock from the NCSC's automated services and will also allow customers to request via telephone the rescheduling of their interviews.

Application Support Centers

This request includes an additional \$11 million investment in the Application Support Centers (ASC) to commute the development and installation of digital photography and digital signature capabilities in the ASCs. This added functionality would facilitate and strengthen the integrity of the benefit application process, while improving customer service.

Replacement Case Tracking System

This request includes \$25 million to replace CLAIMS 3, the only case processing and fee receipting system used for all the benefit applications, except naturalization. The system has exceeded its life expectancy, and no longer performs the tasks for which it was designed. These resources will begin the System Development Life Cycle (SDLC) process to create a new system to replace CLAIMS 3, and will also be used to purchase hardware and software for the new system.

Hardware Replacement

An increase of \$14.15 million is being requested for replacement of hardware in field offices. This hardware replacement will include approximately 2,000 workstations; replace antiquated postage meters; and replace cash registers with electronic cash registers that will allow D15 to better account for fee receipts.

Immigration and Naturalization Service. Immigration Services Capital Investment Account Justification of Proposed Changes in Appropriation Language

The FY 2001 budget estimates include appropriation language for the Immigration Services Capital Investment account. This is a new account.

Immigration Services Capital Investment

For backlor reduction, infrastructure improvements, process improvements, major capital acquisitions, and such other service related expenses and programs necessary for the administration of the laws relating to immigration, naturalization, and alien registration, \$34,600,000, to remain available until expended. (Department of Justice Appropriations Act. 1001.)

Explanation of Changes:

Language amending Section 286 of the Immigration and Nationality Act, as amended, 8 USC 1356, authorizing this account is included in the Department of Justice General Provisions.

Data and Communications			\$53,300
Information and Records Management			\$13,000
Total, Infrastructure Hems			\$127,300

Strategy

In FY 2001, INS has proposed establishing a Immigration Service Capital Investment Account. The resources in the Immigration Services Capital Investment Account (ISCIA) would be used to build service infrastructure, fund system upgrades and address other immigration benefit backlogs. The ISCIA would be capitalized from the following fee revenues: a voluntary Premium Service Fee (\$55,000,000); Re-authorization of a permanent 245(i) adjustment of status program (\$37,500,000); and \$34,800,000 in direct appropriations. INS estimates that for FY 2001 the Premium Service fee could generate approximately \$80,000,000 in additional revenue. Of the \$80,000,000 generated from the "Premium Service" fee, only \$55,000,000 will be used for capital investment items and the remaining \$25,000,000 will remain in the Exams Fee account.

The level of revenue received it, the Exams Fee account from application fees is unable to keep up with the growing resource requirements. By creating the ISCIA, infrastructure and equipment needs can be met. This fund would also provide a mechanism for tracking investment spending in the ISCIA. The following initiatives will be funded in the ISCIA:

Element: Backlog Reduction Efforts - \$43,400,000

Program	<u>Positions</u>	Workyears	Amount
Adjudication and Naturalization			\$20,000
Data and Communications			10,400
Info and Records Management	_	<u></u>	13.000
Total			\$43,400

- BNS requests \$43,000,000 for Backlog reduction efforts. INS surpassed its FY 1999 target for naturalization applications processing. Targeted backlog reduction funding provided in FY 1999 was critical to INS' success, and this new account will be a continuing source for such improvements. This increase wift support INS' backlog reduction efforts through:
- Contractor Support This request includes an increase of \$13 million to allow INS to completely support the National Records Center (NRC) in support of backlog reduction. The investments that these resources will support full development and deployment of a single-tier national records tracking system to complement the NRC, and the upgrade of associated equipment. Resources will also be used to update the functional requirements study for the INS' Central Index System; the central repository for information on all filest recover and rebuild space in INS field offices currently being used to store records; and reconfigure mail rooms so that they will be able to function in a centralized records environment.
- Naturalization Systems Upgrades An increase of \$10.4 million is included in this request to conclude the deployment of CLAIMS 4. This will mean that all naturalization case tracking will be accomplished in one automated system, and eliminate the need for other second generation systems that INS is currently using for some case tracking thereby helping to reduce the backlog. The upgrade will also improve the statistical and financial reporting.
- Fingerprinting for the FBI An additional \$20 million investment is being requested to enhance fingerprinting function for
 the FBI for electronic criminal background checks. These resources will be used for software and hardware improvements in
 the ASC's, to develop a system to store and retrieve electronic fingerprint images to support immigration benefit processing.

Element: Remote Customer Service - \$30,000,000

Program	<u>Positions</u>	Workyears	<u>Amount</u>
Adjudication and Naturalization	<u></u>	<u></u>	\$30,000
Total			\$30,000

- The cost of providing and expanding service at telephone centers for FY 2001 will be \$45,000,000. A capital investment totaling \$30,000,000 will be used for the national Customer Service Center to maintain and enhance customer service enhancements. These services include:
 - Nationwide expansion the NCSC service area will actually expand nationwide in FY 2000. The FY 2000 budget is sufficient to support this expansion. However, additional funding will allow INS to build infrastructure for anticipated increases in call volume and expanded services.
 - National implementation of the Change of Address initiative, which began with N-400 applicants living in Florida and California. With full implementation, any applicant for an immigration benefit will be able to update his or her address by phone.
 - Customers will be able to obtain case specific case status information around the clock from the NCSC's automated services, with live assistance available during business hours.
 - Customers will be able to request interview rescheduling by phone nationwide.

Element: Application Support Centers - \$11,000,000

Program	Positions	Workycars	Amount
Adjudication and Naturalization Total	<u></u>	<u> </u>	\$11,000 \$11,000

The contract cost of providing service at the ASC's in FY 2001 will be \$50,000,000. An additional \$11,000,000 investment in the Application Support Centers in FY 2001 will be used to continue the development and installation of digital photography and digital signature capabilities in the ASC's. This added functionality would facilitate and strengthen the integrity of the benefit application process, while improving customer service.

Element: Replacement Case Tracking System - \$29,000,000

Program	<u>Positions</u>	Workyears	<u>Amount</u>
Data and Communications	<u></u>	<u></u>	\$29,000
Total			\$29,000

- This request includes \$25,000,000 to replace CLAIMS 1, the only case processing and fee receipting system used for all the benefit applications except naturalization. The system has exceeded its life expectancy, and no longer performs the tasks for which it was designed. These resources will be used for the following.
 - Begin the System Development Life Cycle (SDLC) process to create a new system to replace CLAIMS 3.
 - Purchase hardware and software for the new system.
 - Design the new case tracking system to be compatible with newer INS financial tracking systems, which will improve
 financial recording.

Additionally, the new case tracking system will replace an antiquated system that no longer serves the needs of the INS
adequately.

Element: Hardware Replacement - \$13,900,000

Program	Positions	Workyears	<u>Amount</u>
Data and Communications		<u></u>	\$13,900
Total		·	\$13,900

- An increase of \$13,900,000 is being requested for replacement of computer hardware in field offices. This hardware replacement will include:
 - Replace approximately 2,000 workstations (unded from the Exams Fee account, that are on a five-year replacement cycle.
 - Replace antiquated postage meters that are costly to maintain and frequently break down.
 - Replace cash registers with electronic cash registers to support receipting in field offices, allowing INS to better account for fee receipts.

Immigration and Naturalization Service Immigration Examinations Fee Account Summary Statement Fiscal Year 2001

For FY 2001, the Immigration and Naturalization Service (INS) requests 6.046 positions, 6,559 workyears, and \$807,317,000 in the Immigration Examinations Fee account.

The Immigration Examinations Fee account was established in the Department of Justice Appropriations Act of 1989 (P.L. 100-459). Section 209 of the Act amends 8 U.S.C. 1356 by establishing a separate account into which the "Attorney General may deposit adjudication fees collected under the regulations governing INS. All deposits to the account are paid out of this appropriation for expenses in providing immigration adjudication and naturalization services. The resources are to be made available for: adjudication of applications and petitions for benefits under the Immigration and Nationality Act of 1952, as amended: asylum, refugee, parole, and overseas activities; adjudication-related work performed in other INS and non-INS programs; and the necessary support for all of these activities.

In action taken in FY 1995, the Congress amended Section 245(i) of the Immigration and Nationality Act of 1952, to allow certain categories of eligible aliens who have a current immigrant visa number available but who are unlawfully in the United States, to adjust their status in the United States upon payment of a fee, of \$1,000 for this benefit. Congress did not renew this section of law when it passed the FY 1998 Commerce-Justice-State Appropriations Act, but it did pass an extension of eligibility for certain aliens who have begun the immigrant visa process prior to January 14, 1998. Adjustment of status under this provision will be available to aliens on whose behalf an immigrant visa petition has been filed with FNS, or for whom an application for a labor certification has been filed in accordance with Department of Labor regulations by January 14, 1998.

In FY 1996 and FY 1997, the INS conducted an Activity Based Costing (ABC) study of immigration adjudication and naturalization fees in the Examinations Fee account. The purpose of the study was to develop a more consistent and reliable methodology, and to produce a legally defensible Examinations Fee Account Fee Schedule. The final rule was published in the Federal Register on August 14, 1998, with the implementation of a new fee schedule set for October 13, 1998, and January 15, 1999 for naturalization fees.

In FY 2001, INS is proposing to establish a voluntary Premium Service Fee for Business cases. Premium Service will provide businesses with a consistently high level of customer service and improved processing. The fee for this service is \$1,000. The Premium Service concept is being offered to enable INS to meet the needs of business clientele who may be severely impacted by processing delays. INS is currently unable to meet the domand for expeditious service to the business community without adversely impacting relative petitions and document applications. The business community would derive a direct benefit because of the improved service.

INS estimates that for FY 2001 the Premium Service fee would generate approximately \$80,000,000 in additional fee revenue. INS anticipates a significant ponion of the revenue will be generated by high tech industries filling H-1B petitions. It should also be pointed out that since this is a voluntary fee, expected revenue is an estimate.

This request represents an increase of \$27,441,000. The separate enhancement initiatives requested in this appropriation are funded by the proposed new fee, and are described below.

Service Center Personnel and Equipment

An additional 141 positions, 71 workyears and \$17.500,000 is requested for the processing of applications submitted for the Premium Service and for the re-engineering of the citizenship testing process. The Premium Service will provide guaranteed processing within 15 days for business cases, fax capability for resolution of evidentiary issues, and access to an oribudsman to quickly rectify processing errors. It will provide businesses with an option from the regular processing of business cases, which currently takes from 60 days to well over one year, depending upon the form type and the servicing office.

Anti-frand Personnel

An increase of 54 positions, 24 workyears and \$7,500,000 is requested to provide resources that will be dedicated to identifying benefit fraud by conducting local and other agency checks of applicants; and conducting immediate recondary referral after primary interview. By enhancing these operations, INS will improve the deterrence of fraud instigated by individuals acting alone.

Pax Reform

The INS requests an increase of \$2,441,000 as part of a pay reform initiative requested for Immigration Inspectors in the Examinations. Fee account beginning in FY 2001. This pay reform includes only pay upgrades

2000 President's Request. Positions shown for FY 2000 include 300 district adjudications officer positions converted from term appointments and 58 records positions toosted in 5ie this histonial Records Center. Workyears include 58 FTE for the records positions. Congress was previously notified of these charges.

Congressioned Action on the Budget Request. The Congress funded a base restoration of \$30,000,000 and base educatments for Information and Records Management positions (\$1,000,000) and Nestonal Archives and Records Administration charges (\$3,225,000) in the Experimentons Fee Account. These adjustments had been requested in the Salestee and Experiese appropriation. In addition, in order to remain within the level of budget authority approved by the Congress. \$706,500,000 is been reduction of \$14,394,000 was required.

Reprogrammings. A reprogramming will be submitted to the Congress to victease resources needed to meet performance goals

Immigration and Naturalization Service Immigration Examinations Fee Program Performance Information (Dollars in thousands)

The Immigration Examinations Fee account was established by the Department of Justice Appropriations Act of 1989 (P.L. 100-459). Section 209 of the Act amends 8 U.S.C. 1356 by establishing a separate account into which the Attorney General may deposit adjudication fees collected under the regulations governing INS. All deposits to the account are paid out of this appropriation for expenses in providing immigration adjudication and naturalization services. The resources are to be made available for adjudication of applications and petitions for benefits under the Immigration and Nationality Act (INA), asylum, refugee, and parole and overseas activities; adjudication-related work performed in other Service and non-Service programs, and to provide necessary support to all of these activities.

In action taken in FY 1995, the Congress amended Section 245 of the INA to allow certain categories of aliens to adjust their status in the United States upon payment of fees for this benefit. The provision has resulted in an increased workload, as well as an increase in resources available to the INS, for processing these and other applications for immigration benefits.

The Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (P.L. 104-208) amended section 245(i) of the BNA to allow the BNS to collect \$1,000 in addition to the regulatory filing for required for the processing of an application for adjustment of status. The Examinations Fee Account will be altowed to retain the cost to process the application provided that at least \$800 of the \$1,000 penalty fee is deposited in the Immigration Detention Account, now the Breached Bond/Detention Fund. At the present time, \$75 of the penalty fee is deposited in the Examinations Fee Account and \$925 is deposited in the Detention Account.

The Congress did not renew the provisions of Section 245(1) when it enacted the FY 1998 Department of Justice Appropriations Act. It did, however, pass an extension of eligibility for certain aliens who had begun the immigrant visa process by January 14, 1998. Adjustment of status under section 245(i) will be available to aliens on whose behalf an immigrant visa petition had been filled with the BNS, or for whom an application for labor certification had been filled in accordance with Department of Labor regulations, by January 14, 1999.

The INS recently completed two comprehensive Activity Based Costing (ABC) reviews of its largest fee accounts, the Immigration Examinations Fee account and the Immigration User Fee account. The reviews were consistent with the Service's pledge to improve the management of the fee accounts, including the method by which the INS determines its fees. Key components of the Immigration

Examinations Fee account effort included identifying, in detail, all the costs related to adjudicating immigration and naturalization applications and petitions, and logically assigning the costs to appropriate applications in conformance with feed, all cost accounting standards. The INS plans to update the results of these studies as business volumes and processes and/or costs change, and as more precise cost determination processes become available. At the time of the next series of reviews, the INS is committed to examining and evaluating its budget base to determine where efficiencies and cost savings may be realized. This evaluation may include the use of cycle time analysis should this tool be a key expect of the fee reviews.

To expand on the existing fee studies, the IMS will examine the method by which it determines the appropriate source of funding for its resources. This review will examine current cost allocations, and will seek to identify a systematic process to assign expenses among each of the INS' funding sources. This evaluation will be conducted within the coming year.

The study of the Examinations Fee Account led to the production of a revised Examinations Fee Account Fee Schedule. Implementation of the new fee schedule took place in October 1998, with the exception of the fee for naturalization, which went into effect in January 1999. This budget request incorporates the new schedules in receipts projections.

In FY 1999, the Congress approved merging the Legalization Account with the Examinations Fee Account. The Legalization Account was established in 1986 as a part of the legalization program. The Immigration Reform and Control Act of 1986 (IRCA) (P.L. 99-603, Title II, Sections 201-204), established a legalization program that provided temporary resident status to aliens who entered the U.S. illegality, or lapsed into illegal status prior to January 1, 1982, resided continuously in the U.S. since then, and are not excludable. The legislation also provided for adjustment to permanent resident status after 18 months of temporary status upon showing general admissibility and basic citizenship skills. Section 202 further provided for adjustment to permanent resident status of certain Cubans and Halitans who entered the U.S. prior to January 1, 1982. The Immigration Act of 1990 provided a one-year extension of the deadline for filling applications for adjustment from temporary to permanent resident status. Merging the Examinations Fee Account and the Legalization Account simplifies the tracking of budget resources and eliminate duplicative accounting of resources for casentially identical purposes.

2001 Estimate	.198	349	25,920
Increase/Decrease			2,441

BASE PROGRAM DESCRIPTION:

- The function of this program in the Immigration Examinations Fee account is to process and adjudicate applications for immigration benefits. Applications and petitions for a full range of benefits under the immigration laws are adjudicated during periods of standby time at most ports-of-entry during non-peak workload hours.
- Certain types of applications are presented directly at land horder ports-of-entry where they are adjudicated and issued by inspections personnel.
- INS began assessing these fees for services at land horder ports-of-entry on October 9, 1995. The documents are issued to
 visitors from Mexico and Canada who are qualified to enter the United States, and are afforded such special privileges as
 extending length of stay and broadening areas of travel beyond that offered to nonresident alien Mexican or Canadian border
 crossing cards.
- A change in the language authorizing the Land Border Inspection Fee account (sec. 286(q) of the INA) will be requested which
 would require depositing fees for services into that account. If enacted, Inspections positions supported by these fees would be
 moved from the Examinations Fee account to the Land Border inspection Fee account.

2001 Estimate	147	109	19,349
Increase/Decrease	54	27	7,500

BASE PROGRAM DESCRIPTION:

- Generally, the functions of the Investigations program include the detection of criminal law violations and the identification of violators through undercover operations and traditional investigative procedures to initiate criminal prosecution and/or administrative action. Many cases investigated involve violators associated with large-scale, organized criminal conspiracies. Quite often, these criminal alien organizations are simultaneously engaged in other illegal activities such as racketeering, alien smuggling, immigration benefit fraud, counterfeiting, prostitution, official corruption, extortion, narcotics, and weapons trafficking on a national or international scale. Special Agents identify these organizations through interviews, informants, surveillance, and through undercover and task force operations. Investigative task force operations include a combination of resources from several offices and agencies.
- More specifically, these resources are focused on one of the basic enforcement priorities of the INS: detection and deterrence of fraud. The principal goal of the fraud program is to discourage illegal immigration through fraud and to protect the integrity of benefits and documents legitimately provided to authorized aliens by the INS. Many investigations concentrate on individual applications, which have led to the identification of large-scale production of fraudulent documentation. Therefore, the INS is aggressively targeting complex criminal organizations involved in immigration fraud for criminal prosecution.

BASE PROGRAM DESCRIPTION:

- This program provides strategic and tactical intelligence support to Service offices enforcing the provisions of the INA and assists other Federal agencies in addressing national occurity issues. The Service's Forensic Document Laboratory (FDL) is a critical component of the program. Intelligence support in the Immigration Examinations Fee account contributes to efforts aimed at detecting the creation and/or utilization of fraudulent documents to enter and/or remain in the United States.
- The FDL is the only federal crime laboratory dedicated exclusively to the examination of international travel documents and identity documents. It provides a wide range of forensic document analysis and other law enforcement support services to INS offices worldwide, as well as other Federal, state and local agencies and foreign government entities. INS adjudicators in asylum offices, district offices and service centers submit to the FDL suspect documents for forensic examination. The results of these examinations are then used by the adjudicators in their decisions to approve or deny the applications and petitions.
- In the recent past, terrorists and other criminal aliens have filed asylum requests in the United States or submitted applications
 for other immigration benefits, utilizing fraudulent documentation. The work of the FDL in the examination of these suspect
 documents led to the rejection of these applications

Increase/Decrease	141		17,500

BASE PROGRAM DESCRIPTION:

- The mission of this program is to provide accurate and timely information and adjudication of immigration benefit applications to our customers in a professional and courteous manner. Immigration service activities include the processing of applications for permanent residence, petitions for relatives, employment authorization, reentry permits, refugee travel documents, orphan petitions, and naturalization. To adjudicate these applications and petitions, the INS must receive the application, answer inquiries, examine the evidence presented by the applicant, and make a determination as to the applicant or petitioner's qualifications for the benefit under the immigration laws. Some adjudications also require INS to conduct a background check and/or a personal interview with the applicant.
- The INS Immigration Services program operates in field offices located throughout the country and in four Service Centers, located in California, Texas, Vermont and Nebraska. Applications and petitions for immigration and citizenship benefits are received by the Service Centers and field offices. These applications and petitions are adjudicated by a corps of examiners (adjudications officers) and adjudication support personnel. The field offices concentrate on those cases that require personal appearances of the petitioners or applicants. The Service Centers focus on those applications that can be processed without interviews and that benefit from processing in a high-volume, production-oriented environment where INS can benefit from economies of scale.
- In response to requirements contained in the FY 1998 Appropriation Act, the INS established a new in-house fingerprint program. Those applicants and petitioners required to undergo a background check as part of the processing of their benefits, other than those applicants or petitioners fingerprinted at U.S. military installations abroad, must appear at one of INS' 129 Application Support Centers nationwide or at a designated law enforcement agency (DLEA) to be fingerprinted.
- This program is also responsible for processing applications for permanent resident status in accordance with the lumingration Reform and Control Act of 1986 (IRCA) (P.L. 99-603, Title II, Sections 201-204). The Act established a legalization program.

that provided temporary resident status to altens who entered the U.S. illegally or lapsed into illegal status prior to January 1. 1982, resided continuously in the U.S. since then, and are not excludable. The legislation also provides for adjustment to permanent resident status after 18 months of temporary status upon showing gener il admissibility and basic citizenship skills. With the exception of residual cases, the processing of all applications was completed in 1993. Processing of appeals of denials will continue during 2000 and 2001.

BASE PROGRAM DESCRIPTION:

- The function of the program is to adjudicate refugee applications, process parolees, conduct investigations for preference and relative visa petitions, and conduct other record checks and background investigations as required at overseas Service offices. Headquarters components are responsible for maintaining letiso i with foreign government embassies in Washington, haison with domestic district and regions, and meeting the challenges of long-range planning and policy direction. The impact of the overseas environment on administrative and management issues requires a strong support function to meet the mandates of the ICASS (International Cooperative Administrative Support System), budgetary functions, and other administrative systems unique to maintaining a workforce internationally. Officers in the field provide assistance to citizens and lawful permanent residents abroad regarding adoptions, and immigration or parole of alien spouses and children and other deserving individuals. Officers in the field also coordinate with the U.S. Coast Guard on the asytum screening process of the Alien Migrant Interdiction Program. Also of importance to our international base mission is the: training of officers and families preparing for service abroad, our-going training in areas of responsitility, and training of host government immigration officials, air carriers and Department of State Consular personnel in a cas of fraud prevention.
- The refugee admission ceiling for FY 2000 is 90,000 and is expected to increase again with special emphasis and increase in
 refugee candidates from Africa. This increase will invrive increased transportation and per diem expenses because circuit
 rides must be conducted more frequently to a greater number of refugees processing posts. Additional asylum officers will be

needed on temporary overseas assignments to adjudicate an increased number of applications for refugee status. And, officers selected to serve in these activities must be trained in up to date country conditions, special emphasis on changes in application of the law, and how to handle the increased caseload.

- The INS Asylum Program is administered by the Office of International Affairs through eight Asylum offices located
 throughout the U.S. The 1990 final Asylum Rule mandated the establishment of the Asylum Officer Corps as a separate body
 of adjudicators with sole responsibility for the Asylum function. The rule also mandated the establishment of a documentation
 center to provide information on human rights conditions in refugee producing countries.
- The mission of the Asylum Corps has diversified since it was established in 1991. It now encompasses the following workloads: 1) adjudicating the Asylum Reform cascload of new receipts: 2) eliminating the pre-reform backlog; 3) adjudicating the suspension of deportation/special rule cancellation of removal applications of certain Salvadorans and Guatemalans under the Nicaraguan Adjustment and Central American Relief Act (NACARA) and their pending asylum applications; 4) conducting reasonable fear interviews for all personnel placed in expedited removal who request asylum or express fear of returning to their home countries, 5) conducting reasonable fear interviews under the Convention against Torture; and 6) undertaking details to overseas locations to interview and process applicants for refugee status.
- The Congress transferred responsibility for the Cuban and Haitian Entrant Program (CHEP) from the Community Relations
 Service (CRS) to the INS in 1996. Through grants and cooperative agreements, staff who is part of this program administers:
 - (1) the primary Resettlement Program which provides transitional community-based refugee resettlement services to Cuban and Haitian nationals paroled into the United States:
 - (2) the secondary Resettlement Program which provides resettlement services, emphasizing employment placement and retention, at specialized sites outside the state of Florida to Cuban and Haitians whose initial resettlement in South Florida did not lead to self-sufficiency; and
 - (3) the Unaccompanied Minors Program which provides foster care, residential shelter care, health, counseling, educational, recreational, and family reunification services to unaccompanied minors held in the legal custody of the INS.

BASE PROGRAM DESCRIPTION:

The function of the Training program is to provide the staff and the resources necessary to maintain an employee development program that meets the diverse training needs of INS' workforce. Training requirements are identified annually and are revised, as needed, due to new regulations, legislation, or organizational needs. The program is accomplished in a variety of ways: through in-Service training at the Federal Law Enforcement Training Center facilities (FLETC) at Glynco, Georgia and a satellite training facility in Charleston, SC (basic officer training), and at Artesia, New Mexico (journeyman-level advanced, specialized officer training); through the INS Leadership Development Center (LDC) in Dallas, TX; through programs conducted by other Federal agencies; by private contractors; or in combined presentations using Service and non-Service resources.

BASE PROGRAM DESCRIPTION:

- * The Data and Communications program provides the linkage of employees to information and information technology. There are five major technology programs included under the Data and Communications program, plus the functions collectively known as Information Resources Management (IRM) Operations. The five program areas, each of which consist of one or more projects in addition to the normal operations and maintenance required for existing systems and technologies, are:
 1) Infrastructure; 2) Examination Systems; 3) Biometric Identification Systems; 4) Corporate Information Systems; and, 5) Management Systems (financial and administrative). IRM Operations include the functions necessary to support the activities of the Data and Communications program.
- The Examination Systems Program provides for an integrated set of functions that incorporate all individual casework-oriented subsystems used to support the processing of applications and petitions for immigration benefits and associated processes such as the production of immigration documents. These functions and processes include employment authorization, asylum, resident alien processing, and citizenship application and processing for naturalization.

In FY 2000, INS will provide services to operate and maintain the Examinations information technology systems. Such services include: making corrections to existing software to eliminate functional errors, failures, and deficiencie, that could affect operational performance; modifications in response to legislative and/or policy changes; the costs for maintaining and upgrading licenses to existing application-specific software; and the costs for maintaining validation and verification capabilities that can be used to test application systems before they are deployed and placed into operation.

BASE PROGRAM DESCRIPTION:

The functions of this program are to:

- provide responses to inquiries from the public and private sectors; local, State and Federal agencies; and the various branches
 of government, by telephone, in-person, and in writing.
- maintain alsen records and files from which data may be readily obtained to respond to requests from both within and outside ths:
- provide information and records management support to the staff of the Legalization Appeals Unit (LAU).
- develop guidelines, policies and procedures, and responses to FOIA/PA requests;
- compile, analyze and evaluate statistics for use in preparing regular and special reports about Service operations and work accomplishments;
- provide for the coordination, development, preparation and review of the Service's regulations, directives, operating
 instructions and forms, to ensure that these materials are issued and published in accordance with established Federal
 regulations and laws; and
- monitor and ensure internal compliance to standards for systems and service delivery.
- In FY 2000, DNS will continue efforts to establish and begin operation of the National Records Center (NRC). Facility space as
 been leased and one-half of the file shelves have been creeted. The core staff for the NRC will be hired and trained for the
 operation of the Center. By the end of the year, it is anticipated that the Center will have approximately eight million files from
 the INS field offices.

BASE PROGRAM DESCRIPTION:

The functions of this program are:

- to provide management direction and support for the implementation and operation of regional and field activities and
 functions to those managers and supervisors who are responsible for and exercise authority over multiple programs;
- to execute the provisions of the Immigration and Nationality Act and related policies through the development and implementation of immigration programs and the management of resources; and

to provide for the development, implementation, direction, operation and evaluation of administrative support systems and services that meet internal operational and managerial needs, and externally mandated requirements. Included in this program are duties related to providing executive direction and control of the Service; furnishing accurate and prompt responses to congressional and public inquiries; administering and maintaining effective budgeting and financial management systems; performing audits; conducting internal investigations, providing informational responses to frequent inquiries from the General Accounting Office, the Department of Justice Office of Inspector General, the Office of Management and Budget and Departmental offices; and developing and evaluating policies and systems to improve the effectiveness of Service programs. The major administrative functions within the program include—personnel, accounting; equal employment opportunity, procurement; properly management, fleet management, security, safety and health; and other miscellaneous general services that support all programs within INS

Immigration Services

Examinations Fee Account/Premium Service Fee (Dollars in thousands)

Initiative Sommary

Investigations	54	27	7.500
Total, Immigration Services	195	98	\$25,000

Strategy

In FY 2001, INS will continue its efforts to improve Immigration Services by focusing on the customer, both internal and external to INS. INS will continue to implement standardization for application processing, delivery of forms, quality assurance and adjudication procedures. This initiative focuses strategies designed to improve service. Anti-fraud efforts will be increased by providing resources to support field reviews. These resources are necessary to maintain the integrity of the adjudicative process. They also support customer service because adjudications officers can concentrate on timely adjudication of clean petitions while receiving support for suspected fraudulent filings. INS will share information with other federal, state and local agencies to improve fraud detection and independently verify application accuracy, such as employment-related records and birth certificates. Also, the bi-annual Exams Fee Study will be completed in early FY 2000, and it will be used to substantiate a rulemaking to implement a revised schedule of fees for immigration and naturalization benefit applications and petitions in FY 2001.

INS is proposing to establish a voluntary fee for "Premium Service" for business-related applications that would be implemented in FY 2001. This fee would be voluntary for business-related applications and would not impact family based applications. In Fiscal Year 2001 the Premium Service fee will generate approximately \$80,000,000 in additional revenue. The limiting revenue factors include the actual date that the FY 2001 appropriation is passed, and the number of H-1B petitions filed prior to the fee going into effect. Of the \$80,000,000 generated through the Premium Service (se. \$25,000,000 will be used for the following initiatives.

Element: Service Center Personnel and Equipment

.

Program	Positions	Work years	<u>Amount</u>
Adjudication and Naturalization	141	71	\$17,500

- An increase of 141 positions, 71 workyears and \$17,500,000 is being requested to provide Premium Service in the processing of business related applications and to provide resources for citizenship testing re-engineering. Premium Service will provide businesses with a consistently high level of customer service and improved processing. Highlights of the improved service include: guaranteed processing within 15 days for hostiness cases, fax capability for resolution of evidentiary issues and access to an ombudsman to quickly rectify processing errors. Additional services may be provided based upon customer needs. The fee for this service is \$1,000. It will provide businesses with an option from the regular processing of business cases which currently takes from 60 days to well over one year, depending upon the form type and the servicing offices.
- The Premium Service concept is being offered to enable INS to meet the needs of business clientete who may be severely impacted by processing delays. INS is currently unable to meet the demand for expeditious service to the business community without adversely impacting relative petitions and document applications. Petitioners who choose not to elect Premium Service can expect to see application processing times longer than that of Premium Service.
- The business community would derive a direct benefit because of the improved service, but other INS customers would benefit because revenues received in excess of the program costs would be used to pay for infrastructure needs to improve adjudications and customer service.
- Included in this enhancement is \$1,500,000 for citizenship testing. Redesign of the naturalization English and citizenship test
 is a part of the ongoing re-engineering of the naturalization process that began in 1997. The resources in the FY 2001 budget

will enable INS to contract for the development of a new lest designed to ensure that naturalization applicants undergo a consistent, uniform testing process. Redesign of the process is a multi-year project, and this funding will represent a significant step forward towards developing and implementing a re-engineered system.

Element: Anti-fraud

Program	<u>Positions</u>	Workyears	Amount
Investigations	54	27	\$7,500

An increase of \$4 positions, 27 workyears and \$7,500,000 is requested to provide resources that will be dedicated to support field reviews to identify marriage froud cases as well as froud in business related visa petitions, 1-90s and in re-entry permits. Currently, INS agents focus their resources on investigating large-scale henelits froud conspiracy cases. The investigation of lower level, "one-on-one" froud cases, where conspiracy is not immediately apparent, is left to adjudications staff to perform as time afflows. With the large backlogs in N-400s, 1-485s and other applications, INS adjudications staff have limited time and resources to focus on resource-intensive froud identification and investigation. The funding will provide resources that will be used to increase production and resources dedicated to the three steps involved in identifying benefits froud; 1) conducting focal and other agency checks of applicants; 2) conducting immediate secondary referral after primary interview, instead of relying on scheduled interviews when froud is suspected; and 3) conducting field inquiries to gather necessary information, including the status of marital cohabitation, viability of claimed husiness operations, and verification of identify of applicants. By e thancing these operations, INS will improve the deterrence of froud instigated by individuals acting alone. Further, since the investigation of "one-on-one" cases serves as the foundation for developing information that leads to identifying links among cases, these activities will increase the likelihood that large scale conspiracy cases will be uncovered.

Pay Reform

Immigration Examinations Fee (Dollars in thousands)

Initiative Summary

Programs	Positions	Workers	<u>Amount</u>
Inspections			\$2,441

A total of \$2,441,000 is requested in the Examinations Fee account, as part of a pay reform initiative requested for Immigration Inspectors beginning in FY 2001. This pay reform includes the upgrading of the journey grade of the Immigration Inspector position from GS-9 to GS-11.

Strategy

UPGRADING THE JOURNEY GRADE OF THE IMMIGRATION INSPECTOR POSITION

The role of the Immigration Inspector has evolved from one that primarily focused on facilitating the legal entry into the United States of properly documented stiens and U.S. citizens, to one with an increased emphasis on the detection/identification and apprehension of persons attempting to enter the country illegally. In addition, the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 has increased knowledge requirements, authorities and responsibilities of Immigration Inspectors to include the ability to remove immediately from the United State aliens attempting to enter by fraud or without proper documentation. The raising of the journey level for Immigration Inspectors to GS-11 will recognize changes in the basic nature of the work and changes in legislation, and will enable the INS to recruit and retain employees who are critical to mission accomplishment.

		Work-	
Adjustments to Base	Pos.	ytars	<u>Amgunt</u>
Adjustment and Realignment of base resources			
Adjustment of workyears Based on current FTE utilization, an analysis has shown an adjustment in workyears is necessary for the INS. This adjustment in FTE is due in part to a reduction of approximately 2,000 FTE in FY 1996. The positions and funding in the INS budget were unchanged. To remedy this situation, a change of 63 FTE is necessary for the Immigration Examinations Fee account.		(63)	•••
Adjustment of positions and workvears. At the end of FY 2000, appropriated funding for the INS Naturalization Initiative comes to an end. The permanent positions and workyears associated with the initiative in the Salaries and Expenses. Citizenship and Benefits. Immigration Support and Program Direction account are needed for on-going activities related to the processing of applications for naturalization and other immigration benefits. This adjustment accomplishes that stansfer of positions and workyears to the Immigration Examinations Fee account.	<u>304</u>	<u>404</u>	E44

2001 pay raise This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$10,191,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$7,839,000 for pay and \$2,352,000 for benefits, totaling \$10,191,000)			\$10,191

·	Pgs,	Work-	Amount
Annualization of 2000 pay raise This pay annualization represents first quarter amounts (October through December) of the anticipated 2000 pay increase of 4.8 percent effective January 2000, and, for three quarters of a year, the difference between the 4-4 percent estimated in the 2000 President's budget and the approved increase of 4-8 percent. The amount requested, \$4,564,000, represents the total annualization of pay amounts for the fiscal year plus appropriate benefits (\$3,511,000 for compensation and \$1.053,000 for benefits).			\$4.564
Within grade increases. This request provides for increases for the expected increase in costs of within-grade increases for slow or no growth components for FY 2000. This increase is based on an accurate model of the Department's employee population, which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$3,318,000 (or pay and \$995,000 for benefits.)			4,313
General Services Administration (GSA) rem OSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested increase of \$3,066,000 is required to meet our commitment to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data, and rates reflecting a 5 percent increase over 2000 levels.			3,066
Accident compensation This increase reflects the estimated billing from the Department of Lahor for the actual costs in 1999 of employees' accident compensation, which will be billed in 2001. The 2001 increased cost will be \$527,000.			527
International Cooperative Administrative Support Services (ICASS) Under the ICASS, an annual charge will be made by the Department of State (DOS) for administrative support based on the overseas staff of each Federal agency. This request is based upon the actual 1999 ICASS invoice billing for post invoices and other ICASS costs from DOS. Funding of \$708,000 is requested for the Immigration and Naturalization Service.			708

	<u>Pos.</u>	Work- <u>years</u>	<u>Amount</u>	
General Services Administration (GSA) Blue Pages Previously, GSA has paid for all nationwide Government telephone book listings through the GSA 8 percent FTS overhead rate. As a result of the National Partnership for Reinventing Government (NPRVGSA Blue Pages Project, the funding for these listings has been reinvived from the overhead rate, and agencies are being billed for actual costs incurred. The Department's FY 2001 estimated costs total \$282,000. Funding of \$16,000 is requested for the Immigration and Nationalization Service in the Immigration Examinations Fee account.			\$16	
General Priving Level Adjustment This request applies OMB priving guidance to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.			2.291

Immigration and Naturalization Service Immigration User Fee Account Summary Statement Fiscal Year 2001

For FY 2001, the Immigration and Naturalization Service (INS) requests 3,990 positions, 3,956 workycars and \$529,103,000 for the Immigration User Fee account. This request represents an increase of 154 positions, 77 workyears, and \$23,614,000 over the FY 2001 hase level.

The Immigration User Fee account was established in the 1987 Appropriations Act for the Department of Justice (P.L. 99-591). Section 205 of the Act directed the Attorney General to charge and collect a \$5.00 user fee from each individual arriving in the United States aboard a commercial aircraft or vessel from foreign locations (other than Mexico, Canada, and the adjacent islands).

In the 1991 Appropriations Act, the Congress removed the fee exemption for Mexico, Canada, and the contiguous territories for airline passengers, as well as placing a 45-minute immigration inspection standard at air ports-of-entry. The Department of Justice Appropriations Act of 1994 (P.L. 103-121) increased the user fee from \$5.00 to \$6,00. Despite increased costs associated with providing the necessary services, as well as \$29,536,000 in costs transferred in FY 1999 Conference action from the Salaries and Expenses appropriation to the Immigration User Fee Account, the fee has not increased since FY 1994.

Fees are deposited into the Immigration User Fee account to provide immigration inspection services for commercial aircraft and vessels; administer debt collection activities, including the establishment and operation of a national Collections Office; expand and operate information systems for non-immigrant control and debt collection; detect fraudulent documents used by air and sea passengers traveling to the United States, as well as provide specialized training to arrivers in fraudulent document detection; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens arriving on commercial aircraft and vessels; detain and deport inadmissible aliens

Revenue Assumptions

The FY 2001 collections estimate uses the collections of FY 1999 as a base from which outyear projections are calculated, and includes an annual increase in international passenger traffic of 6.0 percent, based upon Federal Aviation Administration and airline industry projections. The Activity Based Costing study performed for the User Fee account in FY 1998 determined that the current

\$6.00 fee was adequate to cover costs through FY 1998. However, because of increasing costs being exerted on the account, IRIRA among them, the revenues collected beyond FY 1998 would be insufficient to cover all of the account's base operating costs. For FY 1999, INS used available carry-forward halances to cover the rising cost of operations in the User Fee account.

The FY 2001 President's budget request assumes an increase of \$2.00 to the current \$6.00 fee. With the continual growth in international traffic at Ports-of-Entry (POE), the increased User Pee, to \$8.00 per passenger, will allow INS to maintain operations. Revenue from the \$2.00 fee increase is assumed in this budget proposal.

In addition, the budget submission includes a general provision removing the User Fee exemption for passengers arriving in the United States from Mexico, Canada, and adjacent islands on commercial vessels. In place of the exemption is specific language that allows INS to charge a \$8.00 User Fee to conduct commercial vessels inspections. The INS estimates that the \$8.00 fee increase will generate \$27,000,000 in FY 2001. This revenue is also assumed on this budget proposal.

Also included in the FY 2001 budget submission is \$12 (86 DB) to provide for an additional 154 Immigration Inspectors to staff new airport terminals that are being constructed at major airports across the United States

Pay Unerade

The INS requests an increase of \$11,428,000 as part of a pay opgrade initialize requested for immigration inspectors in the User Fee account beginning in FY 2001. This pay reform includes the opgrading of the formey grade of the immigration inspector positions from GS-11. The raising of the journey level for immigration inspectors to GS-11 will recognize changes in the basic nature of the work and changes in legislation, and will enable the INS to recruit and retain employees who are critical to mission accomplishment.

Increase/Decrease	154	77	23,614

BASE PROGRAM DESCRIPTION:

- The function of the Inspections program is to enforce and administer the immigration and nationality laws with respect to the inspection of all persons seeking admission to or transiting through the United States at air and sea ports-of-entry to determine if they qualify for admission and, if so, under what conditions. The inspection may include questioning under oath, and a search without warrant, of the applicant and their effects. The program is charged with intercepting terrorists, smugglers, other criminals, and undocumented illegal aliens seeking admission to the United States.
- Overseas, INS officers work with foreign governments and carriers to assist them in identifying mala fide passengers before
 they board an aircraft to the United States. The Carrier Consultant Program provides fraudulent document training, both
 domestically and internationally, to airline personnel and foreign government officials. The Inspections program also
 preinspects passengers destined for the United States.
- The Inspections program also conducts special operations at sea and air POEs including the use of Immigration Response
 Teams (IRT), Passenger Analytic Units (PAU), and oversight of air and scaport security to prevent the transport of contraband,
 drugs, criminal stiens, and terrorists to the United States.

- The inspection process is coordinated with the Department of State, other Federal inspection services, and local port authorities. Local and national lookout systems contaming information relating to inadmissible aliens are used and updated at each POS.
- Inadmissible aliens may be denied entry and ordered expeditiously removed by an immigration inspector without further
 hearing of review. Inadmissible aliens claiming asylum are referred for review of that claim. Criminal activity discovered in
 the inspections process is referred to the appropriate law enforcement agency for further investigation, or presented for criminal
 prosecution. Various applications and petitions for benefits index the immigration laws are adjudicated at some POEs during
 toon-peak hours.

2001 Base	53	46	6.980
2001 Estimate	53	46	6.980
Increase/Decrease			

BASE PROGRAM DESCRIPTION:

- Generally, the functions of the Investigations program include the detection of criminal law violations and the identification of violators, through undercover operations and traditional investigative procedures, to initiate criminal prosecution and/or administrative action. Many cases investigated involve violators associated with large-scale, organized criminal conspiracies. Quite often, these criminal alien organizations are simultaneously engaged in other illegal activities, such as racketeering, alien smuggling, immigration benefit fraud, counterfeiting, prostitution, official corruption, extortion, narcotics and weapons trafficking on a national or international scale. Special Agents identify these organizations through interviews, informants, surveillance, and through undercover and task force operations. Investigative task force operations include a combination of resources from several offices and agencies.
- More specifically, these resources are focused on one of the hasic enforcement priorities of the INS: detection and deterrence
 of fraud and smuggling. The principal goal is to discourage illegal immigration through major POEs (primarily airports) via

fraud. In an effort to accomplish this goal, the INS is appressively targeting complex criminal organizations involved in immigration benefit fraud and counterfeit document fraud. Smuggling cases typically involve the investigation of major international atten smuggling and criminal organizations. Many smuggling cases have demonstrated the use of extensive networks to move alters via the use of fraudulent documents and circuitous routes to reach this country.

2001 Base	177	166	84,391
2001 Estimate	177	166	84,391
Increase/Decrease		hr	111

BASE PROGRAM DESCRIPTION

Detention and Deportation program functions include the detention, transportation, removal, parole and deportation of attens. The INS utilizes Service Processing Centers (SPC's), contract facilities, joint INS/BOP Federal facilities, and State/Local facilities to detain, until ready for removal, those aliens subject to exclusion and removal proceedings who are likely to abscond, or whose freedom at-large would represent a danger to public safety and security. The contract facilities located in Queens, NY, and Elizabeth, NI, are, for Immigration 19cm fee detainees. In the performance of these functions, the INS maintains a system of controls ensuring that every case involving an excludable alien is efficiently and correctly processed and, if necessary, the alien's removal from the country is effected promptly. This is critical since the IIRIRA mandates detention of expedited removal cases until credible fear is found or the alien's removed.

BASE PROGRAM DESCRIPTION:

- This program provides strategic and tactical intelligence support to INS offices enforcing the provisions of the Immigration and Nationality Act, and assists other federal agencies in addressing national security issues. The INS' Forensic Document Laboratory is a critical component of the program. Intelligence support contributes to efforts aimed at preventing the entry of illegal aliens, terrorists and narcotics traffickers, and detecting fraudulent documents, alien smuggling, false claims to U.S. citizenship and other instances of fraud.
- The INS will pursue a proactive international enforcement strategy in identifying, investigating, deterring, disrupting and
 reducing illegal activities at their source, and at key overseus transit locations used by smugglers and mala fide aliens bound for
 the United States.
- The Intelligence program provides assistance to international law enforcement agencies and international air carriers to detect
 fraudulent identity documents.
- The INS Forensic Document Laboratory (FDL) is the only Federal crime laboratory dedicated exclusively to the examination of intermational travel and identity documents. It provides a wide range of forensic document analysis and other law enforcement support service to INS offices worldwide, as well as other Federal, State, and local agencies and foreign government entities. Inspectors at ports-of-entry contact the FDL seven days a week for real-time assistance, via the photophone, to determine whether individuals detained at the ports-of-entry are in possession of fraudulent documents to gain entry into the United States.

2001 Estimate	23	23	2,407
Increase/Decrease			

BASE PROGRAM DESCRIPTION:

- The function of the Training program is to provide the staff and the resources necessary to maintain an employee development
 program that meets the diverse training needs of this agency's workforce. Training requirements are identified annually and are
 toyised, as needed, due to new regulations, legislation, or organization needs.
- * New training technology affords the INS an opportunity to provide continuous training for all INS employees at or near their duty station in order to reduce travel costs. Distance learning methodology will be utilized to reduce the INS' dependency on residential-based training. While certain requirements, such as basic training, firearms and driver training, and other courses involving group interaction and practical exercises, may justify a group/residential learning environment, many learning objectives can be addressed by distance learning packages using video cassettes, workbooks, computer-based instruction and, in certain instances, video conferences. This training can be learner-based, self-paced, ongoing, and reusable. Distance learning technology allows for the dissemination of information, the enhancement of certain skills, and changing attitudes.

BASE PROGRAM DESCRIPTION:

• The Data and Communications program provides direct support for operational programs as well as for administrative support functions of the Service. There are six major technology programs included under the Data and Communications program, in addition to the functions collectively known as Information Resources Management (IRM) Operations. Of the six program areas, each of which consist of one or more projects in addition to the normal operations and maintenance required for existing systems and technologies, there are three that apply to the Immigration User Fee Account.

Inspections Systems - The Inspections Systems Program supports efforts to control admissions at ports-of-entry and enhance INS Inspection functions. Two major automation efforts included under this program are the Interagency Border Inspection System (IBIS), the INS Passenger Accelerated Services System (INSPASS).

IBIS, a system operated jointly with the U.S. Customs Service and the Departments of State and Agriculture, is used at POEs to facilitate inspection and to identify criminals. IBIS is currently installed at major air and land border POEs. INSPASS is an automated inspection system for low-risk, frequent travelers using automated inspection kipsks at several of the Nation's major international airports. This program will develop and deploy machine readable travel documents, which will allow for the positive identification of air travelers destined for the United States.

A combination of technology and advanced production techniques will produce entry documents that are fraud resistant and easy to use. Profile scanning and a sophisticated worldwide law enforcement network will quickly and accurately identify persons of interest. Smart card technology, with positive identification features, will facilitate the quick and accurate inspection of low-risk, frequent land travelers. Technology will allow for improved service to the public while increasing the number of inspection hours devoted to high-risk activities.

In FY 2001, INS will provide services to operate and maintain the Inspections information technology systems developed and deployed in FYs 1795 through 1999.

Biometric Identification Systems - The INS is developing a single fingerprint-based identification system that wift enable it to rapidly and accurately identify persons of interest. IDENT is the current INS fingerprint-based identification subsystem that is used by INS law enforcement and benefit systems to assist in the positive identification of persons who are arrested, as well as for those who apply for benefits, including the identification of travelers referred to secondary inspection processing and for automation inspection.

<u>Enforcement System</u> - In FY 2001, INS will continue with the deployment of ENFORCE at air POEs. The INS will also continue providing services to support and maintain the applications systems that support the Enforcement Systems Program

DASE PROGRAM DESCRIPTION:

INS attorneys represent the Service before Immigration Judges and the Board of Immigration Appeals. The attorneys review charging documents for legal sufficiency, prepare for hearings, represent INS in court, prepare appellate briefs, train INS officers, and provide legal advice. The program provides linguism support in agency litigation conducted in U.S. District Courts and U.S. Courts of Appeals. Attorneys provide advice to the Headquarters staff and field officials on legal matters arising at all levels of agency operations associated with programs supported by the Immigration User Fee account

BASE PROGRAM DESCRIPTION:

The Management and Administration program functions include:

 providing management direction and support for the implementation and operation of regional and field activities and functions to those managers and supervisors who are responsible for and exercise authority over multiple programs;

- executing the provisions of immigration laws and related policies through the development and implementation of immigration programs and the management of resources; and
- providing for the development, implementation, direction, operation and evaluation of administrative support systems and services that meet internal operational and managerial accids and externally mandated requirements. This includes duties related to providing executive direction and control of the INS, furnishing accutate and prompt responses to congressional and public inquiries; administering and maintaining effective budgeting and financial management systems; performing audits; conducting internal investigations; providing informational responses to frequent inquiries by GAO, OfG, OMB and Departmental offices; and developing and evaluating policies and systems to improve the effectiveness of INS programs. The major administrative functions within the program include: personnel; budget, accounting; equal employment opportunity; procurement; property management; fleet management; security and health; and other miscellaneous general services that support all programs funded by the Immigration User Fee account.

Border Management and Control Immigration User Fee Account

(Dollars in thousands)

Initiative Summary

<u>Programs</u>	Positions	Workscars	<u>Amount</u>
Enspections	154	77	\$23,614

This request includes 154 Immigration Inspectors

Note: Total User Fee Account request depends on a LY 2001 proposed fee increase in available revenue including, \$2 fee increase for all passengers for a total \$8 charge and removal of the cross-line exemption with language inserted to charge and collect \$8 fee.

Strategy

In FY 2001, improved facilitation of United States citizens and other legal visitors, while ensuring enforcement against the entry of madmissible aliens, continues to be a major goal of the Agency. Bused on historical trends and passenger data collected, the air transport industry estimates that international air traffic continues to increase by 6-8 percent annually. In FY 2001, INS expects to process an estimated 100 million passengers for inspection at air POLs. Alongside the steady growth of air passengers, new airport terminals are being constructed at major airports. It is imperative that INS receive resources to the meet the congressionally mandated wait times at the new airports.

In addition, INS recognizes the importance managing and maintaining a productive workforce. Career opportunities and responsibilities must be commensurate with compensation, and all are critical to staff retention. The Illegal Immigration Reform and Immigrant Responsibility Act of 1996 has increased knowledge requirements, authorities and responsibilities of Immigration Inspectors to include the ability to remove immediately from the United State aliens attempting to enter by fraud or without proper documentation. The upgrading of the journey level for Immigration Inspectors to GS-11 will recognize changes in the basic nature of the work and changes in legislation, and will enable the INS to recruit and retain employees who are critical to mission accomplishment.

Element: Port Facilitation/Enforcement-Increase Immigration Inspectors for Opening of New Airports in San Francisco and Detroit to Maintain Congressionally Mandated Wait Times

Program	Positions	Workyears	<u>Amount</u>
Inspections	154*	77*	\$ 12,186

Note: The FTEs and workyears do not match to FY 2001 President's Budget MAX submission.

Narrative Description

INS requests 154 positions. 77 workyears, and \$12.186,000 to increase primary Inspectors to maintain the 45-minute wait standard at new airport terminals.

The improvement of Border Facilitation continues to remain a high priority for the Congress, as it is for the air passenger. Based on historical trends and passenger data collected over the past five years, the air transport industry estimal us that international air traffic will increase at the current rate of approximately 6 percent for FY 2001. INS expects to process an estimated 100 million passengers for inspection at air POEs. Alongside the steady growth of air passengers, new air terminals are being constructed at major airports. Congressional scrutiny and performance expectations are that INS will immediately implement a 45-minute wait standard for these new facilities as well as maintain the 45-minute standard at INS' existing airport terminals.

According to Section 286(g) of the Immigration and Nationality Act (INA). INS is required to process all air passengers arriving into the United States within a 45-minute standard. New port facilities are planned to become fully operational during FY 2000 and FY 2001. Currently underway is a new airport terminal complex at San Francisco International scheduled to open in FY 2000. The new terminal will be divided into two separate inspectional areas, with up to 100 primary booths (50 each), 24 arrival gates (12 each), and 2 In-Transit Lounges with flights arriving simultaneously at both terminals during peak hours. The size of the new terminal is three times that of the current one, which has only 27 primary booths and 8 gates. In addition, another airport scheduled to open is the new mid-field terminal at Detroit's Metropolitan Airport which will be roughly the same size as the Chicago O'Hare International Terminal. This terminal will have 74 primary booths and 10 gates compared to the current terminal which has 24 booths. Also, Philadelphia is expecting to open a new terminal that will have a 65 booth capacity compared to the present terminal which has 14. Traffic is estimated to increase by 33% with this new terminal. Although these terminals are due to open in late FY 2000 and early FY 2001, no additional Inspectors have been provided to staff the increased inspections operations. Due to a FY 1999 base transfer from Salaries and Expenses to the User Fee Account and continuation of the cruise fee exemption in FY, INS only had sufficient revenue to hire 100 Immigration Inspectors. The planning, site design, and construction of these facilities is the result of several years of planning and millions of dollars aiready invested.

Also, Miami is scheduled to open the first of three new terminals combined with a surge of megacraise ships (passenger capacity ranging from 1,000-3,000) increasing inspections activity in the Miami area. By FY 2003, the total number of primary booths will have increased from 57 to 120. All of these locations will require additional inspections to support the increased air traffic.

Element: Upgrading the Journeyman Grade of the immigration Inspector Position

Program	Positions	Workycars	Amount
Inspections			\$11.428

Narrative Description

- The role of the Immigration Inspector has evolved from one that primarily focused on facilitating the legal entry into the United States of properly documented altens and U.S. citizens to one with an increased emphasis on the detection/identification and apprehension of persons altempting to enter the country illegally. In addition, the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 has increased knowledge requirements, authorities and responsibilities of immigration inspectors to include the ability to remove immediately from the United State altens attempting to enter by fraud or without proper documentation. The raising of the journey level for Immigration Inspectors to GS-11 will recognize changes in the basic nature of the work and changes in legislation, and will enable the INS to recruit and retain employees who are critical to mission accomplishment.
- A total of \$11,428,000 is requested for pay appraises for Immigration Inspectors in the User Fee account beginning in FY 2001.
 This proposal will upgrade the journey grade of the Immigration Inspector position from GS-9 to GS-11

Adjustments to Bose.	Pos.	Work- years	Amount
Increases:			
Realignment of FTE. Based on current FTE utilization, an analysis has shown an adjustment in workyears is necessary for the INS. To remedy this situation, a change of 258 is necessary for the lemmgration User Lee Account		258	
2001 pay paise. This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 fludget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$8,375,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$6,272,000 for pay and \$2,103,000 for benefits totaling \$8,375,000).			\$8,375
Annualization of 2000 pay raise. This pay annualization represents first quarter amounts (October through December) of the approved. 2000 pay increase of 4.8 percent effective in January 2000, and, for three-quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and this approved increase of 4.8 percent. The amount requested, \$3,993,000, represents the total annualization of pay amounts for the fiscal year plus appropriate benefits (\$2,991,000 for compensation and \$1,002,000 for hencefits).			3,993
Within-grade increases This request provides for the expected increase in costs of within-grade increases for slow or no growth components in FY 2000. This increase is based on an accurate model of the Department's employed population, which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$1,905,000 for pay and \$639,000 for henefits.		•••	2.544

	Perm. Pos.	Work- years	Amount
General Services Administrator of (GSA) rept GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and relatest services. The requested increase of \$577,000 is required to meet our commitment to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates reflecting a 5 percent increase over 2000 levels.	.,		\$577
Accident compensation This increase reflects the estimated billing provided from the Department of Labor for the actual costs in 1999 of employees' accident compensation, which will be hilled in 2001. The 2001 increased cost will be \$452,000.			452
International Cooperative Administrative Support Services (ICASS) Under the ICASS, an annual charge will be made by the Department of State (DOS) for administrative support based on the overseas staff of each Federal agency. This request is based upon the actual 1999 ICASS invoice billing for post invoices and other ICASS costs from the (XOS) building of \$644,000 is requested for the (minigration User Fee account			644
General, Services Administration (GSA) Blue Pages Previously, GSA has paid for all nationwide Government telephone book listings through the GSA 8 percent FTS overhead rate. An a result of National Partnership for Reinventing Government (NPR)/GSA Blue Pages Project, the funding for these listings has been removed from the overhead rate, and agencies are being billed for actual costs incurred. The Department's FY 2001 estimated costs total \$282,000. Funding of \$8,000 is requested for the Immigration User fee account.			Ą
General Pricing Level Adjustment This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.		-	1.396

Immigration and Naturalization Service Breached Bond/Detention Fund Summary Statement Fiscal Year 2001

The lumigration and Naturalization Service (INS) requests a total of 21 positions, 63 workyears, and \$110,134,000 for the Breached Bond/Detention Fund for FY 2001.

The Breached Bond/Detention Fund was authorized in Section 112 of the Department of Justice Appropriations Act of 1993 (P.L. 102-395). The Act amends Section 286 of the Immigration and Nationality Act of 1952, as amended, by establishing in the General Fund of the Treasury a separate account known as the Breached Bond/Detention Fund. Breached cash and surety bonds totaling in excess of \$8,000,000, posted under the Immigration and Nationality Act of 1952, as amended, which are recovered by the Department of Justice, are deposited as offsetting receipts into the Fund. Amounts deposited into the Fund remain available to the INS, until expended, for expenses incurred in the collection of breached bonds and for expenses associated with the detention of illegal aliens.

The INS taxe immigration delivery and exclusion bonds as a means of ensuring that illegal aliens appear at deportation and exclusion hearings. Aliens in custody of the INS may be released on their own recognizance or through the posting of delivery bonds, which are either each or surety bonds (and a limited number of Treasury bonds or notes). These bonds become contracts between the INS and persons acting on behalf of aliens (obligors) who promise their appearances in court. Under a cash bond, an obligor deposits the entire amount to cash with the INS. If the alien fails to appear as scheduled, the bond is breached and the Government retains the amount of the posted bond. Under a surety bond, the surety (insurance) company guarantees the amount of the bond and, if the alien fails to appear as required, the surety is liable to INS for the breached bond amount.

In September 1996, the Illegal immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA), (P.L. 104-208) authorized a new detention account titled the immigration Detention Account (Section 286(a)). Receipts from this account were derived from the penalty portion of receipts collected under the provisions of Section 245(i) of the INA. Specifically, these resources are for expenses incurred for the detention of aliens under IIRIRA Section 236(c), mandatory detention of criminal and terrorist aliens, and mandatory detention of aliens with final orders of deportation under IIRIRA Section 241(c).

In FY 1998, to simplify the INS resource structure, the Immigration Detention Account, was merged with the Breached Bond/Detention Fund. Receipts are still collected the same as they were when the Accounts were separate.

FY 1998 Congressional action did not renew Section 245(i) but did pass an extension of eligibility for certain aliens who had begun the immigrant visa process prior to January 14, 1998. Adjustment of status under Section 245(i) will be available to aliens on whose behalf an immigrant visa petition has been filed with INS, or for whom an application for labor certification has been filed in accordance with Department of Labor regulations, by January 14, 1998. This means that the filing of a visa petition or an application for labor certification on or before January 14, 1998, may preserve an individual's eligibility to apply for adjustment of status in the future. For the eligible 245(i) applicants, statutorily, there is no deadline by which they must apply for adjustment of status.

In FY 1999, Breached Bond/Detention Fund obligations were significantly reduced based on lower receipt levels. As the number of individuals eligible to adjust their status under Section 245(i) decreases, this trend is expected to continue into the outyears. However, the President's FY 2001 Budget proposes reauthorizing Section 245(i) with half of the anticipated \$75,000,000 in receipts deposited into the Breached Bond/Detention Fund. This \$37,500,000 is reflected in the \$110,134,000 receipt estimate and supports INS' detention program.

In FY 2001, resources from the Breached Bond/Detention Fund will be used to: support activities related to detention operations of criminal and illegal aliens, including additional State and Incat detention capacity, particularly additional juvenile detention capacity; continue bond management and collection activities, support the use of litigation to obtain compliance from surety detentions found to be delinquent in meeting their obligations to the INS; and, continue the operation of automated systems to support these activities. The authorization for the INS to retain these services has provided the agency with the means to effect improvements in bond processing and debt management.

Immigration and Naturalization Service Breach Bond/Detention Fund Program Performance Information

(Dollars in Thousands).

The Breached Bond/Detention Fund account was authorized in Section 112 of the Department of Justice Appropriations Act of 1993 (P.L. 102-395). The Act amends Section 286 of the Immigration and Nationality Act of 1952, as amended, by establishing in the General Fund of the Treasury a separate account known as the Breached Bond/Detention Fund. Breached cash and surety bonds totaling in excess of \$8,000,000, posted under the Immigration and Nationality Act of 1952, as amended, which are recovered by the Department of Justice, are deposited as offsetting receipts into the Fund over and above the \$8,000,000. Amounts deposited into the Fund remain available to the INS, until expended, for expenses incurred in the collection of breached bonds and for expenses associated with the detention of illegal aliens.

The INS uses immigration delivery and exclusion honds as a means of ensuring that illegal attens appear at deportation and exclusion hearings. Altens in custody of the INS may be released on their own recognizance or through the posting of delivery bonds, which are either cash or surety bonds (and a limited number of Treasury bonds or notes). These bonds become contracts between the INS and persons acting on the behalf of aliens (obligors) who promise their appearances in court. Under a cash bond, an obligor deposits the entire amount in cash with the INS. If the alien fails to appear as scheduled, the bond is breached and the Government retains the amount of the posted bond. Under a surety bond, the surety (insurance) company guarantees the amount of the bond and, if the alien fails to appear as required, the surety is liable to INS for the breached bond amount.

In September 1996, the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (P.L. 104-208) authorized a new detention account titled the Immigration Detention Account (Section 286(i)). Receipts from this account are derived from the penalty portion of receipts collected under the provisions of Section 245(i) of the INA. Specifically, these resources are for expenses incurred for the detention of aliens under Sections 236 (c), mandatory detention of criminal and terrorist aliens, and mandatory detention of aliens with final orders of deportation under Section 241 (c).

In FY 1998, to simplify the INS resource structure. Congress merged the newly created Immigration Detention Account with the Breached Bond/Detention Fund. Section 111 of the department's FY 1998 appropriation amends the language authorizing the Immigration Detention Account to require that the receipts made available under Section 245(i), be deposited into the Breached

Bond/Detention Fund. These receipts are used to support activities related to detention operations, including additional State and local detention capacity. The amount projected to be available for this purpose in FY 2000 is \$69,035,000 excluding \$8,000,000 that is deposited into the treasury. This resource level is based on the availability of carryover in FY 1999, and new receipts projected for the fiscal year.

In FY 2001, resources from the Breached Bond/Detention Fund will be used to: support the detention of criminal and illegal aliens; continue bond management and collection activities; support the use of litigation to obtain compliance from surely companies found to be delinquent in meeting their obligations to the INS; and, continue the operation of automated systems to support these activities. The authorization for the INS to retain these services has provided the agency with the means to effect improvements in bond processing and debt management.

Increase/Decrease			37,500

BASE PROGRAM DESCRIPTION

- Detention and Deportation program personnel, located in INS field offices, process all required documents needed to issue cash
 or surety bonds to permit the release of aliens in deportation/exclusion/removal proceedings. These personnel are also
 responsible for reviewing aliens! files and taking appropriate actions to cancel bonds when their provisions have been satisfied,
 and to breach bonds in the event that the aliens do not appear as required.
- The Detention and Deportation program detains aliens who are subject to deportation/exclusion/removal proceedings who are likely to abscord or whose freedom at large would clearly represent a danger to public safety and security until they are ready for removal. Performance of this function includes the transportation of aliens to INS and non-INS (contract) facilities, secure detention, medical care and other necessary support services.

- The Immigration Detention Account (IDA) was authorized in the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (P.L. 104-208), for the purpose of making available a portion of the receipts obtained from the adjustment of immigration status under the provisions of Section 245(i) of the Immigration and Nationality Act (INA). In FY 1999, as noted above, these receipts were deposited in the Breached Bond/Detention Fund.
- However, due to the sunsetting of the 245(i) provision in FY 1998, the anticipated receipt level for this account has been
 decreased in FY 2000.
- The president's FY 2004 budget proposes reauthorizing Section 245(i). The anticipated increase in revenue from 245(i) receipts totals \$75,000,000, with half of these receipts proposed to be allocated to the proposed Immigration Services Capital Investment Account, and half, or \$37,500,000 to be deposited to the Breached Bond Defention Fund

BASE PROGRAM DESCRIPTION:

INS attorneys provide legal advice regarding administrative sanctions and other means of enforcing obligations arising from
breached surety bonds, air and sea carrier fines, transit without visa damages, and checks returned because of insufficient
funds. When necessary to refer such matters to the Civil Division for actions in U.S. District Court, INS attorneys assist with
the litigation.

BASE PROGRAM DESCRIPTION:

• The function of the Management and Administration program is to direct implementation of INS-wide policy as it relates to collection of breached bonds, and ensure its effective and uniform application; establish a system to track, report, and bill breached surety bonds posted by aliens; and continue improvements in the forfeiture and collection process to allow increased resources to be directed toward the detention of criminal and other illegal aliens.

Strategy

- In January 1999, INS adopted a new interior Enforcement Strategy to respond more effectively to the changing patterns and consequences of illegal immigration. These new patterns and consequences arise from several dimensions and underlying causes of the flow of illegal atlents. First, progress made under the Border Patrol National Strategy has significantly shifted illegal crossing patterns along the border. Second, international illegal migration has become increasingly coordinated through organized criminal smuggling operations. Third, these organized networks support the recruitment and transportation of illegal workers to places of employment, often with the full knowledge and active participation of middle and lower-level managers. Fourth, illegal immigration is also drawing on more sophisticated and higher quality counterfeit documents often used to support fraudulent applications for legal immigration benefits. Fifth, INS enforcement is encountering, to a greater degree, illegal immigration that has a harmful impact, both on local communities and, often, on the migrants themselves.
- The primary strategic goal of INS interior enforcement is to reduce the size and annual growth of the illegal resident
 population, to deter the flow of temporary illegal magnants, and to tighten controls on the applications for immigration benefits
 based on fraud. The Breach Bond Detention Fund provides resources for the detention and removal of aliens.
- For FY 2001, INS proposes the reauthorization of section 245(i) of the INA in order to provide for detention and removal of alica apprehended by INS under Priority 1 of the Interior Enforcement Strategy.

Priority 1: Identification and Removal of Criminal Aliens

Identify criminal aliens as they are processed through the criminal justice system and remove them as appropriate. These activities will direct resources to State and Federal prisons where criminal aliens are currently incarcerated, to programs in which aggravated felona currently on parote or prohation are apprehended, and to activities actively seeking out absconders convicted of a crime and subject to removal. The following initiative funded from the Breached Bond Detention Fund; will enable INS to achieve its goals in this area:

- 1. Expand the National Transportation System
- Expand Juvenile Detention Space

Element: Enhance the National Transportation System

Programs	Cositions	Workyears	Amount
Detention and Deportation			\$5,550

Narrative Description

Enhance IPATS Resources for 85,000 Total JPATS Movements

- This request includes the following resources for JPATS inovements:
- Detention and Deportation: A total of \$5,550,000 to fund 16,000 additional domestic and repatriation JPATS movements over FY 2000. These resources, combined with the \$10,000,000 requested in the Salaries & Expenses account for FY 2001, will enable INS to fund a total of \$5,000 total 1PATS provincing in LY 2001.
- Air transport operations via <u>IPATS are a critical component of the National Transportation System</u>. IPATS movements serve
 as one of the more economical means of transporting large numbers of aliens from various staging areas around the country to
 those locations where they may be removed from the United States' borders. From FY 1990 to FY 1999, INS has increased its
 use of JPATS by 117 percent.
- Resources requested for increased JPATS movements are based on projected Service-wide usage. The FY 2001 request includes resources for repatriation flights to Central America, the Caribbean, and parts of Africa. The FY 2001 request is an 18 percent increase over the FY 2000 projected target. Increased INS JPATS movements were determined using the following factors: 1) DOJ recommendations to eliminate prolonged bus trips thereby improving treatment of aliens as well as safety compliance; 2) compensation for a lack of available local gail space in certain areas, 3) accommodation of several INS worksite special operations and Border Patrol highway operations simultaneously; 4) Congressional and DOJ recommendations to decrease the transportation of INS detainees on commercial arrians, and 5) a priority to increase the removal of aliens.

Element: Expand Juvenile Detention Space

Programs	Positions	Workycars	Amount
Detention and Deportation		·	\$4,950

Narrative Description

Enhanced Juvenile Bed Space

The request for an increase in beds for unaccommuned manors includes the following elements:

- Detention and Deportation: \$4,950,000 to pay for \$2 juvenile had spaces in EY 2001. This initiative will result in the removal
 of 410 juvenile aliens on an annual basis.
- As stated in INS' Annual Performance plan, Management Core Function Goals, INS needs to provide increased bed space for unaccompanied minors to support the growing influx of juvenile illegal stiens apprehended by INS Enforcement Officials.

 Also, INS' Detention and Incarceration Goal addresses the critical importance of providing safe, secure, and humane confinement for persons detained. Jenny Lisette Flores, et al. vs. Janet Reno was a class action lawsuit filed against INS that challenged INS' policy sugarding the arrest, processing, detention, and release of minors in INS custody. The settlement actions, effective February 1997, resulted in stricter policies concerning juvenile illegal aliens. In support of these goals and responding to the Flores settlement, INS implemented a new, comprehensive unaccompanied minor alien program in April 1997, providing national standards to ensure the safety and welfare of unaccompanied minors who are in the United States illegally. This request supports INS' strategic goals by increasing the number of bod spaces available for detaining juvenile aliens while also supporting INS' efforts to promote Federal, State, and local cooperation to expedite the removal of unaccompanied minor detainness.
- INS' Enforcement Officials have experienced a steady increase in the illegal alien traffic flow of unaccompanied minors since fiscal year 1995. The number of juveniles taken into INS custody increased 278 percent from FY 1995 to FY 1999.

To address increasing numbers of unaccompanied minor illegal aliens, this initiative will fund 82 critically needed detention bed spaces for juveniles nationwide in both contract and shelter care facilities. Detention space for unaccompanied minors is procured through INS Unaccompanied Minors Shelter Care Program (UMSCP) and through a number of Intergovernmental Service Agreements (IGSAs) with State and local governments nationwide. After unaccompanied minors are apprehended, like their adult counterparts, some are removed immediately; others are held for short periods (under 72 hours), and the remaining require longer detention periods. Both shelter care and contract facilities are required to address the different needs of unaccompanied minor illegal aliens.

jucterses.			
Adjustment of FTE Bared on current FTE utilization, an analysis has shown an adjustment in work years is necessary for the IN 5. To remedy this situation, a change of 44 f FE is necessary for the Breached Bond/Detention Fund account.		44	
2001 pay raise This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$46,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$64,000 for pay and \$22,000 for benefits totaling \$86,000).			\$86
Annualization of 2000 pay raise. This pay annualization represents first quarter amounts (October through December) of the 2000 pay increase of 4.8 percent effective in January 2000, and, for three-quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and the approved increase of 4.8 percent. The amount requested, \$24,000, represents the total annualization of pay amounts for the fiscal year plus appropriate benefits (\$17,000 for compensation and \$7,000 for benefits).			24
Withinstrade increases This request provides for the expected increase in costs of within-grade increases for slow or no growth conglineats in FY 2000. This increase is based on an accurate model of the Department's employee populstion, which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The regulation is includes \$10,000 for pay and \$3,000 for benefits.			13

	<u>Pos.</u>	Work- years	<u>Amount</u>
General Services Administration (GSA) rent GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested increase of \$6,000 is required to meet our commitment to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates reflecting a 5 percent increase over 2000 levels.			6
Medical Hospital Service costs The Department of Health and Human Services is projecting an increase in health care costs. The Department is applying a factor of 3.8 percent against medical services. An increase of \$5,000 will be required for 2001.	٠.		5
General Pricing Level Adjustment. This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.	<u></u>	-2-	3.465

Immigration and Naturalization Service Land Border Inspection Fee Account Summary Statement Fiscal Year 2001

The Immigration and Naturalization Service (INS) is requesting 12 positions, 26 workyears, and \$1,641,000 in the Land Border Inspection Fee Account.

The Land Border Inspection Fee account was authorized in Section 210 of the Department of Justice Appropriations Act of 1991 (P.L. 101-515). The Act authorized the Attorney General to establish, by regulation, pilot projects under which fees may be charged at one or more land border ports-of-entry (POE). These pilots would be used to study the feasibility of charging fees to provide inspection services at all land border POEs. The regulations stated that the projects may include the establishment of commuter lanes to be made available to pre-qualified United States citizens and aliens. This provision, as amended, authorizes projects on the Northern border and the entire Southwest border, but probabits the implementation of a universal border crossing fee. FY 2000 conference action included language that made this account permanent.

In FY 2001, a change in the language authorizing the Land Border Inspection Fee Account (Sec. 286(q) of the INA) is being requested that would redirect certain fees for services at land border ports of entry into this account rather than in the Examinations Fee Account. If approved, Inspections positions supported by these fees would be moved from the Examinations Fee Account to the Land Border Inspection Fee Account.

The INS is currently operating Secure Electronic Network for Traveler. Rapid Inspection (SENTRI) in Otay Mesa, California, Buffalo, New York, and Detroit, Michigan. The Otay Mesa site was originally implemented as a National Performance Review pilot project with the U.S. Customs Service, Drug Enforcement Administration, Federal Bureau of Investigation, and the U.S. Attorney's Office. In FY 1997, Congress approved five new pilot sites in Nogales, AZ; San Luis, AZ; El Paso, TX; Laredo, TX; and Hidalgo, TX. The El Paso Inne opened in September of 1999, and the San Ysidro Ianc is expected to open in FY 2000.

Immigration and Naturalization Service Land Border Inspection Fee Program Performance Information (Dollars in thousands)

The Blegal Immigration Reform and Immigrant Responsibility Act of 1996 extended the Land Border Inspection Fee program to September 30, 2000, for pilot protects on the northern and southern borders of the United States. The FY 1997 Appropriations Act granted INS permission to estable. Dedicated Commuter Lanes, (IXTLs) in all southern border states. Frequent border crossers in the states of Arizona, New Mexico, and Texas can derive considerable benefit through the use of DCLs, as well as other means of expediting inspection traffic. The Congressional Appropriation Action on the FY 2000 request permanently established this account. A language change is being proposed so that the fee for service functions at land border POEs, currently in the Exams Fee account, can be moved to this account.

The INS is currently operating Secure Electronic Network for Linvelers Rapid Inspection (SENTRI) in Otay Mesa, California, El Paso, TX, Buffalo, New York, and Detroit, Michigan and DCLs in Hlame and Point Roberts, Washington. The Otay Mesa site was originally a pilot National Performance Review (NPR) site in cooperation with the Drug Enforcement Administration, Federal Bureau of Investigation, U.S. Attorney's Office, and the U.S. Customs Service. Land Border Inspection Fee funding is used for such items as personnel, overtime, equipment, and minor facility medifications.

BASE PROGRAM DESCRIPTION:

- The Land Border Inspection Fee account authorization authorizes the Attorney General to charge a fee for inspection services
 at one or more land border ports-of-entry (POE)
- This program enables low-risk, frequent border crossers, who are approved for participation in the program, to transit the
 border through a specific vehicle traffic lane with an abbreviated inspection process. The INS currently operates sites in Blaine
 and Point Roberts, WA, Detroit MI, Otay Mess, CA, Ruffalo, New York and El Paso, TX.
- The El Paso, TX lane opened in Soptember 1999. The San Yxidro, CA fanc is anticipated to open in May 2000. The sites
 established are popular among users and allow the resources required to inspect horder crossers to be more efficiently applied
 to enforcement and other facilitation efforts.

Immigration and Naturalization Service Immigration Land Border Inspection Fee Justification of Adjustments to Base (Dollars in thousands)

Adjustments to Base.	Penn. Pos.	Work- years	Amount
Increases:			
2001 pay raise. This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Ciuitance for 2001 Budget. Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$35,000, represents the pay amounts for there-quarkers of the fiscal year plus appropriate benefits (\$26,000 for pay and \$9,000 for benefits, totaling \$35,000).			\$ 35
Annualization of 2000 pay mass. This pay annualization represents first quarter amounts (October through December) of the 2000 pay increase of 4.8 percent effective January 2000, and, for three-quarters of a year, the difference between the 4-4 percent estimated in the 2000 President's budget and the approved microse of 4.8 percent. The amount requested, \$16,000, represents the total annualization of pay amounts for the fiscal year plus appropriate benefits (\$11,000 for compensation and \$5,000 for benefits).			16
Within-grade increases. This request provides for the expected increase in costs of within-grade increases for slow or no growth components in FY 2000. This increase is based on an accurate model of the Department's employee population, which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$14,000 for pay and \$5,000 for benefits.			19

Justification of Adjustments to Base (continued) (Dollars in thousands)

	Pos.	Work- krass	Amount
General Services Administration (GSA) reni GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested increase of \$16,000 is required to meet our commitment to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates reflecting a 5 percent increase over 2000 levels.			\$16
General Pricing Level Adjustment This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.		_	7

Immigration and Naturalization Service Immigration Enforcement Account Summary Statement Fiscal Year 2001

The Immigration and Naturalization Service (INS) requests a total of \$1,850,(XII) for the Immigration Enforcement account for FY 2001

The Immigration Enforcement Account was authorized in Section 382 of the IIRIRA. The Act amends Section 280 of the Immigration and Nationality Act of 1952, as amended, by establishing in the General Fund of the Treasury a separate account known as the Immigration Enforcement Account. Prior to EY 1997, two-thirds of the times receipts for INA Sections 271 and 273 were collected and deposited in the User Fee Account, but were unavailable to be spent on User Fee activities as outlined in the INA Section 286 (htt2tA). These fines receipts, plus additional revenue relating to lines and penalties, as outlined in Section 382(a) of the 1996 Act, are deposited into the account and remain available to INS until expended. Expenses may be incurred by the Attorney General for the identification, investigation, apprehension, detention, and remained of criminal aliens, the maintenance and updating of a system to identify and track criminal aliens, deportable aliens inadiums/shle aliens, and aliens illegally entering the United States; and for the repair, maintenance, or construction on the United States border, in areas experiencing high levels of apprehensions of illegal eliens, or for structures to deter illegal entry into the United States.

The INS negotiated enforcement fines regulations based on the Immigration and Nationality Technical Corrections Act of 1994 (P.L. 103-416), which amended the Immigration and Nationality Act (INA) Section 273(e), to allow the Attorney General, in prescribed cases, to reduce, refund, or waive fines

In FY 2001, INS plans to spend these fines receipts in the Data and Communications program. Funding in this account will allow INS to expand its Integrated Surveillance Intelligence System (ISIS)/Remote Video Surveillance (RVS) for the Border Patrol. New thermal infrared imagers mounted with RVS daylight cameras improve the Border Patrol's 24-hour surveillance capability along the Southwest border. The integration of RVS with the new generation of "smart" sensors through the Intelligent Computer-Aided Detection (ICAD) command and control system, when fully deployed, will allow for the development of a true "electronic fence" between the United States and Mexico.

BASE PROGRAM DESCRIPTION:

- This account is used for the identification, investigation, apprehension, detention, and removal of criminal aliens; the maintenance
 and updating of a system to identify and track criminal aliens, deportable aliens, inadmissible aliens, and aliens illegally entering
 the United States; and for the repair, maintenance, or construction on the United States border, of structures to deter illegal entry
 into the United States, in areas experiencing high levels of apprehensions of illegal aliens.
- The INS negotiated regulations based on the Immigration and Nationality Technical Corrections Act of 1994 (P.L. 103-416), which amended the INA Section 273 (e) to aflow the Attorney General, in prescribed cases, to reduce, refund, or waive fines. The INS established an Acceptable Performance Level (APL) based on statistical analysis of the performance of all carriers, as a means to determine eligibility for a reduction of fines. For FY 1999, approximately 40 percent of the 273 fines cases, which were reviewed, excluding all cases enticipated to be canceled or appealed to the Board of Immigration Appeal, were eligible for either 25 percent or 50 percent mitigation.

• The INS plans to use the fines receipts in the Enforcement Account in the Data and Communications program. Included among the projects this funding will support is the expansion of remote video surveillance (RVS) systems for the Border Patrol. The current low light level television (LLLTV) systems are reaching the end of their life cycle, and are in need of replacement and augmentation. These new thermal infrared imagers mounted with daylight cameras improve the Border Patrol's 24-hour surveillance capability along the Southwest border. The integration of RVS with the new generation of "sntart" sensors through the ICAD command and control system, when fully deployed, will allow for the development of a true "electronic fence" between the United States and Mexico.

Immigration and Naturalization Service H-IB Non-Immigrant Petitioner Fee Summary Statement

Fiscal Year 2001

The Immigration and Naturalization Service (INS) requests \$1,125,000 in spending authority for the H-1B Non-Immigrant Petitioner Fee account. The resource level is the same as the level anticipated to be available to INS in this account for FY 2000.

The American Competitiveness and Workforce Improvement Act, P.L. 105-277, was enacted in 1998 and created the new H-1B Fee account beginning in FY 1999. The new law increased the number of 11-1B visas available and established a new fee to pay for the cost of job training and scholarship programs. The number of visas available has been increased from 65,000 to 115,000 for Fiscal Years 1999 and 2000, and to 107,500 in FY 2001. In FY 2002 the number of H-1B visas available will revert to 65,000. The \$500 H-1B visas fee is in addition to the \$110 filing fee for the 1-129S petition. The new fee is being used to help U.S. citizens, legal permanent residents and other U.S. workers with job training, low-income scholarships, grants for mathematics, engineering or science enrichment courses administered by the National Science Foundation and the Department of Labor, and for processing and enforcement. The Department of Treasury assumes control of the revenue deposited into the account and distributes the amount based on the following percentages set forth in the law: 62.3 percent to Department of Labor; 36.2 percent to National Science Foundation; and 1.5 percent to Immigration and Naturalization Service.

The INS' Adjudications and Naturalization program is responsible for processing applications for immigration benefits under the provisions of the Immigration and Nationality Act, as amended. Resources which are made available in the H-1B Non-Immigrant Petitioner Fee account are used to acquire the additional personnel and infrastructure needed to process the increased numbers of temporary worker petitions submitted to INS for review.

BASE PROGRAM DESCRIPTION:

This program is responsible for processing applications for immigration benefits under the provisions of the Immigration and
Nationality Act, as amended. A portion of the visa filing fee established in The American Competitiveness and Workforce
Improvement Act, P.L. 105-277 is made available to the INS for this account. These resources are used to process the
increased numbers of temporary worker petitions submitted to the INS for review.

Immigration and Naturalization Service Shared Support Operations Fund Summary Statement Fiscal Year 2001

In FY 2001, the Immigration and Naturalization Service (INS) proposes to establish a Shared Support Operations Fund (SSOF) for the Immigration and Naturalization Service (INS) to provide agency-wide shared support services for PNS programs. The estimated value of services to be supported through this fund is \$154,622,000. The fund will use an approach which will increase the accountability of service providers resulting in improved quality and timiliness of delivery to support INS' operating divisions and field activities. This will be done through "purchase" agreements covering funding and delivery of services. It is anticipated that this approach to shared support operations will result in enhanced customer satisfaction as well as enhanced service productivity. This concept, which has been employed in other Federal agencies with success, is consistent with the current INS restructuring proposal for shared services supporting enforcement and immigration services functions. In its first year (FY 2001), INS will develop the mechanisms for these central services to gain experience with the concept. The establishment of the SSOF does not require an increase in resources. It provides a means to increase the productivity of existing resources by requiring the application of a business process to the delivery of specific services covered by the fund.

The Shared Support Operations Fund would be used for the delivery of services in the following areas:

Information and Records Management Services

The fund will provide information and records management services which will include information and records services (including the INS National Records Center, Freedom of Information Act/Privacy Act (FOIA/PA), and records services related to the Systematic Alien Verification for Entitlements (SAVE) program. Information and records services include: establishment and maintenance of files, archive services, file retrieval, and security of information. FOIA/PA services include receipt and tracking functions, acquisition of information, and the production of responses to FOIA/PA requests. Activities related to the SAVE program include: the maintenance and production information for client agencies required to verify eligibility for certain federally-supported benefits programs.

Security Background Investigation Services

The fund will support that part of the Security program which provides services related to the adjudication of security background investigations for new employees and the procurement and adjudication of background re-investigations for on-board employees. The services related to the adjudication of the results of the investigations are critical to the maintenance of INS' internal security. All INS employees in sensitive positions undergo a background reinvestigation every five years to determine their continued eligibility to hold a sensitive position and, if applicable, to have continued eligibility for access to classified information. Therefore, Background einvestigation service to INS' programs is critical to the integrity and security of their operations and the timing of the performance of this service is of considerable importance.

Equal Employment Opportunity Program Services

The fund will support all aspects of the INS Equal Employment Opportunity (EEO) program. Activities will include the development of Affirmative Employment Program Plans for use by managers and supervisors, EEO complaints program management, EEO training for managers and supervisors, special emphasis training for all employees (in areas such as sexual harassment), and advisory services to management for the purpose of maintaining and enhancing EEO program compliance throughout the Service.

Immigration and Naturalization Service Shated Support Operations Fund Justification of Proposed Changes in Appropriation Language

The FY 2001 budget estimates include new language to authorize the creation of the Shared Support Operations Fund. This is a new fund.

Shared Support Operations Fund (Including Transfer of Funds)

There is hereby stablished a Shated Support Operations Fund for the Immigration and Naturalization Service, which shall be available without fiscal year limitation, for expenses and equipment necessary for the operation and maintenance of such administrative services as the Commissioner of the Immigration and Naturalization Service, with the approyal of the Department of Justice and the Office of Management and Budget, determines may be performed more advantageously as central services. The capital of the find shall consist of the amount of the furt and reasonable value of such inventories, engineers and other assets and inventories on order pertaining to the services to be carried on by the Fund as the Commissioner may transfer to the Fund, less related liabilities and impaging obligations together with any appropriations made for the purpose of providing capital. Provided, That the Eund shall be reimbursed or credited with advance payments from applicable appropriations and amounts available for the immigration and Naturalization Service, other Federal agencies, and other sources as authorized by law for supplies, materials and services at rates that will recover the expenses of Fund operations including, without limitation, depreciation of plant and equipment of the Fund. The Fund shall globe credited with other receipts from the sale or exchange of property or in payment for ioss or damages to property held by the Fund. Provided further, that all retained carnings shall remain available without limitation, for the acquisition of capital equipment of furtice Appropriations Act, 2001.)

Explanation of Changes:

Establishment of this account will allow the immigration and Naturalization Service to improve the delivery of services in specific support operations, applying business practices to enhance performance and quality of service. This language, establishing the fund, is included in the Department of Justice General Provisions

Shared Support Services Shared Support Operations Fund (Dollars in thousands)

Strainer

In FY 2001, the Immigration and Naturalization Service (INS) proposes to establish a Shared Support Operations Fund (SSOF) for the Immigration and Naturalization Service (INS) to provide agency-wide shared support services for INS programs. The estimated value of services to be supported through this fund is \$154,622,000. The fund will use an approach which will increase the accountability of services providers resulting in improved quality and timeliness of delivery to support INS' operating divisions and field activities. This will be done through "purchase" agreements covering funding and delivery of services. It is anticipated that this approach to shared support operations will result in enhanced customer satisfaction as well as enhanced service productivity. This concept, which has been employed in other Pederal agencies with success, is consistent with the current INS restructuring proposal for shared services supporting enforcement and immigration services functions. In its first year (FY 2001), INS will develop the mechanisms for these central services to gain experience with the concept. The establishment of the SSOF does not require an increase in resources. It provides a means to increase the productivity of existing resources by sequiring the application of a business process to the delivery of specific services covered by the fund.

The Shared Support Operations Pund would be used for the delivery of services in the following areas:

Information and Records Management Services

The fund will provide information and records management services to all INS programs and will include:

- providing responses to inquiries from the public and private sectors; local, state and Federal agencies; and the various branches
 of government, by telephone, in-person, and in writing;
- maintaining alien records and files from which data may be readily obtained to respond to requests from both within and
 outside INS:
- developing guidelines, policies and procedures, and responses to Freedom of Information Act/Privacy Act (FOIA/PA) requests;

- providing for the coordination, d, velopment, preparation and review of the Service's regulations, directives, operating
 instructions and forms, to ensure that these materials are issued and published in accordance with established Federal
 regulations and laws;
- monitoring and ensuring internal compliance to standards for systems and service delivery, and
- managing and administering the Systematic Alien Verification for Entitlements (SAVE) program.

The estimated value of the shared records management services to be supported through the use of the Fund is \$134,414,000.

Security Background Investigation Services

The fund will provide INS Security program services which will include the following:

- providing services related to the adjudication of security background investigations for new employees, and
- procuring and adjudicating background re-investigations for on-board employees.

The services related to the adjudication of the results of the investigations are critical to the maintenance of INS' internal security. All INS employees in sensitive positions undergo a background reinvestigation every five years to determine their continued eligibility to hold a sensitive position and, if applicable, to have continued eligibility for access to classified information. Background reinvestigation service in INS' programs is critical to the integrity and security of their operations and the timing of the performance of this service is of considerable importance. The estimated value of the shared Security program services to be supported through the use of the Fund is \$11,328,000.

Equal Employment Opportunity Program Services

The fund will provide services related to all aspects of the INS Equal Employment Opportunity (EEO) program and will include:

- developing Affirmative Employment Program Plans for use by managers and supervisors;
- managing INS' EEO complaints program;

- providing EEO training for managers and supervisors;
- providing special emphasis training for all employees (in areas such as sexual harassment), and
- providing advisory services to INS management for the purpose of maintaining and enhancing EEO program compliance throughout the Service.

The estimated value of the shared EEO program services to be supported through the use of the Fund is \$8,880,000.

Bureau of Prisons Summary Statement and Performance Plan Fiscal Year (FY) 2001

The Federal Prison System (FPS) is requesting a total of 38,042 positions, 35,120 workyears (FTE), and \$4,381,429,000 for FY 2001. This request represents an increase of 1,373 positions, 506 FTE, and \$713,576,000 over the FY 2000 appropriation. In addition, a total of \$791,000,000 is requested as advance appropriation for FY 2002, and \$535,000,000 for FY 2003 in the new construction program. Positions and workyears will also be needed to accomplish those construction projects.

The Bureau of Prisons' (BOP's total requested program increases for FY 2001 (1,824 positions, 755 FTE, and 874,545) will: support an Average Daily Population of 153,547 and, including advance appropriations for FY 2002 and FY 2003, will provide construction funding for sixteen facilities and one secure female unit. Seven of these facilities have some prior funding.

While this new construction request provides for nine new facilities and a secure female unit, overcrowding will remain a serious issue. Even with the new facilities requested in this budget, overcrowding will be close to 30 percent by 2007. The BOP is experiencing record breaking increases in the inmate population. If this trend continues, additional capacity may be required. The BOP will constantly monitor facility capacity and prisoner overcrowding.

A detailed explanation of the BOP's FY 2001 program increases by initiative and a corresponding explanation of the BOP's base program is included in each individual budget. The four budget requests for the BOP include: Salaries and Expenses (S&E); Buildings and Facilities (B&F); and Faceral Prison Industries (FPI). The Commissary is treated as a revolving fund. Funding and positions formerly provided via the Violent Crime Reduction Program (VCRP) are included in the S&E budget.

2001 Federal Bureau of Prisons Performance Plan and FY 1999 Accountability Report

A. 80P's Mission and Goals, and Relationship to Department of Justice (DOJ) Strategic Plan

BOP's FY 2001 budget submission and performance plan directly support the Detention and Incarceration mission priorities, general goals and strategic approaches that are included in the DOJ Strategic Plan, FY 1997 - 2001. In addition, it incorporates information on performance measurement that should lead to better accountability regarding actual results achieved.

BOP Mission

The mission of the BOP, an agency of the DOJ, was established in an Act of Congress, signed by President Hoover on May 14, 1930. This legislation established the BOP and directed it to develop an integrated system of institutions to provide custody and treatment based on the individual needs of offenders.

The mission of the BOP is to protect society by confining offenders in the controlled environments of prisons and community-based facilities that are safe, humane, cost efficient, and appropriately secure, and which provide work and other self-improvement opportunities to assist offenders in becoming law-abiding citizens.

While State and local incarceration growth rates have declined in recent years, the FPS has experienced record growth, with an increase of over 10,000 inmates during FY 1998 and over 11,300 inmates during FY 1999. Given increased resources for law enforcement and prosecutory agencies, and even stronger emphasis on prosecution of gun related crimes, this inmate growth trend promises to continue into the future.

The Detention and Incarceration priorities in DOJ's strategic plan include the following:

- Goal 1 Provide for the safe, secure and humane confinement of persons who are detained while awaiting trial or sentencing, a hearing on their immigration status, or deportation.
- Goal 2: Ensure that sufficient prison capacity exists so that violent and other serious criminal offenders are imprisoned to the fullest extent of the law.
- Goal 3: Maintain and operate the FPS in a safe, secure, humane and efficient manner.
- Goal 4: Provide productive work, education, medical and other programs to meet inmate needs and facilitate their successful reintegration into society, consistent with community expectations and standards.

B. Highlights of FY 1999 Mission Critical Results

During FY 1999, the BOP exceeded its plan by adding over 3,500 new prison beds to BOP capacity. This kept overcrowding near planned levels despite a second record year in immate population growth. All medically fit immates worked, and all immates were

provided the opportunity to participate in general and occupational education programs, psychology services, religious and fitness activities. The BOP met its goal to provide residential drug treatment to 100% of eligible immates.

C. FY 2001 Performance Goals and Indicators

The BOP is proposing an FY 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown below. These FY 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act (GPRA).

A summary table of key performance measures which support BOP and DOJ goals is provided. More detailed tables are contained in each individual budget submission.

The following goals summarize the major accomplishments anticipated for FY 2001:

Ensure sufficient prison capacity exists so that violent and other serious criminal offenders are imprisoned to the fullest extent of the law.

During FY 2001, the BOP anticipates activating over 6,200 additional prison beds. The activations include the following new facilities: Pollock, Louisiana High and Minimum; Coleman, Florida High; Atwater, California High and Minimum; and Honolulu, Hawaii Detention Center. Also included are approximately 2,500 beds to be added by expanding low security bed space at: Ft. Dix, New Jersey; Elkton, Ohio; Jesup, Georgia; Yazoo City, Mississippi; Seagoville. Texas; and Lompoc, California. In addition, Congress has recently approved a reprogramming to convert the existing prison camp at El Paso, Texas to a secure camp and expand capacity to 500 beds. Activation funding will be requested once the project is completed. The BOP plans to begin construction of several new facilities during FY 2001 which already have received partial funding. The FY 2001 request and advance appropriations will provide new funding for construction of new facilities which will add nearly 20,000 beds when completed and activated during FY 2005 - FY 2007.

Maintain and operate the FPS in a safe, secure, humane and efficient manner

The BOP will continue to repair and renovate facilities as required; identify and address any hazardous waste that may exist on Federal prison property; comply with all requirements of the National Fire Protection Association (NFPA), 101 Life Safety Code pertaining to penal facilities; bring applicable utilities into compliance with National Electric Code and American

Waterworks Standards; and ensure safety and security of facilities. During FY 2000 through FY 2001, the BOP will remediate 100 percent of Life Safety discrepancies. Approximately 450 Modernization & Repair (M&R) projects will be completed each year, including 60 special projects completed and closed relating to life safety, accessability, environmental and energy projects. The BOP has been working diligently to complete M&R projects over three years old. By FY 2001, 100 percent of those M&R projects subject to the new guidelines and over three years old will be completed. In addition, long range master plans will be developed for facilities over 50 years old (50+ surveys) in need of extensive renovation first. Twenty-one BOP facilities are over 50 years old and have not had major renovations. A minimum of four long range master plans will be completed each fiscal year through FY 2001.

Provide productive work, education, medical and other programs to meet immate needs and facilitate their successful
reintegration into society, consistent with community expectations and standards.

All medically fit inmates will continue to work. All inmates will continue to be provided the opportunity to participate in general and occupational education programs, psychology services, religious and fitness activities. FPI will continue to employ up to 25 percent of inmates in secure facilities. The BOP will continue to provide residential drug treatment to 100% of eligible inmates. During FY 2000, over 7,500 inmates are expected to complete at least one vocational training program, and approximately 12,400 will participate in residential drug treatment programs. In FY 2001, an additional 120 staff positions are requested for education programming expansion and to address the backlog of inmates waiting to participate in literacy/General Education Development (GED) programs.

The BOP and United States Marshals Service (USMS) have recently begun a pilot project for delivery of health care to USMS prisoners confined in BOP detention centers. The study results from a recommendation in the Congressionally-mandated DOJ Detention and Incarceration Study which was completed in March 1998. Traditionally, the BOP has provided healthcare services to USMS prisoners in BOP facilities, while the USMS has been responsible for outside medical care. It has been USMS responsibility to transport, maintain custody, and pay for the treatment of USMS prisoners at community hospitals. Under the pilot project, the BOP assumes outside medical care responsibilities, including guard and escont duties, for USMS prisoners at three BOP detention centers: Metropolitan Correctional Center (MCC), New York; Pederal Detention Center (FDC), Miami; and Federal Transfer Center (FTC), and USMS prisoners. The data will be used to assess the financial and operational impact of this initiative on BOP facilities.

In addition, the BOP is actively participating in DO J crosscutting initiatives that have agency representatives meeting on a regular basis to identify and work together on issues which impact them. The BOP is included in three crosscutting groups, Detention, Communities, and Federal Information Resources Management.

D. New 2001 Initiatives

For the S&E budget, this amount includes a program increase of \$193,274,000 for activation of four facilities, activation of expansions at six existing low security facilities, and initial equipment purchases for two new facilities which will activate in FY 2002. Also included is funding for Contract Confinement to house 6,000 criminal aliens in contract beds; a contract population adjustment, and adding staff for educational programming.

For the B&F budget, a total program increase of \$681,271,000 is requested for FY 2001. Of this amount, \$224,722,000 is for completion of additional capacity to absorb the Immigration and Naturalization Service (INS) long term detained population. For BOP sentenced capacity, \$416,397,000 is for completion of four facilities and \$40,152,000 is partial funding for site and planning of five new facilities. The balance of funding for these facilities is requested as Advance Appropriations for FY 2002 along with remaining construction funds for a USP with prior funding. Advance Appropriations for site and planning of an additional four Federal Correctional Institutions (FCIs) and one secure female unit is requested for FY 2002, with the balance of construction funding for these facilities requested for FY 2003.

Initiative	Pos.	FTE	<u>Amount</u>
Activations	1,529	530	\$101,379,000
Contract Beds/Population Increase	23	12	84,462,000
Education	120	120	7,433,000
New Construction	53	35	681,271,000
Federal Prison Industries	78	48	-
Commissary Trust Fund	21	10	-
TOTAL:	1,824	755	874,545,000

Initiative: Activations (1,529 positions and \$101,379,000). This provides funds for activation of four new facilities (3,806 bods): high and minimum security facilities in Pollock, Louisiana; high security facility in Coleman, Florida; high and minimum security facilities in Atwater, California; and a detention center in Honolulu, Hawaii. Also, funds are included for activation of satellite low security bed space at six existing locations (2,444 beds): Ft. Dix, New Jersey, Elkton, Ohio; Jesup, Georgia; Yazoo City, Mississippi; Seagoville, Texas; and Lompoc, California; and initial equipment funding for two institutions to activate in FY 2002.

Initiative: Contract Beds/Population Increase (23 positions and \$84,462,000) Funding is requested to place an additional 6,000 criminal aliens in contract beds and support the projected increase in the BOP contract population. Approximately 29 percent of the BOP population are non-U.S. citizens. One management tool for addressing this growth is the use of privately owned and operated correctional facilities for inmates appropriately housed in minimum and low security facilities.

Initiative: Education (120 positions and \$7,433,000) Funds are requested to expand education programming for inmates waiting to participate in literacy/GED programs. Implementation of the Violent Crime Control Enforcement Act (VCCLEA) and the Prison Litigation Reform Act (PLRA) have dramatically increased demand for the literacy/GED program in the BOP, more than doubling since August of 1997. In addition, enrollments in all BOP education programs have expanded considerably requiring enhancement of resources.

These initiatives directly relates to DOJ CORE FUNCTION 5: Detention and Incarceration

DOJ Strategic Plan Goals:

- Goal 1: Provide for the safe, secure and humane confinement of persons who are detained while awaiting trial or sentencing, a hearing on their immigration status, or deportation.
- Goal 2: Ensure that sufficient prison capacity exists so that violent and other serious criminal offenders are imprisoned to the fullest extent of the law.
- Goal 3: Maintain and operate the FPS in a safe, secure, humane and efficient manner.
- Goal 4: Provide productive work, education, medical and other programs to meet inmate needs and facilitate their successful reintegration into society, consistent with community expectations and standards.

Initiative: New Construction (53 positions and \$681,271,000) For the B&F budget, a total program increase of \$681,271,000 is requested for FY 2001. Of this amount, \$224,722,000 is for completion of additional capacity to absorb the Immigration and Naturalization Service (INS) long term detained population. For BOP sentenced capacity, \$416,397,000 is for completion of four facilities and \$40,152,000 is partial funding for site and planning of five new facilities. The balance of funding for these facilities is requested as Advance Appropriations for FY 2002 along with remaining construction funds for a USP with prior funding. Advance Appropriations for site and planning of an additional four Federal Correctional Institutions (FCIs) and one secure ternale unit is requested for FY 2002, with the balance of construction funding for these facilities requested for FY 2003.

This initiative directly relates to DOJ CORE FUNCTION 5: Detention and Incarceration

DOI Strategic Plan Goals:

- Goal 1 Provide for the safe, secure and humane confinement of persons who are detained while awaiting trial or sentencing, a hearing on their immigration status, or deportation.
- Goal 2 Ensure that sufficient prison capacity exists so that violent and other serious criminal offenders are imprisoned to the fullest extent of the law.

E. Data Validation and Verification Issues

<u>Data Collection and Storage</u>: The data contained in the BOP measurement tables are gathered on several computer systems: Inmate data is collected on the BOP on-line system (SENTRY); Personnel data is collected from the National Finance Center (NFC) database, the Human Resource Management Information System (HRMIS), and from field locations reporting on a regular basis, and Financial data is captured on Financial Management Information System (FMIS)

Data Validation and Verification. The BOP's Financial Statement is audited annually by an independent certified public accounting firm. For FY 1999, the BOP received an Unqualified opinion. Further, within the BOP headquarters, subject matter experts in different divisions retrieve data, analyze, validate, and report it for each budget cycle. On the measurement tables, the column entitled "Data Source" contains acronyms for the BOP division/divisions which validate and provide the information in the other columns: ADM - Administration Division; CCD - Community Corrections and Detention Division; CPD - Correctional Programs Division; HRM - Human Resource Management Division; HSD - Health Services Division; IEVT - Industries, Education & Vocational Training Division; IPPA - Information, Policy & Public Affairs Division; OGC - General Counsel and Review Division; PRD - Program Review Division.

<u>Data Limitations</u>: The BOP and DOJ have strived to provide meaningful performance indicators which have solid and reliable data to back them up. Due to the unpredictable environments in prisons, there may often be discrepancies between planned and actual numbers contained in the performance tables. Most plans are based on past experience and best estimates for the future.

G. DOJ Summary Performance Plan, Performance Goals, Targets and Actuals

Core Function 5. Detention and Incarceration

- Strategic Goal 1: Provide for the safe, secure and humane confinement of persons who are detained while awaiting trial or sentencing, a hearing on their immigration status, or deportation.
 - Goal 2: Ensure that sufficient prison capacity exists so that violent and other serious criminal offenders are imprisoned to the fullest extent of the law.
 - Goal 3. Maintain and operate the FPS in a safe, secure, humane and efficient manner.
 - Goal 4: Provide productive work, education, medical and other programs to meet inmate needs and facilitate their successful reintegration into society, consistent with community expectations and standards.

PERFORMANCE ASSESSMENT

(1) Performance Goal: Reduce Overcrowding

Key Summary Level Indicators	FY 1998 Actual	FY 1999 Planned/Actual	FY 2000 Planned	FY 2001 Planned
Number of prison beds added (BOP)*	3,029	3,408/3,530	5,208	2,817
System wide overcrowding (BOP) By Security Level: Low Med. High	26% 27% 48% 56%	30%/31% 34%/37% 50%/51% 55%/51%	33% 33% 56% 65%	37% 37% 57% 86%
Number facilities under design or construction (BOP)	- 13	19/19	19	26
Number inmates in alternative confinement (contract facilities) CCCs and home confinement	14,109 5,414 1,368	16.439/16,394 . 5,684/5,768 1,343/1,323	20,090 5,941 1,300	28,847 6,119 1,300

^{*} These numbers tie to the BOP Capacity Plan which identifies the year in which the majority of beds are available for inmates.

(2) Performance Goal: Efficiently Operate Well Maintained Facilities

Key Summary Level Indicators	FY 1998 Actual	FY 1999 Planned/Actual	FY 2000 Planned	FY 2001 Planned
Number of 50+ surveys completed	4	44	6	3
Life Safety discrepancies	2%	1%	0%	0%
Facilities ACA Accredited	71%	81%/80%	95%	94%
Per Capita Costs	\$60.07	\$60.07/\$59.41	\$61.78	\$63.71

(3) Performance Goal: Provide Critical Inmate Services

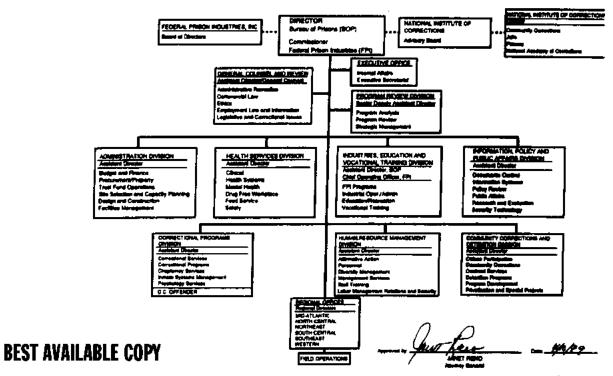

Key Summary Level (pdicators	FY 1998 Actual	FY 1999 Pianned/Actual	FY 2000 Planned	FY 2001 Planned
100% eligible inmate enrolled in residential drug treatment	10,006	10,800/10,816	12,400	14,400
% inmates with GED/HS Diploma, 7 months prior to release	68%	74%/67%	75%	75%
Number inmates completing at least one vocational program	6,848	7,244/8,711	7,550	7,927

In the above table, the projected and actual percentage of inmates with GED/HS Diploma 7 months prior to release is being impacted by the influx of criminal aliens into BOP institutions. Many of these criminal aliens are exempted from mandatory literacy (GED) requirements because they will be deported. During FY 1999, 11 percent of releasing inmates were exempted compared to 7 to 8 percent in FY 1997.

FEDERAL BUREAU OF PRISONS

ı

Federal Prison System Summery Statement and Performance Pign Fiscal Year 2001

The Surresu of Prisons (SGP) is seeking a total of 34,984 parameters positions, 32,734 workyears (FTE), and 53,545,769,000, in its Salaries and Expenses (SAE) request. This request represents an increase of 1,272 positions, 426 FTEs, and 8434,696,000 over the anacted appropriation of FT 2000.

BOP's total requested program increases for FT 200's (1,672 positions, 662 FTE, and 1973,274,000) will support an Average Daily Population of 153,547. A detailed explanation on BOP's FT 2001 program increases by initiative are described on pages 30-34, and a corresponding explanation of BOP's base December 5.0 manes 14-7.

2001 federal Sureau of Prisons Performance Plan and 1999 Accountability Report

A. BDP's Mission and Goals, and Relationship to Department of Justice (DGJ) Strategic Plan

60P's FY 2001 budget submission and performance plan directly support the Detention and Incarceration mission priorities, general goets and strategic approaches that are included in the DOU Strategic Plan, PY 1997-2001. In addition, it incorporates inforestion on performance assessment that ehould item to be their accountability researches sector results achieved.

MEP's Mission

The ession of the 90P is to protect society by confining offenders in the controlled environments of prisons and community-beard facilities that are sefe, humany, cost-officient, and appropriately secure, and which provide sock and other self-improvement opportunities to assist offenders in becaming its-obliding citizens.

The BOP plays a vital role in Federal law enforcement, not only by inconcerning offendane, but also by heighing to break the cycle of crime. First and fermost, the BOP protects public eafety by shauring that federal offendane serve their sentences. Through imprisonment, the BOP heigh dater criminal notivity by shouling offendanes have commanded to the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded of the commanded

BOF's General Goals: Supports the Detention and Incorporation priorities in DOU's strategic plan (5.1,5.2,5.3,5.6) include the following:

- 17 80P will promotively manage its offender population to ensure safe and secure operations.
- 23 NOP will have a competent and representative workforce meeting the organization's meeds up to and beyond the year 2000.
- 33 AMP with maintain its facilities in operationally sound conditions and to compliance with security, safety and environmental requirements.
- 4) 80F will manage its operations and resources in a competent and effective manner which encourages creativity and immovation in development of suppliery programs as well as excellence in maintaining the basics of corrections: management. 80F continually strives toward improvement in its offective may of resources and its afficient delivery a new loss.

- 5) 90P provides services and programs to address innets needs, providing productive user-of-time activities, and facilitating the successful reintegration of integral into accisty, configurate with community expectations and standards.
- 6) 80P will continue to east opportunities for expending the involvement of comparity, and local, State, and Faderal especies, in improving the effectiveness of the services it provides to offenders and constituent agencies. The service purtleipwish by 80P staff to improve performships will allow the 80P to carry out its mission within the criminal justice system and to remain responsive to other especies and be public. 80P to carry out its mission within the criminal justice system and to remain responsive to other especies and be public. 80P will develop extremely to focus the shared responsibility for the establishment of supporting extremely promoting the relatespation of offenders into the combunity.

8. Highlights of FT 1999 Mission Critical Results

C. It 2001 Performance Soule and Indicators

The SOP is proposing on PY 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable mesuits, as shown below. These FY 2001 goes a will establish a baseline upon which future performance any be tracked and reported upon, as required by the Sovernment Performance on Results act (SPEAL)

The fallowing gents pumperize the emfor accompilatements anticipated for FT 2001:

AND PARACULA TO SEER PACK WITH EMMATE MUMBRATION COCKETS AND REDUCE CONFECTION INC.

Ouring TY 2001, the 800 enticipates activating four one facilities and als expensions; USP Follock, CA; USP Atwaine, CA; USP Columne, FL, and FDC manuful, B1. The department are at: Ft. Bis, B1; Elston, CR; Jessp. GA; Yazoo City, MS; Bespoille, TX, and Lumpo; CA. When Fully activated these facilities will gaid a,250 critically needed bade to 800% capacity. In addition, the BOP will convert the Et Feso minimal facility to a satellite low camp for a cotal of 500 bade. Also in FY 2001, 800 will increase it's contract capacity by 6,000 bads to house short tens crisinal allows and famales.

2. PROVIDE LANATES WITH PRODUCTIVE USE OF TIME PROGRAMMING INCLUDING MORK, EDUCATION, AND DEUG TREATMENT PROGRAMS

All medically fit homotes will continue to work. All insertes will continue to be provided the exportantity to participate in general and occupational education programs, psychology services, religious and filmens activities. The BCP will continue to provide residential drug treatment to 100% of will plus insertes. During FY 1909, over 8,000 insertes completed at least one worksional tenling programs, and approximately 11,000 percent and approximately 11,000 percent and over 16,000 will participate in residential drug treatment programs. In FY 2001, an additional 200 staff positions are requested for education programs, and over 16,000 will participate in residential drug treatment programs. In FY 2001, an additional 200 staff positions are requested for education programs, and to address the baction of insertes willing to participate in Viteracy/GED programs.

D. New FY 2001 testinatives

the BDP is requesting for 7001 a total of 1.672 positions, 662 FTE and \$19,274,000 in program enhancements for the Satories and Expanses budget. The above included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included included i

Initiative 1: activations 1:,529 positions and 5:01,379,000). This provides funds for activation of four new facilities (5,806 bags): high and minimum security facilities in Policek, Coursians, high security facilities in Atwater, California; and a detention center in Nonolulu, Hawain. Also, furth are included for activation of satellite los security beds at 6 existing locations(2,446 bags): fit. Dix, New Jersey; Elkion, Ohio; Jesup, Georgia; Taxon Dity, Mississippi; Sasgoville, Texas, and Lompoc, California; and initiality in Institutions to activate in 19 2002.

Intrative 2: Contract Bediffeoulation Increase (2) positions and SAA, 662,000. Ending is requested to place an additional 8,000 atters in contract beds and support the projected increase in the BOP contract population. Approximately of the 90P sopplation are non-u.S. citizens, imperatures took for addressing this growth is the use of privately owned and operated correctional facilities for immates appropriately housed at animals and low security facilities.

Initiative 3: Escation (120 constrons and 57,435,000). Furth are requested to account education programming for invaries waiting to participate in lateracy/GED programs. Implementation of the Violent Crise Control Endorcement Act (DELEG) and the Prison Distingation Endors Act (DELEG) have the interacy/GED programs in the 80P, more than deabling since August of 1997. In addition, enrollments in at 80P education becomes have expanded considerably regaining additional resources.

These unitiatives directly relate to DOU CORE FUNCTION 5: Detention and incarceration

DOJ Strategis Plan Goeles

- Goal 1: Provide for the safe, secure and humane confinement of persons who are detained white assisting trial or sentencing, a hearing on their immigration status, or deportation.
- Goal2: Engure that sufficient prison cases: ty exists so that violent and other serious criminal offenders are imprisoned to the fullest extent of the law.
- GoatS: Maintain and operate the federal Prison System in a safe, secure, humane and efficient manner.
- Goald: Provide productive work, education, medical and other programs to meet immate meets and facilitate their suggestable reintegration into society, consistent with community expectations and standards.
- E. Date Validation and Verification issues

<u>Date Collection and Etonope:</u> The date contained in the BOP measurement tables are gathered on several computer systems: Insiste date is unitested on the BOP on-line system (SEMITH); Personnel date is collected on the Mational Finance Center (MEC) database, the Management Information System (SEMITH); Personnel data is collected on the Mational Finance Center (MEC) database, the finance Resource Management Information System (SMIS).

Date Vilidation and verification: The 80% a Financia. Statement is audited envaelly by an independent certified public accounting firm. For FY 1004, the 80% received an Unqualified opinion. Further, within the 80% headquarters, subject matter experts in different divisions retrieve data, smalyza, validate, and report it for each budget cycle. On the Bessevement tables, the colleme entitled "Bata Source" contains accompany for the 80% division/civisions which validate and provide the information in the other collemes. ADM: Administration Division; EDD: Companity Corrections and Determino Division; EOD: - Companity Corrections and Determino Division; EOD: - Companity Corrections of Section 3 Vocational Programs Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Division; EMD: Administration Divisio

<u>Data clinitations</u>: The BOP and the Department of Justice have strived to provide municipal performance indicators which have solid and reliable data to both these up. Our to the superdictable environments in prisons, there may often be discrepancies between planned and actual numbers contained in the performance tables. Most plans are based on past experience and best supersections for the future.

BASE PROGRAM DESCRIPTION:

The purpose of Inwate Care is to provide offenders incorporated in 80% with a mutritional distr amagnate health care services; clean clothing, footwar, linear, toleries and stationary; and to property manage the Inste Trust fund. The purpose of Inmate Programs is to Emprove impact salf-control, provide educational, opportunity, and establish healthy relationarips mattered and invasive by dividing the Large institution population into saulier, more emmapsials around. A team of sulti-disciplinary staff who have administrative and supervisory authority in small institutional supervisory programs and living and living are personally assigned and located in the unit to sork with the insates. This places services closer to the supers and persists decision-making by those who are most knowledgeable of the immates and their programs. The increased interaction between insates and staff enhances communications and understanding of insate needs to a leave not possible in a centralized correctional environment.

Invarie programs include general and occupational education programs, post-release Tob development and Job placement services, psychology services, religious and telaura time activities. General education programs are designed to meet specific immine mends for functional literacy, high achoos equivalently, continuing advantom, and personal growth. There are severe major comparement of the personal exaction programs Literacy, Adult Continuing Education, English-as-a-Second-Language, Perenting, Postsecondary and Advanced Occupational Education, Life Stills and Structured Lesure Activities. Original Education, Lesure time activities, both structured and unstructured, reduce immine Indianese, prevent Pitness and Health Education). Lesure time activities, both structured and unstructured, reduce immine Indianese, prevent Pitness and Health Education. Lesure time activities, both structured and unstructured, reduce immine Indianese, prevent Pitness and Health Education.

The 80P provides daily meals which are centified for nutritional adequacy by registered distitions and meet the Recommended Distery Allowances established by the Tood and Nutrition Board Commission of Life Sciences, Rational Essearch Council: Next properation is accomplished primarily by inness posters (about 12 percent of the population) under the supervision of staff. The United States Penitentiary at Lampac, California and the Federal Correctional Institution at El Reno, Otlahoma utilize evailable lend resources in Limited production of beef and aith. Erra products are communed at the producting institutions and are also shipped to nearby institutions to offset their need to purchase some products on the spen warket.

Nedical services are provided by a variety of professional and pera-professional health care personnel including physicians, dentists, marses, pharmaciate and physician selectates. Mithir 16 days of admission, all menty sentenced immates receive a complete physical, mental health, and dental smarination. Sick call, which includes examination of patient complaints, ordering and assessment of diagnostic tests, and a medical treatment plan is conducted five days a week. Medical emergencine during other than normal working boars or on weekends and holidays are handled on an arreal bearing. If an immate has a health condition which is beyond the professional capability of an institution's medical staff, the immate in performance of \$80° a medical referral centers.

The healtest Center for Endered Prisoners (MEFF) at Springfield, Alsourd le the major medical referral center and distysts center for the Federal Prison Bystem. Rowever, the FMC, Sutner, North Caroline, a new 500-bed medical and psychiatric prison hospital, will become the major medical referral center for the Federal Prison System when activated in FT 2000. There are six additional regional medical centers witherthe MEF health care defivery system. The Federal Medical Center (FMC), Sochester, Minnesota accepts referreds of male investes for smallest, surgical and psychiatric asseciative care manipulate. The federal Correctional Institution (FCI), Butner, Morth Carolina provides for male psychiatric cases. FMC, Learnston, Entucky is a chronic disease and long-term institution for male investes. FMC, Caravell, fexas handles female medical, surgical and psychiatric cases maiomide. Also, selected chronic disease and indicaped, gerializatic) female cases are referred to Caravell on a nationalize basis. FMC, Fart Worth, Texas accepts referrals for male investes with chronic disease and indicaped, gerializatic) female cases are referred to Caravell on a nationalize basis. FMC, Fart Worth, Texas accepts referrals for male investes with chronic disease and in January 1909. When fully activated in fY 2000, FMC Devens Management health care.

The U.S. Public resilf Service provides personns: In support of the BDP medical program. The SOP and USMS have recently begun a pilot project regarding the delivery of health care to USMS prisoners confirmed in SOP detention centers. The project results from a recommendation in the Congressionally-mandated DOJ Detention and Incarceration Study, which was completed in Narch 1998. Under the pilot brogams, the SOP assumes outside medical care responsibilities, including payed and success during in USMS primaries at three BOP detention centers: MCC See York, FOC disease, and FIC Oklahoma City. From January 1 - April 30,2000, the SOP milit rollect data on sit outside seed call trips at the pilot sites, for both SOP and USMS prisoners. The data will be used to assess the financial and operational impact of this initiative on SOP facilities.

BOP maintains an immembery of clothing, footwear, tollatries, kinems, and writing supplies for Issue to all inmates during incarcaration. Clean clothing and linene are issued weekly in exchange for clothing and linene are issued weekly in exchange for clothing and linene. All services are performed with insace labor under staff amore/islon.

80P manages an Inmate frust Fund account for all monies on deposit for each immate. Nonthly inmate earnings received for work with faderal prison industries, performance pay, and screen from family or friends are deposited directly to each immate's account. 80P continues a successful record with treater formatical supposed between paying a frametial Responsibility Program for court-imposed fines, test, and their immaterial accounts paying superposed and immate varieties while incorporated. At the end of fy 1999, 80P collected \$7,063,242 through investe frustrution accounts. In addition, investes can withoraw funds when needed to make purchases from the communacy, send money to family numbers, pay for legal services, or pay for upplies to participate in electing programs.

ACM's Literacy Program is designed for the approximately 40 percent of federal offenders who both a high achool diplome, and consists of basic Literacy and high school equivalency courses, and general equivalency examinations. All instats, with faw exceptions, are required to emoil if they do not have verification of a high school diplome or a GED equivalency. A mandatory attendance period is 250 instructions hours. In November 1997, the Bursus of Frisonal implemented the Literacy program satisfactory program provision of the Wiolent Crise Control and two Enforcement Act (VECLEA) and the Prison Litigation Reform Act (FURIA). These two least sendent that Inners who are sentenced under the VECLEA or the FULL and do not have a verified high school diploms or its equivalent will make matisfactory programs in a literacy program in order to west their mencad Good Conduct Time (CCI) or to be ellable for maximum SCT, respectively. As a resolt, more immetes amontled in a titeracy program for a longer time period. Adult Continuing Education courses are designed for immates who have a desire to "Drush up" in a special arms or arms it in a special program, e.g., appead reading, English, mathematics, bistory, and foreign Languages. The Crise Control Act of 1990 requires all non-English speaking Enderal prisoners to participate in an English-as-a-is-coord-language program until they function at the equivalent of the eighth grade Level. Advanced Occupational Education courses are for immates who have successfully compilated high school and swent to further their properation for post ruleses employment, e.g., deafting, building maintenance, data processing, and denied technology, and denied acceptance of the processing, and denied technology.

Occupational education programs serve to enhance skills during incarceration and increase the eacloyability of offendars upon release, particularly

those who either lack solid employment history or a marketable skill. SOP has necently updated data for the Post-Heleage Employment Project, which support earlier findings that Prism Industries and vocational training programs decrease recidivism. The majority of Federal invates are unabilited at the Time of commitment to prison. Federal invates can choose a vocation, through instruction, work experiences, and career orientation; acquire or improve productive work skills and habits; and self-precided knowledge essential to working and functioning in a complex industrial-technical world effect.

Fre and Post-release pilot job development and job piecement services include job fairs in selected institutions to familiarize immutes with current employer recruitment procedures, pre-employment counseling for tergeted job interviews, coordination of follow-up activities, and related programs to embance continued employment.

Chapteinty personnel conduct religious services of their perticular faith group and arrange for dailvery of religious services of other faith groups to fulfill their role as correctional program prometers. Chapteinty staff play a positive role in frants and religious group accommodation as they provide programs errors the appetitum of faiths represented in the invester population. Chapteints play train and services are surfaced by the faiths that frants practics. Chapteins additionally provide guidance to the institution to comply with the legal attachment associated by the Religious franchism fact and the first Amendment. A common face dist is provided to meet the religious dist requirements of a veriety of feith groups.

Apprairmely 400 contracts are issued enumity for the delivery of services to smaller faith groups and for other related religious services. Chaptains also recruit, train, supervise, and sustain approximately 8,500 volunteers from the community size regularly visit the institution to participate in religious programming. Approximately 130,000 religious sorably services will be conducted in Ft 2003 representing the 33 religious disciplines within the prisoner population. In addition to sorably services, chaptainty personnel offer a side variety of non-sorably religious program orders.

Paychology staff are an integral pert of correctional treatment as they administed programs of group and individual psychotherapy, crisis. Intervention, personal development cleases, and staff consultation/residents. But price programs are according to a 30° facility be given an initial psychological acreating which consists of psychological testing, psychological interviews, actial history reviews, and behavioral observation. The purposes or the screening set to identify papellal treatment angler personal provide introvation useful in future crisis courseling stustions; identify straights as well as potential adjustment problems to imprisonment; and elected possesses between them.

Both individual and group paychethrapy are wellable to limates she express a desire and desmacrate the road for it. Training and orientation programs are also offered for developing "life computency shilts" including communication, self-image, interpersonal relationships, conflict resolution, problem solution and work shills. Short-rem orisis commenting had been acknowledged by Montal health professionals as a powerful, viable shill, and EXP psychologists with expertise in this area have provided training and consultation to staff in institutions. EXP psychologists have creationally provided the courts, marsh officials and private and marsh officials of the courts. The marsh officials and private area of the courts and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and prov

In response to the rapid greath in the Federal Inmete population having drug chase histories, 50P has developed a comprehensive drug abuse treatment strategy consisting at few components drug abuse education, non-residential drug abuse colousing services, residential drug abuse programming, and community-transitional services programming.

Furticipation in 300's Drug Abuse Education Course is arronally encouraged for all limites who have a judicial recommendation for treatment, on instance offerms invalving single and/or a violation of supervisium invalving sabbanes abuse. The Drug Abuse Education companies provides the insulation special substances abuse. The Drug Abuse Education companies provides the insulation special substances are presented as a function of the substances and substances abuse presents stategies tower Living a drug free timestance and motivating the insulation and participate in SOF's residential drug abuse treatment property.

Mon-residential Sing Abuse Courseling Services consist of both group and Individual therapy delivered through the psychological services absented in each institution. These services after flexibility of service delivery to those who do not make the stightfiley requirements for 600's residential drug shame treatment program. Non-residential treatment services are also provided as a follow-up to the SOF's residential drug treatment program white evelting release to the community.

The residential drug abuse program is designed for extended drug abuse treatment. Residential drug program units, continuing for six-to-twelve-months, are evaluable in 45 Bureau institutions. The residential programs provide unit-based living with automatic measurable, treatment planning, and individual and goods counseling. In addition, the 80 has opened a 16-bed residential drug abuse program for invates with co-occuring mental health and substance abuse disorders. This program, operating at FMC Lexington, has become a model for the corrections field. In 97 2000, FMC Correction for a name to program for famile invates with co-occuring mental model abuse disorders.

The Community-based transitional drug share treatment programs were developed for successful residential drug share program graduates sho were relegated to the community under 80P custody. The continuation of treatment, through community-based transitional drug treatment is required of these instances during this critical period of the financial transition back into sociaty. Additionally, the community transition program now accepts insates who have not participated in a residential drug share program, but have later been identified in need of drug share treatment, as part of their community real integration pion while still in 80P custody, (e.g., [Integrate Enter Impacts, and immates, earning short sentences in CCCS).

In FY 1999, 12,202 inmetes participated in the Drug Abuse Education Course, 6,535 inmetes participated in Non-Residential Treatment, 10,816 participated in the Residential Drug Abuse Treatment Program, and 7,386 participated in the Community Transition Drug Abuse Treatment Program.

BASE PROGRAM DESCRIPTION:

This budget activity cover costs associated with institution Security, Institution Administration, Institution Maintenance and Institution Staff Training. All institutions are assigned a security classification based in part on the physics, design of each facility. There are tour security layers informable possible, additionally, there is an administrative extensive processing updated on extensive processing account of the physics of the processing part of the processing part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of the part of th

Each immate is tracked through 80% a SEXTRY information System. Offenders are easigned a custody status which relates to the degree of supervision needed and emures that offenders are praced in the least restrictive and least expensive correctional environment appropriate to their custody and accuracy level needs. The result is a grouping of offenders with similar custodial needs in an institution, a significant reduction in the wixing of aggressive ordinary supervision of fenders.

Within such institution, correctional officers are whatgred to security posts which are primarily established on the basis of sinuturally/staul considerations. The two basis caregories of security are perimeter security and internal security. Perimeter security consists of a walled or fenced perimeter, supplemented by staffed security towars, rizor sire strong between a double fence, bigh must lighting to iffice not the perimeter, majorized perimeter percols and highly technical equipment such as alarm systems, and video surveitlance. Entrances through the perimeter are controlled by a service of sates, both sectrical and manually, supplemented by metal exterior systems and search procedures for weapon and controlled control. For practical purposes, all other security measures, processes and activities can be called internal security, commencing when an intent is commented to metal and terminating upon his/her ratease.

Supervision of immates is provided in thing units, sent areas, visiting areas, dining hells, and any other area where interes may be located or have access. Regularly scheduled counts are conducted several times a day in all institutions to monitor the whereabouts of instees, shork supervisors and program personnel are held attictly accountable for all immates under their supervision.

Visitations of institution regulations are desit with through the Innete Disciplinary Process. Correctional staff investigate the Incident, prepare a report and sizemit it to the Unit Disciplina Committee. Depending on the sericusness of the Charge, the Unit Disciplina Committee may hear and the case or rafer it to the Disciplina Hearing Officer for appropriate action. An administrative resembly process provides for appeals to decisions of the Committee.

The Administrative Detention program provides for the separation of the general population from offenders who require appellst protection and for those who poss & serious examperish or threat to the security and orderly operation of the institution. The Disciplinary Segregation Program provides for segregation of offenders who have committed serious prohibited sets are held in segregation only efter a due process hearing where the insmitting entire the process hearing where the insmitting even the opportunity to rebut the charges.

The maintenance program is designed to adoquately maintain and continue to operate the physical plants of BOD. Eaclities vary in age from recently constructed to those 100 years pld. Hearly half of the facilities are over 30 years old, thich is the expected life of building systems without major upgrading and removation. At the end of Ff 1996, BOD facilities were altusted on approximately \$4,742 acres and contain approximately \$6.0 biltion aqueer free of floor area (includes activations end activations and separations), all of which must be maintained and furnished wifility services. Complex hearting should air conditioning systems, high pressure attempower plants, apphistication planet, services power systems, and fine protection and life safety systems all require regular maintenance. Each institution maintains communication systems including complete private systems; and solvent electhone systems including and mobile units and several electronic descention and control.

systems. Additionally in F7 1999, this program provided for the Apintenance and operation of approximately 2,995 weblictes.

Physical plant requirements are identified through regular impactions conducted in the on-going preventive maintenance program; format each namual inspections; and through requests for specific masks identified by institution staff maple. This program finances maintenance and since (uprovessed projects which normally cost \$10,000 or less. However, there are policy guidelines which allow funding of maintenance projects (Rajor Mora Costing more than \$10,000 in cetain circumstances. Maintenance and repair requirements in success of \$10,000 are normally included in the "Modernization and Repair" program of the "Buildings and Rectivities" appropriation.

The work within this program is accomplished elmost entirety by immate cross under staff supervision. Each work cross consists of a staff foremen and five to fifteen immates; Each institution must have highly shifted staff with experience and training in every phase of constitution and maintenance work including stemmfitting, also consisted work and other than the staff with experience and training at the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the

BASE PROGRAM DESCRIPTION:

This budget activity covers costs associated with 80P inmetes in contract care and for the National Institute of Corrections. Approximately 13 percent of the National inmete population are housed in attendative continuent, including privatized prisons, contracts with private providers for companity corrections centers (CCC), and inter-governments is greated to a system than the continuent of secure bed space and companity-based programs, and home confinement. Eventy-him Community Corrections Managers (CCMs) throughout the nation develop and overses contract confinement, make initial recommendations for designation of robuly-sevienced offenders, and perform ligiton activities with the U.S. Narshald Service, U.S. Parole Commission, replaced courts, other indexes assertions for a overseen description of cold communities.

Several categories of Federal offendare are confined in State, local and private facilities. Juveniles must be separated from adult offendare and are placed as close to their residences as possible in State, local and privately-run community-based and secure facilities. Adult offendare shoes bless state corrections the endangered in federal facilities (protection-cases) are placed in State corrections tecilities, and offendare shoes shore shore shoes preclude transfer to a Federal facility are placed in incel jails to serve their sentences. This BOP also oversees the Joint BOP and immigration and Maturalization (IRS) 1,500 back (750 for IDP priceses and 750 for iss Ottaines) private details in faility in Arizons, the government-cased, contractor-commented corrections in existing in 18th, California, and the contractor commed and operated facilities that will house 0.0. offendare.

Since January 1982, the number of immetes monitored by contract CCCs has nearly quadrupted, from 7,425 to an everage delly population of 6,761 for Ft 1999. Over 250 CCCs throughout the nation provide services to federal offenders, most of show are preparing for their release to the community. These innerses are transparence from Federal institutions to CCCs mear the end of their sentences for transparence, programming. Life skils, painful amployment, the re-establishment of family ties, and drup treatment are major espects of transitional programms. Home confinement is the last phase of incarcaration for select offenders who have demonstrated personal responsibility and positive programms shill in the Bureau's custody. Strict accountability procedures are applied to investes on home confinement to continue the servation of the sentence.

Some Fadars: offenders with short sentences (less than one yeef) and a recommendation from the court, serve their entire sentences in CCCs. Direct court count towastements are subject to a more punishes program, which restricts movement from the CCC for limited purposes, such as employeems. Offenders and are under the supervision of the U.S. Probetion office, but have demonstrated the meet for enhanced supervision and programming, are also subjected to the more restrictive program.

The Volunteer and Citizen Participation Frograms create partnerships with community groups, public service organizations and other egencies by encurreging staff and insure volunteeries and sinitary understanding of and participation in corrections i delities. Insultation and sinitary participation programs facilitate insults reinteraction into their communities and families. Insultation creates participation programs continue to increase the number of volunteers providing non-traditions; services. The Statement of North for contract community corrections facilities now require the use of volunteers. Institution Volunteer Coordinators and directors of these contract facilities have been encouraged to entablish organize participations as means to improve the volunteer program at these facilities.

Harial Cuben outplacement through 800 CDS provides highly structured residential and community-based services for those whose meets and crisinal histories dictate support and supervision in order for them to become self-sufficient. Each year, approximately 300 Marial declares perscipate in one of three interelys substance abuse program classes. Datafrace because ligibue after 1% issues a release matter. Outplacement through family approaching provides transitional sesistance to individuals whose needs and or leminal histories do not require interely expenses in community supervision, and is generally granted for Marial declares a classification.

In 1990, the both, fish and the Executive Office-of-Lamigration Review (EDIR) signed a Memorandum of Understanding establishing the Enhanced Institution Revoval Program (18P), which was implemented in 1997. The IRE silves IRS and EDSE to complaint removal proceedings for non-ULS citizen Impaces in the signed of their sentences, rather than samedistally before release. As a result, IRS can similate the Ausber of non-ULS, citizen Immates detained after expiration of their sentences, and the BOP can Member it immate appointment of their sentences, and the BOP can Member it immate appointment of their sentences, and the BOP can Member it immate appointment of their sentences, and the BOP can Member it immate appointment of their sentences, and the BOP can Member it immate appointment of their sentences.

The SEP continued to expend in facal year 1998 as additional release sites were ectivated of FCI Forrest City, FCI Yazoo City, and FMC Carswell. In addition, during FT 1999, 1,089 hearing beds and 2,040 release beds were added by resilicating beds at the existing 198 sites, in an effort to keep up with the increasing random of crisinal aliens being educted each year nice the 800. Approximately 29 percent of 800 insetty are remidizanes. Enhanced 189a are now established at 27 800 insettylines and contract facilities around the nation. They range from samiler sites that handle less than a dozen, to targe apparations handling one; 1,000 insettylines and contract facilities around the nation. For the samiler site shall be site, and LER process and complete deportation decisions. In addition to the theoretic process. FOR objects appearable in these originately intricated in 1889, processing insetse at the end of their sentences.

Also included in this decision unit is the Mational Institute of Corrections (AIC), the unity Federal government againty that is solely dedicated to providing comprehensive, technical corrections satisfation to state and local corrections inspected. Deprovides technical estates either by a Technical Resource Provider end/or an AIC staff member to the requesting agency, or an individual on them of individuals visits mention agency to gain aspectise and experience in the specific area of concern. The Mational institute of Corrections Academy is the training division which provides training out related services for state and local correctional practitioners. By developing and delivering training to prisons, justice and community corrections practitioners, the Academy enhances interaction spans provided the Components of the criminal justice system, public policyments, and concerned public and private organizations.

The majority of the 80%'s sentor level training assinars, workshops and workshops are held at the Management and Speciality Training Center (MSTC) in Aurors, Colorado. The messegement and speciality training offered at the MSTC is competency-based, providing participants the opportunity to propressively develop leadership shifts and speciality competencies. A wide range of courses are evaluable for institution Executive Staff, Department Reads, and Fachmost Support Staff, Insee Include courses for Associate Management Connectional Services Supervisors, Food, Financial, and Parsonnel staff, Legisl staff, Legisland Staff, Department of Parthological staff, Chaptains, UmilCOR and Trust Fund staff, and others. In addition to preparing staff for position specific responsibilities, classes also train staff to assume collateral responsibilities such as: Hostage Reportations, "eam Rembers, Oscincibinary Hearing Officer, and others. All states are deviated for effectiveness, yielding prajobat-test scores for the performance of each participant, and in some cases evaluations message included and evaluation of training to the job site. All courses are currently under review for messagement.

Also, the MSTC has created a CD 4DM entitled '2000 Annual Training' and distributed it to aid institutions, Regional Offices, Central Office, and the Macronal Institute of Corrections Information Center (MSIC) for distribution to other state and local law enforcement agencies. With the guidance of the Bureaute Executive Staff, the MSIC has implemented an initiative to praise of training in an effort to restize cost savings. In support of this initiative, the MSIC established criteria for selecting classes that could be successfully delivered off-size. Additionally, the use of military facilities for training purposes is being expanded since they effect eignificant savings in lodging and per dies. The MSIC continues to review and levies all courses that are presented through the center.

Approximately 80 percent of Burshu of Prisons training is conducted on-site of institutions, Aegions, Offices, and the Central Office. Each facility has an Employee Development Manager (FDM) sho plans, manages, and organizes the facility intrining programs. The Employee Development Manager will be proceedings, has been revised by the MSTC. Certain institution naturals are required by national policy. For example, it is managerary that each new employee actived the Ludiweek Institution Familiarities for the institution for institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must institution must support the most institution must support must be supported and immate support of the must be supported in sectionic (euromated) training request form to ensure expeditions mitodiamnia and an occurate method of tracking student training. In Addition, Manager must contain Standards have been established for each position.

the Intermation, Policy, and Public Affairs Division facilitates the use and dissemination of information within 600 and to external committees. Including Congress, other components of Endersia, State, and local governments, members of the crimens, justice community, the madia, and the general public. The division includes offices of Public Affairs, Congressional Affairs, Essearch and Evaluation, Information Systems, Bolicy and Information Resource Representation Security Technology.

The Office of Public affairs is responsible for public information, public and media relations, anchives, and communications functions and provides a wide range of public information services to the media, the public, and other organizations. This office serves as primary contact for six regional offices and 95 institutions serving advice on media policy and national media contacts. In addition, this office coordinates responses to national media contacts, responses to making advice on media policy and national media contacts, responses to memors inquiries from total and national media contacts, responses to memors and publications burseu-related issues, prepares information teledosps programs, and dissuasinated active news efficie clippings to agency securities. This office also develops projects, publications, and communications that enhance public knowledge of 60P and its programs; coordinates information regarding Community Selections Boards not only institutions metromatics; coordinates and advices and enhances and devices and representations requesting sechnical assistance, advice, and information risk other U.S. Government agencies to international assistance assistance, advice, and information risks other U.S. Government agencies to international assistance assistance assistance and anticologic assistance and enternational assistance assistance and enternational assistance assistance assistance.

The Office of Public Affairs also conducts historical research and develops publications and specie; presentations on BOP history for both internal and external sud-ences; responds to requests from BOP offices, other Federal agencies, scholars, the press, and the general public for historical information and records; collects and preserves historical records and surfiscis; conducts onal history interviews; and develops displays on BOP history. The Office of Public Affairs assists in records management insules for BOP by serving as a Liston with the National Archives and Records Administration, assisting in the transfer of records to the Hatlonal Archives, and providing staff with training and advice on historical records management procedures.

The Office of Congressional Affairs tracks and analyzes legislation in Coordination with the Department of Justice, Office of Legislative Affairs; maintains direct context with Numbers of Congress and their staff; responds to Congressional impulsies and concerns; prepares the Director and other staff for Congressional hearings and visits with members of Congress; coordinates implicementation of new less; and works with the Federal Judicial Center in coordinating Sentencing Institute Seminars for Federal Judges, and Yours for Congress onal staffers and others.

The Office of Basearch and Evaluation provides information relevant to current and future questions in the field of corrections through social assence research which includes analyzing current and proposed government policies, conducting studies, developing and maintaining an interactive PC-based system for organizational monitoring, producing and distributing reports, responding to information and technical assistance requists, and processing research proposals. The Research Office generates and distributive reports on such topics as institution social climate, substance abuse problems of instance, scapes, lenathe classification, instance programs, staff alsomators, such climations, for office also responds to requists for prison impact assessments, information or technical sasistance from BDP staff and outside sourcies; and generates data on such issues as population projections, analysis in finance also products, including and price sections.

The Policy and information Resource Ranagement Branch is responsible for system wide Hammagement of agency directives, forms, princing, alectronic and injuring, and quality secures review of the Bureau's directives before and after issue. The Branch also coordinates the agency's electronic and reper records management and disposition functions and is the principle agency tisions with the Balaimal Archives and Records Administration.

Recover, the Branch has Bureau-wide coordination responsibility for the management and protection of Information as a visuable and vital resource to the successful device-of-we constrained on the agency and maintains the second electronic Freedom of Information Act reading cross.

The Office of Security Technology is responsible for Identifying, evaluating, astisting, and developing security/technology initiatives and equipment within 80%; centralizing the identification and screening of new equipment and technology for potential use; establishing relationable with other federal and State Law enforcement agencies; responding to field requests for technology for potential problems; coordinating evaluations with other 90% branches, divisions, regions and institutions potentially affected; distribution information to institutions and office regarding the results of evaluations and tests; and establishing standards for the use of security systems.

The Office of Enformation Systems ensures the provision of modern, automated data and information systems for all BCP locations including computer sarvings, application systems development, technical support, paramet computer support, financial systems, and field support,

The Program Review Division facilitates organizational self-basesment by BCP managers to determine strengths and weaknesses; gathers information about BCP operations in a consistent and objective manager; provides accurate, referent information to management in a timely manager; provides excurate, referent information to management in a timely manager; provides excurate, referent distinct, efficient, efficient, efficient, entering, monitoring and sharing of delay; coordinates and monitors appropriate overlight activities of audit and regulatory suthorities; and ensures that effective standard and concentrations or operations exist informations the functions.

The Program Raview Branch reviews compliance with the isway regulations and policy, edequacy of controls, efficiency of operations, and effectiveness in achieving program results, including supporting and developing all perliment and significant information necessary to properly evaluate, support, and present findings. Through this process, the Branch is able to provide essurance that BOP programs are operating within policy and are free of fraud, wells, adjunct, and situation and filegal acts.

the Program Analysis branch (PAE) is responsible for specific groups performance and Surgau side patterns and trends. PAE also assists 50P atoff with the development of management information about specific groups performance and Surgau side patterns and trends. PAE also assists 50P atoff with the development of management information systems and trends them in the use of the systems to maintar, evaluate and plan. In addition, PAE is responsible for creating and overseeing nations; palling on institution Character Profites (ICP) and Pilot Programs. PAE sesists regional European staff with ICP question development, smallysis, and importing. PAE provides enalysis of still To reports for the biractor. Additionally, PAE evaluate pilot programs, and create the programs and contact the programs and contact the programs and contact the programs and contact the programs and contact the programs and contact the programs and contact the programs and contact the programs and contact the programs and contact the programs and programs are programs. PAE assistance of programs and programs are programs and programs are programs and programs are programs. PAE assistance of programs are programs and programs are programs and programs are programs.

The Strategic Management Branch (BMB) facilitates, monitors, and evaluates the approximation of the Federal Managers' Integrity Act by coordinating management successments, thereby providing a quality essurance suchemise for the profess reside process. The branch also provides program management in the area of American Corrections Association (ACA) eccreditation. SMB is responsible for providing training to ineffectional and regional staff on the accreditation process, has primary oversight over the agency's efforts to ensure that publicy appropriatally addresses ACA standards, functions as the primary resource/source of classification for institutions procedured to the process, and has primary responsibility for interacting with ACA at composed level. The SMB encourages the implementation of strategic planning through training, publication, and the disamediation of strategic planning updated the function of the second second second planning updates assistance to approxy emagers in the development and implementation of strategic goods, objectives and action plans. This affort supports the budget development process and the Bureaus compliance with the Government Performance and Results Act.

The Competition Advocacy Section (CRE) prevides support for the Bureau's Competition Advocate by providing analysis of information required for decisions related to competitive procurament. The Competition Advocate seeks to enhance deficit reduction, several sesteful appareing and across savings to the BDP through various competitive strategies which are designed to reduce contract costs. The CRE coordinates and properhe the Integrity Act Issues compenent of the 80% a submission for the "Annual Accountability Apport for the Department of Justice" for the Director, and the Backion 2 and Section is certifications at the Federal Manager's Financial Integrity Act, for the Director, which is formated to the Attronce General. The CRE serves as a tiginon for the Bursou of Prisons' contacts with external sudic suthoristies such as the General Accounting Office and the Office of

The administration Division provides the resources and support mecessary for Boy to perform in the most effective and efficient manner. This includes the devia common of budget request; the stemportality of function properties and property management; the deviagrand provides and common for the control of the stemport and manner of experience and other administrative support services required by the prescription.

The Budget Development Branch formulates 80% a resource requests including budget submissions, manneaming, useful and inspect assessment estimates and reprogrammings; usefuled the budget estimates by inspering promet budget estimates estimates entirely institute institutemy and detailed data which support the agency's funding requests before the Obserthant of Justice, the Office of Ranagement and Budget, and the House and Senate Appropriations Submission and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Published Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Programming and Progr

The Sudget Execution Branch ensures operation within the appropriated funding and position levels by developing and overseeing adequate monitoring and control mechanisms; and develops national policy to ensure coupli larce with funding increments and instructions issued by searches such as the Department of Justice, Olifice of Renewaters and Sudget, General Accounting Office, Department of Freedom, etc.

The Finance Branch ensures that all financial transactions are recorded in an Accurate and timely manner in the Financial management system in order to produce the Financial reports increasing for the monitoring of the Financial status of the Business and its institutions; develops RDF accounting policies and internal controls to ensure complicance with the requirements of the Department of Justice, the Office of Management and Sudges, the General Services Administration, and the Department of Treasury; pays Central Office vendor and travel paysents; management mission of the Bureau such as the Covernment wild "ravel Carge Eard Program, the third party draft program, which support the financial management mission of the Bureau such as the Covernment wide "ravel Carge Eard Program, the third party draft program, and operation of the Bureaus Financial management system; and prepares the annual Financial Statement of the Federal Prison System required by the Chief Financial Officer Act of 1990 and the Covernment Management Reform Act of 1994 (CMMA).

The Capacity Planning Branch coordinates and ensists information related to capacity planning, overing such varied areas as famale offender needs, the D.C. feton requirements, Attention requirements, Attention requirements, Attention requirements, as famale affects the sursavir Capacity Plan, which is the official composite for the determination of correctional capacity requirements; assists the Office of Research in developing population projections by population subgroups; and is responsible for reviewing rated capacity changes as each institution may assuming that those changes are properly inflicted in Statte.

Facilities Management directs and monitors the existing institution repair and improvement program; establishes policy governing the maintenance of existing facilities; and provides technical support to both 80P staff and outside entities regarding architectural, engineering, and facilities issues.

The Design and Construction Branch is responsible for the planning, design, and construction of new institutions for the Bureau of Prisons; devalops design and related technical standards and policies for development of new BOP facilities; participates in BOP's kong range capacity expansion planning; and provides technical advice and support within BOP and to outside whities related to architectural, angineering, construction, and organized management (saues).

The Procurement and Property Branch develops Bureau side procurement policy to ensure goods and services are acquired in a timely warmer, within federal statutory regulations, and at the best value to the Deverment; provides accurate accountability and control of 60°s rest and personal organizations information technology processing equipment to include finance telephone system and automated collect call appraish early epiper design of the control of 60°s rest and personal organizations are required to the call appraish services; provides direct netional control services in the areas of community corrections, new facility construction, prime vandor phermaceutical products, and other large volume required control organization and control organizations.

Procurement training and education is required by the Clinger-Coheniat of 1995. Approximately 10 years ago, the Bureau of Prizerus established a procurement training program for its surranted contracting officers. The Program provides for In-house Sasic and Advanced Procurement training and for specialized technical training, tracks individual development plans for each Contracting Officer, and monitors, in accordance with the requirement edded by the Justice Acquisition Regulation in 1995, the completion of Federal Acquisition Institute Contract Specialist Monitorio by each Contracting Officer, at the end of fit 1999, over 500 wentered Contracting Officers were provided with appetialized procurement training.

The Site Selection and Environmental Review Branch identifies sites for new correctional facilities; provides public information program for (ecal officials and the general public to garner support for proposed facilities; and coordinates the development of the required environmental impact studies.

Finally, the Trust Fund Braich provides commissary sarvices; ensures the financial integrity of the Trust Fund and Indete Deposit Fund; implements and aureges a Bureau-wide tracte belephone calling program and provides adventually oversight for the Jaunety and unrehouse operations.

Initiative 1: Activations

<u>Promine</u>	Pop 15 Local	Workyear	MACO.
Inmate Core	497	178	£35,89%,000
institution Security and Administration TOTAL	1.032	352 530	65.484.990 101,379,900

An increase of 993,262,000, 1,529 positions and 530 sorkyears is requested for the following facilities which will require activation resources in FT 2001. These Facilities will add a total of 6,250 critically mended bads to reduce overcrouding at pentrentheries and tos security facilities, and address UMMS detention meads in Humanit.

fasility	Lede	Activation Date
Pollock, LA USP	960	1/2001
Minimum Security	128	1/2001
Atweter, CA USF	960	7/2001
Minimum Security	128	7/2001
Hamoluty, HI FDC	670	8/2001
Caleman, FL USP	960	9/2001
Expensions		
Ft. Dik. MJ	750	
Elitton, OH	512	
Jenup, GA	508	
Tazoo Elty, #5	228	
Seegoville, Tr	696	
1	350	

The BDP is requesting 125 positions and \$13,081,000 for the activation of \$1x expansions at \$1x. Dix, NJ, Eikton, DM, Jesup, GA, Tatoo Dity, NS, Seapoville, TE and Lompov, CA, which were approved by Compress in §5 1009. The BDP received approved for the expansions includings: (1) conventing more mentage executing basis to modified the security basis to executing basis corrently occupied by work coders; and (3) adding housing units inside the mecure perimeter of existing low security FCIs. In addition, the BDP will convent EL Paso minimum to a satellite low security camp for a total of 500 bads. The BDP will need to request activation funding when this conversion is

Activation of the Polices, i.A. Atwater, CA, and Coleman, FL, USPs will edd much meeted pertentiary and space in the South Central, Meetern, and Southeast regimes. Additional inigher security had for the BOP remain in the highest pritty for new capacity. Described in BOP's peritorial currently at 53 percent, and these Sections are significant to address this problem which is potentially dangerous to staff, communities and limetes.

Activation of FDC Manalulu will provide 6TO detention bads in the Western region. FDC Manalulu will house both USMS detainess and BCP sentenced inserter for work details.

Also included in this request is an increase of 68.117,000 to begin the initial purchase of equipment for USP tea County, Ya and FCI Petersburg, Ya. Both of these facilities will be activating in the ifirst help of FZ 2002. It is recessary to buy some equipment at least six months to one year prior to activation because it requires long lead time for delivery/installation. Examples include but are not idented to: vehicles, bads and tockers, computers, radice, medical equipment, medical equipment, medical equipment, medical equipment, medical equipment, medical equipment, medical equipment, medical equipment, medical examples.

Opening a new facility is the cultaination of four steps: size election, design, cometraction, and activation. To evoid delays in acceptance of immates, it is measured as staff facilities a winisms of three markle prior to activation, and equipment which requires land time is endered six mushs to one year or for to activation.

As of February 3, 2000, there are 119,455 frametes in BDF operated fractivations with a rated capacity for only 90,475 images, resulting in a 32 percent overcrosding rate systematics. Despite estivation of rare facilities and expensions, the BDF entiripates a 34 percent overcrosding rate systematics in FF 2002 due to projected frames population increases. Without the activations included in this request, exercisely is projected at 63 percent systematics. The BDF is experiencing racord breaking increases in the installed population, and has been forced to absorb the manufactor of frametes showe the rated capacity. This trend is apportunity southered.

Requests for new facilities are developed based upon emobiler costs for new positions and the existing operation of similar type facilities within got.
First year funding is requested based on the projected activation date of the lactifity that writingsted period of operation. Further, it includes
one time costs such as equipping the facility, parament change of station (PCE)costs for transfering superisanced amployees from other facilities,
conducting background investigations on new employees and providing three weeks is a snforcement training to all new employees at Glynco, GA. All oneries costs are non-recturable following year in accordance with future needs.

If these activations are not funded, the completed facilities and expansions would stand vacant after taxpayers agent yearly \$500 million on construction. Overcroading would worsen by FY 2002 From an enticipated 74 percent to 135 percent at pentiantiaries, potentially leading to dm.jer centing millions disturbences, loss of 196 and property.

Initiative 2: Contract Seds/Population Increase

Program	Post Litera	<u>Vorkyear</u>	Appart
Contract Continuent	25	12	ER4 LAS 000

for PY 2001, a total increase of \$64,462,000, 23 positions and 12 workyears is requested for an additional 6,000 tou security contract bads and a general contract population increase of \$70. The 6,000 bods will primarily house a population comprised of short term crisinal attems and females from the Southern and Western regions. Approximately 29 percent of the 800 population are non-citizens.

Contracting for 6,000 Short Term Criminal Atlans

In FP 2001, the BoP requests \$72,175,000 to contract for an additional 6,000 low security back to house short new crisinal attent and females from the Southern and Vestran regions. These back will alleviate croading at Dublin, California and attor the BOP to keep pace with projected growth in the Southeast, South Central and Destarn Regions. The respiraments will be for private carrections services in contractor-communicant nature factities. The BOPs most recent projections of investe growth anticipate meetly 45,000 additional invates by the end of FY 2005. This includes over 8,000 DE sentenced Faloria and over 5,600 INE includes over an experience faloria and contractor for privately commend and commenced falorial for the same for privately commend and contractor for the same falorial for privately commended corrections facilities for binimum and loss security instead, since this growth is particularly significant in the BOP's low security.

There are a number of benefits to contracting for the confinement of the non-U.S. citizen population. Nost of the aliens are serving short sentences, less than 3 years. Rany are serving less than one year. There is not sufficient rise to provide the drug treatment programs, vecational training programs, and other such programs which are typically found in a Faderal Correctional Destination serving a longer term sentenced population, accordingly, the contract can be written with reduced programming requirements in some areas, potentially producing a longer areas.

Contract Population

Finally, included in this request is a total of \$12,337,000 to support a general contract population increase of 520 immates. The cost for the additional bade is extinated at \$65 a day. The 80° apacts the contract population to ground to an estimated 30,663 by \$7 2002. This is an increase of 13,669 beds from the F1 1999 levels. Six thousand of these bads are funded in 11 2000 and 80° is requesting funding for amother 6,000 in F7 2001.

Initiative 3: Education

Program	<u>Positions</u>	ger kydrana	AMOUNT C
Irrente Core	120	120	\$7,435,000

as increase of \$7,633,000, 120 positions and 120 workyears is requested to increase framete problement in education programming. The positions will be distributed across the BOP with most institutions getting one position, and some receiving two or three as the population indicates.

Education programs have the dual benefits of providing all pro-social and employment skills to immates which have been shown by the BDP's Post-Release Employment Study to lead to lower recibirisms, and bi constructive were of improving institution security by reducing immate idianase. Several new reduction intrinsitives have greatly increased the demands for education programs.

1) 660 VCCLEAPLEA - In Movember 1097, the 800 implemented the literacy program satisfactory programs provision of the violent Crime Control and Law Enforcements ach (VCCLEA) and the Frienn Litigation Reform Act (PLRA). These two Laws mandets that inserts who are sentenced under the VCCLEA or the PuRA and do not have a verified high school diplose or General Educations, Development (DED) credential shall make satisfactory programs in the literacy programs in order to vest earned Good Conduct (law (CCL) or to be slightle to earn the maximum amount of CCL, respectively. The supplementation of the VCCLEA and the PLRA have drawsticelly increased the innest demand for the literacy/EED programs. The demand for literacy programs has more than doubled since August 1997, when two than 10,000 immutes were enrolled, to November 1999, when over 20.000 immutes were stripe in the 65D processing or on westing Lists.

The 800 has proactively handled this unfunded mendate by increasing excellments in literacy programs to 16,000 immates with no additional staff. Despits this effort, over 8,000 immates are currently on melting list in 1007. The BDP has attempted to meet this massive demand by maximizing all misting educational resources: Emping classes at or over) capacity at all times; using confractual monies to supplement staff, using quintified immate tutors, using all evaluations appear creatively, e-siminating some non-memoratory programs, reducing class shared on in order to schedule; etc.

Without the additional positions, it is espected that the SOP will continue to experience eventianger working tists, due to the increased number of those incorrected and new policy requirements for DCB, apostol exaction and D.C. intested. Also, as more insets enter SOP facilities with PLRS sentences, the demand for exhication services skill grow at an even higher rate. Currently, 62% of 60P insets have santences which are impacted by the provisions of YCCLER/PLRS; 100% of all newly sentenced insets entering the Federal system will be held to the PLRS for entering the Federal system will be held.

The impact of the large watting lists is significant, as the BOT may be unable to fully comply with a number of laws. As required by PLMA, Insulas can earn only 12 of 54 possible days of ECI s year If They are hat enrolled and tabling progress in the progress. Instead who are only warning 42 days a year typically went to be re-enrolled into the progress but are descriptiong well lists. A potential companions of not increasing staif resources to handle the increasing literacy sets light to interest their time served. In turn, this momental increase in time served to both prison costs and prison overcousing.

(SD-Craitish Proficiency - In Field Year 2001, the SOP plans to implement an English Proficiency Test policy which requires Epantsh-apseting insures to pass an English Proficiency exam as part of the DED completion requirements. The policy and charged to encourage Epantsh-apseting insures to impress their earlish communication satisfy to obtain amployament and caps with the everyoby desarcts of an English speaking sacisty. Impreving the English communication satisfy and their increment share potential confirmation are be avoided due to the impreved English communication satisfy. The English proficiency policy will partly increase the time at takes for Immetes to finish the program. Approximately 33 percent of all Immetes enrolled in literacy/GED programs are in the Separish Edu program.

A sarch 1998 survey shows that the estimated additional time required to mester the English Proficiency skills is 14 menths (sevend the approximately 10 menths already meeded to propers for the five substants in Spanish). Thus, when implemented, one third of 600's interacy instant (rhose in the Spanish 600 program) may take at least twice as long to complete the program, placing enother major damand on 800's sokustion resources.

- Special Severies Immates with versions kinds of cognitive Learning problems require interestion to benefit from eclassion or programming. These investes may also have problems adjusting to a correctional environment, e.g., they have difficulty understanding rules, they are manipulated by other immates, etc. The BOP has a goat of batter managing these immates and established a pilot program for immates with special tearning needs at the Federal Correctional Complex Coleman, Florida. The Education Branch has developed sessessment and instructional procedures to help to determine the utigability of immates to perficipate in special programs such as the Coleman pilot, accommodate special Learning needs of immates in Literacy and other programs, and increase the Level of appecial education instruction at all facilities. Immates participating in these programs require a smallar immate to staff ratio, a wider range of instructional activities, longer periods of profit manes, and more extensively trained teachers. Once again, these requirements place on increased demands on the god's literacy programs. The ability to make program eccosmodations for individuals with disabilitation for.
- (not) went increases: In addition to literacy and special education programs, envoluments in all 900 education programs have expended considerably, again placing competing demands on educational resources. In Explaints 1999, 524 more smallest are smooted in am or more programs that were envolved in Special 1995. The increase in education that is explainted with a .5% education positions. In September 1996, approximately 25,000 limmates were envolved in one or more advocation programs directed by 916 field education positions; in September 1999, element 38,000 inmettes were envolved with 900 field education programs directed by 916 field education positions. In Occember 1999, element 38,000 inmettes were envolved with 900 field education programs in Descender 1999, envolved lammats are at 40,000. In addition to the benefits injectus receive from these programs, increased inmette involvement in programs helps to decrease the research we first to informate or prison indirement.

One major area of program teprovement and expansion has been in occupational training programs. The Bureau's Post-release Employment Study (Office of Research and Evaluation) has demonstrated that invates who participate in these programs recidivate at a nature much as 33% tower than invates that do not. Despite the the not. Despite the provisional programments or the BOPS occupational programs, more programs is needed in the second of examinant of an invate's needs for vocational programming. This is primarily due to the competing literacy program demands on staff made by VCCLEA/PLRA. Without the additional positions, the BOP will be unable to provide programs - with demonstrated ability to lower recidivism rates - to all invates the vocational heads.

5) D.C. Immates: The DC Offender Sentence Computation Group in the 80P has recommended that DC offenders serving time in 80P custody should receive education good time credits for courses completed, and this is correctly only being done. The effect of this decision usual does that DC immates would be more likely to enroll and participate in aducation programs because these documents would lead to a reduction in the time they serve. This would increase the demand for many types of education programs and immates on welling lists would not get "time off" their sentences. It would also men more staff time will be required to emilton programs and immates on welling lists would not get "time off" their sentences. It would also men more staff time will be required to emilton and key data to be used by staff such as the invade Systems damagement but the Discipline searing Officer involved in the sentence computation. But having programs evailable for these D.C. Immates with increase the litedihood of immate lewicits, it will also increase their time served which further impacts on prison overcrampting and or face codes.

Federal Prison System Salanes & Expenses

Status of Congressionally Requested Studies, Reports, and Evaluations

The Conference Report on H.R. 4276, for the Departments of Commerce, Justice, and State, the Judiciary and Related Agencies for Fiscal Year 1999 directed the Bureau of Prisons (BOP) to submit the following report back to the Committees on Appropriations of both the House and Schalt

1. The BOP is directed to conduct a study of the growth and development of the private prison industry and compare general standards and conditions at private and Federal prisons, and report to the Appropriations and Judiciary Committees of the House and Senate 270 days after enactment (7/18/99).

The BOP requested an extension through February, 2000 to complete the report. The BOP is working under cooperative agreement with ABT Associates to determine the status of privatezation of prisons in the United States. A questionnaire was developed to gather information on staffing and training and other pertinent information from privately run facilities. The questionnaire was sent out during October 1999 to state corrections officials to complete about private prisons in their jurisdictions. Data complation is proceeding but not all significant states have responded. Some of the private prisons were visited during late January 2000 to verify the quality of the data. It is anticipated that both phases of the study will be completed and forwarded to the Department by the end of February 2000.

ARRIGED OF REQUIREMENTS By Grade and Chiece Class.	32

The MEA graphes satabilished 500 nmm infrastructure projects in 1999 for a total of 1,660 projects active during the year, which ranged in court from 810,000 to millions of dollars. Of those projects, 562 were completed, fifty-seven percent many than planned.

In FT 1999, the BCP was able to accolorate now construction and MRE elected efforts, as evidenced by the increase in actual abligations ever the provide level. The BCP shillpated 8651 stillen under the new construction program, reserve 25 percent more than plantad 8651 stillen under the new construction program, reserve the serve married.

C. IT 7001 Performent finals and Indicators

The SOP's FF 2001 mission-critical results are obtainable within the requested resource towel and with demonstrable results, as shown horain. The SOP performers pion in built upon the immanceration goals included in the SOJ pion, and the SOP strategic pion peaks which support and expend the SOJ pion, and the SOP strategic pion peaks which support and expend the SOJ pion.

A warmony table of key performings ampairs inition pages 100 and DOJ specie is presided befor in this budget. The measures satisfying a baseline upon which future performance and required to the devenment of security act (1981).

the EDF will deserve that sufficient primer country exists we than violent and other serious crisinal affecture are imprisonal to the fullest extent of the les.

During FT 2001, the SCF plans to begin construction of several new facilities which have already received partial funding. The ET 2001 request, including sources appropriations will also provide funding for construction of facilities to add rearriy 20,000 basis when completed and activated during ET 2005 - 97 2005.

in ff 2001, the 60P plane to everd ten experiencian contracts to mid capacity and embress innets population growth and evercrossing. In addition, four new facilities are planned to be completed in FF 2001.

The BP will deleted a sit facilities in quaretically second condition and in compliance with accountry, and entry and entry contracts

The SCP will conclude to report and resource facilities on required; identify and address any heaterdous usets that day enter an instance prison property; comby with all conjuments of the Matienal Fire Protection Sescribes (SPPA), 181 Life Safaty Code partnings to pure installation; properties of the Code and American Standards; and amount sofety and security of facilities. Through FF 1801, the SCP will remodels 100 percent of Life Safaty electropercies. Approximately 650 Redentization & Regular (SMS) projects will be completed exchange of appeals projects softly to facilities. By FF 2801, 180 percent of these SMS projects sobject to the new policities out one of the completed of the completed softly environmental and energy projects. By FF 2801, 180 percent of these SMS projects sobject to the new policities out one of very local softly appeared to the complete of the softly of secret of CODe sorveys.). Therety was SMF projects and have not had dailer remonentary.

Bureau of Primms halidings and facilities Passery Statement and Performance Plan fiscal Year 2003

The Sureau of Prisons (BDP) is requesting a total of SA2 positions, 50% workyears, and \$835,660,000 for its Suildings and Facilities (LEF) budget. This request represents on increase of 2 positions, 1 workyear, and \$278,880,000 above the FT 2000 anacted level.

The BEFs total requested program increases for FT 2001 (53 positions, 35 monkyears, and Ball, 271,000) would provide additional secure capacity for the BEFs sentenced population and help to absorb the HES Long-Term Detainment (1805) into the Federal Prison System. In addition, this budget includes a request for advance appropriation such that the 2002 in the amount of \$855,000,000 in FT 2003 for FULLY to the first that we construction program and ease damperous overcrouding levels. Positions and workyears will also be needed to accomplish those projects. A detailed explanation of the AEFs FT 2001 program increases by initiative is described on pages 13-18 and a corresponding explanation of BEFs bees program is described on pages 10-12.

17 2001 Federal Bureau of Prisons Performance Plan and FY 1909 Accountability Resorts

A. 807 Missian and Goals, and Colstimusio to Commitment of Austica (COI) Stratonic Plan

809 a FF 2001 budget aubalasion and performance plan directly support the Detention and Incarceration mission priorities, general goals and strategic approaches contained in the OOJ Strategic Film and Performance Plan for F1 1997 - 2001.

OF RISSION

The mission of the SOP, an egency of the COJ, was established in an Act of Compress, signed by President Roover on Ray 14, 1930. This Legislation established the SOP and directed it to develop an integrated system of institutions to provide custody and treatment based on the individual needs of institutions.

The mission of the Surgau of Fricons is to protect society by confining offenders in the controlled environments of prisons and community-based lacifires that are safe, humans, cost officient, and appropriately secure, and which provide work and other salf-improvement apportunities to mediat offenders in becaming lace ability of titles.

The BOP will projectively manage its oifender gaputation to ensure agle and accurat operations.

This directly relates to the DOJ Strategic Pien, COME FUNCTION 5: Detention and Incarceration: Goals 1 & 2: Provide for the safe, secure and housened of persons who are detained while exaking trial or tentencing, a hearing on their isosignation status, or deportation; and groups that sufficient prison capacity exists so that violent and other serious criminal differences are imprisoned to the fullest extent of the law.

the BCP with existens its facilities in exercitorally sound conditions.

This directly relates to the DGU Strategic Pipe, COSM. FUNCTION 5: Selection and Incarcaration: Goals 1 & 3:
Provide for the safe, secure and humans confinament of persons who are detained white swelting trial or sentencing, a hearing on their
comparation agains, or departetion; and molecular and operation the faders of Prizer Strate in a part, secure, humans and efficient manner.

8. Blocktobic of FT 1990 Missian Critical Results

Buring ST 1999, the BDP accessed its plan by adding over 3,500 new priseh hads to BDP capacity, holding overcranding at planted Lavats despite a second scored year of insate population growth. The BDP also exceeded the planted number of Hodernization and Repair (MAI) projects completed in EX-

Total, New Construction	. 53	35	481,271	791,000	535,000

the Construction (55 positions and SASE, 275,000) this request provides a total program increase of 55 positions, 35 workyears, and EASE, 275,000 for the BOP's new construction program, in F7 2001. Also, included are advence appropriations requests for F7 2002 and F7 2005 in the assumpts of AF91,000,000 and 9555,000,000, respectively to fully fund all new construction projects included in this budger. The F7 2005 request, tegether with the advence appropriation funds will pracein the amount of bods required to prevent escalation of overcreading levels through F7 2007.

While this new construction request provides for hims new facilities and a secure femals unit, generousing will remain a serious leave. Even with the new facilities requested in this hadges, overcrousing will be close to 30 percent by 2007. The BD is experiencing necessary in the Investe supportant of the Investe supportant of the Investe supportant of the Investe supportant of the Invested Security and Invested Constitutes, additional capacity may be required. The BDF will constantly monitor facility capacity and prisence overcrousing.

The funding provided by sehence appropriation will enable construction to proceed on an accutarated achedute to reduce overcrossing. White attendy appropriated, the polymond assumpts will not be switable (and will not be according sparset the Sec. 302b atlocations) which they are appropriated. This will allow the ADP to Be inteln a lower unabligated believe corrupting forward from year to peac. In addition, the SMD will be able to writer into full construction contexts under the design/build procurement concept before funds are technically exhibite in Pt 2002 and Pt 2003, where they are appropriated on advance.

This initiative directly relates to DOJ CORE FUNCTION 5: Detention and incarceration

- DOJ Strategic Plan Seale:
- Goal 1: Provide for the safe, secure and humane confinement of persons who are detained white evelting trial or sentencing, a hearing on their immigration statue, or deportation.
- Soal 2: Ensure that sufficient prison capacity exists so that violent and other serious criminal offenders are imprisoned to the fullest exists of the fee.

<u>mass percease biscelerators</u>: The sureau of Prisons (60P) continuously reviews capacity requirements, considering the projected inmust population level, current law enforcement initiatives, exceptable origin of the confined population, and the age and condition of existing facilities. As Foderal inmested population feets are projected to increase and continue to greatly exceed the rated capacity of the 80P, every possible action is taken to protect the community, while tapping institutional overcrouding at manageable proportions to present that Federal immates assert their sentences in a safe and humanes environment.

The federal Prison System (FP) is at the end of the administration of justice gipeline. Rost cruminal justice agencies have at (asst name degree of discretion in controlling their workloads, typically through priority systems developed to ensure that the important cases are hendled. The FPS, however, has little choice and must accept all invates sentenced to confinement by the courts. In addition, through the DLL Revitalization act of 1997, the BOP has been directed to assume responsibility for the District of Countries are returned from population by 2001, and is also adding capacity to about the temperation and structuralization Services (IMS) (ong-term Devaluation in the FPS.

The Bob tries to accommodate the increasing population in the wost cost affective manner, following a policy of adding capacity through the utilization of contract facilities where the insate accurity isset is appropriate, expansion of existing facilities, the acquisition and conversion of military and other properties to prison use, and the construction of new prisons.

From a cost perspective, the superation of existing inetitutions is the least expensive technique for increasing FPS capacity, and the BOP is currently building additional housing units at facilities where program epace and systems infrastructura can absorb population increases. Further, the BOP has identified seven jactities which will be converted or expended to provide additional secure compon satellite los security buds. Housever, where major program areas such as food service and utilizies are already saturated, expension may approach or even exceed the cost of newly constructed facilities.

<u>REST PROGRAM DESCRIPTION</u>: The Rodernization and Repair (MAA) program provides the resources to undertake essential membilitation and removation or replacement projects at existing institutions to ensure that structures, unfiltries mystems, and other plant facilities are kept in a good state of repair. Proper maintenance, modernization and repair of 60P Practicutions is exemptial. Failure to adequately maintain structures and utility systems modes confight investment and multiplies the costs in future years for accomplishing the required maintenance and repair. Most important, failure to adequate a company of the company of the required maintain structures can direct extractive configure.

Host deinterance and repair projects are performed using immate crews. This provides work for immates and labor for the work performed. Insule work crews require stell supervision to direct the work being performed and for obvious security reasons.

Of SDFs 95 institutions, 27 are over 50 years old from the time they were constructed or acquired by the 50%, and more then 40 facilities are over 20 years old. Based on a survey, 20% of 50% institutions are actually older facilities converted to federal Prizon use. Each facility has makenous buildings, as well as insert inying quarters on the compound, many of which require extensive work to maintain them in an adequate state of repair, to assure they week 30% and American Correctional Association (ACA) standards. These prison facilities are subjected to heavier than mormal use, since they are used on a 26 hours day basis. In modificion, because of record levels of overcroading, these are being over utilized which is causing extensive year and tear, as well as premature detailors, this is especially true in many of the older facilities which have infrarestructures designed for a mach smaller (must cook) with the contraction.

To saintain these facilities and provide a safe and secure environment, the NOr continually reviewe institution project requests to determine which project writ be scheduled for completion. Institutions, perform detailed envant inspections of all areas of their physical plants and provide a list of projects to their Regional Office for all lises which are in need of remedial action. The six Regional Office compolitates project request lists from their facilities and forward the lists to the Central Office. The Dentral Office priorities all the MAR project requests submitted by the Regions and them schedules as many projects as practical. Generally, only the highest priority projects from the list are planted each year within existing resource levels. However, the list of projects can error to the thousands.

with such a large inventory of facilities, the BOP generally has over 1,500 MEB projects at various stages of completion at any given time, ranging from \$10,000 to million of dollars. To manage this volume of projects and resources more afficiently, the BOP implemented three initiatives which have begun to significantly improve the entire MEB programs long range master planning with detailed surveys of older facilities; a project time limit policy; and a two percent replacement value mathod to provide a reliable annual course of funding.

le address the large inveniory of older facilities, the BCP established a long Henge Rester Plan to include surveys of pertinent facilities. The first lacilities to be surveyed are those which are over 50 years old and have not had any major removations. The surveys are conducted by confractors to determ he the extent of removations required to bring the older facilities to an adequate state of replace or whether the costs of repair would equal or exceed the cost of replacing the facility. Survey results are then used by management in a long range plan along with other known removation meets as MAB proceeds can be no instituted.

A three year time timit policy are implemented in 1996 to ensure that Institutions either complete acheduled projects in a timity manner or the project is currented, and the funds are committed to their high priority NEE projects. All projects are monitored as local, regions and control until until the committed or the first-new of projects which days not mant the time limit. Inia points along how projects the made substitution in its committed yet unabligated Mik belonce. For fiscal Year 1999, the MEE unabligated belonce meetly \$247 million excitable during the year to maximum many \$354 million, a 300 metabelliant.

The ZR replacement value method of funding is being implemented in FY 2000 and allows the BOP to adopt a project purposement approach to the HBE program since it entures a reliable funding source and a permutati sork force. This method is based on the recommendations of the Federal Facilities council Report Busber 13% which recommends that maintenance programs about the funds at 2% to KF of their replacement value, at a paintum. Using this method of funding, rether than the provious time item method, projects can be planted well in advance, and pretiminary/proparation work can be performed prior to the scheduled start of the projects. In addition, staff and jobs can be scheduled to meet the unique requirements of each insistuation and project. The level of planning provided by this funding method will emable ammagament to start projects, and thus obligate funds on schedule, which may not the case under time from funding, as a result, the ROP will be able to shorten the time required to complete large projects and operate with a least workleaded belance.

80% MAR projects are classified under five general categories for intermal management purposes, (Life Safaty, General Improvements, Infrastructure Improvements, Mazardous Waste and Energy Sevings). Within each of these categories are special projects to meet various regulations and codes requirements. Life Safaty projects are required to make consective actions in order to comply with National Fire Code (MEPA TOT) standards. General Improvement projects are established to modernize and/or improve equipment, entire reques, such as Alichens, or buildings that require total republished on Safaty and stillings that require total republished on Safaty and standards consequently expected by the such as water pipes and electrical systems. Mazardous Meste projects are established to established to somethed to modernize or replace within the such as water pipes and electrical systems. Mazardous Meste projects are established to conserve energy by using more energy afficient equipment and systems, framely projects are required to meet pertinent energy conservation loss and regulations. The energy conservation mandate is enunciated by the Polis Law 102-666, codified at A2 U.S.C.§ 8273 (a), which calls for Federal agencies to achieve at least a 20 percent mandate is enunciated by the Polis Law 102-666, codified at A2 U.S.C.§ 8273 (a), which calls for Federal agencies to achieve at least a 20 percent mandate is enunciated to conserve one square foot of building area during EY 1985. A further emergy conservation requirement for Enderal agencies, set forth in Energy services order part of building area during EY 1985.

The five categories may also contain subcategories of projects, such as Accessibility. Environmental and others to meet specific needs. For example, General Improvement projects may each include smaller Accessibility projects, which are required to meet current Architectural Barriers Act and proposed Chapter 12 under the Americans with Disabilities and Accessibility Suidelines. Environmental projects are necessary for the RDF to be in compilance with environmental and safety regulations required by the Environmental Protection Agency (EPA) and the Office of Emfety and Neelth Administration (OSHA).

In summary, the MSR program has undergone substantial changes through the implementation of the Long Range Pluming with its sesociated facility surveys, that time limit policy which began in FY 1998 and the 2% replacement value method of funding which began in FY 2000. These changes will being the BDP to complete more projects in a whorter period of time and save repair dollars. In addition, the BDP has been able to substantially reduce the MSR woobligated believe which is committed to projects with the time limit policy, and as the 2% replacement method in implemented, the BDP supects to further teacher the unboligated believes to a maintenance invariant shift will be just sufficient to maintain the program.

Proposed Actions

For FY 2001, this initiative seeks to address the following objectives:

- To increase federal prison capacity and esse prison overcrowding to a more managemble level.
- 2. To construct new Federal prisons and expand existing Federal prisons in the most cost efficient manner.
- 1. To provide budget, personnel, and administrative capabilities as needed for the design and construction program.

This request provides a total program increase of 53 positions, 35 workwars, and \$681,271,000 for the SOP's new construction program in FY 2001, Bt also includes advance appropriation authority for FY 2002 in the amount of \$791,000,000 and \$535,000,000 in FY 2003 to fully fund all new construction projects included in this budget. The F7 2001 request, together with the advance appropriation funds will provide the amount of bade required to prevent escalation of overcrowding levels through fr 2007.

While this new construction request provides for nine new facilities and a secure famale unit, overcrouding will remain a serious lesue. Even with the new facilities requested in this budget, overcrowding will be close to 30 purcent by 2007. The BDP is experiencing record breaking increases in the treats negatation of this treet continues, additional capacity was be required. The BCP will constantly define facility remotity and defaunce overcrowding.

the funding provided by advance appropriation will enable construction to proceed on an accelerated schedule to reduce overcrowding. While already appropriated, the advanced amounts will not be svelighte (and will not be scored spaines the Sec. 302b ellocations) until the year for which they are expressioned. This will allow the BOP to maintain a lower unobligated belance corrying forward from year. In addition, the BOP will be able to enter into full construction contracts under the design/build procurement concept before funds are technically available in FT 2002 and FT 2003. since they are appropriated in edvence.

Projects - Partietty funded in Prior Jugara

Of the total (presse, 26 positions, 13 workweers, and \$416 397,000 are included to construct four medium security file with immets work presents areas, which have already received preliminary funding. Two files are planned for the Mentern Region (1,152 beds each and 128 beds for each Work Camp). at FCI Meriphe/Sierce, Colifornia, and FCI Victorville. Cal formie which will be co-located with other existing facilities at these sites. The other two FCIs are to be co-Located with existing los security facilities in Tazoo City, Missianippi (1,152 bads) and Forrest City, Arkanass (1,152 bads). Pretiminary funds were received in F7 1999 for Yezoo City and Forrest City, and additional site and planning funds for Yeloo City were provided in F7 2000.

This request also includes construction funds associated with the transfer of INS LTDs to the BCP. The FT 2001 request seeks an increase of 12 consistence, 12 workwears, and \$224,772,000 for construction of two facilities (one USP and one FC)) to edd canacity to absorb part of the 195 LTDs. In the FT 2000 budget, preliminary funding was provided for two USPs and one FCI. Construction funds for the third facility are requested in FY 2002. using advance appropriation authority. The BOP was directed to accept transfer of the LTDs based on the recommendations contained in the Congressionally directed distention Conspilidation Study. The BOP's assumption of custody of INS LIDs will free up INS bedapace for shorter term detainers assisting deportation. The number of INS LTDs is increasing by approximately ASD a year, and by FY 2004, it is projected there will be ever 8.000. LTDs to be managed by RCP. however, the BCP does not currently have bed space to absorb these inmates, and must build additional capacity.

the LTDs come from countries which refuse to allow their return. In the United States, they are non-relectable by two or for reasons of exhibit safety. The severity of the offerese committed by the Life adds to the challenge in detaining them for an indefinite period of time. The most frequent offenses of the tibe are burglary, largery, drug possession and sale, assault, and homicide. According to an earlier DGU study, LTDs require programs winitur to those provided to sentenced prisoners, such as vocational, recreational and educational programs, at well as long-time health care services. The tack of program activity in IRS short-term facilities results in idigness which causes disciplinary problems.

Rev Facilities in 19 2001 - No Prior Supplys Croading at madium security facilities in 53 percent above capacity and 54 percent at high security levels. These facilities are croading immates. which results in increasing the immates to staff ratio, and decreasing time for staff and immate interaction and exchange. Thus, higher levels of overcrowding potentially endonger stuff, intertus, and the contemity, and new capacity in this request is critical to safe management of the federal Prison Lesten.

included in this request is a present increase for 15 confices. 10 sorkware, and \$40.152,000 cornitries carried also and planning of two MPs, and three FCIs, for a total of \$.014 bads. The USFs are planned for the Southeast and Western regions of the country. The FCIs are planned for the Ridgest and one each in the Southeast and Rid-Attentic regions. The belance of construction funds for these five facilities is requested for FT 2002, under edvence eppropriation authority.

The BOP's Station projections intensify the need for additional higher security especity. Due to the absorption of the D.C. sentenced population and HIS LIDS there is a great meet for higher security beds to the BCP. The higher security population will meanly double by 2007 reinforcing the need for higher security facilities. Thus, it is most critical to increase higher security camedity for the enterty of staff, insetes, and the surrounding communities.

see facilities - Pertial Size and Planning Funds in FT 2002 - No Prior funding tocluded in this request is advance appropriation authority of \$23,000,000 in FY 2002 for four FCLs and a secure famile facility/unit. The Passining \$535,000,000 to construct these facilities is requested for PY 2003. This delay of initial site and planning funds until FY 2002 recommizes both the reality of tight audget constraints in FT 2001, as well as the ACP's critical need for additions, sapecity to relieve projected overcrossing. Naving the multiprity for construction furms in FT 2002 and FT 2003 will allow the BCP to plan and advertise full construction of these facilities under the dealgn/build procurement concept for in advance of what would be possible otherwise. These facilities with provide a total of 5,632 bads in four geographic regions; Meatern, South Central, Morthager, and Mid-Atlantic Regions. The addition of tapacity in those regions will mointain the GOP's policy of housing immates as close to their state of residence and release as precticable.

Copecity Requirements

the BTP is presently designation impates at a level which forces double-bunking in 65% of contractions calls and 90% in section specifies for its contraction. In other words, the SCP has double-burked for greater numbers of inverse at all security levels than specified by its rated capacity standards, and the FT 2001 request for new construction is prevised on continuing this higher level of double-bunking. The table below illustrates how this level provides nearly 50 percent more body in peritentiaries and over 174th more in medium security facilities.

-	Rated Cr		FY 2001	Proposal

Population Projections

Buspite recent neve reports of lower growth in State prison populations, the 80P's population projections indicate transmission projections. long-term. Sentences have remained fairly scable over the last few weeks. Movever, the 600 is again experiencing drawatic increases in the master of invales due to higher numbers of prosecutions, particularly drug cases. This, as well as the recent sharp increase in ishigherion cases are the existery causes of current BCP investe population growth. In fy 1999, the BCP exceeded the fy 1996 record growth of 10,000 investes, and say another record breaking year in F7 1999, with an increase of over 11,300 Immates.

By the end of Ff 2007, the total 809 population is expected to reach 204,527 inmates, including absorption of D.C. falors and 165 cTDs. The projected population in BCP facilities alone will increase to 173,477. Without additional new construction, the BCP capacity will be only 112,782, resulting in an urmanageable and unsafe system-wide overcroading rate of 54 percent.

Thus, the FF 2001 request proposes to add anough beds to bring overcrouding close to 30 percent system-wide by 2007, while increasing the level of double-bunking. The projected year-end capacity in the table on the next page reflects has construction requested in FY 2001, and advance ampropriations for FY 2002 and FT 2003.

^{. *} Tear-and capacity ties to the date by which the majority of bods are projected to be available for immates.

The population, capacity and overcroading projections are displayed on the graph on the following page.

New Committees (ion)

The BEP stries to imprave the pace and infectiveness of its construction program and recently began to incorporate deelgo-mailed contracts for new construction programs and recently began to incorporate deelgo-mailed contracts of new construction programs and present to contract of significant descriptions and procurement concept, the Government contracts for a single firm to perform both the deeign and construction of a facisity, while prior policy was to separate the iso. The new process is a negotiated procurement where the Government can review the qualifications and performance as a basis for separate the iso. The new process is a negotiated procurement where the Government can review the qualifications and performance as a basis for separate charges, and schedule adherence; so the Government is able to focus on the scope of the project rather than coordination between a superate deel performance and schedule adherence; so the Government is able to focus on the scope of the project rather than coordination between a superate deel performance. This approach allows the overlapping of the deelgo and construction periods, and eliminates construction bidding periods, resulting in martial completion. The BOP has successfully used the deelgo hall of process for a minimum macurity facility in format City, Arbaness and currently has several targer projects undersay using this arthod, including periodal facilities (USPs) at Coleman, Pioride; Big Sendy, Kentucky; Echeary County, Kentucky; Consen, Pennsylvania; and Federal Correctional Institution of ICSS at Proteoburg, Virginia and Elemvilla, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia, New Virginia

Projected Population, Capacity and Overcrowding for the Bureau of Prisons Based on the FY 2001 Request

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY GENERAL GOAL (\$000)

DECISION UNITAPROGRAM NEW CONSTRUCTION

GENERAL GOAL, 1: BOP will proactively manage its offender population to ensure safe and secure operations.

Department of Justice Core Function 5. Detention and Incarceration

Strategic Goal: 5 1 and 5 2

Annual Performance Goal. As listed below.

A. Date Velidation and Verification:

The data collected in this table are authorized and managed in the Central Office where data is consolidated on the Local Area Networks (LAN) and the Wide Area Network (WAN). Capacity & immale statistics are maintained on SENTRY & financial data is collected from the Floancial Management Information System (FMIS).

B. FY 1999 Performance Report:

During FY 1999, the BQP exceeded its planned addition of 3,408 beds by adding over 3,500 new prison beds to capacity.

The BOP was able to accelerate new construction mission efforts. In FY 1999. The BOP obligated \$120 million or nearly 23% more funds under the new construction program than planned, as ten construction contracts were awarded.

C. Issues Affecting Selection of FY 2000 and 2001 Indicators:

DECISION UNITERFOCERAL: INCOCREMENTATION AND REPAIR OF EXISTING FACE ITIES

DEFINERAL GOAL 2 BOP will market as facilities in operationally account conditions and in compliance with security, safety and anvironmental residentents

Department of Justice Core Function 5: Detention and Incarceration

Strategic Goel 51 and 53

Arragi Performence Gost: As listed below PERFORMANCE INDICATOR INFORMATION

A. Data Velidation and Verification:
The data collected in the labe are reported directly by facilities to Regional Offices or the Central Office through written reports and via the e-may on the Wide Area Network (WAN). The information is consolidated and maintained by program managers. Most M&R and new construction projects are authorized and managed in the Central Office. In addition, financial data is collected from the Financial Management Information System (FMIS)

8 FY 1899 Performance Report:

The BOP exceeded the plenned number of M&R projects completed in FY 1999

The MAR program solublehed 500 new projects in 1999 for a loss of 1,600 projects active during the year. Of these projects, 582 were completed for more than the planned 370

C. teaues Affecting Selection of FY 2000 and 2001 indicators:

Federal Prison System Buildings & Facilities

Statum of Communicationally Requested Studies, Suports, and Evaluations

The Conference Report (6. Ept. 106-479), directs the Bureau of Prisons (BCP) to submit the following reports to the Committees on Appropriations of both the House and Senste.

1. Study and report on the finantiality of constructing additional medium or high security prisons or work camps at existing rederal prison sites, including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including those currently being constructed, and including the currently being constructed, and including the currently being constructed, and including the currently being constructed.

The BOP continues to evaluate existing sites for edditional construction and compare that with population projections.

The Conference Maport on M.R. 4276, for the Oupertments of Commerce, Justice, and State, the Judiclery and Related Agencies for Fiscal Year 1999 directed that:

2. The Attorney General shall complete conveyance of the percel of land, by quit claim deed and remotinted sale, to the City of Tracy, California.

An agreement for Conseral Services Administration (GSA) to emesse the reservice and aligned by CDP on 12/23/90, and a meeting was held between the City of Tracy and GSA on 1/20/99 to begin reapplications for the purchase. After review by BDP and DDJ/Environmental levies bivision, in July, 1999, BSA submitted to the City of Tracy a deaft offer and in August, 1999 Administration a deaft deed for the Tracy property. As of Jermany, 2000, the BDP is welting for a response from the City on the deaft offer and deaft deed. GSA is also waiting for the City to provide a survey shouling what eyes will be for educational use and what are as for economic developments. Once the survey is received, it will be provided to the GSA apprelian for undets. Additionally, the City of Tracy is in the process of conducting their Environmental lapact Report (ESP) of this property, and GSA is esting for the U.S. Fish and Mildlife Service comments to the deaft EIE, reparding proposed mitigation measures, before initiating consultations under the Endangered Reports Act.

Federal Frieon System Federal Prison Industries, Incorporated Summary Statement and Performance Plan Zingal Yanz, 2001

A total of 2.107 positions and 1.933 workyears are requested for Federal Prison Industries Inc. (FPI) in PY 2001, and 53.879.000 is requested as the Administrative expense limitation. This includes a program increase for the activation of 3 factories at Pollons, Louisiana: Atwarter, California and Coleman, Floride which will employ approximately 316 immates at each location in FY 2001. A detailed explanation of FPI's FY 2001 program increases and base program are included in the Program Performance Information section of this budget.

A. Component Hission and Goale, and Relationship to DOJ Strategic Plan

FPI's plan directly supports the Detention and Incorporation goals and strategic approaches that are included in the Department of Justice's Strategic Plan. FY 1997 - 2001

The mission of Federal Prison Lidustries (FPI) is to employ and provide skills training to the greatest practical number of inhered in Federal correctional facilities necessary to ensure the Safe and secure operation of such institutions, and in doing so, to produce marker priced, quality goods in a self-sustaining manner that minimizes potential impact on private business and labor.

FPI's quais are to provide services and programs to address inmate needs, providing productive use-of-time activities, and facilitating the successful reintegration of inmates into society, constatent with community expectations and itendards.

8. Highlights of 1989 Mission Critical Results

As of September 30, 1999, there were 20,966 inmates employed at 100 factories located at 88 facilities, an increase of 666 inmates need the planned employment level of 20,300. FPI also exceeded its planned new orders by \$22,964,000 and its net tales volume by \$28,572,000.

C FY 2001 Performance Goals and Indicators

In TY 2001. FPS anticipates adding 1,000 more jobs to employ insate employees are as a result of the projected population increases. These additional immates jobs still provide immate opportunities for on-the-job knoticely apprenticeship programs to develop entry level skills and employ innates to acquire on-the-job knoticely and proficiency, as well as discipline in the work ethic. To provide these jobs, PPI plans to activate factories at Policick, Louisians. Atvater, Eslifornia and Coloman, Florids.

D New 2001 Initiatives

FRI's request of 2,107 position and 1,933 workymans for FY 2001 to support the activation of factories at Pollocktoursiana: Atwater, California: and Coleman, Ejorida which will employ approximately 336 inmaces at each location. A total of 2.107 positions and 1.913 workyears are requested for Federal Prieon Industries, Inc. (FPI in FY 2001. This request represents an inclease of 18 positions and 48 workers over the FY 2000 base. These positions and 517.322.000 are being requested for the activation of ractories at Poliock, Louisiana. Atwater, California: and Coleman. Florida employing approximately 136 immates at each location. Further, \$3,479,000 is requested as the Administrative expense limitation which is governor requested in FY 2000.

E. Date Validation and Verification Jesuse

<u>Data Collection and Storage</u>: FP1's operations consist of five principal product programs. The product programs are Metals, Furniture, Electronics/Flastics, Graphics/Service/Optics, and Clothing/Textiles. Financial and manufacturing data are maintained in the Central Diffice on a Mide Area Network (MAN) using off-the-shelf integrated manufacturing software. Local, data is both uploaded and downloaded as needed to Local real Networks (LAN).

Data Validation and Verification: FPI's financial and operational data are audited annually by independent accounting firms.

Data Limiterions FFI is dependent on its WAN being operational and sufficiently backed up

<u>Rest PROGRAM DESCRIPTION</u>: Federal Prison (reductries, Inc. (FPI) reduces undestriable Immats Idlamean by providing a full-time work program and strives to employ approximately 25 percent of the oligible inhabts population, sore than 50 percent of the immate operation do not have eachestable stills. FPI provides a program of constructive industrial work shareful into both to can be developed and not been below to accordant.

FPI's operations are self-sugmorting. Revenues are derived from the sals of products and services to other federal departments, agencies, and government institutions which purchase products listed on FPI's Schedula of Products. FPI provides services on a non-servatacry, preferred source posts. Operating expenses such as the unsts of reasonable states sugges, staff salaries, and capital expenditures are applied mealing these revenues, resulting in contacting income or loss, which is remobiled teamed operating dusts for future production.

Jestitution factories and shape are operated by civil jon supervisers and managers, training and evenaceing the sock of invates. The factories utilize real materials and component parts purchased from the private sector to produce finished pools. FPI's major dovernment continues include the Opportunit of Orderme, the restal Service, the vectorment Administration and the General Services Administration. Institution factories manageture such limits as furniture, clothing, electronics, metal and conses products, and provide such services so date processing and furniture refinishing. Orders for goods and services are obtained through marketing and sales efforts by civil ion sately, a pertion of the servings nealled by these approximates are removed to improve and built new facilities and purchase equipment, sminteln state-of-the-ert capability and provide searching consists.

Extensive testing and product development procedures are required to querits undern factories that produce products which most Government appoint procedures controlled the second products of the rest of the fracts share no provious training, experience or skills. Buck of the rested training occurs on the job, with the civilian appointages and appointment explaining and demonstrating the park to hardly analysis important products are formal training, such as added not consider the provided by UNICOS staff.

FPI makes capital investments in building and improvements suchinery and equipment as necessary in the conduct of its industrial operations. Other expenses charged to the industrial ampufacturing program include insate accident communication.

As a result of private sector concerns that the Corporation was becoming an under burden of competition, Congress adopted guidalines for the production of raw products and algorificant product expansion which are incorporated into statute. Before any algorificant product expansion or min products are manufactured, the guidaline process is conducted with full branchage of interested parties. The original guidalines procedures from groundstated in 1990 were updated in 1997, with input from the private sector, with sublication of interia procedures in the March 12, 1997 Faderal Resistor.

As required under the federal rules, company referred to as the fuldelines process, when FFI proposes to produce a new product or amount its market share of a builting product, they first must conduct a market impact actually. This study must identify and consider the number of variables according the requirements of the federal powernment; the proportion of the federal market for the product currently served by must

business, small disadvantaged businesses, or businesses operating in labor surplus areas; the site of the Enderal non-federal markets for the product; the projected growth in the federal povernment dimmand for the product; and the projected ability of the federal market to mustafe both FPI made private versions. FPI then must arrounce in the Communic sharp its proposal and invite community from private versions.

FPI's Board of Directors is provided copies of the market impact armdy, the comments received, and FPE's recommendations. The Goard also holds hearings which the public can attend and provide testimony.

At the conclusion of the above process, the Board renders its decision, which is also published in the Commerce Subiners Dally.

Proposed Actions

This initiative seeks to address the following objectives:

Plan for the growth of FF1 and provide amployment for immates which is required for the safe and orderly management of the Burseu of Frisons.

Hanage Fht financial affairs in an afficient and more productive fashion.

Provide on-the Job training to approximately 22,300 immates in all industrial factories in 2001.

Provide pra-industrial training projects to unhance factory operations and provide increased training apportunities.

Achieve the installation of developmental programs which will ensure ffl of a highly trained, qualified, and motivated staff.

Ensure Total Customer Settlefaction by being competitive in marketpiace price, quality, and delivery standards.

bevelop and implement strategies for communicating FPI's primary mission and goals to the public, private sector business community, government agencies, and elected officials.

A total of 2,107 positions and 1,935 workyeers is requested for Federal Prison Industries, Inc.(FFL) in FT 2001. This request represents a program increase of 75 positions and 65 workyeers, for the activation of factories at Fallock, Louisians; Atweter, Catifornia; and Column, Florida. The factories in these locations will supply approximately a factories at these locations.

I. COMMUNITY JUSTICE INITIATIVE

A. SUMMARY PERFORMANCE PLAN -- Component Mission and Goals, and Relationship to DOJ Strategic Plan

Throughout the country, communities are engaged in the process of building and rebuilding neighborhoods. At the heart of this work is a commitment to help nurture families to become capable of providing the skills, knowledge, care, values, and resources necessary to ensure that their children become productive, financially self-sufficient and law-abiding citizens. OJP recognizes the direct impact that families and communities have on reducing crime, preventing violence, and promoting public safety. In partnership with communities, OJP is committed to assisting these efforts by supporting a broad range of programs to build safe and healthy families and communities, including comprehensive offender recentry programs. Because crime affects everyone living in a community, many of the strategies for identifying, understanding, resolving, and preventing crime also lie within the community. OJP's goal is to ensure that local residents and organizations who best understand their needs and resources have the tools to be successful. Community-based initiatives and the use of local comprehensive strategies that give residents a real opportunity to solve problems show great promise in preventing crime. The public, private, and community partnerships being formed provide the mechanisms through which residents can sustain their involvement. OJP supports a number of community based initiatives and provides technical assistance to help make programs successful.

All program increases identified under this initiative support the DOJ priority of providing Assistance to Tribal, State and Local Governments.

B. NEW INITIATIVES

	Pos	ETE	Amount
Community Supervision Initiative: Project Reentry	[10]	[5]	[860,000,000]
Police Use of Force Program Initiative (Justice Assistance)	2	1	2,100,000
Executive Office for Weed and Seed (Weed and Seed Program)	1	1	8.500.000
Total, Community Justice Initiative	3	2	\$10,600,000

The Office of Justice Programs (OJP) requests \$10.6 million in resources for the following programs included in the Community Justice Initiative:

- 1. Community Supervision Initiative: Project Reentry \$60 million and 10 positions are requested for a collaborative, comprehensive offender reentry initiative to be administered by OJP of which \$25 million is requested under OJP's Zero Tolerance and Drug Intervention Initiative and \$35 million and 10 positions are requested under the Office of Community Oriented Policing Services (COPS). This initiative will help to reduce recidivism and improve public safety by awarding discretionary grants to address the public safety threats posed by offenders returning to the community from state and federal prisons or local facilities housing state and federal prisoners. The Reentry Project will enable states and local communities to create broad partnerships that will use their combined resources to provide the necessary combination of surveillance, sanctions, incentives, and support services in ways that afford increased protection to communities that experience unusually high returns of immates. The Department of Justice will administer the program in partnership with the Department of Labor, who will target \$75 million to develop and operate jobs-related programs in the same communities and with the Department of Health and Human Services, who will dedicate \$10 million in substance abuse and mental health treatment to support this effort.
- 2. Police Use of Force Program Initiative \$2.1 million and 2 positions are requested to implement a comprehensive program to address the appropriate use of controlling techniques by law enforcement officers when dealing with citizens. This program will be jointly administered by the Bureau of Justice Statistics (BJS) and the National Institute of Justice (NIJ). This enhancement will provide funds to BJS to continue the development and collection of data on use of force from local police agencies, for more extensive

data on police-citizen encounters based on the results of a supplement to the National Crime Victimization Survey (NCVS), and for the analysis of data obtained under these data collection programs. NIJ will perform a variety of research and information gathering functions.

See related base program information under the Justice Assistance Account beginning on page 11.

3. Executive Office for Weed and Seed - An enhancement of \$8.5 million and 1 position are requested for the Executive Office for Weed and Seed. Of this amount, \$6.5 is requested to replace the supersurplus asset forfeiture funds with direct appropriated funding, which will return the program to reliance on the appropriation process rather than the uncertain availability of DOJ supersurplus asset forfeiture funds. The remaining \$2 million is requested to enhance data collection and performance assessment capacity at existing Weed and Seed sites so that these sites can evaluate the effectiveness of their strategies.

See related base program information under the Weed and Seed Program Account.

C. COMMUNITY JUSTICE - PROGRAM INITIATIVES

1. Community Supervision Initiative: Project Reentry	90,000
Funds Requested Under the State and Local Law Enforcement Assistance Account	1000.0
Funds Requested Under the Community Oriented Policing Services Account	0,000

The Office of Justice Programs (OJP) will administer \$60 million and 10 positions for a collaborative, comprehensive offender reentry initiative, of which \$25 million is requested under OJP's Zero Tolerance and Drug Intervention Initiative and \$35 million and 10 positions are requested under the Office of Community Oriented Policing Services (COPS). This initiative will help reduce recidivism and improve public safety by awarding discretionary grants to address the public safety threats posed by offenders returning to the community from state and federal prisons or local facilities housing state and federal prisoners. The Reentry Project will enable states and local communities to create broad partnerships that will use their combined resources to provide the necessary combination of surveillance, sanctions, incentives, and support services in ways that afford increased protection to communities that experience unusually high returns of immates. The Department of Justice's OJP would administer the program in partnership with the Department of Labor, who would target \$75 million to develop and operate jobs-related programs in the same communities and with the Department of Health and Human Services, who would dedicate \$10 million in substance abuse and mental health treatment to support these efforts.

The Reentry Problem

American crime policies over the past two decades have resulted in record numbers of offenders being incarcerated. Some 1.2 million offenders are now living in prisons, and another 600,000 offenders are incarcerated in local jails. Although many offenders are serving longer sentences than they would have a decade ago, once they complete their terms, they return to the community. A record number of approximately 500,000 immates will return to communities this year. Historically, two-thirds of returning prisoners have been rearrested for new crimes within three years.

The safety threat posed by this volume of returns has been exacerbated by reductions in the abilities of states and communities to supervise returning offenders. Parole systems have been abolished in thirteen states. Moreover, policy shifts toward more determinate sentencing have reduced the authority to impose supervisiory conditions upon exiting offenders. Consequently, an estimated 105,000 inmates will receive no supervision in the community. State systems have also reduced the numbers of transitional support programs aimed at facilitating the return to productive community life styles. Recent studies indicate that many returning prisoners receive no help in finding employment upon release. Most offenders have low literacy and other basic educational skills which can impace

successful reentry. At least 60 percent of offenders are fathers, and therefore face a number of issues related to child support and other family responsibilities during incarceration and after release. Substance abuse and mental health problems add to concerns over community safety. Approximately 70 percent of state prisoners have a history of drug abuse. Research by NU indicates that between 60 and 75 percent of inmates with heroin or cocaine problems return to drugs within three months when untreated. An estimated 179,000 state prison inmates have self-reported mental health problems. Mentally ill immates are more likely than other offenders to have committed a violent offense and be violent recidivists. Few states connect mental health treatment in prisons with treatment in the return community.

Current policies to reduce public safety risks are cost prohibitive. Efforts to enforce offender accountability for release conditions have led to record returns to prison for revocations. These practices have added significantly to state correctional costs. Revocations comprised 20 percent of prison admissions in 1980; they have risen to nearly 40 percent in 1997.

Juvenile offenders represent a serious part of the reentry issue throughout the country. Juveniles were involved in 17 percent of all violent crimes and 35 percent of all property crime arrests in 1997. In 1997, 369 juveniles were in custody for every 100,000 in the population. Between 1987 and 1996, the volume of adjudicated cases resulting in court-ordered residential placements rose 51 percent. The steady increase of youth exiting residential placement has resulted in an increased strain on the juvenile justice aftercare system due to increased case loads for purple officers and the inability to provide the appropriate level of required supervision. Without structured aftercare supervision and services, youth are likely to relapse and recidivate and return to confinement in either juvenile or adult correctional facilities.

Recentry Initiatives

The OJP will launch four activities to reduce the short and long term risks presented by returning offenders. A Reentry Partnerships Initiative (\$40 million) would award discretionary grants to state and local community partnerships for coordinated approaches to community returns of offenders. A Juvenile Aftercare Initiative (\$5 million) would address the special reentry needs of youth in the juvenile justice system. A Reentry Courts Initiative (\$10 million) would award grants to states to create courts based oversight programs for returning offenders. The OJP would collaborate with the Department of Labor's Employment and Training Administration and the Department of Health and Human Services's Substance Abuse and Mental health Services Administration (SAMHSA) in building these initiatives. Additionally, a Reentry Research and Development program (\$5 million) would sponsor much needed research on reentry and evaluation of promising approaches. A three percent set-aside would be applied to the reentry grant programs to provide for technical assistance and training. Each of these components is described below:

• Recatry Partnerships -- \$46,860,800. The goals of the Reentry Partnerships initiative are to help reduce recidivism and improve public safety. The initiative seeks to improve risk management of released offenders by enhancing monitoring and follow-up, and strengthening individual and community support systems, and addressing the harm to victims. Patterned after successful police-corrections partnerships, reentry partnerships would establish alliances among institutional corrections, community corrections, community policing, grassroots community leaders, and service providers to prepare for more successful returns of immates to their home neighborhoods.

The OJP would award up to 40 grants of \$1 million to state/community teams consisting of the entities listed above. Applicants will designate an agency within the partnership to serve as the grantee, responsible for grant administration. The Department of Labor's Employment and Training Administration would award Responsible Reintegration for Young Offenders grants in the same communities to provide job placement, work experience, internships, and other transitional services. The target population for these grants would be young offenders aged 18 to 35. A local match would be required by grantees for both Department of Justice, Labor and SAMHSA funds.

Partnership funds could be used to acquire any of the services needed to facilitate the partnership and operate the reentry program. Communities could hire community safety officers ~ law enforcement officials who supervise offenders in the targeted neighborhoods — who would work in partnership with police and community leaders to develop the necessary support network to ensure successful transition to jobs and housing. These officers would also be used conditions by administering graduated sanctions through appropriate administrative law processes. Funds could also be used for drug and alcohol testing and treatment, planning efforts, developing appropriate progress tracking tools, convening victims panels, and service and surveillance costs.

States could apply with multiple partners. Geographic diversity will be a consideration in awarding the grants, as will urban areas which shoulder the burden of heavy concentrations of returning offenders, especially those in which partnerships are in place. The five-year goal of the partnership funding is to establish sufficient programs to supervise 75 percent of the nation's reentry population.

Juvenile Aftercare Programs -- \$5,000,000. A special juvenile transition support program of \$5 million will be used by OJP's Office of Juvenile Justice and Delinquency Prevention (OJJDP) to address the special integrative needs of youth in custody of the juvenile justice system. Discretionary grants will be awarded to 10-15 demonstration sites in the amount of approximately \$250,000 each to develop and implement an intensive aftercare program with emphasis on employment and job training and placement services. This program would be coordinated with the Department of Labor to creste reentry employment opportunities for these juveniles and youth while simultaneously tending to educational, treatment, and family support needs. Funding will also

be used for evaluations of program effectiveness and for training and technical assistance, to include on-site training, cluster meetings, information dissemination to the field, and a national teleconference.

Recentry Courts -- \$10,900,000. Patterned after successful drug courts, reentry courts would create judicial oversight of returning offenders. Funds would be used to create these special courts that would use the coercive powers of the court in promoting positive behaviors. Immates would appear regularly before judges to review their progress and problems with successful reentry, including drug and alcohol testing and treatment progress, job stability, child support and family responsibility accountability, and community restitution as appropriate. Graduated sanctions would be applied by the courts to punish violations, and modest incentives would be given to reward sustained clean drug tests and other positive behaviors. Moreover, judges would order offenders to participate in various treatment and reintegration programs, using drug and alcohol testing and other checks to monitor compliance. The expectation is that this continual review of performance, coupled with appropriate rewards and sanctions, will reduce recidivism among the returning intrates.

Grants of up to \$500,000 would be used to establish these courts and to support services like those allowed under reentry partnerships. The Department of Labor's Responsible Reintegration for Young Offenders grants would also complement these efforts. Eligible award applicants include state and local courts, state agencies, municipalities, public agencies, nonprofit organizations, or tribes that have an agreement with the courts to take the lead in conducting such a project. A local match is required of reentry court grantees.

Reentry Research and Development -- \$5,000,000. Both Reentry Partnerships and Reentry Courts are new and complex
endeavors. While pilot efforts are being tested by the OJP, these efforts are modest, unfunded attempts to explore the issues
involved in establishing these kinds of programs.

NII will sponsor research on a range of issues pertinent to reentry programs including drug and alcohol testing and treatment outcomes, the ability of transition programs to prepare offenders for return to the community, the effects of family and community ties on job performance and compliance with release conditions, and the attitudes of the business community toward returning offenders as employees. In order to accelerate the adoption of promising approaches, NII will develop and test new reentry components and approaches. It will evaluate the results of these field tests as well as a cross section of the projects funded under the joint Justice/Labor initiatives. These results will be communicated rapidly to participating programs through cluster conferences and information dissemination to the field, and a national teleconference. Department of Labor evaluation funds may be linked with this effort.

To fulfill the mission of the Project Reentry, 7 positions would be required to administer the 3 reentry grants programs. At least one of those positions will be assigned to OJJDP to administer the juvenile Recentry Program. An additional 3 positions are requested for NIJ to support research, development, testing, and evaluation.

INITIATIVE: Community

experience high rates of pundle returns.

PROGRAM/ORG UNIT: Project Reentry/Office of the Assistant Athriney General

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assignance to Tobal. State and Taxal Government

D. Verification and Validation.

NII would mustify entity and validate the measurer referenced via progress reports, onsite monitoring and the like. However, at this it is inaugural progress estimates used above are based on desired project goals, projected gravits and estimated forth available.

The shooting of an unarmed man in New York City by police in February 1999 has brought this issue to the forefront. Lack of funds has limited CJP's ability to appropriately address this issue and to fully carry out the legislative mandate for the Attorney General to report annually on data obtained about the excessive use of force by law enforcement officials. Each year since passage of the 1994 Crime Act, BJS and NU have alternated the responsibility for the production of the annual report to Congress. In 2001, OJP requests \$2.1 million to pursue a long-term comprehensive program to address this issue

Under the Police Use of Force Program initiative, \$1.2 million and 1 position is requested for BJS. This enhancement would initiate a Police Use of Force Statistics Program and enhance the annual data collection and reporting program mandated under Title XXI, Section 210402 of the Violent Crime Control and Law Enforcement Act of 1994 (VCCLEA). This enhancement would provide funds to continue the development and collection of data on use of force from local police agencies, for more extensive data on police-citizen encounters based on the results of the 1999 Police-Public Contact Survey, and for the analysis of data obtained under these data collection programs.

The collection instrument used to supplement the National Crime Victimization Survey (NCVS) will incorporate data from citizens about use of force outcomes associated with traffic stops for routine traffic violations, an area of increasing public interest, as well as a wide variety of other types of contacts, whether citizen-initiated or pulice-initiated. In both 1996 and 1999, BJS undertook prefests of potential items to be included in a final questionnaire. The prefests have yielded significant insights into the interactions between police and citizens, either the use of force or the threat that force would be used was found to account for about 1 percent of the contacts between citizens and police. The prefests also revealed that collection of data from the full NCVS sample will be necessary to examine use of force contacts in greater detail, as well as, citizen reporting of such incidents to complaint review boards or other agencies with responsibility to receive and investigate complaints.

VCCLEA sets forth three requirements for the Attorney General with respect to data on the use of excessive force by law enforcement agencies (Title XXI, Section 210402) (1) the Attorney General shall, through appropriate means, acquire data about the use of excessive force by law enforcement officers; (2) data acquired shall be used only for research or statistical purposes and may not contain any information that may reveal the identity of the victim or any law enforcement officer; and (3) the Attorney General shall publish an annual summary of the data.

BJS was assigned the lead responsibility for developing a national reporting program on the use of excessive force. In mid-1995, BJS, together with NJJ, commissioned outside experts to prepare discussion papers on alternative measurement issues associated with the use of force and convened a national panel, composed of representatives of law enforcement and those with an interest in the quality of law enforcement services, to consider the range of statistical opportunities for carrying out Section 210402 of the VCCLEA. These efforts laid the substantive foundation for a first annual report to Congress in December 1995 on future efforts with respect to use of force statistics.

Following the working group conference, BJS initiated three experimental data collection programs in order to meet future reporting requirements. These efforts, while small and very preliminary in scope, have provided useful data for inclusion in the annual reports to Congress.

- The BJS NCVS, the second-largest ongoing household survey sponsored by the federal government, was utilized to estimate the extent of public contact with law enforcement authorities through interviews with a small subsample of respondents in 1996. The NCVS maintains biannual contact with a nationally representative sample of nearly 100,000 persons residing in about 43,000 U.S. households in order to learn about crime and its consequences for our citizens. A set of experimental questions on citizen contact with the police was fielded in May 1996 with a 3-month data collection period and covering approximately 6,000 respondents. BJS published findings from the prefest in the second annual report to Congress released in November 1997.
- In 1995, BJS and NIJ began a two-year joint project with the International Association of Chiefs of Police (IACP) to acquire use of force data from local law enforcement agencies modeled after a pioneering study undertaken by the Virginia Association of Chiefs of Police. In 1997, they focused upon developing uniform data collection standards and the formation of a constituency for supplying data on these incidents. Findings from this study will be used in the third annual report to Congress now in preparation by NIJ. BJS and NIJ have both ceased funding for the IACP effort due to the tack of success in securing adequate participation by law enforcement agencies.
- During the summer of 1999, BJS fielded a second supplement to the NCVS designed to test a revised version of the instrument
 pretested in 1996. This instrument will be administered to approximately half of the NCVS sample. A major new addition to this
 iteration of the instrument will be the use of a number of questions focused upon the exposure to and experience with police traffic
 stops for routine traffic violations.

This enhancement will permit the continued implementation and expansion of the survey effort to the full NCVS national sample with the goal of learning more about the use—th appropriate and inappropriate force as well as other types of contacts during

police-citizen encounters. In addition, funds will be used to support analyses of the collected data and the preparation of the required annual report to the Congress. Specifically, this \$1.2 million will:

- Support a required annual statistical report to the Congress on the use of force by law enforcement authorities. The enhancement
 will permit full fielding of regular data collection activities and will cover the costs associated with analysis of the data and
 preparation of the annual report.
- For the first time ever, provide for the development of a national set of measures describing the public's contact with law enforcement authorities. These measures will be monitored over time to identify changes in the nature of such contacts and the types of contacts experienced by different subgroups of the population.
- Provide new information from the public about those use of force encounters with police stemming from traffic stops. Unlike the
 Traffic Stops by Police Initiative, this data collection effort will focus on controlling techniques by law enforcement rather
 than racial profiling concerns. Specific attention will be paid to the analysis of those stops in which handcuffing, vehicle or
 personal searches, or provocative actions by the officer or respondent were factors in the use-of-force encounter. These data will
 permit estimation of the relative likelihood of a use of force interaction arising from a traffic stop.

A total of \$900,000 and 1 position is requested for NIJ to perform a variety of research and information gathering functions. Informed in part by BJS Use of Force Statistical Program efforts, NIJ would convene an expert working group to define a research and training agenda. That agenda would result in a national survey of the current state of practice in use of force training and policy, policy suggestions and operating protocols for use of force, and a program of research on police use of force issues. NIJ estimates survey cost at \$250,000 and research cost at \$650,000.

A total of 2 positions are required to support the Police Use of Force Program Initiative. BJS will require one statistician to support their new statistical efforts and NIJ will require one position to perform a variety of research and information gathering functions.

In 2001, OJP is requesting a total of \$42 million and 1 position as a direct appropriation for the Weed and Seed program. This request represents an increase of \$8.5 million over the 1999 level of \$33.5 million. Major elements of the requested increase include funds to replace current DOJ supersurplus asset forfeiture funds with appropriated funds (\$6.5 million), and raise the existing site funding level to support local evaluation (\$2 million).

Weed and Seed is the Department Of Justice's (DOJ) premier community-based crime prevention program. Enthusiasm for Weed and Seed is growing rapidly around the nation as information about the program soreads. The success of the Weed and Seed program comes from bringing together the energy of community leaders and organizations and the resources of the public and private sectors in an organized and coherent way. Weed and Seed is unique among DOJ programs in focusing on neighborhoods whose manageable size makes it possible to achieve demonstrable progress that gives hope and encouragement for further efforts in the initial neighborhood and others.

Weed and Seed is currently active in over 200 sites. While many site activities are locally initiated, Weed and Seed sites also serve as platforms for Administration initiatives from conflict resolution and anti-musncy programs to home visitation and after-school programs.

In spite of the phenomenal growth in the number of funded Weed and Seed sites from 36 to over 200 in the last 4 years, the demand for new sites continues unabated. In 1998, 69 communities filed requests for Official Recognition of their Weed and Seed strategy Funding limitations allowed DOJ to offer 1999 funding to only 25 of those sites. Jurisdictions from across the nation are requesting participation and assistance far exceeding our resources and capacity to respond. Driving this demand is the growing recognition that programs that offer partnerships with residents in troubled neighborhoods and that also provide flexible funding to support neighborhood-based strategies work best in helping to reduce crime and restore neighborhoods.

Of the \$8.5 million requested, \$6.5 million will be used to replace supersurplus asset forfeiture funds with appropriated funds. This will return the program to reliance on the appropriation process rather than uncertainty of dependence on supersurplus asset forfeiture funds.

The remaining \$2 million will be used to enhance data collection and performance assessment capacity so that existing sites can evaluate the effectiveness of their Weed and Seed strategies. Locally collected data can be very useful to sites in helping them identify what is working and what is not, so that it can be corrected or duplicated. EOWS is working with the National Institute of Justice to design this new element of the program so that it can provide credible ethnographic documentation of local Weed and Seed experience which will lead to improvements in performance measurements. At the same time, the General Accounting Office (GAO) has prepared a report that discusses ways the Weed and Seed Program could improve measuring the progress of Weed and Seed sites. As a result of both the GAO findings and the work it has completed with NID on improving performance measures, EOWS proposes to (1) his sites improve their capacity to do small-scale evaluations by providing technical assistance (\$500,000) and (2) look at 22 different variables, such as household income, truancy rates, new business start-ups, home uwnership, unemployment, out-of-wedlock births and other measures to get a better sense of the impact the Weed and Seed Program has had at its 200 sites (\$1.5 million).

Rather than having sites perform impact evaluations, which can cost almost the same as the average grant award (\$200,000 versus \$260,000), EOWS will help sites improve their capacity to do small-scale evaluations. The \$500,000 requested would be used to provide technical assistance and the actual evaluations would be funded from the grant award amount. In addition, the remaining \$1,500,000 would be used for data gathering efforts. The 22 different variables will be collected by a contractor.

One additional staff person will be required to compile the data collected by the contractor and work with this data and with EOWS program monitors to determine what progress is being made at sites and determine whether site programs should be modified in light of information gained from the data collected.

PERFORMANCE MEASUREMENT TABLE BY PROGRAM.

PROGRAM/ORG UNIT: Executive Office for Weed and Seed (EOWS) (Base Program)

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal. State and Local Governments

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.3) Support impositive, community-based strategies anned at reducing crime, delinquency and violence in our communities

ANNUAL PERFORMANCE GOAL: (2.3.2) Ensurage community-based approaches to crime and justice at the state and high fevel.

MISSION: To provide grant funding to communities to high develop and implement compensative transplantation and evident crime, drug and gon trafficking, and gas gardenly and "seed" the neighborhood with programs that achieves and maintain crime prevention and committee transplantation.

- A. Definitions of Terms or Explanations for Indicators and Other Data Sources: TBD (In Sc Determined
- Actual appropriations include carryover and. Super Surplus Asset Portesture.
- B. Issues Affecting 1999 Program Performance.
- ** GPRA data category revised for FY 1999, law enforcement data reported in FY 1999 reflects 1-Y 1998 performance. For end outcomes #5 and #8, approximately \$04 iii stee reported. Data is unavailable from new sites.
- *** These data will be available with sites' FY2000 funding applications, expected May 2000.

In 1999, \$33.5 mix ion was appropriated and \$6.5 million in Super Surplus of the Assert Orterand Lanc (ALL) two provided to Weed and Seed. Within DO), other tending sources have included the Discourse Office for U.S. Attorneys, the Eureur of Justice Associated Systection Program, and Assert Forfetting Lands under 28 UM; \$2.4cgc(pt) (approximately \$6 million in 1994 and \$9 million in each year thoreafter). A variety of factors beyond the control of the federal government may affect performance indicators, for example, fixed capacity and communication in injuries the program; and occretal trends of a regional or national indice.

- C. Latues Affecting Selection of 2000 and 2001 Plans.
- In 2000, funding sources include the appropriated amount of \$33.5M. As in years pass, plan to receive additional lumping of \$6.5M to Super Surplus of the AFF.
- In 2001, \$42 million is requested as a direct appropriation. The typical level of site funding as of 1997 and thereafter is approximately \$200,000 \$300,000 per site, disks from \$750,000 per site for the original demonstration sites. This reflects a program decision in special program resources over a larger number of sites. Also note that most sites awards are made toward the end of the fixed year, so that outcomes will extend into the subsequent liked year.

The NB impart evaluation final report and the GAO findings have assisted EOWS in improving data collection efforts. Of the \$8.5 million enhancement requested for 2001, \$2 million will be used to enhance data collection and performance assessment capacity so that causing sites can evaluate the effectiveness of the Weed and Seed strategies. EOWS with help sites improve their capacity to do small-neal evaluations by providing technical essistance and examine 22 different variables, such as household income, truspey rates, out-of-weellock brichs and other measures to get a better sense of the impact the Weed and Seed program has had at its over 200 sites.

D. Validation and Verification. EOWS validates and verifics performance measures through a review of progress reports submitted by grances; telephone contact, and onsute monitoring of Manager's performance by grant program managers.

II. BREAKING THE CYCLE OF SUBSTANCE ABUSE AND CRIME

A. Summary Performance Plan - Component Mission and Goals, and Relationship to DOJ Strategic Plan

The inextricable link between substance abuse and crime is well established by research. For example, studies indicate that over 60 percent of arrestees coming into the criminal justice system test positive for drugs, and that some 80 percent of incarcerated offenders have been involved in some form of substance abuse. Most importantly -- from our research and evaluation activities -- we now know many things that can be done to break that cycle of substance abuse and crime. As it is OIP's mission to help "break the cycle," this initiative builds on proven successes to expand existing Department efforts to address both adult and youth drug use, and to address the frequently overlooked problem of alcohol and crime and drug abuse in the offender population.

All program increases identified under this initiative support the DOJ goal of providing Assistance to Tribal, State and Local Governments

B. NEW INITIATIVES

	Pos	FTE	<u>Amount</u>

Community Demonstration On Alcohol and Crime (State & Local Assistance)	2	1	1,500,000
OJJDP Drug Prevention Demonstration (Juvenile Justice)	Q	<u>Q</u>	[10.000.000]
Total, Breaking the Cycle of Substance Abuse and Crime	28	14	\$93,500,000

The Office of Justice Programs (OJP) requests \$93.5 million in resources for the following programs included in the Breaking the Cycle of Substance Abuse and Crime Initiative:

1. Arrestee Drug Abuse Monitoring System (ADAM) - \$5 million and 2 positions are requested to complete the development of the ADAM program and bring the total funding level to \$11.7 million. This funding is needed to: continue expanding coverage of ADAM to an additional 15 sites to reach the turgeted level of 50; ensure that outreach data collection in rural, suburban and tribal is conducted from each site, initiate regional training meetings; initiate testing for new drugs that are costly to detect (such as inhalants and LSD); and to ensure that juvenile data collection is expanded to as many of the 50 sites where access to juvenile detainees can be obtained (estimated to be 12).

See related base program information under the Justice Assistance Account, Research, Evaluation, and Demonstration Program, beginning on page 11.

- 2. "Stop Drugs and Stop Crime" Initiative The following three cohancements totaling \$87 million along with ONDCP's \$25 million are requested under this initiative for a total enhancement of \$87 million:
 - -Zero Folerance and Drug Intervention Initiative \$75 million and 20 positions are requested for this drug testing and intervention initiative of which \$10 million will be targeted towards an Indian drug testing program. In addition, \$25 million will be directed to the Offender Recentry Initiative which is highlighted under the Community Justice Initiative. Planning grants of up to \$50,000 will be available for those tribal, state, and local jurisdictions interested in implementing comprehensive drug testing and corresponding interventions. These funds will also provide extrainal justice agencies and Indian tribes grant funding for implementation, and enhancement of comprehensive drug treatment programs; training and technical assistance; and program evaluation.
 - -Residential Substance Abuse (RSAT) Treatment Program OIP requests a \$2 million enhancement to RSAT, bringing the total program level to \$65 million. The RSAT program, which is administered by the Corrections Program Office (CPO), provides formula grants for use by state and local governments to develop and implement residential substance abuse treatment programs within state and local correctional and detention facilities where immates are incarecrated for sufficient time to permit substance abuse treatment, typically 6 12 months. The demand for RSAT treatment services is tremendous and this increased level of funding will address only a small fraction of the need.

See related base program information under the State and Local Law Enforcement Assistance Account beginning on page 72.

--Drug Courts - OJP requests an enhancement of \$10 million and 4 positions for the Drug Courts Program, bringing total funding to \$50 million. This enhancement will be used as follows (1) \$2 million is for the Dependency Court System's Response to Child Abuse and Neglect Initiative -- see the Building Knowledge Initiative and (2) \$8 million will be used to establish 12 new drug courts, assist 8 additional communities in planning a drug court, provide the additional training and technical assistance needed for the new grantees, and further the national evaluation of drug courts.

Drug Courts leverage the coercive power of the criminal justice system to achieve abstinence and alter criminal behavior through the combination of judicial supervision, treatment, drug testing, incentives, sanctions, and case management. The Drug Courts Grant Program offers grants to jurisdictions to plan, implement or enhance drug courts

See related base program information under the State and Local Law Enforcement Assistance Account beginning on page 84.

- 3. Community Demonstration On Alcohol and Crime The Office of Justice Programs requests \$1.5 million and 2 positions for this initiative. In addition, OJP wilk direct \$3 million from existing Byrne Discretionary funds to bring the total program to \$4.5 million. These funds will be used to develop and implement a national demonstration initiative to assist communities in breaking the link between alcohol abuse and crime and will provide a comprehensive community-level enforcement and prevention program aimed at combating underage drinking, drinking and driving, and alcohol-related crimes. Of the total, \$2.25 million will be used to support and evaluate approximately 7 community demonstration projects: \$750,000 will be used to disseminate information to communities and practitioners on what practices identified to date already work to effectively deal with alcohol abuse; \$500,000 is for BJS to test and implement a series of supplemental questions for victim respondents to the National Crime Victimization Survey (NCVS) on their use of alcohol and drugs at the time of the victimization incident; and \$1 million is for NIJ to develop a program of study to better understand the link between alcohol abuse and crime.
- 4. OJJDP Drug Prevention Demonstration The Office of Juvenile Justice and Delinquency Prevention (OJJDP) requests \$10 million be made available through existing OJJDP's Title V funding, for the Drug Prevention Demonstration Program. The Administration has identified juvenile substance abuse as one of the most critical areas of concern related to juvenile delinquency, with the country experiencing significant increases over the past six years. OJJDP will use these resources to increase the perception among children that substance abuse is risky, harmful and unattractive. These resources will fund up to 280 new sites and reach approximately 280,000 middle/junior high school students. OJJDP will use the Life Skills Training program to demonstrate effective drug prevention methods. This program has been through extensive process and outcome evaluation, shown sustained successful outcomes over time, and been successfully replicated. It targets middle/junior high school (6th, 7th, and 8th grade) adolescents in urban, rural, and tribal jurisdictions. In studies involving more than 180 suburban and urban schools, grades 7-12, diverse populations of youth, various substance abuse issues -- and with long-term follow-up for up to six years -- the Life Skills program has generally documented initial reductions of fifty percent in youth alcohol, tobacco, and marijuana use, along with a sustained impact.

See related base program information under the Juvenile Justice Account

C. BREAKING THE CYCLE OF SUBSTANCE ABUSE AND CRIME - PROGRAM INITIATIVES

In 1999, the ADAM program achieved several major successes. Project staff developed a new interview instrument that will generate important, policy-relevant information not available from any other source. With the new instrument, which will be fielded in calendar year 2000, local governments will be able to estimate the need for treatment and levels of dependence among the arrestees and will be able to track important changes in drug market operations in their communities. Also in 1999, ADAM staff published the 1998 annual report on drug use among arrestees, four reports on drug use (cocaine, opiates, methamphetamine and marijuana) that provided detailed information about trends in drug use, a report that compared C. S. and English drug use rates, and a detailed study of methamphetamine purchase and use patterns in 5 Western sites. NIJ also provided technical assistance to governments and institutions in 6 foreign countries (Australia, Chile, England, Netherlands, Scotland, and South Africa) that funded their own ADAM-like programs. Finally, project staff, in collaboration with the Centers for Disease Control and Prevention, developed a supplemental interview instrument to explore the extent to which arrestees undertake behaviors that raise their risk of contracting sexually transmitted diseases. When this project is complete, the information will be used to advise correctional staff on the health risks that the arrestee population poses to them in their work.

Also in 1999, ADAM awarded 4 important research grants. A grant to the University of Oklahoma will be used to study the cooccurrence of alcohol and drug use and Intimate Partner Violence among male and female arrestees. A second grant awarded to the
San Diego Association of Governments will be used to compare the victimization of female offenders to victimization among
homeless women. A third grant awarded to the University of Las Vegas-Nevada will be used to study the prevalence of pathological
gambling and the relationship of substance abuse and gambling among offenders. A fourth grant awarded to the University of
California at Los Angeles, Drug Abuse Research Center will be used to propose methods for using ADAM data to estimate national
drug use trends.

ADAM staff also initiated an intramural evaluation project of a jail-based domestic violence treatment program in California. This study will follow offenders over time and allow the community to determine if its specific jail programming has an impact on domestic violence recidivism. Finally, NIJ collaborated with the U.S. Attorney in Nebraska and the COPS office to pilot test the outreach data collection component in rural Nebraska. Initial results indicate that drug use, particularly methamphetamine use, is substantial in some rural communities. The information gathered will be provided to the U.S. Attorneys and service providers.

In 2001, OJP requests \$5 million for NIJ to complete the development of the Arrestee Drug Abuse Monitoring program as originally planned.

This funding is needed to:

- continue expanding coverage of ADAM to an additional 15 sites to reach the targeted level of 50;
- to ensure that outreach data collection in rural, suburban and tribal is conducted from each site;
- to initiate regional training meetings;
 to initiate testing for new drugs that are costly to detect (such as inhalants and LSD); and
- to ensure that juvenile data collection is expanded to as many of the 50 sites where access to juvenile detainees can be obtained (estimated to be 12).

ADAM is designed to provide key substance abuse data in communities across the country. While ADAM sites are selected from among the most populous counties (generally population greater than 200,000), other factors are considered including the capacity of the site for compelling "outreach" data collection to suburban, rural, and/or Indian Country arrestee samples; the need for a network of sites that can provide a platform for analysis of national and regional drug trends; local demand for the data and demonstrated ability to maximize the utility of the data; and compliance with certain data collection parameters such as access to arrestees, assurances of interview data privacy, and specimen collection facilities.

Increasing the number of sites will allow the program to pursue two important but disting goals with respect to population coverage. Instead of relying solely on a national sample that cannot provide insights for specific communities, additional ADAM sites will expand the ability to directly inquire into drug problems within these additional cities. The capability to look at drug use at the local level was the most important contribution made by the predecessor to ADAM, NID's former Drug Use Forecasting (DUF) program. It is now better understood how different kinds of drugs are abused and that patterns of use vary tremendously from one region of the country—and even one city—to the next. For example, the growing phenomenon of methamphetamine use in the West became apparent through the DUF program while other systems have only recently started to register the trend. Current increases in heroin use attong young people being seen it. ADAM samples may not register in a national sample for many years. Heroin is a drug that appears

to be particularly susceptible to local conditions and needs to be monitored throughout the U.S. Expansion to the next 15 sites, largely Eastern U.S. cities, will be critical for monitoring this serious problem. At the same time, the addition of ADAM sites will enable the program to better support estimation processes of national level drug use that are in development. With national coverage, the value of the program will be multiplied greatly when, along with providing data for the majority of large U.S. cities, data can be generalized to the entire population.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

INITIATIVE: Breaking the Cycle

PROGRAM/ORG UNIT: Arrestee Drug Abuse Mosilloring (ADAM) Program/National Institute of Justice DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribul, State and Local Government

DEPARTMENT OF JUSTICE STRATEGIC GOAL; (2.1) Improve the crime fighting and criminal juvenile justice system capabilities of tribal, state and local governments. ANNUAL PERFORMANCE GOAL: (2.1.1) Research and Evaluation

MISSION: To address directly the relationship between drug use and criminal behavior by providing drug use communes based on urinally us results which convey noticey-relevant information to local, state and federal decision-makers

A. Definitions of Terms or Explanations for Indicators and Other Data Sources:

The ADAM instruments focus on the detection of 5 drugs highlighted for prevalence measurement by the National Institute on Drug Abuse: opiates, creating, marijuana, PCP, and methamptecannines. The urinalysis (esting component, however, provides the capacity to less for any controlled or other substances capable of detection through urinalysis, such as a variety of pharmaceuticals, halfuc inogens, anti-depressants, and alcohol.

Indicator #7 - Target number of sites collecting juvenile data is variable due to the fact that burnant subjects review committees, juvenile detention facility manager, and/or state laws that not permit juvenile (miting at all sites.

⁻ Indicator #8 refers to the local policy collaboratives that help "twenk" the testing programs to adjust to local conditions and needs. It usually, but not always, should parallel the number of sites receiving quality control technical assistance.

The following three enhancements along with ONDCP's proposed \$25 million criminal justice treatment program fall under the Administration's "Stop Drugs and Stop Crime" Initiative

\$75 million and 20 positions are requested for a drug testing and intervention initiative of which \$10 million will be targeted for Indian drug testing programs. In addition, \$25 million will be directed to the Olfender Reentry Initiation which is highlighted under the Community Justice Initiative. The Zero Tolerance and Drug Intervention Initiative will provide criminal justice agencies and Indian tribes grant funding for planning, implementation, and enhancement of comprehensive drug treatment programs, training and technical assistance; and program evaluation. This initiative along with OJP's existing drug prevention programs — Drug Courts and the Residential Substance Abuse Treatment Program — and ONDCP's proposed \$25 million criminal justice treatment program fall under the Administration's "Stop Drug and Stop Cirme" Initiative.

Under the coercion of the criminal justice system, systematic drug testing is an important tool for criminal justice agencies concerned with controlling drug abuse among the offender population. Research has shown that when drug testing is combined with effective interventions, such as meaningful, graduated sanctions, drug use can be curtailed within the criminal justice population. Further, recent studies demonstrate that drug dependent individuals who receive comprehensive treatment, decrease their drug use, decrease their criminal behavior, increase their employment, improve their social and interpersonal functioning, and improve their physical health. Moreover, when compared to substance abusers who voluntarily enter treatment, those coerced into treatment through the criminal justice system are just as likely to succeed. Since the majority of drug users are processed through some part of the criminal justice system during their drug use careers, it makes sense to consider that system as a location for intervention.

The Drug Treatment Outcomes Study (DATOS), sponsored by the National Institute on Drue Abuse, examined 3,000 clients in 11 cities in four types of community-based drug treatment—outpatient methadone, long-term residential facilities, out-patient drug free programs, and short -term inpatient programs, principally detaxification programs. About 35 percent of those in the long-term and outpatient programs were criminal justice referrals. The final analysis on 3,000 subjects reassessed 12 months after leaving treatment were very encouraging. The researchers found that both long-term residential and outpatient drug-free programs led to significant decreases in illegal activity. Drug use after treatment also decreased in both types of programs, especially for those who were treated for at least 90 days—with criminal justice supervision increasing the likelihood of an individual's stay beyond the 90-day mark.

Moreover, studies suggest that, not only do treatment interventions work, but that they are cost-effective. In 1994, the RAND Corporation reported that drug treatment is the most cost-effective drug control intervention. Another 1994 study examined CALDATA, a comprehensive drug and alcohol treatment program in California, and concluded that for every dollar invested in drug treatment, taxpayers saved \$7. This savings was attributable to decreased use of drugs and alcohol and the resulting reduction in costs related to the crime and health care.

Rigorous evaluations of a number of prison-based therapeutic communities around the country--Stay'n Out and KEEP in New York. Cornerstone in Oregon, Amity Prison TC in California. Key Crest in Delaware, the Texas Initiative, the Florida comprehensive drug treatment program and TASC-have all shown both reduced drug use and reduced criminal behavior after the offender is released from prison. These studies also show that when we combine prison-based therapeutic community-style treatment with post-release supervision and follow-up treatment the reductions in drug use and entitial activity are even greater.

Thus, based on research and experience, we have the building blocks to support a national effort aimed at drug testing, treatment, and graduated sanctions for those individuals under criminal justice supervision. First, a significant portion of our national drug consumption is attributable to individuals arrested and placed in the custody of our criminal justice system. Second, over half of those arrested are drug users and, therefore, candidates for some sort of intervention. Third, interventions under criminal justice coercion and control have the effect of significantly reducing drug use and criminal behavior

The \$50 million request for the Zero Tolerance and Drug Intervention Initiative will be used as follows:

\$40 million will be used for planning and building block grants of which \$10 million will be for Indian programs. Planning grants of up to \$50,000 will be available for those tribes, state, and local jurisdictions interested in implementing comprehensive drug testing and corresponding interventions and are in the early stages of development. Building block grants of up to \$500,000 will be offered to jurisdictions that have demonstrated a commitment to furthering a system-wide strategy of universal drug testing combined with treatment interventions and graduated sanctions for failure to comply. For example, a jurisdiction may use this funding to purchase drug testing equipment to move to universal testing; to develop and implement a management information system that would allow the judge to instantly view the offender's drug and arrest history, or to create a treatment referral and readiness system in the jails. For both planning and building block grants, juvenile and adult systems would be eligible.

Many jurisdictions have considerable experience with drug testing and treatment interventions, but much more needs to be done to encourage and assist criminal justice agencies to adopt and implement (on a broad scale) new, comprehensive drug testing policies and practices with regard to their arrestee and offender populations. For the most part, jurisdictions have been

constrained by limited resources in achieving the advantages of enhanced testing and intervention efforts for drug abusers. In addition, some jurisdictions have lacked information on the most recent research and findings and "best practices" already shown to be effective in certain sites. This funding will provide state, local and tribal criminal justice agencies grant funding for planning, implementation and enhancement of comprehensive drug treatment programs; training and technical assistance; and program evaluation.

- \$5 million is requested for technical assistance and training. An information packet that describes the objectives of a comprehensive drug testing program will be produced and used for a training and technical assistance program. This packet is based on research findings that support successful interventions. Among the topics to be highlighted will be: developing appropriate responses to positive drug tests, including the use of graduated sanctions; the use of confirmation tests for drug positives; and brokering treatment services through the court. Training will be directed to a variety of key players in the criminal and juvenile justice system, including state courts, the prosecution and defense bar, pretrial service agencies, corrections and probation and parole authorities
- \$5 million is requested for program evaluation. Evaluation resources would be devoted to documenting innovative program models and evaluating the two-year impacts of funded initiatives. Every effort will be made to develop comparable information across clusters of similar programs. A small amount of resources will be used to analyze the implementation process, including difficulties encountered by sites. A central theme of this assessment will be the challenges posed by implementing system-wide coordination and resource sharing. A multi-site impact evaluation of the funded jurisdictions will also address several behavioral issues including: (1) effectiveness of the various interventions on reducing drug abuse and subsequent criminality, (2) the differential effectiveness of various testing, graduated sanctions, and treatment combinations; and (3) the effectiveness of using various treatment modalities and the severity of drug addiction problems encountered.

Residential Substance Abuse Treatment (RSAT) Program. \$2,000,000

OJP requests a \$2 million enhancement to the RSAT Program, bringing the total funding level to \$65 million. The RSAT program is administered by the Corrections Program Office (CPO). RSAT funds are awarded to the states to assist them in implementing and enhancing residential substance abuse programs unat provide individual and group treatment activities for offenders in residential facilities operated by state and local correctional agencies. These programs must:

Last between 6 and 12 months. Each offender must participate in the program for not less than 6 nor more than 12 months, unless he or she drops out or is terminated.

- Be provided in residential treatment facilities set apart from the general correctional population. Set apart means a totally separate facility or a dedicated housing unit within a facility exclusively for use by program participants.
- Focus on the substance abuse problems of the inmate.
- Develop the inmate's cognitive, behavioral, social, vocational, and other skills to solve the substance abuse and related problems.

The demand for RSAT treatment services is tremendous and this increased level of funding will address only a small fraction of the need. According to the Bureau of Justice Statistics (BJS), at least 80 percent or approximately 980,000 of the 1.4 million immates in state prisons used drugs before incarceration. Further, about one in six reported committing their current offense to obtain money for drugs.

In 2001, approximately 22,000 offenders are projected to receive RSAT treatment services from approximately 130 programs. The additional \$2 million will support an additional 700 offenders and 10 additional programs will be initiated. All 56 states and territories are expected to continue to apply for and receive RSAT grant funding. CPO has streamlined the application process so that grant awards can be made no later than 30 days after the application deadline. CPO will continue to provide technical assistance to states through workshops and conferences. These workshops and conferences will provide approximately 800 policy makers and practitioners with intensive training on the essential elements of effective treatment programs, with a goal of increasing the likelihood that treated offenders will remain drug free and crime free.

Recent research and evaluations show consistent reductions in drug use and recidivism for offenders completing treatment programs. To allow states to provide the comprehensive programs needed to appropriately treat inmates with substance abuse problem, language is proposed to enable states that have existing in-prison drug treatment; ograms, which comply with federal requirements, to use their RSAT grants to fund a full continuum of drug treatment, which includes treatment and sanctions, during both incarceration and reentry into the community following release.

\$10 million and 4 positions are requested for the Drug Courts Program, bringing the total funding level for this program to \$50 million. Drug courts are a community based response to the increasing numbers of nonviolent, alcohol, and other drug abusing offenders who contribute to the pervasive problems of prison and jail overcrowding and who maintain a high rate of recidivism. \$2 million of the \$10 million request will be used to help fund the Dependency Court System's Response to Child Abuse and Neglect Initiative (see the Building Knowledge Initiative). Drug courts leverage the cocroive power of the criminal justice system to achieve

abstinence and alter criminal behavior through a combination of judicial supervision, treatment, drug testing, incentives, sanctions, and case management.

Since its inception, the Drug Courts Program Office (DCPO) has assisted more than 400 communities in the plothing, implementation, or enhancement of drug courts. In addition, DCPO has provided technical assistance through an established Mentor Court Network, which provides jurisdictions in the planning stages with drug court mentors near their jurisdictions.

Of the total request, \$8 million will be needed for the DCPO to establish 12 new drug courts, assist 8 additional communities in planning a drug court, provide the additional training and technical assistance needed for the new grantees, and further the national evaluation of drug courts. While the Drug Courts Program has grown in size since its inception, there is still insufficient funding to award grants to all qualified applicants. As interest in the program increases, the need for technical assistance grows exponentially. DCPO plays a critical role in providing information, resources and training on the key components of a drug court. Technical assistance and training stimulate interest in drug courts in general, provide tools for interested communities to properly plan for the creation of a drug court, and include an emphasis on sustainability with non-federal funds. While many courts and treatment providers are interested in the drug court concept, they may have little experience with the fundamental changes required to implement this approach to managing offenders. Furthermore, court administrators and judges often have difficulty developing their capacities for data collection and program evaluation. These are issues that can best be addressed through training and technical assistance to promote and support best practices in the development, implementation, evaluation and institutionalization of drug courts.

In 2001, DCPO is requesting 4 additional positions to support the drug court program. Of these 4 positions, 2 positions would be grant program managers to monitor the increased volume of grants. By the end of 1999, each DCPO program manager will monitor an average of 70 grants. DCPO anticipates that in 2001 the grant load will exceed 90 grants per program manager -- a 20 percent increase. DCPO is not able to effectively monitor this volume of grants without 2 additional positions. Currently grant managers are traveling an average of twice a month to monitor grants on-site and at training programs, writing monitoring reports as a result of on-site monitoring visits, processing grant adjustments, conducting quarterly desk reviews of grants (the original goal was monthly), reviewing an average of 40 new applications for funding, participating in OJP working groups, and participating in external working groups on drug courts. To manage their work loads, staff frequently work weekends and evenings. In the first six months of 1999, staff members have each worked a minimum of 140 hours of overtime.

The remaining 2 positions would manage the training and technical assistance program. DCPO greatly expanded its training and technical assistance program in 1999 to meet the needs of the drug court field. DCPO is now working with 10 organizations to provide training and technical assistance to grantees (previously there were only 3 organizations). Training and technical assistance continue to be a significant need in the drug court field and are a critical component of DCPO because training and technical assistance build capacity at the local level. Staff working on the training program are also frequently working weekends and evenings in order to manage the program.

3. Community Demonstration on Alcohol and Crime S1,500,000
Fording from Existing Byrne Discretionary Grant Program [53,000,000]
According to a 1998 report by the National Center on Addictions and Substance Abuse at Columbia University, "Behind Bars: Substance Abuse and America's Prison Population," drug and alcohol abuse and addiction are involved in the incarceration of 80 percent of offenders behind bars. Moreover, the report finds that alcohol is more closely associated with violent crime than any illegal drug.

This inextricable link between alcohol abuse and crime--particularly violent crime--was highlighted at the April 1998 OJP-sponsored Symposium on Alcohol Abuse and Crime. Participants mer for a three-day period to share current knowledge of the relationship between alcohol abuse and crime in all of its dimensions, and to provide advice and guidance to OJP regarding how it can best provide support to ongoing and emerging efforts to reduce alcohol-related crime and its consequences in communities across this country.

The total funding level for this initiative will be \$4.5 million: \$1.5 million in new funding plus \$3 million from existing Byrne Discretionary program funds. The Community Demonstration on Alcohol and Crime Program will provide funding for comprehensive community-level enforcement and prevention programs for both juveniles as well as adults.

The total program level of \$4.5 million for this initiative will be needed for the following:

\$2.25 million will support and evaluate approximately 7 community demonstration projects. By awarding grants totaling \$1.75 million to 7 sites (\$250,000 per site), OJP's initiative will develop a comprehensive community-level enforcement and prevention program aimed at combating alcohol abuse by adults, underage drinking, drinking and driving, and alcohol-related crimes so that the line between alcohol abuse and crime can be broken. Communities will determine their needs and the most efficient and effective interventions to combat alcohol abuse and related crimes. The additional \$500,000 will be used for evaluation of these sites. A special emphasis will be placed on communities in rural areas and Indian country, where alcohol abuse is a special problem.

\$750,000 will be used to develop and disseminate information to communities and practitioners on best practices that effectively deal with alcohol abuse. The Community-Based Responses and Initiatives Working Group of the April 1998 OJP-sponsored Symposium on Alcohol Abuse and Crime identified some current practices and knowledge regarding the ways in which communities have focused on alcohol abuse. This Working Group agreed that there were some common strategies across communities that could be emulated in a wide range of situations and settings and that this information needs to be shared with communities and practitioners as they mobilize their efforts to deal with drug abuse. As we learn more from the 7 demonstration sites, additional information will be available.

5500,000 is requested for the BJS to test and implement a series of supplemental questions for victim respondents to the National Crime Victimization Survey (NCVS) on their use of alcohol or drugs at the time of the victimization incident in order to establish a

data source for alcohol related issues. This information will complement data that is currently collected on offenders both through inmate self-reports and victims' perceptions of offender drug and alcohol use, as well as available national data on substance use obtained through national household surveys and surveys of high school and college students.

\$1 million is requested for the NIJ to develop a program of study to better understand the link between alcohol abuse and crime. The Department of Justice is responsible for addressing interpersonal violence, crime, and threats to public safety. When the role of alcohol abuse is considered within the study of crime, other federal agencies have expertise that is valuable to the effort. NIJ will execute a government-wide strategic plan, building on OJP's work to date as well as on the extensive research already carried out on alcohol abuse and alcoholism and substance abuse prevention and treatment that have come from Health and Human Services agencies. NIJ's program of study will directly address issues around the reduction of violent crime, which is unique to DOJ's mandate

To support approximately 7 community demonstration programs and disseminate information, two additional professional staff are required to oversee program development, administration, monitoring and evaluation. In addition, these two staff members will be responsible for coordinating sites technology transfer, technical assistance delivery, and disseminating information.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

INITIATIVE: Breaking the Cycle

PROGRAM/ORG UNIT: Community Demonstration On Acobol and Crime/ Office of the Assistant Attorney General

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tobal, State and Local Government

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.3) Support innovation, community-based strategies aimed at reducing crimic delinquency and violence in our communities

ANNUAL PERFORMANCE GOALs (2-3-2) DOI will continue to encourage community based approaches to crime and justice at the state and local level.

MISSION: To provide assistance in developing and implementing a national deconstration intentive, to assist entireliants in breaking the link between alcohol above and crisine and will provide a comprehensive community-level entorcement and prevention program amid at combiting underage drinking, drinking and driving, and alcohol-critical crimes.

D. Validation and Verification: These measures will be validated and verified through a review of various, polydone of necess reports from the data collection areas.

The Administration has identified juvenile substance abuse as one of the most critical areas of concern related to juvenile delinquency. with the country experiencing significant increases over the past six years. The Drug Prevention Demonstration Program is designed to develop, demonstrate and test programs to increase the perception among children and youth that drug use is risky, harmful, and unattractive. OJJDP recognizes the relationship between substance abuse and delinquency, and has thus promoted a rational framework for preventing and responding to adolescent problem behavior that is substantiated by years of research on risk-focused prevention (Hawkins, Catalano, & Miller, 1992). While the following plan is designed to provide communities with a structure to develop and evaluate their proposed substance abuse reduction program, it also provides the necessary latitude to enable them to meet their own specific and unique substance abuse reduction needs.

The 2001 Drug Prevention Demonstration Program total request is \$20 million. The requested \$10 million increase will be made available through existing OJJDP's Title V funding and will be used in conjunction with the existing \$10 million in base Drug Demonstration resources. \$20 million in resources will fund up to 280 new sites, which will serve approximately 1,000 middle/junior high school students per site. A total of 280,000 students will be reached at a cost of approximately \$70 per student and will provide training and technical assistance and support a process evaluation of the 140 currently funded sites as well as the initiation of the 280 new site evaluations.

The Drug Prevention Demonstration Program builds upon previous work in the area of juvenile drug prevention. The Center for the Study and Prevention of Violence (CSPV) at the University of Cotorodo, funded by the Carnegie Comoration, developed Blueprints for ten exemplary violence prevention programs (funded with support from the Colorado Division of Criminal Justice, the Center for Disease Control and Prevention, and the Pennsylvania Commission on Crime and Delinquency). In consultation with an Advisory Board, the Blueprints were used to establish programs based on the following set of evaluation standards: (1) strong research design. (2) evidence of significant deterrence effect, (3) sustained effects, and (4) multiple site replication. The Blueprints provide step-by-step instructions that will help communities plan and implement youth crime and violence prevention strategies. OJJDP recognizes the importance of evaluation and has chosen a program model to replicate from the Blueprints project that focuses on drug prevention. The program, Life Skills Training, resulted from CSPV's search for effective drug prevention programs to combat crime and violence. This program will target middle/junior high school (6th, 7th, and 8th grade) young adolescents in urban, rural, and tribal jurisdictions. While this model has been tested in a number of jurisdictions, the Drug Prevention Program will foster the replication in more and diverse types of jurisdictions. The following is a brief summary of the program and highlights of its extensive evaluation.

Life Skills Training

The Life Skills Training program is a drug abuse prevention program that is based on an understanding of the causes of smoking, alcohol, and drug use/abuse. The Life Skills Training intervention has been designed so that it targets the psychosocial factors associated with the onset of drug involvement. With this in mind, the program impacts on drug-related expectancies (knowledge, attitudes, and norms), drug-related resistance skills, and general competence (personal self-management skills and social skills). Increasing prevention-related drug knowledge and resistance skills can provide adolescents with the information and skills needed to develop anti-drug attitudes and norms, as well as to resist peer and media pressure to use drugs. Teaching effective self-management skills and social skills (improving personal and social competence) offers the potential of producing an impact on a set of psychological factors associated with decreased drug abuse risk (by reducing intra-personal motivations to use drugs and by reducing vulnerability to pro-drug social influences).

More than one and a half decades of research with the Life Skills Training program have consistently shown that it can cut drug use in half. These reductions (relative to controls) in both the prevalence (i.e., proportion of persons in a population who have reported some involvement in a particular offense) and incidence (i.e., the number of offenses which occur in a given population during a specified time interval) of drug use have primarily been with respect to tobacco, alcohol, and marijuana use. These studies have demonstrated that this prevention approach can produce reductions in drug use that are long-lasting and clinically meaningful. For example, long-term follow-up data indicate that reductions in drug use produced with seventh graders can last up to the end of high school. Evaluation research has demonstrated that this prevention approach is effective with a broad range of students including white, middle-class youth, and poor inner-city minority (black and Hispanic) youth. It has not only demonstrated reductions in the use of tobacco, alcohol, or marijuana use of up to 80 percent, but evaluation studies show that it also can reduce more serious forms of drug involvement such as the weekly use of multiple drugs or reductions in the prevalence of pack-a-day smoking, heavy drinking, or episodes of drunkenness.

A substantial base of knowledge has been developed about juvenile substance abuse prevention programs. There are few of these prevention programs that have been tested as thoroughly as the Life Skills Training program. OJIDP selected this program model based on consultations with the Department of Education (DOE) and the National Institute on Drug Abuse (NIDA). In studies involving more than 180 suburban and urban schools, grades 7-12, diverse populations of youth, various substance abuse issues--and with long-term follow-up for up to six year --the Life Skills program has generally documented initial reductions of fifty percent in youth alcohol, tobacco, and marijuana use, along with a sustained impact. There is no doubt that the program can be successfully replicated. Our challenge will be to ensure that the integrity of the program design is maintained so that similar positive outcomes will be achieved in additional communities. In summary, there will always be much to be learned, but we should not fail to seize the opportunity to replicate to foll-scale implementation that which will make a difference on juvenile substance abuse in this country.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

* In addition to the \$10 million appropriated for the Drug Prevention Program, there is an additional \$10 million from the At-Risk Children's Program, bringing the total to \$20 million for Fiscal Year 2001

B. Issues Affecting 1999 Program Performance, N/A

C. Issues A flecting Selection of 2808 and 2801 Plans. The Office of Javenile Justice and Delinquency Prevention (OJIDP) requests \$10 million be made available through existing OJIDP's Title V funding. for the Drug Prevention Demonstration Program. The Administration has identified juvenile substance as one of the most critical areas of consern related to juvenile delinquency, with the country experienceing signify any receive over the QMI stylets.

D. Velidation and Verification.

Implementation of performance measures will be validated and ventiled through a review of progress reports submitted by grantees, telephone contact, and onsite monitoring of anothers, performance by a program distincts.

III. COUNTERTERRORISM INITIATIVE

A. SUMMARY PERFORMANCE PLAN - Component Mission and Goals, and Relationship to DOJ Strategic Plan

An unstable geopolitical world has created a significant threat to the United States from international and domestic terrorism — a threat that the U.S. Congress formally recognized with the 1996 enactment of the Anti-Terrorism and Effective Death Penalty Act. As a result, a comprehensive domestic preparedness initiative is underway which coordinates the resources of federal, state, and local agencies. While the federal government plays an important role in preventing and responding to terrorist threats, the state and local public safety community are the first responders on the scene. These first responders need the most comprehensive training and support available to combat terrorist attacks, especially those involving weapons of mass destruction (WMD), such as chemical, biological and nuclear weapons. Most state and local governments lack the specialized equipment and expertise needed to effectively respond to terrorist attacks. Federal leadership in counterterrorism training, equipment purchase, technology development, and research and evaluation will result in better prepared state and local public safety agencies.

All program increases identified under this initiative support the DOI priority of providing Assistance to Tribai, State and Local Governments.

The Office of Justice Programs requests \$33 million in resources for the following programs included in the Counterterrorism Initiative:

1. Equipment Acquisition Support Program - OJP's Office of State and Local Domestic Preparedness Support (OSLDPS) requests \$3 million and 6 positions for the Equipment Acquisition Support Program, bringing the total program level to \$78 million. Of this amount, \$2.66 million will provide additional equipment support to states and territories. The remaining \$340,000 will support the following activities:

- Office for Victims of Crime's (OVC) Rapid Response Unit \$190,000 and 3 positions are requested for OVC to establish a
 rapid response unit within OVC to enable the Department of Justice to provide a timely, coordinated response to victims of
 terrorism and mass violence. The additional people will be housed in OVC.
- National Domestic Prepareduess Office (NDPO) OJP Linison \$150,000 and 3 positions are requested to enable OSLDPS
 to fully participate in the NDPO. These staffers will serve as liaisons between OSLDPS and NDPO to ensure that all
 counterterrorism activities within OSLDPS are integrated into overall federal program activities and all training conducted is in
 accordance with standards, policies, and guidance promulgated by NDPO.
- 2. Center for Domestic Preparedness (CDP), Fort McCtellan \$2 million is requested for the CDP bringing the total program level in 2001 to \$15 million. Of these funds, \$1.8 million will be used for information systems to develop a training support management systems for tracking students, maintaining a database of student capabilities across the country, and for the installation of an electronic security system for all CDP facilities. The remaining \$200,000 will be needed for contingency costs associated with repairs that fall outside of the realm of routine maintenance such as boiler or air conditioning replacement and for inflation in the operations and maintenance costs for the CDP. These funds will allow OSLDPS to operate the CDP and provide advanced level residential training to 2,600 first responders.
- 3. Local Law Enforcement Training Program \$9 million is requested to develop and implement a comprehensive national law enforcement training program, which will enable OSLDPS to reach out to all states and territories. These funds will support 1) the aggressive expansion of the Law Enforcement Awareness Course; 2) the development of a Tactical Operations Training Curricula for state and local SWAT and tactical teams in cooperation with the FBI's Hazardous Materials Response Unit; 3) the expansion of an already developed demonstration training program in order to train the 3,300 sheriffs nationwide; and 4) the development of a new course for senior command staff in sheriffs' and police departments.
- 4. Technical Assistance Program OSLDPS requests \$6 million to provide additional technical assistance to state and local jurisdictions, which have received or are going to receive equipment from the equipment acquisition program. Of this amount, \$3 million will be needed to provide technical assistance on equipment maintenance. OSLDPS will accomplish this by establishing 4 mobile training teams to visit jurisdictions that have already received equipment and provide them with onsite assistance. A help line manned by an equipment technician will also be established to provide jurisdictions with assistance for minor equipment repairs. The remaining \$3 million will be needed to assist jurisdictions in 1) developing and writing response plans; 2) assessing training and equipment needs; 3) conducting and reviewing exercises, which will include exercise scenario development; and 4) conducting stake holder meetings to gauge current needs of the first responder community and share information regarding equipment and model response programs.

- 5. Num-Lugar-Domenici Implementation (NLD) \$31 million and 23 positions are requested to provide resources sufficient for OSLDPS to continue and complete the existing NLD program, which is currently administered by the Department of Defense (DoD). The NLD program is proposed to be formally transferred from the DoD to DOJ on October 1, 2000 and will be administered by OJP. The program was developed as a "train-the-trainer" initiative targeting the most populous 120 cities in the United States. The 2001 funds will be used to complete Phase 2 training (Field and Biological Table Top Exercises) in approximately 20 cities (cities 69-88) that were initiated in 2000; initiate and complete Phase 2 training and provide training equipment grants to approximately 17 cities (cities 89-105); and initiate and complete training Phases 1 (City Training) and 2 and provide training equipment grants to approximately 15 cities (cities 106-120).
- 6. Counterterrorism Technology Program \$17 million is requested for the National Institute of Justice (NIJ) to address the counterterrorism technology needs of state and local law enforcement first responders. This program will specifically address technologies in the areas of infrastructure protection; hostage rescue; explosive detection and remediation; chemical, biological, radiological and nuclear defense; and information/communication. Of the \$17 million is requested for the following 2 projects identified by the National Security Council's Interagency Working Group on Weapons of Mass Destruction: 1) \$1 million to develop a more structured process for evaluating and responding to potential terrorist events involving toxic chemical agents and 2) \$6.1 million to develop equipment standards, equipment deployment guidelines, and testing methods for law enforcement and first responder personal protective equipment and collective protection.

C. COUNTERTERRORISM - PROGRAM INITIATIVES

Office for Victims of Crime's (OVC) Rapid Response Unit - \$190,000 and 3 positions

\$190,000 and 3 positions are requested to establish a Rapid Response Unit within OVC. This unit will coordinate an effective, timely response to terrorism and other crimes of mass violence. The unit would be staffed with people who have experience in dealing with terrorism victims, responding to multiple casualty crimes, crisis response, managing resources, and providing technical assistance and training. Most importantly, they would be able to respond quickly to emergencies and travel extensively, when necessary, to provide on-site assistance. This staff would be housed in OVC.

The purpose of this initiative is to enable the Department of Justice to provide a timely, coordinated response to victims of terrorism and mass violence. The need for these types of services and coordination is unpredictable, but when they are needed, it is critical that OVC is able to devote staffing resources immediately and intensively. Currently, OVC does not have adequate staff to handle the urgent and ongoing needs of existing cases, much loss a rapid response unit. Among current employees, who are mostly program specialists, there are only a handful who have the recent experience and practical expertise required to manage the provision of crisis response to victims and technical assistance to other professionals.

Experience demonstrates that crimes involving mass violence quickly overwhelm the ability of local communities, and even states, to respond to the immediate and longer-term needs of crime victims and their families. Acts of terrorism against American citizens abroad overwhelm the federal agencies that have to respond and create other unique issues due to where the crime occurred and the residency status of the victims. Americans who are victimized abroad, particularly in multiple casualty crimes, may not be able to access traditional services available to people victimized in the U.S.!

OVC has had to take on extensive direct service responsibilities in cases of national and international terrorism and mass violence. Providing direct services has meant that other policy and programmatic efforts had to be set aside during the crisis and sometimes for months afterwards. It has been nine months since the bombings of the embassies in Kenya and Tanzania, and several OVC

Even when they are eligible for state program assistance, the extent of vectims componention and assistance depends open the state in which the victim claims legal residency. State-run programs very greatly in the types of services covered and the timount of compensation available. It also take time to access these services and funds, which is often difficult for victims working or travelting abroad. For example, victims of the August. 1998 embasty bomblings in East Africe encountered a burgancerate moress when they tried to access workers componentially, death burselfus for government complexes, burnal assistance, counteding, and other types of services.

staff continue to spend a significant portion of each day trying to assist the victims and providing technical assistance to the Department of State and the U. St Attorney's Office prosecuting the case. In addition, OVC has been tasked with providing direct assistance to the families of the victims of the December, 1988 bombing of Pan Am Flight 103 during the course of the trial in the Netherlands. Other pending terrorism cases, such as the bombing of Khobar Towers in June, 1996, also require ongoing assistance from OVC staff.

Because it is impossible to predict where the next act of terrorism or mass violence with occur, it is both impossible and impractical to try to maintain adequate staffing in FBI Field Offices or U.S. Attorney's Offices for responding to victims of these crimes. Therefore, OSLDPS requests 3 positions to devote to these purposes.

National Domestic Preparedness Office (NDPO) OJP Liaison - \$150,000 and 3 positions
 \$150,000 and 3 positions are requested to enable OJP to fully participate in NDPO. This request is consistent with NDPO's office structure.

These staffers will serve as liaisons between OJP and NDPO to ensure OJP's counterterrorism activities, such as exercises and equipment acquisition, are integrated into overall federal program activities, all training conducted is in accordance with standards, policies, and guidance promulgated by NDPO, and ensure there is no duplication of effort. All 28 people currently working in OSLDPS are vital to their existing duties and cannot be spared for such full time liaisoning obligations. Therefore, we request 3 positions to devote to this purpose.

The CDP offers a unique environment and opportunity to provide specialized advanced training to state and local emergency first responders in the management and remediation of incidents of domestic terrorism, especially those involving chemical agents and other toxic substances. Furthermore, as the former home of the U.S. Army Chemical School, Fort McClellan has the facilities and infrastructure required (classrooms, lodging, dining areas, administrative office, and support areas) to support a "live agent" training facility.

The CDP is a member of the National Domestic Preparedness Consortium (NDPC), which is an integral part of OSLDPS' state and local first responders training program. The remaining four members are the New Mexico Institute of Mining and Technology; Louisiana State University; Texas A&M University; and the U.S. Department of Energy's Nevada Test Site. OSLDPS will ensure that all Consortium activities are coordinated with the NDPO in order to ensure Consortium activities are consistent with standards, policies, and guidance promulgated by NDPO.

In 1999, the CDP received \$8 million to support both its operations costs and to support first responder training. In 1999, the CDP trained 1,156 emergency first responders. Through 1999, all operations, maintenance, and facilities' support was provided by Army personnel, based on an agreement between OE' and the Army. In 2000, \$13 million was appropriated for the CDP and will be used as follows:

- 1) \$10.5 million for cost associated with the Army's departure, such as maintaining building and other structures. This includes a contractual 24-hour security guard force for the entire CDP, physical security plans of the CDP property (including the live agent facility), and physical security systems (such as fencing and intruder detection).
- 2) \$2 million to conduct 40 t. sining classes of 50 students each, or 2,000 trainees. Training costs reflect costs for instructors, equipment, materials, training support, and transportation and lodging cost associated with each student; and
- 3) \$500,000 for the management and administration costs for supporting the federal Fort McClellan staff.

In 2001, OJP requests an increase of \$2 million for the CDP, bringing total funding to \$15 million. These additional funds for the CDP will be used as follows:

- -\$1.5 million for information systems to make the CDP a functional Department of Justice entity. These funds will be used as follows: 1) develop a training support management system for tracking students and their capabilities across the country; 2) purchase and configuration of a LAN and additional desk top computers, which will be required to set up a centralized computer area to be used by the first responder trainees; and (3) install an electronic security system for all CDP facilities.
 - --\$305,000 for CDP contingency costs associated with repairs that fall outside the realm of routine maintenance such as a boiler or air conditioning systems replacement.
 - --\$195,000 to cover inflation (2.6 percent) in the operations and maintenance costs for the CDP.

With this additional funding, OSLDPS anticipates training about 2,600 first responders in 2001. The NDPO will be coordinating a national strategy for domestic preparedness and will determine the appropriate role of the CDP in the overall federal training program.

In most instances, a patrol officer or deputy sheriff will literally be the "first to respond" to a potential or actual terrorist incident. It is imperative that these first responders have the basic awareness training to safely and quickly assess a situation and make informed decisions to reduce the threat to both civilians and themselves. During 1999, the Law Enforcement Awareness Course for first responders was developed and implementation began in November 1999. In 2001, \$5.5 million is requested to engage all 50 states to integrate the Law Enforcement Awareness Course into their present curriculum through a combination of train-the-trainer and direct delivery enabling approximately 45,000 first responders to be trained using this course. For those states that are unable to integrate this basic curriculum into their existing program. OSLDPS will work with state associations representing sheriffs and chiefs of police to schedule train-the-trainer and direct delivery of this basic first responder course.

The second key component of the Local Law Enforcement Training Program initiative will be the development of a Tactical Operations Training Curricula for state and local SWAT and tactical teams estimated to cost approximately \$1.5 million. This curricula will be developed in cooperation with the tactical training recently developed and implemented by the FBI's Hazardous Materials Response Unit. The FBI has already deployed this training to their Hostage Rescue Team to ensure a consistent and comprehensive smooth integration of local, state, and federal tactical units. OSLDPS will develop a similar law enforcement tactical training course, which will involve multiple components to address threat assessment and tactical requirements. The Tactical Operations Training Curricula will also address the utilization of specialized equipment designed to enable tactical units to operate in potentially contaminated environments.

Third, \$1.5 million is requested for OSLDPS to significantly expand its new Executive Training for Sheriffs: Response to WMD Terrorism demonstration training program. Through an agreement with the National Sheriffs' Association, these additional funds will engage all 50 state Sheriffs' Associations and enable 1,500 of the nations' 3,300 sheriffs to be trained. By 2002, all 3,300 sheriffs will be trained.

Lastly, \$500,000 is requested to develop a new course, which will focus on senior command staff in sheriffs' and police departments. At present, there is no training available for these senior officials. The class will focus on the operational requirements facing law enforcement, such as perimeter security, controlling access and departures from incident scenes, integration of crisis management with federal agencies, and the challenges to effective transition from crisis to consequences management.

.

PROGRAM/ORG UNIT: Counterterorisin Program (Base)/ Office for State and Local Domestic Preparedness Support Program DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal, State and Local Government

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2-1) Improve the crime fighting and criminal/juvenile justice system capabilities of final, state and local governments

ANNUAL PERFORMANCE GOAL: (2-1.6) Improve Domesiic Preparediiesa

MISSION: Enhance the capabilities of the nation's first responder community to effectively and safely respond to nuclear, hiological, and chemical (NBC) includers of domestic terrorism through training in real-life situations.

- A. Definitions of Terms or Explanations for Indicators and Other Data Sources: TBD-1 means that the Stares will determine the number of counties and manicipalities receiving equipment. TBD-2 means that Comparison are expected April 2000, which will estimate the number of students that will be trained by the Comparison exclusions CDP.
- 10. Semina Affecting 1999 Program Performance: **A plan for distribution of FY 99 equipment acquisition funds was approved by Congress in early August. Eligible applicants intensited their applications by September 30, 1999 and OSLPDS will complete final awards by mid-March 2000.
- ***The 33.5M, provided for situational exercises in 1999 is being used for a tisp officials (TOPOFF) exercise with participation of all key officials who would participate in the consequence management of a major terrorise event involving the use of chemical, bridgescal, maleblogical (CORN) and/or cyber weapons. In mid-2000, OSLDPS will co-direct the TOPOFF 2000 Exercise show with the Fotoral Emergency Management Agency.
- C. Immun Affecting Selection of 2000 and 2001 Plane: The Counterpersons: Program GPRA charts have been consolidated and revised to reflect that that can be measured. GPRA information on equipment, Pt. McCleitan, the Consortium, Local Law Enforcement Training Program. Firefighter/EMS Training and exercises are incorporated into the new base churt.
- *During 1999, the Law Enforcement Awareness Course for first responders was developed and implementation began in November 1999. In 2001, OSLDPS requests 59 addition to develop and implements a comprehensive national law enforcement program. The material law enforcement program would enable OSLDPS to expand the Law Enforcement Awareness Course; develop a Tacsical Operations Training Curricula; and expand its new Executive Training for Sheriffs: Response to WMD Terrorism descentation training for Operation.
- D. Validation and Verification: These presents will be validated and verified through a review of various OIP reports, including progress reports from the data collection

The threat of potential terrorist incidents in our Nation presents an enormous challenge to all levels of government, but most significantly to the nation's first responder community. OJP's OSLDPS provides funds to state and local emergency first response agencies to purchase specialized equipment for fire services, emergency medical services, hazardous materials response units, and law enforcement agencies to enhance their capability to respond to acts of terrorism involving chemical and biological agents, as well as radiological, nuclear, and improvised explosive devices.

Beginning in FY 1998, OSLDPS initiated a limited equipment acquisition program, which formed the basis for the FY 1999 State and Local First Responder Equipment Program totaling \$85.5 million. This funding is being used to provide the nation's 157 largest jurisdictions and the 50 states with first responder basic defensive equipment, as well as for one-time state assessment grants and technical assistance and training to assist states in conducting their assessments.

In 2001, \$6 million is requested to provide technical assistance to the jurisdictions receiving personal protective, chemical, biological and radiological detection, and communications equipment. The \$6 million will be distributed as follows:

\$3 million is requested for an Equipment Maintenance and Repair Program. These funds will be needed to teach jurisdictions
receiving grants from the two OSLDPS Equipment Support Programs how to use, maintain, and repair equipment purchased.
The most up-to-date information will be disseminated to jurisdictions on how equipment works and a consumer guide will be
developed to address equipment performance expectations and testing results.

Four mobile training units will be assembled and headquartered at the Pine Bluff Arsenal. These units will travel to the jurisdictions which have received equipment and provide hands on training as well as videos and procedure manuals on the specific equipment they have purchased.

A help line located in the OSLDPS Washington, D.C. headquarters and manned by an equipment technician will be established to provide jurisdictions assistance on equipment repairs and maintenance questions.

- \$3 million is requested to establish an ongoing Domestic Preparedness Technical Assistance Program which will provide jurisdictions with onsite assistance in the following areas:
 - -Assistance in developing and writing response plans which were not covered under the statewide assessments in FY 1999. These will address the areas of training and exercises rather than a focus on equipment;

- -Assessment of jurisdictional training and equipment needs;
- -Assistance in conducting and reviewing jurisdictional exercises. This will include exercise scenario development. The success of a domestic preparedness program depends upon building the skills and confidence of emergency first responders, firefighters, emergency medical services, and law enforcement officials in their oblity to respond to terrorist incidents. Experience shows this evolutionary process of building new knowledge and skills is best supported through realistic confidence-building exercises based on threat-driven scenarios.
- -Conducting regional stake holder meetings to gauge current needs of the first responder community and share information regarding equipment and model response programs. These conferences will enable the first responder community to come together and discuss what works and lessons learned

The NLD domestic preparedness training program is a comprehensive, systematic approach to domestic preparedness providing classroom training, various levels of practical exercise, and equipment and training aids. This approach insures the involvement of all levels of personnel and disciplines within targeted jurisdictions, and incorporates all dimensions of domestic preparedness for nuclear, biological, and chemical (NBC) incidents.

The NLD program was developed as a "train-the-trainer" initiative targeting the most populous 120 cities in the United States. Training the cities' trainers is seen as the most effective and efficient means of providing critical training and capacity building knowledge to the cities' first responders. The train-the-trainer concept allows each city to decide which of their personnel would be trained as trainers and how incorporation of this program would be accomplished to respond to a city's specific training needs and requirements. Through December 1998, the NLD program has completed orientation training support in 65 cities.

The DoD train-the-trainer program includes training equipment loans which consist of the following 4 categories:

Category 1: Protection - suits, respirators

Category 2: Detection - detection kits

Category 3: Decontamination - kits, showers

administer this program in coordination with NDPO.

Category 4: Training Aids - videotapes, books

This training program is composed of 2 phases. Phase I begins with the initial meeting with each city and continues through a week of training, a chemical tabletop exercise, and receipt of category 4 training aids. In conjunction with the hands on training obtained through the train-the-trainer program, the city uses the category 4 training aids to train their first responders. Phase 2 consists of the planning, preparation, and execution of the chemical functional exercise and biological tabletop exercise, as well as the receipt of categories 1-3 equipment.

In 2001, \$31 million and 23 positions are requested to provide resources sufficient for the OIP's OSLDPS to continue this multiagency collaborative training effort with a commitment to complete the cities remaining from the original list of 120 NLD cities during 2001. In addition, OJP will supply training equipment support to NLD cities through the Equipment Acquisition Program. Negotiations between DOD and DOJ have resulted in a detailed Memorandum of Understanding (MOU) outlining the tasks to be accomplished by both agencies by 2001 to ensure a seamless, efficient transition.

Current plans for 2001 require OSLDPS to complete Phase 2 (Chemical Functional Exercise and Biological Table Top Exercises) in approximately 20 cities (cities 69-88) that were initiated in 2000; initiate and complete Phase 2 training and provide training equipment grants to approximately 17 cities (cities 89-105), and initiate and complete Phase 1 (City Training) and Phase 2 and provide (raining equipment grants for approximately 15 cities (cities 106-120).

A total of 23 new positions are required to support the NLD train-the-trainer program in 2001. Contingent upon fund availability, OSLDPS plans to begin hiring in early FY 2000 in order to have all 23 staff members and on board by October 1, 2000, to support a seamless transfer from and continued, uninterrupted implementation of this program from DoD to DOJ/OJP. In addition, this request for \$34 million includes \$3 million for management and administration, which will support the 23 NLD positions.

Anticipating, evaluating, and combating domestic terrorist incidents continue to present some of the most daunting challenges law enforcement and first responder agencies must prepare to face. The nature of such incidents, their unpredictability and potentially farreaching and disastrous effects, demands state-of-the-art readiness and a response that can be both immediate and seamless in terms of inter-agency coordination. The nation's counterterrorism planning efforts have focused on training in rapid situation assessment, coordination and response as well as the development of technology tools to fortify those who must protect and save the lives of citizens and other responding personnel when such tragedies occur. Increasing concerns over the potential use of Weapons of Mass Destruction in domestic counterterrorist incidents has generated intervely focused efforts on developing technology tools and training to arm first responders and law enforcement against a daunting array of nuclear/radiological, biological, and chemical weapons.

Since 1996, OJP and its technology partners have worked together to develop the nation's ability to deal with terrorism. The Counterterrorism Technology (CT) Program, managed by the National Institute of Justice (NIJ), addresses the unique technology needs of state and local law enforcement first responders and cour finates these needs with organizations such as OJP's OSLDPS. NDPO's Technical Support Working Group (TSWG), and the National Security Council's Inter-Agency Working Group on Weapons of Mass Destruction.

NU's Counterterroriom Research and Development Program has 3 major programmatic thrusts: the assessment of state and local law enforcement and first responder technology needs, the development of technological solutions to meet identified needs, and the implementation of technology standards to complement the technology development process and ensure that new technologies are user- and situationally-appropriate. In carrying out its programmatic mission, NIJ coordinates these efforts with those of other agencies involved in combating terrorism at both the federal and local levels to ensure the application of appropriated funds to best effect.

In 2000, Congress appropriated \$30 million for two NIJ-managed institutes--the Oklahoma City Memorial Institute for the Prevention of Terrorism and the Dartmouth Institute for Security Studies. No funding was allocated for the continued funding of NII's core activities of the Counterterrorism Technology Research and Development Program. Through judicious leveraging of existing resources. NLI expects to keep vital, core program activities moving forward at some minimal level. However, this can not be continued indefinitely. Without a dedicated funding source, technology and standards development with respect to key domestic terrorism countermeasures may be placed in jeopardy. Promising programs that have been initiated will not have sufficient funding to be seen through to completion. For example, the improvement of bomb robots, the personal alarm monitor, through-the-wall surveillance, and concealed weapons detection technology which guard the lives of law enforcement and first responder personnel as they protect the citizenty, will not be sustainable with the currently limited resources now available.

In 2001, NIJ requests \$17 million, of which \$9.9 million will be used to continue the core technology and standards development activities of the Counterterrorism Research and Development program and facilitate the further development of targeted efforts addressing nuclear/radiological, biological, and chemical (NBC) weapons of mass destruction. The remaining \$7.1 million will be used to address two specific proposals recommended by the National Security Council's Inter-Agency Working Group on Weapons of Mass Destruction-a chemical detection program and a personal collective prolection program.

The \$9.9 million requests for NIJ's core program activities will be used as follows:

- \$2.6 M for infrastructure protection technologies, including continued development of portable and handhold devices to remotely
 detect concealed metallic and non-metallic weapons. Weapon detectors currently available require close proximity to function,
 placing the lives of their operators in jeopardy
- \$1.6M for hostage rescue rechnologies, including continued development of portable devices enabling law enforcement officials to
 "see" through exterior and interior building walls to provide for the safe resolution of hostage taking situations. Among the new
 technologies being developed are those that enable responding officers to "see" through metal walls.
- 52M for explosive detection and remediation technologies, including continued development of bomb robots; demonstration of a lightweight, portable container for explosive devices with law enforcement agencies; and continued funding for Operation Albuquerque—the NII funded "graduate school for bomb technicians."
- \$1.5M for information technologies, including continued development, demonstration and assessment of interagency information sharing and communication systems.
- \$2.2M for chemical, biological, radiological and nuclear defense technologies, including continued development and
 demonstration of a low-cost wearable device providing first responders early warning of exposure to chemical and biological
 agents and, as a companion piece development of a low cost, disposable protective mask to enable first responders to extricate
 themselves from hazardous areas.

To address the recommendations of the National Security Councils' Interagency Working Group on Weapons of Mass Destruction, \$7.1 million will provide for the following two projects:

- \$6.1 M to develop equipment standards, equipment deployment guidelines, and testing methods for law enforcement and first responder personal protective equipment (PPE) and collective protection using the combined expertise of the Office of Law Enforcement Standards (OLES) at the National Institute of Science and Technology (NIST) and the National Institutes of Occupational Health and Safety (NIOSH) to implement standards, prepare guidelines and conduct safety testing of PPE such as respirators used in nuclear/radiological, biological, and chemical contexts.
- \$1 M to develop a more structured process for evaluating and responding to potential terrorist events involving toxic chemical agents developing an understanding of the characteristics of takely toxic agents, requirements for detectors that would identify those agents in harmful quantities, developing an architecture for how various detector systems may be used and an intelligent approach for making these systems available to law enforcement and tirst responders.

SCHOOLS AND DEBORT AND DEADE

C. Itwees Affecting Selection of 2000 and 2001 Places.

b) - As no funds were appropriated for the Counterferorism Research and Development program in FY 2000, technology adaptation activities will not occur in this reporting year. Planning for technology adaptation in FY 2001 is subject to available appropriations and to the availability of suitably adaptable reclinelogy(res) at that time

Congress provided \$30M for the equilibranent of two Counterterrorism Institutes of the EVNE Appropriations Bit. No funding was provided for NII's base counterterror sin technology development program account. The performance plan reflected in this clear assumes dust funds for the technology program of at least \$9.9% will be provided in 1 YOI.

\$7.1M of the \$17 million requested in EVOI will fund development of a common set of twist responder equipment standards and guidelines by the NII funded Office of Law Enforcement Standards (OLES) at the National Institute of Standards and Technology (NIST), in accordance with the National Security Counted's recommendations regarding Weapons of Mass Deservation.

D. Validation and Verification, NU validates and verifies performance measures by progress reports submitted by grantees, onsite monitoring of grantee performance and schipture contact.

IV. BUILDING KNOWLEDGE

A. SUMMARY PERFORMANCE PLAN - Component Mission and Goals, and Relationship to DOJ Strategic Plan

Law enforcement is the most visible of all the criminal justice system components in a community. For this reason, law enforcement has an enormous impact on how residents view the quality of life in their neighborhoods, the criminal justice system, and the law. This initiative includes research, evaluation, and statistical analysis to determine "strategies that work" to reduce and eliminate crime in our communities, and the national dissemination of this information. This initiative will provide statistical studies which will build our existing knowledge of the criminal justice system, conduct research to develop ways to improve the criminal justice system, and propose a program to better understand and improve the dependency court system's response to child abuse and neglect.

All program increases identified under this initiative support the Department of Justice (DOJ) priority of providing Assistance to Tribal. State and Local Governments.

B. NEW INITIATIVES

	Pos	ETE	Amount

Total, Building Knowledge Initiative	2	1	\$4,600,000

The Office of Justice Programs (OJP) requests \$4.6 million in resources for the following programs included in the Building Knowledge Initiative:

1. Vierimization of the Disabled - \$300,000 is requested for the Bureau of Justice Statistics (BJS) to develop an appropriate methodology and to initiate preliminary testing of potential questions to be used to enhance the National Crime Victimization Survey (NCVS) to measure victimization of the disabled population in the United States. This data collection effort is required under P.L. 105-301, the Crime Victimization bisabilities Awareness Act, which was signed by the President on October 27, 1998. Currently there are no ongoing programs that provide information on criminal victimization of persons with disabilities. The enhancement will be used to develop questions to determine whether persons in the NCVS sample have any of a specified list of disabilities as well as to identify the distinctive impacts that victimization might have upon people with disabilities.

See related base program information under the Justice Assistance Account, beginning on page 17.

2. Hate Crime Reporting and Statistics - \$1 million is requested for BJS to develop and implement a program for producing consistent annual measures of the incidence of uate crime and to estimate the extent and nature of change from year to year. Activities to be conducted include enhancing the National Crime Victimization Survey (NCVS) to include items about any crimes respondents

experienced to determine whether they attribute to the offender any bias motivation based on race, ethnicity, religion, sexual orientation, or gender.

See related base program information under the Justice Assistance Account, beginning on page 17.

3. Hate Crime Training and Technical Assistance - \$1.25 million is requested for BJA to administer hate crime training and technical assistance. These funds will be made available from existing Byme Discretionary funding and will enhance and build on the following two programs dealing with hate crimes: (1) Hate Crime Technical Assistance (\$250,000) and (2) State and Local Police Hate Crime Policing (\$1 million). Working with appropriate partners at the federal, state, and local level, a technical assistance and outreach program will assist jurisdictions to develop partnerships and highlight innovative hate crime strategies.

See related base program information under the State and Local Law Enforcement Assistance Account beginning on page 17.

4. Tribal Criminal Justice Statistics - \$2 million is requested for BJS to establish a tribal criminal justice data collection program which will include conducting a national census to identify all areas of criminal justice activities implemented by tribes and those provided by non-tribal entities. The U.S. Bureau of the Census will contact each tribe to document information on criminal justice agencies, the services they provide, and specific characteristics of these agencies. This information is critical to policy makers involved in the formulation and implementation of criminal justice related programs throughout Indian jurisdictions. Improved tribal criminal justice information will enhance tribal capacity to participate in federal funded programs, which frequently require the reporting of crime and crime related data.

See related base program information under the Justice Assistance Account, beginning on page 17.

5. Statistics on Disparities in the Justice System - \$500,000 is requested for BJS to upgrade current statistical series which gather case-processing data from the 75 largest counties in the United States. These data will be collected and analyzed for the identifiable disparities in handling by the justice system in order to estimate the extent to which non-legally relevant factors may influence case outcomes.

See related base program information under the Justice Assistance Account, beginning on page 17.

6. Traffic Stops by the Police - \$800,000 is requested for BJS to design and field a statistical series that gathers data from law enforcement agencies and the public on the nature and consequences of routine traffic stops. Administrative data will be collected from law enforcement agencies on the content and consequences of traffic stops. In alternate years, OFP will conduct a supplement to the NCVS to learn about the public's experience relating to traffic stops. The primary goal of this effort will be to determine whether and to what extent such stops may be based upon legally mappropriate criteria such as "racial profiling."

See related base program information under the Justice Assistance Account, beginning on page 17.

7. Dependency Court System's Response to Child Abuse and Neglect - 55 million and 2 positions are requested to conduct a five-year research and evaluation program to better understand and improve the dependency court system's response to child abuse and neglect. This initiative will be carried out in cooperation with OJP's Office of Juvenile Justice and Delinquency Prevention and the Drug Courts Program Office. These funds will be made available from the base funds of the Juvenile Justice Formula Program (\$3 million) and the Drug Courts Program Office (\$2 million). It will be administered by the National Institute of Justice.

See related base program information under the State and Local Law Enforcement Assistance Account (Drug Courts Program Office) beginning on page 84 and the Juvenile Justice Account.

C. BUILDING KNOWLEDGE - PROGRAM INITIATIVES

Currently, there are no ongoing national programs that provide systematic and recurring information on criminal victimization of persons with disabilities. The proposed initiative will begin to address the requirements of the Crime Victims with Disabilities. Awareness Act by providing initial funds for the design and pretest of questions and the formulation of sampling strategies to carry out the goals of this legislation. Because the Act requires the enhancement of the NCVS to collect these data on an ongoing basis, BJS anticipates that a recurring increase of at least \$1.5 million annually will be required to actually conduct the survey with the new disability questions and prepare the analysis.

This initiative will be closely tied to and coordinated with other Federal agencies that have an interest in and responsibility to address various problems of the disabled. In this fashion, the Federal government, by the use of consistent definitions and measurement techniques among statistical agencies, will be in a position to provide a comprehensive statistical portrait of disabled citizens and the challenges which confront them. Collaborative activities already underway include:

- The task of developing a concise battery of questions that will identify persons with developmental disabilities is being addressed by the interagency Subcommittee on Disability Statistics, an organization comprised of members from throughout the Federal government and sponsored by the Bureau of Labor Statistics. The subcommittee meets monthly to discuss issues related to identifying and measuring the characteristics of persons with disabilities as these issues pertain to the various federal agencies. The BJS staff member assigned to this subcommittee has compiled a master listing and calendar of studies now underway in other statistical agencies to address these measurement problems.
- The National Institute of Justice (NIJ) has solicited a proposal from the National Academy of Sciences (NAS) National
 Research Council to carry out the mandated study described in the statute. The research study mandated by the Act will be
 coordinated with the design and implementation of questions to be included in the NCVS.

- BJS is consulting with the Committee on National Statistics (CNSTAT) of the NAS on possible areas of assistance they may
 provide in carrying out this study.
- BIS staff, with the assistance of the Office for Victims of Crime, have begun discussions, and plan to extend and enhance them, with members of interest groups that represent disabled persons, and especially disabled victims of crime, to assure that their concerns are addressed in the process of collecting data.
- The Bureau of the Census Cognitive Research Laboratory is initiating planning for pilot-testing of alternative questions and methods for the NCVS among samples of disabled persons.

Utilizing the knowledge acquired under these efforts, in subsequent years, given adequate funding, baseline and annual national data will be collected on the levels and rates of violent and property victimization of persons with specified disabilities, along with the characteristics of the victims, crimes and consequences of victimization.

Research in other countries suggest that persons with certain disabilities are at much higher risk, possibly 4 to 10 times higher, to become crime victims than those persons without disabilities. There have been, however, no significant studies on this subject conducted in the United States. It is not known, for example, how victimization risks may differ for people with physical, mental, or sight or hearing related disabilities. The survey will provide researchers with a rich database of risk factors on violent victimization among persons with varying types of disabilities and handicapping conditions.

In order to produce measures of victimization of persons with disabilities, it is necessary to design questions that can identify a range of conditions, accurately and efficiently. Starting with the federally defined definition of developmental disability (Section 102 of the Developmental Disabilities Assistance and Bill of Rights Act (42 U.S.C. 6001)), current methodologies will be examined to determine the extent to which they might be applicable to extend to the victimization survey. The National Center for Health Statistics, the Center for Disease Control and Injury Prevention, and other relevant agencies associated with the measurement of disabled populations will be contacted to assist in the development of questions designed to identify and classify disabilities.

Careful study and planning, which BJS will carry out with this funding, will help determine how to word and implement questions that will elicit the desired information. To produce accurate measures of victimization of persons with disabilities, it is necessary to design and administer questions that:

Identify those characteristics that define or delineate the presence of a wide variety of disabilities, accurately and efficiently;

- · Obtain the desired victimization information; and,
- Collect data about persons with disabilities which does not excessively burden the more than 100,000 Americans interviewed in the crime victimization survey, thus affecting rates of participation.

\$1 million is requested for the Bureau of Justice Statistics (BJS) to develop and implement a program for producing consistent annual measures of the incidence of hate crimes and to estimate the extent and nature of change from year to year.

One component of the requested program will be to enhance the National Crime Victimization Survey (NCVS). The national sample of respondents will be asked detailed questions about any crimes they experienced to determine whether they attribute to the offender any bias motivation based on race, ethnicity, religion, sexual orientation, or gender.

BJS, in conjunction with the COPS Office, has developed Windows-based software that allows anyone to conduct a local version of the NCVS in their own community, city, county, or state. The CVS software has stimulated an incredible response since it was first released through the BIS website in Summer 1999. To date, BIS has received more than 600 requests for copies of the software from police departments, local agencies, and criminal justice researchers. BJS plans to include the hate crime questions in the CVS software and will update the wording of the questions to reflect experience with the quality of the hate-crime data received from the national sample.

This funding request will enable BIS to assemble the responses to hate crime questions obtained by jurisdictions using the CVS software, and to analyze them in conjunction with the nationally representative NCVS data on hate crime to produce a richer and more detailed understanding of hate crime and its correlates than can be obtained from national data alone.

Aside from NCVS and potential CVS data about hate crime, the other primary source of data is the FBI's annual Hate Crime Statistics Program. The FBI effort to gather hate crime data from all taw enforcement agencies in the U.S. provides a limited ability to estimate trends and annual change in the volume or rate of bias-motivated crime in part because of a low level of participation by local law enforcement agencies (as late as 1995 only 16 percent of police agencies reported hate crimes) and the deliberate pace at which law enforcement agencies are implementing the FBI's National Incident-Based Reporting System (NIBRS). Making the transition from filing aggregate monthly statistics on hate crime to incident-based reporting requires a major commitment from local law enforcement agencies but concomitantly improves hate-crime reporting.

The limitations of the Hate Crime Statistics program are well recognized by the FBI, and BJS has funded a study in cooperation with the FBI that is addressing these issues and making suggestions for improvements. The study, "Improving the Quality and Accuracy of Hate Crime Reporting," has the following eight objectives: (1) document the extent and character of fute crime training programs in place across the United States; (2) assess the effectiveness of existing hate crime training curricula or materials; (3) improve estimates of incidence, types and trends in hate crime; (4) evaluate the impact of incident-based crime reporting systems; (5) assess the status of

hate crime reporting nationally; (6) conduct a survey of special interest group members to ascertain methods of improving hate crime reporting; (7) examine the relationship between the characteristics of jurisdictions and agencies and the level of hate crime reporting, and (8) assess the circumstances that led agencies to develop hate crime reporting programs.

Based on study recommendations, funds requested will be used to develop procedures to improve collection by the FBI under the Hate Crime Statistics Act of 1990 with the goals of:

- assisting the FBI to improve the quality and accuracy of hate crime administrative statistics gathered from law enforcement agencies;
- (2) expanding the geographic coverage of hate crime statistics recorded by local law enforcement agencies; and
- (3) implementing approaches that will result in reliable administratively-recorded hate crime trend data.

Under this proposed enhancement, a variety of procedures will be examined for developing improved methods for consistently estimating both the volume and nature of hate crimes over time and across jurisdictions. This proposed effort has been closely coordinated with the Hate Crime Statistics Unit of the FBI as a complementary activity to the ongoing development of their Hate Crime Statistics Program.

This initiative directly supports the requirements of the *Hute Crime Statistics Act*, as amended, which states "...the Attorney General shall acquire data, for each calendar year, about crimes that manifest evidence of prejudice based on race, religion, disability, sexual orientation, or ethnicity..." and brings together the efforts of the FBI and BIS to attack in a concentrated and coherent way the problem of improving the recording and collection of administrative data on hate crime from local law enforcement agencies. Attention will be given to the expansion of participation in the NIBRS as the principal vehicle for the future for obtaining and analyzing hate-based crime incidents.

C₁ Issues Affecting Selection of 2000 and 2001 Plan: One component of the requested program will be to colorable the National Curne Victimization Survey (NCVS). The national sample of respondents will be asked detailed guestions about any cornect they experienced to determine whether they surribute to the offender any has motivation based on race, elbucity, religion, sexual orientation, or gender. The FBI has an annual Hate Crime Statistics Program. BJS has founded a study in experience with the FBI to assist the FBI in expending and improving its Trace Crime Statistics Program. The BJS intensive directly supposes the requirements of the Trace Crime Statistics Act of 1990.

D. Validation and Verification: These measures will be validated and verified through a review of various reports, including BJS management status reports and progress reports from the data collection agent.

1000

to every U.S. District.

Reported incidents of hate crime, which encompass a multitude of violent threats and acts against total strangers based solely on racial or ethnic differences from the perpetrators, has risen dramatically. In part, this increase is a function of much greater awareness by law enforcement, social services, and the general public of the true nature of what has previously been dismissed as random violence, drug-induced incidents, juvenile pranks, and the like. The tremendous fear induced in victims, especially young or immigrant victims, by hate crime activities has also inhibited reports of such incidents, leading to the under reporting of this type of violence. BJA has been at the forefront of activities aimed at increasing awareness and prevention, enhancing investigation and prosecution, and promoting better responses to victims of these crimes. This new initiative will allow expansion and concentration of effort in this important area.

In June 1998, BJA in cooperation with other OJP and DOJ agencies, supported a Summit on Hate Crimes. Participants represented a diverse field of professionals who are involved in assisting victims of hate crimes, including law enforcement personnel, educators, medical and social workers, academia, and youth crime specialists. A training program directed at prosecutors has also been funded to enhance the ability of these local leaders to address hate crime not only through effective prosecutorial strategies, but coordinated community outreach and overall improvements in criminal justice system response to victims. Also supported was a multi-year effort by the Maine Attorney General's Office to prevent and respond effectively to incidents of school-related hate crimes and harassment. Here students and teachers are directly involved with guidance from law enforcement, in changing the environment within the schools such that hate crime is not tolerated or ignored. Approximately 100 schools in Maine have been reached by this effort.

Most germane to the 2001 plan is work begun by BJA in the spring of 1998, when funds made available for the editing of a comprehensive, four volume hate crime training curriculum. Working with the Federal Law Enforcement Training Center, state and local law enforcement officers were provided with training intended to these officers to train others at the local level. Three regional training sessions using this curriculum reached at least one statewide team of trainers within each state, for a total of over 400 officers, civil rights organization members, and legal community representatives. Plans are to expand this training in 2001, providing

some limited travel and other support to ensure that each state could continue to participate. Special emphasis will be on states where organized hate group activities are known to be occurring. Some technical assistance and information dissemination to participant sites, based on this training, will be provided and a general education and public awareness campaign will be mounted. Key to all these activities is the active participation of United States Attorneys. In 2001, at least \$500,000 will be expended on this effort.

8. Issues Affecting 1999 Programs Performance. Not applicable - program was not funded during I-Y 1999.

C. Issues Affecting Selection of 2000 and 2001 Plans.

a/ This program includes two initiatives: Hate Crime Technical Assistance (\$250,000) and State and Local Police Hate Crime Training (\$1,000,000). Further development of this program is new every to project data for FY 2001. * The \$1.25 in: How for Hate Crimes Training and Technical Assistance are made available from the existing \$52 million Byrne I, registenery furthing.

D. Validation and Verification.

B/A uses four indicators to assess program performance. BIA files are used to verify the number of applications received and awarded, as well as numbers of training sessions and numbers of participants. Technocal assistance logs are used to track the number of Ta request that are received and completed. Grance progress reports and site visit monitoring reports are used to determine intermediate and end numbers, including the number of participants are used to the program.

\$2 million is requested for BJS to conduct a national census of tribal criminal justice agencies and related statistical activities to improve the Nation's understanding of crime and the administration of justice among Native Americans—American Indians, Aleuts, and Alaska Natives. The implementation of several new national crime prevention grant programs has highlighted the lack of criminal justice information regarding Indian Country. Tribal law enforcement authorities have had great difficulty in fully participating in available programs because of the lack of high-quality and comparable law enforcement data: In addition, such lack of data places local tribal authorities in a disadvantaged position in seeking state pass-through funds such as the Byrne formula grant program administered by BJA.

BJS and the Office for Tribal Justice (OTJ) have not been able to fully respond to policy makers' information needs regarding the agencies which provide criminal justice functions to the more than 500 tribes across the Nation. In the delivery of law enforcement services alone, different tribes are served by the Bureau of Indian Affairs (BIA), local sheriffs, their own police departments, and various combinations. As a consequence, there is no coherent and uniform manner for defining criminal conduct or victimization, measuring its incidence and prevalence, examining the response to crime, assessing case processing, or systematically understanding how criminal matters are adjudicated and disposed. There is simply no basic tribal criminal statistics infrastructure.

There is reason for concern about the lack of high-quality data---BIS findings from the National Crime Victimization Survey (NCVS) indicate that native populations experience the highest rates of violent victimization of any race group. By contrast, the limited data on tribal crime from the BIA would suggest much lower than average rates of violence. This disparity in our understanding of the extent of crime among Native Americans is directly the result of poor data quality and the absence of uniform measurement indices in administrative record-keeping by tribal law enforcement authorities.

With funding from Corrections Program Office and BIA, BIS is currently conducting two tribal-related statistical projects that are relatively limited in scope:

- In order to meet the immediate needs of the OJP Corrections Program Office, BJS has undertaken a complete census of
 correctional facilities operated by tribal governments. Existing data on tribal correctional facilities were not available.
- Beginning in 1997, BJS, with funding from BJA, implemented a pilot project with two tribes to establish criminal justice information systems to better manage caseloads and produce statistics.

Recent BJS attempts to identify tribal criminal justice statistics underscores the need to expand statistical activities related to American Indian crime and justice issues. To meet these needs, BJS proposes to use \$2 million in requested funds to conduct the following range of activities:

- Census of tribal criminal justice agencies and capacity. Comprehensive information is needed in the area of tribal courts, law enforcement agencies, probation and parole functions, correctional institutions, information systems, and agency employment and expenditures. BIS proposes to conduct a complete census of the Indian tribes to gather information on each of the criminal justice agencies operating in these jurisdictions. The U.S. Bureau of the Census will contact each tribe to document information on criminal justice agencies, the services they provide, and specific characteristics of these agencies. Additional information will be collected on the capacity among tribes to collect and report information on crime in their jurisdictions. Specific attention will be given to evaluating personnel resources and training available to manage and operate statistical reporting programs. These survey results will be published by BIS and a public-use data set will be made available to the criminal justice community. In addition, BIS will make available a national directory of all tribal justice agencies. Information gleaned from this exhaustive data collection will allow BIS to respond quickly to information requests from the Office of Tribal Justice, Congress, and other policy makers.
- Improving tribal crime measurement capabilities and information systems. Many tribes are not in a position to report
 comprehensive uniform criminal justice statistics which hinders their efforts to meet the needs of tribal members and to make
 application for federal crime prevention programs. Funding would be used to develop a long-term plan for assessing and
 improving criminal justice capacity and infrastructure in Indian country. This would include capacity building for crime
 measurement, communications, training, information management, and records systems. Technical assistance could be
 provided.

Associated with the crime measurement and management limitations of tribal law enforcement agencies is the need to devise improved methods to utilize information for law enforcement resource allocation or problem analysis. For example, about a third of all murders with Native American victims involve victims and offenders sharing an intimate or family relationship; there are no data available, however, on use or enforcement of protection orders. Victim surveys and homicide data indicate a relatively high involvement of alcohol in violence among Native populations but such data are not systematically collected by tribal criminal justice agencies.

 Integrate tribal crime statistics into existing national reports. National statistical programs do not routinely contain data on criminal justice activities in Indian country. This project component would integrate statistics on criminal justice about Indian country into existing national statistical reports. To date we are uncertain how criminal justice activities which take place among tribal jurisdictions compare to the rest of the Nation. This component would work to include tribal statistics with those from the Nation's law enforcement corrections, and judicial agencies. For certain Indian tribes, this will entail providing training and technical assistance in setting up collection and reporting procedures. For example, BJS, with funding from the OJP Corrections Program Office, recently conducted the first survey of large detention facilities in Indian country which provided data on the age and physical capacity of these facilities, stuffing, and program resources. Such information is not available for the range of other criminal justice services currently administered under tribal law and authority

Understanding violent crime in Indian country. To date little is known about the nature and extent of violent criminal
victimizations among American Indians. Findings from the NCVS show that violent crimes committed against Indians may
be the most interractal, together with Asians, when compared to crimes against whites and blacks. Studies are needed to
examine more about the circumstances of such offenses

Other findings from the NCVS indicate that victims reported a relatively high rate of alcohol use among offenders. Working with the National Center for Health Statistics, Indian Health Service and related agencies. BJS would design statistical studies to uncover the correlates of offending such as the role of alcohol in crime. A joint effort would be developed to systematically collect such data on consumption, illnesses, and violent crimes which are alcohol-related. This can include a supplement to the NCVS to expand the sample of American Indians as well as the range of questions asked. A better understanding of the American Indian crime experience will go a long way in developing effective crime prevention programs in Indian country.

- Integrate inhal crime assistics rate earling national reports
- · Understanding violent crime in Indian country
- D. Validation and Verification: These measures will be validated and certified through a review of various reports, a whiting BIS management status reports and prospers reports from the data artification agent

This request, part of a larger government-wide initiative inspired by the Administration's Initiative on Race, demonstrates the Department of Justice's support for and commitment to the development and monitoring of statistical measures designed to examine concerns about racial discrimination in the administration of justice. The effort will enhance existing statistical series which collect felony case-processing information from representative samples of jurisdictions resulting in an improved ability to examine the effects of legally relevant factors, such as gravity of the instant offense and prior criminal record, on defendant outcomes at each stage in the processing of adult and juvenile felony cases at the local level, from filing to disposition. This approach will expand the capacity of the Department to estimate the impact of non-legally relevant factors, such as defendant race, at each stage of case-processing and to monitor changes in their proportional contribution to case outcome over time.

Disparity, by race, is often observed in the justice system in the rate or percentage of persons involved as defendants when compared to their relative share of the resident population. These disparities, frequently referred to as an over representation (or under representation by race) are occasionally described as evidence of discrimination. The National Academy of Sciences, however, has properly observed that such evidence is insufficient to establish discrimination. Rather, discrimination is the application of inappropriate racial factors to case-processing or management al decision points in the justice system. The study proposed here will examine the types of data necessary to establish the effects of legally irrelevant factors and will attempt to gather such data as a part of the regular collection of data on the movement of felony cases through the justice system.

C. Issuers Affecting Schooline of 2000 and 2001 Plants: BIS would his in upgrate current statistical series which gather case processing data from the 75 targest counties in the U.S. This data will be used to happort in-depth analysiss of identifiable disparates in handling by the justice system in order to estimate the extent in which min-legally relevant factors may influence case maximize.

15. Yalidantian until Vertifestius: These measures will be validated and verified through a review of various reports, including BIS management status seports and progress reports from the data collection faces.

6. Traffic Stops by the Police \$800,000

The Office of Justice Programs (OJP) requests \$800,000, on a recurring basis, for the Bureau of Justice Statistics (BJS) to support the development of a national statistical program to gather administrative data from law enforcement agencies on the content and consequences of police-initiated stops of motorists for routine traffic violations. In addition, during alternating years, BJS will utilize the Traffic Stops supplement to the National Crime Victimization Survey (NCVS), pilot-tested as a part of the Police-Public Contact Survey during 1999, to learn about the public's experience with such encounters with law enforcement officers. The two methods used will complement one another and help to identify gaps in agency-level information.

The primary goal of this effort will be to determine whether and to what extent such stops may be based upon legally inappropriate criteria such as "racial profiling." Recently, this issue has received much attention and has been the subject of repeated legislative proposals both at the Federal level (such as the proposed "Traffic Stops Statistics Study Act of 1999") and among the States. BJS has assisted DOI in formulating a potential Executive Order or Directive, which will gather data from Federal agencies on the nature of Federal law enforcement contacts with the public in order to determine the presence of any blas-motivated conduct on the part of Federal officers. Of particular interest by the Administration and Congress, is the issue of possible bias in law enforcement-initiated traffic stops. Attorney General Rei o has declared that increased data collection on traffic stops is "very important" because with such information, "we can see where the problems exist and how extensive they are" (Source: Washington Post, April 16, 1999).

This proposal will provide the vehicle for the collection of systematic information from law enforcement agencies and from the public on the content and consequences of these stops, which may include:

- the number of individuals stopped for routine traffic violations.
- characteristics of the individual stopped, including the race and clinicity as well as the approximate age of that individual;
- reasons for the stop including the type of traffic infraction alleged to have been committed that led to the stop:
- searches of drivers and vehicles initiated as a result of the stop and what prompted the conduct of a search; and
- especially important, any provocative actions on the part of the person stopped, the rationale for the search, and whether any contraband was discovered in the course of the search.

Analyses will be conducted on the consequences of such stops including whether any warning or citation was issued as a result of the stop, any collateral non-traffic charges resulted, an arrest was made as a result of either the stop or the search, or any complaints about an officer's conduct in a traffic stop were filed and how they may have been adjudicated and disposed.

Utilizing the Law Enforcement Management and Administrative Statistics program as the platform for the collection of agency-level data in 2001, BJS anticipates carrying out initial data collection from among the Nation's 18,000 law enforcement agencies to learn more about the content of and limitations associated with any administrative data they currently compile on traffic stops. A substantial effort will be made to secure participation, but it is anticipated that this collection effort will be met with resistance from local agencies. Much of the first-year funds will be directed to a series of meetings with law enforcement executives around the Nation to obtain their input on data elements for collection. In addition, organizations with an interest in this topic will also be contacted to obtain their comments and suggestions for content of the data collection program.

Funding this project is likely to raise the visibility of the issue as law enforcement agencies are queried about the types of administrative data they maintain on such stops. This is likely to result in improved accountability for law enforcement employed conduct. In addition, these data will be helpful to local officials in managing data and citizen complaints to law enforcement agencies and complaint boards about officer conduct.

This five-year research and evaluation program will accomplish the following

- Develop and implement a national evaluation of the ASFA and its affect on the processes and outcomes of court practice.
- Develop and implement, in ecoperation with the U.S. Department of Health and Human Services, a national evaluation that
 examines the processes and impact of the State CIP on court structure and practice
- Develop and implement a series of process and impact evaluations that examines the development of local model dependency courts and the effectiveness of local model dependency courts on both the court system and the families and abused and neglected children it serves.
- Produce and distribute publications describing results and/or best practices.

Juvenile dependency courts (ace overwhelming pressure in the form of high judicial caseloads, more difficult and complex cases (e.g., drug-exposed children), and innited court and service resources that delay litigation. These pressures have resulted in numerous rases in which children in the foster care system linger (or years, while the courts continue to review their cases with little progress or change. In some cases there is little hope of family reunification, yet courts fail to make decisions regarding the child's permanency

Since 1993, two pieces of legislation have been enacted to change the practices of juvenile dependency courts and prevent children from lingering in foster care: (1) The State CIP, enacted as part of the Omnibus Budget Reconciliation Act of 1993, set aside a total of \$35 million (over 4 years) for states to improve their court handling of abuse, neglect, foster care and adoption cases, and (2) the ASFA that, among other things, requires more timely permanency dicisions and stronger safety guarantees for abused and neglected children. Under the CIP grants each state court system has conducted a detailed assessment of their current handling of these cases, and developed a plan to improve these practices. The passage of ASFA extended State CIP funding to states for an additional 3 years.

Nearly all U.S. states are currently enacting CIPs (48 plus the District of Columbia) and 18 local jurisdictions have implemented Model Dependency Courts (with an additional 3 to be added shortly)

Little is known to date on the impact of the ASFA legislation and the efficacy of subsequent changes in court structure and practice on children and families. Specifically, this proposed research will offer empirical research findings to inform future court improvement efforts. OJP will partner with the Department of Health and Human Services' Administration for Children, Youth and Families, which currently oversees the distribution of CIP funds to the states, and explore the possibility of joint funding, and will provide NIJ funds to carry out the evaluation of the ASFA and State CIP efforts. This initiative will be carried out in cooperation with OJP's OJIDP and the DCPO.

The major objectives of this program include:

- Understand the Impact of the ASFA on Court Practice Nationally. The ASFA, passed by Congress in 1997, is meant to clarify the intent and application of the existing federal Adoption Assistance and Child Welfare Act (P.L. 96-272) by requiring more timely decisions and stronger safety guarantees for abused and neglected children. Key elements include time limits on when courts must make permanency planning decisions for children in care (permanency hearings are required at 12 months), recognition that reasonable efforts toward family preservation are not always required (e.g., in cases with aggravated circumstances, such as tortize, abandonment, chronic abuse, parental murder of a sibling); encouragement for state social service agencies to "concurrently" plan for adoption and reunification; and requirements that states petition for termination of parental rights in cases where a child has been in foster care for 15 of the last 22 months (with some exceptions). At this time, several states have either passed state laws or made administrative changes to conform to the principles of ASFA while others have received waivers to delay the implementation of ASFA in their jurisdiction. Evaluation, at the national level, will determine how the ASFA is impacting the process and outcomes of court practice: which states have implemented legislation and reformed state and local practice based on ASFA, how was this done, and who was involved?
- Understand the Development and Impact of State CIP Efforts. A report by the General Accounting Office published in January 1999, Juvenile Courts: Reforms Aim to Better Serve Multreated Children, states that most court improvement efforts "have not been formally evaluated ... [and] ... without this kind of information, officials are unable to determine which interventions have improved their courts and which have not." The report also notes that most current state evaluation plans are limited. A national process evaluation will document the various ways courts have used CIP funding to change court structure and process to improve their handling of abuse, neglect, foster care and adoption cases. A national impact evaluation will document the affect of the State CIP on both the court system and the families and children it serves.

• Understand the Development and Impact of Model Dependency Courts. Concurrent with State CIPs, a number of local courts have implemented innovative strategies and enacted administrative changes to improve the timeliness and decision making in dependency cases. These efforts have often been aided by the National Council of Juvenile and Family Court Judges (NCJFCJ). OJJDP, through NCJFCJ, funded the publication and release of Resources Guidelines: Improving Court Practice in Child Abuse and Neglect Cases, which provides step-by-step recommendations on how to improve court practice. These guidelines serve as blueprints for the development of Model Dependency Courts and NCJFCJ (with OJJDP funding) provides training and technical assistance to judges, court personnel, attorneys, agency representatives and child advocates on developing model dependency courts. Process evaluation will document the development of local model dependency courts, the degree to which they have various model elements, and to document barriers to implementation and how these were overcome. Impact evaluation will assess the effectiveness of local model dependency courts at the systems level (court and other agencies) and at the individual level (families and their children). Research will also consider the impact of Model Dependency Courts on other state improvement efforts.

This research will document the impact of innovations in for example, family drug courts¹, management information systems, methods to link delinquency and dependency cases that involve the same children, and family group conferencing. Research is needed on the number of courts that are implementing innovative practices, and to document immediate outcomes of these practices. As a result of these innovations, are hearings occurring in a more timely manner? Are permanency plans for children occurring more frequently, quickly, or both? Are courts actually implementing the reforms as planned?

To fulfill the mission of this initiative, OJP requests 2 additional positions. One Ph.D. level social science analyst is required to manage this research agenda. It is preferred that this person have expertise in violence against children and court system research, understand the need for a multi-disciplinary perspective, and have experience conducting field research in this area. In 2001, this person will be responsible for coordinating this effort with OJJDP. DCPO and other DOJ and Federal agencies, writing research solicitations, and managing the award of the research grants. A masters-level social science analyst is also required to assist the Ph.D. level analyst in accomplishing the tasks outlined above and in subsequent years, to help manage the existing research portfolio.

³Family drug courts are designed to help abused and neglected children by addressing parental substance abuse within the context of family court child-protection cases. Functionally, these courts acreen cases for eligibility, arrange clients (who enter a pice and agree to accept the program's rules), prepare a treatment plan for the substance abuser and a child welfare plan, monitor compliance with the plans, and either graduate the client upon successful completion of the plans or terminate the client's participation and transfer them back into traditional judgest procedures.

V. ENHANCING TECHNOLOGY

A. SUMMARY PERFORMANCE PLAN - Component Mission and Goals, and Relationship to DOJ Strategic Plan

The amazing speed of technology development today is outstripping the criminal justice system's ability to keep up with, much less stay ahead of, the technology curve. Use of technology and information integration and sharing in addressing crime are among the ost urgent issues facing the criminal justice field today. The Office of Justice Programs (OJP) is committed to working with tribal, so the, and local criminal justice agencies to encourage and facilitate development of electronic crime data and online information exchange; utilize the full potential of the Internet; provide training on cybercrime; develop, test, and commercialize new law enforcement and criminal justice technologies, and develop a statistical program to measure the magnitude and consequences of computer crime.

All program increases identified under this initiative support the Department of Justice (DOJ) priority of providing Assistance to Tribal, State and Local Governments.

B. NEW INITIATIVES

	<u>Pos</u>	FIE:	Amount
Gun Safety Research and Development (Justice Assistance)	0	0	\$10,000,000
Electronic Crime Data: On-Line Data Collection/Analysis (Justice Assistance)	0	0	500,000
National White Collar Crime Center (NWCCC) (Justice Assistance)	à.	1	8,750,000
Justice Online Information Exchange (JOIE) (Justice Assistance)	2	1	1,000,000
Computer Crimel Cyber-Fraud Fraud Statistics (Justice Assistance)	Ũ	Q	1.000.000
Total, Enhancing Technology	3	2	\$21,250,000

The Office of Justice Programs (OJP) requests \$21.25 million in resources for the following programs included in the Enhancing Technology Initiative:

1. Gun Safety Research and Development - \$10 million is requested for NII to expand development, testing, and replication of "Smart Gun" technologies that will reduce the cost to human life resulting from the use of weapons taken intentionally or accidentally from their proper owner. NII's technology mission is to identify and provide access to promising technologies for use by law enforcement agencies to enable them to perform their jobs more efficiently and effectively and to provide the necessary tools to enhance protection of public and law enforcement officers. Currently there are four different and promising techniques for "Smart Gun" development – radio frequency, biometric, ultrasonic, and touch memory. Once fully developed and tested, these "Smart Gun" technologies will allow law enforcement officers' weapons to be more safely and reliably secured, and will help prevent accidental deaths to children who have access to a firearm.

See related base program information under the Justice Assistance, Research, Evaluation, and Demonstration Account beginning on page 11.

2. Electronic Crime Data: On-Line Data Collection/Analysis - \$500,000 is requested for BJS to begin converting existing paper-based collections of administrative data from state and local units of government to internet-based, paperless collection programs. In addition, this enhancement will provide for a substantial upgrade to current BJS web-based data dissemination efforts by making

available to users of the BJS website the most current technologies for accessing BJS datasets and conducting analyses online, particularly for those with disabilities and those users participating in college-level distance learning programs.

See related bese program information under the Justice Assistance Account, Criminal Justice Statistical Program, beginning on page 17.

3. National White Collar Crime Center (NWCCC) - \$8.75 million is requested for BJA to support the work of the National CyberCrime Training Partnership (NCTP) in concert with IXO3's Criminal Division. The NCTP is a national partnership comprised of federal, state, and local level law enforcement, investigative and prosecutorial agencies. Its mission is to provide guidance and assistance to local, state, and federal law enforcement and prosecutorial agencies in an effort to ensure that these communities are properly trained to address computer-related crime. The foundation of BJA's request for \$8.75 million is a five-year budget plan for NCTP training activities.

See related base program information under the Justice Assistance Account beginning on page 31

4. Justice Online Information Exchange (JOIE) - \$1 million is requested to create the Justice Online Information Exchange (JOIE). As the new century begins, the expanding justice challenges and the potential of powerful new technology demand a shift from reactive, one-way, paper-based dissemination to an electronic knowledge exchange and network linking communities and justice professionals together to maximize crime prevention, crime control, public safety, and community justice efforts. Utilizing the full potential of the Internet-perhaps the most profound socio-technological development of the late 20th century--OJP proposes to create an interactive information exchange and communications network to provide answers to pressing questions, share hard-to-find information, and fester linkages between communities to share best practices on crime and justice.

See related base program information under the Justice Assistance Account beginning on page 11.

5. Computer Crime and Cyber-Fraud Statistics - \$1 million is requested for BJS to initiate the operation of the National Computer Crime Statistics Program (NCCS) to gather information on changes over time in the incidence and prevalence of computer crime offenses, statistical data on the costs and consequences to victims of computer crime, and data on prosecutions, convictions, and sentencing of persons convicted of computer crime.

See related base program information under the Justice Assistance Account, Criminal Justice Statistical Program, beginning on page 17.

C. ENHANCING TECHNOLOGY - PROGRAM INITIATIVES

According to the recent FBI report Officers Killed and Assaulted, one in six officers are killed annually with their own firearm after being disarmed by a suspect. To address the growing concern for the safety of our nation's police officers, NIJ, in 1994, awarded funds to Saxdia National Laboratories (SNL) in Albuquerque, NM, for the following purposes:

- study the problem of police firearm take-aways.
- identify the extent to which officers are assaulted and killed with their own firearms, and
- identify the requirements officers would want in a "Smart Gun."

SNL was also charged with identifying existing technologies that could be used to disable a weapon so that it would only fire for a recognized user.

Law enforcement officials have the following needs and requirements:

- the programmable code that operates the gun has to be accessible to a varied number of law enforcement personnel (i.e., entire shifts, specialized units or to the entire agency);
- a way to confirm visually that the weapon recognized the registered user;
- . the weapon does not require extensive training or in-depth modification to existing equipment; and, most importantly;
- the weapon must be foolproof so that if the "smart" system failed, the weapon would revert back to manual operation.

Based on these and other requirements, Sandia assessed the technical and practical feasibility of 14 technology concepts ranging from simple mechanical devices to sophisticated electromagnetic concepts. Subsequently, five models of proof-of-principal "Smart Gun" devices were built to illustrate the strengths and limitations of each technology under consideration. They included (1) passive radio frequency, (2) radio frequency (you enable the weapon to read the frequency), (3) touch memory, (4) voice recognition, and (5) fingerprint identification. A final report detailing Sandia's findings was published by NU in 1996.

Of all the promising techniques for "Smart Gun," the radio frequency technology is the only one to be developed into an operational prototype. A partnership was formed with Colt Manufacturing to further develop the radio frequency "Smart Gun" technology. The radio frequency "Smart Gun" works by an energized weapon emitting a radio signal that is received by a small transponder worn by the authorized user. The transponder returns a coded radio signal to the firearm. When the weapon hears the signal, the trigger automatically unlocks and the weapon can be fired. Colt will deliver two "Smart Gun" working prototypes that use radio frequency technology by mid-2000.

Colt's research initiative for bringing its law enforcement version of a "Smart Gun" to fruition has not been without several mechanical and technical difficulties. For example, Colt had to position critical components in the frame of the pistol. The communications package, power source (batteries), and actuator (motor) are currently located in a customized grip panel. In addition to extreme environmental conditions (dirt, water, temperature, impact, etc.), the shock and vibration on the "Smart Gun" components while firing the pistol pose a significant design challenge. Developing and incorporating components that operate reliably under extreme conditions is difficult, expensive, and time consuming. Colt's projects have demonstrated that commercial off-the-shelf technology to support the "Smart Gun" has been difficult to locate and once found, difficult to incorporate.

In response to NIJ's 1999 technology solicitation, and as a result of the heightened interest in developing a "Smart Gun", NIJ received four proposals from both firearms manufacturers and the technology industry to develop additional versions of "Smart Guns." The projects range from a fingerprint authorized, fully electronic firing weapon to magnetic and material recognition. The proposals, currently undergoing independent peer review, are in various stages of product development, from proof-of-concept to a fully integrated, operational prototype (a 28 month project). Of all the proposals received to date, none meets all the pertinent requirements identified in the Sandia report, such as being able to fire the weapon white wearing gloves, no introduction of specialized equipment (i.e., specific holsters or ammunition), manual or automatic override in case of system failure, and the need for separate identification devices to be carried by the officer. One of the primary requirements unique to law enforcement is that if the "smart" aspects of the weapon fail, the weapon is still operational. For example, if batteries go dead or the communications package jams the weapon will still fire so the officer can use it to protect himself or a citizen. Of course, this requirement would be the reverse for civilians.

Of the \$10 million requested, \$2.5 million will support refinements to Colt's radio frequency prototype; \$1.5 million will be used to replicate and distribute the radio frequency technology prototype (if this becomes the first fully functional law enforcement model) to law enforcement agencies for actual field testing in police eacademies, as well as provide training and testing for officers in the field. The remaining \$6 million would be used to fund the four new proposals for "Smart Gun" technology development including biometric, magnetic, ultrasonic, and material recognition. The cost for these proposals ranges from \$300,000 to more than \$3 m Ilion.

The availability of a "Smart Gun" would be of great benefit to citizens as well, but that does not take the place of responsible use, storage and ownership of a firearm. The "Smart Gun" is merely the next evolution in firearms technology, much as the introduction of the semiautomatic pistol was after the revolver. While radio frequency technology may appear to be readily adaptable and accessible to the novice, we have not had an opportunity to fully evaluate how successful it will operate in the field and whether other frequencies will interfere with its consistent performance. Extensive research, development and testing will be required to bring any "Smart Gun" concept to an operations status.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

INTUATIVE: Enhancing Technology

PROGRAM/ORG UNIT: Smart Gun Technology Development/National Institute of Justice

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal, State and Local Governments

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.1) Improve the crime tighting and criminal justice system capabilities of tribal, state and local governments. ANNUAL PERFORMANCE GOAL: (2.1.1) Research and Evaluation

MISSION: To improve the enforcement and corrections officer safety through the development and product appropriate interaction of new literature technologies, which prevent the unauthorized use of service measures.

- at Subject to the availability of technologies suitable for federal technology development funding in this (schnology area, between 2 and 4 technologies/prototypes will receive development funding in FY 2001.
- b/ The Smart Gunt technology development process in expected to span 3 to 5 years for each exclusively developed from the concept to the working prototype stage, as such our restrictible services will never during FY 2001.

NUI's technology mission is to identify and provide access to primiting technologies for use by Liw enforcement agencies in enable them to perform their jobs more efficiently and effectively and to provide the necessary tools to enhance protection of public and Liw enforcement officers. Currently there are four different and primiting techniques for "Smart Guo" development - radio frequency, hometers, ultrasonic, and fouch memory. Once folly developed and leared these. "Smart Guo" technologies will allow law unforcement officers" weapons to be more safety and reliably secured, and will help prevent conditional death in children with their decessors in finance. Of the \$10 million requested, \$1.5 million will surpoint refinements to Coll 3 radio frequency prototype. \$1.5 million will be used to replace and distribute the radio frequency prototype (if this becomes the first fully functional taw enforcement model) to have officers in the field. The remaining \$6 million would be used to find the four new proposals for "Smart Guo" technology development including his oriented, unbrasonic, and material ecogetion. The cost for these proposals ranges from \$300,000 to more than \$5 million.

D. Validation and Verification. NII validates and verifies performance measures by progress reports submitted by grantees, unsite maintening of grantee performance and telephone contact.

Current web technology is changing rapidly and BJS has led the way in OJP and much of DOJ in utilizing these emerging tools. New capabilities, emerging technologies, more efficient languages, and improved standards (such as eXtensible Markup Language (XML), JAVA, and Cascading Style Sheets) offer promising improvements for the way BJS both collects and disseminates justice statistics.

Reducing Burden to Criminal Justice Agencies

BJS currently maintains nearly two dozen different data collection programs that obtain data describing the workload of the approximately 50,000 federal, state and local agencies, offices, and institutions, which compose the criminal justice system nationwide. At the present time, all BJS collection activities involving criminal justice agencies utilize traditional paper-based methods for obtaining the requested data from law enforcement agencies, prosecutor's offices, probation offices, local jails, courts, pretrial release agencies, offices providing public defense services, prison authorities, and parole authorities. This proposed enhancement will permit BJS to acquire the most up-to-date software for expanding the potential opportunities to collect data on-line from agencies.—It will require no new software for BJS respondents. In many government and private sector data management activities, paper-based data collection methods are rapidly being replaced by methods utilizing the Internet for direct submission of information to a database. With appropriate safeguards and protections, such as client-sided validation of data on electronic forms, electronic authentication and identification of respondent agencies, automatic e-mail notification, and automatic updating of directories and databases, collection of statistical information will be easier for the contributors, will provide more accurate data, will cost less than the current process, and will take far less time to prepare the data and produce findings than is required using the current methods. This upgrade to the BJS website will provide an electronic option for Internet-capable respondents so that they merely need to complete requested forms directly without any need to enhance their own operating systems or Internet environment.

Improving Access and Usability

Aside from the hundreds of BJS reports and the numerous links to other sites available to users, the BJS website provides a number of significant features to enhance user access including regularly updated Key Facts at a Glance; a keyword search capacity; access to simple spreadsheets covering a wide variety of crime and justice issues; and online tabulations, datasets, and codebooks to access and analyze NCVS data, Supplementary Homicide Report data, and BJS data on prison admissions and releases.

Use of the BJS website has been growing dramatically, the website is now experiencing over 20,000 user sessions per week with thousands of publications and datafiles downloaded each day. This BJS user community is growing rapidly, increasing by two-thirds during 1998.

The current website provides a series of static pages in which the user must find the desired information. This proposal will improve BJS' software to interact with users. In addition, some customized information will be delivered automatically. This capability is particularly important for providing content to persons with disabilities who may need the information presented in a particular form which is usable by their assistive software. For example, a sight-impaired user coming to the BJS website will automatically be served the information in a format that can be read by text-readers designed to assure access for the blind to web materials.

Similarly, the ability to disseminate information dynamically would be valuable for those participating in online course work which would permit both finding data on a specific question of interest and manipulating the data for presentation. Our analysis of our web use statistics shows that usage corresponds closely to the educational calendar. Furthermore, we are continuously asked questions online by students and teachers which require the response of a BIS staffer—a dynamic website would help users to craft answers to questions themselves. Finally, a dynamic website would allow a student looking for a particular number to gather information on a wider array of topics related to the subject of his/her initial inquiry.

With this enhancement, users will be able to find the information most relevant to them—information on people like them, people who live near them, or people with whom they share a common concern. An upgraded BJS website will permit web users to obtain the greatest utility from the data most pertinent to their needs and will insure that BJS dissemination strategies are operating at a level consistent with the new technologies increasingly available to academic and physically challenged user communities.

Utilizing seed money from NIJ, BJS is adding some dynamic content, which will allow users to obtain statistics about specific jurisdictions. This new feature was initiated in response to the numerous requests for data describing individual jurisdictions and will serve as a prototype for the types of improvements to be obtained under this 2001 enhancement. Furthermore, BJS will need to explore additional enhancements including expanding the statistics in the database and providing new capabilities, such as graphics and client sided data manipulation. BJS is also coordinating this effort with other Federal Statistical agencies' efforts to provide users a seamless interface to statistics produced by the federal government. Already, BJS has introduced software, accessible through the BJS website, at the National Archive of Criminal Justice Data at the University of Michigan to provide for immediate on-line analyses of homicides, criminal victimization, State prison admissions and releases, and international surveys of crime. In addition, data collected from the Administrative Office of the U.S. Courts and the Federal Bureau of Prisons under the Federal Justice Statistics Program for 1994-97 can now be analyzed by non-technical users as a result of major upgrades to make the BJS website more user-friendly. This enhancement request will permit BJS to increase these efforts to improve and expand the utility of the BJS website and the range of options available to those users who are seeking greater control over the content of the information they receive.

health care fraud, financial crimes against the elderly, and computer crime. In NWCCC serves as the operations center for the National CyberCrime Training Partnership (NCTP) activities, due to its position as a fully functioning support service group. It provides logistic, administrative and communication support for NCTP activities, and serves as the state and local liaison and training arm of the Partnership. It also acts as a clearinghouse, providing information on all federal computer crime training available to state and locals, as well as a "yellow pages" of resources available in forensic computer science, computer and network investigations

In 2001, NWCCC is requesting an \$8.75 million enhancement to support the work of NCTP. The request would bring total funding for NWCCC for all purposes to \$18 million. The NCTP is a national partnership comprised of federal, state and local level law enforcement, investigative and prosecutorial agencies. Its mission is to provide guidance and assistance to local, state and federal law enforcement and prosecutorial agencies in an effort to crisure that these communities are properly trained to address computer-related crime. In this capacity, the NCTP serves as a centralized, operational focal point for assessment, design and delivery of federal, state and local training and technical assistance regarding computer crime investigation and prosecution. The Computer Crime and Intellectual Property Section of the Criminal Division (CCIPS) initiated the NCTP approximately two years ago, and serves in a leadership capacity, providing policy and oversight of NCTP functional activities.

The rapid growth of the Internet and other computer technologies are promoting advances in virtually every aspect of society and every corner of the globe. The Internet, which allows people to interact electronically for both personal and commercial reasons, has generated justifiable excitement over the past few years. But as with other innovations, crime has quickly followed. While new computer technologies allow us to do things that were previously impossible, they can also be misused in ways that threaten public safety and security. Although it is difficult to quantify the scope of the computer crime problem, public reports have estimated that computer crime costs us between \$500 million and \$10 billion annually. Law enforcement must keep pace with advances in all areas of computer-related crime. This request will enable the NCTP to deliver a basic level training program as well as design and deliver more advanced level training by expanding and enhancing the NCTP Operations Center as identified in their 5-year plan.

The foundation of BJA's request for \$8.75 million is a 5-year budget plan for NCTP training activities. This plan was drafted based on program development objectives determined by the NCTP and 2 focus groups conducted by CCIPS on behalf of the NCTP. These focus groups provided state and local law enforcement the opportunity to detail their needs in the area of cybercrime training. Results from this assessment confirmed predictions that nearly all law enforcement officers require at least a basic level of cybercrime training and investigators require several levels of training. This input was incorporated in the NCTP's design for the scope of its training program, and in the development of its 5-year budget plan.

٠ς.

The NCTP's 5-year budget plan recognizes that program start-up costs will involve a significant investment in computer hardware and software that will require continuous upgrading. Facility and equipment sharing between NWCCC and the FBI has been initiated, as well as cross-utilization of instructors. NCTP's 5-year budget plan recommended funding levels of approximately \$6.2 million in the first year (1999), \$5 million in the second year (2000), \$5.5 million in the third year (2001), \$5.8 million in the fourth year (2002), and nearly \$6 million in the fifth year (2003). BJA set aside \$4 million at the end of 1998 from its Local Law Enforcement Block Grant (LLEBG) program to be used in 1999 us funding for the first year of this budget plan. In 2000, NCTP was appropriated \$1.9 million. The 2001 enhancement would bring the total funding level for NCTP to \$10.55 million.

Specifically, the \$8.75 million enhancement will support the following NCTP activities:

\$2 million for the expansion and enhancement of the NCTP Operations Center — Current facilities at the NCTP Operations
Center in Fairmont, West Virginia consist of offices and two state-of-the-art computer training rooms (leased space). Expansion
will include additional leased office space (\$135,000 for first year lease of approximately 5,000 square feet), a forensic training
lab (\$300,000); work stations and other technical support (\$65,000); upgrades for existing computer systems and training labs
(\$250,000); and general administrative and telecommunications support (\$60,000).

Included in this request is an additional 15 core staff for the operations center (\$1.2 million), bringing total staffing to 32 positions. Additional staff are as follows. I deputy assistant director. I supervisory computer crime specialist, 6 computer crime specialist; 2 forensic specialists, 1 section clerk, 2 curriculum developers. I research assistant; and 1 administrative assistant.

- \$1.7 million for development and delivery of basic, intermediate, advanced, and specialized level training NCTP has identified and prioritized approximately 15 training programs needed beyond the basic level courses for law enforcement. This will allow for the delivery of 70 hands-on basic level training reaching approximately 2,100 law enforcement officers. In addition, 10 intermediate, advanced, and specialized training courses now under development will be completed and presented. These 10 courses will reach an estimated 600 law enforcement officers, administrators, and forensic examiners.
- \$500,000 for forensic "tools" production, distribution, and training -- NCTP needs an internal capability to pursue the development of specific types of technology software "tools" required by its partners. NIJ has agreed to lead the research and development effort; "high they are currently doing through base funding streams, the LLEBO research and development set-aside, and the development of counterterrorism technologies. NCTP Operations Center will provide training on the use of these tools. This request relates only to the training expenses and production/distribution costs for the "tools." An example of a forensic "tool" used in the cybercrime area would include software designed to retrieve data from the "crime scene" or criminal's computer in order to avoid destroying this data or evidence. Approximately 300 forensic examiners will be provided these "tools" and trained on their use.

- \$400,000 for forensic "tools" validation and standardization capability There is a critical need for a third party independent evaluation of new forensic software developed and to provide standardization of software tools used by law enforcement. This verification of newly developed software for forensic purposes will be done through a partnership with the National Institute of Standards and Technology (NIST). NIST will use this funding for development and first year implementation costs to establish the capability to assess newly developed software for forensic examinations to determine if the software actually works as expected. NIST would then validate the performance of the "tool" or refute its claim based upon independent evaluation. Law enforcement can then rely upon the NIST validation before buying, or otherwise acquiring these "tools." The NIST validation will become the accepted "standard" for law enforcement use.
- \$900,000 for continuation and enhancement of the "guidelines" project The "guidelines" project is a series of 7 "best practices" manuals covering all major aspects of law enforcement management of electronic crimes. The first has been completed, and the remaining 6 in the series can be produced in a time effective manner with this funding. Each manual costs approximately \$150,000 to develop. Production and distribution will continue beyond the initial year.
- \$1.45 million for enhancement of the Secure Collaborative Communications System (SCCS) The SCCS requires constant modification and upgrading to maintain its maximum value to the partners of NCTP. This system provides a totally secure, real time capability to work on training and technical assistance programs and products. Additionally, it provides high level security for distance learning and development of exercises, while also protecting the sensitive information in programs and other communications. This request will allow for the continued development and addition of a critical multi-media component, as well as secure online collaboration, training, and research.
- \$500,000 for establishment of a "virtual" software library -- As law enforcement encounters a wider variety of software and hardware in criminal cases, it is necessary to establish a "clearinghouse" or library of technologies available. This "virtual" software library will enable law enforcement officials to locate technologies and will establish proper protocols for gaining access and assistance for investigative purposes. Actual purchases of software will be rare, but necessary. NCTP plans on establishing a partnership with several academic institutions to offer staff, space, administrative support, and technical assistance expenses.

\$800,000 for short-term high level technical assistance -- The NCTP requires short-term high level technical assistance for portions of various projects. This assistance is generally obtained through agreements with uniquely qualified experts and is an effective and cost efficient method for managing this need.

\$500,000 for a student-based evaluation of training — The NCTP serves as a centralized, operational focal point for assessment, design and delivery of federal, state and local training on computer crime investigation and prosecution. In this capacity,

additional funding is required to perform a follow-up student evaluation of training. This evaluation would look at the effectiveness of the available courses given at the NCTP to enable them to revise and enhance the program to better meet state, local and federal law enforcement needs.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

INITIATIVE: Enhancing Technology

PROGRAMIORG UNIT: National White Critic Crime Center (NWCC) Hurana of Juniae Assistance

A. Definitions of Terms or Explanations for Indicators and Data Source:

*BLA files = Bureau of Justice Assistance's files and National White Collar Crime Center Annual Program Performance Report

B. Issues Affecting 1999 Program Performance. (a) The original estimate of 70 arrests was projected incorrectly

C. Issues Affecting Selection of 2000 and 2001 Targets. In 2001, BJA requests an increase of \$8.750 million to support the National Cybercrime Training Partnership (NCTP). Specifically, a person of those funds will be devoted to training law enforcement of ficers to cybercrime. The balance of the tunds will be used for expansion and enhancement of the NCTP Operations Certest, for development of training materials, for independent evaluation of new forenses oftware, for development of best practices instituals. For establishment of a software library, and for short-tern; high-level technical assistance a full of which cannot be quantified in the GPRA.

D. Veliderion and Verification.

The Program Development Division relies on B2A files and grantee reports to verify GPRA numbers. BIA files track information for indicators 2 - 5. Information provided in indicators 6 - 8 are obtained from quarterly reports submitted by individual projects. BIA requires that grantees track figures for filese performance indicators and report them quarterly. To further validate the numbers the projects intuitinate the original documents that support the numbers.

The Office of Justice Programs (OJP) requests \$1 million to begin to create the Justice Online Information Exchange (JOIE). As the new century begins, the expanding justice challenges and the potential of powerful new technology demand a shift from reactive, one-way, paper-based dissemination to an electronic knowledge exchange and network looking communities and justice professionals together to maximize crime prevention, crime control, public safety, and community justice efforts. Utilizing the full potential of the Internet-perhaps the most profound socio-technological development of the late 20th century--OJP proposes to create an interactive information exchange and communications network to provide answers to pressing questions, share hard-to-find information, and foster linkages between communications between the practices on crime and justice.

For, more than a quarter century, OJP has fulfilled its Congressional mandate to serve as a national and international clearinghouse for criminal justice information. Through the National Criminal Justice Reference Service (NCJRS). OJP has built the largest clearinghouse for criminal justice information in the world, with a traditional library of 150,000 document abstracts and a virtual library of over 1,500 documents that the public can request via an 800 telephone number or the Internet. In 1999, NCJRS distributed over 1.5 million documents and over 750,000 people requested information and/or publications from OJP. The success of the reference service is undeniable.

Current information and communications technology, and the public's appreciation and widespread use of them, has highlighted the limitations of NCJRS' one-way dissemination model. The traditional delivery systems-publications, journals and 800 numbers-are no longer sufficient because they lack interaction and knowledge transfer capabilities. In addition, the current system is too antiquated to offer the "one stop shopping" capacity that OJP envisioned in its March 1999 Report to Congress. Therefore, OJP proposes a five-year plan to increase productivity and customer services by transitioning from a primarily paper-based reference service to an interactive 21st century information sharing and communications network for justice professionals and those interested in justice

The technology is here to make this a reality. Information technology advances of the last decade have moved the imaginable to the attainable. Today, technology allows us to link researchers and practitioners from around the world to discuss important issues of crime and justice; today we can convene a panel of experts in school violence prevention and bring their discussion directly to thousands of classrooms around the country—and the kids can ask questions and interact with the panel; today we can build "knowledge-bases," which can be easily accessed by customers to quickly find "what works" and "what doesn't" in any crime prevention area. These knowledge-bases can also include rosters of experts in specific jurisdictions that have tried interventions to address these crime problems. This linked system will permit continuous growth—from the top down and from the bottom up—as the frontiers of knowledge are expanded and as researchers and practitioners working together in the field apply that research and learn valuable lessons in implementation. Today, information technology will allow us to put a police chief who has implemented a program to deal with managing sex offenders in the community directly in touch with a community faced with this problem. This is

particularly important because OJP has learned (and recent research supports this) that practitioners are far more likely to adopt a proven best practice if it is communicated by a respected peer than it if were presented in a journal or at a conference.

5-Year Plan

In order to develop an appropriate 5-year funding plan for JOIE, OJP commissioned an independent feasibility and cost analysis of the JOIE system. This report shows that JOIE is not only a better way to interact with our expanding customer base, but that it is cost effective as well.

In the first year, 2001, \$1 million is requested to (1) begin analysis and design for the system and (2) upgrade and/or modify existing computer hardware, software and search technologies to ensure that they are compatible with the plans for the new system. Finally, new technologies, including hardware and software, will be assessed, field tested by potential customers, purchased, and installed.

In 2002, OJP will engage in the first of two major development years. Systems analysis and design will continue. The upgrading of relevant hardware and software to state of the industry standards will progress, and the start of designing, developing, and loading the knowledge-base will begin. This comprehensive database will actually consist of multiple, compatible, connected databases whose information can be cross-analyzed when queried by customers. This knowledge-base will contain electronic versions of all criminal justice related publications, journals, newsletters, news stories, etc., produced around the world, as well as video and audio justice information as it becomes available. To achieve this comprehensive, virtual library, OJP will forge partnerships with publishers, news services, and academic and criminal justice institutions. Eventually, JOJE, with an audience in the hundred thousands, will be seen as a major distribution "channel" for these organizations. In addition, other linked databases that will become part of the knowledge-base will include "best practices" on crime and justice; criminal justice subject experts, practitioners and policy makers working on crime prevention and criminal justice; training, technical assistance, and funding opportunities available from the Department of Justice; archived data-sets, on-line training curricula, etc.

Through design and development of an easy-to-use, customer-friendly search engine, which will also be completed during year two, communities, criminal justice professionals, researchers and students alike will be able to access the knowledge-base and get the help that they need without waiting for hardcopy materials or dealing with intermediaries. In fact, through the satellite telecommunications services, list-servers, and on-line discussion areas offered, JOIE will be capable of virtually linking communities together—in real time—to discuss issues of crime and justice. OJP will require grantees and others who access our services to add their research findings, data sets, program's successes and failures, innovations, etc., to feed OJP's continuous updating and refining of the databases with current news stories, publications, on-line training curricula, an on-line feedback mechanism to provide customer input, etc.

Thus, the knowledge-base will be continuously growing and expanding to improve its own capacity and usefulness over time.

Summary Funding Chart (5 in millions)

	2001	2002	2003	2004	2005
System Development	\$ 1.00	\$ 2 75	·		
Implementation		\$1.63	\$2.75		
Operations and Maintenance			\$2.06	\$1.96	\$2.05
Totals	51.00	54.38	\$4.81	51,96	52.05

As the chart above illustrates, after an initial investment in capital, including hardware and software, reductions in cost resulting from this more efficient networked communication system will begin to offset the initial capital investments. By 2004, a real savings of \$1.2 million will be realized in printing, mailing, and watchousing costs as searchable electronic versions of justice information are expedited to target areas and made available in an electronic data watchouse. In 2005, a savings of \$3.9 million will be realized and by 2006, the JOIE system will have paid for itself.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

INITIATIVE: Enhancing Technology

PROGRAM/ORG UNIT: Justice Online Information Eachange (JOIE)/Office of the Assistant Attorney General

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal. State and Local Government

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2-1) Improve the crime fighting and chunnel juvenile justice system capabilities of initial, state and local governments.

ANNUAL PERFORMANCE GOAL: (2.1-1) Research and Evaluation

MISSION: To utilize the full potential of the Internet to create an interactive information exchange and communications network to provide answers to pressing questions, share hard-to-find information, and forcer linkages between communities in share best practices on crime and justice.

B. James Affecting 1999 Program Performance. N/A

C. Issues Affecting Selection of 2009 and 2008 Places. * This work will not be completed in 2001, but rather, in program out-years. The design and development phase of the project should be complete by the end of FY 2001. Then the system will be put no loss over the next few out years on incremental stages, with full implementation occurring by 2001. The current NGRS system is no anniquised so offer the "one stop thopping" capacity that OIP envisions in the March 1999 Report to Congress. Therefore, OIP proposes a 5-year plan to increase productivity and customer services by transitioning from a primarily paper-based reference service to an interactive 21st century information during and communications network for justice professionals and these interested in justice. By 2004, a real earning of \$1.2 million will be realized in printing, maining and warehousing costs as searchable electronic versions of justice information are empedited to larget areas and made available in an electronic data warehouse, in 2005, a savings of \$1.9 million will be realized and by 2006, the IOIS system will have post for isself.

O. Validation and Verification, NiJ validates and verifies performance measures by progress reports, onsite monitoring of grantee performance by program managers and those contact.

OJP requests \$1 million for BJS to initiate the operation of the National Computer Crime Statistics Program (NCCS) to gather information on changes over time in the incidence and prevalence of computer crime offenses, statistical data on the costs and consequences to victims of computer crime, and data on prosecutions, convictions, and sentencing of persons convicted of computer crime. There is currently no national data available to characterize the nature or extent of computer crime nationwide, or to serve as a baseline against which future data could be compared. Estimates relating to the volume and amount of computer crime have been prepared by a variety of organizations and advocacy groups using different methodologies and definitions, thereby leading to multiple views of the nature and scope of this problem, often limited to a particular type of computer crime. The NCCS will provide for the first time a consistent and comprehensive nationwide view of the volume and cost of computer crime and will serve as a baseline against which future measurements can be compared.

At present, 49 states and the federal government have enacted specific computer crime statutes which provide penalties ranging from civil remedies to incarceration. The NCCS statistical series is designed to gather information on the enforcement of these statutes and changes over time to the incidence and prevalence of offenses.

Computer crime may affect a wide array of victims, drawn from both the public and private sectors, and may reflect a diversity of criminal behaviors. The general categories of computer crime for which data would be collected include.

- unauthorized access or use for illegal purposes, such as unauthorized penetrations of financial networks, use of network to facilitate future crime such as child abduction.
- causing damage to systems or records, such as incidents involving vandatism to financial records or destruction of networks, costs to repair damage or reconstruct financial records;
- theft of intellectual property, such as theft of computer programs or software, illegal transfer of proprietary computer code: and
- economic fraud or gain, such as illegal credit card transactions over the Internet or creation of false identities for purposes of theft from financial networks.

The sources of data will vary and the data collection procedures will need strong coordination with and endorsement from other federal agencies (such as the Federal Deposit Insurance Corporation (FDIC), the Securities and Exchange Commission (SEC), and DOJ's FBI and Criminal Division's Computer Fraud Unit). In 1984, using data obtained from credit card companies over a four year period, BJS reported that losses from credit card fraud were increasing:

Year	Loss per \$1000 volume	Loss per transaction
1979	\$ 1 126	\$.042
1980	\$ 1.321	\$.053
1981	\$1.499	\$.065
1982	\$1.673	\$.079

In 1985, in an in-depth study of 16 U.S. banks, BJS examined fraudulent transactions involving automated teller machines (ATM) and electronic funds transfers (EFT). Based upon the sample transaction data collected, BJS estimated that fraud losses may have been running as high as \$.07 per transaction and \$1.12 per \$1000 transacted electronically.

In the 15 years since such data was last collected by BJS, the range and volume of economically significant types of electronic transactions have grown exponentially, and there continues to be no current national data series measuring the extent of fraud associated with such transactions. There is no single source of national data to inform policy-makers and the public on the magnitude of such losses, the types of transactions most vulnerable to fraud, and the extent to which the incidence and prevalence of loss vary over time and across geographic areas. While we know that bank robbery accounts for about two percent of the robberies in the U.S. with an average loss of \$4,207 per incident, there are no equivalent measures of the distribution by victim or the size of loss associated with ATM, EFT, or other types of financial transactions.

In addition to economic fraud, there are other types of thefts and illegal acts that need to be counted and described: unauthorized access to or use of computer networks, causing damage to systems of records, and theft of intellectual property. There is no current source for information on these kinds of crimes and their consequences.

BJS has not collected or published any data on this emerging crime problem in 15 years. The initiation of the NCCS maintained by the Department of Justice will be a critical step in determining whether enforcement measures are having an effect on the magnitude of the problem.

In 2000, \$250,000 will be used for developing the methods, definitions, and protocols to obtain uniform nationally-representative data on the four general categories of computer crime previously mentioned. A major effort is being devoted to identifying the data collection objectives, preparing agreements with respondent data sources, and examining the range of data available on a recurring

basis. In addition, BJS is developing agreements with other federal agencies, such as the FDIC, the SEC, the FBI, and the Computer Fraud Unit of DOJ, on the types of data available for use as measures of computer crime. Finally, for each of the data collection activities designed, a schedule for recurring measurements is being devised as a foundation for a long-term plan for and commitment to national statistics on this topic. Throughout this phase, BJS is seeking the assistance of the American Statistical Association and a variety of organizations which have an interest in this subject such as the public and private members of the President's Information Infrastructure Working Group. BJS is closely coordinating these efforts with relevant DOJ components and is maintaining a close working relationship with the Computer Crime Unit in the Criminal Division.

In 2001, OJP requests \$1 million to initiate the operation of the NCCS. The NCCS will measure the annual change in the volume and impact of the wide variety of computer-based crimes and will provide for a consistent annual estimate of the extent of such crime and its consequences by examining key areas of illegal access, damage to record systems, thefts of intellectual property, and frauds perpetrated through computer systems or networks. The NCCS will collect data from a cross section of commercial, governmental, and individuals to estimate the incidence, prevalence, and costs associated with computer-based crimes.

The development of a consistent set of measures, jointly with other federal agencies, represents a coordinated strategy to address a growing problem. As with other crime data, data on computer crime will provide a coherent basis for the development of public policy and for evaluation of public initiatives designed to affect the incidence, prevalence, or costs associated with these types of offenses.

VI. JUVENILE JUSTICE INITIATIVE

A. SUMMARY PERFORMANCE PLAN - Component Mission and Goals, and Relationship to DOJ Strategic Plan

With so many risk factors for delinquency and violent behavior for young people today, we know that there is no magic formula that will cure the problem of juvenile crime. But experience and research are pointing to a number of effective responses to reduce youth crime, starting with the earliest stages of life. The Office of Juvenile Justice and Delinquency Prevention's (OJJDP) Comprehensive Strategy for Serious, Violent, and Chronic Juvenile Offenders helps pull together all resources in a community to address juvenile crime. The recent outbreak of school shootings reminds us that much remains to be done to prevent young people from resorting to violence and to ensure that violent juveniles receive appropriate interventions. The initiatives that follow respond to this tremendous challenge.

All program increases identified under this initiative support the DOI priority of providing Assistance to Tribal, State, and Local Governments.

B. NEW INITIATIVES

	Pos	FIE	Amount
Evaluation of OJJDP Comprehensive Strategy (Juvenile Justice)	_		\$4,403,000
Local Gun Violence Reduction Media Campaign (State & Local Assistance)	-		[10,000,000]
Reduction of Youth Gun Violence (Juvenile Justice)	=	=	[10.000.000]
Total, Juvenile Justice Initiative	_	_	\$4,403,000

The Office of Justice Programs (OJP) requests \$4.403 million in resources for the following programs included in the Juvenile Justice Initiative:

1. Evaluation of OJJDP Comprehensive Strategy • \$4.403 million is requested for OJJDP for evaluation of the Comprehensive Strategy for Serious, Violent, and Chronic Juvenile Offenders, which provides communities with a framework for developing sound prevention and graduated sanction strategies for reducing juvenile crime and victimization. OJJDP will measure this program's success by tracking the number of sites completing integration of the Comprehensive Strategy Initiative into their performance review process; the establishment of both process and outcome evaluation frameworks by sites; and completion of a national process and outcome evaluation.

See related base program information under the Juvenile Justice Account.

2. Local GunViolence Reduction Media Campaign - \$10 million is requested to be made available from existing Byrne Discretionary funding for the Local Gun Violence Reduction Media Campaign initiative to support local media campaigns to reduce gun violence among youth. The campaign will focus on local gun violence strategies to ensure proper storage of guns as well as other messages to prevent child access to guns, gun accidents, and other forms of gun violence. The Bureau of Justice Assistance (BJA) will work in close partnership with the Office of Juvenile Justice and Delinquency Prevention (OJJDP) to administer this campaign.

See related base program information under the State and Local Law Enforcement Assistance Account beginning on page 17.

Reduction of Youth Gun Violence - \$10 million is requested for OJJDP to be made available from existing Title V funding to
expand the current OJJDP "Partnerships to Reduce Juvenile Gun Violence Initiative." Of this amount, \$7.5 million is requested to

provide \$300,000 to 20-25 new communities; \$1 million to provide technical assistance and training to assist the sites in implementing their programs; and \$1.5 million to support evaluation of this effort.

See related base program information under the Juvenile Justice Account.

C. JUVENILE JUSTICE - PROGRAM INITIATIVES

The Office of Juvenile Justice and Delinquency Prevention (OJJDP) is charged with leading the fight against juvenile violence and victimization by promoting practical solutions to the problems challenging our Nation's juveniles. The key to addressing these problems is a comprehensive strategy for communities. OJJDP has developed a framework for such a comprehensive approach – The Comprehensive Strategy is a research based, data driven and outcome focused strategic planning and implementation framework for the juvenile justice system. The Strategy incorporates the following two principal components: 1) preventing youth from becoming delinquent by focusing prevention programs on at-risk youth, and 2) improving the juvenile justice system response to delinquent offenders through a system of graduated sanctions and a continuum of treatment activities. The Strategy is best represented as providing a comprehensive and seamless continuum of programs and services, from prenatal care to correctional aftercare (0-18 years of age), with the emphasis on juvenile delinquency prevention, early intervention and graduated sanctions. The program complements the National Institute of Justice's (NII) Community Safety Initiative in that information gathered by NII may be used to help target communities and assist in gathering data to design and involvement a local Comprehensive Strategy.

The Comprehensive Strategy for Serious, Violent, and Chronic Juvenile Offenders has been the foundation of OJJDP's programming since 1993. OJJDP has synthesized decades of research and practice from practitioners and established a framework for implementing an effective juvenile justice system. Through support of research, demonstration programs, and training and technical assistance. OJJDP encourages states, local governments, and communities to use the Comprehensive Strategy to develop coordinated, community wide approaches to intervene and prevent juvenile delinquency and victimization. This comprehensive, systematic approach will help turn the tide of rising juvenile crime by implementing a continuum of juvenile delinquency prevention, early intervention, and graduated sanctions that are responsive to community risk factors. OJJDP focuses its support on programs and initiatives that further one or more of the six key principles of the Comprehensive Strategy:

- (1) Strengthen families in their role of guiding, disciplining, and instilling sound values in their children;
- (2) Support core social institutions and their role in supporting families and helping children develop their maximum potential;
- (3) Promote delinquency prevention strategies and activities that reduce the impact of negative (risk) factors and enhance the influence of positive (protective) factors in the lives of youth at greatest risk of delinquency;
- (4) Immediate, effective, and appropriate interventions at the first signs of trouble in a child's life;
- (5) Establishment of a system of graduated sanctions and a continuum of services to respond appropriately to the needs of each juvenile offender; and
- (6) Identify and control the small group of serious, violent, and chronic juvenile offenders who account for the majority of juvenile crime by providing their incapacitation while at the same time addressing their treatment needs.

The Comprehensive Strategy planning process consists of three distinct phases. First, a local Comprehensive Strategy plan is developed through intensive training and technical assistance, provided by OJDP, which is based on a Comprehensive Strategy curricula. The development of local Comprehensive Strategy plans is achieved by local teams who assess risk factors that put youth at risk of delinquency and develop and establish effective programs that reduce those identified risk factors and strengthen protective factors to prevent juvenile delinquency. The second phase is implementation of the local and State Comprehensive Strategy plans. Implementation requires the provision of technical assistance in developing management information systems, effective program evaluation, and other needs as identified by state and local officials that are developing Comprehensive Strategy plans. The third phase is for outcome and process evaluation. Evaluation results will assist OJJDP in developing the ability to replicate effective Comprehensive Strategies in other communities.

OJJDP is currently providing intensive training and technical assistance to eight states -- Florida, lowa, Maryland, Rhode Island, Texas, Ohio, Oregon, and Wisconsin -- for each of the eight states to implement the Comprehensive Strategy in up to six local jurisdictions for a total of 44 participating communities. In addition, OJJDP is providing technical assistance support to San Diego County, California, one of the first sites in the country to develop and prior a local Comprehensive Strategy. The Comprehensive Strategy is currently supported with technical assistance and training funds through grants to Developmental Research and Programs, Inc. and the National Council on Crime and Delinquency (NCCD) in the amount of \$1.1 million for FY 1999. These grantees have assisted in establishing the research foundation and development of Comprehensive Strategy publications, including a training curriculum, and have provided intensive strategic planning training and technical assistance in each of the local sites in the states.

In 2000, OJIDP will begin a multi-year, multi-site process evaluation of the Comprehensive Strategy for Serious, Violent, and Chronic Juvenile Offenders. The evaluation will first look at the lessons learned from the Comprehensive Strategy training and technical assistance process that was provided in three pilot communities: Fort Myers and Jacksonville, Florida; and San Diego, California. The evaluation will then look at the effect of the 2-year training and technical assistance process that is currently being provided in 8 states and 44 local jurisdictions. The training and technical assistance process is designed to transfer the knowledge, skills, tools, and practices necessary to develop a comprehensive strategic plan in each community. The evaluation will also sook at the level of services being provided in each of the jurisdictions that have successfully completed the training and technical assistance process and are implementing their Comprehensive Strategy plan. In the first year, the process evaluation will also document baseline data in the Comprehensive Strategy states and participating local communities.

The \$4.403 million requested would be used to support a full outcome evaluation from selected local jurisdictions within the 8 states (5 of which are in the process of implementing locally developed Comprehensive Strategies and 3 of which are in the planning phase and scheduled to begin implementation efforts in the fall of 2000). Additionally, at least one other state (Kansas) that has developed Comprehensive Strategy plans throughout the state and based on the work in the 8 states that received training and technical assistance

from OJJDP will be included in thic evaluation. Although OJJDP is currently working on conducting a process evaluation, without the provision of additional resources it will not be possible to conduct a full outcome evaluation. The implementation of the Comprehensive Strategy in the 44 jurisdictions will be primed for an outcome evaluation in 2001. Such an evaluation is essential to provide the richest possible information on the program's successes and failures and the reasons for these outcomes.

In order to determine the effectiveness of the Comprehensive Strategy in helping communities combat juvenile delinquency, an evaluation must go beyond a process evaluation stage. While the process evaluation can identify what the community did to comprehensively respond to and prevent delinquency, it cannot identify how effective these changes were in reducing actual rates of delinquency and achieving other measures of success. To measure the value of the Strategy, data must be collected regarding the juvenites served to determine both how the Strategy affected risk factors and protective factors and whether these changes caused less recidivism or initiation of delinquem behavior. The intended evaluation design will keep costs as low as possible. Evaluation experts warn of the difficulty and the expense of measuring final impacts like reductions in crime and delinquency in evaluations of comprehensive community-based initiatives. However, intermediate outcomes such as decreased risk factors, increased protective factors, and reduced recidivism will be available earlier. Even being careful with costs in this way, the evaluation will have to sample from the 44 participating communities. With a sample of adequate size, however, an outcome evaluation should communicate the effectiveness of the the Comprehensive Strategy planning approach in reducing risk factors and strengthening protective factors and ultimately, in reducing juvenile crime and delinquency.

PROGRAM/ORG UNIT: Comprehensive Strategy for Serious, Yawieri, and Chronic Juvenile Officeader Office of Juvenile Juvice and Delinquency Prevention (Base Program)
DEPARTMENT OF JUSTICE CORE FUNCTION (2) Assistance to Tribat, State and Local Governments

DEPARTMENT OF JUSTICE STRATEGIC GOAL. (2.1) Improve the criticalighting and critically result justice system capabilities of streat, state are least governments.

ANNUAL PERPORMANCE GOAL (2.1.3) - Continue to emphasize both enforcement and justiceration strategies to counter youth windence through targeted joing rate that provide founding and specialized assistance to dates and localized.

MISSION: The Comprehensive Strategy for Serious, Violent, and Chimin, Juvenile Offenders provides the framework for developing wanta prevention and graduated continuous strategies for reducing susenile crime and neuropations.

local gun violence strategies to highlight proper storage of guns, as well as other messages to prevent child access, accidents, and other forms of gun violence. Localities can also use these media campaigns to publicize gun penalties to maximize deterrence against gun crimes. The Bureau of Justice Assistance (BJA) will work closely with the Office of Juvenile Justice and Delinquency Prevention (OJJDP) to administer this campaign.

Although overall crime rates have declined nationwide in recent years, concerns associated with gun-related violence are far from over. These concerns resurfaced graphically on both the national and local levels this past year as a result of several tragic shootings in our nation's public schools. These violent episodes galvanized the American public and alerted everyone of the immediate need to address our country's gun violence problem, particularly the issue of youth access to firearms. The unfortunate recent spate of school shootings left an indelible mark on the country, serving as an abrupt reminder that gun violence can happen anywhere, at any time, and in any place.

Recent studies have shown that American children are more at risk from firearms than any other children in the world. According to the Centers for Disease Control, the rate of firearm death of children 0-14 years old is nearly twelve times higher in the U.S. than in 25 other industrialized nations combined. From 1984 to 1994, the firearm death rate for 15-19 year olds increased 222% while the non-firearm homicide death rate decreased only 13%. For every child killed with a gun in America, four are wounded. Within five years, firearms are expected to overtake motor vehicle accidents as the leading cause of death among American children.

In many cases, research has shown that children in America often die or are badly injured because their parents and other gun owners do not store their firearms properly. As a result, children find loaded guns and use them unintentionally on themselves or other children. Older children are more at risk from horseplay with available guns, while teenagers use guns for impulse suicides and for crime. All are vulnerable to getting caught in the crossfire from guns used in domestic violence and in crime.

Perhaps the greatest tragedy of gun violence is the increasing number of children and youth killed or injured each year by firearms. On average, more than 14 youths each day are killed by gunshots. In 1985, the number of firearm homicides for youth 19 years and younger was 1,339. In 1995, that number was 2,754, and, in that same year, guns accounted for \$4% of homicides of persons 13 to 19 years of age. Youth suicides from firearms have also significantly increased since 1985. In that year, there were 1,256 firearm suicides for youths one to 19 years of age. In 1993, this number increased to 1,460. Additionally, unintentional firearm deaths among youths 19 years of age and under totaled 551 in 1991. In that same year, a total of 5,737 youths 19 years of age and younger died from firearm homicide, suicide, and unintentional shootings.

Another disturbing indicator is the increasing number of young people in possession of firearms. A 1990 survey conducted by the Centers for Disease Control found that one in 20 high school students carried a gun to school in the past month. In 1995, 43,211 juveniles were arrested for weapons violations. In 1976, 59% of murders committed by juveniles involved a gun. In 1991, that number had increased to 78%.

Contrary to conventional wisdom, people who keep guns in their homes for self-protection often place themselves and their families at tremendous risk, particularly when the firearm is kept loaded and in an unsecured location. According to a 1998 study conducted by the New England Journal of Medicine, guns kept in the home for self-protection are 22 times more likely used to kill somebody a person knows than to kill an intruder in self-defense. Thus, a cun in the home actually increases the likelihood of an unintentional shooting, particularly among children. Unintentional youth shootings commonly occur when children find an adult's loaded gun in a drawer or closet, and while playing with it shoot themselves, a sibling, or a friend. In 1996, 1,134 people - many of them children were killed accidentally or unintentionally by firearms. In 1995, there were 1,225 unintentional shooting fatalities. Of these fatalities, 181 were children 14 years of age and younger. Perhaps more troubling is research that shows that as many as one-fourth of all gun owners do not even take the most basic of safety precautions - for example, leaving a gun unloaded and activating the safety mechanism. Many popular semi-automatic weapons lack magazine safety disconnects or load indicators, meaning that children have no way of knowing that a gun that appears unloaded actually has a bullet in the chamber. A 1995 survey found that 59% of parents who admitted to having a gun in the home did not lock the gun away from their children. The Chicago-based Joyce Foundation commissioned Louis Harris Research, Inc. to conduct a poll which found that only 43% of parents with children under 18 years of age who own a gun keep that gun safely tocked. An estimated 1.2 million elementary-aged, latchkey children have access to guns in their homes. Because handgons and other firearms are so easily accessible to many children, adolescents and other family members in their homes, the risks of gun violence in the home increase dramatically. Indeed, the risk of homicide in the home is three times greater in households with guns than those without guns

The \$10 million request will be used as follows:

• \$7 million for grants to support local media campaigns designed to increase youth awareness of gun-related violence and reduce the number of youth gun-related incidents. The grants will emphasize a multi-media approach to ensure broad access to a wide range of audiences. Methods of disseminating this information will include various distribution channels, including electronic print media, billboards, public service announcements (PSAs), point-of-purchase information for new gun owners, and community outreach to publicly available gun safety programs:

٠,

- \$1.25 million in product reproduction to promote the dissemination of documents aimed at reducing gun violence, including, but not limited to, brochures, leaflets, pamphlets, camera ready print, radio commercials, etc.;
- \$1 million for technical assistance to local agencies to assist in developing and implementing strategies to emphasize gun safety and prevent gun violence; and,
- \$750,000 for an impact evaluation to assess the effectiveness of the program.

These funds will be made available through existing OJIDP Title V resources and will fund 20-25 additional demonstration sites. These sites are needed to test the various prevention and intervention components of this comprehensive model in diverse communities and to maximize what we learn from the demonstration effort. Of this amount, \$7.5 million is requested to provide \$300,000 to 20-25 new communities; \$1 million to provide technical assistance and training to assist the sites in implementing their programs; and \$1.5 million to support evaluation of this effort.

The goal of this program is to reduce juveniles' illegal access to guns and address the reasons they carry and use guns in violent exchanges. The success of this program will be determined by addressing the following measures: (1) reduction of illegal gun availability to juveniles; (2) reduction of the incidence of juveniles illegally carrying guns; (3) reduction of juvenile gun-related crimes; (4) increase in youth awareness of the personal and legal consequences of gun violence; (5) increase in participation of community residents and organizations in public safety efforts; (6) improvement in community attitude toward law enforcement/ more confidence in public safety, and (7) increase in services and resources for at-risk juveniles, especially juveniles involved in the juvenile justice system.

OJJDP expects this program will promote and increase the effectiveness of new and existing youth gun violence reduction programs by enhancing and coordinating prevention, intervention, and suppression strategies, and strengthening linkages between community residents, law enforcement, and the juvenile justice system.

The requested program increase would expand demonstration of an approach supported both by three decades of research on prevention delinquency and reducing juvenile crime, and preliminary research on reducing gun violence. As recently as July 30, 1998, at a Department of Justice focus group, the nation's top public health and criminology researchers, city mayors, community representatives and law enforcement practitioners, reaffirmed the components of the Partnerships to Reduce Juvenile Gun Violence Initiative, from the elements of gun tracing, strong law enforcement activity, and innovative police/probation partnerships to community-based efforts involving schools, mental health, social service providers and parents and public information efforts to educate youth and communities as a whole on the dangers of firearms. They also voiced their support for more demonstrations of comprehensive approaches to reduce juvenile gun violence, along with essential elements of training and evaluation.

VII. MEETING NEW CHALLENGES INITIATIVE

A. SUMMARY PERFORMANCE PLAN - Component Mission and Goals, and Relationship to DOJ Strategic Plan

The criminal justice needs of tribal, state and local jurisdictions are expluding -- prosecution rates are up, prisons are crowded, forensic labs are overworked and the court systems are overloaded. As a result, OJP is reaching out into some previously under-addressed areas. Such as international crime, investigative and forensic sciences, and treatment of the ever growing number of serious mentally ill offenders within the criminal justice system. Additionally, OJP is focusing on Indian Country needs as they relate to alcohol and substance abuse, tribal courts, sexual abuse, and juvenile mental health. Presently, prisons and jails face unique problems due to this growing trend and they are ill equipped to manage or serve the deinstitutionalized mentally ill.

All program increases identified under this initiative support the DOJ priority of providing Assistance to Tribal, State and Local Governments.

B. NEW INITIATIVES

	Pos	FTE	<u>AMOUNT</u>
Mental Health of Offenders (State & Local Assistance)	1.0	1.0	[\$6,000,000]

Total, Meeting New Challenges Initiative	15.0	9.0	540,400,000

The Office of Justice Programs (OJP) requests \$40.4 million in resources for the following programs included in the Meeting New Challenges Initiative:

1. Mental Health of Offenders - \$6 million and 1 position are requested for this program. Of the amount requested, \$5.169 million is requested for the Mental Health of Offenders Discretionary Grant Program to be administered by the Corrections Program Office and \$831,000 and 1 position is requested to establish a Mental Health Court Program to be administered by BJA. The entire \$6 million will be made available from the base funds of the Prison Grant Program.

See related base program information under the State and Local Law Enforcement Assistance Account's Prison Grant Program beginning on page 30.

2. Investigative and Forensic Sciences Improvement - \$2 million and 1 position are requested for NI3 to initiate, develop, and support several Technical Working Groups (TWGs) dedicated to creating guidelines for investigative and forensic sciences. NI3 will create new protocols and establish national guidelines and standards, based on a broad-based consensus from criminal justice

ς.

professionals, to ensure the sound identification, collection, and preservation of forensic evidence and its presentation in the courtroom as well as develop criteria for training investigators.

See related base program information under the Justice Assistance Account beginning on page 11.

3. International Crime Research Program • \$1.4 million and I position are requested for NIJ's International Center to implement an International Crime Research Program. Crime in the twenty-first century will occur in a global framework and because multinational business creates global economies, no country is more vulnerable to transnational crime than the United States. While we can occasionally collaborate across state and county lines, our capacity to track offenders across international borders is virtually non-existent. Developing countries and emerging democracies, with weak enforcement capabilities and justice systems, serve as natural origins for illicit goods and destinations for stolen properties and laundered money. In the absence of a firm and broad-based understanding of the nature and extent of transnational crime threats operational agencies cannot develop effective programming to combat this type of crime. This program would help NIJ to develop and share knowledge in support of federal law enforcement efforts to assist justice agencies in emerging democracies, and to share knowledge developed through a variety of research, evaluative and technology-related practices with law enforcement and criminal justice practitioners and researchers both in the United States and abroad.

See related base program information under the Justice Assistance Account beginning on page 11.

4. Tribal Criminal and Civil Legal Assistance - \$6 million and 4 positions are requested by OJP to be funded under the Byrne Discretionary Grants Program for the Tribal Criminal and Civil Legal Assistance program, which will develop and enhance the legal services provided to Indian tribes through a mix of program funds, training and technical assistance, and program research and evaluation. This program is crucial to furthering the President's Indian Country Law Enforcement Initiative begun in 1999.

See related base program information under the State and Local Law Enforcement Assistance Account beginning on page 17.

5. Indian Country Grants - A total of \$21 million and 8 positions are requested to implement a three-part initiative in Indian Country. The primary purpose of the Initiative is to promote Indian youth mental health, education, alcohol and substance abuse related services, and provide certified medical staff to assist in the forensic examination of sexual assault victims. Specifically, \$8 million and 3 positions are requested for Tribal Youth Mental Health and Behavior Problems Initiative; \$8 million and 3 positions are requested to establish an Indian Alcohol and Substance Abuse Diversion Program; and \$5 million and 2 positions are requested to form a pilot project for establishing Sexual Assault Nurse Examiner Units to be administered by the Violence Against Women's Office.

2459

6. Indian Tribal Courts - \$10 million is requested for BJA to expand the current Tribal Courts Initiative, bringing total funding to \$15 million. This initiative will provide additional resources to focus on juvenile and family issues, non-traditional approaches to justice, enhancing the administration of civil and criminal justice on Indian lands, and encouraging the implementation of the Indian Civil Rights Act by tribal governments. While promoting greater cooperation among tribal, state, and federal justice systems, this initiative assists tribal justice systems to coordinate programs and services within its tribal structure with law enforcement, victims services, treatment providers and others. The initiative also assists with technology development to ensure that tribal justice systems can communicate within the tribal and non-tribal justice community.

4

See related base program information under the State and Local Law Enforcement Assistance Account beginning on page 34.

C. MEETING NEW CHALLENGES INITIATIVE - PROGRAM INITIATIVES

The Mental Health of Offenders Discretionary Grant Program will address problems related to the growing number of serious adult and juvenile mentally ill in the criminal justice system--a primary concern of the Attorney General. This issue, which has been given little attention in the past, is emerging as a national crisis as the magnitude of the problem is now being recognized. According to CPO data, one in every 14 inmates in local jails suffer from serious mental illness according to a nationwide survey of 1,391 jails conducted in 1992 by the Public Citizen's Health Research Group and the National Alliance for the Mentally Ill. Among persons in the criminal justice system who are diagnosed with schizophrenia, major affective disorders, or antisocial personality disorder, 90 percent also have a co-occurring substance abuse disorder. Almost one in three (29 percent) jails detain seriously mentally ill persons who do not have criminal charges against them. The most common offenses cited by jails for arresting the mentally ill were assault and/or battery, disorderly conduct, and drug and alcohol-related crimes. Seriously mentally ill persons face substantial problems in jails, including abuse from other inmates, and jail officials report that the seriously mentally ill must be closely monitored for possible suicide, require more attention from jail staff, disrupt normal jail activities, and increase the potential for outbreaks of violence. In many jails, psychiatric resources are limited or non-existent--over 20 percent of the jails report having no access to such specialized services. Corrections officers in 84 percent of jails receive either no training or less than three hours of training in the special problems of the mentally ill. More than two-thirds of the jails report seeing more or far more inmates with serious mental illnesses now than 10 years ago.

It is estimated that at least 10 percent of prison inmates have a serious brain disorder such as schizophrenia or manic-depressive illness (bipolar disorder). Inmates with schizophrenia or manic depressive illness are at higher risk for suicide. Too often, inmates with these disorders exhibit behaviors that result in disruption for the correctional system and disciplinary problems for the offender. They frequently "get lost" in the correctional system preventing them from receiving adequate treatment and causing them to suffer in silence. Many mentally ill offenders are unable to adjust to the myriad of rules and the stresses of prison life and accrue disciplinary records that lead to their placement in isolation or in super-maximum security facilities.

In July 1999, BJS released a report entitled, "Mental Health and Treatment of Intrates and Probationers." The report found an estimated 283,800 mentally ill offenders were incarcerated in the Nation's prisons and jails. BJS estimates that 16 percent of state prison inmates, 7 percent of federal inmates, and 16 percent of those in local jails reported either a mental condition or an overnight

stay in a mental hospital. About 16 percent, or an estimated 547,800 probationers, said they had a mental condition or stayed overnight in a mental hospital at some point in their lifetime.

It is widely recognized that, as public mental health facilities deinstitutionalize many of these individuals find their way into alternative institutions (i.e., prisons and jails), which are ill equipped to manage or serve them. This poses particular problems for law enforcement, the community, jails and prisons, and the mentally ill/persons with mental retardation. In a correctional environment, they are frequently humiliated, degraded or abused by other prisoners, and sometimes, staff who are often neither trained or inclined to recognize or serve their special needs.

In addition to the adult mentally ill offenders, an increasing number of juveniles with emotional disorders are also entering the juvenile justice system. This growing trend is the result of multiple systemic problems including inadequate local mental health services for children and more punitive state laws related to juvenile crine. The National Mental Health Association estimates that up to 60 percent of youth involved in the juvenile justice system suffer from emotional disorders. Special treatment should be available to children who are sexually abused, who have substance abuse problems, health problems, educational problems, histories of family abuse or violence, and who are sex offenders. Programming in facilities should be appropriate to the child's age, gender and culture. Linguistically and culturally appropriate therapy with the child's family should be encouraged. Facilities should train staff to use behavior management techniques that minimize the use of intrusive, restrictive, and punitive control measures. Facilities should have written guidelines for the use of seclusion, room confinement, and restraints.

The White House recently held a conference on mental health that included a breakout session to look at solutions to the problems of mentally ill offenders who repeatedly cycle through the criminal justice system without appropriate intervention. As a follow-up to the conference, DOJ and the Department of Health and Human Services' Substance Abuse and Mental Health Services Administration (SAMHSA) are hosting a conference this summer to focus on how the criminal justice system can prevent crime by mentally ill people, and address the needs of offenders with mental illness. Following this conference, DOJ plans to launch an outreach effort to educate the criminal justice community on how better to serve people with mental health needs. This initiative will include a new partnership with the National GAINS Center for People with Co-occurring Disorders in the Justice System so that communities interested in pursuing these approaches can get technical assistance and ideas about how to implement successful strategies.

The GAINS Center for People with Co-occurring Disorders in the Justice System was established in 1995 and is jointly funded by the Center for Mental Health Services, the Center for Substance Abuse Treatment, and the National Institute of Corrections. The National GAINS Center is the locus for the collection and dissemination of information about effective mental health and substance abuse services for people with co-occurring disorders who come into contact with criminal justice systems. GAINS Center staff and consultants collect information designed to influence the range and scope of mental health and substance abuse services provided in

jails, prisons, and community corrections; tailor these materials to the specific needs of localities; and help localities plan, implement, and operate appropriate, cost-effective programs.

In 2001, \$6 million and 1 position are requested for the Mental Health of Offenders Program. Of this amount, \$5.169 million is requested to provide discretionary grants to 20-30 state adult and juvenile corrections agencies and local jails for the assessment, diversion, and treatment of mentally ill inmates. Grants will help correctional agencies develop and implement a system to screen incoming inmates to identify those with mental illness, and provide needed treatment and adequate aftercare service in the community following release. The program will support the development and implementation of innovative and effective approaches which result in partnerships between corrections, the courts, mental health and substance abuse treatment agencies, and other community support services to effectively treat and monitor mentally ill offenders while incarcerated and when released back into the community. Of the funds requested, 10 percent of funding would be used for research and 10 percent for training and technical assistance. Programs that are implemented by local jails and juvenile detention centers would be expected to establish mechanisms and protocols to screen individuals for possible mental health and co-occurring (mental health and substance abuse) problems and to divert those whose disorder is mote related to mental illness or retardation than criminality to an appropriate mental health provider. Programs that are implemented by adult and juvenile corrections agencies would be expected to establish mechanisms and protocols to evaluate and treat individuals with serious mental illness.

The remaining \$831,000 and 1 position is requested for BJA to develop a mental health court program that will provide a single point of contact for mentally ill defendants charged with misdemeanor offenses. Such courts would provide, in large part, screening and placement decisions for mentally ill offenders at the "pre-institutionalization" stage. They would also serve to divert a portion of these offenders from the correctional institutions into other residential settings and community care situations. A mental health court would apply the treatment court concept demonstrated initially by drug courts, and later, domestic violence courts. This strategy would use the authority and oversight capabilities of the court to link mentally ill defendants with mental health services; such linkage does not presently exist except in a few jurisdictions. BJA is already working with three existing mental health courts (Broward County, Florida; King County, Washington; and Anchorage, Alaska) that deal with mentally ill or impaired individuals arrested for misdemeanor offenses. One of these courts was set up in response to a study that found that mentally ill offenders in the county jail had an average of six prior bookings into the jail in the three years prior to their current offense. The study also demonstrated that the average length of stay in the jail for inmates with mental illnesses was three times longer than for the average inmate. BJA anticipates that the three existing courts would be invited to become host sites for providing technical assistance and outreach to up to five other jurisdictions which will be selected within the first year. Of the amount requested, \$600,023 will be used to support the demonstration projects, and \$230,977 will support the planning and documentation that occurs before site work begins and the ongoing technical assistance required to ensure successful implementation of the court model or models. In the second year of the program, an evaluation component will be added to the continued support of the site work and technical assistance components.

PERFORMANCE MEASUREMENT TABLE BY PROGRAM

PROGRAM/ORG UNIT: Mental Health of Offenders/Corrections Program Office

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal, State and Local Government

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.1) Improve the crime fighting and oriminal juvenile justice system capabilities of tribal, state and local covernments.

ANNUAL PERFORMANCE GOAL: (2 1-1) Research and Evaluation

MISSION: To provide screening, management and treatment of the inentally ill writing jails and proving and to develop a montal health court component.

C. Sames Affecting Selection of 2000 and 2001 Plants. So miltion is requested for this new initiative which will be carved out of the \$75 miltion Violent Offender Incarrantion budget request. \$5 169 million is requested for the Corrections Program Office to provide discretionary grants to assist 15 state adult and juvenile corrections agencies and local jails with the assessment, diversion and treatment of mentally ill inmates. Crants will help correctional agencies develop and implement a system to screen incoming immases to identify those with mental illness, provide needed treatment and provide adequate affercare service in the community following release. This request also includes \$831 million for the Bureau of Justice Assistance to develop a Mental Health Court Program that will provide a single point of contact for mentally ill defendants changed with misdemeanor offenses.

D. Validation and Verification. CPO validates and verifies performance measures by provinces repairs submitted by grantees, onsite monitoring of grantee performance and independent

\$2 million and 1 position are requested by NIJ to continue the development of guides for the investigative and forensic science communities. In the NIJ research report Convicted by Juries, Exonerated by Science, the Attorney general enumerated several tasks for the scientific and justice communities, including "ensuring proficiency and credibility of forensic scientists so that their results and testimony are of the highest caliber and are capable of withstanding exacting scrutiny". Support for the development of basic minimum protocols, the development of appropriate validation studies to support traditional forensic sciences newly challenged as inadmissible in the courtroom, and the evaluation of fundamental information about the activities of the greater than 300 public crime laboratories currently conducting some form of forensic analyses is needed to effectively support the criminal justice system in its use for reliable, accurate analysis of crime scene evidence. This initiative will (1) assess the baseline capacity and capability state and local forensic laboratories; (2) continue to develop guides on the effective identification, collection, preservation, and preparation of forensic evidence target to specific areas of investigation as requested by the investigative and forensic science communities; and (3) support appropriate validation studies to support, and in some cases, establish the scientific foundation of traditional investigative and forensic sciences currently or potentially facing admissibility challenges in court.

There are currently no nationally recognized investigative and forensic science protocols to guide state and local law enforcement. Police departments currently operate under a broad array of state and local investigative and procedural guidelines and standards. NIJ has already responded to requests from the investigative and forensic science communities by developing and supporting several Technical Working Groups (TWGs) dedicated to creating practical guides for Death Investigation, Eyewitness Evidence, and Crime Scene Investigation based on broad-based consensus from criminal justice professionals. For example, in developing the Death Investigation Guide, NIJ selected an independent review panel whose members represented international and national organizations. The multi-disciplinary technical group that was formed allowed the experts to develop consensus guidelines about the 29 essential points that must be addressed during a death investigation in order to safeguard important evidence that may be of forensic value.

Response to the Guide series has been uniformly positive and the demand for the pamphlets has superceded previous records for NIJ publications. For example there have been more than 30,000 Guides for Death Investigation distributed since its publication in December of 1997 with thousands more downloaded off the web. Additionally, the Eyewitness Guide has yielded more than 6500 downloads and been distributed to almost 3000 recipients in less than a month since publication. Clearly, this Guide series is filling a need in the criminal justice system.

The funds requested for 2001 will be used to develop several Guides and their training criteria as requested by the investigative and forensic science communities. Due to the overwhelming response to the first publications, there is obviously a need for these tools within the law enforcement community. The specific request for 2001 includes guides and training criteria for digital evidence from computers, cell phones and other sources which will contain seven volumes, a guide for teleforensics using remote sensing devices at the crime scene, and a law enforcement guide and training criteria for the identification, collection and safe presentation of DNA

evidence. In addition, NIJ will conduct an overall assessment of investigative and forensic sciences training criteria. Validation studies will complement the existing and planned series in fingerprinting and document evidence.

Recognizing that many of the nation's approximately 9000 people responsible for signing Death Certificates across the country are, in many cases, not required to have any medical background whatsoever, the national death investigator guide researchers also identified training criteria for each of the 29 points in the national guide. This research was completed and the guide published in February 1998.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

INITIATIVE: New Challenges

PROGRAM/ORG UNIT: Investigative and Porensic Sciences/National Inditate of Justice

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal, State and Local Governments

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.1) Improve the crime fighting and constraint juvenile justice system capabilities of tribal. Mate and local governments.

ANNUAL PERFORMANCE GOAL: (2.1-1) Research and Evaluation

MISSION: To initiate, develop, and support several Technical Working Groups (FWGs) dedicated to create new protocols and establish national guidelines and standards, based on a broad-based consensus from criminal justice professionals, to ensure the sound identification, cellection, and preservation of forensic evidence and its presentation in the countroom as well as develop criteria for training investigators.

- B. James Affecting 1999 Program Performance, N/A
- C. Insular Affecting Selection of 2000 and 2001 Plans. There are no nationally recognized investigative and furnished senence protocols to guide State and local law enforcement. Police departments currently operate under a broad array of investigative and procedural guidelines hased on state and local standards, which range from sophisticated to vest of the pants. In 2001, NIJ proposes to initiate, develop, and support several CW Scholicated to creating guidelines for investigative and furnished sentences. NIJ will create new protocols and establish national guidelines and standards, based on a broad-based consenses from crimal justice printessmists, to ensure the sound identification, collection, and prescription in the coordinate way and as develop engaged.
- D. Validation and Verification. MII validates and verifies performance measures by progress reports substitled by grantees, unsite monitoring of grantee performance and telephone contact.

\$1.4 million and I position are requested for NII's International Center to implement an International Crime Research Program. Crime in the twenty-first century will occur in a global framework. Because multi-national business creates global economies, no country is more vulnerable to transnational crime than the United States. As the world's wealthiest nation, it offers the most customers for illicit goods like drugs, stolen art, and forged financial instruments, and the most wealthy targets for thefts and swindles. A fragmented criminal justice system of 17,000 police forces, 3,000 courts systems, and 50 sets of statutes further enables criminal entrepreneurs. While we can occasionally collaborate across State and county lines, our capacity to track offenders across international borders is virtually non-existent. Developing countries and emerging democracies, with weak enforcement capabilities and justice systems, serve as natural origins for illicit goods and destinations for stolen properties and laundered money. In 1996 alone, the United Nations (UN) estimated that profits from illegal drug trafficking markets and trade exceeded \$400 billion worldwide, and \$50 billion in the United States alone. In the absence of a firm and broad-based understanding of the nature and extent of transnational crime threats, operational agencies cannot develop effective programming to combat this type of crime. Additionally, the creation of proactive policies requires a solid grasp of emerging trends and future threats so that practitioners can take the offensive in the fight against transnational crime.

Over the last few years, the United Nations Crime Prevention and Criminal Justice Branch has executed a Memorandum of Understanding with NIJ. Since that time, NIJ has been one of 12 UN affiliated criminal justice research institutes around the world. As a member of this network, NIJ participates in a global dialogue on the problems of crime and crime prevention, and efforts to improve the administration of justice. NIJ has also created the International Document Exchange (IDE) program, an information work with more than 100 members from more than 50 countries and has partnered with international ADAM research sites around the world. These affiliations have improved U.S. access to internationally available criminal justice information that can assis' policy makers and practitioners in this country and around the world.

The \$1.4 million will be used for the following two activities:

• NIJ's International Center proposes to implement an International Crime Research Program to support the goals and objectives of the President's International Crime Control Strategy. NIJ's International Center currently coordinates OJP's international activities and serves as an international research, dissemination and networking resource for the Department. The requested enhancement would allow the International Center to support other Department components' international activities, and to share criminal justice information with an international audience of practitioners and researchers. This program would help NIJ to develop and share knowledge in support of federal law enforcement efforts to assist justice agencies in emerging

democracies. Additionally, it will allow ND to share knowledge developed through a variety of research, evaluative and technology-related practices with law enforcement and criminal justice practitioners and researchers both in the United States and abroad. ND estimates the cost of this activity will be \$500,000.

NU proposes to establish an "International Research Support Contract" to fill any research/information gaps, and to form the Department's policy relevant questions. For example, agencies have expressed needs for reliable information on subjects such as (1) the extent of trafficking in women and children from Chino; (2) the nature of transnational organized crime across regions; (3) the number of countries that test arrestees for drug use: (4) the extent of research on global computer crime; and (5) human trafficking into the U.S. The kind of research envisioned under this initiative would determine how human trafficking is conducted by organized crime and would facilitate examination of the network structures that make up various transnational criminal organizations.

NII is establishing a Department of Justice International Consortium, which will include all Department components with international activities, and whose members will share information and propose to NII research and information gaps that need to be addressed. The International Research Support Contract will allow NII access to the resources and expertise necessary to draft background reports, conduct quick response/factical support studies, produce policy briefs, translate research findings, examine international policies and practices, determine the nature and extent of transnational crime problems, etc. This will be done through a contract with the pool of experts to be called upon as the need arises. NII estimates the costs of this activity will be \$900,000 and believes it can be implemented no later than 3 months from the receipt of the appropriation.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

INITIATIVE: New Challenges

PROGRAM/ORG UNIT: International Crime Research/National Institute of Justice

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal State and Local Government

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.1) Improve the crime fighting and criminal juvenile justice system capabilities of tribal, state and local governments.

C. Lineas Affecting Selection of 2009 and 2001 Phasis. The \$1.4 million will be used for NU's International Center to implement an International Crime Research Program to support the goals and objectives of the President's International Center Control Strategy. NU's International Center currently coordinates OIP's international activities and serves as an international entering international entering resource for the Department. The requested enhancement would allow the International Center to support other Department components' international activities, and to share criminal justice information with an international audience of practitioners and researchers. This program would help NIU to develop and share knowledge in support of federal law enforcement efforts to assist justice agencies in emerging democracies. Additionally, it will allow NIU to thate knowledge developed through a variety of research, evaluative and technology-related practices with law enforcement and criminal justice practitioners and researchers both in the United States and abroad.

D. Versiculous Variousian. No variouses and vertiles performance measures by progress reports summitted by grantees, onsite monitoring or grantee performance and selections.

The Indian Country Law Enforcement Initiative is intended to reduce crime in American Indian and Alaska Native communities by improving tribal law enforcement and justice systems. Funding has been provided for more tribal police officers, detention facilities, and tribal courts, so complementary funding for tribal criminal legal assistance is critically important to ensure due process for indigent defendants in tribal justice systems. In addition, indigent tribal members are often left without assistance in child custody and other cases critical to their civil rights because tribal courts lack funding to provide assistance to such indigents, so funding for tribal civil legal assistance is also critical.

While there are over 200 tribal court systems, OJP has identified only 30 public defender offices. These offices are both tribally-sponsored and contracted practitioners. Additionally, there are 30 Indian Legal Service offices throughout Indian Country primarily providing civil legal assistance. Tribal justice systems and legal services offices need resources to meet the burgeoning demands of tribal criminal and civil justice systems. OJP has identified the following 5 areas to help meet these needs:

\$4.5 million, to be administered by the Violence Against Women's Office, for the Tribal Criminal and Civil Legal Assistance Program will provide Indian tribes, tribal consortia, and private/non-profits (egal services organizations serving a reservation-based constituency resources to develop or enhance their capacity to provide criminal and civil assistance. Grants ranging from \$50,000 to \$200,000 will be awarded to develop and enhance both adult and juvenile public defender services. In addition, grants will provide for necessary resources, equipment, case management, police and procedure development, personnel and training to operate these areas to better serve the criminal and civil needs of Native Americans.

Consistent with principles of government-to-government relations, Indian tribes should have the first opportunity to provide governmental and community services to Indian communities under their jurisdiction. To avoid duplication in the provision of services, legal aid agencies and non-profit legal services organizations (such as Indian Legal Services) will be required to submit a statement of support from the tribal government with jurisdiction.

\$1 million, to be administered by the Violence Against Women's Office, for discretionary grants to the 31 existing Tribal
Colleges to create, develop and enhance a two-year curriculum on paralegal studies, law advocate studies, indigenous justice
systems or other areas directly related to criminal and civil legal as sistance. Tribal Colleges are proving to be affective avenues.

for increasing access to justice by educating the public about their legal rights in tribal justice systems. Moreover, some Tribal Courts permit paralegal advocates to defend cases in tribal courts, and Tribal Colleges are training cost-effective paralegal advocates to defend tribal members in misdemeanor cases and small claims court cases. For example, the Crownpoint Institute of Technology provides a law advocate course. These advocates are then able to make application to the Navajo Nation Bar Association to represent indigent defendants in misdemeanor cases. Additionally, Tribal Colleges will be able to focus on justice systems integration and technology development. Grantees will work closely with public defender offices and legal aid agencies in tribal communities on training and technical assistance activities. Furthermore, Tribal grantees will be able to use resources to ensure that their respective public defender office is involved in an intergovernmental justice information architecture which would permit information sharing between all components of the criminal justice system. The overall goal is to improve the effectiveness of the criminal justice enterprise through better information sharing.

- \$250,000 will support training and technical assistance activities to develop the tribe's capacity in criminal and civil legal
 assistance and technology. A competent provider must have working knowledge and experience in working with indigent
 defense and tribal justice systems. The training provider will be encouraged to coordinate training activities with relevant
 organizations such as National American Indian Judges Courts Association, the National Institute for Trial Advocacy and
 others to maximize resources and depth of knowledge.
- \$150,000 will be provided to NIJ for the following research and evaluation activities: (1) developing adult and juvenile
 innovative indigent defense strategies in Indian Country, (2) studying the impact of civil and legal assistance in Indian Country
 and (3) evaluating the program. A promising practices document will be coordinated and disseminated by OJP to share
 information on innovative strategies and practices in the field.
- \$100,000 will support data collection activities in the Bureau of Justice Statistics (BJS) to work with Indian tribes and other
 legal aid offices on indigent defense. The goal of this effort is to develop a survey instrument and gather information from
 Indian tribes to supplement the National Survey of Indigent Defense Systems to develop data collection capacity at the tribal
 level in order for participation in national information systems.

- N/A
- B. Igrors Affecting 1999 Program Performance.
- N/A
- C. Issues Affecting Selection of 2000 and 2001 Plans.
- Six million is requested by QCP for the Tribal Criminal and Civil Legal Assistance program, which will develop and enhance the legal services provided to Indian tribes thereigh a mis of program hospital, training and inclinical assistance, and program research and evaluation. This program is crucial to furthering the President's Indian Country Law Enforcement Integrate began in 1999.
- D. Validation and verification:

The Office of the Assistant Attorney General validates and verifies performance measures by progress reports submitted by grantees, omite monitoring of grantee performance and tel compet.

- - Tribal Youth Mental Health and Behavior Problems Initiative \$8 million and 3 positions are requested for a Tribal Youth Mental Health and Behavior Problems Initiative, which will support tribal justice systems in helping to prevent juvenile and gang-related violent crime. This initiative provides resources for a range of youth support services and programs to address the needs of native youth with mental health, behavioral, or alcohol and substance abuse problems in various settings as in the home, school, community, and juvenile justice systems. It will also support training and technical assistance, evaluation, and research on mental health issue of native youth to help build our knowledge and continue to develop effective strategies and servi. 4) to better assist Indian youth.

American Indian youth face serious mental health, behavioral, and alcohol and substance abuse problems that often later lead to involvement in the justice system. For example, the Health and Human Services National Child Abuse and Neglect Data System reports that the rate of child abuse and neglect among American Indian children was the highest in the nation in 1995,3 and abused and neglected children are likely to become involved in the justice system as they become teens. The FBI, the Bureau of Indian Affairs (BIA) Division of Law Enforcement Services, and tribal law enforcement agencies report that violent crime by juvenile offenders and Indian youth gangs is on the rise in many Indian communities. The Final Report to the Attorney General and the Secretary of the Interior of the Executive Committee on Indian Law Enforcement Improvement, published in 1997, sitted data estimating that there are 375 gangs on or near Indian reservations. The Bureau of Prisons (BOP) reports that the number of American Indian youth in custody has increased by more than 50% since 1994. The Indian Health Service (IHS) report Key Facts About American Indian and Alaska Native Youth 1997, states that "[h]omicide is the second leading cause of death among Indians from 1–14 years of age and third for 15-24 year-olds."

Indian juveniles entering the criminal justice system are more likely than others to have a mental health or emotional problem. In 1998, BJS reported in their Survey of Jails in Indian Country that detained Indian youth "were significantly

³ Rates were calculated on the number of children age 14 or younger because they account for at least 80% of the victims of child abuse and neglect. 1995 was the most recent year for which statistics were available and 1995 statistics indicated an alarming increase in child abuse and neglect among American Indians from prior years.

more likely than their non-detained indian counterparts to have a diagnosable substance abuse/dependence, alcohol abuse/dependence, and/or conduct disorder."

In response to this issue, the U.S. Departments of Justice, Health and Human Services, Education and Interior are currently working on a Memorandum Of Understanding on the Mental Health and Community Safety Initiative for Native American Youth to utilize existing resources to address the mental health, behavioral, substance abuse, and community safety needs of tribal youth in the home, school, community and justice system. The \$8 million requested for OJP's Tribal Youth Mental Health and Behavior Problems Initiative would build upon existing efforts and be used as follows:

- \$3.5 million is requested to provide 45 Indian tribes, which operate tribal juvenile detention facilities, with resources to support tribal efforts in developing or enhancing programs to address tribal youth with mental health, behavioral, or alcohol and substance abuse problems
- \$3 million is requested for continuation grants for up to 12 Indian tribes participating in the federal interagency Mental Health and Community Safety Initiative for Native American Youth.
- \$700,000 is requested to support training and technical assistance for grantees to develop or enhance youth mental health, behavioral, and substance abuse programs. Technical assistance providers will have a working knowledge and expertise on tribal justice systems as well as experience in the area of mental health, behavioral, and substance abuse issues among American Indians and Alaska Natives, which will enable them to promote the development of effective tribal strategies that are capable of replication in other American Indian communities.
- \$550,000 is requested for research and evaluation efforts by NIJ. Of this amount, \$300,000 will be needed to evaluate tribal juvenile detention facilities and the effectiveness of the federal interagency's Montal Health and Community Safety Initiative for Native American Youth Information collected through this evaluation on effective tribal strategies for dealing with tribal youth mental health, behavioral, and substance abuse problems will be developed, published and circulated to grant participants and throughout Indian country. The remaining \$250,000 is requested for research into problem areas such as child sexual abuse and dual diagnosis treatment modules. OJP will coordinate these activities with the Department's Office of Tribal Justice.

- \$250,000 is requested to expand the BIS Survey of Juils in Indian Country, to include data collection on tribal juvenile corrections and services.
- * Indian Alcohol and Substance Abuse Diversion Program \$8 million and 3 positions are requested for an alcohol and substance abuse diversion program. Alcohol is the most pervasive substance abuse problem in Indian Country, however drug abuse is a growing problem in some Indian communities. Alcohol and drug abuse are often involved in violent crime, ranging from homicides to child abuse. The violent crime rate among American Indians generally (124 per 1,000 persons age 12 or older) is almost 2 % times the national rate. Among federal and trihal law enforcement officials, there is broad consensus that a large majority of violent crime in Indian country, involves alcohol and/or drug abuse. American Indian victims of crime report that alcohol and drug use was a factor in more than half of the violent crimes committed against them, the highest rate of any group in the Nation. It appears that when the violent crime is committed by an American Indian against an American Indian, roughly two-thirds of the crimes are alcohol and/or drug related. The 1997 arrest rates among American Indians for alcohol-related offenses (driving under the influence, liquor violations, and public drunkenness) was more than double the national rate. Arrests of American Indians under the age of 18 for alcohol-related violations are also twice the national average. About half of convicted American Indian inmates in local jails had been consuming alcoholic beverages at the time of the offense for which they had been convicted. An estimated 7 in 10 American Indians in local jails convicted of a violent crime had been drinking when they committed the offense. In an effort to more effectively deal with this problem, OJP is requesting \$8 million to be used as follows:
 - \$6.5 million will be available to Indian tribes for grants ranging from \$100,000 to \$500,000 to support tribal detention or probation-based demonstration projects. Currently, many tribal criminal justice systems have minimal referral services available for court-mandates activities. These demonstration projects will target alcohol-related offenders, including non-violent recidivist adult offenders, Indian youth, Indian parents with child abuse or neglect problems, and pregnant Indian women with recurring involvement in the justice system. Innovative court-mandated services will be provided; especially those that place offenders in detoxification centers, halfway homes, in-patient treatment, and home detention. Other services will include court-program coordination (e.g., probation, social services). Resources will include support services, equipment, training and personnel necessary to effectively develop these projects. Additionally, demonstration sites will coordinate service delivery with the DHHS' Indian Health Service, BIA and other federal agencies targeting tribal alcohol and substance abuse programs.
 - \$700,000 is requested to support training and technical assistance to assist participating Indian tribes in developing or
 enhancing their projects. Technical assistance providers will be knowledgeable and have expertise on tribal justice
 systems as well as expertise in the area of alcohol and substance abuse in American Indian communities. Training will

be for multi-disciplinary teams consisting of tribal leaders, chemical dependency counselors, and criminal justice personnel.

- \$550,000 will be available for NIJ to evaluate the demonstration projects and to research effective strategies to break the link between alcohol abuse and crime in Indian country. Input from the Strategie Planning Meeting on Crime and Justice Research in Indian Country will help guide the development of a body of knowledge on alcohol and crime in Indian country. NIJ will work with other federal agencies such as DHHS' Indian Health Service. National Institute on Alcohol Abuse and Alcoholism, National Institute of Health and/or Administrative Office, U.S. Courts on a coordinated, comprehensive research and evaluation. NIJ will also coordinate the development and dissemination of promising strategies and practices information based on an evaluation of demonstration projects.
- \$250,000 will be available for BJS to collect Indian-specific information about alcohol related crime as part of the National Crime Victims Survey. This work will be coordinated with the Department's Office of Tribal Justice and OJP's American Indian and Alaska Native Affairs Office.
- Sexual Assault Nurse Examiner Units \$5 million and 2 positions are requested for the Violence Against Women's Office to form approximately 16 Sexual Assault Nurse Examiner Units (SANE) in Indian Country. This request includes equipment, personnel, training and technical assistance, and research and evaluation of these units. A Sexual Assault Nurse Examiner is a registered nurse, R.N., who has advanced education in forensic examination of sexual assault victims. In some areas, the SANE is referred to by other names, including Sexual Assault Nurse Clinician (SANC), and Sexual Assault Forensic Examiner (SAFE). Across the country, state and local governments operate special sexual assault exam units with funding from the Department of Justice and other sources. These units are critically important for gathering evidence for use in prosecuting sexual offenders, but very few such units exist in Indian Country.

The impetus to develop SANE programs began with nurses, other medical professionals, counselors, and advocates working with rape victims in hospitals, clinics, and other settings. These individuals recognized that services to sexual assault victims were inadequate and not at the same high standard of care as for other emergency room clients. When rape victims came to the emergency room for care, they often had to wait as long as four to twelve hours in a busy, public area; their wounds were seen as less serious than the other trauma victims; and rape victims competed unsuccessfully for staff time alongside the critically ill. They were often not allowed to eat, drink, or urinate while they waited, for fear of destroying evidence. Doctors and nurses were often not sufficiently trained to do medical-legal exams, and many were also lacking in their ability to provide expert witness testimony. Even when they had been trained, staff often did not complete a sufficient number of exams to maintain their level of proficiency. Even when the victim's medical needs were met, their emotional needs all too often were overlooked, or even worse, the victim was blamed for the rape by the emergency toom staff.

Typically, the rape victim faced a time-consuming, cumbersome succession of examiners for one exam, some with only a few hours of orientation and little experience. Emergency room services were inconsistent and problematic. Often the only physician available to do the vaginal exam after the rape was male. While approximately half of rape victims in one study were unconcerned with the gender of the examiner, for the other half this was extremely problematic. Even male victims often prefer to be examined by a woman, as they too are most often raped by a man and experience the same generalized fear and anger towards men that female victims experience. There are also many ancedetal and published reports of physicians being refuctant to do the exam. This was due to many factors including their lack of experience and training in forensic evidence collection, the time-consuming nature of the evidentiary exam in a busy emergency room with many other medically urgent patients, and the potential that if they completed the exam they were then vulnerable to being subpoenced and taken away from their work in the emergency room to testify in court and be questioned by a sometimes hostife defense attorney. This often resulted in documentation of evidence that was rushed, inadequate, or incomplete. Many physicians even refused to do the exam. In one case, it was reported that a rape victim was sent home from a hospital without having an evidentiary exam completed because no physician could be found to do the exam. As research became more readily available on the complex needs and appropriate follow-up of rape victims, nurses and other professionals realized the importance of providing the best emergency room care possible. For 75 percent of these victims the initial emergency room contact was the only known contact they had with medical or professional support staff. Nurses also were very aware that while they were credited with only "assisting the physician with the exam," in reality they were already doing everything except the pelvic exam. It was clear to these nurses that it was time to re-evaluate the system and consider a new approach that would better meet the needs of sexual assault victims.

Sexual assault, including rape and child sexual abuse, are extremely serious problems in Indian communities, and occur at much higher rates than the national rates. American Indians have higher per capita rates of violent criminal victimization than whites, blacks, or Asians in the United States, according to data from the National Crime Victimization Survey (NCVS). The NCVS provides estimates of the violent crimes of rape, sexual assault, robbery, and assault for persons age 12 or older. During 1992-96 the NCVS found that American Indians experienced an average of almost 150,000 violent crimes per year from among the estimated 10.8 million violent crimes occurring on average per year among all racial groups. The Nation's population of American Indians age 12 or older experienced an annual average of 126,400 simple and aggravated assaults, 14,800 robberies, and 8,400 rapes or sexual assaults during 1992-96. American Indians are over represented among victims of violence compared to their share of the general population age 12 or older. The average annual per capita rate of violent victimization translates into about 1 violent crime for every 20 residents age 12 or older. Substantial variation, however, was evident by race. American Indians experienced about 1 violent crime for every 8 seidents age 12 or older compared to 1 violent victimization for every 16 black residents, 1 for every 20 white residents, and 1 for every 34 Asian residents. The violent crime for American Indian females during this period was 98 per 1,000 females, a rate higher than that found

among white females (40 per 1,000) or black females (56 per 1,000). American Indian victims of rape/sexual assault most often reported that the victimization involved an offender of a different race.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY PROGRAM.

C. Factors Affecting Selection of 2000 and 2001 Targets.

The Office of Justice Programs requests a total of \$21 million to implement a three part initiative in Indian Country. The primary purpose of the Initiative is to promote Indian youth mental health, education, already and advantage abuse related services, and provide centrical medical valid to assist in the forensic examination of sexual assault victims. Specifically, \$8 million is requested for Trobal Youth Mental Health and Behavior Problems Indian States are requested to establish an Indian Alcohol and Substance Abuse Diversion Program; and \$5 million is requested to form a pilot project for establishing sexual Assualt Nurse Examiner Dates.

D. Validation and Verification. OIP validates and verifies performance measures by progress reports submitted by grantees, onsite monitoring of grantee performance and telephone contact.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

INTIIATIVE: New Chailenges

PROGRAM/ORG UNIT: Tribal Youth Mental Health and Behavioral Problems/Office of the Assistant Attorney General

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to State and Local Government

DEPARTMENT OF JUSTICE STRATEGIC GOAL(2.1) Improve the crime-fighting and criminal juvenile justice system capabilities of tribal, state and local coveriments.

ANNUAL PERFORMANCE GOAL: (2.1.4) DOI will focus on criminal and juvenile justice system improvements in Italian country.

MISSION: This initiative will address the growing number of serious problems in the area of youth mental health and behavior problems, such as suicide, depression, alcohol and substance abuse, gang activity, domestic violence, and violent crime. Through this initiative tribes will be able to consult with participating federal agencies, and will be able to receive guidance in assessing mental health and related program needs, through tectinical assistance and in developing early mental health assessment and intervention program.

- C. Insues Affecting Selection of 2000 and 2001 Plans. This request includes equipment, personnel, training and technical assistance, and research and evaluation of these units.
- #3 The grants to establish the sexual abuse purse examiner units will run for 18 months. Therefore, the units will be extablished in 2002.

Funds for this initiative will be made available through the Indian Country Grant Program (121M) and will be administered by the Violence Against Women's Office (VAWO).

D. Validation and Verification. VAWO closely monitors grantees to validate and verify performance measures by using progress reports submitted by grantees, on-site monitoring and telephone contact. Through these tracking mechanism, VAWO keeps highly accurate records to assess their programs and determine "lessons leafned" and "best practices."

\$10 million is requested for BJA to expand the current Tribal Courts Initiative, bringing total funding to \$15 million. This initiative will provide additional resources for the necessary tools to sustain safer and more peaceful tribal communities by focusing on juvenile and family issues as well as non-traditional approaches to justice, enhancing the administration of civil and criminal justice on Indian lands, and encouraging the implementation of the Indian Civil Rights Act by tribal governments. While promoting greater cooperation among tribal, state, and federal justice systems, this initiative assists tribal justice systems to coordinate programs and services within its tribal structure with law enforcement, victims services, treatment providers and others. The initiative also assists with technology development to ensure that tribal justice systems can communicate within the tribal and non-tribal justice community.

Funding for law enforcement for Indian tribes is an important DOJ priority because crime rates are rising in Indian Country and tribal law enforcement has historically been under funded and undermanned. Just as in other parts of the country, crime has spread on reservations at a rapid rate, thereby increasing the need for criminal adjudication in tribal courts.

Tribal courts have existed in one form or another for several hundred years. The last 11 years, however, have witnessed an unparalleled growth in their vitality, importance, and workload. This is due to a number of factors, in particular economic growth and development on many reservations. This growth has increased the need for a reliable means of settling disputes that arise in the ordinary course of business. This is especially true when business responds to the changing needs of the communities that they serve raising issues, such as how to appropriately regulate complex affairs like the garning industry, environmental pollution control, mining, banking, and toxic waste disposal. Because of these challenges and a lack of funds, tribal court judges and court personnel handle astounding caseloads.

In 1999 and 2000, OJP was appropriated \$5 million for this program. Congress did not approve a funding plan for the tribal courts until May, 1999. Therefore the grant solicitation process did not begin until June, 1999 and grants will not be awarded until March, 2000. In 2001, OJP requests an enhancement of \$10 million, bringing total funding to \$15 million. The proposed funding increase will provide for:

Discretionary grants for enhancement and continued operations of existing tribal courts.

Implementation of tribal courts for those tribes that were awarded planning grants in 2000.

Development and awarding of tribal court planning grants.

Developing and implementing training seminars for sites awarded tribal court planning grants.

On-site technical assistance to tribal court enhancement and implementation projects.

Education and training for tribal court personnel.

Promotion of cooperation and coordination among tribal justice systems and the federal and state judiciary systems.

Outreach to tribal judicial systems not previously funded in 1999 or 2000.

Projects may include, but are not limited to, improving case management, training court personnel, acquiring equipment, enhancing prosecution, improving indigent defense services, establishing diversion programs, and accessing services.

The impact of strengthening tribal justice systems is far reaching. It benefits Native Americans in Indian Country and raises the level of respect for their adjudicatory role with Indians, non-Indians, and state and federal judges. Tribal justice systems are essential mechanisms for resolving civil and criminal disputes and family problems arising on Indian lands. Strong tribal justice systems also encourage the development of and investment in Indian lands by Indians and non-Indians. Moreover, interaction with federal and state judges on Indian issues will improve communication and coordination between jurisdictions, which are intimately connected, but know very little about each other. Informed decisions by tribal, federal and state judges are essential in the delivery of justice for Indian people and others residing on Indian lands.

C. Immer Affecting Scheetian of 2009 and 2001 Plane: A in 1999 and 2000, OFF was appropriated \$5 million for this program. In 2001, OFF requests an enhancement of \$10 million, bringing, total funding to \$15 million. In 2000, additional planning grains will be made as well as implementing grains to their thise who received planning grains in 1999. Enhancement grains will be made to those tribes who freed the strange phase courts. Tribal counts have exceed in one form or another for several phase forms, however, have writered and importalized grains the interest planning grains and importance, and warkload. This is due to a number of factors such as economic growth and development on reservations. This growth has increased the need for a reliable means of settling disputes that arise in the ordinary course of housess. This enhancement will allow for enhancement and command operations in existing tribal courts and for development and awarding of characteristic to protect who wish to stain a richal court.

D. Validation and Varification: These measures will be validated and varieties through a review of variety Off reports, including progress, results from the data collection agent.

VIII. CURRENT INVESTMENTS.

A. SUMMARY PERFORMANCE PLAN - Component Mission and Goals, Relationship to DOJ Strategic Plan

OJP's fundamental mission is to provide assistance to state and local law enforcement. As such, OJP remains dedicated to providing the criminal justice community with resources to address their criminal justice problems. The 2001 proposal includes increases for three grant programs -- the State Criminal Alien Assistance Program (SCAAP), the Public Safety Officers' Educational Assistance (PSOEA) program, and the Violence Against Women Office (VAWO) Law Enforcement and Prosecution Grant Program. The SCAAP program provides federal assistance to states and localities for a portion of the costs of incarcerating criminal aliens who are being held as a result of state and/or local charges or convictions. The PSOEA program allows eligible dependents of public safety officers who are killed or disabled in the line of duty to apply for funding to defray the costs of higher education. The VAWO Law Enforcement and Prosecution Grants are designed to protect, detect, and stop violence against women.

All program increases identified under this initiative support the Department of Justice (DOJ) priority of providing Assistance to Tribal. State and Local Governments.

B. NEW INITIATIVES

-	<u>Pos</u>	FTE	Amount
State Criminal Alien Assistance Program (SCAAP) (State & Local Assistance)	Ð	0	\$180,000,000
Public Safety Officers' Education Assistance Program (PSOEA)	0	0	4,800,000
Violence Against Women Office (VAWO) Law Enforcement and Prosecution Grant Program (State & Local Assistance)	<u>5</u>	<u>2.5</u>	13.250.000
Total, Current Investments Initiative	5	2.5	\$198,050,000

The Office of Justice Programs (OJP) requests \$198.05 million in resources for the following programs included in the Current Investments Initiative:

1. State Criminal Alien Assistance Program (SCAAP) - \$180 million is requested in direct funding for the State Criminal Alien Assistance Program (SCAAP), which will bring the total funding award for SCAAP to \$600 million in 2001. SCAAP is administered by BJA and provides federal assistance to states and local units of government incurring costs of incarcerating illegal aliens convicted of one fellony or two misdemeanor offenses and to expedite the transfer of custody for certain deportable aliens. This enhancement will be used to maintain the current level of awards and to provide additional financial assistance to state and local corrections agencies for the incarceration of criminal aliens.

See related base program information under the State and Local Law Enforcement Assistance Account beginning on page 27.

2. Public Safety Officers' Educational Assistance Program (PSOEA) - \$4.8 million is requested for the Public Safety Officers' Educational Assistance Program (PSOEA), which is administered by the Bureau of Justice Assistance (BJA). PSOEA was formerly known as the Federal Law Enforcement Dependents Assistance Program (FLEDA). These funds will provide education benefits to the dependents of our nation's public safety officers who are killed or disabled in the line of duty.

See related base program information under the Public Safety Officers' Benefits Account.

3. Violence Against Women Office (VAWO) Law Enforcement and Prosecution Grant Program - \$13.25 million and 5 positions are requested for the S-T-O-P formula grants program, which is administered by the Violence Against Women Office

(VAWO). Of this amount, \$7.25 million is requested to expand efforts to strengthen Civil Legal Assistance to domestic violence victims; \$1 million will be used for the Bureau of Justice Statistics (BJS) to collect data on the justice system's processing of domestic violence cases, and the remaining \$5 million is requested for the National Institute of Justice's (NIJ) Family Violence Research Program.

See related base program information under the State and Local Law Enforcement Assistance Account beginning on page 46.

C. CURRENT INVESTMENTS - PROGRAM INITIATIVES

Congress authorized SCAAP, and appropriated substantial funds to the program, because it recognized that the Federal government is ultimately responsible for controlling this nation's borders and the criminal acts of those who illegally breach those borders. SCAAP funding, which began in 1995, has clearly provided relief for a pressing need in state and local correctional systems. On average, 6 to 8 percent of state and local offenders now incarcerated are deportable aliens.

The program was initially intended to serve as an interim and alternative means of providing states with some relief from the burden of incarcerating illegal aliens while the INS moved to more vigorously monitor the national borders and deport aliens already incarcerated. However, the number of qualifying illegal aliens has continued to increase, thus the need for the program is still apparent. Since its inception, SCAAP has expanded in coverage and impact. Statutory changes have allowed the number of entities receiving SCAAP funds to increase from 44 states in 1995 to all 50 states and 286 local and territorial jurisdictions in 1999. The number of days of incarceration reimbursed, which is the key measure for this program, has likewise risen from 13,387,835 in 1995 to 25,430,696 in 1999.

B)A requests an \$180 million enhancement in direct funding for this program, bringing the total SCAAP request to \$600 million. This enhancement will be used to maintain the current level of awards and to provide additional fundral assistance to state and local corrections agencies for the incarceration of criminal aliens. The need for additional funds is evident in that, although there have been increases in total funds over the years, the reimbursement rate for qualified claims has remained at about 40 cents per dollar in the last several years, down from a high of 60 cents per dollar in 1996. The additional funding will only raise this reimbursement rate to 41 cents per dollar. Thus, while SCAAP program funds are helping these state governments in defraying costs of incarcerating illegal aliens, their proportionate share of these costs has not decreased.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

B. Issues Afferting 1999 Program Performance.

Congress mandated that foods be awarded in the same year as appropriated. An abbrey litted progress was used whereby 1998 Jata was the basis for determining 1999 awards.

C. Issuer Affecting Selection of 2000 and 2001 Plans.

In FY 2000, the organial application/deward process will resume with subsequent awards in the spring of the year appropriated

D. Validation and Verification.

Data is generated and verified from SCAAP applications, IMA automated SCAAP systems, and INS databases

request ensures that all eligible dependents will receive benefits in 2001.

The Police, Fire, and Emergency Officers' Educational Assistance Act of 1998, P.L. 104-238 (110 Stat 3495), signed November 13, 1998, amended the Education Assistance to Dependents Program and established the Public Safety Officers' Educational Assistance (PSOEA) program. The new educational assistance program, PSOEA, amended the Federal Law Enforcement Dependents Assistance (FLEDA) program to include state and local public safety officers as well as Federal public safety officers. PSOEA provides payments for educational purposes to children and/or spouses of Federal, state, and local public safety officers killed or disabled in the line of duty. Based on the availability of appropriations, financial assistance is provided by direct payments to an eligible dependent and are computed on the basis set forth in section 3532 of title 38. United States Code. A dependent cannot receive assistance for longer than 45 months of full-time education or training (or a proportional period of time for a part-time program), and is not eligible for assistance beyond the child's 27th birthday (unless there are extraordinary circumstances that precluded the child from pursuing a program of education before reaching 27). A person seeking assistance under this program submits an application to the Attorney General, and is notified of approval or disapproval in writing. Educational assistance can be discontinued if it is found that, according to the regularly prescribed standards and practices of the educational institution, the recipient fails to maintain satisfactory progress as described in section 484(c) of the Higher Education Act of 1965. Legislation is pending in Congress that would provide retroactive educational assistance to eligible dependents of federal law enforcement officers killed in the line of duty on or after May 1, 1978, instead of the previously enacted May 1, 1992, and state and local officers killed in the line of duty on or after October 1, 1978, instead of the previously enacted October 1, 1997.

A. Definitions of Terms of Explanations for Indicators and Data Sources:

BJA Files - Public Safety Officer's Benefits Program Annual Report

8. Isones Affecting 1999 Program Performance.

- o. Number of death and disability claims received varies from year to year
- o Claims received in a given fiscal year may not be paid until the following fiscal year due to delays in receiving occessary documentation from claimant
- o The responsibility of a court appeal no longer resides with the PSOR office until adjudicated. Once adjudicated, the PSOR office is involved for closure of the claim
- The handling of appeals within 60 days depends on the availability of administrative hearing officers and, more often, time constraints on the part of clarimants' legal representatives.
- o it is important to note that the number of appeal requests are increasing commensurate with increases in the amount of the benefit payment
- o Date for member (9) 1999 exacted is not available.
- o Data for number (18) 1999 exacted and actuals is not available.

C. Issues Affecting Selection of 2000 and 2001 Targets.

#Funds include a \$4 6 million increase for the Public Safety Officer's Educational Assistance (PSOLA) Program in LY 2001. The 2000 enacted total includes on inversal TXO) reduction of 3 White injects congressionally mandated budget spending caps.

bThe fodoral advantance portion of this program was expanded on October 3. 1998, to include all state and fincal public safety officers as opposed to formerly including only federal law inferences officers which likely result in a jurge process in applications and dependents receiving any state. We are unable, at this time, to project for FY 2000 and Fy 2001.

- o. Targets for 2000 and 2001 are estimates. Number of death and disability claims received vary
- o. Claims in a given Fiscal Year may not be eaid until the following I recal Year.
- o The responsibility of a court appeal no longer resides with the PSOB office until adjudicated. Once adjudicated, the PSOB office is involved for classic of the claim
- o The handling of appeals within 50 days depends on the availability of administrative hearing officers and, more often, time constraints up the part of claimants, legal representatives a first important to note that the number of appeal requests are increasing commensurate with increases in the annual of the henceff payment.
- o The federal educational statistance portion of this program was expanded on October 1, 1998, to include all state and local public safety, inflicers as upposed to formerly including only federal low enforcement officers which likely result in a large increase in applications and dependents receiving assessment. We are unable, at this time, to project for LY 2000 and LY 2001

D. Validation and Verification.

The Public Safety Officers: Benefits Program (PSOB) validates and verifies claims by various tracking methods, which include log books a dutabase system, microfilm, statistical reports and a system of self-reporting. PSOB also cross-references data with law enforcement agencies (i.e., Congrams of Police Survivors, National Law Enforcement Memorial, National Volunteer Line Council, etc.)

As of December 1998, states and territories had awarded almost 4.500 S-T-O-P (Services * Training * Officers * Prosecutors) subgrants totaling \$193 million. This represents 93 percent of all 1995 through 1997 S-T-O-P funds. In May 1999, the Urban Institute, which is evaluating the S-T-O-P Program, reported that women victims of violence are safet now than they were prior to S-T-O-P project implementation and have greater faith in the criminal justice system. S-T-O-P funding has made it possible to improve efforts to reach out to and serve women who had been victims of violence and provide them with an increased number of services and enhanced access to these services.

In 2000, Congress appropriated \$206.75 million for the Law Enforcement and Prosecution Grant Program, which is commonly referred to as the S-T-O-P Violence Against Women Formula Grant Program. This included the following: \$28 million to strengthen civil legal assistance for battered women; \$5.2 million for research and evaluation of domestic violence programs; \$10 million for Campus Safety; \$10 million for Project Safe Start; and \$1.2 million to support an enhanced domestic violence prosecution unit within the District of Columbia. In 2001, VAWO is requesting an enhancement of \$13.25 million and 5 positions under the S-T-O-P formula grants program for a total of \$220 million. Of this amount, \$7.25 million is requested to expand efforts to strengthen Civil Legal Assistance to domestic violence victims; \$1 million for the Bureau of Justice Statistics (BJS) to collect data on the justice system's processing of domestic violence cases; and the remaining \$5 million for an NIJ Family Violence Research Program. A detailed description of the enhancement follows:

• Grants to Support Civil Legal Assistance for Domestic Violence Victims • \$7.25 million and 2 positions are requested to expand efforts to strengthen Civil Legal Assistance to domestic violence victims, providing a total of \$35.25 million for this program. Battered women seeking to escape violent relationships face a myriad of legal problems. Assistance in obtaining protection orders, representation to ensure that child custody and visitation arrangements will not endanger them or their children, and access to hubbic benefits to help them maintain economic independence are some of their most immediate needs. Abusers often use economic coercion as a means of punishing their victims. They frequently forbid their partners to work or

deny them access to money. Women in these situations cannot afford to retain qualified counsel to assist them in obtaining safety and redress through the civil legal system, or to defend against legal challenges brought by their abuser. Victims who earn too much to qualify for the limited free legal assistance program that exist, but who still struggle to support themselves and their children also cannot pay legal fees

In 1999, \$23 million of the S-T-O-P appropriation was allocated for civil legal assistance for domestic violence victims. The program encourages collaborative efforts involving the legal community (including legal services providers, law school clinics, and pro bono programs) and the domestic violence victims advocacy community. The need to fund and the demand for civil legal assistance for domestic violence victims has been significantly greater than anticipated. On May 22, 1998, VAWO received more than 360 applications requesting approximately \$83 million. In September 1998, VAWO awarded 57 grants totaling \$11.5 million to support projects in 54 states and territories. Grant awards averaged \$190,500. Recipients included 35 Legal Services Corporation agencies, 3 other legal assistance providers, 12 state or local nonprofit community organizations, 5 universities, and 2 national constituency organizations. VAWO anticipates awarding up to 100 additional grants by the end of May 1999.

Justice System Processing of Domestic Violence Cases - \$1 million and I position are requested for BJS to conduct a national study tracking the justice system's handling of domestic violence cases. Currently, no national studies exist that document how the system processes these cases. The conventional wisdom is that many of these cases do not lead to conviction because victims often reconsider and decide not to assist in prosecuting alleged offenders or that the justice system treats non-stranger crime more teniently. But this conventional wisdom is based on anecdotal evidence, which may be unrepresentative of what typically happens when domestic violence cases are brought to the attention of police or prosecutor. The proposed study would track domestic violence cases and document their outcomes -- a priority of VAWO. Factors that increase or decrease the likelihood of conviction would be carefully documented. Apart from varying legal provisions, such factors may include: the victim-offender relationship, criminal histories of victim and offender, policies regarding issuance and enforcement of restraining orders, prosecutorial policies regarding domestic violence cases, and pre-trial release and sentencing practices in the jurisdiction.

For the first time, nationally representative data from the 75 largest counties would be gathered prospectively tracking domestic violence cases through the justice system: from arrest, through prosecution, to conviction and sentencing. The database would establish a baseline against which improvements in the justice system's handling of these cases can be

evaluated. A six-month data collection period woul, be utilized during which data on an estimated 16,000 cases would be obtained. Cases of interest would include both feloty and misdemoanor charges in which the defendant's relationship to the victim is known and the relationship can be specified as involving family members or intimates.

This study would have particular value for those who must initiate programs to address domestic violence. Studies of domestic violence in Kansas City and Minneapolis found that in half the cases of domestic assault and homicide, police had previously been called to the address an average of 5 times. This has the practical effect of demonstrating that the criminal justice system may have an opportunity to intervene early in domestic violence to avert future, perhaps more serious consequences.

BJS is uniquely qualified to conduct this study since it has been in the forefront of the development of offender-based transaction statistics and State court case processing statistics. Since 1986, BJS has produced a wide variety of studies tracking felons following arrest. However, the proposed study would require the enhancement of ongoing case tracking systems to gather information on the victim and offender relationship and to generate substantial increases in sample size in order to produce generalizable findings.

The cost estimate is based on the cost of an existing BJS case processing statistical series that longitudinally follows a sample of felony cases from arrest through disposition or one year, whichever occurs first. This series normally costs about \$800,000 to conduct biennially. The cost for domestic violence case tracking statistics, which would also be a two-year project, would be higher since domestic violence must be determined manually from case records; knowing the offense would not be sufficient to ascertain whether domestic violence was involved, information would have to be obtained on the victim/offender relationship at the time of arrest. In addition, since domestic violence cases are less numerous than felonies, BJS would need a longer period of data collection in order to insure sufficient sample size which will also increase the overalt cost of the study.

Additionally, I position is requested for BIS data collection, analysis, report writing, and coordination of intra-and interagency activities with regard to the successful conduct of this statistical effort.

Family Violence Research Program - \$5 million is requested by NIJ to conduct a family violence research and evaluation program. The nation spends billions of dollars each year to curb family violence, mostly with an array of treatment and intervention efforts. However, most of these services have not been evaluated for impact and effectiveness. In fact, a National Academy of Sciences (NAS) report found only 113 research-based evaluations had been conducted in this field, of which only 23 related to services provided by the criminal justice system.

The need to improve our understanding of family violence has never been greater. Annually, nearly three million children in the United States are reported to child protective service agencies as alleged victims of maltreatment, and at least one-third of these cases are confirmed. The 1996 national rate of victimization was 15 victims per 1,000 children in the population. Most disturbing is that 1,077 child maltreatment fatalities occurred in the 50 states and the District of Columbia in 1996. According to BJS's annual National Crime Victimization Survey (NCVS), nearly 1 in 4 crimes of violence occurs at or near the home of the victim. Research also shows that, for 1 in 4 female victims of violence and 1 in 16 male victims of violence, family members and intimates were responsible for the victimization they experienced. Our current information on the depth and breadth of policy responses to family violence in the United States is limited and filling this information gap is a priority.

In response to the gravity of family violence today, the economic and social costs to society, and the findings presented in the NAS report, the National Institute of Justice (NIJ) proposes to: (1) evaluate current practices and systems of service delivery responding to family violence, (2) establish a basic research program concentrating on the understudied areas of child abuse and neglect and elder abuse, and (3) design and test a demonstration program guided by family violence research and evaluation.

NU proposes a series of program evaluation efforts. Among the evaluations recommended by the NAS report are mandatory reporting laws, protective orders and shelter programs, child witness-to-violence programs, home visitation programs, and training programs for service providers and law enforcement officials.

2 Positions to Service VAWO Indian Country Grants - Currently, VAWO has 2 staff servicing its Indian country grantees. Through its various programs, VAWO provides more grants to Indian country than any other DOJ grant component. In 1995, VAWO provided grants to 14 tribal governments; currently they provide grants to 113 tribal governments and 9 tribal consortia. Because of the geographic isolation of many tribes, their inexperience with grant programs, and the fact that many of the grantees require intensive technical assistance and guidance to launch projects, management of these grants is labor intensive. In addition, because VAWO has so much experience with Indian country, these 2 staff members are frequently tapped to work on DOJ projects and with OJP's Tribal Liaison. Given all of the above and the sheer number of tribes the current staff deal with, 2 additional positions are requested to work on Indian country.

OFFICE OF JUSTICE PROGRAMS Justice Assistance Programs 2001 Summary Statement

The C. Tee of Justice Programs (OJP) is requesting a total of \$377,907 million, 954 permanent positions and 966 work years for the Justice Assistance account. This 2001 request represents an overall increase of \$58,959 million from the 2003 base of \$318,948 million.

The mission of the Office of Justice Programs is to provide federal leadership in developing the Nation's capacity to prevent and control crime, administer justice and assist crime victims. These programs of the Justice Assistance appropriation account contribute to that mission through direct grants, as well as through program research and evaluation and analysis of program statistics.

Office of Justice Programs Justice Assistance Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Justice Assistance

For grants, contracts, cooperative agreements, and other assistance authorized by title I of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, Cithe 1968 Act"), and the Missing Children's Assistance Act, as amended, including salaries and expenses in connection therewith, and with the Victims of Crime Act of 1984, as amended, [\$155,611,000] \$186,260,000, to remain available until expended, as authorized by section 1001 of title I of the Omnibus Crime Control and Safe Streets Act of 1968, as amended by Public Law 102-534 (106 Stat. 3524).

In addition, for grants, cooperative agreements, and other assistance authorized by sections 819, 821, and 822 of the Antiterrorism and Effective Death Penalty Act of 1996, [\$152,000,000] \$185,000,000, to remain available until expended.

(Department of Justice Appropriations Act, 2000, as enacted by section 1000(a)(1) of the Consolidated Appropriations Act, 2000 (P.L. 106-1)31)

OFFICE OF JUSTICE PROGRAMS Justice Assistance

Research, Evaluation And Demonstration Programs 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The National Institute of Justice (NII) is the principal federal agency for research on crime. Crime costs the citizens of the United States as much as \$450 billion each year and the federal government alone spends \$5 billion annually to fight it ("The Extent and Costs of Crime Victimization." A New Look," National Institute of Justice. Research Preview, January 1996). Strategic investments in research and development can build knowledge and tools that begin to reduce this cost over time. In 2001, NIJ will continue to develop new information on the nature and causes of crime, its consequences and its relationship to institutional and community corrections. Developing this information on what works to prevent, enforce and adjudicate crime allows NIJ to disseminate practical knowledge and tools to all levels of the criminal justice community, to include the international front. NIJ's mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

NU supports research and development programs, conducts demonstrations of innovative approaches to improve criminal justice, develops new criminal justice technologies, and evaluates the effectiveness of OJP-supported and other justice programs. An overview of program specific highlights are as follows:

Arrestee Drug Abuse Monitoring System (ADAM). ADAM is a research program that provides program planning and
policy information on drug use and other characteristics of arrestees through quarterly interviews of adult and juvenile
incarcerated in 35 U.S. cities during 1999. Through interviews and drug testing, communities continue to assess the
dimensions of their particular local substance abuse problems, evaluate programs and interventions with offender populations,
and plan policy responses appropriate to these populations.

In 2001, NIJ proposes to expand ADAM to 50 sites, which will provide for greater advancements in the understanding of substance abuse patterns such as the largely western methamphetamine abuse phenomenon and the characteristically regional abuse patterns associated with heroin.

The National Law Enforcement and Corrections Technology Centers (NLECTC) System. NLECTC is a system of regionally located centers that provide a gateway for law enforcement, corrections, and the entire criminal justice community to have access to relevant technology information. The centers, which are located in Rockville (Maryland), Rome (New York), Charleston (South Carolina). Denver, Orlando, and El Segundo (California), are co-located with an organization or agency that specializes in one or more specific areas of research and development. Each center has a specific technology focus within this linked web of service for law enforcement, corrections, and other criminal justice professionals.

In 2000, with base funding, NIJ will continue to build upon existing program activities. These include: responding to technology assistance requests from agencies; facilitating the transfer of Defense excess equipment to state and local law enforcement and corrections agencies; disseminating documents pertaining to innovative law enforcement and corrections technology; performing analyses ordinary crime labs cannot perform because of limited capabilities, resources, and expertise; developing and supporting special task forces to develop requirements, study evolving needs, and develop strategies for getting technology into the field; soliciting manufacturers to commercialize technologies based on requirements identified by law enforcement and corrections practitioners; providing "Capacity Building" in which agencies are assisted in developing their own technology capabilities and encouraged to share with other agencies; and providing law enforcement and corrections practitioners with technology information via the JUSTNET Website, Techbeat publications, workshops, and direct technology assistance.

- DNA Research and Development. In 1999, NIJ implemented a five-year effort to miniaturize (DNA miro-chip) and make the performance of forensic DNA testing faster, easier, and less expensive. Also in 1999, NIJ published the brochure, What Every Law Enforcement Officer Should Know About DNA Evidence by National Institute of Justice, September, 1999 and the report Issues und Practices, Post-conviction DNA Testing: Recommendations for Handling Requests by National Commission on the Future of DNA Evidence. September, 1999. This improved technology will enhance the ability of state and local jurisdictions to convict many more criminals, exonerate innocen; suspects earlier, and change law enforcement in fundamental ways.
- NII oversees the direction of the National Commission on the Future of DNA Evidence. The duty of the Commission is to
 recommend courses of action and means to improve the use of DNA technology in the investigation of criminal cases. In 1999,
 the Commission sponsored four two-day conferences which included working-groups in a wide range of topics concerning
 DNA uses within the criminal justice system. In 2000, NII will embark on a two-year effort to reduce the estimated one
 million backlogged DNA samples.
- Application of mapping demonstration programs. NIJ supported implementation and use of crime mapping through the Crime Mapping Research Center (CMRC) and the locally-based Crime Mapping, Planning, and Analysis Program

(COMPASS). CMRC provided classroom training modules in partnership with the COPS Office through their Regional Community Policing Institutes throughout the country. NIJ further disseminated crime mappings through forums such as the third annual conference as well as a series of publications to inform the field about crime mapping including the handbook, Crime Mapping: Principle and Practice.

- COMPASS. COMPASS is a data-driven approach to enhancing community safety through proactive problem-solving
 involving analysis of comprehensive data by key decision makers in the community. NII is assisting in the implementation of
 this process intended to facilitate identification and understanding of the underlying causes of crime problems, and foster the
 development of innovative solutions. Seattle, Washington will pilot this new initiative in 2000.
- Strategic Approaches to Community Safety (SACSI). SACSI is a comprehensive, problem solving, information-driven
 effort intended to reduce crime. SACSI was implemented in five cities in 1999 (Memphis, TN; New Haven, CT; WinstonSalem, NC; Indianapolis, (N; Portland, OR). Pilot communities are analyzing data to determine the nature and scope of local
 crime problems, and designing interventions based upon the data. U.S. Attorneys in each of the five cities are working with
 local decision-makers and a local research partner to formulate strategic approaches to identified and verified crime problems.
- Sharing research results and providing access. NIJ published 110 documents. NIJ grantees published their research findings in journals and newsletters, averaging about 70 articles per quarter. Additionally, NIJ research was cited in numerous news articles in 1999, averaging about 50 per month. The National Criminal Justice Reference Service (NCJRS) is the largest clearinghouse for criminal justice information in the world. It has a traditional library of 180,000 abstracts of documents and a virtual library of over 1,000 full documents which the public can request via an 800 telephone number or via the Internet. In 1999, NCJRS distributed over 1.5 million documents and over 650,000 people requested information and/or publications from NIJ.

FY 2001 Performance Goals and Indicators

NU is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

OFFICE OF JUSTICE PROGRAMS JUSTICE ASSISTANCE RESCARCH, Evaluation and Demonstration Programs PROGRAM PERFORMANCE INFORMATION (dollars in thousands)

Research, Evaluation and Demonstration Programs	<u>Amount</u>
2000 Appropriation Enacted	\$ 43,448
2001 Base	46,000
2001 Estimate	49,400
Increase/Decrease	\$ 3,400

BASE PROGRAM DESCRIPTION:

NII, a component of the Office of Justice Programs, is the research agency of the U.S. Department of Justice. The bureau was created under the authority of the Omnibus Crime Control and Safe Streets Act of 1968, as amended. NII is authorized to support research, evaluation, and demonstration programs; support development of technology; and both national and international information dissemination. Specific mandates of the Act directs NII to do the following:

- Sponsor special projects, and research and development programs, that will improve and strengthen the criminal justice system
 and reduce or prevent crime.
- Conduct national demonstration projects that employ innovative promising approaches for improving criminal justice.
- Develop new technologies to fight crime and improve criminal justice.
- Evaluate the effectiveness of criminal justice programs and identify programs that promise to be successful if continued or repeated.

- Recommend actions that can be taken by federal, state, and local governments, as well as, by private organizations to improve criminal justice
- Carry out research on criminal behavior.
- Develop new methods of crime prevention and reduction of crime and delinquency.

In recent years, NIJ has greatly expanded its initiatives, the result of the Violent Crime Control and Law Enforcement Act of 1994 (the Crime Act), partnerships with other Federal agencies and private foundations, advances in technology, and a new international focus. Examples of these new initiatives are:

- New research and evaluation is exploring key issues in community policing, violence against women, sentencing reforms, and specialized courts such as the drug courts. This research is being carried out in cooperation with Department of Justice and Office of Justice Programs Crime Act offices, supported by funds from the Crime Act.
- Dual-use technologies are being developed to support national defense and local law enforcement needs. The five-year program, begun in 1994, is the result of a partnership between the Departments of Defense and Justice, supported by a \$37.5 million Congressional appropriation in 1995.
- Three regional National Law Enforcement and Corrections Technology Centers and four specialty centers have joined the National Center in Rockville, Maryland. All offer toll-free and online access to information about products and technologies available for law enforcement use.
- The causes, treatment, and prevention of violence against women and violence within the family are being investigated by interagency research. The research is sponsored by NIJ and several agencies of the U.S. Department of Health and Human Services, with funding of more than \$5 million.
- NII's links with the international community are being strengthened in several ways: through membership in the network of
 criminological institutes affiliated with the United Nations (UN); participation in the development of the United Nations

Criminal Justice Information Network; initiation of UNOJUST (United Nations Online Justice Clearinghouse), an Internet-based system electronically linking the institutes to the UN network; and establishment of an International Center within NII

- The NII-administered criminal justice information clearinghouse, the world's largest, has improved its online capability. It is a resource widely used by state and local officials across the country and by criminal justice agencies throughout the world.
- The Institute's Drug Use Forecasting (DUF) program has been expanded and enhanced. Renamed ADAM (Arrestee Drug
 Abuse Monitoring), the program will increase the number of drug-testing sites, and its role as a research "platform" for
 conducting studies of drug-related crime will grow.
- The development of computer mapping technology was the impetus for the establishment of NIJ's Crime Mapping Research
 Center. The Center will provide training in the new technique, collect and archive geo-coded crime data, and develop analytic
 software, all intended to help police analyze the spatial patterns of crime. Training is also offered through the Crime Mapping
 and Analysis Program at the NLECTCs in Denver, CO and Charleston, SC.
- The Institute's program of intramural research has been expanded and enhanced.

2001 Program Change

In 2001, NIJ is requesting \$49.4 million. This request represents a \$3.4 million increase over the 2001 base level funding. This amount is the net result of a \$15 million decrease for DNA Research and Development/NLECTC, which are requested under the COPS appropriation and the following 2001 program increases:

- \$5 million for ADAM -- program details are included under Breaking the Cycle of Substance Abuse and Crime, page 17;
 \$10 million for Gun Safety Research and Development -- program details are included under Enhancing Technology Initiatives, page 71;
- \$2 million for Investigative and Forensic Sciences -- program details are included under Meeting New Challenges Initiatives, page 105;
- \$1.4 million for International Crime Research Program -- program details are included under Meeting New Challenges Initiatives, page 107.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY PROGRAM

PROGRAMORG UNIT: Research, Evaluation, and Demonstration Programs/National Institute of Justice (Base Program) DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assurance to Tribal. State and Local Government.

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.1) Improve the come-lighting and community preside justice system capabilities of (ribal, state and local governments. ANNUAL PERFORMANCE GOAL: (2.1.1) Research and Evaluation

MISSION: To develop new information on crime; to determine what works and why in prevention, enforcement, and adjudication of crime and its consequences, and in institutional and community corrections; and to disseminate the information to uses and local criminal patters programs

A. Descritions of Turns or Explanations for Indicators and Other Data Sources: N/A.

B. Issues Affecting 1999 Program Performance.

4 - Transfer of technology does not occur as an element of this program unit of the Base Program. As such, FY 99 activity level is reported at zero. This activity is reported as part of the Counterterrorism Research and Development Program, Department of Justice Counterterrorism Research and Development Program.

11 has undergone a change in description. This new description provides a more accurate outcome measure.

13 - FY 99 actual figure recorded as 72. This number is smaller than the enacted plan because the enacted plan figure represented all science and technology programs, regardless of program funding source. The number 72 represents the outcome for this specific program number.

C. Issues Affecting Selection of 2000 and 2001 Plans.

4. Current year plan and outyear plan totals are reflected in the Performance Measurement Table for the Counterterrorism Research and Development Program, Department of Justice Counterterrorism Programs activity.

D. Validation and Verification. NO validates and verifies performance measures by progress reports submitted by grantees, onsite monitoring of grantee performance and telephone contact.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY PROGRAM

FROGRAM/ORG UNIT: Carve-Out Programs/National Institute of Justice

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal, State and Local Government

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.1) Improve the crime fighting and criminal juvenile justice system capabilities of tribal, state and local governments.

ANNUAL PERFORMANCE GOAL: (2.1.1) Research and Evaluation

MISSION: To develop new information on crime, to determine what works and why in prevention, enforcement, and adjudication of crime and its consequences, and in institutional and community corrections; and to disseminate the information to state and local crim-mal justice programs.

A. Definitions of Terms or Explanation of Indicators and Data Sources: TBD - To be determined.

^{3.} Factors Affecting 1999 Program Performance. VAWA Research and Evaluation: A reduction of \$1.8M led to a decrease in proposed and actual solicitations and fewer grants awarded.

^{*} Publications highlighting program impact for 1998 and 1999 grants will not be ready for publication until after the two-year grants begin to expire.

C. Factors Affecting Selection of 2000 and 2001 Turgets.

Byrne Evaluation To evaluate the Byrne Formula Gram Programs

In 2001, tunds are requested from the Byrne Formula Grant Program for the National Institute of Justice (NIJ) to conduct comprehensive evaluations of Byrne programs. This program evaluation activity also folfalls NIJ's statutory mandate to evaluate programs funded under the Edward Byrne Memorial State and Local Law Enforcement Assistance. Programs

VAWA Family, Violence Research: To evaluate current practice and systems of service defivery responding to family violence, to establish a haste research program concentrating on the understudied areas of child abuse and neglect and chief abuse, and design and rest a demonstration program guided by family violence research and evaluation.

#22 - Publications and other dissemination activity to begin in FY 2001

In 2001, the Violence Against Women's Office is requesting an enhancement of \$13.25 million under the S+T+O+P formula grants program. Of this amount, \$5 million is for an MID: Family Violence Research Program. Mil prinners a series of pringism evaluation efforts. Among the evaluations recommended by the NAS report are mandatory reporting laws, printective orders and shelter pringrams, club witness-to-violence programs, some visuation programs, and training programs for service providers and law enforcement officials.

VAWA Research and Evaluation. To evaluate current practice and system of service delivery responding to violence against women; to establish a basic research program concentrating on the understudied areas of violence against women, and devign and rest a demonstration program guided by VAW research.

The number of solicitations is again reduced as a greater share of the appropriated amount give inwards program support and dissemination, continuations and supplements, and planning and feasibility studies.

Dependency Court System To conduct a five year research and evaluation program to hotter understand and improve the dependency court system's response to child abuse and neglect.

The funds for this initiative will be made available through the Office of Juvenile Juvine and Deinquetry Prevention (OJDP) Formula grant program (\$3 million) and the Drug Cours Program Office (DCPO) (\$2 million). NIT will implement this initiative in cooperation with OJDP and the DCPO. Specifically, the program will Social on the State Court Improvement Program (CIP) and the Adoption and Safe Families Act (ASPA), which are two pieces of legislation enacted to change the practices of juvenile dependency courts and prevent children from impering in foster care.

D. Validation and Verification. NU validates and verifies performance measures by progress reports submitted by grantees, onatte monitoring of grantee performance and relephone contact.

OFFICE OF JUSTICE PROGRAMS Justice Assistance Criminal Justice Statistical Program 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The Bureau of Justice Statistic's (BJS) mission is to provide the Nation with comprehensive and accurate statistical information concerning crime and the operation of our justice systems; to support the information needs and operational demands of policy and decision-making officials of the Office of Justice Programs, the Department, the Administration, and the Congress; to provide financial and technical assistance to states in developing and improving capabilities in justice statistics and information systems; to provide customers with access to statistical information through both paper and electronic means. BJS's mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Lucal Governments.

Highlights of 1999 Mission Critical Results

In 1999, the Bureau of Justice Statistics (BJS) continued to serve as an important resource for data for many DOJ components, the White House, Congress, justice agencies at all levels of government, academia, and the public. BJS maintains more than two dozen of its ongoing core data collections, collecting and publishing data on criminal victimizations and the consequences of these crimes for victims, populations under correctional supervision, federal criminal offenders and case processing, administration of law enforcement and correctional agencies, the nation's felony trial courts, and criminal justice expenditures and employment.

In addition, BJS develops and maintains analytic programs addressing the implications of national justice statistics and methodologies for Administration and legislative initiatives, including anticipating data needs that respond to emerging policy imperatives. BJS works closely with OJP's Bureaus and Offices and DOJ policy offices in collecting and analyzing information on victimization, law enforcement, adjudication, and corrections for use in program and policy development. In 1999, BJS conducted analyses and published data addressing many topical and policy-relevant areas, including:

In partnership with the Community Oriented Policing Services (COPS) Office, BJS conducted city-level victimization surveys in 12 cities providing a unique city-based dataset to examine attitudes toward community policing activities, perceptions of crime, police-public contact and characteristics of victimizations by crime. Findings were released in time 1999.

BJS responds to the information needs of customers through the development and maintenance of publication and dissemination programs and through new technological mechanisms to facilitate the electronic distribution and access to statistical data and publications. In 1999, BJS disseminated over L3 million statistical reports, codebooks, and other information products by mail and conferences through the BJS Clearinghouse and the National Archive of Criminal Justice Data. Many BJS reports are accompanied by press releases or put directly on the newswire and are given prominent coverage in the nation's electronic and print media. BJS reports are also frequently discussed in the editorial columns of American newspapers. During 1999, BJS data were included in an estimated 167,160 media citations. Ten federal and state court case opinions cited BJS data.

BJS customers have become heavy users of data and reports accessing the BJS website an average of 88,352 user sessions per month—this represents an increase of over 30,000 user sessions per month when compared to 1998.

New in 1999, BJS in collaboration with the COPS Office developed the Local Crime Victimization Survey (CVS), which represents a major step forward in empowering communities to examine crime and its consequences. Together BJS and COPS developed this desktop survey software package and made it available to police and local officials, planning agencies and researchers — at no cost — to conduct surveys that measure local crime levels and citizen attitudes toward public safety. The CV3 is based on the National Crime Victimization Survey (NCVS) and contains questions that measure citizen attitudes toward crime, their neighborhood, and local policing services. The software can be tailored to meet individual jurisdiction needs by modifying questions to emphasize issues of local concern. The CVS software has stimulated an incredible response since it was first released through the BJS website — to date, BJS has received more than 900 requests for copies of the software from police departments, local agencies, and criminal justice researchers, some of which are from countries including israel, treland, and South Africa.

FY 2001 Performance Goals and Indicators

BIS is proposing an 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

OFFICE OF JUSTICE PROGRAMS BUTEFU OF JUSTICE STRIKES PROGRAM PERFORMANCE INFORMATION (Collars in thousands)

2000 Appropriation Enacted	\$25,505
2001 Base	27,100
2001 Estimate	33,200
Increase/Decrease	\$ 6.100

BASE PROGRAM DESCRIPTION

BJS was established in December 1979, under the Justice Systems Improvement Act of 1979, which amended the Omnibus Crime Control and Safe Streets Act of 1968. As the statistical arm of the Department of Justice, BJS is responsible for (1) providing comprehensive, objective, and accurate national data on crime and justice system operations to the President, the Congress, the judiciary, state and local governments, and the general public, (2) assisting states and units of local government in the development of justice information systems and the collection, analysis, and dissemination of justice statistics; and (3) providing customer access to statistical information by a variety of traditional and electronic means.

NATIONAL DATA ON CRIME AND THE JUSTICE SYSTEM

Collect and Analyze Statistical Information

Crimes and Victims: BJS conducts the National Crime Victimization Survey (NCVS) that collects data from a nationally representative sample of roughly 50,000 households comprising more than 100,000 persons on the impact, frequency and consequences of criminal victimization in the United States. Survey data reveal how many rapes, sexual assaults, robberies, assaults, thefts, household burglaries and motor vehicle thefts U.S. residents age 12 or older and their households experience each year. BJS also collects information on intentional injuries, such as domestic violence, rape and child abuse, from a national sample of hospital emergency rooms on characteristics of the victim and perpetrator, victim-perpetrator relationship, alcohol/drug involvement in the incident and a description of the circumstances of the injury. Data are collected on the incidence of campus sexual assault victimizations from a national sample of women enrolled in post-secondary institutions in the U.S. In 2000, BJS will begin development of a methodology to enhance the NCVS to measure victimization of the

disabled population in the United States. Currently, there are no ongoing programs that provide information on criminal victimization of persons with disabilities. Baseline and annual national data will be collected on the levels and rates of violent and property victimization of persons with specified disabilities, along with the characteristics of the victims, crimes and consequences of victimization.

Law Enforcement Every four years, BIS collects and analyzes data from the more than 18,000 law enforcement agencies nationwide on the organization and administration of police and sheriffs' departments — capturing details such as number of sworm and civilian personnel by state and type of agency. In addition, censuses of federal, state and local law enforcement agencies are conducted periodically, as well as a survey of campus law enforcement agencies. BIS is scheduled to conduct this survey in 2000.

Prosecution Through an ongoing effort, BJS collects data on resources, policies, and practices of local prosecutors from a nationally representative sample of chief prosecutors who handle felony cases in state courts on a variety of topics including those of emerging and long-term interest, such as the use of innovative prosecution techniques, intermediate sanctions, plea bargaining and work-related assaults and threats

Courts and Sentencing BJS provides data on (1) state court sentencing of convicted felons, including demographic characteristics of felons, conviction offenses, types of sentences, sentence lengths, and length of time from arrest to conviction and sentencing; (2) criminal justice processing of persons charged with felonies, including demographic characteristics, arrest offense, criminal justice status at time of arrest, prior arrests and convictions, bail and pretrial release, court appearance record, rearrests while on pretrial release, type and outcome of adjudication, disposition, and type and length of sentence; (3) civil trial caseload data, including case type, outcome, jury awards, type of parties, legal representation and dates of filing and disposition; and (4) annual data on workload, activities, and outcomes associated with Federal criminal cases collected from the Executive Office of U.S. Attorneys, the Federal Pretrial Services Agency, the Administrative Office of the U.S. Courts, the U.S. Sentencing Commission, and the Federal Bureau of Prisons. In 2000, a Survey of Civil Trial Cases in State Courts will collect civil trial caseload data for a 1-year period from a sample of counties representative of the Nation's 75 largest counties. Data will include case type, outcome, jury awards, type of parties, legal representation, and dates of filing and disposition.

Also in 2000 with funding from OJJDP, BJS will track all cases of juven:les in adult court filed during 1998, in a representative sample of the Nation's 75 largest counties. The project will build upon BJS's State Court Case Processing Statistics data collection series as well as data collection efforts of the Building Blocks for Youth project funded by OJJDP and BJA. This data collection will represent the most comprehensive dataset on juvenities in adult criminal court to date. **Corrections:** Information is provided on correctional populations and facilities gathered from Federal, state and local governments, and covers the major sub-units of the corrections system -- probation, jails, prisons and parole. The overall

program consists of the following components: (1) annual counts and characteristics of persons entering or exiting probation and parole; (2) annual and mid-year counts of incurcerated persons in state and frederal prisons and local jails; (3) annual statistics on persons admitted or released from state and Federal prisons and on persons released from purole supervision; (4) annual counts and characteristics of persons sentenced to death; (5) quinquennial surveys of national samples of prison and jail inmates and adult probationers; and (6) censuses of state and local correctional facilities and parole and probation agencies.

HJS will conduct the 2000 census to obtain detailed information on facility characteristics, including design and rated capacity, construction and renovation, and facilities under court order for conditions of confinement; inmate counts, persons under age 18 and over age 55, inmate housing arrangements, and inmates being held for other authorities; facility operations and security, misconduct reports and grievances filed; inmate health, including procedures for suicide prevention and screening for HIV and tuberculosis; facility programs, such as work, education, and counseling; and staff characteristics, including occupation and ethnicity.

In 2000, BJS has begun to compile a report from existing data on deaths in custody including trend information on in-custody deaths by cause and to design and test a new data collection for all deaths in custody in local jails to be conducted annually.

With funding support from the OJP Corrections Program Office (CPO) and FBI, BJS is currently conducting a national study that will develop a sample of state prison releases with oversampling of violent offenders, particularly those offenders convicted of sexual assault crimes and crimes against children. Fifteen states are participating in the recidivism study and collectively account for over half of all releases from state prisons in 1994. These include: Arizona, California, Delaware, Florida, Illinois, Maryland, Michigan, Minnesota, North Carolina, New Jersey, New York, Ohio, Oregon, Texas, and Virginia. BJS will track released prisoners for three-years, using State and Federal criminal history records. An initial report giving results of the three-year recidivism study is expected by the end of 2000.

Analyze Implications for Policy and Legislation

BIS develops and maintains analytic programs addressing the implications of national justice statistics and methodologies for OJP, Departmental, legislative and budgetary initiatives, including anticipating data needs that respond to emerging policy imperatives. BIS works closely with OJP's Bureaus and Offices and DOJ policy offices in collecting and analyzing information on victimization, law enforcement, adjudication, and corrections for use in program and policy development. The Attorney General and White House frequently indicate areas of statistical interest such as alcohol and crime or denials of handgun purchases due to background checks. Additionally, BIS often receives legislative mandates to collect data on such topics as police use of force, crimes against the disabled, or campus crime

Identify and Implement Recommendations to Improve Data Quality

BJS conducts, supports, and implements methodological research and initiatives designed to improve the quality of justice statistics, records, and information systems. Over the last decade, BJS has played an important role in demonstrating the utility of the FBI's National Incident-Based Reporting System (NIBRS), which is capable of producing more detailed, accurate, and meaningful data than produced by the traditional Uniform Crime Reporting (UCR) Program. Currently, BJS and the FBI are working on efforts to assess the status of incident-based reporting among law enforcement agencies and promote the implementation of NIBRS. Working under a cooperative agreement from BJS, a contractor and the National Consortium for Justice Information and Statistics are undertaking efforts to demonstrate how local agencies can or are using NIBRS data at the local level for crime analysis, resource allocation, and other purposes, assessing technical issues relating to data elements, software, and data imput; and providing technical assistance to local agencies in record system upgrades and NIBRS implementation. Efforts to support state and local agencies in the implementation of NIBRS will be significantly enhanced with the availability of funds under the Crime Identification Technology Act

ASSISTANCE TO STATE, LOCAL AND TRIBAL GOVERNMENTS

Improve Quality and Coverage of Justice Data and Statistics and Their Compliance with Confidentiality and Security Requirements:

Criminal Records Data Quality: Program supports surveys, studies, conferences and technical assistance on issues relating to criminal justice records. Primary emphasis is on accuracy and completeness of records, limitations on dissemination, commissing of inventile and adult records, data auditing techniques and the interstate exchange of records.

Encourage the Development, Maintenance and Utilization of Data Systems and Analysis:

State Justice Statistics (SJS) Program for Statistical Analysis Centers offers technical and financial support to states to establish and operate state-level Statistical Analysis Centers (SACs) to collect, analyze and report statistics on crime and justice to Federal, state and local levels of government and to share state-level information nationally. Under this program, BJS, in conjunction with other OJP components and SAC directors, identifies particular criminal justice topics for in-depth analysis and encourages SACs to conduct statistical research and publish findings on these issues.

Technical assistance to the State SACs is provided by BJS through the Justice Research and Statistics Association (JRSA) in support of state-level development, collection, analysis, use and dissemination of criminal justice statistics. In providing

technical and liaison services to the SACs for BJS, JRSA maintains a criminal justice information clearinghouse; provides an automated Database of State Activities and Research; and conducts an annual conference on justice statistics, research and policy analysis.

CUSTOMER ACCESS TO STATISTICAL INFORMATION

Publish, Disseminate and Facilitate Electronic Access:

BJS Internet World Wide Web site presents information by crime and justice topics. Summary findings, descriptions of the data collections, publications and additional work by BJS staff are listed under each topic and subtopic. Links to related pages on the BJS site and to related sites are also included. BJS, in conjunction with NIJ, is currently establishing Internet access to much of its data and related sources using a database interface. The Internet Database will meet the growing needs of many of the users of BJS and NIJ crime and justice data, provide a new resource of information that will permit users to see trends over time on a jurisdictional basis, and significantly expand the services to BJS and NIJ customers.

BJS Clearinghouse a component of the National Criminal Justice Reference Service (NCJRS), provides information about crime and justice statistics. The clearinghouse offers products and services tailored to the needs of the criminal justice professional.

National Archive of Criminal Justice Data, on behalf of BIS, archives data files, documents them and makes them available to researchers, scholars, journalists, and other users. The archive is located with the central staff of the Inter-university Consortium for Political and Social Research (ICPSR) in the Institute for Social Research at the University of Michigan. The data from most BIS statistical series—more than 300 individual data sets—are held by the archive and distributed through electronic and traditional means, including downloading from NACJD Internet site, datatages, CD-ROM or diskettes. Online data analysis can now be conducted from the NACJD website.

National Clearinghouse for Criminal Justice Information Systems operates an automated index accessible through the Internet of more than 1,000 criminal justice information systems maintained by state and local governments throughout the Nation, issues technical publications, provides technical assistance and training for state and local government officials, and operates the National Criminal Justice Computer Laboratory and Training Center.

Database of State Activities and Research, maintained by the Justice Research and Statistics Association (JRSA), contains the

activities of state priminal justice statistical agencies, including current Statistical Analysis Center (SAC) activities, research efforts and statistical programs, abstracts of SAC publications, information on publications in the JRSA library and data from the SAC Skills Survey.

2001 Program Changes:

In 2001, BIS requests a total of \$33.2 million, which is \$6.1 million above the 2000 base. This increase is requested for the following program activities located in the Initiative Section:

- (1) \$ 3 million for Victimization on the Disabled under the Building Knowledge Initiative on page 52.
- (2) \$1 million for Hate Crimes Reporting Statistics under the Building Knowledge Initiative on page \$5.
- (3) \$2 million for Tribal Criminal Justice Statistics under the Building Knowledge Initiative on page 59.
- (4) \$ 5 million for Statistics on Disparities in the Justice System under the Building Knowledge Initiative on page 62.
- (5) \$.8 million for Traffic Stops by the Police under the Building Knowledge Initiative on page 63
- (6) \$.5 million for Electronic Crime Data. On-line Data Collection/Analysis under the Enhancing Technology Institutive on page 74.
- (7) \$1 million for Computer Crime/Cyber Fraud Statistics under the Enhancing Technology Initiative on page 84.

A. Definitions of Terms or Explanations for Indicators:

BIS distributes many of its publications through mass faxing, as well as fax on demand systems (#25 and #26). Fax-nin-demand refers to an automated fax delivery system in which customers call a titil free number and request discipling through a roughnise retiru. Has brivadicating yellow joint pages of the BIS home page only, information is not available on the unimber of finerizer sites finking to when pages of the BIS without page.

B. Issue Affecting 1998 Program Performance:

- at Indicator #14 studies and codebooks disseminated by NACID, is no longer useful as a measure because virtually all study files and codebooks are being ejectronically accessed. and downloaded by users. This activity is captured by indicators #23 and #24
- b! Most products previously diseminated by mail are now available on the Archive website and will soo be primed and distributed in the future. In 1998, printing of the National Institute Of Justice (NU) Data Resources Program Catalog was replaced by a pull version on the website. Additionally, the National Crime Victimization Survey (NCVS) codebooks were not printed and distributed as these are available for downloading from the website
- of This indicator will be useful for BIS to assets its performance, browever complete data is not yet available.
- d/ This indicator will be useful for BJS to assess its netformance, however complete data is not ver available.
- e/ Targets relating to number of media citations (indicator #28) has increased due to an improved method of estimation using factors such as number of daily newspapers on AP wire, number of TV and radio stations, and number of BIS press releases.

leaves Affecting 1999 Program Performance:

- If Over 50% of these cooperative agreements included funding, full or partial, from the COPS office, Juvanile Accountability Incentive Block Grants (IAIBG) program, and the Criminal Records Upgrade program
- g) The number of charts and spreadsheets available from the BIS website increased at a rate for preader than anticipated. New spreadsheets and webpages have been adoed in the areas of Key Facts at a Giance, Crime and Justice Data Abstracts, Drugs and Crime Facts, and Humicide Trends. In 1999, the number of charts and spreadsheets included in publications also increased
- hy Indicator #16, datasets on customized diskettes distributed by NACID, is no imager useful as a measure herasise datasets proviously distributed on diskettes are being obtained from the NACID website. This activity is currently being captured in indicator #24.

- If This indicator will be useful for BJS to assess its performance, however complete data is not yet available.
- if This indicator will be useful for BIS to assess its performance, however complete data is not yet available.
- k! Atthough difficult to have direct control over this measure. BIS met its target for increasing use of BIS data by state and local policymakers and practitioners

C. Issues Affecting Selection of 2000 and 2001 Plans:

- * Of the \$33.2M requested for FY 2001, the following initiatives are included in the \$53.2M initial
- Victimization of the Disabled (.7M).
- · Hate Crime Reporting Statistics (IM)
- Tribal Criminal Justice Statistics (2M)
- . Statistics on Dispaintes in the Justice Systems (SM)
- . Traffic Stoos by the Police (RM)
- Electronic Data Collection (.5M)
- . Computer Crime/Cyber Fraud Stansocs (IM)

Performance measures describe intended results from both base program activities and requested program initiatives

BIS anticipates a gradual decrease in its customers' use of traditional methods of dissemination (i.e., mailing paper versions) due to the increased use of electronic dissemination, such as the faternet and automated fating systems.

D. Verification and Validation:

. .

BUS obtains its measurement data from a variety of vources, including. Management and project tracking systems of BUS, Office of Compireller (OC), the National Criminal Justice Reference Service, and the National Archive of Criminal Justice Data; Off webserver logs, Lexis/Nexis database; Alla Vista search engine; and data from the Associated Press and National Broadcasters. Association. BIS continually evaluates the sources and met puls of dua collection of these data and have determined they are reliable and of satisfactory.

OFFICE OF JUSTICE PROGRAMS Justice Assistance Missing Children's Program Mission Statement and 2001 Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of the Missing and Exploited Children's Program (MECP) is to enhance the national response to missing and exploited children. Assautorized by the Missing Children's Assistance Act of £984, the Missing and Exploited Children's Program coordinates the Federal government response, supports research and demonstration programs, provides training and technical assistance, and maintains a national resource center and clearinghouse dedicated to missing and exploited children issues. The MECP's mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

In 1999, MECP established guidelines (The Standards) pertaining to investigations of online sexual exploitation offenses in collaboration with the Internet Crimes Against Children (ICAC) Task Force and various federal law enforcement agencies. The Standards foster information sharing, coordinate enforcement efforts, avoid redundant or disruption of ongoing investigations, ensure the probative quality of undercover operations, and facilitate interagency case referrals through the standardization of investigative practices. Created by state and local law enforcement for state and local law enforcement, the Standards play an important role in sharing a national strategy for investigative efforts targeting hi-tech crime. In the first year of the ICAC Task Force Program, more than 100 child molestation or pornography offenders were arrested and thousands of children and parents received information about online safety. In late 1999, MECP selected ten new agencies for participation in the ICAC Task Force Program and anticipates adding another ten agencies by April 2000.

In a collaborative effort with the National Center for Missing and Exploited Children and the National Association of School Boards, MECP provided information about safe Internet practices for children through two broadcasts of Online Safety: A Primer for Parents and Teachers—More than 30,000 parents, teachers, and law enforcement officers from 525 downlink sites viewed the broadcasts.

FY 2001 Performance Goels and Indicators

MECP is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

2000 Appropriation Enacted	\$19,952
2001 Base	19,952
2001 Estimate	20,000
Increase/Decrease	\$ 48

BASE PROGRAM DESCRIPTION

Everyday in America, 2,200 children are reported missing to law enforcement. Many of these children are runaways, others are abducted by noncustodial parents and used as pawns in custody battles. Some wander away and are unable to find their way home, and still others represent a parent's worst nightmare, the loss of a children and their families, MECP supports research, training and technical assistance, and a national resource center and clearinghouse to assist parents, law enforcement, prosecutors, and other individuals working on child victimization issues.

MECP research, training and technical assistance programs are designed to assist communities develop effective policies and enhance services to missing and exploited children and their families by providing practical information for parents, legislators, policymakers, prosecutors, law enforcement, and other professionals working on child victimization issues. In addition to collecting statistics about missing children, MECP research efforts also identify model programs, best practices, and emerging technical information to inform training and technical assistance programs. MECP provides training and technical assistance on we wide scale of child victimization topics ranging from assisting communities develop comprehensive response protocols and action plans to specific investigative techniques for frontline law enforcement personnet. The Jimmy Ryce Law Enforcement Training Center Program (JRLETC) at the National Center for Missing and Exploited Children provides multi-tiered training for law enforcement executives and investigators working on missing and exploited children cases. Under the JRLETC program, law enforcement executives receive information to assist them develop policies and procedures for their agencies while investigators are offered information about the most effective investigative techniques and available resources to assist them respond effectively to missing and exploited children cases.

MECP began a national program to counter the emerging threat of offenders using the Internet or other online technology to sexually exploit children. Designed to encourage communities to adopt a multidisciplinary, multijurisdictional response to online enticement and child pornography cases, the Internet Crimes Against Children (ICAC)Task Force Program ensures that participating state and local law enforcement agencies can acquire the necessary knowledge, equipment, and personnel resources to prevent, interdict, or investigate ICAC offenses.

2001 Program Change

In 2001, MECP requests a total of \$20 million, which is a \$48,000 increase above the 2000 base. This enhancement will allow for the updating and reprinting of important MECP publications.

- A. Definitions of Terms or Explanations for Indicators and Other Data Sources: Measuring outcomes in terms of missing children is difficult due to the wide spectrum of Title IV programming. For example, while there may be some correlation between training and increased recoveries of missing children, is a difficult to establish a direct presidential between training and a specific recovery. Other program products include. "A Report Card to the Nations" a document that promotes self assessment by states regarding their laws and procedures, establishment of time lines on known senal mandeters to close previously analysed homicides, studies that produce resource manuals, catalog of Foderal services to missing, exploited children and their families, evaluations of state clearing/bases and non-profit organizations, resource and investigative guides for law enforcement involved in Child homicide investigations and demonstration models all constraints to the recovery of missing children.

OFFICE OF JUSTICE PROGRAMS Justice Assistance Programs Regional Information Sharing System 2001 Mission Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The Regional Information Sharing System (RISS) is a valuable tool that provides information and intelligence services to state and local criminal justice agencies nationally in the pursuit of criminal investigations. Its mission is to enhance the ability of state and local criminal justice agencies to identify, target and remove, criminal conspiracies and activities spanning jurisdictional boundaries. The mission of RISS directly supports DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

BJA measures the impact of the RISS program by identifying how successful state and local law enforcement agencies are in addressing local and national crime issues as a result of the services RISS provides. For example, during 1994-1996, RISS projects were instrumental in effecting: a total of 21,452 arrests; the seizure of narcotics valued at \$550 million; the seizure of \$68 million in currency; and the recovery or seizure of property valued at \$45 million.

Since 1980, when the RISS program was fully implemented, it has assisted member agencies in investigations resulting in over \$12 billion in recoveries at a total cost of 1.6 percent of that amount. This amounts to a rate of return of \$62 for each \$1 invested.

RISS Intelligence Centers reported the following summary-level performance indicators during the second quarter of 1998 (Aprillune). RISS centers were instrumental in effecting: a total of 925 arrests; the seizure of narcotics valuated at \$39,198,493; the seizure of \$1,925,640 in currency and property.

FY 2001 Performance Goals and Indicators

RISS is proposing an 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

OFFICE OF JUSTICE PROGRAMS JUSTICE ASSISTANCE REGIONAL INFORMATION SHARING SYSTEM PROGRAM PERFORMANCE INFORMATION (Dollars in thousands)

Regional Information Sharing System	<u>Amount</u>
2000 Enacted	\$20,000
2001 Base	20,000
2001 Estimate	20,000
Increase/Decrease	\$ 0

BASE PROGRAM DESCRIPTION

The RISS program is administered by OJP's Bureau of Justice Assistance (BIA) and was first funded in 1975. The RISS program operates six regionally based information centers: (1) Middle Atlantic-Great Lakes Organized Crime Law Enforcement Network; (2) Mid-States Organized Crime Information Center; (3) New England State Police Information Network; (4) Regional Organized Crime Information Center; (5) Western States Information Network; and (6) Rocky Mountain Information Network. All six centers are electronically linked and provide services such as.

- Automated information sharing to provide controlled input, dissemination, rapid retrieval and systematic updating of criminal information;
- Analysis capabilities to assist in the compilation, interpretation and presentation of criminal information; and
- Telecommunications systems to support the operation of the information sharing and analysis components, and to support project-sponsored investigations and activities.

In addition, the RISS program provides non-federal member agencies investigative fund support, specialized equipment on loan, training and training support to upgrade investigative skills, and technical assistance.

In 2000, RISS was appropriated \$20 million. However, an additional \$5 million was provided from the COPS appropriation which will allow the RISS Centers to maintain the demand for membership services which include information sharing, data analysis and telecommunications. Center staff will assist in membership training, information sharing, production of monthly and annual Center

bulletins, update and enhance in-house print materials, and production of superior quality analytical products in a timely manner. This program will continue to maintain the six regionally-based information sharing centers throughout the United States and continue the deployment of the criminal intelligence database pointer system (RISSNET) and the RISS Secure Intranet (RISS.NET).

In addition, this funding received from the COPS Technology Program will be used towards enhancing the RISS program by upgrading its communications infrastructure. This will involve the expansion of the RISS program by providing access to law enforcement member agencies to the RISS Secure Intranet to increase their ability to share and retrieve criminal intelligence information on a real-time basis.

2001 Program Change

The 2001 request of \$20 million is the same as the 2000 enacted appropriation

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY PROGRAM

PROGRAM/ ORG UNIT: Regional Information Sharing System (RISS): Bureau of Justice Assistance (Base Program)

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance in Tribal. State and Local Government

DEFARTMENT OF JUSTICE STRATEGIC GOAL: (2.1) Improve the crime fighting and criminal juverile juverile system capabilities of Tribal, state and local governments.

ANNUAL PERFORMANCE GOAL: (2.1.1) Research and Evaluation

MISSION: To enhance the ability of state and local crammal justice agencies to identify, larger, and remove criminal compitacies and activities spanning juris-fictional boundaries.

- A. Definitions of Terms or Explanations for Indicators and Data Source:
- In addition to the \$20M in 1998 and 1999 direct appropriations. \$5M was made available each year through a COPS earmark. For enhancements in RISS communication infrastructure.
- ** BIA files and Regional Information Sharing Systems Annual Program Performance Report
- #7,8,9 Member agencies are the RISS customers.
- 3/3, (4, (5 (af) 5) is a matter of policy that the Department of Justice (DOF) does not set numeric targets for these indicators. However, DOF does track these measures because they provide valuable information concerning the nature and fevel of activity in a jurisdiction
- B. lasues Affecting 1999 Program Performance N/A
- C. Issues Affecting Selection of 2000 and 2001 Plants. An additional \$5 million will be transferred to this program for \$Y 7000, as was the case in prior years. We do not yet know whether these COPS earmank funds will be transferred to the program in FY 2001.
- D. Validation and Verification. The Program Development Division relies on BIA files and grantee progress reports to verify CPRA numbers. BIA files track information for indicators of 12 is obtained from quarterly reports submitted by individual projects. BIA requires that grantees track figures for these performance indicators and report them quarterly. To further validate the numbers, the projects maintain the original documents that support the numbers.

OFFICE OF JUSTICE PROGRAMS Justice Assistance Programs National White Collar Crime Center 2001 Mission Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The National White Collar Crime Center (NWCCC) provides a national support system for the prevention, investigation and prosecution of economic crimes. The NWCCC provides assistance to Federal, state and local law enforcement agencies in conducting multi-state investigation of white collar crimes including: investment, telemarketing and securities fraud; better room operations; and advanced fee loan scams. It also supports investigation efforts regarding health care fraud, computer crimes and financial crimes against the elderly. NWCCC's mission directly supports the Department of Justice's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

In 1999, BJA through its National White Collar Crime Center (NWCCC) funded 24 multi-state investigations, exceeding the 1999 target of 22. Significant 1999 outcomes of NWCCC activities include the following:

- NWCCC received the International Association of Law Enforcement Intelligence Analysts' 1999 Professional Service
 Award for excellence in law enforcement intelligence publications and NWCCC was recognized for producing and
 distributing A Guide to the Financial Analysis of Personal and Corporate Bank Records, currently in its second edition.
- Santa Cruz County, California, received nearly \$20,000 in case funding to pay for out-of-state victims to travel to Santa Cruz to appear as witnesses and to testify against Mathew Bowin and his Internet-based, start-up company, Interactive Products & Services, Inc., (IPS). IPS offered its shares for sale on the Internet. The shares were not registered for sale in California under the state securities law. Bowin was arrested in April 1998 and charged with 53 combined counts of unregistered sale of securities, fraud and grand theft. NWCCC's funding assistance led to the successful prosecution of Bowin. In October 1998, Bowin was sentenced to 10 years in state prison.
- The Aurora, Colorado, Police Department reported that two major organized crime cases emerged as the direct result of NWCCC training. Aurora Police Department investigators used computer forensic skills to draft search warrants that take into account the sensitive nature of computer storage media. The officers' NWCCC training allowed them to efficiently secure computer evidence by using effective crime scene evidence checklists. These cases represent initial success in the prosecution of racketeering and organized crime where the method of operation was computer crime.

- The Administrator of the Governor's Office of Consumer Affairs (OCA) in Georgia received funding and support in the investigation of the alleged criminal activities of a telemarketing fraud operation. NWCCC provided the necessary analytical data associated with evidence seized, compiling victim data, and most of the financial analysis of these companies. NWCCC analysis and financial flow charts were invaluable in resolving these investigations. OCA stated numerous times that the costs associated with the production of documents, as well as the support associated with these investigations, would have been cost prohibitive for their department. OCA could not have conducted these investigations without the NWCCC's financial support.
- An Alaskan NWCCC member reported that, because of the publication cited above, he was able to obtain search warrants that ultimately resulted in a plea to a felony offense. As a result, the subject was sentenced to 7 months and restitution of \$500,000. This same member also reported that he investigated an insurance agent who embezzled \$160,000 from a fiduciary account. Based upon the investigator's NWCCC computer training, he was able to copy the hard drive and extract the relevant information. This investigation resulted in a plea and surrendering of the subject's insurance license.
- In a civil case brought by the California Department of Corporations (DOC), the DOC needed to find bank accounts of the defendants to enable the accounts to be seized. However, the names of the individuals were very common and the banks wouldn't cooperate without social security numbers. The DOC provided the NWCCC the names of fifteen individuals including the probable cities where they resided to NWCCC. Within 24 hours, NWCCC faxed a list of information including social security numbers, addresses, drivers' license numbers, and civil actions filed against them. DOC located bank account numbers from that information and their receiver was able to seize assets.
- The Colorado Department of Revenue, Criminal Tax Enforcement Section, used NWCCC's public information database for a number of its investigations. In one particular instance, they were engaged in a joint investigation with the Denver Police Department's vice squad. The target was involved in prostitution and rucketeering. Denver PD acquired an intelligence package independently, while the Department of Revenue requested information from NWCCC. The other intelligence package came in the form of about eight generic pages, while the 40 plus pages supplied from NWCCC included information that was invaluable to the prosecution of this case.
- The Louisiana Department of Justice received nearly \$9,000 of funding for a mortgage fraud case, operating out of California, that solicited victims in Louisiana. NWCCC's involvement resulted in seven indictments in Louisiana and three in California. An arraignment is scheduled for December 1999.

FY 2001 Performance Goals and Indicators

NWCCC is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

OFFICE OF JUSTICE PROGRAMS JUSTICE ASSISTANCE NATIONAL WHITE COLLAR CRIME PROGRAM PERFORMANCE INFORMATION (Dollars in thousands)

National White Collar Crime Center	Amount
2000 Appropriation Enacted	\$9,250
2001 Base	9,250
2001 Estimate	18,000
Increuse: Decreuse	\$2.750

BASE PROGRAM DESCRIPTION

The NWCCC, administered by OJP's Bureau of Justice Assistance (BJA), provides member agencies assistance such as: (1) automated information sharing to provide controlled input, dissemination, rapid retrieval and systematic updating of criminal information; (2) analysis capabilities to assist in the compilation, interpretation and presentation of criminal information; and (3) telecommunications systems to support the operation of the information sharing and analysis components and support to project-sponsored investigations and activities. However, like the RISS program, NWCCC also provides non-Federal member agencies limited investigative fund support.

In addition to the Criminal Intelligence Database, the NWCCC operates (1) a Civil/Administrative Database that maintains intelligence on civil/administrative economic and white collar violations and (2) a Training and Research Institute, in partnership with West Virginia University.

NWCCC was appropriated \$9.25 million in 2000, \$1.9 million above the 1999 appropriation. These additional funds are being used to support National CyberCrime Training Partnership (NCTP) activities. The NWCCC serves as the operations center for NCTP activities, due to its position as a fully functioning support service group. The NCTP is a national partnership comprised of federal, state, and local level law enforcement and prosecutional agencies. Its mission is to provide guidance and assistance to these groups in an effort to to ensure that these communities are properly trained to address computer-related crime. The NCTP serves as a centralized, operational focal point for assessment, design and delivery of federal, state and local training and technical assistance regarding computer crime investigation and prosecution.

2001 Program Change

In 2001, BJA requests \$18 million for this program, an \$8.75 million increase over the 2000 appropriation. This increase will provide resources for the National Cybercrime Training Partnership (NCTP) and is explained in detail under the Enhancing Technology Instative which begins on page 77

PERFORMANCE MEASUREMENT TABLE MESENTED BY INITIATIVE AND PROGRAM.

INITIATIVE: Enhancing Technology

Find Outcome	Number of multi-state investigations tunded by Certer Number of arrests as a result of services provided by projects Number of enforcement personnel trained in computer crime	Grantee Reports* Grantee Reports* Granten Reputs*	19 25 710	22 70 (a) 1,200	24 35 1.301	28 35 2,000	32 35 1,000	

A. Definitions of Terms or Explanations for Indicators and Data Source:

*BIA files = Bureau of Justice Assistance's files and National White Collar Crime Center Annual Program Performance Report.

B. Issues Affecting 1997 Program Performance. (a) The original estimate of 70 arrests was projected incorrectly.

C. Jasses Affecting Selection of 2009 and 2001 Targets. In 2001, BJA requests an increase of \$8 750 million to support the National Cybercrime Training Partnership (NCTP). Specifically, a portion of those funds will be devoted to training law enforcement officers in cybercrime. The balance of the funds will be used for expansion and enfundement of the NCTP Operations Center, for development of training materials, for independent evaluation of new forence software, for development of best practices manuals, for establishment of a software library, and for abort-term, highlevel recharge assistance - all of which cannot be quantified in the GPRA

D. Validation and Verification.

The Program Development Division relies on BIA files and granuer reports to verify GPRA numbers. BIA files track information for indicators 2 - 5. Information provided on indicators 5 - 8 are abtained from quarterly reports submitted by individual projects. BJA requires that graphees coach figures for these performance indicators and report them quarterly. To further validate the numbers. the projects maintain the original documents that support the numbers

OFFICE OF JUSTICE PROGRAMS Justice Assistance Counterterrorism Programs Mission Statement and 2001 Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

While the Federal government plays an important role in preventing and responding to terrorist threats, the state and local public safety community serve as the first responders. The mission of the Office of State and Local Domestic Preparedness Support's (OSLDPS) Counterterrorism Program is to provide state and local first responders with the most comprehensive training and support available to combat terrorist attacks, especially those involving weapons of mass destruction (WMD), such as chemical, biological, and nuclear weapons. Most state and local governments lack the specialized equipment and experise needed to effectively respond to terrorist attacks. Federal leadership in counterterrorism training, equipment purchase, technology development, and research and evaluation will result in better prepared state and local public safety agencies. OSLDPS' mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

OSLDPS has made great strides in developing comprehensive training programs for our Nation's first responders and providing technical assistance and grants to states and localities for the purpose of procuring appropriate basic level first responder equipment. A key feature of OSLDPS' program is the Center for Domestic Preparedness (CDP) at Fort McClellan, Alabama, which is a "live agent" training facility that offers advanced level counterterrorism-courses to a full spectrum of first responder personnel including firefighters, emergency medical personnel, HAZMAT units, an law enforcement officials. In 1999, the CDP trained 1,156 first responders. In 2000, \$13 million is available for the CDP to train approximately 2,000 first responders.

OSLDPS also provides funds to the National Domestic Preparedness Consortium (NDPC) – a 5 member consortium that brings a unique set of assets to OJP's domestic preparedness initiative and delivers specialized training to the emergency response community. The four Consortium members, excluding (*eCDP; include: (1) the New Mexico Institute of Mining and Technology; (2) Louisiana State University; (3) Texas A&M University; and (4) the U.S. Department of Energy's Nevada Test Site. In 1999, a total of 1,672 responders were trained at these four Consortium sites.

The success of a domestic preparedness program depends upon building the skills and confidence of emergency first responder community in their ability to respond to terrorist incidents. Experience shows that this evolutionary process of building new knowledge and skills is best supported through realistic confidence-building exercises based on threat-driven scenarios. In 1999, \$3.5 million was provided for situational exercises. These funds are supporting the planning, development and execution of a top level officials' (TOPOFF) exercise in cooperation with the Federal Interagency Working Group on Exercises. This no notice exercise is a major, nationally-based, state, local, and federal exercise and will provide for the participation of senior-level federal officials. This exercise is scheduled for mid-2009, and

will be a combination of field training exercises and command post exercises. A variety of scenarios including chemical, biological, and cyber-attacks will be used. As planned, there will be multiple venues across the nation.

FY 2001 Performance Goals and Indicators

OSLOPS is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

OFFICE OF JUSTICE PROGRAMS Counterterrorism Programs PROGRAM PERFORMANCE INFORMATION (dollars in thousands)

Counterterrorism Programs	Amount
2000 Enacted	\$152,000
2001 Base	152,000
2001 Estimate	85,900
Increase/Décrease	\$ 33,000

BASE PROGRAM DESCRIPTION:

The existing national threat of terrorism incidents involving weapons of mass destruction, such as chemical, biological, and nuclear weapons, demands that countermeasures be developed and perfected to defend the United States. Most state and local governments lack the specialized equipment and expertise needed to effectively respond to terrorist attacks. Federal leadership in counterterrorism training, equipment purchase, and technology development will result in better prepared state and local public safety agencies. The Counterterrorism Program is a comprehensive program to integrate terrorism training, equipment acquisition, and exercise and technical assistance initiatives into a coordinated, integrated approach to achieve enhanced domestic preparedness capabilities at the state and local level in all public safety disciplines.

Training

The National Domestic Preparedness Consortium (NDPC) was established in June 1998, in response to language in the Conference Report accompanying the 1998 Department of Justice Appropriations Act. The Act urged the Department of Justice to look to the nation's existing assets in developing a training program for first responders. NDPC is the principal vehicle through which the OSLDPS identifies, develops, tests and delivers training to state and local first responders. The NDPC is comprised of five members who bring a unique set of assets to OSLDPS' domestic preparedness initiative. The Center for Domestic Preparedness (CDP), Fort McClellan, Alabama is one of the five members and is a key to OSLDPS' comprehensive counterterrorism training program is the Center for Domestic Preparedness (CDP) at Fort McClellan, Alabama. Operating as a field office of OJP's OSLDPS, the CDP offers a unique environment and opportunity to provide advanced, hands-on specialized training to state and local emergency responders in the management and remediation of WMD terrorist incidents. As a former home of the U.S. Army Chemical School, Fort McClellan offers what no other U.S. civilian training facility can provide—the opportunity to train in a live chemical agent environment in its Chemical Defense Training Facility (CDTF). In 2000, \$13 million was approprieted to train approximately 2,000 emergency first responders. In 2001, \$15 million is requested that will train approximately the same number of first responders.

The remaining four members of the NDPC and a brief description of their expertise follows:

- -New Mexico Institute of Mining and Technology (National Energetic Materials Research and Testing Center) (NMIMT) has the ability to offer live explosive training including the use of field exercises and classroom instruction. NMIMT has been designated as the Consortium's lead for explosives and firearms, live explosives, and incendiary devices training. NMIMT modifies curriculum used for fire and emergency medical services personnel to train law enforcement officials in crisis management. In addition, they provide hands-on emergency response training in detecting live explosives.
- --Louisiana State University (LSU) (National Center for Bio-Medical Research and Training) has the ability to provide training on biological at agents as well as other aspects of weapons of mass destruction incidents. LSU has been designated as the Consortium's least or law enforcement training and program activities. LSU has focused its efforts on the delivery of the Emergency Response to Terrorism: Basic Concepts for Law Enforcement Course and on the developing and delivering a Biological Agents Course which provides on-scene incident commanders, mid-level and senior management for fire, law enforcement and emergency responders with knowledge about microorganisms or toxins derived from living organisms that induce death or disease in human beings, animals, or plants.
- --Texas A&M University (National Emergency Response and Rescue Training Center) has the ability to provide training (including use of live exercises) in a variety of emergency response techniques, including urban search and rescue techniques. Texas A&M has been designated as the Consortium's lead for fire service training programs and activities. The University integrates its well-established emergency response training programs and facilities of the Texas Engineering Extension Service. Its mission is to prepare state and local officials, including emergency first responders, to effectively respond to acts of terrorism caused by weapons of mass destruction.
- -U.S. Department of Energy's Nevada Test Site (National Exercise, Test, and Training Center) has the ability to conduct large scale field exercises using a wide range of five agent simulants, live radiological materials as well as explosives. The Nevada Test Site will develop and deliver a Responder Operations Training Course and a Radiological/Nuclear Agents Course. It will also collaborate with the National Fire Academy in the development and the delivery of a Weapons of Mass Destruction Incident Operations Course.

- The Metropolitan Firefighter and Emergency Services Program (FF/EMS) is authorized under Section 819 of the Antiterrorism and Effective Death Penalty Act of 1996, (P.L. 104-132). Each year since 1997, this program has been appropriated \$5 million. Its mission is to enhance the capability of fire and emergency service departments to identify and respond more effectively to terrorist attacks by providing training to local fire and emergency services departments personnel and funding to purchase equipment necessary to enhance their ability to respond to terrorist attacks including NBC warfare and other explosive incidents. Planned activities and on-going prionties continue to support the antiterrorism policies and initiatives of OJP, Department of Defense (DoD), the Administration, and the Congress. Domestic terrorism is a major threat to public safety throughout the nation and the haunting possibility of a terrorist attack using nuclear, biological or chemical agents represents an unknown challenge to local fire and emergency medical personnel as first responders to such incidents. OJP, in conjunction with the Federal Emergency Management Agency (FEMA), administers this training program and estimates that approximately 120 metropolitan jurisdictions, which protect 80 percent of the nation's population, are eligible to participate. In 2000, \$5 million of the \$8 million general training funding will be dedicated to this program. OSLDPS will maintain this level of funding in 2001 for FE/EMS.
- Local Law Enforcement Training Program. In most instances, a patrol officer or deputy sheriff will literally be the "first to respond" to a potential or actual terrorist incident. It is imperative that these thousands of first responders have the basic awareness training needs to safely assess a situation, which may be a Weapons of Mass Destruction (WMD) incident, and make informed decisions that will reduce the threat to both civilians and themselves. During 1999, the Law Enforcement Awareness Course for first responders was develop and implementation began in November 1999. In 2000, OSLDPS will train first responders with basic awareness training. In 2001, \$9 million is requested to engage all 50 states' to integrate the Law Enforcement Awareness Course into their present curriculum through a combination of train-the-trainer and direct delivery. For those states that are unable to integrate this basic curriculum into their existing program, OSLDPS will work with state associations representing sheriffs and chiefs of police to schedule train-the-trainer and direct delivery of this basic first responder course.

Equipment Acquisition

The threat of potential terrorist incidents in our Nation presents an enormous challenge to all levels of government, but most significantly to the nation's first responder community. OJP's OSLDPS provides funds to state and local emergency first response agencies to purchase specialized equipment for fire services, emergency medical services, hazardous materials response units, and law enforcement agencies to enhance their capability to respond to acts of terrorism involving chemical and biological agents, as well as radiological, nuclear, and improvised explosive devices.

Beginning in 1998, OSLDPS initiated a limited equipment acquisition program, which formed the basis for the FY 1999 State and Local First Responder Equipment Program totaling \$85.5 million. With Congressional approval, \$85.5 million was distributed as follows: 1) \$8 million was set aside for one-time state assessments grants, which provided for the conduct of risk and needs assessments based on models developed by NDPO. These assessments will serve as the basis for the guidance of future federal domestic preparedness efforts. In 2000, assessment grants will not be available; 2) \$2 million was set aside for technical assistance

and training to assist states conducting their assessments and for developing a required plan. In 2000, no funding is specifically provided for technical assistance and training; and 3) \$75.5 million was set aside for states and jurisdictions to purchase first responder basic defensive equipment - \$31.7 million to the 157 largest national jurisdictions and \$43.8 million to the 50 states for distribution to localities. The states have been instructed that their funds may not be sub-granted to any of the 157 direct OSLDPS grantees.

Counterterrorism Technology Development

The Development of Counterterrorism Technologies Program is authorized under Section 821 of the Antiterrorism and Effective Death Penalty Act of 1996 (P.L. 104-132) and was appropriated \$10 million in 1997, \$12 million in 1998, and \$10 million in 1999. This program's activities are managed by OJP's National Institute of Justice (NIJ). In this program, NIJ has undertaken a comprehensive research and development effort to address the unmet technology needs of state and local law enforcement first responders to combat terrorism. In 2000, \$30 million was appropriated for two NIJ-managed institutes—the Oklahoma City Memorial Institute for the Prevention of Terrorism and the Dartmouth Institute for Security Studies. No funding was allocated for the continued funding of NIJ's core activities of the Counterterrorism Technology Research and Development Program. Through judicious leveraging of existing resurves, NIJ expects to keep vital, core program activities moving forward at some minimal level.

This program aims to enhance the safety of the public and of law enforcement officials by developing better tools to anticipate, prevent, and deal with terrorist acts. It focuses on the areas of infrastructure security, hostage rescue, explosive detection and remediation, information technology and defense against weapons of mass destruction. NIJ has also placed a strong emphasis on the development of technical standards for these technologies and on keeping their unit costs low.

2001 Program Changes

In 2001, a total of \$185 million is requested for the Counterterrorism Program, which is \$33 million above the 2000 base. This increase is the net result of restructuring the base funding for state and local domestic preparedness assistance; (1) eliminating the \$30 million in earmarks for counterterrorism laboratories at Dartmouth College and the Oklahoma City Memorial Institute due to the fact that these laboratories are currently under development the funding provided in 2000 will be ample to cover the resource needs through 2001; (2) eliminating the \$2 million distance learning earmark is eliminated; (3) and reducing over general training by \$3 million. Off setting these reductions are the following program increases, which total \$68 million. These increases are discussed in detail under the Counterterrorism Initiative:

- \$3 million to expand the First Responder Equipment Acquisition Program page 35.
- \$2 million for operations of the Center for Domestic Preparedness, Ft. McClellan, AL page 37.
- \$9 million to expand the Law Enforcement First Responder Training Program page 39.
- S6 million for a Technical Assistance Program page 41.
- \$31 million for cost associated with the Nunn-Lugar-Domenici Domestic Preparedness Training Program page 43.
- \$17 million for the Counterterrorism Technology Program page 45.

A, Definitions of Terms or Explanations for Indicators and Other Data Sources:

Data Sources information obtained through monitoring, progress reports, state and local reports

This highly visible, high specialized training program is designed to prepare State and local law enforcement, prosecution and intelligence agency personnel to
effectively manage domestic between the striction. Training focuses on providing law enforcement with the shifts and abilities to identify, prevers and respond to domestic
terrorisms activities.

⁻ Focus Groups, composed of law enforcement and terrorism expens, will provide for continuous program development, refinement, and expansion

This program is in great demand and is only limited by the annual appropriations process. OIP has established that it can achieve (00% of its mission and train as many law enforcement and prosocution reasonnel as funding allows.

B. James Affecting 1999 Program Performance.

The program was revised at the beginning of the 1999 program period. A previous measure, "train the trainer workshope," was merged with "specialized workshope." This figure includes 5,000 attenders who perturbated throughout California yiu a saidlife broadcast.

C. lanea Affecting Selection of 2006 and 2001 Plans.

Outcomes #3 and 6 were changed to include intelligence officers

At 10, 2000 and 2001 Congress speropristed training funds under "energit training." Consequently, this program was not funded in 2000 and 2001.

D. Validation and Verification.

The information in sections 3 - 8 are verified by the recons required of the granger, as well as monitoring by the program manager,

STATUS OF CONGRESSIONALLY REQUESTED STUDIES, REPORTS AND EVALUATIONS

JUSTICE ASSISTANCE

- Section 102(b) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, requires the Assistant Attorney General
 to submit an annual report to the President and Congress by March 31 of each year. The 1998 report was submitted to Congress
 in June, 1999. The 1999 report is expected to be submitted on time.
 - NOTE: Section 810 of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, also requires the Assistant Attorney General, the Directors of the Bureau of Justice Assistance, the Bureau of Justice Statistics, and the National Institute of Justice to submit to the President and the Speaker of the House of Representatives and the President of the Senate by April 1 of each year, a report on their activities from the preceding fiscal year. The submission of the Section 102(b) report satisfies the reporting requirement under Section 810.
- 2 Section 520(c) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, requires the Director of the National Institute of Justice to annually report to the President, the Attorney General, and the Congress on the nature and findings of the evaluation and research and development activities funded under Sections 501(c), 506 and 511. The Institute will report on its program to evaluate anti-drug programs and will report on anti-drug research and development projects initiated since the passage of the Anti-Drug Abuse Act of 1988. The 1997 report was submitted in November, 1998. The 1998 report is expected to be submitted by March, 2000.

VIOLENT CRIME REDUCTION PROGRAMS, STATE AND LOCAL LAW ENFORCEMENT ASSISTANCE

1. Section 522(b) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, requires the Director of the Burcau of Justice Assistance, no later than 180 days after the end of each fiscal year, to submit to Congress a report that includes with respect to each State — (1) the aggregate amount of grants made under subpart 1 and subpart 2 to such State for such fiscal year; (2) the amount of such grants awarded for each of purposes specified in subpart 1; (3) a summary of the information provided in compliance with paragraphs (1) and (2) of subsection (a); (4) an explanation of how Federal funds provided under this part have

- been coordinated with Federal funds provided to States for drug abuse education, prevention, treatment, and research activities; and (5) evaluation results of programs and projects and State strategy implementation. The 1998 report was submitted in September, 1999. Submission of the 1999 report to Congress is anticipated to be submitted in Spring, 2000.
- 2. Section §406(b) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, requires that the Director of the Bureau of Justice Assistance, no later than 90 days after the end of each fiscal year for which grants are made under the Grants for Closed-Circuit Televising of Testimony of Children Who Are Victims of Child Abuse program, to submit to Congress a report that includes, with respect to each State (1) the aggregate amount of grants made under this title to each State for the fiscal year, and (2) a summary of the information provided in compliance with subsection (a)(1). The 1998 report was submitted along with the Section 522(b) report in September, 1999. The 1999 report is also expected to be submitted along with the report due under Section 522(b). (This information is still included in the annual report, therefore the status is the same as the above.)
- 3. Section 2004(b) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, requires the Attorney General to submit to the Committee on the Judiciary of the House and Senate, no later than 180 days after the end of each fiscal year for which grants are made under the Violence Against Women STOP program, a report that includes for each State and for each grantee Indian tribe: (1) the number of grants made and funds distributed under this subchapter; (2) a summary of the purposes for which those grants were provided and an evaluation of their progress, (3) a statistical summary of persons served, detailing the nature of victimization, and providing data on age, sex, relationship of victim to offender, geographic distribution, race, ethnicity, language, and disability; and (4) an evaluation of the effectiveness of programs funded under this subchapter. The 1998 report was submitted in May. 1999. The 1999 report is anticipated to be submitted in Spring. 2000.
- 4. Section 2406(b) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, requires the Attorney General to submit to Congress, no later than 90 days after the end of each fiscal year for which grants are made under the DNA Identification Grants program, a report that includes: (1) the aggregate amount of grants made under this subchapter to each State or unit of local government for such fiscal year; and (2) a summary of the information provided in compliance with subsection (a)(1) of this section a summary of the activities carried out under the grant and an assessment of whether such activities are meeting the needs identified in the application submitted. The 1998 report was submitted November, 1998. The 1999 report is anticipated to be submitted by March, 2000.
- Section 20110(d) of the Violent Crime Control and Law Enforcement Act (VCCLEA) of 1994, as amended, requires the Attorney
 General to submit to Congress by May 15, 1999 a report which contains the recommendation of the Attorney General concerning
 the extension of the program under this section. The report was submitted in June, 1999.

- 6. Section 20112 of the VCCLEA of 1994, as amended, requires the Attorney General to submit to Congress, beginning on October 1, 1996 and each subsequent July 1 thereafter, a report on the implementation of the Violent Offender Incarceration and Truth-Insentencing Incentive grants, including a report on the eligibility of the States under sections 20103 and 20104, and the distribution and use of funds under this subtitle. The 1997 report was submitted July, 1998. The 1998 report was submitted in July, 1999. The 1999 report is due July 1, 2000, and is expected to be submitted on time.
- 7. Section 40506(b) of the VCCLEA of 1994, requires the Attorney General, in consultation with the Secretary of Education, to provide a national baseline study to examine the scope of the problem of campus sexual assaults and the effectiveness of institutional and legal policies in addressing such crimes and protecting victims. The report is to be based on the study required by subsection (a) of this section and data collected under the Student Right-To-Know and Campus Security Act (20 U.S.C. 1001 note; P.L. 101-542). BJS sponsored a study of campus sexual victimization being conducted at the University of Cincinnati. BJS analyzed data collected under this study and expects to release findings in Spring, 2000.
- Section 40610 of the VCCLEA of 1994, requires the Attorney General to submit to Congress an annual report, beginning one year
 after September 13, 1994, that provides information concerning the incidence of stalking and domestic violence, and evaluates the
 effectiveness of State anti-stalking efforts and legislation. The 1998 report was submitted September, 1998. The 1999 report is
 expected to be submitted to Congress in March, 2000.

JUVENILE JUSTICE PROGRAMS

1. Section 207 of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, requires the Administrator of the Office of Juvenile Justice and Delinquency Prevention to submit an annual report to the President and Congress within 180 days after the end of each fiscal year. The report must contain: (1) a detailed summary and analysis of juvenile custody data, including offender type, offense, race, gender, age, facility type, death rate information and educational status; (2) a description of part A funded activities; (3) a description of each State's compliance with Section 223 and the State plan; (4) a summary of each part C or part D funded program or activity, evaluation information and an assessment of replication potential; and (5) a description of exemplary delinquency prevention on programs funded under title ii. Included in OJJDP's Annual Report is the report to the President as required by Section 404(a)(5) of the Missing Children's Assistance Act, as amended. The 1998 report was submitted in March, 1999.

2. Section 248(b)(6) of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, requires that not later than 180 days after enactment of the 1992 amendments (November 4, 1992), the Administrator shall begin to conduct a study on the incidence, nature and causes of violence committed by or against juveniles in urban and rural areas. The study is to be completed and a report submitted to Congress discussing and summarizing the results, within three years (by November 4, 1995).

OJJDP awarded four grants to study the incidence, nature and causes of violence committed by or against juveniles in urban and rural areas. The first two studies (Wisconsin and South Carolina) were funded with 1993 funds. The South Carolina study has been given further funding to develop violence prevention resources for schools, parents, and communities in their target areas. Data analyses will also be performed to study community factors affecting rural violence and juvenile homicide, and results from that analyses will be discussed at a later date. The second two studies (Washington, D.C. and Los Angeles, CA) were competitively awarded with 1994 funds. Because of the nature of the competitive award process, these studies were delayed. The Los Angeles Violence Study will be continued in 1997 to implement the research design fully.

OJJDP has a draft interim report on the four projects that is currently under review. However, because of the different end dates of these projects, the production of the final report had been delayed. The final report was submitted in March, 1999.

- 3. Section 288H of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, requires the Administrator of the Office of Juvenile Justice and Delinquency Prevention (OJJDP) to submit to Congress, no later than 120 after the completion of the first cycle of Mentoring grants, a report regarding the success and effectiveness of the grant program in reducing juvenile delinquency and gang participation, improving scademic performance, and reducing the dropout rate. OJJDP awarded forty one, 3 year grants that end in June 1998. The Administrator's report was submitted January, 1999.
- 5. Section 504(4) of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, requires the Administrator of the Office of Juvenile Justice and Delinquency Prevention to submit to Congresss, not later than 180 days after the end of each fiscal year, a report that (a) describes activities and accomplishments of grant activities funded under the Intentive Grants for Local Delinquency Prevention Programs; describes procedures followed to disseminate grant activity products and research findings; (c) describes activities conducted to develop policy and to coordinate Federal agency and interagency efforts related to delinquency prevention; and (d) identifies successful approaches and making recommendations for future activities to be conducted. The 1997 was submitted March, 1998. The 1998 report was submitted in May, 1999.

CRIME VICTIMS FUND

 Section 1407(g) of the Victims of Crime Act of 1984, as amended, requires that the Director of the Office for Victims of Crime shall on December 31, 1990, and on June 30 every two years thereafter, report to the President and to the Congress on the revenue derived from each source described in section 1402 and on the effectiveness of the activities supported under this chapter. The Director may include in such report recommendations for legislation to improve this chapter. The report is expected to be submitted by March, 2000.

This requisel provides for the increase in Fadural Employees Restaurant System (FERS) costs, based on the transfer of CAVI Service Restaurant System (CSRS) projectors to FERS, so authorized by the FERS Open Employee Act of 1897, and the open season that rain from JAVI 1888 through Describer 31, 1988. This torrespice is based on the number of employees with marketime to FERS, the grade of employees, and the increased Government cost of FERS benefits. The requised virtualist \$30,000 for femality.

Justification of Adjustments to Base (continued) (Oplians in thousands)

			A
	Pos	Years	Amount
5 Increased Enderal Health Insurance Costs	_	_	227
This request provides for the increase in agency contributions to Féderal employées health benefits —in 1999, Federal health insurance prehrunds, including agency contributions increased approximately 10.2 percent. Because the Government absorbed a larger proportion of the total const. by the TS percent, the total const. coat to the Government has increased autotranally. This increase is based on the "increased" Government cost of health insurance. This request includes \$227,000 for these costs.			
6 General Services Administration (GSA) rent GSA will continue to charge and a rates that approximate those charged to commercial tenants for equivalent space and related services. The requested increase of \$150,000 is required to meet our communent to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates reflecting a 5 percent increase over 2000 levels.		-	160
7 General Sennoss Administration (GSA) Blue Pages. Previously, GSA has paid for all nationwide Government telephone book listings through the GSA 8 percent FTS overhead rate. As a result of the National Perforation for Reviewerting Government (NPRI)GSA Blue Pages Project, the funding for these fistings has been removed (rom the overhead rate, and agencies are being billed for actual costs routed. The Department's FY 2001 estimated costs total \$282,000.00. Funding of \$1,000 is requested for Office of Justice Programs.		-	1
5 Trayer Management Center Fees	_	٦.	183
In the past, travel Milinagement sennoes were provided at no cost, and the Department received rebates based upon ticket sales Powerver, current practices in the trave-industry have ended this process. The new contracts will not provide rebates and will carry fees for each lockst, hotel, car and other reservation made. The Department's cost for travel management center fees is estimated at \$2,500,000.00. Funding of \$183,000 is requested for Office of Justice Programs.			
9 Seneral Pricing Level Adjustments	_	-	113
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from apprying a factor of 2.0 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by lew or regulation. Generally, the fautor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation custs, and utilities.			
Total increases	***	_	4,698
Decreases.			
Accident Compensation This decrease reflects the estimated billing from the Department of Labor for the actual costs in 1999 of employees accident concensation, which will be tilled in 2001. The 2001 cost will be a decrease of \$5,000 from the actual 1999 billing.	=	=	161

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance 2001 Summary Statement and Performance Plan

The Office of Justice Programs' (OJP) is requesting a total of \$1.662 million in 2001 for State and Local Law Enforcement Assistance Appropriation. The total request for the State and Local Law Enforcement Assistance Appropriation for 2001 will support the goals and priorities of the Administration, the Department of Justice, and the Office of Justice Programs. Due to the expiration of the Violent Crime Reduction Trust Fund (VCRTF) in 2001, all of the programs previously funded under the VCRTF will now be included under the State and Local Law Enforcement Assistance Account.

Office of Justice Programs State and Local Law Enforcement Assistance Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is italicized and language proposed for deletion is bracketed.

State and Local Law Enforcement Assistance

For assistance authorized by the Violent Crime Control and Law Enforcement Act of 1994 (Public Law 103-322), as amended ("the 1994 Act") [\$1,634,500,000]; the Omnibus Crime Control and Safe Streets Act of 1968, as amended ("the 1968 Act"); and the Victims of Child Abuse Act of 1990, as amended ("the 1990 Act"), \$1,662,200,000 (including amounts for administrative costs, which shall be transferred to and merged with the "Justice Assistance" account), to remain available until expended [; of which \$523,000,000 shall be for Local Law Enforcement Block Grants, pursuant to H.R. 728 as passed by the House of Representatives on February 14, 1995, except that for purposes of this Act, the Commonwealth of Puerto Rico shall be considered a "unit of local government" as well as a "State", for the purposes set forth in paragraphs (A), (B), (D), (F), and (I) of section 101(a)(2) of H.R. 728 and for establishing crime prevention programs involving cooperation between community residents and law enforcement personnel in order to control, detect, or investigate crime or the prosecution of criminals: Provided, That no funds provided under this heading may be used as matching funds for any other Federal grant program: Provided further, That \$50,000,000 of this amount shall be for Boys and Girls Clubs in public housing facilities and other areas in cooperation with State and local law enforcement: Provided further, That funds may also be used to defray the costs of indemnification insurance for law enforcement officers: Provided further, That \$20,000,000 shall be available to carry out section 102(2) of H.R. 728; of which \$420,000,000 shall be for the State Criminal Alien Assistance Program, as authorized by section 242(i) of the Immigration and Nationality Act, as amended; of which \$686,500,000 shall be for Violent Offender Incarceration and Truth in Sentencing Incentive Grants pursuant to subtitle A of title II of the 1994 Act, of which \$165,000,000 shall be available for payments to States for incarceration of criminal aliens, of which \$25,000,000 shall be available for the Cooperative Agreement Program, and of which \$34,000,000 shall be reserved by the Attorney General for fiscal year 2000 under section 20109(a) of subtitle A of title II of the 1991 Act; and of which \$5,000,000 shall be for the Tribal Courts Initiativel. as follows:

- \$600,000,000 for the State Criminal Alien Assistance Program, as authorized by section 242(j) of the Immigration and Nationality Act, as amended:
- (2) \$75,000,000 for the Prison Grant Program, of which
 - (a) \$35,000,000 shall be for the Cooperative Agreement Program.
 - (b) \$34,000,000 shall be for grants under section 20109(a) of subtitle A of title II of the 1994 Act, and (c) \$6,000,000 shall be for the Mental Health of Offenders Program.
- (3) \$15,000,000 for the Tribal Courts Initiative:
- (4) \$459.500,000 for programs authorized by part E of title I of the 1968 Act, notwithstanding the provisions of section 511 of said Act, including:
 - (a) \$5,000,000 for the National Institute of Justice for program evaluation,
 - (b) \$59,500,000 for discretionary grants under the Edward Byrne Memorial State and Local Law Enforcement Assistance Programs, of which \$4,500,000 shall be for the community demonstration grants on alcohol and crime, \$4,500,000 shall be for the Executive Office of the United States Attorneys to support the National District Attorneys Association's participation in legal education training at the National Advocacy Center, \$10,000,000 shall be for the Kids and Guns Local Media Campaign, and \$6,000,000 shall be for strengthening criminal and civil legal assistance programs for Indian Tribes.
- (5) \$9,000,000 for the Court Appointed Special Advocate Program, as authorized by section 218 of the 1990 Act:
- (6) \$2,000,000 for Child Abuse Training Programs for Judicial Personnel and Practitioners, as authorized by section 224 of the 1990 Act;
- (7) \$220,000,000 for Grants to Combat Violence Against Women, to States, units of local government, and Indian tribal governments, as authorized by section 1001(a)(18) of the 1968 Act, including:
 - (a) \$35,250,000 to be used exclusively for the purpose of strengthening civil legal assistance programs for victims of domestic violence,
 - (b) \$5,200,000 for the National Institute of Justice for research and evaluation of violence against women,
 - (c) \$1,000,000 for the Bureau of Justice Statistics for a domestic violence case processing study,
 - (d) \$5,000,000 for the National Institute of Justice for research on family violence; and
 - (e) \$10,000,000 for the Office of Juvenile Justice and Delinquency Prevention for the Safe Start Program, to be administered as authorized by part C of the Juvenile Justice and Delinquency Act of 1974, as amended;
- (8) \$34,000,000 for Grants to Encourage Arrest Policies to States, unus of local government, and Indian tribal governments, as authorized by section 1001(a)(19) of the 1968 Act;
- (9) \$25,000,000 for Rural Domestic Violence and Child Abuse Enforcement Assistance Grants, as authorized by section 40295 of the 1994 Act;

- (10) \$5,000,000 for training programs to assist probation and parole officers who work with released sex offenders, as authorized by section 40152(c) of the 1994 Act, and for local demonstration projects;
- (11) \$1,000.000 for grants for televised testimony, as authorized by section 1001(a)(?) of the 1968 Act;
- (12) \$65,000,000 for grants for residential substance abuse treatment for State prisoners, as authorized by section 1001(a)(17) of the 1968 Act: Provided, That states that have existing imprison drug treatment programs, in compliance with federal requirements, may use their residential substance abuse grant funds for treatment and sanctions, both during incorporation and after release.
- (13) \$900,000 for the Missing Alzheimer's Disease Patient Alert Program, as authorized by section 240001(c) of the 1994
 Act.
- (14) \$1,300,000 for Motor Vehicle Theft Prevention Programs, as authorized by section 220002(h) of the 1994 Act;
- (15) \$50,000,000 for Drug Courts, as authorized by title V of the 1994 Act, of which \$2,000,000 shall be far the National Institute of Justice for research into the dependency court system's response to child abuse and neglect;
- (16) \$1,500,000 for Law Enforcement Family Support Programs, as authorized by section 1001(a)(21) of the 1968 Act;
- (17) \$2,000,000 for public awareness programs addressing marketing scams aimed at senior citizens, as authorized by section 250005(3) of the 1994 Act;
- (18) \$21,000,000 for the Indian Country Grants Program, including \$8,000,000 for demonstration grants on alcohol and crime in Indian Country, \$5,000,000 for the establishment of sexual assault nurse examiner units in Indian Country, and \$8,000,000 for a Tribal Youth Mental Health and Behavior Program.
- (19) \$75,000,000 for the Zero Tolerance Drug Testing and Intervention Initiative, including \$10,000,000 for Indian Tribes and \$25,000,000 for the Re-entry Initiative.

Provided further. That funds made available in fiscal year 2001 under subpart 1 of part E of title I of the 1968 Act may be obligated for programs to assist States in the litigation processing of death penalty Federal habeas corpus petitions and for drug testing initiatives: Provided further, That balances for these programs may be transferred from the Violent Crime Reduction Programs, State and Local Law Enforcement Assistance account to this account

(Department of Justice Appropriations Act, 2000, as enacted by section 1000(a)(1) of the Consolidated Appropriations Act, 2000 (P.L. 106-1131.)

Explanation of Changes:

Adds references to authorizing language.

- Adds language to allow the transfer and merging of funds from the State and Local Law Enforcement Assistance account to the Justice Assistance account for management and administration costs.
- Deletes language for the Local Law Enforcement Block Grant Program, the State Criminal Alien Assistance Program, the Violent
 Offender Incarceration and Truth in Sentencing Incentive Grants, and the Tribal Court Program.
- 4. Adds language to fund programs previously funded under the Violent Crime Reduction Programs: State Criminal Alien Assistance Program (\$600,000,000); Prison Grant Program (\$75,000,000), including funding for the Cooperative Agreement Program (\$35,000,000), spants under section 20109(a) of subtitle A of title II of the 1994 Act, and for the Mental Health of Offenders Program: Tribal Courts Initiative (\$15,000,000); Byrne Memorial State and Local Law Enforcement Assistance Programs (\$459,500,000), including funding for the National Institute of Justice for program evaluation (\$5,000,000), funding for demonstration grants on alcohol and crime (\$4,500,000), funding the Executive Office for United States Attorneys (\$4,500,000), funding for the Kids and Guns Local Media Campaign (\$10,000,000), and funding for criminal and civil legal assistance for Indian Tribes (\$6,000,000); the Court Appointed Special Advocate Program (\$9,000,000); the Child Abuse Training Programs for Judicial Personnel and Practitioners (\$2,000,000); the Grants to Combat Violence Against Women Program (\$220,000,000), including funding for strengthening civil legal assistance programs for victims of domestic violence (\$35,000,000), funds for the National Institute of Justice for research and evaluation of violence against women (\$5,200,000), funds for the Bureau of Justice Statistics for a domestic violence case processing study (\$1,000,000), funds for the National Institute of Justice for research on family violence, and funds for the Office of Juvenile Justice and Delinquency Prevention for the Safe Start Program (\$10,000,000); the Grants to Encourage Arrest Policies Program (\$34,000,000); the Rural Domestic Violence and Child Abuse Enforcement Assistance Program (\$25,000,000); funds for training programs to assist probation and parole officers who work with released sex offenders (\$5,000,000); funds for televised testimony (\$1,000,000); the Residential Substance Abuse Treatment Program (\$65,000,000); the Missing Alzheimer's Disease Patient Alert Program (\$900,000); the Motor Vehicle Theft Prevention Program (\$1,300,000); the Drug Courts Program (\$50,000,000), including funding for the National Institute of Justice for research into the dependency court system's response to child abuse and neglect (\$2,000,000); the Law Enforcement Family Support Program (\$1,500,000); funds for public awareness programs addressing marketing scams aimed at senior citizens (\$2,000,000); funding for Indian initiatives (\$21,000,000); and the Zero Tolerance and Drug Intervention Initiative (\$75,000,000), including funds for indian Tribes (\$10,000,000) and funds for the Reentry Initiative (\$25,000,000). Language is also included to allow balances from the VCRP account to be transferred to this account, as those programs are now included in this account.

Hote: Obligation amount for 2000 includes \$24,106,900 in unobligated 1999 reimbursements.

In 1999, resources provided by contributing agencies for joint projects or programs to be administered by the Bureau of Justice Assistance. Resources included such programs from the Department of Justice Office of Community Chemied Policing Services for the Bullet Proof Vests Initiative and the FBI State Identification Systems Program. Administration of these programs will continue in 2000 and 2001.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Byrne Law Enforcement Assistance Program 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The Byrne Law Enforcement Assistance Program is composed of two grant programs: (1) the Edward Byrne Memorial State and Local Law Enforcement Assistance Formula Grant Program and (2) the Edward Byrne Memorial State and Local Law Enforcement Assistance Discretionary Grant Program. Together, these two programs are managed to meet a unified mission of assisting tribal, state, and local law enforcement units of government in controlling and preventing drug-related and violent crime, and improving the functioning of the criminal justice system through enhanced criminal bistory systems and other advanced technologies. For 2001, planned program initiatives and ongoing activities support the anti-drug abuse priorities of the Office of Justice Programs (OJP), the Department of Justice (DOJ), the Administration, and the Congress. Specifically, the Byrne Law Enforcement Assistance Program directly supports DOJ's Strategic Plan core function of providing Assistance to Tribal. State and Local Governments.

Byrne Formula Grant Program

Highlights of 1999 Mission Critical Results

BIA conducted six major technical assistance visits related to the Byrne Formula Grant Program in 1999. They are outlined as follows:

BJA conducted a multi-state training session in response to State Administrative Agency (SAA) requests for training of new staff and a forum to share information regarding innovative programs, problems, solutions, and concerns. This session focused on the administration of the Byrne Formula Grant Program and the Local Law Enforcement Block Grants (LLEBG) Program, as well as Byrne program evaluation and annual report writing. BJA provided specific training on Byrne Formula and LLEBG compliance measures and requirements, developing and evaluating state and local programs, and defining needs for evaluation and reporting. Attendees included new SAA staff from Colorado, Kansas, Missouri, and Wyoming. (September 1-2, 1999, in Denver, Colorado)

- BJA provided technical assistance to the Montana Board of Crime Control (MBCC), the SAA for the Byrne Formula Grant Program, on strategic planning in preparation of the state's multi-year Byrne Strategy. Topics included: Strengthening the Strategic Development Process; Coordination and Input of State, Local and Federal Agencies; Public, Legislative and Executive Review; Sources of Data for Defining Problems and Determining Needs; Describing the Nature and Extent of the Problem; Priority Setting; Program Response and Program Brief Development; Program/Project Monitoring, Assessment and Evaluation; and Issues Related to Statewide Strategy Development. As a result of the training and in preparation for development of their multi-year strategy, a compendium of strategies was developed on historical operations of state level drug strategy development and the modifications that have occurred over the life cycle of the Byrne Program. (May 9-13, 1999)
- BIA supported three major technical assistance events for groups of SAA staff and Byrne Formula Advisory Committee
 members to assist states with the development of their FY 2000 Multi-Year Statewide Strategies. The first event was provided
 for the State of Alaska (September 21-22, 1999), the second for the State of Washington (August 11, 1999 and October 11-12,
 1999), and the third for the State of Utah (September 21-22, 1999). The purpose of these technical assistance sessions was to
 facilitate each state's efforts to better identify crime problems, their sources, and develop effective corrective statewide
 strategies.
- BJA facilitated a training workshop, "Planning and Strategy Development Assistance," for the Office of Drug Control Policy, Michigan's SAA. The purpose of this workshop was to provide technical assistance to the SAA for the administrative and planning needs related to the development and implementation of the multi-year strategy for the Byrne Formula Grant Program and to enhance the state planning, management, and evaluation capabilities for the implementation of effective criminal justice and other related programs. As a result of the workshop, Michigan plans to incorporate the shared information into its FY 2000 multi-year strategy submission. (June 16-17, 1999)

Byrne Discretionary Grant Program

Highlights of 1999 Mission Critical Results

Significant 1999 achievements for the Byrne Discretionary Program include the following:

 expanding and enhancing the Boys and Girls Clubs to serve 3 million youth in 2,260 clubs nationwide including clubs for military families and Native American communities;

- supporting National Night Out, which in 1999 involved more than 32 million people in more than 10,000 communities;
- providing services to prosecutors, investigators and DNA analysts on scientific developments, case law, legislation and training in DNA analysis;
- developing model business case solutions for integrated information systems;
- · making significant advancements in development of the National Resource Center for integrated information systems;
- initiating the development of model court systems for dealing with mentally impaired offenders;
- training law enforcement agencies in dealing with issues associated with cybercrime;
- providing technical support to law enforcement agencies on computer-based information management related to criminal investigations;
- establishing model protocols to guide police-medical collaborations;
- developing a guide for law enforcement agencies to effectively recruit, hire, train and retain female police officers;
- providing technical assistance to state and local agencies on creating community probation-community police teams in their jurisdictions;
- producing and disseminating a guidebook for police officers on dealing with hate crimes;
- developing a set of police facility design guidelines;
- conducting regional and statewide training seminars on developing successful comprehensive public safety initiatives;
- · developing model trial court performance standards and measurement systems;

- providing technical assistance services to local prosecutors on successful and cost effective ways to prosecute as well as
 prevent home improvement fraud against senior citizens;
- providing technical assistance to Alaska native villages to conduct community analysis and community problem solving through the Alaska Native Technical Assistance and Resource Center; and
- providing training to law enforcement officials on firearms interdiction.

FY 2001 Performance Goals and Indicators

BJA is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act,

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Byrne Law Enforcement Assistance Program PROGRAM PERFORMANCE INFORMATION (dollars in thousands)

Edward Byrne Formula Grants	Amount
2000 Enacted	\$500,000
2001 Base	500,000
2001 Estimate	400.000
Increase/Decrease	\$(100,000)

BASE PROGRAM DESCRIPTION

The Byrne Formula Grant Program is authorized by the Anti-Drug Ahme Act of 1988, as amended, and administered by OIP's Bureau of Justice Assistance (BJA). This program assists states and units of local government in carrying out programs that offer a high probability of improving the functioning of the criminal justice system, with a special emphasis on nationwide and multi-level drug control strategies and violent crime prevention. The states, in consultation with local officials, develop statewide drug and violent crime strategies and funding priorities to address their drug and violent crime problems and to improve the functioning of their criminal justice systems, while supporting national priorities and objectives.

Grantees may direct the funds received under the Byrne Formula Grant Program in one or more of the 26 program purpose areas authorized by the law. As reflected on performance measurement charts, the State and Local Assistance Division (SLAD) will develop and implement in 2001 an integrated information system for the Byrne Formula Program. This system will enable SLAD to track all program components, including exemplary programs that exhibit a high probability of improving the functioning of the criminal justice system in the 26 purpose areas.

- State Administrative Agencies continue to use Byrne funds across all 26 purpose areas. The areas with the highest percentages
 of 1999 allocations include multi-jurisdictional task forces (the largest percentage of funds at approximately 44.6%), criminal
 justice information systems improvements (10.33%), crime prevention programs (6.42%), and corrections improvement
 programs (4.76%).
- In 1999, the State and Local Assistance Division conducted a total of 56 monitoring visits to Byrne grantees to address
 compliance issues. In addition, six major technical assistance visits were conducted to assist states with specific needs requests
 for the Byrne Formula Program.
- To support BJA's efforts to conduct extensive outreach, BJA will conduct five regional conferences for grantees during 2000, including those grantees responsible for the administration of the Byrne Formula program. The conferences will be designed to provide training and technical assistance in the areas of criminal justice planning and budgeting, address emerging trends and issues, discuss changes in program requirements, and allow opportunities for feedback from grantees.

2001 Program Change

In 2001, BJA requests \$400 million for the Byrne Formula Grant Program, a decrease of \$100 million from the 2000 funding level. Of the funding requested, \$5 million is requested to be made available to NIJ to support an evaluation of the Byrne programs.

2001 Estimate	_59,500
Increase/Decrease	\$7,500

BASE PROGRAM DESCRIPTION

The Byrne Discretionary Grant Program is authorized by the Anti-Drug Abuse Act of 1988, as amended, and administered by OJP's Bureau of Justice Assistance (BJA). Bla awards grants to public and private agencies and organizations for national scope and multi-state programs, demonstration programs, and training and technical assistance to assist states and local jurisdictions. National scope programs are those that provide services or products that benefit county, multiple states or address issues of national concern. Demonstration programs include those that develop, test, evaluate and document new programs and practices. Training activities provide state and local criminal justice practitioners and others with state-of-the-art information on effective programs and practices. Technical assistance programs provide support to sites participating in demonstration programs and assist individual jurisdictions to implement programs or practices and/or address specific issues. Additionally, this discretionary program assists states and local units of government to control and prevent drugs and violent crime, and improve the functioning of the criminal justice system by assisting states to develop and implement innovative alternatives to traditional modes of incorrecation.

The 2001 budget submission reflects programmatic needs and priorities developed from a broad spectrum of sources. Throughout the year, BJA receives planning input from a wide variety of sources, both within and outside of the Department of Justice, from which program strategies are developed. Those sources include:

- Meetings with criminal justice agencies, academia and professional associations, such as the International Association of
 Chiefs of Police, the National District Attorneys Association, and the American Correctional Association, to identify the needs,
 priorities and gaps in service in all areas of criminal justice;
- Individual focus group meetings with representatives of specific disciplines (police, courts, corrections etc.) to concentrate on priority areas of concern as identified by individuals most closely associated with what is happening in the field;
- Meetings with OJP Directors and Administrators, and with representatives from the Department of Justice and the Attorney
 General's Office to determine the priority areas of interest or concern to the Administration; and
- Formal information-sharing conferences with representatives of all of the state agencies administering the BJA formula grant
 programs (note that these agencies generally administer the other OJP state level programs for OJJDP and OVC) and review of
 the annual state-wide strategies prepared by each state and territory participating in BJA's formula grants programs.

BJA program development activities involve on-going coordination by BJA and other OJP and DOJ staffs. For example, efforts in the area of counterterrorism are undertaken in concert with the FBI, the DOJ Criminal Division, and the Federal Emergency Management Agency, and involve participation by staff members on a national working group. Anti-violence programming involves coordinated activities with the National Youth Gang Consortium sponsored by OJJDP, OJP's Gangs Working Group, constant interaction with the Criminal Division of DOJ, the DBA and FBI, and Treasury's Bureau of Alcohol, Tobacco and Firearms. BJA's programs for tribal strategies have been fully coordinated with OJP's Native American Program Manager. In developing the Community Justice Program, BJA has coordinated with the Deputy Assistant Automey General of OJP, NJJ, and appropriate offices within DOJ.

Open Solicitation Grants. This program involves a broad range of activities addressing a myriad of topics — only a few of which can be highlighted here. Technical assistance and training efforts make up a large part of the total program, and nearly all site-based efforts are supported also by some technical assistance component.

Established in 1997, BJA's Open Solicitation responded to grantees' suggestions for improving the grant application process by simplifying and shortening the application and by allowing creativity and innovation.

In 1998, BJA announced the third annual Open Solicitation competition. The topic areas for the 1999 Open Solicitation included the following: Alcohol and Crime, Crime Prevention Among the Elderly, Improving Access to Services in Rural and Tribal Settings, Mental Health, Police Partnerships, Local Criminal Justice Planning, Improving Front-End Decision Making, Strategies to

Strengthen the Adjudication Process, and Innovations in Offender Supervision and Reentry. The concept paper deadline was December 13, 1998. Approximately 1,400 applicants representing state, local, and tribal governments and agencies responded to the solicitation. Awards of up to \$150,000 each will be issued. In 2000 and 2001, BJA plans to continue to its Open Solicitation program,

National Citizens' Crime Prevention Campaign. The National Citizens' Crime Prevention Campaign is administered by the National Crime Prevention Council (NCPC) and sponsored by more than 120 member Crime Prevention Coalition of America, which represents millions of Americans affiliated with federal and state agencies, national associations and organizations, and branches of the United States military. This initiative reaches out to children, their families, public and private service providers, and elected officials in a comprehensive effort to control and prevent crime, violence and substance abuse. Readily recognized by McGruff the Crime Dog and the slogan, "Take a Bite Out of Crime," the campaign and its public education messages serve as positive symbols that can influence the public's understanding and behavior with respect to crime prevention, crime control, and drug abuse. In cooperation with BJA, NCPC also coordinates activities with members of the Crime Prevention Coalition of America and throughout the program period works with OJP offices, other DOJ agencies (e.g., EOUSA, DEA) and federal agencies (e.g., ONDCP, HHS and HUD) in an effort to enhance program goals, activities and products.

Public Safety Assistance to Communities. BJA is pursuing a number of initiatives, which will support technical assistance and demonstration efforts in our neighborhoods and communities. Results from the Comprehensive Communities Program (CCP) show that public, private, and community purnerships, which use deliberate strategies to focus on crime issues, can make a big difference, not only in the decreasing the crime rates, but also giving community residents a real opportunity to solve problems. National programs like the CCP, Tribal Strategies Against Violence, and the Federal Partners in Local Planning, reflect BJA's commitment to build the capacity within our local communities to sustain problem solving approaches. In 1999, BJA continued to focus on state, urban, rural, and tribal jurisdictions to promote comprehensive crime prevention and control strategies and to support implementation of those strategies. For example, the Statewide Communities Initiative (SCI), operating in Colorado, Maryland, Pennsylvania, and Virginia, will be expanded into other states to build the infrastructure of state, local, tribal, and neighborhood communities to devetop deliberate and integrated strategic plans so that resources from various federal, state, and local sources can be applied in a more responsive way. The SCI will build the skills, knowledge, and abilities capacity at all levels to understand and apply the principles of strategic planning, partnership, and coalition building to sustain continued focus on problem solving in our neighborhoods and communities. In addition, SCI will seek to enhance coordination among state agencies in their strategic planning and allocation of block/formula resources.

During 1999, crucial elements and program design were developed to support implementation in 2000. Building upon lessons learned from recent system wide training, which targeted executive level managers from urban and tribal jurisdictions (i.e., The Cutting Edge

and Community Analysis and Planning Strategies [CAPS]), technical assistance providers will be identified to enhance and/or design curricula to be administered through workshops targeting teams representative of both rural and tribal jurisdictions. Specifically, interactive sessions will provide participants with problem solving techniques and tools to effectively and accurately collect and analyze crime statistics; utilize analysis in strategic planning activities to develop a community-wide crime control and prevention plan (that is relevant and achievable in their community); and enhance the development of partnerships and collaborative efforts both in and outside of their jurisdiction. Under CAPS, 42 tribal teams, consisting of a total 268 participants, received training. This training was provided through seven regional training programs and one technical assistance program. Through the Cutting Edge initiative, three training sessions reaching 35 jurisdictions were held. Additionally, follow-up technical assistance was conducted in four jurisdictions in Florida.

2001 Program Change

in 2001, BJA requests \$59.5 million for this program. This request represents an increase of \$7.5 million over the 2000 appropriated level, to include funding for the following two new programs: (1) Alcohol and Drug Demonstration at \$1.5 million, as described under the Breaking the Cycle Initiative, which begins on page 23, and (2) Tribal Criminal and Civil Legal Assistance Program at \$6 million, as described under the New Challenges Initiative, which begins on page 109.

A. Definitions of Terms or Explanations for Indicators and Data Source:

II. Joseph Affecting 1999 Program Performance.

- (a) The initial projection was incorrectly extered, it should have been 1700
- (c) Performance indicators 11 and 12 are not applicable to the majority of the base discretionary programs, and will be deleted during the next budget cycle. They will be replaced with new performance indicators, which more accumulately focusions program accomplishments

Data Sources-information obtained through BIA files and grantee files to include meculoring, progress reports, and state and local reports. Indicators 9 and 10 were revised in FY 2000 and new data collection methods are being developed to ensure accurate data.

C. Issues Affection Selection of 2000 and 2001 Plans

(b) This figure includes \$1.5M for the Alcohol and Drug Demonstration program and \$654 for the Tethal Criminal and Civini Egal Assistance program, in addition to the base program amount of \$52 million, the following programs are contained. The Commet (\$1.25M). Advisory Center Training (\$4.5M) and Xid4 and Guist Local Media Comparing 1810M).

(c) Performance indicators. It and 12 are not applicable to the majority of the base discretionary programs, and will be deleted during the next budget cycle. They will be replaced with new performance indicators, which more accorately measure program accomplishments.

(d) This figure depends on the amount of funds carmanical by Congress, which has increased in recent years. As a result, the number of programs that will be funded through open competition is expected to decrease.

D. Velidation and Verification.

To validate and verify performance indicators, the Program Development Division manifolds records an the number of applications received, reviewed, and awarded. Contractors manifolds on peer review panels and attendance at conferences and provides this viformation in semi-annual progress reports. TBIA has determined that indicators is 1-12 are not reliable for verification purposes. Therefore, these indicators will be delicted and new indicators will be added in the 1-Y-2002 budget cycle.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Local Law Enforcement Block Grants Program 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The Local Law Enforcement Block Grants Program (LLEBG) is administered by the Bureau of Justice Assistance (BJA) and provides funds for purposes of reducing crime and improving public safety. The LLEBG planned program activities support OJP and DOJ goals and initiatives relating to providing assistance to State and local governments, investigating and prosecuting criminal offenses, and improving the criminal justice system. LLEBG's mission directly supports DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

LLEBG 1999 accomplishments include the following:

- BJA administered \$523 million in funds authorized by Congress in FY 1999, the most since the program began in 1996. More than
 3,500 jurisdictions in all 50 states and the 5 U.S. territories—an unprecedented number—applied for and received LLEBG assistance.
- BJA launched an Internet-based, end-to-end, electronic grant application and award system for the LLEBG Program. The system revolutionized how BJA works with state, local, and tribal grant recipients by putting at grant recipients' fingertips all of the information they need to apply for and receive LLEBG funding. In 1999, the system eliminated 6 weeks typically needed to prepare and mail out LLEBG application kits. The system will dramatically improve BJA's ability to collect, analyze, and disseminate information on how jurisdictions are spending LLEBG funds and improve BJA's outreach to potentially eligible jurisdictions.
- The reorganization of BIA's State and Local Assistance Division and the impact of time-saving information technology allowed SLAD
 grant managers to move their focus from administering LLEBG funds to helping state and local communities define and resolve
 criminal justice issues.

FY 2001 Performance Goals and Indicators

LLEBG is proposing an 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Local Law Enforcement Block Grants PROGRAM PERFORMANCE INFORMATION (doilars in thousands)

Local Law Enforcement Block Grants		Amoun:
2000 Enacted		\$523,000
2001 Base		523,000
2001 Estimate		Q
Increase/Decrease	1	(\$23,000)

BASE PROGRAM DESCRIPTION

The LLEBG program primarily provides funding to units of local government for the general purposes of reducing crime and improving the criminal justice system. However, these funds are also available to states for re-award to local governments, which do not qualify for direct funding based on the distribution formula, and to State law enforcement agencies that provide law enforcement services to local governments. At the end of 2000, there will be 8,800 active block grants to approximately 3,100 grantees, requiring ongoing program administration, monitoring, and technical assistance.

The amount of funding provided to individual units of government is based on the average number of Part I Violent Crimes Reported through the Uniform Crime Report (UCR) for the three most recent years. The formula is statutorily mandated and consistent with the desire to focus resources more in insively on those jurisdictions where the violent crime actually occurs. There are seven statutorily prescribed program purpose areas for which LLEBG funds may be used. These purpose areas are consistent with OJP and DOJ goals and initiatives. This program also provides states and units of local government the flexibility to make programming decisions. The charts that follow provide detailed expenditures by program purpose areas and funding levels for technical assistance and training support provided for 1996 through 1998.

Local Law Enforcement Block Grant Program	Fiscal Year 1996	Fiscal Year 1997	Fiscal Year 1998
	\$ Amount % Total	S Amount % Total	S Amount % Total

¹This category under Program Area One includes expenditures of LLEBG funds on crime technology, as well as more traditional law enforcement equipment expenditures.

TECHNICAL ASSISTANCE & TRAINING Local Law Enforcement Block Grants Program

Fiscal Year 1997	Fiscal Year 1998	Fiscal Year 1999
\$2,103,231	\$9,843,771	\$10,853,607
For crime technology related technical assistance and training regarding MIS replication projects at State and local levels; and Tribal Court MIS system development.	For crime technology assistance and framing regarding cybercrime, surveillance technologies, and drug court programmatic ESIS development	For technical assistance and training regarding automated grants administration, surveillance technologies, information technology strategic planning, and Alaska native criminal justice planning

Program Evaluation: Phase I (process evaluation) of the LLEBG program evaluation being conducted by the National Institute of Justice should be completed in 2000. The evaluation will be continued with Phase II to review jurisdictions using an "outcomesoriented" approach with the grant funds

Technology: In addition to BJA's block grants program, each year since 1996, \$20 million in LLEBG funds have been made available to NIJ for the purpose of assisting local units of government to identify, select, develop, modernize, and purchase new law enforcement technologies.

In 1999, Congress extended this 1 percent or \$20 million set-aside for these purposes. NII targeted the LLEBG set-aside fund to develop testing and standards, investigative and forensic science, officer protection and crime prevention, training and simulation, less-than-lethal, and communications and information technologies. In 1999, Congress earmarked \$10 million of these funds for the Safe Schools Initiative. The remaining \$10 million will be targeted for:

- NII established Technical Working Groups (TWGs) for the development of reliable forensic evidence, including: crime scenes, eyewitness evidence, electronic/computer crime, and training of evidence technicians. In addition NII supported the National Commission on the Future of DNA and the establishment of the National Center for Forensic Sciences.
- Officer protection and crime prevention includes: testing of surveillance technology, development of a School Security Technology Guide, further development and assessment of a personal alarm monitor, development of a health status monitor

for use by corrections agencies, and assessment of per fluorocarbon taggant technologies to detect dangerous contraband (e.g., explosives)

- Training and simulation projects include computer-based interactive training, training and simulation for bomb training, and video-based interactive training.
- Among Less-Than-Lethal projects is development of vehicle stopping methods (primarily those using electronic discharge technologies).
- Communication and information technology projects include, information technology for selected High Intensity Drug
 Trafficking Areas; standardization of wireless communication planning, development, and dissemination; and improvement of
 law enforcement interoperability for fixed and mobile systems.

Boys and Girls Clubs: In 1999, \$40 million was earmarked for LLEBG for the Boys and Girls Clubs of America (B&GCA) to establish, enhance, and expand Boys and Girls Clubs. The program targets communities where children are most disadvantaged. In 2000, \$50 million will is available to the B&GCA to continue efforts to provide at-risk boys and girls with a fully and fair opportunity to lead productive and meaningful lives.

2001 Program Change

There are no continuation funds requested for this program in 2001, as other new programs targeting community justice and law enforcement are proposed. In addition, continued OJP programs such as the Byrne program, the VAWO program, and the Drug Court program provide resources which may be used by State and local jurisdictions to purchase technologies.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY PROGRAM

PROGRAM/ORG UNIT: Local Law Enforcement Block Grants (ULEBG) Program/Bureau of Justice Assistance (Base Program)

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal, State and Local Government

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.1) Improve the crime fighting and criminal juvenile justice system papelilities of tribal, state and local governments.

ANNUAL PERFORMANCE GOAL: (2.3.2) To encourage community-based approaches to crime and justice at the state and total sevel.

MISSION: To restore funding to the LLEBG program, which provides funding directly to units of state and local governments and to Indian tribes for the general purposes of reducing crime and improving criminal justice programs

A. Definitions of Terms or Explanations for Indicators and Other Data Sources:

a/ The GPRA information for LLEBG was redesigned in 1999, in keeping with newly established values and goals as a result of a reorganization within the Bureau of Justice Assistance. Therefore, data for 1998 actuals are not available for certain indicators.

b/ PY 1996 grants were not closed during FY 1999 due to a change in the expenditure policy which had potential impact on the close-out of these grants. Therefore, SLAD will close-out these grants during FY 2000, along with the FY 1997 grants.

c/ Technical difficulties with development and implementation of the application system and award systems, primarily with the application server, significantly delayed the application and award processes. However, BJA continues to work with the information Resources Management Division (IRMD) to complete application and award capabilities. While actual awards were not made by September 30, 1999, financial obligations were completed for 1,835 LLEBG applicants amounting to \$316.979,648 in flacet year (FY) 1999 funds. LLEBG awards for FY 1999 funds will be made during FY 2000.

d' it was assicipated that deak reviews would be conducted following the implementation of the new LLEBG grants management system. However, due to delays in system development and implementation, which resulted in a revised time line for system implementation, automated deak review capabilities were not completed during PY 1999. Thus, deak reviews were completed for the 260 grantees monitored for compliance, rather than for all LLEBG grantees.

of Future indicator which is based on system development and implementation which will provide the analytic framework to identify promising programs.

Compliance monitoring - on-site review of all program activities, including compliance and actual program initiatives, as conducted according to standardized review protocol in order to address/review statutory, regulatory, and programmatic requirements.

Deak review - Internal review of documents and other information submitted by grantees as conducted according to standardized review protocol.

IIS - Integrated information systems which equate to both an information management system and a management information system.

information management system - software system designed to integrate the application, award, progress reporting, and monitoring phases of grants management into one integrated information system.

OA - Office of Administration, Office of Justice Programs.

OC - Office of the Comptroller, Office of Justice Programs.

OCPA - Office of Congressional and Public Affairs, Office of Justice Programs.

<u>Program assistance monitoring</u> - general assistance to address any criminal justice system needs that may/may not be funded directly with LLEBG program funds; this type of assistance could be combined with more targeted technical assistance to ensure community success in dealing with criminal justice issues.

SLAD - State and Local Assistance Division, Bureau of Justice Assistance.

<u>Tectarioal assistance monitoring</u> - to provide on-site guidance, expert advice, and/or training on program planning, implementation, and administration as it relates directly to program activities; this type of assistance could be combined with more general program astistance to ensure community success in dealing with criminal justice issues.

B. Issues Affecting 1999 Program Performance. * In each 1998 and 1999, LLEBG was appropriated a total of \$523 million. The amounts shown reflect the balance available after nesting out the \$20 million LLEBG technology setaside and the \$40 million Boys and Girls Club earmark. The 2000 amount reflects an appropriation of \$497, \$44,500 less the \$20 million LLEBG Technology setaside for NIJ plus the \$50 million Boys and Girls Club parmark.

C. James Affecting Selection of 2000 and 2001 Plans. * Funds were not requested in President's Budget for PY01.

D. Validation and Verification.

Performance indicators are generally based on the following activities: awards made, desk reviews completed in preparation for on-site visits, on-site compliance monitoring visits, on-site program documentation and assistance visits, bechinical assistance visits, and the close-out of grants. Activities are routinely tracked and documented, which term provides the verification for reported date. For example, staff monitoring reports are used to verify completion of on-site compliance monitoring visits conducted and to review greaters and documentation assistance activities.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance State Criminal Alien Assistance Program 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of the State Criminal Alien Assistance Program (SCAAP) is to provide federal assistance to states and units of local government incurring costs of incarcerating illegal aliens convicted of one felony or two misdemeanor offenses and to expedite the transfer of custody for certain deportable aliens. In 2001, SCAAP planned activities and ongoing activities support the goals and initiatives of OJP and DOJ that deal with providing assistance to State and local governments. SCAAP's mission directly supports DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

In 1999, \$585 million was available for SCAAP. Of this amount, \$420 was provided as direct appropriations and \$165 million was available from the State Prison Grants Program. Funds were awarded in July 1999, to 336 jurisdictions.

FY 2001 Performance Goals and Indicators

SCAAP is proposing a 2001 Performance. Itan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

2612

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance State Criminal Alica Assistance Program PROGRAM PERFORMANCE INFORMATION (dollars in thousands)

State Criminal Alien Assistance Program	<u>Amount</u>
2000 Enacted	\$585,000
2001 Base	420,000
2001 Estimate	600,000
Increase/Decrease	\$180,000

BASE PROGRAM DESCRIPTION

The State Criminal Alien Assistance Program (SCAAP) is authorized under section 20301 of the Violent Crime and Law Enforcement Act of 1994 (VCCLEA) and governed by the Immigration and Nationality Act of 1990, as amended at 8 U.S.C. 1251(i). It is administered by BJA with the assistance of the Immigration and Nationalization Service (INS). SCAAP provides federal assistance to State and units of local government to help cover the costs of incarceration extension categories of aliens (primarily those entering the United States without inspection or overstaying visas) who have been convicted of one fellowy or two misdemeanors.

Recognizing that the record-keeping systems used by many individu. State and local correctional facilities may not be very technologically advanced and the fiscal systems used are complex; BJA has been flexible in the requirements for inmate and cost data during the first few years of program implementation. However, as the program continues and these requirements are refined and the information requested is standardized, the impact of SCAAP in fostering improved records and fiscal systems within correctional institutions will also become significant. Information is requested not only on numbers of suspected illegal aliens, but on all possible aliens in applicant facilities (i.e., all self-reported foreign born inmates and any others with indicators of alien status), on the offense that qualifies them for reimbursement, and on the foreign country from which they came to the United States. This information will allow INS to better map out the scope and distribution of criminal aliens within State and local institutions and better identify areas where significant numbers of undocumented aliens need to be processed for removal. The information on costs of incarcention

developed as part of the application process will help fill gaps in knowledge at the federal level about the total burden on states and local jurisdictions resulting from the activities of all categories of aliens.

In accordance with 1999 appropriation language, 1998 applicant data submissions were used to support 1999 awards. In addition, the cycle for SCAAP awards was changed so that awards can be made in the same year in which funds are appropriated.

Below is a chart displaying the average payout per dollar of claim for qualifying alien inmates for the past six years for SCAAP.

Fiscal Year	Average Payout Rate (per \$ of claim)			
FY 1995*	17 cents			
FY 1996	60 cents			
FY 1997	34 cents			
FY 1998	40 cents			
FY 1999	39 cents			
FY 2000	35 cents			
FY 2001 Plan	41 cents**			

^{*} Note: This was the first year this data was available.

2001 Program Change

In 2001, BJA requests a total of \$600 million in direct funding for SCAAP, which is \$180 million above the 2000 base level. A detailed description of the 2001 SCAAP enhancement request can be found in the Current Investments initiative on page 122.

QFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Correctional Facilities Grants 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of the Correctional Facilities Grants Program is to enhance the capability of states to confine violent offenders in secure facilities and ensure that violent offenders remain incarcerated for substantial periods of time and to ensure that the actual time served by Part I violent offenders is accurately reflected in their sentences. The Correctional Facilities Grants Program's mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribal. State and Local Governments.

Highlights of 1999 Mission Critical Results

In 1999, the goal of 5,000 new prison, jail or alternative beds constructed was significantly surpassed. With the reported construction of 12,427 new beds, this is a landmark year reflecting tremendous progress toward the program goal of increasing bed space for violent offenders. The numbers of bods are anticipated to increase dramatically over the next 2 years as some multi-year construction projects are nearing completion. Additionally, the number of states qualifying under the Truth-in-Sentencing Grant Program increased from 25 in 1996 to 30 in 1999.

During 1999, OJP's Corrections Program Office (CPO) provided extensive technical assistance and guidance, not only through on-site technical assistance visits, but through extensive workshops, symposiums, and conferences for grantees and the criminal justice community at large. This training and technical assistance provided essential information to corrections practitioners and policymakers to enable them to make informed decisions about the management of violent offenders within prison and jail systems. Two examples of CPO sponsored and co-sponsored events held in 1999 are as follows:

National Corrections Conference on Cont Effective Interventions for Substance Abusing Offenders. This conference
continued the assistance to state policymakers in making informed decisions about state policies related to substance abusing
offenders. It focused on state efforts to achieve systems integration and to maximize resources across state agencies to create
drug-free prisons and drug testing, treatment, and sanctions programs that are effective in reducing drug use and related crime
among offenders in institutions and in the community following release.

- National Workshop on Privatization. This workshop brought together correctional administrators and other key
 policymakers in the states to help them make informed decisions about privatization of correctional operations and support
 services and to effectively manage these activities if the state decides to pursue privatization.
- Training on Planning and Designing Juvenile Correctional Institutions. This training was a series of three week-long workshops provided by the National Institute of Corrections with support from the CPO and the Office of Juvenile Justice and Delinquency Prevention. The training was designed to assist state juvenile corrections agencies and local and tribal jurisdictions in planning and designing correctional facilities and detention centers that meet their needs. Topics addressed include the following: the facility development process, planning team role clarification and decision-making process, mission statement, using data for facility planning, building in space for programs and services, new facility staffing, development of a space program, direct supervision, site evaluation, and transition and activation.

FY 2001 Performance Goals and Indicators

The Correctional Facilities Grants Program is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Correctional Facilities Grants Program PROGRAM PERFORMANCE INFORMATION (dollars in thousands)

Correctional Facilities Grants Program	Amount
2000 Enacted	\$653,533
2001 Base	686,500
2001 Estimate	75,000
Increase/Decrease	(\$611,500)

BASE PROGRAM DESCRIPTION

The Corrections Program Office (CPO) was established within the Office of Justice Programs (OJP) in 1995 to implement the correctional grant programs created by the Violent Crime Control and Law Enforcement Act of 1994, as amended (Crime Act). The Violent Offender Incarceration and Truth-in-Sentencing Incentive Formula Grant (VOI/TIS) Program is the vehicle used by CPO to administer the correctional grant program.

The Violent Crime Control and Law Enforcement Act of 1994 (Crime Act) addressed the need for additional prison and jail capacity so that violent offenders can be removed from the community and the public can be assured that the offenders will serve substantial portions of their sentences. Through the VOI/TIS, created under Title II, Subtitle A of the Crime Act, Pub.L. 103-322, as amended, formula grant finding is available to states to build or expand correctional facilities and jails to increase secure confinement space for violent offenders. Half of the funds are available for Violent Offender Incarceration Grants and half as incentive awards to states that implement Truth-in-Sentencing. States may apply for grants in both categories. States may make sub-awards to state agencies and units of local government. Between 1996 and 1998, over \$1.3 billion was distributed to jurisdictions under the VOI/TIS Program. In 1999, \$481 million was awarded to states through formula grant programs and an additional \$34 million was provided to Indian Tribes to construct itils on tribal lands.

The VOI/TIS program goals include:

- Provide assistance to states to build or expand correctional facilities to increase the bed capacity for the confinement of violent offenders.
- Promote the implementation of truth-in-sentencing laws that ensure that violent offenders serve a substantial portion of the sentences imposed.

Although, the federal government has strongly encouraged states to participate in this program, it is not anticipated that any additional states will adopt the Truth-In Sentencing (TIS) legislative provisions beyond the 30 states participating at the end of 1999. Three years have elapsed since the inception of the TIS program in which states have had ample time to evaluate its costs and benefits and whether or not to adopt.

To date, CPO's efforts to build capacity for violent offenders has been successful. Research indicates that a more cost effective means of building capacity for violent offenders is to stop the criminal justice revolving door by treating substance abuse offenders, especially non-violent offenders. Research findings also determined that as a nation we cannot build our way out of this paradigm. Now that the program has reached its maximum potential and target audience, funding should be redirected to other federal prison building efforts.

2001 Program Changes:

In 2001, a total of \$75 million is requested for the VOI/TIS program. Of this amount, \$34 million is for construction of detention facilities on Tribal lands, \$35 million for the continuation of the USMS Cooperative Agreement Program (CAP), which is a \$10 million increase over the 1999 appropriation; and \$6 million for Mental Health of Offenders Program. A detailed description of the Mental Health of Offenders Program can be found under the New Challenges Initiative request, which begins on page 101.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Indian Tribal Courts Program 2001 Mission Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of this program is to assist tribal governments in the development, enhancement and continuing operation of tribal judicial systems by providing resources for the necessary tools to sustain safer and more peaceful communities, by focusing on juvenile and family issues as well as non-traditional approaches to justice, to enhance the administration of civil and criminal justice on Indian lands, and to encourage the implementation of the Indian Civil Rights Act by tribal governments. While promoting greater cooperation among tribal, state, and federal justice systems, this Initiative will assist tribal justice systems to coordinate programs and services within its tribal structure with law enforcement, victims services, treatment providers and others. The Initiative will also assist with technology development to ensure that tribal justice systems can communicate within the tribal and non-tribal justice community. The Department will consult with tribal leaders and court personnel on the development of this initiative.

This 2001 program request and performance plan directly support the Department of Justice's (DOJ), Strategic Plan core function of providing Assistance to Tribat, State and Local Governments. In addition, this Initiative is consistent with the DOJ policy on Indian Sovereignty and government to government relations with Indian tribes and the Indian Tribes law enforcement initiative.

Highlights of 1999 Mission Critical Results

Through the Indian Tribal Courts Program, tribal communities receive assistance in developing justice systems through a combination of technical assistance and direct funding for specific projects. To date, 1999 data for the indicator "number of cases handled by tribal courts" is unavailable as awards have not been made. The solicitation process for the Indian Tribal Courts Program could not begin prior to Congressional approval of the funding plan in May 1999. The Bureau of Justice Assistance (BJA) disseminated the program solicitation in June 1999, and 184 tribes submitted concept papers in early August 1999. BJA anticipates awarding 70 Tribal Courts Program grants in March 2000.

The 1999 Tribal Courts Program was part of the Department of Justice's initiative to Improve Indian Country Law Enforcement, which provided funding to tribal communities for purposes such as hiring, equipping, and training law enforcement officers and

building new jails and detention facilities in Indian Territory. This comprehensive Indian Law Enforcement Initiative is aimed at improving criminal justice services and reducing the rate of crime among the 1.4 million Native Americans living on or near Indian lands.

FY 2001 Performance Goals and Indicators

The Indian Tribal Courts Program is proposing an 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

2001 Estimate	_15.000
Increase/Decrease	\$10,000

BASE PROGRAM DESCRIPTION

"Today, in the United States, we have three types of sovereign entities—the Federal government, the States, and the Indian tribes. Each of the three, sovereigns has its own judicial system, and each plays an important role in the administration of justice in this country," (Supreme Court Justice Sandra Day O'Connot).

Tribal courts have existed in one form or another for so ceral hundred years. The last ten years, however, have writnessed an unparalleled growth in their vitality, importance, and workload. This is due to a number of factors including economic growth and development on many reservations. This growth has increased the need for reliable means of settling disputes that arise in the ordinary course of business. This is especially true when business responds to the changing needs of the communities that they serve raising issues, such as how to appropriately regulate complex matters like garning, air and water pollution control, mining, banking, and toxic waste disposal. Just as in other parts of the country, crime has spread on reservations at a rapid rate, thereby increasing the need for criminal adjudication in tribal courts.

Because of these challenges and a lack of funds, tribal court judges and court personnel handle astounding caseloads. For example, in 1996 the Navajo Nation court system handled over 25,000 cases; the much smaller Gila River Tribal Court in Arizona handled over

3,000 cases, the Colville Tribal Court in Washington handled approximately 1,700, the Ft. Peck Tribal Court in Montana, approximately 3,400; and the Ft. Hall Tribal Court in Idaho, approximately 4,000.

This is a new program that was first appropriated to OJP in 1999, at a level of \$5 million. BJA has used some of its discretionary funds to support improvements in Indian Tribes, including funding, in 1997, for the National Indian Justice Center to provide technical

assistance and training for tribal court judges in the areas of domestic violence, child abuse, and gang violence. Another program, the Tribal Strategies Against Violence (TSAV) Program, in 1997 and 1998 provided direct funding and technical assistance to a number of individual tribes, emphasizing crime prevention initiatives

In 2000, the Tribal Court Program will (1) provide financial and technical assistance for federally recognized Indian Tribal governments to further development, enhancement and continuing operation of tribal judicial systems; (2) provide education and training for tribal court personnel; and (3) promote cooperation and coordination among tribal justice systems and the federal and State judiciary systems. Also in 2000, BJA anticipates funding the development of new tribal courts, the implementation of recently developed tribal courts, as well as the enhancement of existing tribal courts. In addition, BJA anticipates the development and enhancement of tribal judicial and inter-tribal court systems. This program will be competitive, based on the extent and urgency of the need of each applicant. As directed by Congress, BJA will fund the Wapka Sica Historical Society of South Dakota and the Winnebago tribe of Nebraska to assist in the enhancement of their tribal judicial systems. These tribal courts will enable Native American and Alaskan Native communities to sustain safer communities and enhance the administration of civil and criminal justice on Indian lands, and promote cooperation among tribal, state, and federal judicial systems

The Indian Tribal Court Initiative complements the White House law enforcement initiative and addresses findings of the U.S. Commission on Civil Rights. First, the White House has acknowledged the rise of violent crime on Indian reservations, and directed the Department of Justice and department of Interior's Bureau of Indian Affairs to work with tribal leaders on the law enforcement problems on Indian lands. The White House cites that during the past five years, as the homicide rates nationwide have dropped as much as 22 percent, on Indian lands crime rates have increased dramatically. Second, the U.S. Commission on Civil Rights found that tribal justice systems were inadequately funded by the federal government—as the judiciary of the third sovereign nation, tribal justice systems make significant contributions not only to Indian communities but to our national administration of justice.

2001 Program Change

The 2001 request for this program is \$15 million, an increase of \$10 million above the 2000 appropriated level. A detailed description of the 2001 initiative can be found in the New Challenges Initiative on page 117.

In 2001, O/P requises an enhancement of \$10 million, bringing costal fanding to \$15 million. In 2000, additional planning graces will be smale, as well as implementation graces to those tribes who received planning graces in 1999. Enhancement graces will be made to shose tribes who already have counts. In this counts have a small in one form on a souther for greent handled years. The last 11 years, however, have wincested an approximate, and workload. This is due to a resistoic encase of such as occasioning graves in an development on reservations. This provide has former and an artistic encase of small and for the ordinary counts of fouriers. This enhancement will allow for rehometered and continued operations of en joint probability counts.

D. Velidation and Verification: These measures will be validated and verifical threath a review of various OUP, mounts, including approximate from the data collection and services.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Court Appointed Special Advocates 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The rates of child abuse and neglect continue to increase every year with over one million confirmed cases of abuse and neglect in 1995. The Court Appointed Special Advocates (CASA) Program's mission is to provide for a Court Appointed Special Advocate to every victim of child abuse or neglect in the United States that needs such an advocate. This project recognizes the need for technical assistance in program development and public relations, so that CASA programs can effectively complement the services provided to children and their families through the existing juvenile court and social service delivery system.

The Court Appointed Special Advocates (CASA) Program request/performance plan directly supports the overall assistance to State and local governments mission priorities, general goals and strategic approaches that are included in the Department of Justice's (DOJ) Strategic Plan: Assistance to Tribal, State and Local Governments:

Highlights of 1999 Mission Critical Results

The 1999 goals of all indicators under CASA program were exceeded. The CASA program is a national program that supports volunteer adv. actes to represent abused and neglected children's interests in court. In 1999, this program served 906 jurisdictions across the United States. This reflects a significant increase from the 810 jurisdictions served in 1998. Although this number represents only 27% of the total US jurisdictions, CASA programs have been established in jurisdictions where 72% of the US population reside. Similarly, the number of children served increased by over 10,000 in 1999. These two program outcomes along with the increase in the number of state and local CASA programs, demonstrate the significant national impact of this program.

FY 2001 Performance Goals and Indicators

CASA is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

1999 Enacted	\$10,000
2000 Base	10,000
2000 Estimate	9,000
Increase/Decrease	. (1,000)

BASE PROGRAM DESCRIPTION

The Court Appointed Special Advocate (CASA) Program is authorized by Section 218(a) of the Victims of Child Abuse Act of 1992, 42 U.S.C. 13014(a), and Section 261(a)(3) of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, 42 U.S.C. 5665. This program is administered by the Office of Juvenile Justice and Delinquency Prevention (OJJDP). Beginning in 1996, the CASA program was funded under the Violent Crime Reduction Programs Trust Fund. This project recognizes the need for training, technical assistance in program development, data collection and evaluation, public relations and resource development, so that CASA programs can effectively complement the services provided to children and their families through the existing juvenile court and social service delivery systems.

To advance program services/growth objectives of the project, the National Court Appointed Special Advocate Association (NCASAA) provides ongoing direct consultation and referral to CASA programs and other resources. NCASAA encourages the development of unified, strong organizations at the State level for the purpose of support for new programs, communication among existing programs, training, support for program quality and consistency, and advocacy with their State legislatures. NCASAA also promotes and enhances effective, well-managed local CASA programs providing volunteer representation of children.

Program Activities:

Children - One of the CASA primary objectives is to increase the number of abused and neglected children receiving representation through indigenous CASA programs in tribal and State courts.

Technical Assistance - A variety of technical assistance services are provided to CASA programs to support their program operations, volunteer representation of children, and promote excellence and consistency in CASA programs.

Training - The objectives of training are to provide specialized training for CASA program staff; to promote use of a comprehensive training curriculum; and to provide interdisciplinary training and discuss issues affecting abused children.

Grants Program - In 1998, NCASAA was able to provide grants to all State CASA organizations who qualify, for the first time. This was also the first year that CASA was able to award demonstration grants. A grant was made for a kinship care project, to establish permanence in the lives of the children served. Another demonstration grant was for a prevention program, identifying children in school who are neglected, and providing assistance to help these families before they enter the abuse and neglect system.

Public Awareness - The objectives of public awareness are to support programs in their community outreach and volunteer recruitment efforts.

2001 Program Change

The 2001 request of \$9 million is \$1 million less than the 2000 enacted appropriation.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

OFFICE OF JUSTICE PROGRAMS

State and Local Law Enforcement Assistance

Child Abust Training Programs for Judicial Personnel and Practitioners
2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of this program is to develop, refine and implement model training and technical assistance programs to improve the juvenite and family courts' handling of abuse and neglect cases and the design of model programs to improve State court systems.

The Child Above Training Engrams for Judicial Personnel and Practitioners program request and performance plan directly supports the overall assistance to State and local governments mission priorities, general goals and strategic approaches that are included in the Department of Justice's (DOJ) Strategic Plant Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

Program Activities of the National Council of Invente and Lannly Court Judges Permanency Planning for Children Department's (PPCD) Model Court Project

- Conducted 47 planning and dissemination conferences
- · Provided 67 jurisdictions with rechnical assistance
- PPCD continues to develop and publish a National Permanency Planning Judicial Training Curriculum. This curriculum was the basis for training conducted at the second Annual Child Abuse and Neglect Institute.
- PPCD staff participated in a work group sponsored by Department of Health and Ruman Services and OJIDP to produce
 guidelines for state compliance with the Adoption and Safe Families Act of 1997, the development of which many NCIFCI
 member judges contributed.
- PPCD is and will continue to seek support for a nationwide appellate training initiative

PPCD is proposing a 15 month effort to study information management systems and devise performance measures for
application in court improvement programs. Also, PPCD is becoming involved with family group conferencing and
experimental learning techniques with judicial applications.

FY 2001 Performance Goals and Indicators

The Child Abuse Training Programs for Judicial Personnel and Practitioners program is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

BASE PROGRAM DESCRIPTION

The increased demands on juvenile and family court calendars for expanded and increased hearings on increasingly complex child abuse and neglect matters have strained judicial resources to the limit. The Judicial Child Abuse Training program is authorized by Section 223(a) of the Victims of Child Abuse Act of 1990, P.L. 101-647, as amended, and administered by the Office of Juvenile Justice and Delinquency Prevention (OJJDP), provides for a grant to the National Council of Juvenile and Family Court Judges (NCJFCJ) to develop, refine and implement model technical assistance and training programs to improve the court system's handling of child abuse and neglect cases and the design of model programs to improve State court systems.

In 1997, Congress enacted the Adoption and Safe Families Act (P.L. 195-89) significantly shortening federally mandated time frames for court handling of child abuse and neglect cases. The impact of statutes bringing states into compliance with this legislation is being realized in individual jurisdictions and courtrooms nationwide. The NCJFCI's Permanency Planning for Children Department is working in 17 Model Courts in 16 states, where judges are taking leadership roles in permanency planning. Each Model Court is making unique, court-specific changes to reduce the length of time children spend in foster care and to improve the timeliness and quality of judicial decision making. The Model Court focuses on the following objectives:

- · increased community-based services and outreach to vulnerable children and families
- increased institutionalization of alternative dispute resolution such as court-based mediation services and family conferencing to keep inappropriate cases from reaching litigation
- reorganized court calendars to allow more substantive, expanded hearings through which permanency planning for children can begin as early as possible
- increased collaboration with social services to safely speed case processing
- · increased representation for families and children
- . increase frequency of court-led meetings and training programs for all individuals involved in child abuse and neglect cases

The model programs and approaches documented by NCJFCI will assist courts to achieve: (1) improved cooperation among juvenile and family courts, child welfare systems and related agencies to establish and maintain linkages to avoid duplication of resources and prevent further victimization of children; (2) careful, complete and fundamentally fair hearings for every child victim at all stages of court proceedings involving abuse or neglect; and (3) training and technical assistance to judicial personnel, attorneys and other key people in juvenile and family courts to achieve expedient yet thorough adjudication of child abuse and neglect cases. The overall goals of the project are to disseminate information, offer court improvement training programs and provide technical assistance widely at the national and State levels on permanency planning and on Model Court achievements for purposes of increasing the number of dependency courts that improve administrative practice in child abuse and neglect cases.

2001 Program Change

The 2001 request of \$2 million is equal to the 2000 enacted appropriation.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY PROGRAM

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Law Enforcement and Prosecution Grants 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of OJP's Violence Against Women Grants Office (VAWO) is to restructure and strengthen the criminal justice system's response to crimes of violence committed against women and enhance the services available to victims of such violence through the award of formula and discretionary grants to states, units of local government, Indian Tribal governments, and other public and private entities in rural states. A related responsibility is to ensure that domestic violence is recognized and treated as a serious violation of criminal law. The Violence Against Women Act Program's mission directly supports the DOJ's Stralegic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

In 1999, the Violence Against Women Office (VAWO) did not meet any of its planned goals. This is due to the fact that, in 1999, VAWO made a policy decision to make more continuation grant awards than originally estimated, decreasing the number of new awards that could be made. This was particularly evident under the Grants to Encourage Arrest Polices Program. This was done because the grant programs created by the Violence Against Women Act (VAWA) require the initiation and institutionalization of changes throughout local and state criminal justice systems (e.g., the creation of special units within police departments, the creation of vertical prosecution teams within prosecution offices, enhanced violins' services, domestic violence courts, and the development of new information system to gather cumulative data on the impact of VAWA).

These major changes cannot be accomplished in 1 or even 2 year's time. Most jurisdictions have requested continuation funds for 2 and 3 years running so that they can sustain and enhance the systemic change the grant programs require. In 2000, this will be addressed by an adjustment in the estimates. In addition, 2000 solicitations will require the submission of a plan on how grantees will begin to gradually absorb some or all of the costs of their VAWO programs.

Also, it is important to note that under the indicator "Number of jurisdictions that implement new policies and procedures to supervise and manage cases involving release of sex offenders," there was an unanticipated need for additional technical assistance in many states. Even after receiving technical assistance in 1997 and 1998, many states were not ready to put new policies and procedures into place.

In 1999, there were 66 states, territories, and Indian tribal governments that introduced coordinated justice approaches to address violent crimes against women. Success under this indicator can be measured by the important work that is being done at the tribal level. The following examples demonstrate this success:

- Northern Cheyenne Special Prosecutors Unit: This special unit, established under a 1997 grant, has a 90 percent conviction
 rate. As a result of this unit's work, the number of domestic violence incidents declined sharply among a population of 6,000
 people. The success of this unit can be attributed in part to the following:
 - revision of the Tribal Code, which was fundamental to increasing prosecutions;
 - training personnel to properly handle domestic violence cases;
 - adoption of a pro-prosecution policy, which is also changing social tolerance of domestic violence; and
 - coordination with the Bureau of Indian Affairs and the U.S. Attorney's Office, which has been crucial to the successful transfer of cases.
- Intertribal Council of California: The Intertribal Council of California's (ITCC) Taking Responsibility project fosters a
 strong tribal community commitment toward prevention and intervention of domestic violence and child victimization for
 individuals residing in isolated communities. The project encourages collaboration between tribal and nontribal agencies and
 promotes culturally relevant prevention to enhance the safety of California Indian women: These goals are achieved through
 community forums, educational workshops, and emergency services. The project currently reaches 16 tribes from 11 counties
 in northern and central California.

ITCC worked with consortium-member tribes to develop tribal codes and ordinances and establish domestic violence coordinating councils. It developed educational materials and implemented a "Domestic Violence is a Tribal Responsibility"

campaign. To provide comprehensive emergency services to tribal consortium members, ITCC helped establish food and clothing banks and staffed three Family Liaison Specialists to provide outreach to women and children.

FY 2001 Performance Goals and Indicators

The VAWO is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

BASE PROGRAM DESCRIPTIONS

The Violence Against Women Office of the Office of Justice Programs was created in 1995 to implement the 1994 Violence Against Women Act (VAWA) and to lead the national effort to stop domestic violence, sexual assault, and stalking of women. The Violence Against Women Office (VAWO) works with U.S. Attorneys to ensure enforcement of the federal criminal statutes contained in the 1994 Act, assists the Attorney General in formulating policy related to civil and criminal justice for women, and administers more than \$270 million a year in grants to help states, tribes, and local communities transform the way in which criminal justice systems respond to violent crimes against women.

The VAWO works with victim advocates and law enforcement in developing grant programs that support a wide range of services for women, including: advocacy, emergency shelter, law enforcement protection, and legal aid. Additionally, the VAWO is leading efforts nationally and abroad to intervene in and prosecute crimes of trafficking in women and children and is addressing domestic violence issues in international fors. The VAWO works with the National Advisory Council on Violence Against Women to prepare public information strategies and materials and to carry out special projects, such as writing an Agenda for the Nation on Violence Against Women scheduled for release in the year 2000. Guiding the work of the VAWO is the understanding that eradicating crimes of violence against women calls for coordinated community-based responses. The VAWO administers four programs: (1) The Law

Enforcement and Prosecution Grant Program (S-T+O-P), (2) Grants to Encourage Arrest Policies; (3) Rural Domestic Violence and Child Victimization Enforcement Program, and (4) the Sex Offender Training Program, which are described in detail below:

• Law Enforcement and Prosecution Grant Program. This program is commonly referred to as the S-T-Q-P (Services - Training - Officers - Prosecutors) Violence Against Wamen Formula Grant Program. S-T-Q-P grants are awarded to the states, District of Columbia, and territories to develop and strengthen their eniminal justice system's response to violence against women and to support and enhance services for victims. Each grantee must allocate 25 percent of the grant funds to law enforcement, 25 percent to prosecution, and 25 percent to victim services. The remaining 25 percent can be allocated at each grantee's discretion within the broad parameters established by VAWA. In 2000, Congress appropriated \$206.75 million for S-T-Q-P. This included \$28 million to strengthen civil regal assistance for battered women; \$5.2 million for research and evaluation of domestic violence programs; \$10 million for Campus Safety, \$10 million for Project Safe Start; and \$1.2 million to support an enhanced domestic violence prosecution unit within the District of Columbia.

This program is designed to create a coordinated, integrated response to violent crimes against women that actively involves all components of the criminal justice system, victim advocates and service providers, and the community as a whole. The development of coordinated and integrated strategies requires collaboration among police, prosecutors, the courts, and victim services providers. The purposes for which these grants may be used by states, units of local government, and Indian Tribal governments include: training for police officers, prosecutors, and other criminal justice practitioners to enable them to respond more effectively to violent crimes against women; the creation or enlargement of special units of police officers and prosecutors to handle cases involving violence against women, the creation or enhancement of services for victims of such violence; the development and implementation of more effective police and prosecution policies and procedures, protocols, orders, and services specifically dedicated to preventing, identifying, and responding to violent crimes against women; and the creation of programs addressing stalking

Additionally, VAWO will continue to administer the S+T+O+P Violence Against Indian Women discretionary grant program. The Violence Against Women Act stipulates that four percent of the funds available each year for the S+T+O+P Violence Against Women formula grants must be set aside for grants to Indian Tribal governments. The purpose of this program is to develop and strengthen tribal law enforcement and prosecutorial strategies to combat violent crimes against Indian women and develop and enhance services for the victims of such crimes. Tribes that have law enforcement and prosecution activities must allocate 25 percent of the funds they receive to tribal law enforcement; 25 percent to tribal prosecution; and 25 percent to nonprofit, non0governmental victim services. The S+T+O+P Violence Against Indian Women discretionary grants may be used for the same general purposes as the S+T+O+P formula grants.

Grants to Support Civil Legal Assistance for Victims of Domestic Violence. Battered women seeking to escape violent relationships face a myriad of legal problems. Assistance in obtaining a protection order, representation to ensure that child custody and visitation arrangements will not endanger them or their children, and access to public benefits to enable them to maintain economic independence are examples of some of their most immediate needs. Abusers often use economic coercion as a means of punishing their victims. They frequently forbid their partners to work or deny them access to money. Women in these situations cannot afford to mount legal challenges to protracted litigation. Victims who are middle cleass—earning too much to qualify for free lawyer assistance programs but still struggling to support themselves and their children—are still unable to pay attorney's fees.

In 1998, \$12 million was available under the S*T*O*P program for civil legal assistance. VAWO received approximately 350 applications requesting a total of \$80 million. From this pool of applicants, VAWO awarded 57 grants at an average of \$190,500. In 1999, \$23 million of S*T*O*P funding was available to strengthen civil legal assistance programs for domestic violence victims. VAWO awarded 94 new grants with these funds. Recipients of these grants were selected from applications that could not be funded in 1998 because of the limited amount appropriated for the program that year.

In 2000, \$23 million was made available from S*T*O*P to continue to support law school fegal clinics assisting battered women, as well as legal services provided by other entities and domestic violence victim assistance programs. Up to two-thirds of the funding in 2000 will support continuation of the successful grants awarded in 1998 at their current levels. At the same average level of funding, approximately 20 new grants will be supported in 2000. Given the number of applications submitted in 1998 when the program began, this amount would not begin to address the needs of states and local communities.

2001 Program Change

In 2001, VAWO is requesting an enhancement of \$13.25 million under the S-T+O-P formula grants program for a total of \$284 million. Of this amount. \$7.25 million is requested to expand efforts to strengthen Civil Legal Assistance to domestic violence victims: \$1 million for the Bureau of Justice Statistics (BJS) to collect data on the justice system's processing of domestic violence cases, and the remaining \$5 million for an NIJ Family Violence Research Program. Details for each 2001 program change is as follows:

- \$7.25 million for Civil Legal Assistance -- program details are included under Current Investments Initiative, page 124;
- \$1 million for BJS to collect data on the justice system's processing of domestic violence cases -- program details are included under Current Investments Initiative, page 125; and
- \$5 million for an NIJ Family Violence Research Program -- program details are included under the Current Investments Initiative, page 126.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Grants to Encourage Arrest Policies 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of the Grants to Encourage Arrest Policies Program is to ensure victim safety and offender accountability by encouraging states, units of local government, and Indian Tribal governments to treat domestic violence as a serious violation of criminal law. The scope of the Grants to Encourage Arrest Policies Program includes the statutory program purposes and the special interest categories. An example of a current special interest category is Enforcement of protection orders and implementation of the full faith and credit provision of the Violence Against Women Act. The Grants to Encourage Arrest Policies Program's mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

All of the currently-supported projects under this program are meeting their objectives and progressing toward the project's goal. In 1999, eight new grantees received funding to implement mandatory or pro-arrest policies as part of a coordinated response to violence against women. This level of new grants was greatly reduced by the policy decision to fund requested continuation grants, to stabilize existing grantees before expanding to new ones.

Success under this indicator can also be measured by the outstanding projects funded. The following examples illustrate this success at the local level:

Baltimore City, MD: Baltimore City, MD, enhanced its police department's response to domestic violence. Components of
this project included advanced training on domestic violence for police department command personnel and development of a
quality-compliance procedure to ensure the proper investigation of all domestic violence cases. Baltimore strengthened the
Internal Investigation Division's ability to investigate cases of police officers who commit acts of domestic violence,
administratively prosecute police offenders, and share information with other jurisdictions to learn of abusive officers who live
outside of Baltimore City.

- Milwaukee County, W1: Milwaukee County expanded the availability of services for victims of domestic violence by hiring three additional assistant district attorneys and victim liaisons for its Domestic Violence Unit. Additionally, nonprofit, non-governmental victim advocacy services have been made available on weekends. This enhanced the implementation of Wisconsin's mandatory arrest law (for perpetrators of domestic violence) by ensuring, thorough investigations and evidence gathering, proper case preparation and ongoing contact with victims in domestic violence cases.
- Town of Greenwich, CT: Greenwich, CT, created a multi-disciplinary team to address domestic violence in a coordinated, comprehensive manner. The team works through the Domestic Violence Prevention Unit as a partnership of the criminal justice system, domestic violence support services, and local community organizations and agencies.

FY 2001 Performance Ge ain and Indicators

The Grants to Encourage arrest Policies Program is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

BASE PROGRAM DESCRIPTIONS

VAWO will continue to administer this discretionary grant program, designed to encourage states, units of local government, and Indian Tribal governments to treat domestic violence as a serious violation of criminal law. Although the title emphasizes arrest, the scope of the program actually is much broader. If arrest is to be an effective response to domestic violence, police, pretrial service professionals, prosecutors, judges, probation and parole officers, and victim advocates and service providers must be poised to follow through in a coordinated and integrated manner that will enhance the safety of victims and hold offenders accountable for their violent behavior. Grants therefore may support the following purposes:

- Implementation of mandatory arrest or pro-arrest programs and policies in police departments, including mandatory arrest or pro-arrest programs and policies for protection order violations;
- Development of policies and training in police departments and other criminal justice agencies to improve tracking of cases involving domestic violence;

- Creation of centralized and coordinated police enforcement, prosecution, probation, parole, or judicial responsibility for domestic violence cases in groups or units of police officers, prosecutors, probation and parole officers, or judges;
- Development of coordinated computer tracking systems to ensure communication between police, proseculors, and both criminal and family courts.
- Strengthening of legal advocacy service programs for victims of domestic violence, and
- Education for judges and others responsible for judicial handling of domestic violence cases in criminal, tribal, and other courts
 about domestic violence and to improve judicial handling of such cases

The Program assumes that the arrest of a batterer will leverage the coercive and persuasive power of the criminal justice system to ensure victim safety and manage the behavior of abusive, violent offenders. Arrest, accompanied by a thorough investigation and meaningful sanctions, demonstrates to the offender that he has committed a serious crime and communicates to the victim that she does not have to endure the offenders abuse. Arrest must be followed by immediate arraignment and a thorough investigation. Orders of protection and conditions of release must be proactively monitored. Cases must be vigorously prosecuted. Designated dockets must be created to enhance the management of offender behavior and expedite the scheduling of trials. The violent behavior of donestic violence offenders must be managed through frequent judicial monitoring and appropriate sanctions. Probation and parole agencies must develop strategies—in collaboration with local law enforcement—for monitoring offenders and strictly ensuring that the terms and conditions of probation or parole are met.

At each juncture in the criminal justice process, the actions of all partners in the system should be guided by concerns for victim safety. Mechanisms should be put in place to allow the voices and experiences of women who are victims of domestic violence, particularly those who have sought assistance from the criminal justice system, to inform the development of policies, protocols, procedures, and programs. These mechanisms should ensure that the diverse experiences of abused women are considered—particularly the experiences of women of color, immigrant women, the elderly, the disabled and women from other traditionally underserved parts of the community.

Criminal justice agencies must collaborate among themselves and in formal partnership with victim advocates from nonprofit, nongovernmental domestic violence programs, including local shelters, advocacy organizations and domestic violence coalitions to ensure that victim safety is of paramount consideration in the development of any strategy to address domestic violence. Grants to Encourage Arrest Policies challenge victim advocates, police officers, pre-trial service personnel, prosecutors, judges and other court personnel, probation and parole officers, and community members to work together to craft solutions to overcome domestic violence.

With 1999 funding, VAWO continued grants awarded with 1996 and 1997 funding, and supported a limited number of carefully selected new jurisdictions. Also in 1999, 52 grantee implemented mandatory or pro-arrest policies as part of their coordinated response to violence against women. The 2000 requested funding will continue to be used by states, Indian Tribal governments, and units of local government to shape and solidify a umfied, coordinated response to domestic violence that includes aggressive enforcement of protection orders, arrest and prosecution of barrerers, appropriate supervision of and intervention with batterers in the community, and legal and support services for domestic violence victims as the cases against their batterers proceed through the criminal justice system.

2001 Program Change

In 2001, VAWO requests \$34 million for this program, which is the same amount appropriated in 2000.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Rural Demostic Violence and Child Victimization Enforcement Program

2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of the Rural Domestic Violence and Child Victimization Enforcement Grant Program, hereinafter referred to as the Rural Program, is to focus on the needs and unique characteristics of rural communities in addressing domestic violence and child victimization. The Rural Program addresses these issues in collaborative ways that improve and increase the services available to women and children, and enhance community involvement in developing a jurisdiction's response to domestic violence and child victimization. The Rural Program's mission directly supports the DOI's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

In 1999, 53 new jurisdictions received funding to provide services to previously under served populations in rural communities. Success under this indicator is demonstrated in that funded projects are achieving their goals:

- Isolated rural and tribal communities are using funds to develop services for battered women and children where previously
 there were none.
- Grant funds have allowed communities to provide services to diverse and traditionally under served populations: battered immigrant women, migrant farm worker women, and women of color.
- People living in rural areas often state that battering of women and children is not a problem in their community. The Rural
 Program supported the creation of community awareness campaigns on the dynamics of domestic violence and the availability
 of services.
- Children are present in nearly half of reported incidents of domestic violence and batterers use children to maintain control
 over their victims. Children are traumatized by witnessing domestic violence, can be hurt during a violent episode, and are

intended victims of the batterer. Jurisdictions are using funds to create shelter-based programs for children, provide supervised visitation centers, and support partnerships between the domestic violence and child abuse prevention advocates

The following exemplary local programs further demonstrate performance under this indicator.

- North Carolina Governor's Crime Commission: The Governor's Crime Commission received funding in support of the
 Family Violence and Rape Crisis Services (FVRCS), located in a rural section of North Carolina. Under this program, FVRCS
 efforts include: enhancing safety and access to services for Latinos; increasing community awareness of domestic violence and
 services among Latinos; and increasing the capacity of community agencies to address the needs of battered Latinas.
- Missoula County, MT: Missoula County supports a victim assistance satellite program in Seeley Lake, an extremely isolated, under served community in the county. The program provides legal advocacy, crisis counseling, and transportation to victims of domestic violence, as well as public education about the issue. The grantee established services in this under served community following a grassroots model: holding focus group meetings, interviewing key players in the community, and forming a task force, the entire community has been involved in development and implementation of the program. In 1999, Missoula expanded its Rural Program by reaching out to people in the Himong and Russian communities using this same grassroots model. The project team, which includes women from the Himong and Russian communities, is translating and developing materials, teaching domestic violence classes, dialoguing with the community members and elders, and providing direct services to battered women and their children.

While the project does not include an evaluation component, ancedotal information shows progress. For example, between January 1, 1999, through June 30, 1999, eleven domestic violence classes were held in the Himong community, in which a total of 95 community members attended.

FY 2001 Performance Goals and Indicators

The Rural Program is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

BASE PROGRAM DESCRIPTIONS

The Rural Domestic Violence and Child Victimization Enforcement program is designed to implement, expand, and establish cooperative efforts and projects among law enforcement officers, prosecutors, victim advocates and service providers, and other related parties to investigate and prosecute incidents of domestic violence and child abuse, provide treatment and counseling to victims of these crimes; and work in cooperation with the community to develop education and prevention strategies directed toward such issues.

The Rural Program provides an opportunity for law enforcement and prosecution agencies, the courts, non-governmental victim services agencies, community organizations and businesses in rural communities and indian Nations to collaborate in creating protocols and strategies tailored specifically to meet the needs of rural populations. The goals of the Rural Program are to:

- Develop and implement policies, protocols, and services designed to promote the early identification, intervention, and
 prevention of domestic violence and child victimization.
- Increase victims' safety and access to treatment and counseling;

- Enhance the investigation and prosecution of domestic violence and child abuse cases, and
- Develop and implement comprehensive strategies that draw on a rural jurisdiction's unique characteristics and resources to
 enhance community understanding of the phenomenon of domestic violence and child victimization.

A 1997 study by the Center for Policy Research (supported by the National Institute of Justice) indicates that 1 in 7 women has been raped in her lifetime, 1 in 13 women has been stalked, 1 in 3 adult women was physically assaulted by an adult. The national sample of 8,000 women was physically assaulted by an adult. The national sample of 8,000 women was representative of rural as well as urban communities. The University of Maryland report referenced previously also noted that buttered women's shelters are a promising means to ensure women's safety. The report indicates a stay at a battered women's shelter can improve a woman's personal safety. Unfortunately, the report also notes that there are not enough battered women's shelters in the United States -- in New York City alone, a March 1995 study showed that 300 women and children per week were turned away due to lack of space. If there is limited access to shelters in urban areas, the problem is exacerbated in rural areas. If there is a shelter at all, it may serve a large geographic area and be located in a town or city miles from a battered woman's home. Even if a woman can find transportation to get there, she may be very reluctant to leave her immediate community to seek shelter or assistance. This program expands the services available in rural communities to abused women and children, including increasing the availability of stickers. In 1999, VAWO awarded 50 new grants, 10 planning grants, and 15 continuation grants. In addition, 68 jurisdictions provided services to previously under served populations. In 2000, Congress appropriated \$25 million for this program and VAWO anticipates continuing support for the most successful projects and also awarding a limited number of new grants.

Public awareness of the prevalence of violence against women, particularly domestic violence and sexual assault, has increased dramatically in recent years. The resulting attention, however, has focused largely on urban areas, making them the primary beneficiaries of the comprehensive research and enhanced victim services. Although there is a dearth of information about violence against rural women, results of the National Crime Victimization Survey indicate that there is little variation in the extent to which urban, suburban, and rural women experience violence by intimates.

Unlike their urban and suburban contemporaries, rural victims of domestic abuse often face additional obstacles: Fewer law enforcement resources, a shortage of victim services, lack of privacy in tight-knit communities, geographic isolation, cultural pressures to keep family matters private, and an inability to keep locations of shelters confidential. All of these barriers can serjously complicate rural women's access to legal remedies and social services.

Rural and tribal criminal justice practitioners must work in partnership with social services agencies, local service providers and community leaders to send a strong message that domestic violence and child victimization are serious criminal offenses that will not be tolerated and that ending such violence is the responsibility of the entire community. Creating partnerships that include nonprofits and governmental agencies, as well as local volunteer and membership organizations, will augment available resources and enhance the capacity of rural jurisdictions to respond to domestic violence and child victimization incidents

2001 Program Change

In 2001, VAWO requests \$25 million for this program, which is the same amount appropriated in 2000.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Violence Against Women's Office Training Frogram 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of the Violence Against Women's Office Sex Offender Training Program, is to provide training and technical assistance that focuses on case management, supervision techniques, and relapse prevention. It is designed to emphasize offender accountability and at the same time ethance community safety by strengthening collaboration among those agencies responsible for community-based sex offender management. The Sex Offender Training Program mission directly supports the DOI's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

In 1999, 28 new jurisdictions received funding to implement new polices and procedures on sex offender management. In additional, 1,500 probation and parole officers were trained. The program's success is demonstrated by the activities of the Center for Sex Offender Management (CSOM). CSOM provides support, training, and technical assistance on managing violent sex offenders to jurisdictions. CSOM is achieving the following:

- Developing a comprehensive training curriculum for those who are managing sex offenders in the communities. The
 curriculum will address sex-offender supervision, treatment, assessment, and other management issues and will include 15
 training modules.
- Identifying and providing technical assistance to two tribal resource sites, documenting their work, and building the capacity of
 these sites to serve as resources for other tribal jurisdictions. The Navajo Nation in Arizona and the Yankton-Sioux Tribe in
 South Dakota were selected and are currently providing services to other tribes.
- In single and multi-disciplinary settings, providing basic knowledge of sex offender management issues to the field. CSOM
 developed and delivered a Risk Assessment Video Conference and provided intensive training on sex offender management at
 the American Probation and Parole Association.

Providing access to information through the Internet as a means of efficient and broad information dissemination. The CSOM
website was established in November 1998. The website has been accessed approximately 31,500 times since then.

FY 2001 Performance Goals and Indicators

The Violence Against Women's Office Sex Offender Training Program is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Violence Against Women's Office Training Program PROGRAM PERFORMANCE INFORMATION (dollars in thousands)

Sex Offender Training Program	Amount
2000 Enacted	\$5,000
2001 Base	5,000
2001 Estimate	_5,000
Increase/Decrease	\$0

BASE PROGRAM DESCRIPTIONS

Under this program, VAWO provides training and technical assistance that focuses on case management, supervision techniques, and relapse prevention. It is designed to emphasize offender accountability and at the same time enhance community safety by strengthening collaboration among those agencies responsible for community-based sex offender management.

According to a report released in February 1997, by the Bureau of Justice Statistics (BJS), on any given day in 1994, almost 60 percent of the 234,000 convicted sex offenders under the care, custody, or control of corrections officials in the United States were on parole or probation. Prior BJS follow-up studies of sex offenders discharged from prison or sentenced to probation showed that while these offenders have a generally lower rate of rearrest than other violent offenders, they are substantially more likely than other violent offenders to be rearrested for a new violent sex offense. Released rapists were found to be 10.5 times as likely as non-rapists to be rearrested for rape. Offenders who served time for sexual assault were 7.5 times as likely as those convicted of other crimes to be rearrested for a new sexual assault. Within three years of prison release, about 52 percent of released rapists and 48 percent of those convicted of other sexual assault were rearrested for a new crime. To coordinate these efforts, the Center for Sex Offender Management (CSOM) was established in June, 1997.

In 1999, \$5 million was appropriated for this program. Of this amount, \$2 million was targeted to continue support for technical assistance and training through the Center for Sex Offender Management. For the first time, in 1999, the remaining \$3 million was targeted to fund demonstration grants including planning, implementation, and enhancement grants.

In 2000, plans include the continuation of CSOM's activities, along with additional support to the demonstration grant recipients.

2001 Program Change

In 2001, VAWO requests 55 million for this program, which is the same amount appropriated in 2000.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Closed-Circuit Televising of Child Victims of Abuse 2001 Mission Statement and Performance Plan

2001 Component Mission and Gogls, and Relationship to DOJ Strategic Plan

The mission of the Closed-Circuit Televising of Child Victims of Abuse (CCTV) Program is to reduce the trauma related to testifying at a hearing and/or trial by children who are victims of abuse. Its planned program activities support OJP and DOJ goals and initiatives as they relate to providing assistance to state and local governments. CCTV's mission directly supports DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

During 1999, Closed-Circuit Televising of Child Victim Testimony (CCTV) grant funds were instrumental in providing the necessary videotape and/or closed-circuit equipment for a central child interview center; developing inter-agency protocols coordinating child maltreatment investigations among social workers, prosecutors and law enforcement; training 12 officials (4 social workers, 4 prosecutors, and 4 law enforcement staff) in the use of the equipment; supporting a workshop on the legal requirements of CCTV utilization, training a total of 65 court and prosecutor staff; and educating officials in human service and criminal justice areas, and the general public on the utilization of the CCTV equipment.

1999 CCTV funds also supported an award to the American Bar Association (ABA) to evaluate the FY 1998 CCTV projects to determine their effectiveness and impact on reducing the trauma to child abuse victims during criminal hearings or trials. Currently, the ABA is conducting visits to the 13 1998 CCTV projects. Of the 13 visits planned, three projects were visited in the areas of Wisconsiin, Florida, and California. These site visits consisted of interviews of all key personnel, case file data extraction, observation, and group meetings with non-offending parents. Case studies will provide the basis for a future report which will include both quantitative and qualitative data assessing the impact of the use of the CCTV equipment in reducing the trauma experienced by child victims during hearings and criminal proceedings.

In 2000, \$1 million is available for this program. These funds will be combined with the remaining 1999 funds to award 27 grants in 2000.

FY 2001 Performance Goals and Indicators

BJA is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Closed-Circuit Television of Child Victims of Abuse PROGRAM PERFORMANCE INFORMATION (dollars in thousands)

Closed-Circuit Televising of Child Victims of Abuse	Amount
2000 Eracted	\$1,000
2001 Base	1,000
2001 Estimate	1,000
Increase/Decrease	\$0

BASE PROGRAM DESCRIPTION

The Omnibus Crime Control and Safe Streets Act of 1968, as amended by the Crime Control Act of 1990, created Part N--Grants for Closed-Circuit Televising of Testimony of Children Who are Victims of Abuse. The Director of the Bureau of Justice Assistance (BJA) is authorized to make grants to provide equipment and personnel training for the closed-circuit televising and video taping of the testimony of children in criminal proceedings for the violation of laws relating to the abuse of children. The CCTV program seeks to reduce the training related to testifying at a hearing or at trial by children who are victims of abuse. It encourages states to pass faws that allow the use of closed-circuit televising or video taping of testimony of children in criminal proceedings against those charged with violation of laws relating to child abuse. Funding can also be used to assist courts or other system agencies to establish procedures, obtain equipment, and conduct the types of training necessary to televise or videotape the interviews and testimony of child victims and witnesses.

This program was originally established as a formula grant program, with each participating state slated to receive a base award of \$50,000 and the remaining balance to be distributed to participating states on the basis of population. However, funds appropriated were not sufficient to achieve the base distribution. Section 40156 of the 1994 Crime Act modified this program, converting it to a discretionary grant program.

The goals of the CCTV Program are (1) to encourage states to pass laws that promote the use of closed-circuit televising and video taping the testimony of children in criminal proceedings for the violation of laws relating to child abuse and (2) to assist courts in establishing procedures and programs for televised testimony in cases where the judge determines that a child witness will be traumatized by the presence of the defendant.

2001 Program Change

The 2001 request of \$1 million is the same as the 2000 exacted appropriation.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Residential Substance Abuse Treatment for State Prisoners 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The Residential Substance Abuse Treatment (RSAT) Program's mission is to provide support to the states to enhance their capabilities to provide residential substance abuse treatment for incarcerated inmates. The RSAT Program's mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

Increased number of substance abuse treatment programs and number of offenders who received treatment. 18,893 offenders received treatment from 114 programs initiated or expanded with 1999 funds. The CPO monitors and collects data on the number of treatment programs that are established and the number of offenders that are treated. The following are the major performance indicators for measuring program success and projected outcomes:

Provided technical assistance. CPO continued to conduct technical assistance workshops and conferences on effective treatment programs and strategies to convince policymakers that treating offenders is one of the most effective means of reducing recidivism among offenders and reducing management problems within institutions. These workshops and conferences provided more intensive training for corrections practitioners on the essential elements of an effective program and how to implement such a program. In 1999, 5 workshops or conferences were held and 950 policymakers, correctional practitioners, and treatment practitioners received training.

FY 2001 Performance Goals and Indicators

The CPO is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Residential Substance Abuse Trentment Program PROGRAM PERFORMANCE INFORMATION (dollars in thousands)

State Prison Drug Treatment Program	Amoun
2000 Enacted	\$63,000
2001 Base	63,000
2001 Estimate	_65,000
Increase/Decrease	\$2,000

BASE PROGRAM DESCRIPTION

The Residential Substance Abuse Treatment for State Prisoners (RSAT) Formula Grant Program assists states and units of local government in developing and implementing residential substance abuse treatment programs within state and local correctional and detention facilities in which prisoners are incarcerated for a period of time sufficient to permit substance abuse treatment. The RSAT Program was created by the Violent Crime Control and Law Enforcement Act of 1994, Pub.L. 103-322 which amended Title Lof the Omnibus Crime Control and Safe Streets Act

The demand for treatment services is tremendous. According to the Bureau of Justice Statistics, at least 80 percent, or approximately 980,000 of the 1.4 million immates in state prisons have used drugs in the past. Only about 11 percent of prison immates and a smaller percentage of jail inmates participate in drug treatment programs. About one in streported committing their current offense to obtain money for drugs. Lack of substance abuse treatment is recognized as a significant problem among juvenile offenders yet few treatment programs exist and little is known about what types of programs are effective for this population.

To allow states to provide the comprehensive programs needed to appropriately treat immates with substance abuse problems in 2000, new legislative language is proposed to enable states that have existing in-prison drug treatment programs, which comply with federal

requirements, to use their RSAT grants to fund a full continuum of drug treatment, which includes treatment and sanctions, both during incarceration and after release

Programs continue to move through preparation hiring, and training stages to actually admitting clients and operating. In 2000, approximately 22,000 offenders are projected to receive treatment from approximately 130 programs with 2000 funds. The CPO monitors and collects data on the number of treatment programs that are established and the number of offenders that are treated.

2001 Program Change

In 2001, CPO requests a total of \$65 million for the RSAT Program. This request represents an increase of \$2 million above the 2000 appropriation. A detailed description of the RSAT Program can be found under the Breaking the Cycle Initiative request, which begins on page 27.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Juvenile Accountability Block Grants Mission Statement and 2001, Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of the Juvenile Accountability Incentives Block Grant (JAIBG) program is to provide states and units of local government with funds to develop programs to promote greater accountability in the juvenile justice system. The JAIBG program is administered by the Office of Juvenile Justice and Delinquency Prevention (OJJDP). The JAIBG program mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribul, State and Local Governments.

Highlights of 1999 Missian Critical Results

In 1999, JAIBQ Block Grant funds in the amount of \$232.25 million were distributed to the states, with allocations ranging from \$1.48 million (Wyoming) to \$22.6 million (California).

In addition to the Block Grants program, approximately \$4.7 million was provided for research, demonstration, and evaluation to focus on examining strategies and programs that target juvenile offenders; providing critical information about juveniles in the juvenile justice system and the impact of accountability-based sanctions; and to enhance the research and evaluation capacity of practitioners.

In 1999, approximately \$7 million was provided for training and technical assistance, which reached more than 4,000 participants.

FY 2001 Performance Goals and Indicators

The JAIBG program is proposing a Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

Juvenile Incentive Block Grants	Amount
2000 Enacted	\$237,995
2001 Base	12,005
2001 Estimate	_0_
Increase/Decrease	\$(250,000)

BASE PROGRAM DESCRIPTION:

The Juvenile Accountability Block Grant (JAIBG) Program was created through the 1998 Commerce, Justice, State and the Judiciary Appropriations Act, P.L. 105-119, to encourage accountability-based reforms in states and local jurisdictions. JAIBG funds, which are administered by the Office of Juvenile Justice and Delinquency Prevention (OJJDP) can be used for 12 purpose areas, including building juvenile detention facilities, hiring prosecutors, establishing gun courts, improving juvenile probation programs and testing youth in the juvenile justice system for controlled substances.

To qualify, states have to certify that they have adopted, have considered or will consider certain accountability-based reforms, including enabling prosecutors to charge youth 15 or over accused of committing a violent crime as adults; establishing graduated sanctions for juvenile offenders, treating juvenile delinquency records for felony offenders in the same manner as adult records; and ensuring that juvenile court judges are not prohibited from issuing court orders that require parental supervision of juvenile offenders. States are also required to agree to establish a policy of drug testing for appropriate categories of youth in the juvenile justice system.

Absent a waiver, each state must distribute not less than 75 percent of its allocation among units of local government in the state. In making such distribution, the state will allocate funds among units of local government using a formula that combines law enforcement expenditures for each unit of local government and the average annual number of Uniform Crime Report Part I violent

crime arrests reported by each unit of local government, each for the three most recent calendar years for which data are available. Two-thirds of each unit of local government's allocation is based on the law enforcement expenditure data and one-third on the reported violent crime arrest data, in a natio based on the aggregate data for all units of general local government in the state. A unit of local government must qualify for a minimum of \$5,000 in order to be eligible to receive an award. The state will retain funds allocated to nonqualified units in order to provide services for their benefit or use. The state or local government ecipient of a JAIBG award must contribute, in the form of a cash match, at least 10 percent of the total program cost. If JAIBG funds are used to construct a permanent juvenile corrections facility, the cash match must be at least 50 percent of the total costs. JAIBG program funds cannot be used to supplant state or local funds.

States and units of local government eligible to receive JAIBG funds must establish a Coordinated Enforcement Plan (CEP) for reducing juvenile crime developed by a Juvenile Crime Enforcement Coalition (JCEC). State CEP's must be developed by a JCEC consisting of law enforcement and social service agencies involved in juvenile crime prevention. To assist in developing the state's CEP, states may choose to utilize members of the State Advisory Group established by the State's chief executive under the OJJDP Formula Grants program, if appropriate membership exists, or another planning group that constitutes a coalition of law enforcement and social service agencies.

2001 Program Change

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Missing Alzheimer's Disease Patient Alert Program Mission Statement and 2001 Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The Alzheimer's Program's mission is to establish a national Missing Alzheimer's Disease Patient Alert Program to protect and locate missing patients with Alzheimer's disease and related dementia. The Missing Alzheimer's Disease Patient Alert Program's mission directly supports the DOJ's Strategic Plan core function or providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

in 1999, the Alzheimer's Safe Return Program increased its registration data hase to 55,869 individuals and assisted in return of over 4,900 wanderers. In 2000, the program will continue to expand the national registry of memory-impaired persons, support the toll-free telephone service, provide a Fax Alert System, conduct train the trainers programs for law enforcement and emergency personnel, disseminate information and educational materials, and continue a national public awareness campaign.

FY 2001 Performance Goals and Indicators

OJJDP is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

D. Validation and Verification:

Implementation of performance measures will be validated and verified through a review of progress reports aubmitted by grantees; telephone contact, and onsite monitoring of grantees' performance by grant program managers. Additionally, the National Alzheimer Association, and their designated contractor, Life Service, Inc. have management information systems, which have the caosethy to verify and validate training components and hot line calls, respectively.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Motor Vehicle Theft Prevention 2001 Mission Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission the Motor Vehicle Theft Prevention (MVTP) Program is to reduce auto thefts committed primarily during the early morning hours. The 2001 planned activities and priorities support the initiatives of the OJP and DOJ related to improving the justice system by assisting State and local law enforcement. The mission of the MVTP Program is to directly support the DOJ Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

The MTVP Program measures its performance by tracking the number of states implementing the program. In the long-term, program performance will be measured in terms of how well the public responds to what the program offers, the number of vehicles registered in the program, and the overall level of public satisfaction that the program is beneficial and dependable. As end outcomes, we have included performance measures for the number of cars stopped and the number of cars recovered.

Highlights of 1999 Mission Critical Results

In 1999, the Bureau of Justice Assistance (BJA) awarded MVTP grants to the states of Arizona, Colorado, Delaware, Maryland, New York, Tennessee, and Washington in the amount of \$950,000. These seven recipionts joined Alabama, Connecticut, Massachusetts, Minnesota, North Carolina, and the U.S. Virgin Islands as participants in this national motor vehicle theft prevention program. Colorado, Delaware, Tennessee, and Washington each received new \$200,000 implementation awards. Arizona, Maryland, and New York each received supplemental awards of \$50,000 to continue their ongoing efforts.

FY 2001 Performance Goals and Indicators

The MVTP is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

Amount

BASE PROGRAM DESCRIPTION

The MVTP was established by the Motor Vehicle Theft Prevention Act authorized under Section 220002 of the Violent Crime Control And Law Enforcement Act of 1994 and is designed to assist states with development of a voluntary motor vehicle theft prevention program. The program encourages motor vehicle owners to voluntarily display a decal or other authorized device on their vehicles to alert police that their vehicles are not normally driven between the hours of 1 a.m. and 5 a.m. Motorists may also choose to display another decal or device to signal that their vehicles are not normally driven across or in the proximity of international land borders or ports. The goals of this program are as follows:

- Improve the interdiction of stolen vehicles, narcotics, firearms, etc., within the United States and at international land borders and international ports
- Expand the program nationally
- Identify major auto theft rings and develop a strategy to disrupt chop shop operations and the interstate/international trefficking of stolen parts and vehicles
- Develop objectives and timetables that will increase the number of vehicles registered in the program.

A total of nine states were participating as of the end of 1998, and an additional four will be added in 1999. By 2000, BJA anticipates that a total of 18 states will be participating in the program — five more states than in 1999.

2001 Program Change

In 2001, BJA requests \$1.3 million to implement the fifth year of funding of the MVTP Program. This represents the same level of funding as the 2000 enacted appropriation.

- D. Validation and Verilleuten.

The Program Development Division maintains files that track the number of applications received and awarded (#2.3), as well as on the number of meetings held on auto thefe prevention (#4). Grantee program will also track the number of states implementing the program (#5) and number of vehicles registered under the program (#6, as well as indicators 7,8 and 9). Grantee program reports and division site visits will be used to determine the end outcome measures. This determination will be made through a process of ensuring that the grantee has measurable, statisable, and germane goals and objectives, that grantee reporting requirements are exablished from the start of the program, and that an assessment is made by the program parameter as the time of close-out that the grantee recomplished the measurity of its goals and objectives.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Drug Courts Grants Program 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The Drug Courts Program Office's (DCPO) overall mission is to improve public safety and reduce criminal recidivism through the support of drug court programs that intensively supervise drug treatment for drug addicted, non-violent offenders. DCPO's mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

Currently, DCPO measures performance in terms of the numbers of drug courts that come on-line and the percent of drug court program participants in grantee programs that do not commit other crimes while participating in the program. In 1999, 108 new federally funded drug courts, including 16 tribal drug courts were established through support from the DCPO. Eighty percent of drug court program participants in grantee programs did not commit other crimes while participants in the program. Other accomplishments during 1999 included: DCPO conducted 60 site visits and sponsored 22 grantee workshops; all of the 1997 planning grantees (79) attended two training workshops; and DCPO staff and it technical assistance providers have responded to more than 3,100 requests for assistance.

In 1999, DCPO received 215 applications. From this pool of applicants, \$1 planning grants were awarded for up to \$30,000 each; 119 implementation grants were awarded for up to \$200,000 each; and 23 enhancement grants were awarded for up to \$100,000 (\$300,000 if for multiple jurisdictions) each.

Despite their increasing numbers, drug courts have generated only limited research and evaluation, both locally and nationally.

Research shows that substance abuse treatment works and that coerced treatment works in other settings. Evaluations of individual drug court programs are showing promising results. In 1998, Columbia University's National Center on Addiction and Substance Abuse provided the first major academic review and analysis of drug court evaluations. The author reviewed 30 evaluations pertaining to 24 drug courts and concluded, "that drug courts provide closer, more comprehensive supervision and much more frequent drug

testing and monitoring during the program, than other forms of community supervision. More importantly, drug use and criminal behavior are substantially reduced while offenders are participating in drug courts."

National research activity started slowly due to the slow growth of the drug court movement in the early years --from 1989 to 1993, only about 12 courts were developed. In 1997, NIJ awarded the Drug Court Evaluation Program I. Grants were awarded to study four drug courts (Las Vegas, Nevada; Portland, Oregon; Kansas City, Missouri; and Pensacola, Florida) to examine "process" issues such as the operational features of the courts and the dynamics of program development. The impact of the drug courts on criminal recidivism also will be measured, as will the extent of participants' retention in treatment and changes in their life circumstances and productivity. Results from the first phase of this study are currently under review. Results from the second stage are being compiled at this time.

In 1999, NU awarded the Drug Court Evaluation Program II to evaluate the 16 drug courts that have received implementation grants from the DCPO with 95-96 funds. This phase will take a more in-dupth look at program outcomes. The results will form the nucleus of a future publication addressing possible new or improved approaches and techniques to further develop the drug courts.

As of 1998, to ensure that grantees are collecting critical information on their drug courts for evaluation purposes and to assist in the national evaluation of drug courts, grantees that receive funds to implement and enhance a drug court are required to collect, and submit on a semi-armual basis, a minimum data set. This data set was developed with input from the drug court field and the U.S. General Accounting Office.

FY 2001 Performance Goals and Indicators

The DCPO is proposing an 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

2001 Estimate	_50.000
Increase/Decrease	\$10,000

BASE PROGRAM DESCRIPTION

The Drug Courts Program Office (DCPO) was created under the authority of the Omnibus Crime Control and Safe Streets Act of 1968, as amended. The DCPO provides financial and technical assistance for states, state courts, units of local government, local courts and Indian Tribal governments to develop and implement treatment drug courts that employ the coercive power of the courts to subject non-violent offenders to an integrated mix of treatment, drug testing, incentives and sanctions to break-the-cycle of substance abuse and crime. Furthermore, Drug Court Program is regarded as one the cornerstones of the Administration's Stop Drugs and Stop Crime Initiatives. In conjunction with the National Institute of Justice, the DCPO is conducting comparative evaluations of drug court programs to identify the most effective program elements and designs to combat drug abuse and crime. The drug court movement began as a grass roots, community-level response to reduce crime and substance abuse smong criminal justice offenders. A drug court brings together the court, other criminal justice agencies and the treatment community to create a paradigm shift when intervening with substance abusing offenders. The DCPO fully supports this grass roots, community-level movement by awarding drug court grants, technical assistance and training. The DCPO awards two types of grants:

- Implementation Grant. Awards for jurisdictions with new drug court programs that have already made a commitment to
 develop a drug court program and have identified the target population to be served and the case processing procedures. These
 grants are available to either single jurisdictions or multiple jurisdictions planning a joint effort.
- Enhancement Grant. Awards to jurisdictions to improve or enhance services in existing drug courts. These awards are
 available to single jurisdictions or to multiple jurisdictions or statewide or regional entities to coordinate joint improvements,
 such as information systems, program evaluations, or training.

The DCPO implementation and enhancement grantees use grant funds to support the development of management information systems and the necessary software to accompany these systems. It is critical that drug courts be able to efficiently and effectively share data regarding program participants in a timely manner. Specialized technical assistance is made available by DCPO to assist drug courts with the development of effective information systems.

Implementation and enhancement grantees are required to evaluate their program efforts. A future publication addressing possible new or improved approaches and techniques to further develop the drug courts is being compiled based upon 16 site evaluations completed by the Rand Corporation in 1999. It is anticipated that the results will be released by the end of 2000. DCPO will continue to supplement funding to support evaluations which will produce additional outcome results beyond recidivism and drug use.

Multi-agency collaboration and cooperation are at the heart of the drug court philosophy. Drug courts work effectively because of the successful linkage between the criminal justice system and substance abuse treatment systems, as well as other community resources. DCPO's implementation and enhancement grantees are required to randomly and frequently drug test participants and to provide comprehensive treatment services. The 2000 Drug Court Grant Program is responsive to, and supportive of, developments in the field. The grant program will support the opening of 40 drug courts.

Additionally, in 2000, DCPO is launching the Drug Court Planning Initiative (DCPI) to assist communities in the process of planning a drug court. DCPI will consist of a series of three workshops for community teams who want to plan drug court. As part of the DCPI, communities will not need to submit an application for a planning grant, provide a 25% local funds match, or compete for funding to receive training and technical assistance on planning an adult, juvenile, or family drug court.

DCPI will pay for the workshops and the planning team's travel cost (airfare, ground transportation, hotel, and meals) based on the federal travel regulations for up to 10 team members. An eligible team must consist of a judge, prosecutor, public defender, treatment representative, coordinator, and a research or management information system specialist. If a community is planning a juvenile drug

court the team must also consist of a school representative. Each workshop will build upon the foundation of the previous workshop.

Thus a drug court team must attend all three workshops. There will be specialized series of workshops about how to plan an adult, juvenile, or family drug courts. Technical assistance will also be available at no cost to communities participating in the workshops.

2001 Program Change

In 2001, DCPO is requesting a total of \$50 million. This request represents a \$10 million increase over the 2000 base level funding. \$2 million will be for the dependency court system's response to child abuse and neglect detailed under Building Knowledge, page 65. The remaining \$8 million will be needed by the DCPO. A detailed description of the DCPO program enhancement can be found under Breaking the Cycle of Substance Abuse and Crime, page 29.

C. Imper Afferting Selection of 2000 and 2001 Plans.

in 2001, \$2 million of the \$10 million request will be used to help fund the Deptindency Court System's Response to Chid Abune and Neglect instantive (see the Building Knowledge Instantive). The remarking \$5 million will be needed for the DCPC to establish 12 new days crusts, assist \$ additional communities in planning a drug court, provide the additional training and inclinical investment against for the new grantom, and further the national evaluation of drug conves.

D. Validation and Verification

Performance manufacts will be validated and verified through a review of progress reports submitted by grantees, telephone contact, and omitte monitoring of grantees' performance by grant program managers. Additionally, the OJF Drug Court Cleaninghouse and Technical Assusance Project, a collaborative effort with American University, provides data to measure performance.

- #13. Number of DCPO-funded new operational drug courts. The number of DCPO-funded new operational drug courts as obtained with the assistance of a grantee survey conducted by the Drug Court Clearingbouse. It is important to note that the number of DCPO-funded new operational drug courts per by gatengy be obtained by adding the number of planning, implementation, and enhancement grains in one FY, it may not become operational whill the next FY. The Drug Court Clearingbouse surveys drug court grantees and obtains information on when a drug court becomes operational. This is the information used to arrive at this performance indicator. This information is verified by DCPO Program Managers through program monitoring.
- #15. Percent of drug court program prencipants in grantee programs that do not commit other crimes while participating in the program (recidivism). This information is collected through a survey of all operations drug cours. The survey is administered by the Drug Court Clearinghouse and the data is self-reported. This data is not verified by the Drug Court Clearinghouse on or the DCPO through evaluative mesor.

OFFICE OF JUSTICE PROGRAMS State and Local Law Enforcement Assistance Law Enforcement Family Support Program 2001 Summary Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of the Law Enforcement Family Support program is to assist State and local law enforcement and correctional agencies in developing and implementing policies and programs to reduce stress and provide appropriate support services for officers and their families through research, training, technical assistance, and financial support. These planned program activities support the goals and initiatives of OIP and DOJ. The Law Enforcement Family Support Program's mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

The Law Enforcement Family Support Program is discovering innovative ways to prevent and treat the negative effects of stress experienced by law enforcement and correctional officers a.,d their families. The program consists, among other development activities, of demonstration and research grants which are periodically awarded to state and local law enforcement and corrections agencies, or organizations (i.e., unions and associations) representing law enforcement and corrections personnel. In 1999, fewer grants than expected were awarded due to the decrease in innovative proposals from the field of law enforcement and the requirement for rigorous evaluation of all programs. Proposals that were funded focused primarily on programming for the line staff rather than the managerial staff. There were 6 new employee assistance programs established, 2 grants were awarded for research, and 6 grants were awarded for demonstration and training programs. Also in 1999, 38 managers were trained to establish, operate, or expand stress reduction and family support programs. Through the Law Enforcement Family Support Program, over 5,600 officers and family members were served in 1999.

FY 2001 Performance Goals and Indicators

The Law Enforcement Family Support Program is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

BASE PROGRAM DESCRIPTION

.

The Law Enforcement Family Support Program is authorized by section 1001 (a)(21) of the Omnibus Crime Control Act of 1968 Crime Act and directs the Attorney General to: 1) establish and implement family friendly policies within law enforcement related offices of the Department of Justice, and 2) support research, program development, and evaluation; training, technical assistance, and support programs; and information dissemination concerning family support, stress reduction, and psychological services to federal, State, and local law enforcement agencies and related organizations. In 1995, responsibility for developing a guide for research and program development was assigned by the OIP Associate Attorney General to the National Institute of fustice (NII).

In 1999, NLI intensified it's efforts to understand the extent and nature of stress experienced by corrections and law enforcement officers. Their efforts included: a solicitation directed at correctional officers and their families, a grant writing workshop, the completion of an Issues and Practices Report entitled, Correctional Officer Stress, and establishment of several single-site demonstration projects targeting under-served populations (rural areas, regional service models, corrections, etc.).

In 2000, NIJ is using funds to target and expand the program to the corrections field. NIJ's plan is to spend a more substantial percentage of their funding on correctional officer stress reduction programs. In addition, NIJ will sponsor a national symposium on

the nature, causes and consequences of stress and will identify programs to help prevent and ameliocate those stressors. From the information gained at the national symposium, and in conjunction with other partners (e.g., BJA, COPS Regional Training Centers, etc.), NJJ will build a curriculum to be utilized at regional training sessions. The regional training sessions will focus on general and local/apocific issues, stressors and/or programs.

Finally, in 2000, NIJ will coalesce program outcomes into a handbook that can assist law enforcement and corrections agencies in developing successful stress programs. To accomplish this, NIJ will compile and disseminate a compendium of all final program and hypothesis-based evaluation reports filed by Law Enforcement Family Support funded demonstration programs.

2001 Program Change

In 2001, NIJ requests \$1.5 million for this program, which is the same amount appropriated in 2000.

Office of Justice Programs State and Local Law Enforcement Assistance Telemarketing Fraud Against Senior Citizang Program 2001 Mission Statement and Performance Plan

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan:

The mission of the Telemarketing Fraud Against Senior Citizens Program is to reduce the incidence of scams perpetrated against senior citizens. The goal of this program is to make grants to states, to state and local law enforcement and prosecutorial agencies and senior citizen advocacy organizations aimed at decreasing the incidence of fraud perpetrated against senior citizens. The Telemarketing Fraud Against Senior Citizens Program's mission directly supports the Department of Justice's (DOJ's) Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Musica Critical Results

In 1999, 8 grants were awarded under this program and 3 technical assistance training workshops were held for approximately 300 program participants. In the long-term, program impact will be based on the number of telemarketing scams that are investigated and prosecuted as a result of the resources provided by this program.

FY 2001 Performance Goals and Indicators

The Telemarketing Fraud Against Senior Citizens Program is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

BASE PROGRAM DESCRIPTION:

C

This program, authorized by Section 250005 of the VCCLEA, provides grant funding for State and local law enforcement agencies and senior citizen advocacy organizations for public awareness and prevention initiatives, such as seminars and training targeted at fraud against senior citizens.

In 1998, the Bureau of Justice Assistance (BJA) awarded grants to: (1) National Association of Attorneys General; (2) American Prosecutors Research Institute; (3) National White Collar Crime Center and (4) American Association of Retired Persons, which have begun to address the following major challenges to the investigative and prosecutorial efforts of State and local agencies in addressing telemarketing fraud:

- A multi-agency committee comprised of State and local law enforcement and prosecutorial officials assisted by federal justice divisions to coordinate the planning and provision of criminal law training to State attorneys general, district attorneys and investigators.
- National and regional training and technical assistance to broaden criminal and civil enforcement efforts by increasing the numbers of State and local telemarketing prosecutions against both companies and individuals.

 A case study of up to 10 State and local task forces that have created unique approaches to increasing prevention and prosecution of telemarketing fraud cases.

2001 Program Change:

In 2001, BJA requests \$2 million for the continuation of this program, which is equal to the 2000 enacted level.

OFFICE OF JUSTICE PROGRAMS Violent Crime Reduction Programs 2001 Summary Statement and Performance Plan

Summary Statement

In 2001, all programs previously requested and funded under the Violent Crime Reduction Programs, State and Local Law Enforcement Assistance appropriation are requested to be funded under the State and Local Law Enforcement Assistance account.

Office of Justice Programs Violent Crime Reduction Programs, State and Local Law Enforcement Assistance Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is italicized and language proposed for deletion is bracketed.

[Violent Crime Reduction Programs, State and Local Law Enforcement Assistance]

(For assistance (including amounts for administrative costs for management and administration, which amounts shall be transferred to and merged with the "Justice Assistance" account) authorized by the Violent Crime Control and Law Enforcement Act of 1994 (Public Law 103-322), as amended ("the 1994 Act"); the Omnibus Crime Control and Safe Streets Act of 1968, as amended ("the 1968 Act"); and the Victims of Child Abuse Act of 1990, as amended ("the 1990 Act"), \$1,194,450,000, to remain available uptil expended, which shall be derived from the Viotent Crime Reduction Trust Fund; of which \$552,000,000 shall be for grants. contracts, cooperative agreements, and other assistance authorized by part E of title I of the 1968 Act, for State and Local Narcotics Control and Justice Assistance Improvements, notwithstanding the provision of section 511 of said Act, as authorized by section 1001 of title I of said Act, as amended by Public Law 102-534 (106 Stat. 3524), of which \$52,000,000 shall be available to carry out the provisions of chapter A of subport 2 of part E of title I of said Act, for discretionary grants under the Edward Byrne Memorial State and Local Law Enforcement Assistance Programs; of which \$10,000,000 shall be for the Court Appointed Special Advocate Programs, as authorized by section 218 of the 1990 Act; of which \$2,000,000 shall be for Cluld Abuse Training Programs for Judicial Personnel and Practioners, as authorized by section 224 of the 1990 Act; of which \$206,750,000 shall be for Grants to Combat Violence Against Women, to States, units of local government, and Indian Imbal governments, as authorized by section 1001(a)(18) of the 1968 Act. including \$28,000,000 which shall be used exclusively for the purpose of strengthening civil legal assistance programs for victims of domestic violence: Provided, That, of these funds, \$5,200,000 shall be provided to the National Institute of Justice for research and evaluation of violence against women, \$1,196,000 shall be provided to the Office of the United States Attorney for the District of Columbia for domestic violence programs in D.C. Superior Court, \$10,000,000 which shall be used exclusively for violence on college compuses, and \$10,000,000 shall be available to the Office of Juvenile Justice and Delinquency Prevention for the Safe Start Program, to be administered as authorized by Part C of the Juvenile Justice and Delinquency Act of 1974, as amended; of which \$34,000,000 shall be for Grants to Encourage Arrest Policies to States, units of local government, and Indian tribal governments, as authorized by section 1001(a)(19) of the 1968 Act; of which \$25,000,000 shall be for Rural Domestic Violence and Child Abuse Enforcement Assistance Grants, as authorized by section 40295 of the 1994 Act; of which \$5,000,000 shall be for training programs to assist probation and parole officers who work with released sex offenders, as authorized by section 40152(c) of the 1994 Act, and for local demonstration projects; of which \$1,000,000 shall be for grants for televised testimony, as authorized by section 1001(a)(7)

of the 1968 Act; of which \$63,000,000 shall be for grants for residential substance abuse treatment for State prisances, as authorized by section \$1001(s)(17) of the 1968 Act, of which \$900,000 shall be for the Missing Alzheimet's Disease Patient Alert Program, as authorized by section 240001(c) of the 1994 Act; of which \$40,000,000 shall be for Motor Vehicle Theft Prevention Programs, as authorized by section 220002(th) of the 1994 Act; of which \$40,000,000 shall be for Drug Courts, as authorized by title V of the 1994 Act; of which \$1,500,000 shall be for Law Enforcement Family Support Programs, as authorized by section 1001(a)(21) of the 1908 Act; of which \$2,000,000 shall be for public awareness programs addressing can keting seams aimed at senior citizens, as authorized by section 250005(3) of the 1994 Act; of which \$250,000,00 shall be for Javenile Accountability Incentive Block Grants, except as set forth in the provisions under this heading for this program in Public Law 105-119, but all references in such provisions to 1998 shall be deemed to refer instead to 2000. Provided further. That funds made available in fiscal year 2000 under subpart 1 of part E of title 1 of the 1968 Act may be obligated for programs to assist States in the hitigation processing of death penalty Federal habeas corpus petitions and for drug testing initiatives: Provided further, That, if a unit of local government uses any of the funds made available under this title to increase the number of law enforcement officers, the unit of local government will achieve a net gain in the number of law enforcement officers who perform nonadministrative public safety service.]

(Department of Justice Appropriations Act, 2000, as enacted by section 1000(a)(1) of the Consolidated Appropriations Act, 2000 (P. L., 106-113).)

Explanation of Change:

1. Deletes VCRP language. In 2001, funding for these programs are requested under State and Local Law Enforcement Assistance.

OFFICE OF JUSTICE PROGRAMS Executive Office for Weed and Seed 2001 Summary Statement and Performance Plan

Summary Statement

Weed and Seed represents the Department's premier, neighborhood-based comprehensive crime control initiative. The Executive Office for Weed and Seed (EOWS) is accordingly requesting a total of \$42 million as a direct appropriation for the Weed and Seed Program. This request represents an increase of \$8.5 million over the 2000 base funding level of \$33.5 million. Major elements of the requested increase include funds to replace current DOJ supersurplus asset forfeiture funds with appropriated funds (\$6.5 million), and raise the existing site funding level to support local evaluations (\$2 million). EOWS's total request for 2001 will support the goals and priorities of the Administration, the Department of Justice, and the Office of Justice Programs.

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The Executive Office for Weed and Seed's (EOWS) mission is to assist communities in the development and implementation of comprehensive strategies to "weed out" violent crime, illegal drug and gun trafficking, and illegal gang activity and to "seed" their communities with crime prevention programs. To achieve this mission, EOWS provides assistance to sites in designing comprehensive strategies to prevent and control crime, coordinates federal participation in cooperation with the U.S. Attorneys Offices and Federal law enforcement agencies and other Federal departments, and provides grant funding to communities to further their strategies. EOWS' mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

Since 1991, the Weed and Seed Program has grown from three to over 200 sites nationwide. The Weed and Seed Program assists communities in establishing strategies that link federal, state and local law enforcement and criminal justice efforts with private sector and community efforts. It assists communities in "weeding out" violent crime, gang activity, drug use and drug trafficking in targeted neighborhoods and then "seeding" the targeted areas with programs that lead to social and connemic rehabilitation and revitalization.

In 1999, Abt. Associates published a National Impact Evaluation on the Weed and Seed Program, which focused on eight sites (Akron. OH: Hartford, CT; Las Vegas, NV; Manatee and Sarasota Counties, FL; Pittsburgh, PA; Salt Lake City, UT; Seattle, WA; and

Shreveport, LA) exemplifying different aspects of the program. In six of the eight Weed and Seed sites studied, clear evidence exists that Part I crime (homicide, rape, robbery, aggregated assault, burglary, larceny, and auto theft) declined more rapidly than in comparable areas over the course of the program and that this was attributable to the Weed and Seed Program efforts. Furthermore, the evaluation found that Weed and Seed funding acted as a significant catalyst for general community revitalization efforts and that most target area communities have undertaken programs and created beneficial community organizations that likely would not have come into existence without Weed and Seed.

In addition to the evaluation described above, in July 1999, GAO issued a report on its review of EOWS operations for efficiency and effectiveness. EOWS is currently working with the National Institute of Justice to enhance data collection and performance assessment capacity so that existing sites can better evaluate the effectiveness of their Weed and Seed strategies. Locally collected data will be useful to sites in helping them identify what is working and what is not, so that it can be corrected or duplicated. As a result of both the GAO findings and the work that has been completed with NIJ on improving performance measurements, EOWS has requested an enhancement in 2001 to further improve Weed and Seed site strategies.

EV 2001 Performance Goals and Indicators

FOWS is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

Office of Justice Programs Weed and Seed Program Fund Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is italicized, and language proposed for deletion is bracketed.

Weed and Seed Program Fund

For necessary expenses, including salaries and related expenses of the Executive Office for Weed and Seed, to implement "Weed and Seed" program activities, [533,500,000] \$42,000,000, to remain available until expended, for inter-governmental agreements, including grants, cooperative agreements, and contracts, with State and local law enforcement agencies engaged in the investigation and prosecution of violent crimes and drug offenses in "Weed and Seed" designated communities, and for either reinhorsements or transfers to appropriation accounts of the Department of Instice and other Federal agencies which shall be specified by the Attorney General to execute the "Weed and Seed" program strategy: Priviled, That funds designated by Congress through language for other Department of Justice appropriation accounts for "Weed and Seed" program activities shall be managed and executed by the Attorney General through the Executive Office for Weed and Seed" Provided further. That the Attorney General may direct the use of other Department of Justice funds and personnel in support of "Weed and Seed" program activities only after the Attorney General notifies the Committees on Appropriations of the House of Representatives and the Senate in accordance with section 605 of this Act.

(Department of Justice Appropriations Act, 2000, as enacted by section 1000(a)(1) of the Consolidated Appropriations Act, 2000 (P. L. 106-113).)

BASE PROGRAM DESCRIPTION:

Begun in 1991, the Weed and Seed program commutes to pioneer the nationwide adoption of community-based comprehensive crime prevention and control strategies. Site funding generally tends to be evenly split between "weeding" and "seeding." "Weeding" activities encompass joint law enforcement operations and community policing, while "seeding" activities range from prevention activities located in Safe Havens to neighborhood physical improvement and economic development.

Since 1995, Weed and Seed sites have been funded with resources available through direct appropriations and funds available from the DOJ's Asset Forfeiture Funds. By 1995, 36 Weed and Seed sites were supported by an appropriation of \$23.5 million, plus Asset Forfeiture Funds, and by 1996, 79 sites were supported by an appropriation of \$18 million, plus Asset Forfeiture Funds. In 1997, Weed and Seed funding was provided to almost 120 sites supported by an annual appropriation of \$28.5 million plus Asset Forfeiture Funds. In 1998, Weed and Seed funding was provided to 176 sites. As the number of sites has increased by almost 400 percent, while overall program resources have increased by only 43 percent, EOWS has reduced the base level of support to each site from \$750,000 to between \$200,000 to \$300,000. The decision to provide smaller grant resources to more sites reflects Weed and Seed program experience that the federal dollars are useful as a catalyst in bringing people to the table to work together. The effect sought and expected is that sites will reach out to local partners early on to leverage resources from other government and private sources. By reducing the award amount, EOWS is able to more effectively reach a larger population of needy sites. In 1999 and 2000, Weed and Seed received \$33.5 million in appropriated funds plus \$6.5 million in Asset Forfeiture Super Surplus Funds for a total of \$40 million. This funding level has enabled the program to grow to 201 sites. In 2001, \$42 million is requested as a direct appropriation with no funding provided from Asset Forfeiture. Of the \$8.5 million requested, \$6.5 million will be used to replace Asset Forfeiture Super Surplus Funds with appropriation process

rather than uncertainty of dependence on Asset Forfeiture Super Surplus Funds.

In addition to providing funding directly to sites, the Weed and Seed appropriation has supported many multi-site activities. In cooperation with AmeriCorps, Weed and Seed has supported hundreds of AmeriCorps participants contributing to public safety-oriented projects in a growing number of Weed and Seed sites. In cooperation with the U.S. Navy Drug Demand Reduction Task Force and other military partners, Weed and Seed is supporting the implementation of the successful year-long "Drug Education For Youth" (DEFY) program in Weed and Seed communities. The number of DEFY programs in Weed and Seed sites increased from 3 in 1996 to 30 in 1997. DEFY programs were fielded in 60 Weed and Seed sites in each 1998 and 1999. This level will be maintained in 2000.

Weed and Seed sites are provided funding and training to implement programs that will help them deal with serious crime problems in their communities such as: gun abatement; community empowerment; truancy prevention; conflict resolution; justice innovations; jobs for at-risk youth; anti-gang crime initiatives; prevention through the arts; mentoring; and anti-drug and alcohol abuse strategies. Consistent with the program's emphasis on flexibility and customer orientation, sites were invited to select the programs that fit their needs. Increasingly, funds are being used to marshal the experience of older sites by making them peer-to-peer training sites that showed potential new sites what to do and what to avoid to have a successful program. The Weed and Seed program has proven to be an effective Federal program, which works at the grass roots level and is tremendously popular.

2001 Program Changes:

In 2001, EOWS requests a total of \$42 million, which is \$8.5 million above the 2000 base. Of the \$8.5 million requested, \$6.5 million will be used to replace the Asset Forfeiture Fund Super Surplus with appropriated funds. The remaining \$2 million will be used to enhance data collection and performance assessment capacity so that existing sites can evaluate the effectiveness of their Weed and Seed strategies. A description of this enhancement can be found under the Community Justice Initiative beginning on page 11.

PERFORMANCE MEASURAMENT TABLE BY PROGRAM

PROGRAM/ORG UNIT: Executive Office for Weed and Seed (EOWS) (Base Program)

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal, State and Local Governments

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.3) Support innovative, community-based strategies aimed at reducing crime, delinquency and violence in our communities.

ANNUAL PERFORMANCE GOAL: (2.3.2) Encourage community-based approaches to crime and justice at the state and local level.

MISSION: To provide great funding to communities to help develop and implement comprehensive strategies to "weed out" violent estime, drug and gun trafficking, and gang activity and "seed" the neighborhood with programs that achieve and maintain crune prevention and economic revitalization.

- A. Definitions of Terms of Explanations for Indicators and Other Data Sources: TED To Be Determined
- Actual appropriations include carryover and. Super Surplus Asset Forfeiture.

B. lasues Affecting 1999 Program Performance.

- ** GPRA data category revised for FY 1999, law enforcement data reported in FY 1999 reflects FY 1998 performance. For end outcomes #5 and #%, approximately \$0% of sites reported. Data is unavailable from new sites.
- *** These data will be available with sites' FY2000 funding applications, expected May 2000.

In 1999, \$33.5 million was appropriated and \$6.5 million in Super Surplus of the Asset Forfeiture Fund (AUF) was provided to Weed and Seed. Within DOI, other funding sources have included the Executive Office for U.S. Attentive, the Bureau of Justice Assistance Byrne Grant Program, and Asset Forfeiture Funds under 28 USC \$2416, (1)(1) (approximately \$8 million in 1994 and \$9 million in each year thereafter). A variety of factors beyond the control of the federal government may affect performance indicators, for example; local capacity and committeent to implement the program, and societal iterads of a regional or national nature.

C. Issues Affecting Selection of 2000 and 2001 Plans.

In 2000, funding sources include the appropriated amount of \$33.5M. As in years pass, plan to receive additional funding of \$6.5M in Super Survius of the AFF.

In 2001, \$42 million is requested as a direct appropriation. The typical level of site funding as of 1997 and thereafter is approximately \$200,000 - \$100,000 per site, down from \$750,000 per site for the original demonstration sites. This reflects a program decision to spread program resources over a larger number of sites. Also note that most sites awards are made toward the end of the fiscal year, so that outcomes will extend into the subsequent fiscal year.

The ND impact evaluation final report and the GAO findings have assisted EOWS in improving data collection efforts. Of the \$8.5 million enhancement requested for 2001, \$2 million will be used to enhance data collection and performance assessment capacity so that enjaining sites can evaluate the effectiveness of the Weed and Seed strategies. EOWS will help sites improve their capacity to do small-scale evaluations by providing technical assistance and examine 22 different variables, such as household income, truately rates, out-of-wedlock births and other measures to get a better sense of the impact the Weed and Seed program has had at its over 200 sites.

D. Validation and Verification. EOWS validates and verifies performance measures through a review of progress reports submitted by grantees; telephone contact, and onsite monitoring of grantees* performance by grant program managers.

OFFICE OF COMMUNITY ORIENTED POLICING SERVICES

Appendix 1 125/0000

2735

COMMUNITY ORIENTED POLICING SERVICES Summary Statement and Performance Plan Fiscal Year 2001

The Office of Community Oriented Policing Services (COPS) is requesting a total of 366 permanent positions, 301 workyears, and \$1,335,000,000. This request represents an overall increase of \$740,000,000 above the 2000 enacted level, as well as an increase of 131 positions and 66 workyears to support new and enhanced initiatives further identified within this document. Of the 131 positions and 66 workyears supporting COPS programs, 31 will be derived from Management and Administration funds. The 2001 requested level supports continued implementation of the Violent Crime Control and Law Enforcement Act of 1994.

The COPS Office is requesting an additional \$225,393,000 for the Public Safety and Community Policing Grant programs. The COPS Office will continue to provide grants to state and local law enforcement agencies to hire and redeploy police officers, as well as encourage the institutionalization of community policing practices.

The Management and Administration increase for 2001 (31 positions, 16 workyears, and \$5,282,000) will support continued management oversight, administrative support, and will ensure that the goals of the COPS Office are achieved. Five positions and 5 workyears will be used to support the Justice Management Division's (JMD) Global Program. The remainder of the staffing increase, 95 positions and 45 workyears, will support new Office of Justice Programs (OJP) administered programs proposed under the COPS program. These OJP positions will be funded with \$5,016,000 from program dollars.

The COPS Office is requesting an increase of \$190,000,000 to enhance the Community Based Prosecutors Program. Additional funding will assist states and localities to hire prosecutors dedicated to addressing community crime problems through identifying and prosecuting criminals.

The COPS Office is requesting an increase of \$99,325,000 in 2001 to enhance and expand upon COPS current crease suppression and community building offorts. Additional funding will support several 2001 initiatives including School Safety programs and Police Integrity Training.

To assist law enforcement agencies in obtaining the latest crime technologies COPS is requesting an increase of \$220,000,000 to enhance Crime Technology programs, including the COPS CONECT initiative. Additional funding will give COPS the ability to

promote interoperability among law enforcement agencies' telecommunications and computer systems and the uses of crime analysis tools to detect, prevent, and solve crimes.

2001 Component Performance Plan and 1999 Accountability Report

A. Component Mission and Goals, and Relationships to DOJ Strategic Plan

The COPS Office 2001 request is a critical component of the Administration's Crime Control Strategy, and fully supports the Assistance to State and Local Governments core function included in the Department of Justice's (DOJ) Strategic Plan, 1997-2001. The COPS program directly supports Strategic Goal 2 and 3, under Core Function 2: Strengthen and improve community policing services, and, by the year 2000, increase the number of officers funded by 100,000 over 1992 levels and support innovative, community-based strategies aimed at reducing crime, and violence in our communities. COPS supports these goals by substantially increasing the number of officers on-the-beat practicing community policing, through Public Safety and Community Policing Grant programs. Community Crime Prevention efforts, and Crime Technologies initiatives. COPS Indian Country grant program directly supports Strategic Goal 1, under Core Function 2: Improve criminal and juvenile justice system improvements in Indian country by providing grants to Indian tribes to develop and enhance their judicial systems, train local court personnel, support youth anti-violence initiatives and for basic law enforcement needs.

COPS Mission

The Office of Community Oriented Policing Services is dedicated, through partnerships with communities, policing agencies, and other public and private organizations, to significantly improve public safety in neighborhoods and communities throughout the country.

We will accomplish this mission by funding up to 150,000 additional officers by the end of 2005, expanding the use of current technology, and continuing to put into practice the concepts of community policing in order to maintain and reduce levels of disorder, violence and crime through the application of proven, effective programs and strategies. We will meet the needs of our customers through innovation and responsiveness. We will create a workplace that encourages creativity, open communication, full participation, and problem solving.

We will carry out these responsibilities through a set of core values that reflect our commitment to the highest standard of excellence and integrity in public service.

B. Highlights of 1999 Mission Critical Results

- On May 12, 1999, the COPS Office reached its goal, established in 1994 at the Office's inception, to provide funding for 100,000 additional community-policing law enforcement officers. This was accomplished with a total of 24,141 grants for hiring, redeployment, technology equipment, and support systems announced to 11,558 grantees. The federal share of these awards total over \$5 billion.
- In response to an alarming number of violent crimes recently committed in the nation's schools, the COPS Office awarded \$178 million to hire over 1,500 school resource officers deployed to work in and around schools in 1999. In addition, COPS awarded over \$13 million in 1999 to provide policing agencies with an opportunity to work with schools and community-based organizations to address persistent school-related crime problems. Grants funded such items as computer technology, crime analysis personnel, collaborative problem-solving training, community organizers, school personnel, and student-involved projects.
- In 1999, the COPS Office continued to support comprehensive on-site and in-house monitoring activities consisting of in-depth reviews of grant compliance and implementation of community policing. The COPS Monitoring Division conducted 809 monitoring site visits and, along with the Legal Division and Office of the Comptroller, was involved in eleven planned regional training sessions nationwide that addressed issues such as supplanting and retention.
- In 1999, the COPS Office continued support to the 28 Regional Community Policing Institutes (RCPIs). The RCPIs trained 50,000 individuals including 8,500 community members in advanced community policing strategies. To expand training opportunities the Training and Technical Assistance Division, through the RCPIs, partnered with domestic violence advocacy groups, police departments, and other providers of social and health services to utilize community based strategies to combat domestic violence throughout the United States. The COPS Office also provided 155 School-Based Partnership grantees with training in implementing problem-solving efforts to reduce and prevent crime and disorder in and around public schools.
- COPS provided \$33 million to enhance law enforcement on Indian lands in 1999. Grants were awarded for hirring uniformed
 officers and for the purchase of equipment and training for new and existing officers. This included the development and delivery

of culturally sensitive community policing training for Indian Country through the RCPIs. Of the \$33 million, COPS provided \$7.3 million for the Comprehensive Indian Resources for Communities and Law Enforcement (CIRCLE) project in coordination with the Office of Justice Programs.

- In 1999, COPS awarded nearly \$4 million for the implementation of a voluntary 3 digit non-emergency system. These systems
 provide communities with an easy way to reach local law enforcement agencies for non-emergencies, thus relieving the burden on
 the 9-1-1 emergency system.
- In 1999, COPS provided funding for state and local projects to combat methamphetamine production, distribution, and use, as well
 as training funds to the Drug Enforcement Agency (DEA). A total of \$34.9 million was provided under the COPS
 Methamphetamine Program designed to fight this escalating methamphetamine problem.

C. 2001 Performance Goals and Indicators

The COPS Office will continue to support its two primary goals of significantly increasing the number of officers on the beat and advancing community policing. The goals are attainable within the requested level of resources and with demonstrable results, as shown below. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act (GPRA). The key COPS performance goals for 2001 are listed below:

COPS Long Range Goal: Fund up to 50,000 additional officers

In FY 2001, COPS will continue its progress toward funding up to 50,000 additional officers by funding approximately 6,000 to 7,000 additional law enforcement officers in 2001 through the Universal Hiring and MORE programs.

Summary Level Performance Indicators

- Number of grants awarded
- Number of additional police officers funded
- Cumulative total police officers funded

COPS Long Range Goal: Strengthen and improve community police services

In FY 2001, COPS will conduct 660 site visits to examine grantees' records and practices to insure that COPS funds are being used properly to fund additional officers and implement community policing

Summary Level Performance Indicators

Number of on-site comprehensive monitoring evaluations of COPS grantees

COPS Long Range Goal: Strengthen and improve community police services

COPS will host or attend 7 conferences on community policing where researchers, academics, and law enforcement officials can exchange information and ideas. We will increase the availability of COPS-generated information to the law enforcement and research communities by 50 percent.

Summary Level Performance Indicators

- Number of conferences hosted or attended to disseminate information about community policing
- Percentage increase of the availability of COPS-generated information to the law enforcement or research communities

COPS Long Range Goal: Strengthen and improve community police services

COPS will increase efforts to enhance police integrity by implementing a nationwide training program that will focus on police ethics and community policing. COPS will also develop and implement the Police Recruitment Initiative, which aims to diversify the workforce in law enforcement agencies.

Summary Level Performance Indicators

- Number of grants awarded to provide technology and technical assistance (to Police Integrity grantees)
- Number of training products that are available for police agencies (under the Recruitment Initiative)

COPS Long Range Goal: Strengthen and improve community police services

COPS will make up to 50 CONECT program awards to law enforcement agency consortia working together to enhance interconnectivity in a region.

Summary Level Performance Indicators

Number of CONECT grants awarded

D. New 2001 Initiatives

The COPS Office total requested program increases (131 positions, 66 workyears, and \$740,000,000) can be grouped into five distinct initiatives, each of which supports a key component of the Administration's commitment to community policing.

Initiative: Public Safety and Community Policing Grants (\$225,393,000)

Hiring Programs: (\$68.393 million)

The COPS Office will continue to provide grants to state and local law enforcement agencies to hire and redeploy police officers, as well as encourage the institutionalization of community policing practices. The Universal Hiring Program will continue to be the COPS Office's primary hiring grant program. COPS is requesting an increase of \$68,393,000 to the Public Safety and Community Policing Grant programs to fund up to 150,000 additional law enforcement officers, including continued funding of school resources officers through the COPS-in-Schools program, from 1994 through 2005.

Non-Hiring Programs: (\$157 million)

The 2001 budget requests \$157,000,000 for non-hiring programs including Police Corp, Bulletproof Vests, Safe Schools, DC Court Services and Offender Supervision, Indian Country, and National Police Officer Scholarships. These on-going programs have been funded from unobligated balances, in the hiring programs, in prior years.

This initiative directly relates to Goals 1, 2, and 3 under the Core Function 2 in the DOJ Strategic Plan: 1) Improve the crime-fighting and criminal/juvenile justice system capabilities of tribal, state, and local governments; 2) Strengthen and improve community police services and, by the year 2000, increase the number of officers funded by 100,000 over 1992 levels; and 3) Support innovative, community-based strategies aimed at reducing crime, and violence in our communities.

Initiative: Management and Administration (131 positions and \$5,282,000)

Management and Administration (M&A) is responsible for funding management oversight and administrative support for the COPS Office. These responsibilities include labor-intensive tasks such as processing grant applications, assisting grantees, compliance assessment, and programmatic and financial closure. Due to the rising numbers of maturing grants, the need for grant compliance monitoring, site visits, non-compliance resolution, and grant closure have increased. These responsibilities require substantial interaction with grantees, a final programmatic compliance assessment, and records archiving. COPS continues to review and award new grants at the same time as they are addressing these issues. This situation has caused the need for an increase in the management and administration of the COPS Office. Of the 131 increased positions, 5 are requested for the Justice Management Division, 95 are requested for the Office of Justice Programs, and 34 will be dedicated to COPS.

This initiative directly relates to the following goal in the DOJ Strategic Plan: Strengthen and improve community police services and, by the year 2000, increase the number of officers funded by 100,000 over 1992 levels.

Initiative: Community and Local Prosecutors (\$190 million)

This program will be administered by the Office of Justice Programs and will make discretionary grants to state, local, and tribal jurisdictions and prosecutors' offices to substantially increase the number of local prosecutors interacting directly with members of the community and to encourage local prosecutors to recrient their emphasis to tough enforcement at a community level. Of this amount,

\$150 million will be used to hire 1,000 state and local gun prosecutors and \$50 million to hire up to 300 community prosecutors. In addition, funding will also be available for training and technical assistance as well as program research and evaluation.

This initiative directly relates to goal 3 under Core Function 2 in the DOJ Strategic Plan: Support innovative, community-based strategies aimed at reducing crime, and violence in our communities.

Initiative: Community Crime Prevention (\$99,325,000)

Police Integrity and Hate Crimes Training: (\$20 million)

Public concern over police integrity threatens the trust between the police and the community that is essential to effective policing. In response to these problems, the COPS Office, in coordination with the Office of Civil Rights and the Office of Justice Programs will administer this initiative.

The COPS Office will encourage greater professionalism in the ranks of local law enforcement by providing training and technical assistance grants to develop and implement new policing methods and strategies that encourage a more professional police force. Departments seeking to prevent problems such as use of excessive force, racial profiling, overtime abuse, and/or other egregious methods that raise questions about department integrity will be eligible to receive training and technical assistance under these grants.

· Police Recruitment: (\$5 million)

COPS will assist local law enforcement agencies with recruiting a diverse body of qualified applicants. Police agencies have struggled for many years to recruit and hire minority and women officers, knowing that by reflecting the demographics of the community they serve, police agencies are better able to reach those communities, as well as minority groups that have historically been excluded. The lack of diversity has hindered police agencies' community policing efforts. The Community Police Recruitment Initiative is designed to assist agencies in the development of officer recruitment standards, collaboration with their stakeholders, and provide training for law enforcement personnel professionals on effective recruitment techniques.

· Cliben's Problem-Solving Academies/One America Race Dialogues: (\$5 million)

The primary goal of this program is to provide citizens with the tools and training necessary for them to work collaboratively with policing agencies to use problem solving techniques to reduce crime. A secondary objective of the Citizen's Academies is to help institutionalize the practice of community policing in jurisdictions throughout the nation, through substantive citizen participation in crime prevention efforts.

In addition, COPS will coordinate with the Department of Justice's Community Relations Service to provide support and technical assistance to state and local governments and community-based and other organizations to promote and facilitate dialogues on racial diversity and understanding.

Value-Based Program Between Youth and Police: (\$5 million)

The Value-Based Community Policing Partnerships Initiative is designed to encourage and support the development of relationships between police, youth, and local value-based organizations and entities. These organizations will work collaboratively to develop programs that address youth issues such as street violence and gangs, drug abuse, school failure, child abuse and neglect, teen pregnancy, incarceration, chronic joblessness, lack of cultural values, and hopelessness about the future.

School-Based Partnership Program: (\$10 million)

Recent school violence has generated intense public concern about the safety and security of our nation's youth. As part of the Administration's commitment to combat and prevent crime in and around America's schools, the COPS Office will expand its existing School-Based Partnership Program. This \$30,000,000 program (\$20,000,000 is derived from the Safe Schools program mentioned under the Public Safety and Community Policing Grants section) provides grants to local law enforcement agencies to reduce school-related crime through enhanced community policing strategies. COPS School-Based Partnership Program emphasizes the fostering of partnerships among police, community organizations, and local boards of education. These collaborative teams will be responsible for problem identification, as well as developing effective responses, including prevention and intervention strategies.

Safe Schools/Healthy Students: (520 million)

In partnership with other offices within the U.S. Departments of Justice, Education, and Health and Human Services, OJJDP plans to fund Safe Schools/Healthy Students continuation grants to 54 sites awarded in 1999 and a projected 18 additional sites in 2000. Through a cooperative agreement with the Research Triangle Institute, OJJDP is collaborating with the Departments of Educatic and Health and Human Services to conduct a national evaluation of this program and will provide continuation funding for this activity in 2001, as well as transfer continuation funding to the National Mental Health Association to provide training and technical assistance to the sites through the Safe Schools/Healthy Students Action Center. With the 2001 request, the Safe Schools/Healthy Students program will continue to fund the 72 sites from 1999 and 2000, as well as provide funding for an additional 40 new sites.

Community Supervision Program - Project Reentry: (\$35 million)

This initiative, Project Reentry, will help reduce recidivism and improve public safety by awarding discretionary grants to address the public safety threats posed by offenders returning to the community from state and federal prisons or local facilities housing state and federal prisoners. Project Reentry will enable states and local communities to create broad partnerships that will use their combined resources to provide the necessary combination of surveillance, sanctions, incentives, and support services in ways that afford increased protection to communities that experience unusually high returns of inmates. The Department of Justice will administer the program in partnership with the Department of Labor, who will develop and operate jobs-related programs in the same communities, and the Department of Health and Human Services, who will dedicate funds for substance abuse and mental health treatment service.

· Police Firearms Surplus Safety Program: (\$10 million)

The goal of this initiative is to prevent guns from being circulated into the population from state and local law enforcement agencies. The program funding will provide one-time grants to state and local law enforcement agencies to help meet budgetary constraints associated with selling used and seized firearms. Law enforcement agencies must certify that they will use the funding to end the practice of reselling used police firearms and confiscated weapons on civilian markets.

. Building Blocks: (\$15 million)

The short-term goal of the Building Blocks program is to help communities identify and respond to immediate and pressing community problems. The long-term goals are to institutionalize the skills gained from short-term activities and to integrate lasting problem solving capabilities. This program will provide assistance to communities in the following five core areas: (1) Collaborative Teams for Technical Assistance; (2) Data Driven Assessment and Planning; (3) Community-Based Intervention; (4) Long Term Infrastructure; and (5) National Evaluations. The goals of the program apply equally to adult and juvenile justice issues, and to enforcement and prevention efforts.

Strategic Approaches to Community Safety Initiative (SACSI): (\$10 million)

SACSI resources will be used to implement a collaborative, information-driven approach to crime reduction in 50 communities across the country. Under U.S. Attorney leadership, this Strategic Approaches to Community Safety Initiative (SACSI) model — which partners federal, state and local law enforcement, researchers, criminal justice personnel, elected officials and community members to critically examine and overcome a targeted crime problem — is extraordinarily promising and offers the potential of real success in terms of reducing crime and saving lives.

. Methamphetamine Program: (Decrease \$35.675 million)

The \$35,675,000 decrease in COPS funding is to eliminate the earmarks for methamphetamine and drug hot spots. In 2000, the funding was included from direct appropriations for state and local law enforcement programs to combat methamphetamine production, distribution, and use (with over \$35 million earmarked for specific state and local projects). In addition, the funding was used to reimburse the Drug Enforcement Administration for assistance to state and local law enforcement for proper removal and disposal of hazardous materials at clandestine methamphetamine labs. The funding was also used for policing activities in "hot spots".

This initiative directly relates to goal 3 under Core Function 2 in the DOJ Strategic Plan: Support innovative, community-based strategies simed at reducing crime, and violence in our communities.

Initiative: Crime Technology (5220,000,000)

Crime Identification Technology Assistance Act: (\$69 million)

The following six programs comprise the CITA request in 2001, totaling \$199,000,000:

- COPS Community Oriented Networking and Enhanced Communications Technology (CONECT): (\$89 million)

The COPS Community Oriented Networking and Enhanced Communications Technology (CONECT) program will help state and local law enforcement agencies purchase and implement new technologies to fight crime more effectively. Unlike the COPS MORE program, CONECT will not require agencies to redeploy officers as a condition of this grant. COPS CONECT will enable agencies to employ state-of-the-art technology to address interoperability issues, improve information flow between criminal justice agencies, and provide access to fully-integrated information systems required for successful field operations, investigations, and problem-solving. The ability to purchase enhanced technology will allow multiple agencies to work collatoratively to analyze, prevent, and fight crime through the development of regionally based law enforcement information networks or consortia.

- National Integrated Ballistic Identification Network (NIBIN): (\$10 million)

The National Integrated Ballistic Identification Network (NIBIN) is comprised of approximately 229 computer installations in federal, state, and local forensic laboratories. At the present time, there are approximately 1 million ballistics images in this system. There have been over 8,000 matches (cold hits) linking two or more images that would not have otherwise have been linked. The President has proposed the goal of being able to identify every bullet in every crime with a gun through the expanded use of this network.

- OJP Global Criminal Justice Information Network Initiative (OJP Global): (\$18 million)

The goal of the Global Initiative is to improve state and local criminal justice through the development of a nationwide network of criminal justice information systems where state and local authorities with responsibilities for law enforcement, courts, prosecution, public defense, corrections, probation and parole will have immediate access to information necessary to respond to and resolve the consequences of criminal activity. The Global Initiative is being coordinated with two other

interoperability efforts in DOJ -- the NIJ's Advanced Generation of Interoperability for Law Enforcement (AGILE) Project and the Public Safety Wireless Network (PSWN).

JMD GLOBAL: (\$7 million)

The mission of the Global Justice Information Network (Global) project is to facilitate mission critical information exchange among law enforcement, courts, corrections, and other justice-related entities at the federal, state, local, tribal, and international levels. The Global initiative was established in Initiative A07 of Vice President Gore's "Access America: Reengineering Through Information Technology".

Advanced Generation of Interoperability for Law Enforcement (AGILE): (\$5 million)

The goal of the National Institute of Justice's (NIJ) Advanced Generation of Interoperability for Law Enforcement (AGILE) program is to address the lack of communication interoperability among state and local criminal justice and public safety communities. The AGILE program is the only federal interoperability program that will address both wireless communication and information sharing technology.

- Public Safety Telecommunications Assistance Program (PSWIN): (\$70 million)

This initiative will provide for planning grants to states and eligible territories for the purposes of encouraging these jurisdictions to include several criteria in their planning process, including interoperability across all local, state, and federal public safety agencies. In addition, PSWIN will seek to administer a technical assistance program to assist states and municipalities in the planning and design of improved public safety communications systems, structured to account for states at differing stages of systems development. Finally, the program will provide the National Telecommunications Information Administration (NTIA) with funds for demonstration grants that will assist a limited number of states and municipalities in implementing public safety communication systems.

· National Law Enforcement and Corrections Technology Centers: (\$10 million)

The National Law Enforcement and Corrections Technology Center system was established in 1999 by the Office of Justice Program's National Institute of Justice to offer technology information, support, research findings, and technological expertise to

help state and local law enforcement and corrections personnel perform their jobs more safely and efficiently. The NLECTC system consists of facilities located around the country that are co-located with an organization or agency that specializes in one or more specific areas of research and development. This arrangement is particularly cost effective and beneficial to the field because it allows for leveraging structures and expertise already in place in these organizations or agencies, and in which taxpayers have already made significant investments.

DNA Technology Research and Development: (\$5 million)

The challenge for forense DNA testing in the 21th Century is to be able to identify offenders quickly, with high discriminatory power and lower cost from minuscule sources of physical evidence. This program, previously funded by the Department of Justice's NIJ, directs research toward the development of highly discriminating, less costly, reliable, rapid, and portable DNA testing technology tools for the investigation of violent crime. NIJ anticipates that this initiative will result in the development of at least two acceptable DNA testing technologies complete with training and validation necessary for court acceptance. These innovations will provide new tools for suspect identification or exclusion in violent crime cases and for development of a nationwide DNA database system, increasing the likelihood that the guilty will be identified and reducing the likelihood that the innocent will be charged or convicted.

· Criminal Records Upgrade: (570 million)

The Criminal Records Upgrade Program, also referred to as the National Criminal History Improvement Program (NCHIP), assists states in the upgrade of criminal history, criminal justice, and identification record systems; promotes capability and participation in national, state, and local systems; and captures information for statistical and research purposes. Among other things, NCHIP will improve the speed and accuracy of Brady background checks for firearm purchases.

Crime Laboratory Improvement Program (CLIP): (535 million)

CLIP will improve the analytic and technological resources of forensic labs servicing all 50 states. This program will also increase forensic laboratory access to specialized forensic services, strengthen the network of cross-jurisdictional learning among local, state and regional labs; and establish a steering group for the intelligent allocation of scarce, yet high priority, forensic capabilities to critical investigations. In a decade when high profile cases have called the accuracy, reliability and integrity of the nation's

forensic laboratories into question, CLIP will provide immediately appreciable results: more crimes solved, more criminals brought to justice, and better administration of justice through the presentation of strong, reliable forensic evidence at trial.

DNA Backlog Elimination: (\$15 million)

Funding for this program will provide DNA laboratories with the technology to dramatically improve analytic capacity, thereby reducing the backlog and freeing up laboratory resources for the analysis of new DNA and other types of forensic evidence. The requested resources will assist state and local DNA labs in eliminating their backlog of statutorily mandated convicted offender DNA samples while keeping pace with current DNA casework needs.

COMPASS: (\$10 million)

The Department of Justice requests \$10 million to build local crime data collection and analysis capacity in urban, suburban, and rural communities, to improve models for predicting crime in neighborhoods with the use of advanced crime mapping techniques, and to test the effectiveness of selected community crime prevention interventions. This initiative, which will be administered by the National Institute of Justice (NIJ), will develop a new way of understanding crime in its local context, and will arm practitioners with the tools they need to help them adapt to changing crime patterns.

· Computer Forensic Crime Laboratory Enhancement Program: (\$6 million)

The criminal justice community has an immediate need for greater investigative resources to combat the rising levels of electronic crime. Because of the unique nature of electronic crime - it involves the use of rapidly changing technology, and its perpetrators can strike instantly from everywhere in the world - most state and local law enforcement agencies, which typically have a very limited capacity to respond to such crimes, face severe hardships in responding adequately. NIJ will address the electronic crime forensics challenge through the development of a computer forensic laboratory system, including up to ten dedicated regional computer forensics labs, and will engage in strategic activities to enhance state and local law enforcement's capabilities to respond to the most common electronic crimes.

This initiative directly relates to goal 1 under Core Function 2 in the DOJ Strategic Plan: Improve the crimo-fighting criminal/juvenile justice system capabilities of tribal state and local governments.

For a more extensive discussion of these initiatives and how they relate to DOI's longer-term strategic goals, begins on page 29 of this submission.

E. Data Validation and Verification Issues.

Data Collection and Storage:

The COPS Management System (CMS), an in-house database, is an integral part of the grant award process, tracking every application from the date it is received to the date of announcement. CMS contains detailed data on each grantee, including the type of awards held and the number of officers funded. This system yields grant processing information that can be tracked and verified.

In the past year, we have implemented a new section of CMS called the Issue Resolution Module which for the first time gathers in one place all the compliance issues found by various divisions on specific grantees. The Legal, Grants Administration, and Grant Monitoring Divisions are now jointly tracking compliance issues which has enhanced our ability to report on those efforts.

Data Validation and Verification:

The COPS Office's primary vehicle for measuring the number of officers hired and practicing community policing as a result of COPS funding has been the COPS Count Survey. This survey, conducted three times a year by a contractor, is a laborintensive process that involves contacting every single COPS grantee. In an effort to enhance the accuracy of the count, as well as reduce costs, COPS is evaluating the benefits of conducting limited surveys using representative samples of MORE grantees contacted by COPS employees familiar with the program. In addition, COPS will continue contacting the entire UHP population through the use of the existing contract.

Data Limitations:

COPS collects data on the number of officers, citizens, at d agencies trained from the Regional Community Policing Institutes.

The office believes that the data is reliable; however, to en tance accuracy and standardize data collection among the Institutes,

COPS is considering asking the institutes to report on the number of training hours delivered as well as the number of attendees at each training session.

F. Resources

Under Core Function 2, Assistance to 1ribal, State and Local Governments, the COPS Office supports three DOI Strategic Goals Strategic Goal 2.1 is to Improve the Crime-Fighting and Criminal/Juvenile Justice System Capabilities, Goal 2.2 is to Strengthen and Improve Community Policing Services, and Goal 2.3 to Support Innovative, Community-Based Strategies Aimed at Reducing Crime, and Violence in our Communities.

Strategic Goal		1999		T	2000			2001	
	Dollars	Positions	FTE	Dollars	Positions	FTE	Dollars	Positions	FTE
Improve Crime- Fighting and Criminal/Juvenite	143 million	23	19	130 million			420 million	46	23
Justice System Capabilities						I		_	! <u> </u>
Strengthen and Improve Community Police Services	1.194 billion	228	197	419 million	235	235	543 million	240	238
Support innovative, community-based strategies aimed at reducing crime, and violence in our communities	81 million	15	13	46 million			372 million	80	40

G. DOJ Summary Performance Pian, Performance Goals, Targets, and Actuals

Core Function 2: Assistance to Tribal, State and Local Governments.

DOJ Strategic Goal 2.1: Improve the Crime-Fighting and Criminal/Juvenile Justice System Capabilities of Tribal, State

and Local Governments.

DOJ Strategic Goal 2.2: Strengthen and Improve Community Policing Services and, by the year 2000, increase the

number of officers funded by 100,000 over 1992 levels.

DOJ Strategie Goal 2.3: Support Innovative, Community-Based Strategies Aimed at Reducing Crime, and Violence in

our Communities.

Key Summary Level Indicators	1998 Actual	1999 Actual	2000 Planned	2001 Planned
Number of standardized packages of materials developed for grantees to provide guidance and implement community	12,000	500*	12,700	13,000
policing Number of law enforcement agencies that have received COPS	11.075	11.853	12.564	13.317
grants			<u> </u>	
Cumulative number of new police officers funded as a result of COPS funding:	88,030	103,720	109,353	115,353 = 116,353

^{*} FLETC delayed dissemination of 10,000 training packages to COPS grantees until 2000.

COMMUNITY ORIENTED POLICING SERVICES Justification of Proposed Changes in Appropriation Language

The 2001 hudget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and bolded with deleted matter enclosed in brackets.

For Activities authorized by the Violent Crime Control and Law Enforcement Act of 1994, Public Law 105-322 ("the 1994 Act") (including administrative costs), \$595,000,000, to remain available until expended, including \$45,000,000 which shall be derived from the Violent Crime Reduction Trus; Funds, of which \$130,000,000 shall be available to the Office of Justice programs to carry out section 102 of the Crime Identification Technology. Act of 1998 (42 U.S.C. 14601), of which \$35,000,000 is for grants to upgrade criminal records, as authorized by section 106(b) of the Brady Handgun Violence Prevention Act of 1993, as amended, and section 4(b) of the National Child Protection Act of 1993, of which \$15,000,000 is for the National Institute of Justice to develop school safety technologies, and of which \$30,000,000 shall be for state and local DNA laboratories as authorized by section 1001 (a)(22) of the 1968 Act, as well as for improvements to the state and local forensic laboratory general forensic science capabilities and to reduce their DNA convicted offender database sample backlog, of which \$419,325,000 is for Public Safety and Community Policing Grants pursuant to title 1 of the 1994 Act, of which \$180,000,000 shall available for school resource officers, of which \$35,675,000 shall be used for policing initiatives to combat methamphetamine production and trafficking and to enhance policing initiatives in drug "hot sputs", and of which \$10,000,000 shall be used for the Community Presecutors program. Provided, That of the amount provided for Public Safety and Community Policing Grants, not to exceed \$29,825,000 shall be expended for program management and administration. Provided further. That of the unobligated balances available in this program, \$210,000,000 shall be used for innovative community policing programs, of which \$100,000,000 shall be used for a law enforcement technology program, \$25,000,000 shall be used for the Matching Grant Program for Law Enforcement Armor Vests pursuant to section 2501 of part Y of the Omnibus Crime Control and Safe Streets Act of 1968 ("the 1968 Act"), as amended, \$30,000,000 shall be used for Police Corps education, training, and service asset forth in sections 200101-200113 of the 1994 Act, \$40,000,000 shall be available to improve tribal law enforcement including equipment and training, and \$15,000,000 shall be used to combat violence in schools. | For netlytties authorized by the Violent Crime Control and Law Enforcement Act of 1994, Public Law 103-322 ("the 1994 Act") \$1,335,000,000, to remain available until expended; Provided, That the Attorney General may transfer any of these funds, and balances for programs funded under this heading in fiscal year 2000, to the "State and Local Law Enforcement Assistance" account, to be available for the purposes stated under this heading: Provided further, That administrative superies associated with such transferred amounts may be transferred to the "Justice Assistance" account. Of the amounts provided:

- 1) for Public Safety and Community Policine Grang purposed to title 1 of the 1994 Act, \$650,000,000 as follows: not to exceed \$36,000,000 for program management and administration: \$10,000,000 for programs to combat violence in ichools: \$75,000,000 for the matching grand program for Law Enforcement Armor Yests purposed to section \$301 of part Y of the Omnibus Crime Control and Safe Streets Act of 1968, as amended: \$17,000,000 for program support for the Court Streets and Offender Supervision Angary for the District of Columbia: \$45,000,000 to Improve tribal law enforcement including equipment and strictling: \$10,000,000 for National Police Officer Scholaritains; and \$30,000,000 for Police Correspond from training, and streets under section 200(1):200113 of the 1994 Act;
- 21. for crime technology, \$550,000,000 as follows: \$70,000,000 for grants to upgrade, crimelant records, as authorized under the Crime Identification Technology Act of 1998 [42 U.S.C. 14001; \$15,000,000 for state and forall forents; laby to reduce their constituted offender DNA approximates as authorized by section 1001 [abi32] of the 1958 Act, as well as

improvements to state, tribal and loyal forensic laboratory general forensic science capabilities; \$10,000,000 for the National Institute of Justice Law Enforcement and Corrections Technology Centers; \$5,000,000 for DNA technology research and development; \$10,000,000 for research rechnical assultance, evaluation, grants, and other expenses to public and improve crime-spiring, data sharing, and crime-forcessing technologies; \$6,000,000 to establish regional foreuse computer tabs; and \$199,000,000 for discretionary grants, including planning grants, to states under section 102h of the Crime Identification Technology Act of 1998 (42 U.S.C. 14501), of which up to \$99,000,000 is for grants to law enforcement agencies, and of which not more than 23 percent may be used for splantes, administrative expenses, technical assistance, training, and explusions.

- 3) for a Community Prosecution Program, \$200,000,000, of which \$150,000,000 shall be for grants to states and units of local government to address gun violence "hot spots";
- 4) for grants, training, technical assistance, and other expenses to support community crime prevention efforts, \$135,000,000 as follows: \$35,000,000 for a youth and school safety program; \$5,000,000 for critizen academies and One America race dialogues; \$35,000,000 for an offender resentry program; \$25,000,000 for a Building Blocks Program, including \$10,000,000 for the Strategic Approaches to Community Safety Intratives; \$20,000,000 for police integrity and hate crimes training; \$5,000,000 for police rescultment; and \$10,000,000 for police fireterms surplus safety.

(Department of Justice Appropriations Act, 2000, as enacted by section 1000 (a) (1) of the Consolidated Appropriations Act, 2000 (P.L. 106-113))

Explanation of changes

- 1 Language is proposed to provide the Attorney General the authority to transfer any 2000 COPS funds, and balances for programs funded under this heading in 2000, to the "State and Local Law Enforcement Assistance" account, and to allow administrative expenses associated with such transferred amounts to be further transferred to the "Justice Assistance" account. This language will provide optimum flexibility in the operation of these programs.
- 2. Language is proposed to delete reference to the use of unobligated balances in 2000 language. Language is proposed for funding Public Safety and Community Policing Grants, including programs to combat violence in schools, matching grant program for Law Enforcement Armor vests, for program support for the Court Services and Offender Agency for the District of Columbia, and improve tribal law enforcement, funding for National Police Officer Scholarships, and for Police Corps education, training, and service. Similar language was provided in 2000. The current proposal is intended to make language proposals more easily used.

2756

- 3. Language is proposed to fund intovative programs to combat crime, including \$70,000,000 for grants to upgrade criminal records. \$15,000,000 for State and local forensic labs to reduce convicted offender DNA sample backlog, \$35,000,000 for State, Tribal and focal DNA laboratories, \$10,000,000 for the National Institute of Justice Law Enforcement and Corrections Technology Centers, \$10,000,000 for assistance to use and improve crime-solving, data sharing and crime forecasting technologies, \$6,000,000 to establish regional forensic computer labs and \$199,000,000 for discretionary grants. The discretionary grants language, including planning grants, to States, under section 102b of the Crime Identification Technology Act of 1998 (42 U.S. C. 14601), of which up to \$99,000,000 is for grant to law enforcement agencies.
- Language is proposed for a Community Prosecutor Program, including \$150,000,000 for grants to States and local government to addressing gun violence "hot spots"
- 5. Language is proposed for funding \$135,000,000 for grants, training, and technical assistance in support of community crime prevention efforts.

BASE PROGRAM DESCRIPTION: The 2001 requested level will provide sufficient funding to continue the COPS program. Funds will be used to hire and redeploy as well as train and educate law enforcement officers. The COPS Office is requesting \$614,000,000 for Public Safety and Community Policing Grant programs.

The Public Safety and Community Policing Grants decision unit includes the following critical program areas, in addition to the hiring-related program: Police Corps (\$30,000,000), Bulletproof Vests (\$25,000,000), Safe Schools (\$20,000,000), D.C. Offender/D.C. Courts (\$17,064,000), Indian Country initiatives (\$45,000,000), and National Police Officers Scholarships (\$20,000,000).

PROGRAM CHANGES:

COPS Hiring Programs: (Increase \$68,329 million)

The goals of the hiring programs are to design, implement, and support discretionary grant programs that significantly increase the number of law enforcement officers and sheriffs' deputies in communities throughout America. Funds are to be applied to grants for the hiring and redeployment of officers through procurement of related equipment and technology, or civilian hiring. COPS funded a

total of 103,720 officers by the end of 1999 and anticipates reaching 109,353 at the end of 2000. Based on requested funding levels, COPS estimates between approximately 6,000 and 7,000 additional officers will be funded in 2001.

COPS Universal Hiring Program (UHP). The COPS Universal Hiring Program was announced in June 1995. The COPS Office will continue the Universal Hiring Program as its primary hiring grant mechanism. This program is open to all policing agencies that have primary law enforcement responsibility and to applicants seeking to start a new department. These resources will be used to fund officers to work with communities to fight back against school violence, drugs, gangs, and other crime as well as continue to fund school resource officers through the COPS-in-Schools program. The Universal Hiring Program accepts applications submitted by agencies or communities that are not currently COPS grantees as well as current COPS grantees seeking additional resources.

In 2001 COPS will target up to \$50,000,000 of its UHP hiring funds for the hiring of community police officers to work with local prosecutor officers. Officers hired under this initiative will be counted toward the COPS Office hiring goal of up to 150,000 officers funded by the year 2005. It is estimated that up to 670 officers will be hired under this initiative in 2001.

The COPS Office has begun to develop a new program to fund officers in crime hot spots. At this point, it is anticipated that this program will be initiated after congressional notification sometime in 2000 and will be continued in future years. In order to implement this program, a change in the application of the waiver criteria would be required. Under the program, any law enforcement agency would be eligible for a waiver when a community-policing officer is assigned to an area designated as a crime hot spot. The waiver will guarantee that fiscal constraints will not exclude any community from participating in the program.

<u>COPS Making Officer Redeployment Effective (MORE) Program.</u> COPS MORE was announced in December 1994 as a program designed to expand the time available for community policing by current law enforcement officers. These grants are used both to purchase equipment and technology and to procure support resources (including civilian personnel). Applicants are required to demonstrate how funds will result in actual increases in the number of officers deployed in community policing equal to, or greater than, the number of officers which would result from grants of the same amount for hiring new officers.

Training and Technical Assistance. This program area includes Training and Technical Assistance as well as Program, Policy, Support, and Evaluation. The goal of Training and Technical Assistance is to design, implement, and support programs that reinforce partnerships and activities to deliver training and technical assistance that will help in permanently sustaining community policing. The objective of Training and Technical Assistance will be achieved by integrating community partnerships, problem-solving, and organizational transformation into regional, state, local, and Indian tribal police and community groups and activities. Through the Regional Community Policing Institutes training in community policing will be available to every state in the nation. The goal of

Program, Policy, Support, and Evaluation is to evaluate the practice of community policing nationwide, promote its adoption, and determine the effectiveness of various strategies.

COPS Non-Hiring Programs: (Increase \$157.064 million)

In 2001, the total requested increase for non-hiring programs includes the following new program:

National Law Enforcement Scholarship Program. Of the \$20,000,000 requested, eighty percent will be dedicated to improve the retention of dedicated officers while creating a better-educated police force. In addition, twenty percent of the available funds will be used to support internships and part-time positions for students as a way for them to gain an understanding of the duties performed by law enforcement agencies.

The following on-going programs, funded in previous years out of carryover funds, are requested increases in 2001:

Police Corps. In 2001, \$30 million is requested for the Police Corps Program, which will be administered by the Office of Justice Programs (OJP). In each 1999 and 2000, \$30 million has been appropriated under COPS to be administered by OJP for this program, which is designed to address violent crime by helping police and sheriff's departments increase the number of officers with advanced education and training assigned to community patrol. The program, which operates within states that have submitted an approved state plan, is designed to motivate highly qualified young people to serve cities and counties as police officers and sheriff's deputies. It does this by offering federal scholarships on a competitive basis to college students who agree to serve as police for at least 4 years. The scholarship funds cover educational expenses, including tuition, fees, books, supplies, transportation, room and board, and miscellaneous expenses. Participants who seek baccalaureate degrees begin their work as police upon graduation from college. Those participants pursuing graduate study complete their service in advance. Participants become members of state end local police departments in geographic areas that have the greatest need for additional police officers. All serve on community patrol.

<u>BulletProof Vests.</u> In 2001, \$25 million is requested for the Bulletproof Vest Partnership (BVP) Program, which will be administered by the Office of Justice Programs (OJP). In each 1999 and 2000, \$25 million has been appropriated under COPS to be administered by OJP for this program, which helps to protect the lives of law enforcement officers by providing funds to units of state and local government and Indian tribes for the purchase of bulletproof vests that meet National Institute of Justice (NIJ) standards. The chief executive officer (CEO) of a jurisdiction may request funds to help purchase one bulletproof vest per law enforcement officer per fiscal year. The program provides up to 30 percent of the cost of each jurisdiction's vests. Each jurisdiction's CEO coordinates vest needs among all law enforcement agencies (police, sheriff, correction, probation/parole, etc.) in a jurisdiction and submits one

comprehensive application per year through the Internet. While online, applicants can read about NII standards for armor vest and link to yest yendors.

In March 1999, OJP's Bureau of Justice Assistance (BJA) successfully brought on-line the Bulletproof Vests Partnership Program -- a paperless, Internet-based grant application and award process. This state-of-the-art innovation was a cooperative effort between BJA, NIJ and BJS, COPS, the National Aeronautics and Space Administration, the U.S. Bureau of the Census, and private industry. This collaborative effort lead to the development of an Internet-based technology that allowed the potentially 39,000 jurisdictions nationwide easy access to grant application and award instructions, as well as information about different types of vests, vest vendors and vest manufacturers. Under this partnership, states and units of local and tribal governments request federal assistance in equipping their law enforcement officers with armor vests. The partnership provided that each eligible jurisdictions could request federal funds to help cover up to 50 percent of the cost of purchasing one bulletproof vest per law enforcement officer per fiscal year. Jurisdictions were required to purchase only those vest models meeting the standards developed by OJP's NIJ. By September 30, 1999, BJA approved a total of 3,510 jurisdictions to share in the \$23 million in 1999 available funding. It is estimated that these jurisdictions will have sufficient resources to purchase 167,000 vests.

The success of this important program was formally recognized in June 1999, when the Bulletproof Vest Partnership Program received the gold award from the Federation of Government Information Processing Councils, which recognizes innovative efforts in the use of technology to provide government services.

<u>Safe Schools.</u> This program area was developed in response to an alarming increase in the number of violent crimes committed in the nation's schools. \$20,000,000 from the Public Safety and Community Policing Grants will be used to continue funding of the COPS School-Based Partnership. An additional \$10,000,000 will be used for this initiative, and is to be derived from the School-Based Partnership Program identified under the Crime Prevention section of this document.

District of Columbia Court Services and Offender Supervision. This program has been developed to reduce crime, enhance public safety, and restore confidence in the criminal justice system in the District of Columbia. COPS will provide \$17,064,000 to strengthen and increase the level and quality of supervision of released offenders and pretrial defendants, as well as provide additional drug testing, treatment, and sanctions facilities to increase offender and agency accountability.

Indian Country. COPS will provide \$45,000,000 in grants to Indian Country to be used for hiring tribal law enforcement officers, the purchasing of equipment, and providing training to new and existing tribal law enforcement personnel.

Increase/Decrease	131	66	5,282

BASE PROGRAM DESCRIPTION: Management and Administration (M&A) is responsible for funding management oversight and administrative support for the COPS Office, and ensuring that the goals of the Office are achieved. For 2001, there are three separate enhancements within this decision unit:

To ensure the best return on the continuing federal investment in community policing, it is incumbent upon COPS to review and process each application quickly and accurately. COPS expects the number of incoming applications needing review in 2001 to be particularly high given the scope and range of various programs. Furthermore, competitive applications, such as MORE, which provide funding for technology to local law enforcement jurisdictions, are considerably more time consuming than processing Universal Hiring Program (UHP) grants. On average, it takes three times as long to process a competitive hiring grant as opposed to a normal hiring grant.

In addition to processing grants, the COPS Office will dedicate a significant portion of administrative resources to closing out expired grants from previous fiscal years. Closeout activities including final programmatic compliance assessment, financial closure, and the archiving of grant records are resource-intensive and require substantial interaction with grantees. In 2001, approximately 5,000 grants will be eligible for closeout

Critical to program integrity is the monitoring function. Grant monitoring, funded under M&A, helps ensure that the resources provided are spent as authorized and as reported by the grantee. Monitoring typically involves the labor-intensive tasks such as conducting on-site monitoring reviews or site visits of grantees, coordinating resolution of non-compliance issues with appropriate officials, and serving as liaison for the evaluation aspects of the program. The COPS Office has developed a strategy that enables monitoring personnel to visit a significant sample of grantees that includes both small and large jurisdictions from a pool of approximately 13,800 agencies. Because there are significantly more small jurisdictions, monitoring a representative sample is

extremely resource intensive. The requested increase of 31 positions, 16 FTE, and \$5,282,000 for COPS, is necessary to not only support on-going grant processing, awarding and payment activities, but also to ensure that COPS can continue to monitor grantees effectively. This would provide a total staffing level of 266 positions and 251 FTE for the COPS program.

In addition, an increase of 5 positions and 5 FTE are requested for JMD's Global Program. Funding will be used for pilot projects, additional staff, and support for the Global Advisory Committee. This funding would be paid for out of CITA program funds.

The remainder of the staffing increase, 95 positions and 45 FTE, are to support new OJP-administered programs proposed under the COPS appropriation. In order to fund these positions, the budget proposes that a portion of the proposed program funding be used.

Increase/Decrease			190,000

BASE PROGRAM DESCRIPTION:

Since 1999, a total of \$15 million has been appropriated under COPS and administered by OJP's Bureau of Justice Assistance (BJA) for the Community Prosecutor Program. In 1999, \$5 million was appropriated, however, due to the normal delay involved in developing a new program none of the funds were awarded. As a result, BJA plans to make these awards in 2000. In 2000, an additional \$10 million was appropriated for this program — these resources will be awarded during 2000 for the continued support of the development, implementation, and enhancement of the community prosecutor programs. The expertise of existing programs led by prosecutors in Denver, Portland, and Washington D.C., is being utilized in creating and enhancing new programs.

On example of how well the community prosecution concept works is the U.S. Attorney's Office in the District of Columbia, which created a community prosecution program in the Fifth Police District to work with residents to respond aggressively to the crime problems that afflict their neighborhood. Results included:

- Crime decreased by 34 percent during 1998 compared to the average decrease of 29 percent in the District of Columbia.
- With assistance from HUD, the DC Metropolitan Police, and the DC Public House Authority, a housing project known as "Montana Terrace" experienced a 72 percent reduction in crime in 1997.

Other prosecuting offices that have embraced community prosecution in some form include: Boston, Chicago, Denver, Indianapolis, Kansas City, New York City, Milwaukee, and Austin.

PROGRAM CHANGES:

Community and Local Gun Prosecution Initiative: (Increase 5190 million)

Objective

In 2001, an increase of \$190 million is requested to establish a Community and Local Gun Prosecution Initiative. This program will be administered by the Office of Justice Programs and will make discretionary grants to state, local, and tribal jurisdictions and prosecutors' offices to substantially increase the number of local prosecutors interacting directly with members of the community and to encourage local prosecutors to reorient their emphasis to tough enforcement at a community level with a special emphasis on gun violence. Of this amount, \$150 million will be used to hire 1,000 state and local prosecutors to handle gun related cases and \$50 million to hire up to 300 community prosecutors. In addition, funding will also be available for training, technical assistance, and program research and evaluation.

This initiative will allow DOI to assist states, localities, and tribes to hire dedicated prosecutors to address community crime problems through identifying and prosecuting criminals. To accomplish this mission, DOI will focus on the following goals:

- To assist state, local, and tribal prosecutors in bringing criminals to justice by identifying community criminal justice needs and
 providing funds to hire new prosecutors to address those problems -- especially gun related violence; and
- By encouraging community and local prosecutors to work in conjunction with community police, community members, and other community stakeholders to identify community needs and address them through tough and effective enforcement.

Increasingly, law enforcement agencies throughout the country are turning to successful community policing and other community-based criminal justice programs to combat priority crime problems such as guns, gangs, and drugs. One of the touchstones of these programs is the close interaction between law enforcement personnel and the community, including neighborhood and civic associations, local businesses and business associations, value-based organizations, and individual citizens. Through this interaction, law enforcement agencies can respond swiftly and effectively to crime hot spots and emerging crime problems. Moreover, by being more responsive to local crime concerns, the law enforcement community can help in efforts to revitalize communities by cracking down on quality of life crimes, fostering a safe environment for schools, businesses, and citizens, and reducing the fear that can overwhelm entire communities.

Community prosecution is a logical extension of the proven successful community-policing concept. While community policie officers can do a great deal to respond to community crime concerns, the success of community policing programs can be limited due to the lack of effective coordination and communication with local prosecutors. For example, while the police may be willing to address quality of life crimes that plague a particular neighborhood, the success of such efforts will be limited if local prosecutors are not committed to prosecuting these cases. Without such a commitment, the confidence and support of the local community and community police officers will be lost. Community and local prosecutors can also work with allied government agencies, including fire marshals, building inspectors, environmental and public works agencies, and others to shut down crack houses, clean up troubled housing projects, fix street lights, and address other problems that foster and promote crime.

Another advantage of community and local prosecution programs is that the dedication of prosecutors to such programs allows them to take a pro-active approach to the most pressing local crime problems. For example, community prosecutors would:

- combat gun-related violence through intensive local enforcement initiatives aimed at seizing illegal guns and prosecuting gun offenders;
- · crack down on open air drug markets, crack houses, and other neighborhood drug problems; or
- target quality of life crimes -- such as gang violence, loitering, prostitution, graffiti, and vandalism -- that can victimize residents and businesses in a community.

Program Characteristics

Hiring: (\$195 million)

Effective prosecutorial efforts to address crime and public safety have increasingly shown the importance of working in partnership with communities, service providers (such as substance abuse treatment providers and family violence prevention specialists), and in collaboration with other components of the criminal justice system.

In order for localities to accomplish this work effectively and to implement strategies in partnership with communities, additional prosecutors are needed. This program provides resources to hire prosecutors in community and local prosecution programs to prevent, reduce, and respond to crime at the local level -- especially gun violence.

This hiring initiative provides a much-needed enhancement to the criminal justice system. As a result of the Administration's successful efforts to put an additional 100,000 police officers in communities across the nation there is increased burden on the prosecutorial sector of the criminal justice system. This burden is largely felt in local communities where resources are limited. The Community and Local Gun Prosecution Initiative attempts to bridge that gap by providing additional prosecutor and prosecutor-related personnel at the local level to encourage and facilitate community partnerships to address unique crime problems locally.

This discretionary grant program will assist jurisdictions in hiring community and local gun prosecutors for up to 3 years and will require the grantee to design a retention plan that would maintain the prosecutor for a minimum of 1 year past the end of the grant period.

In addition to local grants, a total of \$5 million will be designated for technical assistance, training, and evaluation.

Training and Technical Assistance: (\$4 million)

- Convening of 8 regional training and information-sharing conferences during the multi-year initiative that will allow the widest
 participation of local rural, urban, and tribal prosecutor offices and other related personnel.
- A series of symposia for local prosecutors and other related personnel with classroom instruction developed and provided by the National Advocacy Center;
- Development and distribution of community prosecution publications; and
- Local community capacity building to participate in decision-making and strategic planning for local crime prevention priorities.

Program Research and Evaluation: (\$1 million)

- An action research component, which will allow researchers to offer strategic assistance and planning to practitioners throughout
 this multi-year initiative;
- A national evaluation that examines both the process of how this major initiative is being implemented, and the impact of community prosecution on local crime problems;
- A dissemination plan to deliver information to the field regarding community prosecution best practices and lessons learned; and
- A forum of practitioners, community representatives, and researchers to explore community prosecution and its implications for
 the future in preventing crime through strategic problem-solving, partnerships with communities, and cross minal justice system
 coordination.

2000 Enacted	***		\$35,675
2001 Base	***		35,675
2001 Estimate	<u></u>	•••	135,000
Incresse/Decresse			99,325

BASE PROGRAM DESCRIPTION: The Community Crime Prevention programs advocate the development and implementation of strategies to support specific programs that engage the entire community in suppressing and fighting crime and delinquency. Funds support partnerships and collaboratives among policing agencies, prosecutors, probation and parole agencies, schools, value-based groups, business leaders, civic association members, social service agencies, and other relevant stakeholders that can assist in creating safe and secure neighborhoods. Communities are encouraged to participate in a comprehensive planning and strategy development process that sets local crime prevention and crime-fighting priorities, and devises locally crafted responses.

The Community Crime Prevention programs fill critical gaps in support for local public safety efforts that current DOJ funding — both formula and discretionary — cannot fill. In addition to supporting neighborhood planning, these programs also encourage jurisdictionwide strategic planning that other DOJ programs administered by Weed and Seed, BJA, OJJDP, and COPS are unable to fund. These programs provide greater flexibility in the use of funds for planning and implementation of comprehensive strategies than is allowed in current programs (e.g., Weed and Seed, BJA's Comprehensive Communities Program, OJJDP's Comprehensive Strategies Program). The Community Crime Prevention programs allow communities to develop and implement their comprehensive plan through one source of funding and overall technical assistance.

For 2001, COPS proposes several new and enhanced grant programs including a comprehensive collaborative problem-solving effort encouraging school-based partnerships with local law enforcement. In addition, initiatives addressing training, technical assistance and recruitment efforts are supported under the Community Crime Prevention programs.

PROGRAM CHANGES:

Police Integrity and Hate Crime Training: (Increase \$20 million)

Objective

In response to the President and the Attorney General's directive to the COPS Office to implement programs designed to enhance police integrity, the COPS Office has designed a unique training and technical assistance initiative with the objective of training police in the ethical and appropriate use of police authority. This initiative, based on recommendations made by civil rights, community and law enforcement leaders from across the country, will build on COPS currently funded projects and will rely on COPS expertise gained through our leadership role in promoting community policing, police integrity, and delivering training and technical assistance to local communities.

Relationship to Community Policing

In his statement at the Attorney General's Conference on Strengthening Police – Community Relationships, in June 1999, the President emphasized the relationship between community policing and police integrity. "We have to restore the trust between community and police in every community in America. It is the only way that community policing can really work to make our streets safe."

The use of aggressive police tactics such as excessive use of force or racial profiling can undermine community trust and is a barrier to advancing community policing. Recently, public concern, particularly in underrepresented communities, has become national in scope and has become the focus of civil rights groups and police leaders across the country. This initiative will provide training and technical assistance to police in the appropriate and ethical use of police authority: a prerequisite to establishing effective relationships between police and the communities they serve.

Program Characteristics

The COPS integrity initiative has four components: Data Collection to Identify Racial Profiling; Targeted RCPI Training to Promote Police Integrity; Innovative Training and Technical Assistance Grants to Promote the Effective Use of Police Authority; and Hate Crimes Training.

Data Collection to Identify Rocial Profiting

Law enforcement agencies apply to the Regional Community Policing Institute (RCPI) to establish pilot sites that implement a comprehensive program of data collection and evaluation to identify instances of racial profiling. Grantees will receive training and technical assistance from the RCPIs, and will establish: a procedure for collecting data, a system for evaluating the data, a committee – composed of police and community members that will make policy recommendations based on the evaluation of the data, and an evaluation of the process and outcome of the data collection.

Thirty sites will be funded through this pilot project. Grantees will be targeted based on their capacity to collect data (existing technological infrastructure) and those that have expressed interest in such a project. COPS will collaborate with the Civil Rights Division and other Department of Justice components to identify potential grantees, and to identify a variety of urban, rural, large, small, and state policing agencies to allow for maximum replication among other law enforcement agencies.

Targeted RCP! Training to Advance Police Integrity

The COPS Office and the Department of Justice have sponsored numerous conferences to examine ways to advance police integrity. The feedback from these conferences frequently points to the need for non-militaristic, scenario-based training on police integrity issues. This scenario-based ethics training will be delivered to police through COPS national network of RCPIs. Cooperative agreements will be implemented to develop training on the following topics that have been identified by police practitioners and community and civil rights leaders: Appropriate Use of Force, Disengagement from Confrontation, Developing Cultural Competency, Combating Racial Profiling, and Reducing Overtime Abuse.

Innovative Training and Technical Assistance Grants to Promote the Effective Use of Police Authority

COPS will promote a culture of accountability in law enforcement agencies by promoting organizational and individual police accountability. These grants will provide funds and technical assistance to law enforcement agencies and police training academies for innovative local projects. These grants will allow state and local law enforcement agencies to build the capacity for developing innovative responses to police integrity issues, such as personnel management systems to provide early warning and intervention for abusive police practices, use of force reporting systems, and non-militaristic tactical training to reduce citizen apprehension and tension during police encounters. In addition, a portion of this money will go to an assessment of the effectiveness of these innovative integrity programs.

Hate Crimes Training

The growing concern generated by the increasing number of hate crimes in communities across America is among the top public safety issues that law enforcement is facing today. Training to prevent hate crimes will provide the necessary skills to build a foundation of collaborative problem-solving that will permit police and community partners to minimize the negative impact of hate crime incidents as well as mobilize the community to educate its citizens. Out of the \$20 million, \$2 million will be used for Hate-Crimes training. This, when combined with the \$1.25 million from OIP will provide a total of \$3.25 million for hate-crimes.

Police Recruitment: (Increase \$5 million)

Objective

The COPS Police Recruitment Initiative will assist iaw enforcement agencies with recruiting a diverse body of qualified applicants to reflect the community they serve. The primary objective of this initiative is to foster the engagement and involvement of under-served populations in community policing strategies to address crime. Police agencies have struggled for many years to recruit and hire minority and women officers, knowing that by reflecting the demographics of the community they serve, police agencies are better able to reach the communities and minority groups that are historically excluded.

The economic and social conditions that have hindered police recruitment and retention include an expanding economy with low unemployment, changes in worker expectations and demands, and the retirement of the baby-boom generation. The COPS Police Recruitment Initiative would encourage the pooling of resources among small and rural police departments to maximize their recruitment, hiring, and retention efforts. Police departments will be able to develop an ongoing pool of qualified applicants, a course of study and workshops to familiarize prospective recruits with the application process, and peer-officer mentoring programs.

Relationship to Community Policing

Community policing requires that law enforcement agencies partner with the community to identify and address crime and quality of life concerns. Often, under-served populations do not participate in these efforts due to lack of trust, prior negative police contact, and other cultural considerations. To reach these groups, officers must be versed in community policing strategies, and be able to partner with those under-served populations.

Program Characteristics

The Police Recruitment Initiative will include collaboration with stakeholders; recommendations for community police officer recruitment strategies, hiring, retention, and training for law enforcement professionals; and an education component on law enforcement career opportunities designed to promote interest in law enforcement careers.

Police agencies will be invited to apply for these grants on a competitive basis under the following groupings:

- Departments that serve populations of more than 100,000.
- Collaborative groups of smaller police agencies within a geographical area such as a county, metropolitan area, or other analogous grouping.
- Rural or tribal police departments within a statewide or Indian country area, and
- Partnerships with local minority community groups and educational institutions.

Twenty demonstration sites will be funded at \$250,000 per site. Each of the sites will receive training and technical assistance, recruitment program design, community partnership training and outreach strategies, as well as funding for personnel, training materials, and marketing tools.

Partnerships will be developed between the COPS Office, the Community Relations Service, the Civil Rights Division, and the Office of Justice Program's American Indian Alaska Native American Desk to help identify the jurisdictions that will be invited to apply. Initial solicitation criteria will be based on need, past civil rights violations, incidents of police-community conflict, and current involvement in community policing practices.

Citizen Problem-Solving Academies/One America Race Dialogues: (Increase \$5 million)

Objective

The primary goal of this program is to provide citizens with the tools and training necessary for them to work collaboratively with policing agencies to use problem-solving techniques to reduce crime. A secondary objective of this program is to help institutionalize the practice of community policing in jurisdictions throughout the nation, through substantive citizen participation in crime prevention efforts.

This program is greatly needed because few citizens or community group representatives have had the training necessary to actively participate in community problem-solving efforts. When citizens are not actively involved in selecting and developing law enforcement's responses to persistent crime problems, the interventions may not be supported by the community. In addition, police agencies can greatly benefit from strong working relationships and the development of substantive problem-solving partnerships with broad segments of the community.

Relationship to Community Policing

Collaborative problem solving is one of the primary building blocks of community policing. For problem solving to be collaborative, it must involve the police and at least one other member or representative of the community, such as individual citizens, neighborhood watch groups, businesses, schools, value-based organizations, other municipal and social service entities, senior citizens' groups, etc.

The COPS Office defines community policing as collaborative problem solving and the implementation of organizational changes to support these activities. This particular program focuses on the collaborative problem-solving aspect of community policing, but also helps to develop an organizational infrastructure for institutionalizing police-community problem-solving efforts in agencies across the country.

Program Characteristics

Ten demonstration sites will be funded at an average of \$500,000 per site, for a total of \$5,000,000. Sites will receive funds for a variety of tools that will help build citizens' formal knowledge of problem solving and enhance their ability to access and analyze key data in order to achieve the objectives of the program. These resources will include initial training and ongoing technical assistance; information systems and technology that enable police and communities to analyze crime data, ir iding crime analysis programs, mapping software, in-field reporting systems; laptop computers; public information terminals; In act/Intranet site development costs; and project staff, such as training coordinators, crime analysis and project managers.

To ensure that the goals and objectives of the program regarding collaboration are being met, formal alliances between policing agencies and community organizations will be required and additional partnerships with social service agencies and other municipal entities will be encouraged.

Further, to ensure that specific crime and disorder problems are targeted and reduced, all citizens and police officers participating in the academy training and technical assistance program will be required to work on a specific problem-solving project in their

communities. Citizen academy attendees will be encouraged to team up with other citizens and one or more officers to jointly address a problem of mutual concern and interest.

To ensure that the COPS Office learns what works best with regard to citizen police academy structures, approaches to training and impacts on crime and disorder problems, at least 10 percent of the funding for each site will be set aside by the site to document its efforts and evaluate the impact of all of the selected problem-solving projects undertaken by academy participants.

In addition, COPS will coordinate with the Department of Justice's Community Relations Service to provide support and technical assistance to state and local governments and community-based and other organizations to promote and facilitate dialogues on racial diversity and understanding.

Value-Based Program between Youth and Police: (Increase \$5 million)

Objective

The Value-Based program is designed to encourage and support the development of relationships between police, youth, and local value-based organizations and entities. These organizations will work collaboratively to develop programs that address youth issues such as street violence, gangs, drug abuse, school failure, child abuse and neglect, teen pregnancy, incarceration, chronic joblessness, lack of cultural values, and hopelessness about the future.

Relationship to Community Policing

Addressing crime and violence through collaborative, community-based responses is a hallmark of community policing. Value-based entities can be a unifying leadership force in a community. Developing relationships and restoring trust between value-based entities and law enforcement is an essential building block to the comprehensive implementation of a community policing philosophy in many neighborhoods. As President Clinton recently stated, "We have to restore the trust between community and police in every community in America. It is the only way that community policing can really work to make our streets safe." By supporting the development of these collaborative partnerships, we promote trust between these groups thereby strengthening the foundation for the institution of community policing.

Program Characteristics

The Value-Based Program between Youth and Police will provide competitive grants to local law enforcement agencies that create and strengthen the development of positive relationships between police, youth, and local value-based organizations and entities. Collaboratively, these entities will develop programs such as peer mediation, conflict resolution efforts between gangs, neighborhood crime watches, and mentoring. All programs are designed to enhance young peoples' commitment to their communities, to intervene with at-risk youth and to nurture youth to enhance their personal, educational, occupational, and spiritual development. Funds will assist these collaborative partnerships by supporting personnel, strategic planning, training and technical assistance, partnership building, and requisite technology and program infrastructure.

School-Based Partnership Program: (Increase \$10 million)

Objective

Recent school violence has generated intense public concern about the safety and security of our nation's youth. The Columbine shooting, the worst school violence tragedy in U.S. history, was just one in a string of recent school shootings. As a result, the public is demanding a response from law enforcement to this critical problem. As part of the Administration's commitment to combat and prevent crime in and around America's schools, the COPS Office will expand its existing School-Based Partnership Program which has been designed to keep school children safe by reducing school-related crime through innovative community policing strategies.

In addition to media accounts of crime on school campuses, a national survey of school principals and disciplinarians for the school year 1996-1997 demonstrated that crime in schools is a major public concern. More than half of U.S. public schools reported experiencing at least one crime during the year and one in ten schools reported at least one serious violent crime. According to the National Center for Education Statistics, principals say that the most serious disciplinary problems center on student tardiness, absenteeism or class cutting, and physical conflicts among students. The increasing threats posed by student bullying and intimidation and the seriousness of disorder in and around school campuses can be reduced effectively by promoting smart policing and crime prevention through collaborative problem solving. Thus, the School-Based Partnership Program emphasizes the fostering of partnerships among police, community organizations, and local boards of education. These collaborative teams will be responsible for problem identification, as well as developing effective responses, including prevention and intervention strategies.

Relationship to Community Policing

One of the primary tenets of community policing is that effective solutions to persistent crime problems cannot be developed and implemented without the buy-in and cooperation of the affected community. The School-Based Partnership Program emphasizes the need for local law enforcement agencies to work with schools and community-based organizations to address school-related crime and disorder problems in or around elementary and secondary schools. In addition, the program emphasizes problem analysis, a key component of problems solving, to help develop effective responses to the identified problems.

Program Characteristics

School-Based Partnership grants to local level law enforcement agencies will foster the development of partnerships between police, community organizations and local boards of education to address crime and safety issues in and around schools by applying tested problem-solving techniques. These comprehensive grants will address a broad spectrum of crime and safety problems experienced by communities. They will also address the policies that affect how the police, communities, and schools work together. By collaborating, police, communities, and schools will foster community health and make school environments safer and more conductive to student learning. In keeping with the tenets of community policing, School-Based Partnership grants will focus on crime and rectifying the decline or decay that can facilitate its occurrence.

School-Based Partnership grants will be open and competitive. To be eligible for funding under this one-year grant program, agencies must submit a justification that:

- delineates the city's/county's experiences with crime and disorder in schools, including a review of juvenile violence and crime rates;
- demonstrates the formation of a collaborative team of stakeholders that includes parents, students, mental health professionals, youth advocates, and representatives from other social service and policing agencies within the geographical area being considered; and
- includes a proposal for how funds would be used to develop solutions to identified crime problems.

Grantees will be required to work with the COPS Office to develop strategic plans that focus not only on the development and outcomes of the project during the first two years of funding, but also on a longer-term, five-year plan for the collaboration. School-Based Partnership grantees will be encouraged to build upon the strength of their collaboration to be oreative in their strategic plans.

Levels of funding will consider general and student population sizes and the quality of the proposed project, strategic plans, and budget. Agencies will be eligible to receive up to \$1 million. Based on the experiences of the COPS Office, the primary grantee pool consists of approximately 10,000 policing agencies, 10 to 15 agencies would be accepted under this initiative.

Safe Schools/Healthy Students Initiative: (Increase \$20 million)

Ubjective

In 2001, \$20 million is requested for the expansion of the existing OJP Office of Juvenile Justice and Delinquency Prevention's (OJDP) Safe School/ Healthy Students Program. These resources will be added to the \$15 million that is requested to be made available under OJJDP's Title V program. The \$35 million in resources will allow OJJDP to significantly expand this program in 2001.

Program Characteristics

In partnership with other offices within the U.S. Departments of Justice, Education, and Health and Human Services, OJJDP plans to fund Safe Schools/Healthy Students continuation grants to 54 sites awarded in 1999 and a projected 18 additional sites in 2000. Through a cooperative agreement with the Research Triangle Institute, OJJDP is collaborating with the Departments of Education and Health and Human Services to conduct a national evaluation of this program and will provide continuation funding for this activity in 2001, as well as transfer continuation funding to the National Mental Health Association to provide training and technical assistance to the sites through the Safe Schools/Healthy Students Action Center.

In addition, OJJDP, along with other offices within the U.S. Departments of Justice, Education, and Health and Human Services will contribute funding for up to 40 new sites in 2001.

Community Supervision Initiative - Project Reentry: (Increase \$35 million)

Objective

In 2001, a total of \$60 million is requested for a collaborative, comprehensive offender reentry initiative, which will be administered by the Office of Justice Programs.

Of this amount, \$35 million is requested under the Office of Community Oriented Policing Services (COPS) and \$25 million is requested under the Office of Justice Program's Zero Tolerance and Drug Intervention Initiative.

Program Characteristics

This initiative will help reduce recidivism and improve public safety by awarding discretionary grants to address the public safety threats posed by offenders returning to the community from state and federal prisons or local facilities housing state and federal prisoners. Project Reentry will enable states and local communities to create broad partnerships that will use their combined resources to provide the necessary combination of surveillance, sanctions, incentives, and support services in ways that afford increased protection to communities that experience unusually high returns of immates. The Department of Justice will administer the program in partnership with the Department of Labor, which will develop and operate jobs-related programs in the same communities, and the Department of Health and Human Services, which will dedicate \$10 million in substance abuse and mental health treatment to support this effort.

A detailed description of this \$60 million initiative is found under the OJP 2001 Congressional Budget request.

Police Firearms Surplus Safety Initiative: (Increase \$10 million)

Objective

In 2001, \$10 million is requested to implement the Police Firearms Surplus Safety Initiative, which will be administered by the Office of Justice Programs.

The goal of this initiative is to prevent surplus police firearms and confiscated weapons from being resold on civilian markets where they may fall into the hands of criminals or other restricted persons. Police agencies are often subject to financial pressures to sell their used or seized firearms once those firearms are no longer needed, and need assistance to end this practice. This initiative will provide one-time grants to state and local law enforcement agencies to help them meet those budgetary constraints on the condition that they certify that they will use the funding to end the practice of reselling used police firearms and confiscated weapons on civilian markets.

Program Characteristics

Police agencies are often subject to financial pressures to sell their used or seized firearms once those firearms are no longer needed. However, because such firearms, if sold on civilian markets, can end up in the hands of criminals, state and local law enforcement agencies do not want these weapons available to the public. Thus, law enforcement agencies need the revenues associated with the sale of surplus weapons to help defray the escalating costs of new weapons. This phenomenon presents a particular problem for state and local law enforcement agencies where no policy relating to the disposition or destruction of service weapons when they are no longer suitable for the agencies' use. Some departments destroy their obsolete weapons, some make them available to other law enforcement agencies, and some sell excess weapons to the public. Many police weapons sold on civilian markets have later been used to commit crimes, including homicides and assaults

The goal of this initiative is to prevent guns from being circulated into the population from state and local law enforcement agencies. Gun violence is a pressing crime problem in America that is exacerbated by the ready availability of firearms to criminals on illegal markets. An estimated 200 to 250 million firearms are in circulation in the United States, and guns account for nevely 70 percent of all homicides in our nation. In 1997, over 32,000 Americans lost their lives in gunfire, and almost 100,000 others are treated each year for gun-related injuries. This initiative aims to curb this disturbing trend by preventing public access to firearms used by state and local law enforcement agencies, and reducing the likelihood that these firearms may fall into the wrong hands through secondary market sales.

Building Blocks Initiative: (Increase \$15 million)

Objective

In 2001, \$15 million is requested for the Building Blocks Initiative, which will be administered by the Office of Justice Programs.

Federal crime policy is at a crossroads. For thirty years, the Office of Justice Programs (OJP) and its predecessors have supported wide-ranging research and demonstration efforts to bring promising programs to state and local governments. These efforts to build and deliver programs have met with mixed success. In its best moments, the federal program delivery model has helped states meet important challenges in court delays, detention or prison crowding, drug enforcement, and crime and delinquency prevention.

Success comes by combining strategic thinking with local action. Recent successes in community crime reduction in cities such as Boston and New York are difficult to attribute to specific programs. Successes of community interventions stem more from flexible and reasoned responses to both specific and general problems than from structured responses to general problems. The identifiable

components in successful initiatives are not programs per se, but up-to-date information about delinquency, risk factors or crime in relevant locations; coalitions of local, state and federal officials sharing authority and responsibility; comprehensive research-based programming from delinquency prevention to aftercare; and feedback on how well trial solutions were faring.

Federal initiatives from several OJP agencies have sought to marry these same elements in different combinations and settings. OJP's Comprehensive Communities Program, the National Institute of Justice's (NIJ) COMPASS Initiative, the Office of Juvenile Justice and Delinquency Prevention's (OJJDP) Comprehensive Strategy, the Bureau of Justice Assistance's (BJA) integrated state strategy efforts, the Department of Justice's (DOJ) SACSI (Strategic Approaches to Community Safety Initiative), and the evolving Weed and Seed program have all sought to blend problem assessment, strategy development, coalition-supported interventions, and evaluative feedback into planning for public safety and healthier communities. Each in its own way seeks to create a closer relationship between the problem and the system response.

OJP's research and experiences in a wide variety of communities have led to the following common key ingredients to successful crime reduction efforts:

- coalitions that collaborate across disciplines and/or jurisdictions (federal, state, local) and have strong community-level involvement;
- data driven problem identification and safety assessment (including risk and protective factor, crime and safety, and resource
 assessments):
- · community-based law enforcement and crime prevention approaches;
- concentration of resources in areas of greatest need;
- implementation of proven and promising crime and justice intervention models;
- implementation of key effective programs from pre-natal prevention and youth development, to graduated juvenile and criminal
 justice sanctions and probation/aftercare;
- evaluative feedback on program performance; and
- · investments in community problem-solving infrastructure.

Program Characteristics

Building Blocks adopts these principles and combines them into the following five core activities: (1) Collaborative Teams for Technical Assistance; (2) Data Driven Assessment and Planning; (3) Community-Based Intervention; (4) Long Term Infrastructure; and (5) Fintional Evaluations. These five activities are the operating philosophy and allow OJP to bring coordinated community support to different jurisdictional levels. The short-term goal of the initiative is to help communities identify and respond to immediate and pressing problems. The long-term goals are to institutionalize the skills gained from short-term activities and to integrate lasting problem-solving capabilities. These goals apply equally to adult and juvenile justice issues, and to enforcement and prevention approaches.

The Building Blocks Initiative would support:

- Neighborhoods using the Weed and Seed approach to grass roots community involvement and the U.S. Attorneys partnerships;
- Cities/Counties engaged in strategies that mirror SACSI, COMPASS and the Comprehensive Strategy approach to targeted, community wide problem solving, prevention, and accountability;
- States engaged in the Comprehensive Strategy and similar system wide reforms and infrastructure building.

The Building Blocks Initiative will bridge delinquency and crime fighting across jurisdictional levels, building on existing/proven program models and working to achieve system-wide integration of strategies and resources over time. To accomplish this, the Department requests \$15 million in 2001 for the Building Blocks Initiative to be funded through COPS 2001 Community Crime Prevention Program initiative and will be administered by OJP. By pooling OJP's existing expertise and targeting specific skills and services, 25 jurisdictions (neighborhoods, cities/counties, and states) would be able to address immediate delinquency and crime problems and develop long-term infrastructures that identify and successfully meet future crime and public safety challenges.

The Building Blocks funding processes will facilitate integrating activities for, and building state capacities to support networks of, collaborative problem solving. Jurisdictions will be able to apply for one, two, or three levels of program support -- neighborhood, city/county, and state support -- depending on their needs and their current capabilities. All of these funding opportunities will be offered within a single program, within a unified application process.

Supporting Collaborative Teams (Initia) Technical Assistance) - \$500,000

The long-range vision of the Building Blocks Initiative is to achieve integrated planning among state, local, and neighborhood coalitions, aided by federal presence in law enforcement and prosecution. Building Blocks will support coalitions, whether at state, local, or neighborhood levels, interested in moving toward integrated strategic planning expertise while solving immediate short-term problems.

To equip communities with the skills to formulate, implement, and evaluate comprehensive prevention and enforcement plans, Building Blocks will provide resources for orientations of key community leaders, training on developing risk and resource assessments, identification of mapping and information integration needs, and other technical assistance as needed to develop problem-solving processes. This comprehensive, interdisciplinary approach will dramatically increase the efficacy of prevention and enforcement efforts, while coordinating service delivery.

Data Driven Assessment, Planning, and Progress Tracking - \$2.5 million

Communities cannot wait for lengthy analyses and planning processes to address the delinquency and crime problems that confront them now. In taking on the challenge of providing an immediate response to pressing problems, while also developing longer-term solutions to deep-rooted issues, communities already possess considerable data and understanding of their problem areas.

Taking what we have learned from the assessment process of Strategic Approaches to Community Safety Initiative (SACSI) and Comprehensive Strategy, the Building Blocks Initiative will enable community coalitions to both immediately, and in an ongoing manner identify and shape responses to targeted street crime as well as broader delinquency and crime problems. Exactly where are offenders getting their guns and drugs? What are key deficiencies in the community's ability to prevent child abuse and delinquency? What barriers and resources exist in the services established to serve communities?

In the short-term, coalitions will rely on existing data sources and other local information to assess problems. Neighborhoods will be asked to use existing city and county data plus local police and community information to piapoint problems. Cities and counties will be asked to portray problems at neighborhood levels using not only crime statistics but also public health, zoning, and school information. Participating states will not only need to support participating jurisdictions through their Byrne funds but also to develop training and educational opportunities that encourage jurisdictional efforts in planning and problem assessment.

Ultimately, the coalitions are expected to build sound infrastructure that will generate permanent sustainable information streams for safety strategies. Infrastructure building would include crime mapping, ability to estimate neighborhood indices of risk and protective factors, and program performance measures. These funds will support the areas described below:

Data Mapping of Targeted Street Crime. Building Blocks will require that a team of crime analysts, law enforcement, and researchers routinely analyze information from juvenile and criminal justice and city agencies to provide a picture of the area's general delinquency and crime trends and detailed characteristics of the target problem. The research partner will help the coalition through its problem solving processes, designing targeted strategies based on the opportunities identified by local crime data and crime control theory. Building Blocks will offer crime mapping and data integration support to cities and counties through NIJ's COMPASS, which will select its first ten sites in 2001, DOJ's SACSI (another US Attorney-supported program), which plans to expand to 10 sites in 2001, and OJJDP's Comprehensive Strategy, which currently operates in eight states and multiple local jurisdictions.

Community Risk and Protective Factor Assessment. The Building Blocks Initiative will also go beyond identifying and targeting street crime, to assess and address the risk factors for delinquency and family violence, based on what we have learned from OJJDP's Title V Community Prevention Grants and the Comprehensive Strategy.

Resource, Management and System Analysis. Building Blocks will support communities in identifying federal and private resources available in the community to address crime. This support will be provided through an interagency team and through the development of management information systems that track funds, allocations, and outcomes in the communities.

Local Evaluative Feedback. Building Blocks communities will operate under a performance assessment and improvement process where research partners help coalitions understand the progress that their efforts are making through simple "on-the-job" assessments and performance measures. Communities would use data and changing conditions to adjust program priorities and target strategies. This local, micro-level evaluation would be used to continually assess and improve interventions. Selected, particularly promising, programs would be singled out for more formal evaluation if their prospects for successful replication seemed high. This approach is particularly important for early Building Blocks interventions, which might begin with less-developed empirical bases than later initiatives.

Community-Based Interventions - \$5.9 million

Recognizing the planning sophistication and available resources, the Building Blocks Initiative will offer grant support to teams at state, city/county and community levels and will build on programs with proven records of success such as DOI's Weed and Seed

Program. The Weed and Seed Program is DOJ's premier community-based crime prevention program and serves as a platform for the Administration's and Attorney General's crime-fighting initiatives which range from conflict resolution and anti-truancy programs to home visitation and after school programs. The success of the Weed and Seed program comes from bringing together the energy of community leaders and organizations and the resources of the public and private sectors in an organized and coherent way. Wherever possible, activities will be closely coordinated with U.S. Attorneys to engage their support. OJP will work at the federal level to encourage U.S. Attorney collaborations with local jurisdictions, offering them appropriate opportunities to contribute their resources as well as bring federal law enforcement officials into the coalition.

The primary goal of the Building Blocks initiative is to help communities choose strategies that work for their problems and to implement programs that have a high probability of succeeding. Fortunately, we are now armed with considerable knowledge on how to respond to street crime, treat offenders in the justice system, and prevent delinquency. Recognizing the multiple causes to crime, we must implement tested and proven programs and strategies to successfully attack the multiple causes.

Building Blocks will build upon previous DOJ demonstrations and successes in implementing comprehensive, community-involved strategies. For example, it will incorporate what we have done in addressing juvenile crime, integrating community policing lessons of community engagement, and forging multi-disciplinary partnerships with health, education, and housing. OJP will assist communities in moving from their strategic plans to program choices and model implementation through technical assistance, consultation, and seed program funding as necessary. The specific grant size will depend upon jurisdictional size.

Specifically, it will support implementation of a continuum of integrated programs and strategies which have proven effective in reducing delinquency and entire, including but not limited to law enforcement targeting of gang members, and gun and drug traffickers, model criminal justice interventions, probation and aftercare for offenders, gang outreach and mentoring, drug opportunities and safe schools, pre-natal and early intervention, and community development and problem-solving.

Communities would also be encouraged to devise new and innovative solutions to their problems. However, these innovations would be formed out of their analyses of local data and information and they would be evaluated under the feedback framework proposed in the preceding section.

Long Term Infrastructure - \$5.4 million

Funding for long-term infrastructure at the initial 25 Building Blocks sites will not be needed until the third year. The \$5.4 million requested in 2001 for this core activity will be used to support the completion of OJJDP's Comprehensive Strategy in 8 states. The funds requested will provide these states and their 48 identified local jurisdictions with nominal, but essential incentive funds

(\$75,000 to each of the 8 states and \$100,000 to each of the 48 jurisdictions) to ensure the commitment of the local counties/cities and states in the hard work of bringing together disparate agencies and implementing a full continuum of programming from prenatal, to the deepest juvenile justice interventions, to aftercare. Given the extensive work that each of these states have done, tack of support at this time would squander investments that have been made.

Although funding is not requested in 2001 for long term infrastructure activities that will take place at building blocks sites in years three through five, a brief explanation of these future activities follows:

Building Blocks will assist in institutionalizing data collection and problem solving as a matter of course for community crime reduction strategies. It will work with neighborhood sites to help their adjoining neighbors collect similar information and to participate in similar interventions. It will also help neighborhoods link with city officials to obtain expanded and more routine data coverage. Complementing this "bottoms up" approach, Building Blocks coalitions will work within participating jurisdictions to identify neighborhood groups that are experiencing difficulties in coping with specific problems and help these communities engage in problem-solving processes.

Building Blocks will focus on County and City-level system and service coordination and reform which can support lasting and effective implementation of crime reduction strategies. Funds will be made available to bolster community-planning staffs through training and short-term staffing support. Funds will also help build geographic information systems that merge data from schools, public health, and transportation sources with safety statistics. Attention will be paid to improving identification, referral, and case management processes; making services serve children, families, and communities more holiatically; increasing the quality and communication among service providers, systems and organizations; and reducing gaps, deficiencies, and barriers in prevention, intervention and accountability policies, procedures, and services.

Building Blocks will support interested states in furthering long-range strategic planning in their major jurisdictions. Building Blocks will utilize BJA's existing Byrne program and Local Law Enforcement Block Grant processes and OJJDP's Comprehensive Strategy State-level work to create state-level support to institutionalize strategic planning processes. States have important resources to contribute. In addition to Byrne, Juvenile Justice, Health, and Education formula funds, state administered agencies that have skills and information relevant to local affairs. Statistical Analysis Centers house goo-based information and analytic expertise. State drug abuse, health, and educational agencies offer programs that can be placed or coordinated with city and county initiatives. State universities house analytic resources that can support immediate local interventions and also help enrich the pool of local talent through educational courses.

Building Blocks enables communities to formulate coordinated interventions almost immediately. These early efforts provide important learning experiences in working in coalitions and data driven settings. They also amplify the importance of systematic program and data support. A significant portion of funds have been allocated to creating a permanent core of skills, processes, and resources for identifying emerging problems, formulating and implementing responses, and monitoring results. Building Blocks will support states, which demonstrate a vision and a willingness to help their localities through such enterprises. It could help states build and offer training programs in strategic planning, computer crime mapping, and data systems integration. It could support statewide strategic planning initiatives. In general, Building Blocks would expect states to show commitment toward institutionalizing the outgrowths of this support.

National Evaluation - \$500,000

In 2001, \$500,000 is requested to begin implementation of a national evaluation of Building Blocks ites. The national Building Blocks Initiative will be evaluated from implementation to determine the effectiveness of a comprehensive crime reduction strategy. The value of the initiative will be the ongoing dissemination of lessons-learned from the communities as they replicate effective programs, sharing of data and mapping technology from local assessments, guidance in targeted problem-solving approaches, approaches to developing a lasting strategic plan and changing the agencies and organizations that need to work more effectively together in reducing crime and delinquency. This information will be invaluable to the Building Blocks communities as well as to others across the country, as we learn of the benefits of this initiative, including its impact on reducing crime and victimization.

Participating agencies would contribute the necessary executive and managerial staff to assure the proper coordination of program functions.

Strategic Approaches to Community Safety Initiative (SACSI): (Increase \$10,000,000)

Objective

In 2001, \$10 million is requested for the SACSI Initiative, which will be administered by the Office of Justice Programs.

SACSI resources will be used to implement a collaborative, information-driven approach to crime reduction in 50 communities across the country. Under U.S. Attorney leadership, this Strategic Approaches to Community Safety Initiative (SACSI) model -- which partners federal, state and local law enforcement, researchers, criminal justice personnel, elected officials and community members to

critically examine and overcome a targeted crime problem -- is extraordinarily promising and offers the potential of real success in terms of reducing crime and saving lives. Building upon such efforts as Weed and Seed, Comprehensive Communities Program, the Anti-Violent Crime Initiative, the Boston Gun Project, and New York City's successful COMPSTAT program, this data-driven, problem-solving strategy is credited with reducing youth homicides in Boston by 65 percent.

SACSI will give communities the tools they need to work together, understand their crime problems, and develop effective interventions to deal with those problems. The goal of SACSI is to significantly reduce the targeted crimes and to institute a process by which to address future community crime problems

DOJ's Commitment to SACSI

In 1997 there was a growing recognition that cities such as Boston and New York had achieved a sustained drop in major crime categories. For over six months DOJ examined lessons learned from these cities as well as from other locally-based, crime reduction initiatives, and found that these successful approaches each had several important components: they were collaborative in nature, information-driven, used a problem-solving approach, and judged success by outcomes such as reductions in crime and increased public safety. Led by the Office of the Attorney General, officials in the Department distilled "what worked" from these models, and in March 1998, devised the Strategic Approaches to Community Safety Initiative. The Department felt so strongly that this approach could be effective that 12 DOJ components! volunteered funds and staffing to plan and implement 5 pilot sites. Working through the leadership provided by the 5 United States Attorneys in Indianapolis (IN), Memphis (TN), New Haven (CT), Portland (OR), and Winston-Salem (NC), DOJ implemented the SACSI model. A year and a half into the project, each site has engaged diverse crossagency policy teams, targeted and analyzed a major crime problem facing their community (from gun crime to sexual assaults), developed strategic interventions that capitalize on local dynamics, vulnerabilities in the crime problem, and the "what works" literature, and begun implementation. Preliminary results in Indianapolis, where implementation has been underway the longest, suggest a significant drop in their target crime homicides.

The excitement generated from the 5 pilot sites has created a demand to bring the SACSI model to other jurisdictions -- some 15 cities have expressed serious interest in adopting the model. The Attorney General is supportive of SACSI expansion, and has stated that the DOJ should expand SACSI to 10 additional sites as soon as possible.

DOJ components include Office of the Associate Attorney General, Office of Justice Programs (National Institute of Justice, Bureau of Justice Assistance, Office of Juvenile Justice and Delinquency Prevention, Bureau of Just. - e Statistics, Office of Victims of Crime, and the Executive Office of Weed and Seed), Office of Community Oriented Policing Services, the Criminal Division, Executive Office of U.S. Attorneys, and Inter-Governmental Affairs.

Program Characteristics

To build on the momentum of the S existing pilot sites and to institutionalize this way of doing business more broadly. OJP proposes to implement SACSI in up to 10 new sites every year for the next 5 years. Using the lessons learned from the pilot sites, the OJP is in a position to assist communities in building an even more robust model that will reduce crime over the long term.

SACSI has several site-level core components. The first is to institute a collaborative, system-wide process by establishing an inter-Agency Working Group. Building on the process used successfully in Weed and Seed, the U.S. Attorney in each new site will convene a team of local, state, and federal criminal justice practitioners, community leaders, representatives from relevant community agencies—and a research partner. Teams will meet to develop, implement, and evaluate a crime prevention and reduction strategy, which focuses on a major crime problem facing the community. The team will work to strategically deploy both federal and local law enforcement and community resources, coordinating around the identified problem and decired outcome. This effort will build on and enhance existing efforts in selected communities. 33 million is requested to support this effort.

The next core component is to build the Research and Analysis Infrastructure. DOJ, specifically NIJ, will fund a consortia of crime analysts and researchers to work in each community to develop data-driven crime control strategies and to evaluate the effectiveness of those strategies. The research and analysis team will routinely analyze information from criminal justice and city agencies to provide a picture of the area's general crime trends and detailed characteristics of the target problem. The research partner will help the Working Group develop targeted strategies based on the opportunities identified by local crime data, crime control theory, organizational capacities, and promising strategies used elsewhere, and will provide ongoing evaluation of the intervention. \$3 million per year is requested to support this effort.

Additionally, OJP will work to assess, utilize, and/or build crime analysis capacity in local law enforcement agencies. For example, funds are required to ensure that each district has a crime mapping and analysis system. As has been proven in New York City and other jurisdictions, mapping crime and other data to identify and predict emerging crime patterns is an effective analytic tool in designing crime reduction interventions. \$1 million per year is requested to improve the analytic tools and technologies integral to the success of this project.

Once the data and information needs of communities have been met, the Inter-Agency Working Group can institute the Problem Solving Process. This process, which proved so effective in Boston and elsewhere, relies on the implementation of the following seven steps: (1) identify the problem; (2) analyze the problem; (3) identify trends, patterns, opportunities for intervention; (4) design the strategy; (5) implement the intervention; (6) evaluate the intervention; and (7) adjust the intervention.

This work, albeit straightforward in concept, is quite difficult in practice. Fortunately, much has been learned from prior initiatives, research, and evaluation efforts. The OJP will Provide Technical Assistance both to communities chosen to implement this model, and more broadly to communities interested in implementing the model on their own. In addition to the support and guidance planned under the technology and data acquisition section of this proposal, the OJP will host a series of training opportunities and cluster meetings to enable communities to learn from one another. Further, guidance to communities through conferences, "blueprints", web sites, and other forms of communication will be made widely available, \$2.5 million per year is required for this effort.

The final component of this initiative is to Build Knowledge and Transfer Lessons Learned. The long-term value of this program is its ability to translate lessons learned from a small number of sites to communities nationwide. In order to have the greatest national impact, NIJ will identify, evaluate, and disseminate techniques as they are developed, tested, and demonstrated to be effective. NIJ will also document barriers to successful implementation and conduct a comprehensive national evaluation of all SACSI sites. The evaluation will develop models of successful implementation, and, to the extent that there are failures, document how, when, where, and why the initiative failed. The evaluation results should be seen as a road map toward a national model to address local crime problems. \$0.5 million is requested in fiscal year 2001 to support the national evaluation and translation of research, evaluation, and program findings throughout the criminal justice community.

Communities will be expected to compete for funding, with preferences given to jurisdictions with significant crime problems that demonstrate a setious commitment to this process over the long term. If, as expected, the approach is found to achieve greater public safety along with greater efficiency, there is a strong likelihood of it taking hold across the country.

OJP's 5-year plan will be to implement this effective crime reduction model in 50 new communities. Each site will receive approximately \$900,000 in federal development and assistance over three years. Over the long term, jurisdictions are expected to institutionalize this work and support it locally.

	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005
New Sites/Cumulative	10/15	10/25	10/35	10/45	10/55
New Site Funding (3 year cycle)	\$7.0	\$7.0	\$7.0	\$7.0	\$7.0
Training & Tech Assistance	\$ 2.5	\$2.5	\$2.5	\$2.5	\$2.5
National Evaluation	\$0.5				
Total SACSI	\$10.0	\$9.5	\$9.5	\$9.5	\$9.5

It is hard to argue with SACSI principles -- collaboration, analysis, targeted interventions, and results. These are straightforward principles, but challenging to implement, as they require a new way of doing business. If there is one common lesson that has been learned from the 5 pilot sites, it is that this process of coalition building, data analysis, problem identification, and strategic intervention towards goals that matter requires an enormous amount of effort and skills that are currently underdeveloped. SACSI challenges the traditional approach to crime control and encourages communities to work together. It is a process that, once learned, can be very successful not only in reducing the initial target crime problems, but in establishing an infrastructure that can be adapted to other criminal justice and safety issues over the long term. This is no doubt compelling to criminal justice practitioners and policymakers looking for a comprehensive, cost-effective way to combat local crime problems.

Methamphetamine Program: (Decrease \$35.675 million)

The \$35,675,000 decrease in COPS funding is to eliminate the earmarks for methamphetamine and drug hot spots. In 2000, the funding was included from direct appropriations for state and local law enforcement programs to combat methamphetamine production, distribution, and use (with over \$35 million earmarked for specific state and local projects). In addition, the funding was used to reimburse the Drug Enforcement Administration for assistance to state and local law enforcement for proper removal and disposal of hazardous materials at clandestine methamphetamine labs. The funding was also used for policing activities in "hot spots".

The Safe Schools Initiative is a joint federal effort shared with COPS Office, and the U.S. Departments of Education and Health and Hustan Services. The program provides for a coordinated effort focused on action) and community safety and involves urban, rend, inhurban, and urban activities into one community wide approach to violence prevention and healthy effective into one community wide approach to violence prevention and healthy efficiently. 2001 Base	1+1	414	130,000
2001 Estimate		<u></u>	350,000
Increase/Degrease			220,000

BASE PROGRAM DESCRIPTION: The Crime Technology programs assist state and local law enforcement agencies to purchase and implement new technologies to fight crime more effectively. COPS will strive to develop regionally based law enforcement networks or consortia allowing inultiple communities to work collaboratively to analyze, prevent, and fight crime through crime technology grant programs.

PROGRAM CHANGES:

Crime Identification Technology Assistance Act (CITA): (Increase 569 million)

COPS is requesting a total of \$199 million for the Crime Identification Technology Act (CITA) program in 2001. This funding will be used for several programs; some of these will also receive funding from the 1999 CITA appropriation. Consistent with the thrust of the CITA legislation, these six projects will promote the interoperability and interconnectivity of computer systems within the public safety community. COPS is proposing to use up to \$99 million of this funding to provide grants directly to law enforcement agencies so that they can develop regional information networks and put ballistic images from crime scenes into the National Integrated Ballistic Imaging Network. In addition, COPS is requesting the flexibility to use a greater portion of funding for administration, and training and technical assistance, including developing standards and protocols on information sharing in both the adult and juvenile justice systems and addressing privacy issues regarding information sharing.

The CITA legislation requires that 20 percent of funding be used for forensic labs. Rather than setting aside this funding from the \$199 million, the 2001 budget proposes \$50 million in additional, separate funding to improve forensic labs: \$35 million in grants to state, tribal, and local laboratories to improve their DNA and general forensic capabilities and \$15 million in grants to state and local

laboratories to reduce their convicted offender DNA sample backing. The following six programs comprise the CITA request in 2001, totaling \$199,000,000:

1. Community Oriented Networking and Enhanced Communications Technology (CONECT): (\$89 million)

Objective

COPS Community Oriented Networking and Enhanced Communications Technology (CONECT) is a comprehensive technology program to advance community policing and cross-jurisdictional information sharing and problem solving. CONECT grants are predicated on enhancing partnerships between agencies and citizens through the application of advanced technology and better communication. Technology purchases under CONECT are designed to be flexible, but applicants under this program must demonstrate a clear link to community policing and problem-solving strategies.

CONECT program objectives are consistent with the Attorney General's recent calls for greater regional information sharing among law enforcement and other public safety organizations which would: enable agencies to employ state-of-the-art technology to address interoperability issues; improve information flow across multiple jurisdictions and among criminal justice agencies; and provide real-time access to fully integrated information systems required for successful field operations, investigations, problem solving, strategic management and resource allocation.

Relationship to Community Policing

The COPS CONECT program will enable agencies to employ state-of-the-art technology to address interoperability issues, improve information flow between criminal justice agencies and provide access to fully-integrated information systems required for successful field operations, investigations, and problem-solving.

The purpose of this grant program is to develop regionally based low enforcement information networks or consortia that will allow multiple communities to work collaboratively to analyze, prevent, and fight crime. This approach will build on existing COPS investments in technology to support community policing and meet multi-jurisdictional needs of law enforcement agencies within geographic regions. Because crimes and criminals do not stop at jurisdictional boundaries, public safety professionals must be provided with the tools to facilitate inter-jurisdictional information planning and sharing, communication, and criminal investigation.

Program Characteristics

The CONECT program will provide funding to law enforcement organizations forming a consortium of regionally based networks. It will provide agencies with the resources to 1) plan and identify technology requirements with a built-in needs assessment component, and 2) acquire and implement an expanded technology infrastructure that would include the hardware, software, and personnel to achieve cross-jurisdictional modernization objectives.

Since the CONECT program is not intended to be "one size fits all" and would serve the diverse needs of a variety of law enforcement consortia, grant amounts will vary. The funding will benefit both larger agencies that may want to expand their technological infrastructure and smallet/rural agencies that have not traditionally had occess to such resources. Grants would typically range between \$1-15 million per applicant, allowing for up to 50 jurisdictions to receive the technology and interoperability benefits of COPS CONECT. The number of agencies that could be funded and the size of the awards would vary based on factors including total available funding, the number of law enforcement agencies within the region, the informational needs of the agencies, and the types of technology applications required.

Fundable items under this program may include: network hardware and software, communication systems, digital imaging technology, crime analysis software, training and technical assistance providers, and other personnel necessary to carry out the intended purpose of the integrated technology.

Five percent of the appropriation for the COPS CONECT program will be set aside for training, technical assistance and a program assessment. Training and technical assistance may include conferences, site visits and consultations by agency staff with advanced technological capabilities, or the provision of problem analysis and mapping training to crime analysts from participating agencies. The program assessment will track the progress of the initiative from start to completion across the selected consortia, coupled with an assessment of the effectiveness of this initiative in meeting the stated program objectives. These funds would supplement, not suppleme funding requests submitted by the applicants for a technology needs assessment or other training/technical assistance purposes.

Eligible law enforcement agencies are those that demonstrate a commitment to community policing, the ability to work collaboratively with other agencies, a willingness to develop a communications infrastructure with a regionally diverse group of agencies and a need for information systems technology.

Funding decisions will be based on such factors as potential for successful interagency collaboration, regional participation, current technological abilities, systems integration needs, and demonstration of how technology will enable applicants to better employ the concepts and practices of community policing within the proposed region.

To encourage local commitment, a 25 percent local match will be required. In extreme situations, waivers may be considered for regional consortia demonstrating fiscal hardships and distress.

2. National Integrated Ballistic Identification Network (NIBIN): (\$10 million)

Objective

The National Integrated Ballistic Identification Network (NIBIN) is comprised of approximately 229 computer installations in federal, state, and local forensic laboratories. At the present time, there are approximately 1 million ballistics images in this system. There have been over 8,000 matches (cold hits) linking two or more images that would not have otherwise have been linked. The President has proposed the goal of being able to identify every bullet in every crime with a gun through the expanded use of this network.

Statistics reveal that time is a critical factor in successfully matching ballistic images -- 85 percent of matches are made within 6 months of the image being taken and entered into the system. Unfortunately, the combination of the volume of gun crimes, the limited personnel and the input capacity of the equipment can create significant backlogs for imaging crime evidence across most of the ballistic network. These backlogs are either short-term in nature -- due temporary workforce reductions or unexpected workload surges such as those that occur when a locality sponsors a gun-buyback program or semi-permanent due to increasing volumes of gun-related crimes in a particular jurisdiction or changes in local government policy.

For example, the Washington D.C. Metropolitan Police offered a gun buy-back program in 1999. The response was overwhelming. Several thousand weapons were purchased and had to be processed in NiBIN for past crime use. To handle this sudden increase in volume, the FBI loaned the D.C. Police an additional ballistics imaging system for 4 months. The additional system temporarily increased in the imaging capacity of the city lab by 50 percent. Absent the availability of FBI's equipment, the D.C. Police would still be processing this backing.

Program Characteristics

In an effort to assist state and local forensic labs in reducing backlogs, whether short-term or semi-permanent, the Office of Justice Programs is requesting \$10 million to implement the National Ballistics Image Backlog and Conversion Grants Program. OJP will award state and local forensic labs grants for the purposes of establishing a regional loaner equipment program to handle short-term backlogs; provide needed training to bring workforce up to speed on new imagining technologies; or hire additional operators to increase the manpower capacity in order to more efficiently manage larger volumes of ballistic evidence; and/or to convert critical database images from the existing system to the new unified NIBIN system.

3. Global Criminal Justice Information Network Initiative (OJP GLOBAL): (\$18 million)

Objective

In 2001, \$18 million is requested for the Global Criminal Justice Information Network Initiative, which will be administered by the Office of Justice Programs.

Crime is global and must be pursued on a global level. Criminal organizations such as drug, terrorist, and organized crime are more sophisticated, better financed, and more efficient than ever before. Criminal elements are routinely organizing themselves across national boundaries and their application of technology often exceeds the capabilities currently available to law enforcement. The Global Criminal Justice Information Network Initiative, referred to as the Global Initiative, recognizes that an information sharing capability across the entire criminal justice community is essential for effective crime fighting. Access to this information in a timely, secure, and user friendly fashion will assist all local, regional, state, and national components of the criminal justice community to apprehend, charge, and convict criminals. The Global Initiative is not intended to be a new network, rather an initiative of collaboration and understanding to help create and foster information sharing among local, regional, state, and federal criminal justice entities.

The goal of the Global Initiative is to improve state and local criminal justice entities through the development of a nationwide network of criminal justice information systems where state and local authorities with responsibilities for law enforcement, courts, prosecution, public defense, corrections, probation and parole will have immediate access to information necessary to respond to and resolve the consequences of criminal activity. The Global Initiative is being coordinated with two other interoperability efforts in DOJ, the NIJ's Advanced Generation of Interoperability for Law Enforcement (AGILE) Project and the Public Safety Wireless Network (PSWN).

In 1997, at the request of the Vice President, Attorney General Reno accepted, on behalf of the Department of Justice, the leadership role for the development of a Global Criminal Justice Information Network capability under the Access America A07 initiative. Since that time, the Office of Justice Programs (OIP) and the Justice Management Division (IMD) have been tasked with coordinating efforts to encourage the development of integrated information sharing capabilities between state, local, and federal criminal justice components. At the December 1998 Global Criminal Justice Network Advisory Committee meeting, the Committee agreed that the Global Initiative would support the objectives of the Global Advisory Committee regarding the state and local integration portion of its task under the A07 initiative.

In 1998 and 1999, the OJP Global Initiative completed two primary objectives: (1) eliciting information from state and local criminal justice leaders to aid OJP in developing funding and technical assistance strategies for development of state and local integrated criminal justice information sharing systems, and (2) initiating programs in response to field input to facilitate integrated criminal justice systems.

In 1999, OJP initiated eight actions developed in direct response to input received from state and local criminal justice leaders through its 1998 outreach and conference series. The eight actions initiated were: (1) the development of a "business case" or marketing strategy for high level executives, legislators, and judiciary to support state and local integration initiatives; (2) identification of information interchange points within the criminal justice system; (3) a survey and analysis of state integration governance structures; (4) the facilitation of a mational information technology standards discussion; (5) implementation of a grant guidance strategy to improve coordination of OJP information technology funding; (6) a survey of state and local information technology and integration legislation; (7) a survey and analysis of information technology procurement issues; and (8) the planning and development of a national center for integration resources.

Funds were not specifically appropriated for the Global Initiative in 1998, 1999, or 2000. Funding for Global projects has been accomplished through redirection of appropriated funds from the Office of the Assistant Attorney General (OAAG), the Bureau of Justice Assistance (BIA), and the National Institute of Justice (NIJ).

In 2001, the Department requests a total of \$25 million to advance national integrated information sharing at the state and local level. Of this amount, JMD will administer \$7 million and OJP will administer \$18 million. JMD and OJP will work closely in a coordinated effort on the Global initiative.

Program Characteristics

The Office of Justice Programs is requesting \$18 million for the following purposes:

- \$500,000 is requested for OJP's Office of the Assistant Attorney General to review privacy law and procedures as they relate to state, local, and tribal criminal justice information sharing. Of the \$500,000, \$290,000 will be used to host a national privacy conference to discuss privacy issues associated with sharing of criminal justice information. The review of privacy law and procedures will include a review of criminal justice intelligence systems and compliance with section \$12(c) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, and 28 C.F.R. part 23 (1998). These efforts will build on and be coordinated with current efforts of the Bureau of Justice Statistics (BJS) and the DOJ Privacy Council and will seek to focus a national discussion on criminal justice information sharing and privacy. The remaining \$210,000 will be used for specific research and technical assistance projects in the area of privacy policy and law. State privacy laws affect the development of inter-state information sharing systems in the criminal justice arena and must be explored in more detail.
- 57 million is requested for NIJ to develop criminal justice standards, guidelines, and protocols for information sharing and analysis tools to facilitate interoperability. Standards, guidelines, and protocols will take several years to develop. They would include, but not be limited to, hardware and software interfaces for encryption, fingerprints, voiceprints, facial matching technologies, general databases, and legacy databases. Coordination for this effort will occur with other OJP bureaus and offices and, while separate from NIJ's AGILE project, the development of information sharing data standards will be done in conjunction with AGILE's effort to assess and develop wireless standards. The initiative will employ the services of the National Institute of Standards and Technology's (NIST) Office of Law Enforcement Standards (OLES) under its agreement with NIJ. NIST will survey, inventory, catalogue, and analyze existing standards and make recommendations to the field on existing standards for justice and public safety information sharing. Where gaps in standards are identified, NIST will initiate a standard setting process to fill these gaps. As members of the Global Standards Subcommittee of Global Criminal Justice Information Network Advisory Committee (GAC), JMD, and OJP will work closely in this effort.
- \$4.5 million is requested for the Bureau of Justice Statistics (BJS) to administer infrastructure development grants in five states to support the development of strategic plans and the enhancement and implementation of strategies to ensure coordination of information technology. Over the past 25 years, BJS has had an historical interest in promoting an integrated criminal justice infrastructure for states and localities. From funds awarded in 1972 through the Comprehensive Data Systems program to support the development of Computerized Criminal History (CCH) systems, to today's National Criminal History Improvement Program (NCHIP), BJS has provided assistance in facilitating this integrated infrastructure. BJS will provide integration planning grants to enable state and local governments to develop strategies for integrating their existing criminal.

justice information systems, including extending existing law enforcement systems to all components of the criminal justice system, or improving and maintaining their existing integrated criminal justice system networks.

- \$1.5 million is requested for the Office of Juvenile Justice and Delinquency Prevention (OJJDP) to do the following:
 - 5500,000 to survey juvenile justice agencies and conduct focus groups and conferences to determine present information technology capabilities and future needs for the field. The surveys, focus groups, and conferences will address the needs of juvenile courts, juvenile probation, juvenile corrections, and law enforcement with emphasis on juvenile issues. These efforts are specific to the area of juvenile justice. Similar efforts for the sharing of adult criminal records have been undertaken in the past. Separate efforts are necessary due to unique confidentiality issues related to sharing data on juvenile offenders, the separation of juvenile from adult data in most systems, and the current lack of automated juvenile justice systems throughout the country.
 - 51 million for the development of interagency information sharing protocols on juveniles among juvenile serving agencies, such as juvenile courts and juvenile corrections. Given that under state laws, most juvenile records are sealed or are considered confidential, only specific types of information can or should be shared. However, there are pieces of information, such as warrants, that make sense to share. The juvenile system must be linked, at least in part, to the overarching system and care must be taken to first explore and test out the modes and methods of information sharing to assure no laws are broken and that the legitimate privacy of minors is protected.
 - \$4.5 million for BJA to assist in developing integration models. BJA will conduct four "pilot projects" modeled after the Year 2000 Pilot Projects in which BJA enhanced already successful state, local, and tribal government integration initiatives and used these projects as "learning laboratories" for other states, localities, and tribal sovernment integration initiatives and used these projects as "learning laboratories" for other states, localities, and tribal seven local jurisdictions that have not begun or are just beginning the planning stage of criminal justice integration (\$1.05 million); and project evaluation (\$450,000). The purpose of the pilot projects and peer-to-peer consulting projects is to create a state, local, and tribal technical assistance capability where jurisdictions with successfully implemented integration initiatives will assist jurisdictions that are entering the integration planning and implementation process. States that may be considered for the pilot projects include California, Colorado, Florida, Kansas, Louisiana, Michigan, Missouri, North Carolina, New Jersey, New York, Pennsylvania, Ohio, Texas, and Washington. These states and their local jurisdiction have shown successes in developing integration governance bodies, legislation, and comprehensive strategic planning, and have partially or fully implemented integrated criminal justice information networks. States that may be considered for the peer-peer consulting projects include Alabama, Arizona, Illinois, Kentucky, Mississippi, Nevada, Oregon, and Rhode Island. These states have

shown an interest in criminal justice integration, have evidenced resources available to undertake an integration project, and are either beginning the planning process or have undertaken integration planning, but have not yet begun system-wide implementation.

4. JMD GLOBAL: (\$7 million)

Objective

The mission of the Global Justice Information Network (Global) project is to facilitate mission critical information exchange among law enforcement, courts, corrections, and other justice-related entities at the federal, state, local, tribal, and international levels. The Global initiative was established in Initiative A07 of Vice President Gore's "Access America: Reengineering Through Information Technology".

Program Characteristics

The \$7,000,000 will be used for centralized planning, development, and support of the Global Advisory Committee. In particular, these funds include:

- \$1,925,000 to develop a detailed concept of operations and implementation plan;
- \$1,950,000 to conduct a pilot project;
- \$1,874,000 will fund the Global office, including: 5 permanent positions, 4 detailers, \$840,000 for direct contractor support, and travel for Global office members; and
- \$595,000 to support and continue the activities of the Global Advisory Committee.

These activities form the foundation for the development of the Global network. With these studies and pilots the Department, state, local, or other agencies will have the necessary documentation to begin coordinated development. These studies and the pilot will also enable the Department, state or local entities to articulate a coordinated plan and provide the basis for expansion in the future.

The Global office will serve as the integrator for the DOJ components, other federal agencies, and the Global Advisory Committee. As the integrator, the Global office will be responsible for producing a number of policy guidelines, as well as programmatic, operational, and technical standards. All activities will be coordinated with and build upon the efforts of OJP and the Global Advisory Committee Working Groups.

In the current information sharing environment, states and localities are developing their own integration efforts, often using grants from OJP. Without conducting these integration activities at the federal level, the work supported by these grants does not guarantee the efficient development needed for automated information exchange for local and state entities with federal components.

5. Police Communications Improvement Program (AGILE): (\$5 million)

Objective

In 2001, \$5 million is requested for the Police Communications Improvement Program (AGILE) which will be administered by the Office of Justice Programs

The goal of this program is to develop and demonstrate a broad range of technologies to improve police communications and interoperability. Law enforcement work requires effective coordination, communication, and sharing of information with numerous criminal justice and public safety agencies. Unfortunately, many police officers, firefighters, and emergency medical service personnel responding to the same incident cannot communicate with each other. The lack of coordination is further compounded by the fact that many law enforcement agencies either have or are in the process of upgrading or implementing computer aided dispatching, communications, and records management systems. A majority of these systems will be unable to communicate and share data across jurisdictional and regional boundaries or with other public safety agencies within the same jurisdiction (e.g. fire and medical) due to unique system designs.

Program Characteristics

The goal of the National Institute of Justice's (NIJ) AGILE program is to address this lack of communication interoperability among state and local criminal justice and public safety communities. It should be noted that the AGILE program is the only federal interoperability program addressing both wireless communication and information sharing technology. This interoperability is important because the convergence of information technology and communications begs a singular activity to bridge the gaps in interoperability. In 2001, the AGILE program will focus on four key program areas:

- 1. the development of advanced technologies to enhance interoperability,
- 2. the demonstration of interoperable communications technologies in public safety testbeds and pilot projects,

- the development and coordination of standards that will establish common baselines for all public safety interoperable equipment, and
- the development and implementation of an education campaign designed to inform policy and decision makers about interoperability.

Technology Research and Development for Law Enforcement Communications

The goal of the technology research and development phase is to provide the tools that address the regional communication needs of police. This goal will be accomplished by either identifying commercial off-the-shelf (COTS) items that meet these needs, identifying COTS items that can meet these needs when used in a new or innovative way, or by developing new technologies when COTS items do not meet the user's needs. Examples of communication needs include seamless voice communications among regional agencies, e-mail, intelligence information, image transmission, data management, trend analysis, on-line inquiries of other regional data bases, secure commercial cellular communications, and quicker messaging. Data management and searching tools are particularly important because as information becomes electronically available, law enforcement will require efficient ways to obtain needed regional intelligence information in a timely fashion. These tool are especially important where it is easy for criminals to cross-junsdictional and interstate boundaries. The end capability will be to provide law enforcement with the ability to transmit voice, imagery, and data via wireless and wire methods. The following technology areas will be addressed by this initiative:

- 1. wireless radio, including spectrum issues; cellular; security; voice; imagery; and data transfer;
- wire, including creation of shared databases; accessing information; knowledge mining; voice, imagery, and data transfer, and systems security; and
- information analysis, which includes Geographic Information Systems (GIS), command and control, time line and trend analysis, and intelligent search techniques.

Test and Evaluation

The AGILE program will conduct operational testbeds and pilot projects to evaluate a number of interoperability technologies in various operational settings. The lessons learned from these efforts will be used by the AGILE Interoperability Education and Outreach campaign to assist law enforcement and other public safety agencies in developing interoperable communications infrastructures to meet public safety needs. The operational testbeds will include an exhaustive evaluation of the process involved to fully integrate selected interoperable technologies into the operational use by the participating law enforcement agency. This evaluation will include the steps taken by the Department to incorporate department-wide strategies to create a seamless communications infrastructure. Pilot projects that focus on individual interoperability communications technology (e.g.,

interfacing with the FBI's NCIC 2000, Regional Public Safety jurisdictions, other federal, state and local testbed initiatives) will also be evaluated.

Development of Open Architecture Standards

Open architecture is the ability of different systems to integrate or be compatible with one another. Interoperability cannot be achieved without open architecture. The National Institute of Standards and Technology (NIST) and NII's Office of Law Enforcement Standards (OLES) will continue to work on creating a set of industry-wide interoperability standards. These standards will maintain an open system architecture that enables individual law enforcement agencies to select peripheral communications equipment among competitive vendors and encourages the integration of current and future public safety technologies. To accomplish this result in a timely fashion, NIJ, together with NIST and OLES, will work closely with a broad range of non-government standards setting organizations to develop open architecture standards which will help ensure the development of a seamless, interoperable national public safety communications infrastructure.

Interoperability Education and Outreach

Technical personnel within law enforcement and public safety agencies are aware of the challenges associated with achieving interoperable communications. There is an acute need to conduct focused education efforts with decision-making entities that clearly state the urgency of the problem, discuss possible solutions, and facilitate multi-agency cooperation. AGILE's educational efforts will be directed primarily at policy makers, government leaders, and legislators so as to explain complex technical issues in laymen's terms. In addition, outreach efforts must support on-going state and local efforts by associations and jurisdictions in planning, radio frequency coordination, and regional systems architectures.

6. Public Safety Telecommunications Assistance Program (PSWIN): (\$70 million)

Objective

Major public safety incidents, such as the World Trade Center and Oklahoma bombings, dramatically illustrate some of the deficiencies of existing public safety radio communications. Public safety agencies responding from different jurisdictions and levels of government were unable to establish and maintain effective communications. Due to the number of agencies, jurisdictions, and levels of government involved in responding to such incidents, a concerted and coordinated effort is needed to resolve these deficiencies. The Public Safety Telecommunications Assistance Program will meet this challenge.

The National Performance Review (NPR) called for the Departments of Justice, Treasury, and Commerce, and the Federal Enforcement Wireless Users Group (FLEWUG) to convene an interagency working group to develop an alternative funding mechanism to improve public safety communications. Pursuant to the NPR, the interagency working group was formed and has been meeting since January 1998. Initially, this group was focused on planning to ensure that federal agencies procure compatible technology when replacing their current radio systems with digital narrowband radio systems as mandated by the National Telecommunications Information Administration (NTIA). However, FLEWUG has determined that it is essential for state and local law enforcement to begin planning efforts so that their systems will be compatible with the federal systems. Currently, every federal, state, and local law enforcement agency operates separate tactical networks in every metropolitan area in the country. Interoperability among these tactical land mobile radio systems has been difficult to achieve. Federal, state and local law enforcement agencies operate in different parts of the radio spectrum. Complicating this problem is the tack of security on most systems, leaving them open to interception and monitoring. When security is applied to the radio systems, interoperability results in different law enforcement agencies being unable to communicate with one another when they are responding to the same inclined.

Program Characteristics

As part of the Department of Justice's efforts to improve public safety communications, \$70 million is requested for public safety radio communications planning grants, a technical assistance program, and demonstration grants to be used as follows:

- \$41 million will be used to provide for planning grants to states and eligible territories for the purposes of encouraging these jurisdictions to include several criteria in their planning process, including interoperability across all local, state, and federal public safety agencies. This compelitive grant program will assist states by providing federal resources to allow them to (1) recognize the security risks associated with public safety communications systems and (2) create comprehensive statewide public safety telecommunications system plans through collaborative efforts at all levels of government and with different agencies. It is estimated that it will take states and municipalities approximately 18 24 months to plan and develop their systems and 2 3 years to implement them.
- \$9 million is requested for the Department of Justice's National Institute of Justice (NIJ) to administer a technical assistance program to assist states and municipalities in the planning and design of improved public safety communications systems, structured to account for states at differing stages of systems development. This flexibility is necessary because of the large number of agencies currently procuring replacement communications systems because they currently lack existing systems leaving them unable to take advantage of new technologies.

\$20 million is requested to provide the National Telecommunications Information Administration (NTIA) with funds for
demonstration grants that will assist a limited number of states and municipalities in implementing public safety
communication systems. NTIA has played a major role in the demonstration of new uses of the National Information
frastructure by public safety agencies and its Office of Spectrum Management advises the Administration on public safety
communication issues.

National Law Enforcement and Corrections Technology Center: (Increase \$10 million)

Objective

In 2001, \$10 million is requested for the National law Enforcement and Corrections Technology Center, which will be administered by the Office of Justice Programs.

The National Law Enforcement and Corrections Technology Center system was established in 1999 by the Office of Justice Program's National Institute of Justice to offer technology information, support, research findings, and technological expertise to help state and local law enforcement and corrections personnel perform their jobs more safely and efficiently. The NLECTC system consists of facilities located around the country that are co-located with an organization or agency that specializes in one or more specific areas of research and development. This arrangement is particularly cost effective and beneficial to the field because it allows for leveraging structures and expertise already in place in these organizations or agencies, and in which taxpayers have already made significant investments.

Program Characteristics

The NLECTC system includes a national center in Rockville, Maryland, four regional centers in Charleston, South Carolina, Denver, Colorado, Rome, NY, and El Segundo, California, and three specialty centers in the Border Research and Technology Center in San Diego, California, Office of Law Enforcement Standards in Gaithersburg, Maryland, and the Office of Law Enforcement Commercialization in Wheeling, West Virginia.

Examples of the activities the NLECTC system suppo. in 1999 include:

Responded to over 10,000 requests for Science and Engineering Advice and Support from law enforcement and corrections
agencies across the United States.

- Tested 183 models of body armor. Of the models tested 108 passed, 68 failed, four produced inconclusive results, two withdrew from testing, and one is pending. A total of 68 manufacturers worldwide now participate in voluntary body armor compliance testing program. To date, 2,100 lives have been saved as a result of the Body Armor Testing Program.
- Facilitated the transfer of excess military equipment, totaling \$35 million to state and local law enforcement and corrections
 agencies in all 50 states.
- Disseminated information pertaining to law enforcement and corrections technology
- Performed a technology demonstration for the Sullivan County (New York) District Attorney's Office that was key to the conviction of two child-killers. The demonstration involved both digital and forensics technologies. The analysis performed during the demonstration lead to the plea bargain of both suspects to the highest count, murder one. Both will serve life without parole.
- Conducted Law Enforcement and Corrections Technology Exhibit attended by 239 law enforcement and/or corrections agencies, representing over 80 different federal, state and local agencies. A total of 53 technologies were demonstrated or displayed.
 Overall, the activity drew participation from 10 different states and the District of Columbia.
- More than 100 analysts from over 70 agencies nationwide were trained through the Crime Mapping Analysis Program. In FY 2000, this effort is expanding training with a new program in the NLECTC-SE located in Charleston, South Carolina.
- Over 125 law enforcement personnel and representatives from several foreign countries participated in Operation Riverside. This
 advanced render-safe training for selected bomb squad personnel is the only intensive 10-day training event of its kind in the
 world.
- Hosted four Commercialization Planning Workshops with an average of 12 technology developers per session. These workshop
 are designed to work with vendors and inventors to take a technology from concept to commercialization in order to get the
 product into the hands of law enforcement or corrections practitioners. Road Spike and Tiger Vision are two examples of products
 that have been commercialized.

In 2000, \$10 million NIJ received direct appropriations for this program activity. In 2001, this request is included under COPS.

DNA Technology Research and Development: (Increase \$5 million)

Objective

In 2001, \$5 million is requested for the DNA Technology Research and Development Program, which will be administered by the Office of Justice Programs

The challenge for forensic DNA testing in the 21st Century is to be able to identify offenders quickly, with high discriminatory power, and lower cost from minuscule sources of physical evidence. DNA testing needs to be faster, cheaper, and better. NII's 5-Year DNA Technology Research & Development Plan, begun in 1999, will harness the tremendous growth in the field of DNA technology by directing research toward the development of highly discriminating, reliable, economical, portable, and rapid DNA testing methods for suspect identification or exclusion in violent crime investigations. The goals of this five year, \$25 million initiative are to develop technology tools that will allow for free DNA testing of any biological sample at the crime scene, and to develop and apply new biotechnology methods such as microchips and mass spectrometry to allow unique identification of any evidence sample.

This program, previously funded by the Department of Justice's NIJ, directs research toward the development of highly discriminating, less costly, reliable, sapid, and portable DNA testing technology tools for the investigation of violent crime. NIJ anaccipates that this initiative will result in the development of at least two acceptable DNA testing technologies complete with the training and validation necessary for court acceptance. These innovations will provide new tools for suspect identification or exclusion in violent crime cases and for development of a nationwide DNA database system, thus increasing the likelihood that the guilty will be identified and reducing the likelihood that the innocent will be charged or convicted. Improvements in rates of analysis, discriminatory power, and costs can enhance the criminal justice system and society as a whole by bringing investigations to a faster conclusion and quickly removing the guilty from society.

NII's 5-Year DNA Technology Research and Development Plan is critical to the stimulation of technological innovations and the continued advancement of DNA science within the criminal justice system. NII is the only source of funding available to private industry for such forensic DNA research and development efforts. Much of the forensic DNA research conducted in the U.S. has been funded in whole or in part by NII. Since 1985, NII has invested more than \$7 million in DNA technology research and development. The DNA markers known as STRs, which are now being implemented in all public and private laboratories in the U.S. and abroad, and are the required genetic markers for the National convicted offender database, CODIS, were first developed for forensic use under an NII-funded effort.

NII received \$5 million in each of 1999 and 2000 to implement a five-year effort to make the performance of forensic DNA testing faster, easier, and less expensive. Continued funding of \$5 million per year through 2003 will complete the development of technologies to meet Technical Working Group on DNA Analysis Methods (TWGDAM) and DNA Advisory Board (DAB) requirements for casework and dalabase testing, field testing of prototype technologies (including validation of test results), and development of training programs for the certified use of these technology tools.

Program Characteristics

The proposed 2001 activities of the DNA Technology Research and Technology Development 5-Year Plan are attainable within the 2001 resource request of \$5 million. The program's objectives are:

- Reduce DNA test performance time to minutes instead of hours within a number of technology platforms
- Reduce DNA testing costs to less than \$10 per test
- Develop inexpensive, single-use DNA test tools for analysis at the crime scene
- Increase the number of DNA traits to achieve unequivocal identity of a crime scene stain
- Reduce the time delay in entry of DNA profile data into state and national CODIS databases
- Increase the availability of court-ready methods for all aspects of forensic DNA testing

Criminal Records Upgrade: (Increase \$70 million)

Objective

In 2001, a total of \$70 million is requested for the Criminal Records Upgrade (CRU) Program, which will be administered by the Office of Justice Programs.

This program, which is also referred to as the National Criminal History Improvement Program (NCHIP), assists states in the upgrade of criminal history, criminal justice, and identification record systems; promotes capability and participation in national, state, and local systems; and captures information for statistical and research purposes.

NCHIP, established in 1995, and administered since them by the Office of Justice Programs Bureau of Justice Statistics (BJS), was designed as an umbrella program providing support to states in the expanding range of areas which impact on the improvement of criminal history records and record systems. The program was initially focused primarily on ensuring that states could fully

participate and support operation of the National Instant Criminal Background Check System (NICS), which was established under the Brady Handgun Violence Prevention Act (Brady Act). The NCHIP program builds on DOPs efforts to assist states in establishing the overall infrastructure required for a national criminal record system capable of meeting both criminal justice and non-criminal justice demands. Funds under the program are awarded to states to improve the accuracy, utility, and interstate accessibility of criminal history records; records of protective orders involving domestic violence and stalking; and other non-criminal records relating to firearm ownership eligibility.

Improved criminal history records are necessary to support the immediate identification of persons prohibited from firearm purchases or holding positions of responsibility involving children, the elderly, or the disabled. The proposed increase will help to improve the speed and accuracy of pre-sale firearm checks. Interstate access to complete and accurate criminal ecords is also necessary for criminal justice decisions on pretrial release, career criminal charging, sentencing, and correctional assignments. Background checks for national security and related purposes are also only as effective as the quality of the records on which they are based.

Program Characteristics

Starting in 1998, awards were also provided under the NCHIP program to assist states in the development and enhancement of state sex offender registries capable of interfacing with the FBI's National Sex Offender Registry. Complete and accurate in-state sex offender registries that meet the requirements of the Jacob Wetterling Act, Megan's law, the Pam Lychner Sexual Offender Tracking and Identification Act, and related state standards, will protect the public and assist law enforcement in handling incidents and cases involving sexual offenses. Timely collection, maintenance, and exchange of information on released sexual offenders is critical to supporting the effective operation of the FBI's national Sex Offender Registry, which was established pursuant to a Presidential directive and will provide immediate interstate access to such information.

Prior to 2001, this program was funded as a line item under the Office of Justice Program's Violent Crime Reduction Trust Fund (VCRTF). However, in 2001, this program is requested under COPS Crime Technology Initiative. The total 2001 request of \$70 million will be administered by OJP's BJS. These resources will continue to provide for the upgrade of criminal history, criminal justice, and identification record systems; promote compatibility and participation in national, state, and local systems; and capture information for statistical and research purposes, as authorized by the Crime Identification Technology Act of 1998, P.L.105-251 and consistent with 42 USC 3732 (c) (18) and (19).

Crime Laboratory Improvement Program (CLIP): (Increase \$35 million)

Objective

In 2001, \$35 million is requested for the Crime Laboratory Improvement Program (CLIP), which will be administered by the Office of Justice Programs.

To provide the best service possible to the criminal justice system, crime laboratories must stay abreast of and have access to the latest technology and methods to analyze forensic science evidence. Limitations surrounding accessibility to new technologies, training, and support threaten the quality and effectiveness of the criminal justice system. These limitations can be overcome both by increasing the capacities and capabilities of state and local crime laboratories and by developing a means of accessing specialized forensic services that extend as a network available to the forensic science community. The framework of sharing methods, equipment, and other valuable resources already exists in the forensic community, where consortiums of laboratories share certain DNA-based technologies across states and regions. The Crime Laboratory Improvement Program (CLIP) will leverage lessons learned in implementing DNA techniques to other critical forensic science areas such as transfer (trace) evidence, bomb, and arson and latent print examinations, in addition to continuing improvements in DNA identification.

The explosion in both technology and detection capabilities and the availability of new tools being implemented by criminals, coupled with a number of incidents which have called into question the integrity of parts of the nation's forensic laboratory system, makes it essential that the nation continue to develop, test, and implement new forensic capabilities across the country. CLIP will build on a number of efforts within the Department of Justice to address critical forensic science needs at the state and local levels of the criminal justice system. These efforts include the existing NI/s National Law Enforcement and Corrections Technology Centers (NLECTC). This program will improve the analytic and technological resources of forensic labs servicing all 50 states. CLIP will also increase forensic laboratory access to specialized forensic services, strengthen the network of cross-jurisdictional learning among local, state and regional labs; and establish a steering group for the intelligent altocation of scarce, yet high priority, forensic capabilities to critical investigations. In a decade when high profile cases have called the accuracy, reliability and integrity of the nation's forensic laboratories into question, CLIP will provide immediately appreciable results: more crimes solved, more criminals brought to justice, and better administration of justice through the presentation of strong, reliable forensic evidence at trial.

In 2000, NIJ was appropriated \$15 million for CLIP. Of the approximately \$4.5 million in unearmarked funds, about \$3 million will fund existing DNA laboratory improvement at the state and local levels. The remaining \$1.5 million will be used to develop 1) three pilot programs focusing on non-DNA forensic sciences, and 2) priorities and directions for the anticipated continued funding of CLIP through a national survey and a National Forensic Science Symposium.

Program Characteristics

In 2001, the Department of Justice requests \$35 million for the CLIP program to improve the ability of the nation's crime laboratories to more effectively support investigations by bringing the best available science to bear in the investigation of serious crimes. These funds will be used for the following purposes:

- \$20 million to award discretionary grants to state and local forensic science agencies in all 50 states to expand and improve their investigative and analytic capabilities in forensic areas other than DNA. Grants will be awarded following the National Institute of Justice's external review process, which will include a review by the FBI and other researchers, practitioners, and other expens in the field. Of this amount, \$10 million for laboratory equipment such as mass spectrometry systems for trace evidence and drug analysis and computer systems for fingerprint and weapons identification; \$5 million for laboratory staff training in new forensic technologies and methods; \$3 million for research/validation for equipment and systems to be implemented; and \$2 million for technical assistance for consultants services in system set-up, implementation, and training.
- \$9 million to continue to award discretionary grants to state and local forensic DNA taboratories in all 50 states under the DNA State identification Grants Program. Since the inception of this program in 1996, NJ has funded over 100 separate laboratory facilities in 48 states. With additional funding in 2001, NJJ will be able to provide support to labs in all 50 states.
- \$5 million to improve forensic services for Indian Country.
- \$600,000 to conduct a three-day National Workshop in each of NIJ's four NLECTC regions to identify crime laboratory
 development potential in several specific areas, including: resource protocols for state and local agencies to gain access to
 specialized forensic capabilities unavailable to them; fee for service arrangements like the MetroCard concept; and protocols for
 obtaining sound scientific testing of forensic evidence in specialized national or private laboratories.
- \$250,000 to initiate a National survey in cooperation with the FBI to identify the status and needs for specialized forensic
 capabilities in state and local laboratories.
- \$150,000 to establish a federal, state, and local steering group for NLECTC to give advice on the development of protocols for
 locating and funding high priority, hard-to-find forensic capabilities in critical state and local criminal investigations. Among the
 planning members on this group will be the FBI, the American Society of Crime Laboratory Directors (ASCLD), and the
 American Academy of Forensic Sciences (AAFS).

DNA Backlog Elimination: (Increase \$15 million)

Objective

In 2001, \$15 million is requested for the DNA Backlog Elimination Program, which will be administered by the Office of Justice Programs.

The National Commission on the Future of DNA Evidence, charged by the Attorney General with the improvement of the use of DNA technology throughout the criminal justice system, recently identified the elimination of the Combined DNA Index System (CODIS) convicted offender DNA sample backlog as an urgent priority. Currently, the system contains approximately 650,000 backlogged, or unprocessed, samples, representing an untold number of crimes as yet unsolved for lack of these potential sources of evidence. DNA technology has been widely recognized as key both to fighting crime and preserving justice through the identification of the guilty and the exoneration of the innocent. Funding for this program will provide DNA laboratories with the technology to dramatically improve analytic capacity, thereby reducing the backlog and freeing up laboratory resources for the analysis of new DNA and other types of forensic evidence.

DNA is key to fighting violent crime. The power of DNA technology has been widely documented and agreed upon by the legal, law enforcement, and scientific communities. So much is possible in this new millennium that seemed like science fiction only a decade ago. With a 62 percent felony recidivism rate and almost 2 million felonies per year brought through the criminal justice system, we must make better use of DNA technology. We are poised and ready to use DNA data to stop crimes before they happen.

To date, analysts find one "hit", or DNA match, per one thousand samples entered into the FBI's CODIS National DNA database. At this rate, adding 300,000 high priority convicted offender samples to the database may result in 300 hits or more representing approximately 300 offenders who will be brought to swift justice.

For example, in February of 1995, in Tallahassee, Florida, the Florida Department of Law Enforcement linked semen found on a Jane Doe rape-homicide victim to a convicted offender's DNA profile. The suspect's DNA had been collected, analyzed, and stored in a CODIS database while he was incarcerated for another rape. The match was timely; it prevented the suspect/offender's release on parole, which had been scheduled to occur eight days later. By prioritizing the samples of convicted offenders, we will maximize the number of cases solved; those destined for parole, those out on time served, or parole, should have their DNA profile in the database before they step away from custody.

Program Characteristics

Eliminating the backlog is a priority. In 1997, the Attorney General asked the National Institute of Justice to establish and administer the National Commission on the Future of DNA Evidence. The Commission's mandate is to improve the use of DNA technology throughout the criminal justice system, from the crime scene to the courtroom. In March 1998, the Commission, a group of twenty-two of the country's leading authorities on DNA technology and policy, met for the first time. Among the most pressing concerns the Commission presented to the Attorney General was the elimination of convicted offender samples backlogged for entry into local, state and national databases. In November of 1998, the Commission voted to recommend both backlog elimination and convicted offender sample prioritization as urgent issues to be addressed.

In order to eliminate the backlog, it is estimated to cost a total of \$30 million over a two-year period. These resources will assist state and local DNA labs in eliminating their backlog of statutorily mandated convicted offender DNA samples white keeping pace with current DNA casework needs. This funding will complete the forensic analysis of all samples identified as urgent priority samples (i.e., samples for homicide and rape/sexual assault cases) in the current backlog of convicted offender DNA samples. The backlog has accumulated as states across the country have passed laws requiring that DNA samples of convicted offenders be included in state or national databases. States were unable to begin processing samples until September 1997, when the National system (CODIS) announced the 13 STR acceptable DNA markers. By then a surplus of convicted offender samples had already occurred. There are currently 650,000 samples waiting to be analyzed and this number is estimated to reach 1 million by the year 2000. To reduce the backlog, grants will be awarded to state and local crime labs to either conduct or outsource analysis of convicted offender samples. An estimated cost of \$50/sample for the 13 DNA markers allows the analysis of 300,000 high priority samples with the \$15 million request.

In 2000, the Department's NIJ was directly appropriated \$15 million to initiate the first year of DNA backlog reduction activities. In 2001, the Department of Justice requests \$15 million for the second year of the two-year effort. The \$15 million request will permit the Department, through NIJ, to assist crime labs to eliminate the convicted offender backlog, thereby freeing future time to analyze samples quickly and immediately. DOJ believes these goals may be reached within two years due to advanced technology such as mass spectrometry and microchip DNA analysis. Prototype state-of-theyart machines are already screening 3,000 samples per day in contrast to the maximum of 300 samples per day analyzed with the technology in place at most crime labs today. Samples that currently take three hours to analyze will take less than three minutes; a result that can be achieved in-house by the more sophisticated labs or by outsourcing to private contract laboratories.

Community Mapping, Planning, and Analysis for Safety Strategies (COMPASS): (Increase \$10 million)

Objective

In 2001, \$10 million is requested for the Community Mapping, Planning, and Analysis for Safety Strategies Initiative, which will be administered by the Office of Justice Programs.

The Department of Justice requests \$10 million to build local crime data collection and analysis capacity in urban, suburban, and rural communities, to improve models for predicting crime in neighborhoods with the use of advanced crime mapping techniques, and to test the effectiveness of selected community crime prevention interventions. This initiative, which will be administered by the National Institute of Justice (NII), will develop a whole new way of understanding crime in its local context, and will arm practitioners with the tools they need to help them adapt to changing crime patterns.

Community Mapping, Planning, and Analysis for Safety Strategies (COMPASS) modernizes crime analysis and crime fighting at the local level. Over five years, COMPASS will equip a diverse group comprised of 15 jurisdictions — 10 urban and 5 rural, mid-sized, and tribal jurisdictions — with cutting edge information technologies that will allow them to fight crime more effectively and efficiently. Though crime has fallen in recent years, it is still much higher than it was in the 1960s and today's criminals have become increasingly sophisticated, armed, and mobile. More police and more prisons help, but law enforcement officials are using outmoded technologies for building their strategies. COMPASS offers communities a profound new mode of strategic planning that directs resources more efficiently and cohesively. This mode involves not only police, but also strategic teams consisting of police, prosecutors, community corrections, and other community stakeholders such as educators, housing officials, and local leaders.

Why COMPASS Now? The logic behind COMPASS derives from a combination of recent experiences and realizations:

Our knowledge base has never been better. Thirty years of federal research and development have produced significant improvements in our understanding of crime as well as our abilities to fight it. In the Congressionally-mandated assessment of programs to prevent crime, Preventing Crime: What Works, What Doesn't, What's Promising, authors identified a wide range of successful and promising programs that prevented adolescent drug abuse, built effective parenting skills, and secured community trouble spots. Other recent research has uncovered successful interventions with neighborhood gangs, crack houses, drug addicts, spouse abusers, and sex offenders. Research and evaluations funded under the Crime Act are adding to this inventory in the areas of community policing, drug courts, violence against women, and incarceration of violent offenders.

- Knowing what works and making it work are two different things. Part of the understanding that we have accrued tells us that programs "work" under highly specific circumstances, in terms of target populations and community circumstances, and fail to "work" in other settings. So simply packaging programs will not achieve significant gains in public safety.
- Another reality is that community crime threats are constantly evolving. At the base of the crime pyramid, we find that shifting socio-economic conditions can cause neighborhoods to decline in vitality. In turn, this loss of communal strength, which involves combined factors of economic decline, impacting businesses and families; and a weakening of social infrastructures (i.e., families, businesses, value-based organizations, schools), renders communities more vulnerable to crime. Even the most successful law enforcement crackdowns can simply cause criminals to migrate to other neighborhoods within a city. Evolving and adapting crime threats require equally dynamic assessments and responses.
- Today's local drug problem is part of a complex trans-national industry. Stolen cars and burglarized art are routinely smuggled to
 other continents. Motorcycle and ethnic gangs operate in regional networks.
- While law enforcement has been adopting new telecommunications technologies, planning technologies are still unsophisticated. Virtually all departments rely on reported crime as their sole measure of criminal activity. Only about one third of large (over 100 officers) police departments do any kind of computerized crime mapping. Of the remaining 16,500 smaller departments, only three percent do crime mapping.

COMPASS Premises. Financially pressed communities can not afford to simply add more police, prosecutors, or jails in response to crime problems. Neither can they afford to apply existing resources in the same way across a community irrespective of neighborhood differences. As police departments in this country have moved toward community policing, advanced departments have found that their greatest tool is information, particularly information about crime that shows crime in its neighborhood context.

Responsibility for crime control resides with local law enforcers. The Federal government can help by accelerating the introduction of information technologies into police departments around the country. Technology alone is not enough; however, it must be connected to sound data collection activities, and supplemented with data-driven policy formulation that recognizes changing local conditions.

The heart of COMPASS is mapping, planning, and assessment. Crime mapping is now at the cutting edge of community policing. Crime mapping develops computer-generated pictures of the location of crime in space and time. It allows commanders to hold their officers accountable for results. When other data (e.g., school data, liquor outlets, abandoned housing stock, parolee residences) are added to the data mix, then local planning and problem solving become more comprehensive and strategic. The same data streams

facilitate assessments of the tactical and strategic decisions taken. As new approaches are tried, geo .oded data displays neighborhood results, including displacement to adjacent areas.

Each of the 15 communities selected for COMPASS would be equipped with a crime data system containing the following building blocks: the Uniform Crime Reports, an incident-based crime reporting system; an Arrestee Drug Abuse Monitoring (ADAM) program; a public survey to measure school safety; and a gun tracing system for guns used to commit crimes. These data would all be geo-coded and mapped to show community-level problems and results; other data that are available in the jurisdiction would be added to the system, although not paid for by the federal funding.

Communities will be drawn from large and small population centers. Sites will be selected to ensure geographic diversity as well as diversity across ethnic composition and crime problems. Communities will compete to receive funds. Awards will be based on the innovativeness of plans to use data to formulate crime policies and the extent to which communities involve a broad base of community organizations.

COMPASS would also fund a research entity or consortium to work with crime analysts in each community to develop data-driven crime control strategies and to evaluate the effectiveness of those strategies. Participating jurisdictions would agree, in return for a federal investment in building this infrastructure, to create a broad partnership of agencies that would develop and test safety strategies using the data to reduce crime. This initiative would build upon the New York City's COMPSTAT experience (and other crime mapping projects in large departments), the Boston Gun Project, and Department of Justice Strategic Approaches Initiative, and other projects of the Office of Justice Programs (e.g., BJS victimization surveys, NIJ's ADAM program, OJJDP's Communities that Care program, BJA's Comprehensive Communities Program, the Weed and Seed program, etc.).

The Department of Justice would also carry out research, test new technologies, and provide technical assistance under this initiative. Evaluations of these new strategies would build an important national reservoir of successful strategies to learn what works to reduce crime, at the jurisdiction level as well as the neighborhood level. It would be particularly important to work with jurisdictions of all sizes to learn lessons from these test jurisdictions and to implement successful strategies and technologies in non-COMPASS jurisdictions.

Program Characteristics

In 2001, the COMPASS initiative has three parts that together develop local skills to assess and combat crime:

- Crime Mapping and Data Integration provides intensive aid that helps neighborhoods develop models to predict and thereby prevent local crime through comprehensive crime mapping information systems (55 million).
- Strategic Planning and Assessment will help communities understand what works (and why) in preventing crime in specific neighborhoods (\$4 million).
- Research, development, testing, and evaluation (RDT&E) will ensure that federal funds are spent efficiently and promote
 continued innovation throughout COMPASS development (\$1 million). This function will be funded by reserving up to ten
 percent of the program funds for the mapping and planning activities.

Program Administration

COMPASS is presented in three parts because each of the three parts represents a distinct activity. Nonetheless, COMPASS as a concept depends on all three activities for its success. The three parts are Mapping and Data Integration; Strategic Planning and Assessment; and, National Research, Development, Testing, and Evaluation. The table below highlights the funding request.

COMPASS Summary of Funding Requested

	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005
New Sites/Cumulative	9/9	0/9	3/12	1/13	2/15
Startup Funds (\$) million)	\$9,000,000 (9 new sites)	0	\$3,000,000 (3 new sites)	\$1,000,000 (1 new site)	\$2,000,000 (2 new sites)
Year 2 Annual Support		\$9,000,000 (1 th 9 sites)		\$3,000,000 (2 nd 3 sites)	\$1,000,000 (3 rd 1 site)
Year 3 Annual Support (\$625,000)			\$5,625,000 (1" 9 sites)		\$1,875,000 (2 nd 3 sites)
Year 4 Armuai Support (\$500,000)				\$4,500,000 (1 st 9 sites)	
Year 5 Annual Support (\$250,000)		_			\$2,225,000 (1st 9 sites)
National RDT&E	\$1,000,000	\$1,000,000	\$1,250,000	\$1,500,000	\$2,225,000
Escrow for later years			\$125,000	<u></u>	\$900,000
TOTAL	\$10,000,000	\$10,000,000	\$10,000,000	\$10,000,000	\$10,000,000

Crime Mapping and Data Systems Integration

The Department of Justice requests \$5 million to establish neighborhood crime mapping programs in 15 COMPASS communities over the five-year program period. The programs, which will enable law enforcement agencies to describe their current crime patterns, predict emerging crime "hot spots", and prevent new "hot spots" from surfacing. The initiative will be directed by NIJ's Crime Mapping Research Center, the national clearinghouse for crime mapping technology and its development. The Center is equipped with state-of-the-art hardware and software, and is staffed by researchers trained in geographic cartography and spatial analysis. Center staff advises other OJP agencies and local communities on the use of Geographic Information Systems (GIS) to analyze crime problems.

The Center will concentrate its efforts in four activities: helping communities procure appropriate information technologies; leading community data systems integration efforts; providing technical support for systems design and integration; and developing location-based prediction models. Each activity is described below.

Procuring Appropriate Information Technologies. NIJ will provide funds to purchase information technologies necessary for communities to establish their mapping and analysis capabilities. Funding will support staff, office space, and the hardware and computer software tools they will need to produce reports, maps, and statistical analyses. Communities will be able to acquire state-of-the-art data analysis technology to pinpoint crime patterns and to track the success of strategies developed in response. This funding will build community capacity to assemble data describing crime incidents reported to police, criminal victimizations, citizen perceptions of crime, and other relevant data necessary for them to identify specific crime problems and to devise tactical solutions to those problems.

Integrating Data and Data Systems. In addition to crime data already existing in every community, participants will integrate data from a variety of other local sources into a single local database

- Arrestee Drug Abuse Monitoring (ADAM): Data from NII's survey of drug use among arrestees documents the nature and extent
 of drug uses both locally and nationally.
- Criminal victimization statistics: The Bureau of Justice Statistics (BJS) has developed a Windows-based version of the National
 Crime Victimization Survey (NCVS) allowing local jurisdictions to conduct their own local victimization surveys. This software
 can be used by localities to accurately estimate crime rates, the rates of reporting of crime to the police, citizen attitudes toward the
 police, and perceptions of community policing initiatives.
- Incident-based crime statistics. In collaboration with the FBI, BIS has long encouraged the implementation of incident-based records management systems. Incident-based crime data provide specific information describing a community's crime problem and contain information relevant to the factical and strategic decisions that law enforcement administrators must make
- Other crime relevant information: Other sources may be selected by the community such as: gun tracing, school truancy and crime, social welfare, public health, economic development and local commercial statistics.

BIS staff members will develop and coordinate data collection and analysis protocols. BIS will also operate a Help Desk for jurisdictions developing incident-based crime statistics, local victimization surveys, and other data specific to local needs.

Providing Technical Support and Peer Learning. The over-arching goal of this initiative is to enable communities to maintain a locally-driven data infrastructure in order to develop data-driven solutions to crime problems. It will be necessary to provide technical support and peer learning in order to enable sites to become self-sufficient. In addition to the support and guidance planned under technology and data acquisition. NII will host a series of cluster conferences and cross-site visits to enable communities to learn from the experiences of other participants.

Developing Location Prediction Models. The analytic engine that will drive this initiative is GIS, which holds promise as a powerful tool for forecasting purposes. These neighborhood-based mapping systems will serve as an early warning signal to local criminal justice and social service agencies a signal that will aid in the development of strategic and tactical responses. In addition to building local capacity in specific neighborhoods, NIJ staff will work with the sites to develop theoretical models for predicting crime that can be applied to all neighborhoods. Their activities will include developing predictive modeling methods to create forecasting capabilities and testing forecasting methods in multiple sites to determine the most accurate predictive methods.

Strategic Planning and Assessment

The Department of Justice requests \$4 million to build strategic planning and assessment capabilities in 15 COMPASS communities, and to help communities implement and evaluate local crime interventions. The initiative will be managed by NIJ staff with strong expertise in demonstration programs and evaluation efforts. NIJ currently operates a variety of large scale demonstration/evaluation programs including ONDCP's Breaking the Cycle, the Congressionally-mandated Law Enforcement and Family Support demonstrations, and DOJ's Strategic Approaches to Community Safety initiative.

Strategic Planning and Investment consist of four connected activities: building a strategic planning council, conducting special data collections, implementing and assessing community safety interventions, and evaluating special neighborhood interventions. Each of these activities is described below.

Building a Strategic Planning Council. One of the first tasks to be started will be the introduction of strategic thinking to community safety planning. While communities will be required to propose a strategic planning council as part of the selection process, it has been NIPs experience in other programs that truly collaborative decision groups are extremely are, and that considerable time and effort are necessary to ensure success. NIJ will help communities build this group through gentle prodding to hold regular meetings, by convening regional meetings of strategic planning councils where participants "show and tell" and learn from others, and by offering technical assistance to bolster weak links in the community's planning framework.

Conduct Special Data Collections. The bulk of COMPASS data collection will be managed by the mapping and data integration group. In the course of their planning and priority setting, however, the planning council may want to acquire special information on a specific problem or in a particular neighborhood that is particularly vital to the nature of the interventions that are being considered. The planning group would coordinate such data collections with the mapping learn but would design and conduct the special collection themselves. By way of illustration, consider a decision to invest in after-school recreational programs. At the neighborhood level, planners might create a Boys and Girls Club. They would use data to select a site and target population, and they would monitor performance by collecting data on participant characteristics and attendance, activities offered, disciplinary problems, and child victimization and delinquency. Research might seek to identify where and how at-risk kids spend their time and come into contact with crime. Researchers would collect information for entire jurisdictions on the times of day and locations for various child activities and victimizations. They could also survey children to learn their fears and how they related to guardianship. They might also track gang involvement as a competing activity. These data would be used to structure and locate new child recreational programs in a neighborhood or throughout the jurisdiction.

Implementing and Assessing Safety Interventions. NIJ will work with the communities to test the effectiveness of multiple crime prevention interventions simultaneously. These initiatives will be multi-year efforts to determine the impact on community safety, community perception of safety, and overall community well being, as measured by the data and indicators available because of the data and mapping programs. NIJ will assist communities in designing and selecting interventions to test based on extant research and evaluation findings. The package of interventions tested in a community must address three public safety targets: offenders, victims, and other community members and justice system re-invention.

- Interventions to reduce criminal activity by convicted offenders under supervision in the community. The goal is to build human
 capital and motivation of offenders to pursue legitimate job opportunities.
- Collaborations between residents and police that provide productive, law-abiding developmental pathways for children. NII will
 provide technical assistance on location-specific and group-specific prevention strategies, crime mapping, and incidence reporting
 expertise and will help communities design and test systemic preventive programs for children.
- Innovative and community-focused management practices in local agencies. NIJ will also encourage both justice and non-justice
 organizations to stretch their resources and improve on performance through productive partnerships. Police-prosecutor
 coordination and joint police-probation officer teams are especially important concepts to community based management.

Implementing and Evaluating Demonstration Neighborhood Initiatives. NIJ will work with communities to design and implement innovative factics in particular neighborhoods in ways that maximize the potential for sound evaluation. NIJ will develop an

infrastructure within these demonstration neighborhoods for measuring and evaluating results over the life of the program. The combined data from these measurement activities will enable planners to modify and redirect intervention activities intelligently. As with special data collections for planning, NII staff and local evaluation teams will help the community measure program performance with program-specific indicators of success, and will provide feedback for project improvements. Results from these experiments will provide the impetus for I_m ger scale replications, including transfers of the concepts to other COMPASS communities.

National Research, Development, Testing & Evaluation

The Department of Justice requests \$1 million to manage a national research and evaluation program for COMPASS, and to disseminate the results of the 15 community programs. Up to 10 percent of funds from the community mapping and strategic planning activities will be reserved for research, development, testing and evaluation. COMPASS is a groundbreaking program that will need ongoing revision to reach its full potential. In order to have the greatest national impact, particularly for many small cities, towns, and rural areas that will not be COMPASS sites, NIJ will need to identify, evaluate, and disseminate effective techniques as they are discovered and tested. This portion of the program will also ensure that the best methods discovered in the early years of the program are properly disseminated to all of the COMPASS sites and other sites that could benefit from those strategies. Such information sharing will allow faster development of new techniques.

Maintaining a Continual National Evaluation. In order to understand thoroughly community successes, and to document barriers to successful implementation, a comprehensive national evaluation of all efforts will be conducted. This evaluation will group sites into categories based on geography and other defining characteristics. The evaluation will develop models of successful implementation, and, to the extent there are failures, document how, when, where, and why the initiative failed. The evaluation will be a road map to successful implementation, allowing those jurisdictions interested in such an approach to understand fully likely requirements before beginning such an effort.

Building National Capacity and Knowledge. The long-term value of this program is its ability to translate lessons learned from a small number of neighborhoods to communities nationwide. User manuals, guidance to communities, web sites and other forms of technical assistance will be available to any jurisdiction in the country that would like to use them, whether or not they are a COMPASS site. More broadly, transferring knowledge gained from COMPASS will allow for the development of a nationally applicable strategy, rather than ones centered on a series of individual sites. NII will archive the data collected and analyzed for this project, and make the data accessible through the Crime Mapping Research Center Web Site to enable researchers to easily replicate analyses and experiment with new research methods. An annual conference will promote the development and use of crime forecasting systems, provide regular interaction among practitioners, promote collaboration, as well as disseminate information on the latest methods and technologies.

Computer Forensic Crime Laboratory Enhancement Program: (Increase S6 million)

Objective

In 2001, \$6 million is requested for the Computer Forensic Crime Laboratory Enhancement Program, which will be administered by the Office of Justice Programs.

The criminal justice community has an immediate need for greater investigative resources to combat the rising levels of electronic crime. Because of the unique nature of electronic crime (it involves the use of rapidly changing technology, and its perpetrators can strike instantly from everywhere in the world) most state and local law enforcement agencies, which typically have a very limited capacity to respond to such crimes, face severe hardships in responding adequately. However, this ability could be significantly enhanced by the acquisition of key resources, such as comprehensive knowledge regarding the characteristics of electronic crime, uniform training and certification for crime analysts and investigators, and access to up-to-date technological tools and equipment.

Achieving this goal will require a coordinated approach to ensure: 1) where practical, all appropriate state and local agencies acquire the capability to meet their most common computer and other electronic crime forensic challenges, and 2) these agencies can easily and rapidly access other more sophisticated resources to help solve electronic crimes that exceed their resources. NII is the only federal agency with a congressionally mandated mission to address the unique needs of state and local law enforcement agencies. As such, NII is particularly well suited to this task and will continue to coordinate and work closely with all appropriate federal law enforcement agencies both within and outside the Department of Justice to accomplish the goals of this initiative.

Program Characteristics

NII, in collaboration with the FBI, will address the electronic crime forensics challenge through the development of a computer forensic laboratory system, through partnerships with various Federal, state, and local capabilities.

The program will work to strengthen local capabilities to address the most common problems and will address the need to expand law enforcement capacity to deal with unique or difficult investigative problems that are too expensive to be undertaken individually by smaller crime laboratories.

In 2001, the Department requests \$6 million, the first implementation year. These funds will be administered by NII and will allow for the establishment of several new regional computer forensic laboratories. After the expiration of this program, alternative sources of funding will be required for the regional labs to continue operating.

The funds requested in 2001 will be applied to the following tasks:

- \$400,000 to perform an assessment of law enforcement needs for computer forensic analyses. This assessment will be performed on a national basis by sampling states, municipalities, and localities regarding their investigative needs. A computer forensic laboratory technical working group (TWG), comprised of criminal justice practitioners, computer scientists, and electronic forensics analysts will review the assessment. NII has successfully used a similar process in its recent assessment of state and local experiences with and efforts to combat electronic crime. To insure the continuing technological suitability of laboratory enhancements throughout the program, \$200 thousand will be expended to perform an updated assessment of state and local needs in 2004.
- \$200,000 to establish a computer forensic laboratory technical working group (TWG), which will include federal experts as well as state and locals. The TWG will remain in place throughout the six-year program. The TWG will 1) validate the assessment of investigative needs and the generic model for identifying requirements for individual forensic laboratories, 2) provide guidance during the process of establishing new regional laboratories and in enhancing individual state and local laboratories, and 3) plan for the transition of the regional laboratories toward independent operation. The TWG will also establish standards for investigative practices and will provide guidance on interoperability issues relating to inter-laboratory communications. The total funding sought to cover the TWG throughout this program is \$850 thousand.
- \$300,000 to generate a decision model. The model will serve as a template that may be applied in determining the unique requirements for establishing and operating any given computer forensic laboratory. The model will specify facilities, equipment, personnel, training, forensic tools, and practices that are required to perform computer forensic investigations. Like the needs assessment, the decision model will need to be updated in 2004 at an estimated expense of \$200 thousand.
- 55.1 million in year one will be used to establish up to ten regional computer forensics labs. The needs assessment and denision model will be applied strategically to determine locations for new laboratories suitable in terms of need and geography. The plans will also provide for more precise costing in terms of procurement, installation, and maintenance of the necessary hardware, software, networking capabilities, and staffing.

B. Jasues Affecting 1999 Program Parformance, N/A

- C. Issues Affecting Selection of 2000 and 2001 Plans. The goal of the National Institute of Justice's (NIJ) Advanced Constitution of Interoperability for Law Enforcement (AGILE) program is to address this lack of communication interoperability among state and local criminal justice and public safety communities. It should be noted that the AGILE program is the only federal interoperability program addressing both writeless communication and information sharing technology. This is important because the convergence of information technology and communications beautiful structure activity to bridge the same in interoperability.
- D. Validation and Varification. NII validates and verifies performance measures by progress reports submitted by grantees, ensite monitoring of grantee performance and telephone contact.

8. Factors Affecting 1999 Program Performance. ** In FY 99, certification of the testing faborators was being completed

C. Factors Affecting Selection of 1809 and 1806 Plans. The National Law Enforcement and Corrections Technology Center system was established in 1999 by the Office of Justice Program's National Lautitude of Justice to offer technology information, support, research findings, and technological expertite to help State and local law enforcement and corrections personnel perform their jobs more safety and efficiently. The NLECTC system includes a national center in Rockville, Maryland, four regional centers in Charleston, South Carolina; Denver, Colorado; Rome, NY; and El Segundo, California, and these specialty centers in the Border Rasearch and Technology Center in Sac Diego, California, Office of Law Enforcement Standards in Gauthersburg, Maryland; and the Office of Law Enforcement Commercialization in Wheeling, West Virginia.

A. Definitions of Terms or Explanations for Indicators:

Output/Activity

Indicators 36: 4. Conferences and reviews relating to development of the national criminal history record system (including protective orders relating to demestic and stational). Brisdy procedures/impact, and sexual offender registries.

End Outcome

Indicator 7: The Interstate Identification Index (III) allows states access to other states' criminal history record system.

Indicator 6: Measurement has been cavised to count the number of states participating in the FBU's IAFIS. In 1999, indicator 10 reflects, the percentage of states using automated fungerprise sectionology at the state level.

Inducator 10: For FYs 99, 00 and 01, measurement has been revised to count only states which conducted an audit. In 1990, inducator 10 reflects states which had established an audit program.

- 8. Factore Affecting 1999 Program Performance: Specifically, the end outcomes are affected by delays in the expenditure of finds by the granter; changes in state personnel involved in project operation; flow progress of state activities identified in grant application; and state agencies waiting for pending State legislature decisions before completing projects. Monitoring and inchanical assistance are enhanced in cases where these factors are identified in an effort to state in state in accomplishing project goals.
- C. Factors Affecting Selection of 2000 and 2001 Plans: * There is a 10 million dollar discrease in the 2000 appropriations compared to the 1999 appropriations, which will affect some of the outcome performance indicators such as indicator # 9. Is is important to note that the end outcomes are significantly affected by the following factors: (1) amount of Federal Ruds appropriated; (2) amount of state funds appropriated for these activities; (3) status of available technology; (4) FBI program development; and (5) legislative changes.
- D. Verification and Validation: BIS collects its measurement data from a variety of sources, all desmed reliable, as follows: Indicator #1-Public Law; 72-4, 6-BIS project records and ensures processar records: #5 5 C properts: #7.8.15 FBI reports: #9.14 BIS published survey findings.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

INTTIATIVE: Crime Fighting Technologies

PROGRAM/ORG UNIT: Crime Laboratory Improvement Program (CLIP)

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal, State and Local Governments

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.1) Improve the crime fighting and criminal juvenile justice system capabilities of tribal, state and local governments.

ANNUAL PERFORMANCE GOAL: (2.1.1) Research and Evaluation

MISSION: To improve the capabilities and capacilities of state and local crime laboratories by developing a national network for accessing specialized forestate services (e.g., methods, equipment, and other resources) available to the forespic science community for cross-jurisdictional cooperation and collaboration (a criminal investigations.

- C. Issues Affecting Selection of 2000 and 2001 Plane.
- at In 2000, the 15 number of grant awards does not only include new table, but program activities to enhance the capacity of existing forensic table.
- bf In 2001, the 50 number of grant awards includes award supplements to applications approved which received awards in previous fiscal year, such that no new program activity would be intraced in the reporting year.
- In 2000, the National Institute of Justice (NII) received \$15 million for CLIP. Of the approximately \$4.5 million in unearmarked funds, \$3 million will fund existing DNA laboratory improvement at the State and local levels. The transhing \$1 million will be used to develop (1) three pation programs focusing on non-DNA forensic sciences, and (2) priorities and directions for the anticipated continued funding of CLIP through a national survey and a National Serveys Science Symposium.
- In 2001, this initiative, which will be administered by NII, will improve the ability of the nation's crime laboratories to more effectively support investigations by bringing the best available science to bear in the investigation of serious crimes. Of this amount, 55M will be dedicated to enhance the provision of forestic services within the Indian intell communities.
- D. Validation and Verification. NII validates and verifics performance measures by progress reports submitted by grantees, onsite monitoring of grantee performance and telephone.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE AND PROGRAM

INITIATIVE: Crime Fighting Technologies

PROGRAM/ORG UNIT: DNA Backlog Elimanation Initiative

DEPARTMENT OF JUSTICE CORE FUNCTION: (2) Assistance to Tribal, State and Local Governments

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.1) improve the crime fighting and criminal juvenite justice system capabilities of tribal, state and local governments.

ANNUAL PERFORMANCE GOAL: (2.1.1) Research and Evaluation

MISSION: To reduce and ultimately eliminate the convicted offender DNA sample backlog awaiting analysis and entry into the Combined DNA Index System (CODIS) national database.

- A. Definitions of Terms or Explanations for Indicators and Other Date Sources: "STR Short Tandem Repeat. The STR DNA markers are the current genetic marker of choice (or forense DNA testing: "PCR Polymerase Chain Reaction is the process of DNA amplification (copying).

 [FIT-4. 8] 3: "When indicator betraining in 2000.
- B. Issues Affecting 1999 Program Performance, N/A
- C. Jasuás Affecting Selection of 2000 and 2001 Plans. In 2001, this intritieve, which will be administered by the National Institute of Justice (NII), will assist state and local DNA labs in cliniquating their backlog of statutorily mandated convicted offender DNA samples while keeping pace with current DNA sasework needs. This funding will support a two year initiative to complete the forensic analysis of all samples identified as organization for samples for homicide and rape/sexual assault cases) in the current backlog of convicted offender DNA samples.
- a/ As fabs, through outcourding (to private fabs) of priority samples or analytic capacity enhancement (high through-put sample analysis equipment for labs ready to Incorporste the new technology), eliminate statisting backsogs, it frees up time to analyze other samples quickly and immediately. The same lab resources are used to address the backtogs as are used to process new samples. The majority of programmatic impact in lab productivity is expected to occur in year one, with further advances in lab productivity leveling off in the out years.
- b? This funding will support a two year initiative to complete the forensic analysis of all samples identified as urgent priority samples (i.e., samples for homicide and repet/sexual asseuticesss) in the current backatog of convicted offender DNA samples. There are currently 650,000 samples warring to be analyzed and this number is settlemented to reach 1 millions by the year 2000.
- D. Validation and Verification. ND validates and verifies performance measures by progress reports submitted by grantees, analise monitoring of grantee performance and telephone contact.

PERFORMANCE MEASUREMENT TABLE. PRESENTED BY INITIATIVE AND PROGRAM

DEFARTMENT OF JUSTICE COMMUNITY ORIENTED POLICING SERVICES CONGRESSIONAL JUSTIFICATION FOR FISCAL YEAR 2001

NARRATIVE FOR ADJUSTMENT-TO-BASE ITEMS

Increases		Amount
2001 pay raise. This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$715,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$535,000 for pay and \$180,000 for benefits totaling \$715,000).		715
Annualization of 2000 pay raise. This pay annualization represents first quarter amounts (October through December) of the anticipated 2000 pay increase of 4.8 percent effective fanuary 2000, and, for three-quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and the approved increase of 4.8 percent. The amount requested \$267,000, represents the pay amounts and appropriate benefits for these items (\$200,000 for compensation and \$67,000 for benefits).		267
Travel Management Center Fees. In the past, travel management services were provided at no cost, and the Department received rebates based upon ticket sales. However, current practices in the travel industry have ended this process. The new contracts will not provide rebates and will carry fees for each ticket, hotel, car, and other reservation made. The Department's cost for travel management center fees is estimated at \$2,500,000.00. Funding of \$21,000 is requested for the Office of Community Oriented Policing Services.	¥	21

NARRATIVE FOR ADJUSTMENT-TO-BASE ITEMS (Continued)

Increases	Amount	
Increased Federal Health Insurance Costs. This request provides for the increase in agency contributions to Federal employees health benefits. In 1999, Federal health insurance premiums, including agency contributions, increased approximately 10.2 percent. Because the Government absorbed a larger proportion of the total costs, up to 75 percent, the total cost to the Government has increased substantially. This increase is based on the "increased" Government cost of Health Insurance. This request includes \$75,000 for these costs.	75	•
Total Increases	1,076	
<u>Decreases</u>		
General Services Administration rent. GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested decrease of \$185,000 is required to meet our commitment to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates reflecting a 5 percent decrease over 2000 levels.	185	2873

- OFFICE OF JUSTICE PROGRAM Juvenile Justice Programs 2001 Summary Statement and Performance Plan

Summary Statement

The Office of Juvenile Justice and Delinquency Prevention (OJJDP) is requesting a total of \$289 million for 2001, which represents an overall increase of \$1.903 million above the program's 2000 base funding level of \$287.097 million. The 2001 budget includes a \$4.403 million increase in the Part C discretionary program to support an outcome evaluation of the Comprehensive Strategy for Serious, Violent, and Juvenile Offenders, a \$1.5 million decrease for the Part G Mentoring program and \$1million decrease for the Drug Prevention Program. The 2001 budget proposes that of the \$95 million available for Title V - Incentive Grants to Local Delinquency Prevention Programs (At-Risk Children's Program) \$20 million will be for prevention programs for Indian Tribes; \$10 million for the drug demonstration program; \$10 million to reduce juvenile gun violence; \$15 million for the Sofe Schools Initiative, and \$40 million for incentive grants. OJDP's total request for 2001 will support the goals and priorities of the Administration, the Department of Justice, and the Office of Justice Programs.

2001 Component Mission and Coals, and Relationship to DOJ Strategic Plan

OJIDP's mission is to provide national leadership, coordination, and resources to develop, implement, and support effective methods to prevent juvenile victimization and respond appropriately to juvenile delinquency. This is accomplished through prevention programs and a juvenile justice system that protects public safety, holds juvenile offenders accountable, and provides treatment and rebabilitative services based on the needs of each individual juvenile. OJIDP's mission also includes the implementation of a comprehensive strategy that addresses youth violence and focuses resources on programs that result in the improvement of the operation of the juvenile justice system, development of a system of graduated sanctions for serious, violent, and chronic offenders, identification and intervention with first time offenders and prevention of delinquency. The Comprehensive Strategy for Serious, Violent, and Chronic Juvenile Offenders (the Strategy) stresses the importance of using resources to maximize public safety, ensure accountability, and provide treatment and rehabilitation services for juvenile offenders as appropriate. Such a comprehensive strategy ensures safer communities by assisting state and local units of government, public and private agencies, organizations and institutions in the prevention, reduction, and treatment of juvenile violence and delinquency through demonstration and replication programs and improvement of the administration of juvenile justice through financial and technical support. The Strategy also addresses juvenile victimization that leads to violent delinquency through improvement of the investigation and prosecution of child abuse and child

exploitation, the development and implementation of multi-disciplinary child abuse investigation and prosecution programs, and through the establishment of regional and local children's advocacy centers. OJIDP's mission directly supports the DOJ's Strategic Plan core function of providing Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

The factors that contribute to the problems of juvenile delinquency and violence are all too familiar: children and adolescents with too much idle time, too little positive adult supervision, and too few healthy role models; guns and drugs too readily available in too many of our communities; more than a million cases of child abuse and neglect every year; parents without adequate parenting skills; and children with namet special education and mental health needs. It is these factors along with their outcomes that we must attack in our fight against juvenile crime.

In 1999, OJJDP participated in an unprecedented joint federal effort involving other offices within the Department of Justice, such as the COPS Office, and the U.S. Departments of Education and Health and Human Services. This joint effort, known as the Sefe Schools/Healthy Students Initiative, is aimed at helping communities design and implement comprehensive educational, mental health, social service, law enforcement and juvenile justice services for youth. The program provides for a coordinated effort focused on school and community safety and involves urban, rural, auburban, and tribal school districts who receive support to help link community-based services and prevention activities into one community wide approach to violence prevention and healthy child development. The Safe Schools/Healthy Students approach includes promoting children's skills to show self-control and rebuff the use of violence and aggression. A total of 447 applications were received and grants of \$1 million to \$3 million were awarded in September 1999 to \$4 local education authorities who have formal purtnerships with local mental health and law enforcement agencies. These purtnerships are implementing comprehensive plans to promote healthy development, foster resilience in the face of adversity, and prevent violence. The plans consist of 6 main areas: (1) school safety; (2) alcohol and other drugs and violence prevention and early intervention programs; (3) school and community mental health prevention and treatment services; (4) early childhood psychosocial and emotional development programs; (5) educational reform; and (6) safe school policies. In 2000, \$15 million is available for OJJDP to continue its Safe Schools/Healthy Students Initiative. In 2001, a total of \$35 million is requested to expand the program.

OJJDP's Research Division is collaborating with the Departments of Education and Health and Human Services to conduct a national evaluation of this program. A RFP was issued in June 1999 and 24 applications were received. A \$3 million cooperative agreement was awarded to the Research Triangle Institute in September 1999 to conduct the national evaluation. The national evaluation will carefully document both the process and the outcome of the initiative. It will encompass the formation of the community

collaboratives, the impact of these collaborations on school safety and health student development, economic analyses, surveillance of core indicators, and intensive outcome analyses. It will describe the activities conducted in the \$4 sites. The evaluation will also explore each of the six individual components of the collaboration mentioned above.

The National Mental Health Association, through a \$3 million cooperative agreement funded by the Departments of Education, Health and Human Services, and OJIDP, has established the Safe Schools/Healthy Students Action Center to provide training and technical assistance to the \$4 sites receiving awards in 1999. The overall goal of the Action Center is to enhance the ability of the grantees to fully attain their goals through school and community collaboration and adoption of evidence-based practices.

OJJDP's Juvenile Mentoring Program (JUMP) is designed to support one-to-one mentoring programs for youth at risk of educational failure, dropping out of school, or involvement in delinquent activities, including gangs and drug abuse. At the end of 1998, OJJDP completed a Report to Congress on JUMP. This report included preliminary results from an evaluation of the JUMP program, which will continue through the year 2001. Although the formal evaluation of JUMP has not been completed, it appears from the report, that JUMP programs are making a difference in the lives of young people. The preliminary results indicate that JUMP programs show promise as preventive measures to reduce delinquency and give participating youth a better chance at success. In addition, a workbook is being designed, which will assist mentoring programs in using evaluation techniques for program development and assessment. This workbook will be available by the Spring of 2000. In an effort to strengthen the quality of the JUMP funded mentoring programs, OJJDP has also funded a National Mentoring Center. This center provides training and technical assistance to men. bring programs through a variety of service, resources and conferences. OJJDP also supports mentoring through the SafeFutures initiative, which sasists communities in combating delinquency by developing a full range of coordinated services and formula grant funding to individual states.

The Truancy Reduction Demonstration Program is jointly funded with OJJDP, the Department of Education (DOE) and the Executive Office of Weed and Seed. The goals of this program are to develop and implement or expand and strengthen comprehensive truancy programs that pool education, justice system, law enforcement, social services and community resources; identify truant youth; cooperatively design and implement comprehensive, system-wide programs to meet the needs of truants; and design and maintain systems for tracking truant youth. In 1999, OJJDP awarded eight sites for this program, 3 non-Weed and Soed sites that received up to \$100,000 each, and 5 Weed and Soed sites that received up to \$50,000 each, all sites are currently involved in a 6-month planning phase. It is anticipated that during 2000, the program will focus on the development of implementation and evaluation plans

that link youth and adolescents who are truant with community-based services and programs; as well as a full implementation of the community's comprehensive system-wide plan to prevent and intervene with the problem of truancy. A process evaluation is being conducted that will identify factors that contribute to or impede the successful implementation of a truancy program.

The Program of Research on the Causes and Correlates of Delinquency includes 3 coordinated longitudinal research projects that have been supported by OJIDP since 1986. The Causes and Correlates studies are designed to improve the understanding of serious delinquency, violence, and drug use through the examination of how individual youth develop within the context of family, school, peers, and community. Results from the study have been used extensively in the field of juvenile justice and contributed significantly to the development of OJJDP's Comprehensive Strategy for Serious, Violent, and Chronic Juvenile Offenders and other program initiatives. Over the years, findings from the Causes and Correlates research have been presented in a number of OJJDP bulletins and fact sheets. In an effort to make these important findings increasingly accessible to the public, a Causes and Correlates of Delinquency website was recently added to the OJJDP website. The website includes descriptions of the individual projects and a bibliography of all the publications resulting from these projects.

In March 1998, OJJDP announced the findings and recommendations of its Study/Group on Serious and Violent Juvenile Offenders. In the publication, "Serious and Violent Juvenile Offenders: Risk Factors and Successful Intervention." Over a period of 2 years, the study group of 22 researchers worked collaboratively under the direction of Drs. Rolf Loeber and David P. Farrington, to analyze the current research on risk and protective factors and the development of serious violent juvenile offending careers, integrating it with information on the effectiveness of prevention and intervention programs. The findings of this distinguished panel of researchers are quite hopeful and compelling. They concluded that it is never too early to begin efforts to prevent serious and violent juvenile (SVI) offending, and it is never too late to intervene with known serious and violent juvenile offenders. Expanding upon OJJDP's formative work on the "Comprehensive Strategy for Serious, Violent, and Chronic Juvenile Offenders," the study group has carefully documented what is known about SVI offenders, what programs have been tried, how these programs have performed, what lessons can be drawn from them, and what research and evaluation efforts are needed to advance knowledge about preventing and controlling SVI offending. One of the primary goals of the study group was to provide further guidance to jurisdictions across the country that are implementing OJJDP's Comprehensive Strategy. The Strategy, originally developed from research on general delinquency, emphasizes strengthening the family and core socializing institutions, implementing prevention programs targeting key risk factors, identifying potential offenders at a young age, and employing graduated sanctions based on assessment of risk and needs. The study group used this framework to guide its effort.

Modeled after the OJJDP Study Group on Serious and Violent Juvenile Offenders, the Study Group on Very Young Offenders (VYO) is exploring what is known about the prevalence and frequency of very young (under the age of 13) offending. In 1999, OJJDP supplemented a grant to the University of Pittsburgh, the grantee for the Study Group on Serious and Violent Juvenile Offenders. The

VYO Study Group is examining whether such offending predicts future delinquent or criminal careers; how these youth are handled by various systems, including juvenile justice, mental health and social services; and what methods are best for preventing very young offending and persistence of offending.

In addition to conducting additional data analyses and literature reviews, the VYO Study Group has presented its preliminary findings to meetings of other researchers, judges, prosecutors and legislators to explore the needs of the practitioner communities in developing the final report. An in depth summary of the book will be developed for a lay audience. This project will disseminate the results of the research to the public, policy makers and practitioners through a variety of other summary reports on special topics aimed at key practitioner audiences. In 2000, OJJDP will convene a number of national workshops and in-depth public policy forums to further explore the implications of the research for policy makers and practitioners at the federal, state and local level.

In September 1999, OJIDP released the Juvenile Offenders and Victims: 1999 National Report. This publication is the most comprehensive source of information about juvenile crime, violence and victimization and the response of the juvenile justice system to these problems. The authors of the 232-page report of the National Center for Juvenile Justice have compiled the latest available statistics from a variety of sources; created easy-to read tables, graphs and detailed maps; and presented their analysis of the statistics in a clear, nontechnical language. They have presented baseline information on juvenile population growth trends, patterns of juvenile victimization, including homicide, suicide and maltreatment; the nature and extent of juvenile offending including data on antisocial behavior and arrest rates; and the structure, procedures and activities of the juvenile justice system, including law enforcement agencies, courts and corrections.

The 1999 National Report includes the most recent updates of information originally presented in Juvenile Offenders and Victims: A National Report (the benchmark publication issued in 1995) and also includes findings from important new sources, including the Bureau of Labor Statistics' 1997 National Longitudinal Survey of Youth, and the Office of Juvenile Justice and Delinquency Prevention's new national Census of Juveniles in Residential Placement. To make the findings available to the broadest range of users, OJJDP published the full report and disseminated 50,000 copies. In addition, an electronic version of the report was published on the OJJDP Internet web site. Within the OJJDP's Statistical Briefing Book web site, a "National Report Notebook" was created to facilitate quick access to important findings in the new report. More than a dozen key topics were highlighted with summary text explaining the results and linking the user with graphs and tables and supporting data. The notebook also offered suggestions for further contacts, as well as quotes from agency officials and the authors. More than 200,000 "hits" on this site were recorded since the release of the report.

In addition, a state-of-the-art CD-ROM version of the report was developed for dissemination. The CD-ROM version enables users to: view and search the 232-page report in portable document format; download statistical information from full-page, presentation-

ready graphs (also available in Microsoft Powerpoint) for easy use in lectures, community presentations and workshops with practitioners; analyze data found in the graphs (also available in Microsoft Excel); access the complete version of more than 40 source documents used in the development of the report; and link to key government Web sites to obtain more information. A total of 28,000 copies of the CD-ROM are being printed for dissemination. Finally, in an effort to draw attention to key issues addressed in the National Report, OJIDP began developing The National Report Bulletin Series, a collection of 8-12 page compilations of relevant pages found in different chapters of the Report on six topics, including: "Violence After School," "Juvenile Justice: A Century of Change," "Minorities in the Juvenile Justice System," "Challenging the Myths," "Kids and Guns," and "Juvenile Victims." Thousands of copies of each are to be targeted to specific audiences in 1999 and 2000.

The movement toward performance-based standards gained momentum with the Office of Juvenile Justice and Delinquency Prevention (OJJDP) 1994 release of the Congressionally-mandated Conditions of Confinement for Juveniles Offenders (CoC) Study. Responding to the study's recommendations, OJJDP jaunched the Performance-based Standards (PbS) project. Since 1995, the Council of Juvenile Correctional Administrators (CJCA) has worked with experts and practitioners in the field to develop a set of performance goals, the standards to measure progress toward meeting the goals, and data collection protocols that can be used to assess performance in six critical areas of facility operations: safety, order, security, programming (including education and treatment), health/mental health and justice. To date, the PbS project has:

- field tested and levised the standards and date collection instruments and diagnostic tools;
- refined a Web-based system for participating sites to report performance data via the Internet; gotten back individual site reports with comparative data; and, conducted interactive diagnostic assessment of the data;
- supported the implementation of the PbS program in 32 facilities across the country, in which sites also receive technical
 assistance in collecting data, developing and implementing Facility Improvement Plans in response to the site's analysis of
 baseline and subsequent performance measures. OJJDP has also provided demonstration funds to support facility
 improvements.

Recent survey results from the formative evaluation being conducted by the National Academy of Public Administration indicate initial positive findings—both in terms of the adoption of the PbS model and improved outcomes within the facility. Although nearly one-third of respondents reported experiencing significant difficulties with initial implementation, there is a strong consensus among participating facilities that performance-based standards will ultimately be accepted and used in juvenile correction and detention facilities. This finding is a positive indicator that the goals of the project are widely shared by facility administrators and staff, and that the use of performance-based measures and standards represent a value-added contribution to facility procedures and operations. Reported initial effects on conditions of confinement from sites' implementing Facility Improvement Plans included a reduction in disciplinary segregation, better medical and substance share sevening, improved data collection, and reduced incidents of violence.

2883

FY 2001 Performance Goals and Indicators

OJJDP is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

Office of Justice Programs Juvenile Justice Programs Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is italicized, and language proposed for deletion is bracketed.

Juvenile Justice Programs

For grants, contracts, connectitive agreements, and other assistance authorized by the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, ("the Act"), including salaries and expenses in connection therewith to be transferred to and merged with the appropriations for Justice Assistance, [\$269,097,000] \$272,000,000, to remain available until expended, as authorized by section 299 of part I of title II and section 506 of title V of the Act, as amended by Public Law 102-586, of which: (1) notwithstanding any other movision of law, \$6.847,000 shall be available for expenses authorized by part A of title II of the Act. \$89,000,000 shall be available for expenses authorized by part B of title W of the Act, of which \$3,000,000 shall be available to the National Institute of Justice for research into the dependency court system is response to child abuse and neglect, and [\$42,750,000] \$47,153,000 shall be available for expenses authorized by pair C of title II of the Act: Provided, That \$26,500,000 of the amounts provided for part B of title II of the Act, as amended, is for the purpose of providing additional formula grants under part B to States that provide assurances to the Administrator that the State has in effect (or will have in effect no later than I year after date of application) policies and programs, that ensure that juveniles are subject to accountability-based sanctions for every act for which they are adjudicated delinquent, (2) \$12,000,000 shall be available for expenses authorized by sections 281 and 282 of part D of title II of the Act for prevention and treatment programs relating to juvenile gangs, (3) \$10,000,000 shall be available for expenses authorized by section 285 of part E of title II of the Act. (4) [\$13,500,000] \$12,000,000 shall be available for expenses authorized by part G of title II of the Act for juvenile mentioning programs; and (5) \$95,000,000 shall be available for expenses authorized by title V of the Act for incentive grants for local delinquency prevention programs; of which [\$12,500,000] \$20,000,000 shall be for delinquency prevention, control, and system improvement programs for tribal youth; of which [\$25,000,000 shall be available for grants of \$360,000 to each State and \$6,640,000 shall be available for discretionary grants to States, for programs and activities to enforce State laws prohibiting the sale of alcoholic beverages to minors or the purchase or consumption of alcoholic beverages by minors, prevention and reduction of consumption of alcoholic beverages by minors, and for technical assistance and training;] \$10,000,000 shall be for prevention and reduction of youth gun violence; of which \$10,000,000 shall be for developing, testing and demonstrating programs designed to reduce drug use among juveniles; and of which \$15,000,000 shall be [available] for the Safe Schools Initiative: [Provided further, That upon the enactment of reauthorization legislation for Juvenile Justice Programs under the Juvenile

Justice and Delinquency Prevention Act of 1974, as amended, funding provisions in this Act shall from that date be subject to the provisions of that legislation and any provisions in this Act that are inconsistent with that kegislation shall no longer have effect: | Provided further, That of amounts made available under the Juvenile Justice Programs of the Office of Justice Programs to carry out part B (relating to Federal Assistance for State and Local Programs), subpart B of part C (relating to Special Emphasis Prevention and Treatment Programs), part D (relating to Gang-Free Schools and Communities and Community-Based Gang Intervention), part E (relating to State Challenge Activities), and part G (relating to Mentoring) of title II of the Juvenile Justice and Delinquency Prevention Act of 1974, and to carry out the Al-Risk Children's Program under title V of that Act, not more than 10 percent of each such amount may be used for research, evaluation, and statistics activities designed to benefit the programs or activities authorized under the appropriate part or title, and not more than 2 percent of each such amount may be used for training and technical assistance activities designed to benefit the programs or activities authorized under that part or title

In addition, for grants, contracts, cooperative agreements, and other assistance, [\$11,000,000] \$10,000,000 to remain available until expended, for developing, testing, and demonstrating programs designed to reduce drug use among juveniles.

In addition, for grants, contracts, cooperative agreements, and other assistance authorized by the Victims of Child Abuse Act of 1990, as amended, \$7,000,000, to remain available until expended, as authorized by section 214B of the Act.

(Department of Justice Appropriations Act, 2000, as enacted by section JOO((a)(1) of the Consolidated Appropriations Act, 2000 (P. L. 106-113).)

Explanation of Changes:

- 1. Adds language providing \$3 million in funding under Part A to the National Institute of Justice for research into the dependency court system's response to child abuse and neglect.
- 2. Eliminates the Under Age Drinking earmark in 2001.
- 3. Adds language providing funding under Title V for the following: \$10 million for a prevention and reduction of youth gun violence program and \$10 million for the development, testing and demonstration programs designed to reduce drug use among juveniles
- 4. Eliminates language regarding the reauthorization legislation for Juvenile Justice Programs under the Juvenile Justice and Delinquency Prevention Act of 1974.

2001 Estimate	282,353
Increase/Decrease	1.903

BASE PROGRAM DESCRIPTION:

The Juvenile Justice programs are authorized to be funded under the Juvenile Justice and Delinquency Prevention Act of 1974, as amended (JJDP Act). This legislation is divided into a number of parts. These parts are as follows:

Authorized under Part A of the JJDP Act, OJJDP, through the Coordinating Council on Juvenile Justice and Delinquency Prevention, coordinates and concentrates federal resources on the problems of delinquency and the operations of the juvenile justice system. This includes the development of federal youth policy and joint programs to target high risk youth. OJJDP provides up to \$200,000 for support of the Coordinating Council activities annually.

The Formula Grants Program, Part B of the JJDP Act, provides funds to states on the basic of population under the age of 18. To receive its allocated funds, a state or territory must submit a three-year comprehensive plan that meets statutory criteria. Funds may be expended for innovative programs to prevent delinquency, divert juveniles from the system, provide community-based alternatives to secure confinement, and to provide programs for juveniles who commit serious crimes. In 1999, 52 states and territories, of the 54 eligible, participated in the program. Under the 1992 amendments to the JJDP Act, beginning with 1994, states must demonstrate compliance with the definitionalization, separation, jail removal, and minority over representation requirements in order to qualify for their formula grant program allocation. Failure to comply with these requirements results in a 25 percent reduction in a state's allocation for each such failure. In 2000, \$89 million was appropriated to support.Part B - Formula Grants Program. In 2001, OJfDP requests continued Part B funding at the 2000 level.

Pan C of the JJDP Act authorizes, within OJJDP, the establishment of the National Institute for Juvenile Justice and Delinquency Prevention (NJJDP) and the Special Emphasis Division. The National Institute for Juvenile Justice and Delinquency Prevention conducts research and program development activities to increase understanding of the risk factors for delinquency and the effects of alternative justice policies. This information is applied to the development of promising program models, through joint initiatives with the Special Emphasis Division. The NJJDP also serves as an information collection and dissemination center for OJJDP. Information on juvenile delinquency, promising programs, and innovative juvenile justice policies and procedures are disseminated through nonprint media, including electronic devices, such as the Internet and bulletin board systems, and clearinghouse, training, and technical assistance activities.

New program development efforts, authorized under Part C of the JIDP Act and funded through the Special Emphasis Division, address a wide range of national juvenile justice issues by developing and testing prototypes and demonstrating effective programs. Program information generated throughout the development process is disseminated to the field. Competitive awards are made to support comprehensive planning and program development in many areas impacting on high risk youth, as well as violent juvenile offenders. The design and implementation of these new efforts are coordinated with NIJIDP and OJIDP's State Relations and Assistance Division. In 2000, \$42.75 million was appropriated for Part C of the JIDP Act. The 2001 budget includes a request for a \$4.403 million increase in the Part C discretionary program to support an outcome evaluation of the Comprehensive Strategy for Serious, Violent, and Juvenile Offenders.

In 2000, \$12 million was appropriated for the Gang-Free Schools and Communities, Community-Based Gang Intervention Program, which is authorized under Part D of the JJDP Act. Through this program, OJJDP awards grants for such programs and activities that include: (1) individual, peer, family, and group counseling, including provision of life skills training and preparation for living independently, which includes cooperation with social services, wetfare, and health care programs; (2) education and social services designed to address the social and developmental needs of juveniles; (3) crisis intervention and counseling to juveniles who are particularly at risk of gang involvement, and their families; (4) organization of neighborhood and community grups to work closely with parents, schools, law enforcement, and other public and private agencies in the community; and (5) training and assistance to adults who have significant relationships with juveniles who are or may become members of gangs, to assist such adults in providing constructive alternatives to participating in the activities of gangs. In 2001, OJIDP requests continued Part D funding of \$12 million.

In 2000, \$10 million was appropriated for the State Challenge Activities Program authorized under Part E of the JIDP Act. In 2001, \$10 million is requested to continue funding at the 2000 level. This program authorizes the OJIDP Administrator to award grants to states participating in the Formula Grants Program, in the amount of 10 percent of the state's formula grant allocation, for each of the challenge activities that the state agrees to undertake. The following are the 10 challenge activities:

- basic health, mental health and education services for youth in the juvenile justice system;
- access to counsel for youth in the juvenile justice system;
- establishment of programs and criteria to increase use of community-based alternatives through objective detention and correction placement criteria;
- 4 establishment of a secure, community-based corrections options for violent juvenile offenders as an alternative to training schools:
- 5 policies to prohibit gender bias and provide female youth with a full range of system services;
- establishment of a state ombudsman office for complaints related to out-of-home care of juveniles;
- 7. appropriate removal of status offenders from juvenile court jurisdiction;
- alternatives to school suspension and expulsion;
- 9. comprehensive aftercare service programs; and
- establishment of a state admir I rative structure to coordinate program and fiscal policies for youth with emotional behavioral problems and a state wide case review system.

In 2000, \$13.5 million was appropriated for the Mentoring Program, which is Part G of the JJDP Act. This level of funding included 2 earmarks totaling \$2 million. Under this program, OJJDP awards three-year grants to local agencies for mentoring programs designed to link at-risk youth with responsible adults to provide guidance, promote personal and social responsibility, increase educational participation, discourage use of illegal drugs, violence, weapon use, and other criminal activity, discourage gang involvement, and encourage participation in community service and activities. In 2001, OJJDP requests continued Part G funding of \$12 million, which restores program funding to the non-earmarked 1999 level.

The Title V - Incentive Grants for Local Delinquency Prevention Program is authorized under the JIDP Act. Under this program, grants are awarded through state advisory groups to units of local government for a broad range of delinquency prevention programs and activities to benefit youth who have had contact with or are likely to have contact with the juvenile justice system. In 2000, the \$95 million program includes \$15 million for the Safe Schools Initiative, \$12.5 million for the Tribal Youth Program, \$25 million for the Underage Drinking Program, and \$42.5 million for Title V Delinquency Prevention Program incentive grants. Services to children, youth, and their families include recreation, tutoring and remedial education, work skills, health and mental health, alcohol and substance abuse prevention, leadership development, and accountability. Priority in awards is given to applicants that coordinate and collaborate in provision of services, involve the private nonprofit and business sectors, and develop or enhance a statewide subsidy program to local governments that is dedicated to early intervention and delinquency prevention. In 2001, OJJDP requests continued Title V funding of \$95 million, of which \$10 million is available for the Prevention of Youth Gun Violence, \$10 million for the Drug Prevention Program, \$20 million for the Tribal Youth Program, \$15 million for the Safe Schools Initiative and \$40 million for Title V Delinquency Prevention Program incentive grants.

In 2000, Congress appropriated \$11 million for the Drug Demonstration Program. This program, which was begun in 1998 as an earmark for \$5 million within the Juvenile Justice appropriation, is designed to develop, demonstrate and test programs to increase perception among children and youth that drug use is risky, harmful and unattractive. OJJDP recognizes the relationship between substance abuse and delinquency and has thus promoted a rational framework for preventing and responding to adolescent problem behavior that is substantiated by years of research on risk-focused prevention. In 2001, OJJDP requests \$20 million for this program, of which, \$10 million is to be funded out of Title V - Incentive Grants for Local Delinquency Prevention and the remaining \$10 million is requested separately under the Juvenile Justice appropriation's Drug Demonstration Program.

In 1992, amendments to the Victims of Child Abuse Act of 1990, P.L. 101-647, changed the administering agency for the investigation and Prosecution of Child Abuse Program from the Office for Victims of Crime (OVC) to the Office of Juvenile Justice and Delinquency Prevention. In 2000, Congress appropriated a total of \$7 million of which \$1.5 million is for a grant to the American Prosecutor Research Institute's (APRI) National Center for the Prosecution of Child Abuse (Center). The APRI Center provides publication services, training, and technical assistance to prosecutors and other professionals involved in the prosecution of child abuse at the state, local and federal levels. Th: Center's staff attends conferences and workshops throughout the country to provide training on the most effective techniques the prosecution of child abuse. In addition, APRI's Center serves as an information clearinghouse for prosecutors, social workers, therapists, law enforcement, and clinicians involved in the prosecution of child abuse. In 1999, Congress also provided \$500,000 for the National Network of Children's Advocacy Centers, \$1 million for Regional Children's Advocacy Centers, and \$4 million for Local Advocacy Centers. In 2001, OJJDP requests continued funding of \$7 million.

2001 Program Changes:

In 2001, OJ/DP requests a total \$289 million, which is \$1.903 million above the 2000 base. An increase of \$4.403 million is requested for Part C discretionary funding to support a full outcome evaluation of the Comprehensive Strategy. A description of this enhancement can be found under the Juvenile Justice Initiative beginning on page 90. A \$1.5 million decrease in the Part G Mentoring program and a \$1 million decrease in the Drug Prevention Program is also included in the OJ/DP's 2001 budget request.

PERFORMANCE MEASUREMENT TABLE: PRESENTED PROGRAM

PROGRAM/ORG UNIT: Juvenile Justice Program/Office of Juvenile Justice Delivapency and Prevention(Base Program)
DEPARTMENT OF JUSTICE CORE PUNCTION: (2) Assistance to Tribal, State and Local Government

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.1) Improve the crime fighting and criminal juvenile justice system capabilities of tribal, state and local governments.

ANNUAL PERFORMANCE GOAL: (2.1.3) To emphasize both enforcement and prevention strategies to counter youth violence through targeted programs that provide funding and necessitated translature to states and localizing.

*CISSION: To implement a comprehensive straining that aggressively addresses youth violence and focuses resources on programs which will result in the improvement of the operation of the precede passes green, development of a system of graduated sanctions for serious, violent, and chronic offenders, identification and interventions with first time offenders, and prevention of delinquency.

IDP Act: Juvenite Justice and Delinquestry Prevention Act, as amended in 1992:

Section 223(a)(12): deinstitutionalization of status offenders - i.e., young people who commit an offense that would not be punishable for an adult. separation of jeveniles and adults in secure facilities;

Section 223(a)(14): removal of invention from adult juits and lockups;

Section 223(a)(23). Circlesion of disproportionate minority confinement in parisdictions where it exists.

B. laues Affecting 1999 Program Performance.

The 1999 Appropriation contained the following language: "Provided further: That of amounts made available under the Juvenile Justice Programs of the Office of Justice Programs, to carry but Part B (relating to Federal Assistance for State and Local Programs, subpair II of the part C (relating to Special Emphasis Prevention and Treatment Programs), part D (relating to Special Emphasis Prevention and Treatment Programs), part D (relating to Mentoring) of fittle II of the Juvenile Based and Delinquency Prevention Act of 1974, and to carry out the ALRISE Children's Program under title V of that Act, not more than 10 persons of each such amount may be used for research, evaluation, and statistics activities designed to benefit the programs or activities authorized under that part or fulle, and not more than 2 persons of each such amount may be used for training and technical assistance activities designed to benefit the programs or activities authorized under that part or fulle. These set asides resulted in more grant/contract ward and overall more activities these areas.

C. Issues Affecting Selection of 2000 and 2001 Plans.

Avuilability of funds may affect the number of awards, maining and technical assistance provided and overall ability to meet legislative requirements. Congressional carmarks and continuation requirements fund discretionary grant funding.

D. Validating and Verification.

Performance indicators are generally based on the following activities: awards made, desk reviews completed in preparation for obsiste visits, on-site compliance monitoring visits, un-site congruent documentation and assistance waits, technical assistance visits, and the close-out of grants. Activities are required pracked and documented, which in turn provides the verification for reported data. For example, staff monitoring, reports are used to verify completion of on-site compliance monitoring visits conducted and to review program and documentation assistance activities, as well as technical assistance activities.

OFFICE OF JUSTICE PROGRAMS Public Safety Officers' Benefits Program 2001 Summary Statement and Performance Plan

Summary Statement

The Public Safety Officers' Benefits (PSOB) program is requesting a total of \$38.024 million for 2001, which represents an increase of \$3.483 million over the 2000 level. The Public Safety Officers' Educational Assistance (PSOEA) program, formerly known as the Federal Law Enforcement Dependents Assistance (FLEDA) program, is requesting direct funding of \$4.8 million in 2001. In 2000, this program is funded from the 1999 unobligated balances.

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The Public Safety Officers' Benefits (PSOB) program's mussion is to provide financial and emotional assistance to the eligible survivors of Federal, state, and local public safety officers who have died as the result of traumatic injury or who are permanently and totally disabled as the direct result of a catastrophic injury sustained in the line of duty, and to provide educational assistance to the spouses and children of slain or totally disabled oublic safety officers.

The program supports public safety officers, their families, and their agencies before, during and after tragedies occur through the following:

- Paying eligible death benefit claims within four weeks of the filing of a fully documented claim, and eligible disability claims within six weeks of the filing of the fully documented claim.
- Issuing determinations on ineligible death benefit claims within four weeks of the filing of the fully documented claim, and
 determinations on ineligible disability claims within six weeks of the filing of the fully documented claim.
- Issuing hearing officer determinations within 30 days of the official close of appeal hearings.
- Handling each death benefit and disability claim with the utmost dignity, sensitivity, and professionalism.
- Continuously looking for opportunities to better serve public safety officers.

PSOB's objectives for 2000 include the following:

- Rapid and accurate response to benefit claims by continuing to increase the number of cases closed each year, and by completing implementation of PSOB's electronic management information system.
- Humanistic approaches in handling all contacts. Continue to provide PSOB staff with in-service training on issues
 associated with grief, critical incident stress, and conflict resolution.
- Continued dissemination of information on the PSOB program to Federal, state, and local units of government through establishment of a national survivors network for the families and co-workers of fallen firefighters, and continued implementation of the Public Safety Officers' Educational Assistance (PSOEA) program.
- Closure of 250 death cases (approvals and denials) and 30 disability cases in 2000.

FY 2001 Performance Goals and Indicators

PSOB is proposing an 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

Office of Justice Programs Public Safety Officers Benefits Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is italicized.

Public Safety Officers Benefits

To remain available until expended, for payments authorized by part L of title 1 of the Omnibus Crime Control and Safe Streets Act of 1968 (42 U.S.C. 3796), as amended, such sums as are necessary, as authorized by section 6093 of Public Law 100-690 (102 Stat 4339-4340); and, in addition. \$4,800,000 for the Public Safety Officers Dependents Assistance Program, as authorized by section 1211 of said Act.

(Department of Justice Appropriations Act. 2000, as enacted by section 1000(a)(1) of the Consolidated Appropriations Act. 2000 (P.L. 106-113).)

Explanation of Changes:

1. Adds language requesting funds in 2001 for the extension of retroactive eligibility dates for financial assistance for higher education for spouses and children of public safety officers killed in the line of duty.

BASE PROGRAM DESCRIPTION

The Omnibus Crime Control and Safe Streets Act of 1968, as amended by the Public Safety Officers' Benefits Act of 1976, established the Public Safety Officers' Benefits Program. The Anti-Drug Abuse Act of 1988 (P.L. 100-690)(42 U.S.C. 3796), authorized a basic death benefit payment of \$100,000 when a Federal, State, or local law enforcement officer, firefighter, corrections officer, judicial official, or public ambulance or rescue squad member dies as the direct and proximate result of a traumatic injury sustained in the line of duty. The Act also provided for an annual cost of living escalator tied to the Consumer Price Index (CPI). This escalator, on October 1 of every year, increases the benefit by the percentage of increase in the CPI. If a spouse and eligible children survive, the widow/widower receives one-half of the benefit, and the remaining one-half is apportioned among the children. If there is no spouse and there are eligible children, the full benefit is apportioned among the eligible children. If there are no eligible children, then the spouse receives the full benefit. Parents are eligible for the death benefit when a spouse and/or eligible children do not survive the deceased public safety officer. The Crime Control Act of 1990, provided authority for a new Public Safety Officer's Disability Program. Federal, State, and local public safety officers are eligible for the disability payment when permanently and totally disabled as the direct result of a catastrophic injury received in the line of duty on or after November 29, 1990. Like the death

benefit, each year, the amount of the disability benefit payment is adjusted by the annual percentage change in the CPI. The benefit payment was \$143,943 in 1999, which was a 1.7 percent increase over the 1998 amount. The 2000 benefit payment is \$146,949, an increase of 2.1 percent over the 1999 amount. The request for 2001 base includes funds for the estimated annual change in the Consumer Price Index for the death benefits program.

The Police, Fire, and Emergency Officers' Educational Assistance Act of 1998, P.L. 104-238 (410 Stat 3495), signed November 13, 1998, amended the Education Assistance to Dependents Program and established the Public Safety Officers' Educational Assistance (PSOEA) program. This new educational assistance program, PSOEA, amends the Federal Law Enforcement Dependents Assistance (FLEDA) program to include state and local public safety officers as well as federal public safety officers. PSOEA will provide payments for educational purposes to children and/or spouses of Federal, state, and local public safety officers killed or disabled in the line of duty. Based on the availability of appropriations, financial assistance is provided by direct payments to an eligible dependent and are computed on the basis set forth in section 3532 of title 38, United States Code. A dependent cannot receive assistance for longer than 45 months of full-time education or training (or a proportional period of time for a part-time program), and is not eligible for assistance beyond the child's 27th birthday (unless there are extraordinary circumstances that precluded the child from pursuing a program of education before reaching 27). A person seeking assistance under this program submits an application to the Attorney General, and is notified of approval or disapproval in writing, Educational assistance can be discontinued if it is found that, according to the regularly prescribed standards and practices of the educational institution, the recipient fails to maintain satisfactory progress as described in section 484(c) of the Higher Education Act of 1965. A dependent of a federal, state, or local law enforcement officer killed or totally disabled in the line of duty is eligible for assistance. Also, retroactive assistance may be provided to eligible dependents for each month a program of education was pursued. (Note: Congress has legislation pending that would provide retroactive educational assistance to eligible dependents of federal law enforcement officers killed in the line of duty on or after May 1, 1978, instead of the previously enacted May 1, 1992, and state and local officers killed in the line of duty on or after October 1, 1978, instead of the previously enacted October 1, 1997.)

Generally, the PSOB program staff receives a death report within one week of the public safety officer's death, usually from the employing agency. When notice is received from other than the employing agency, PSOB staff will initiate direct contact. Employing agencies generally take from 60-120 days to file apomplete claims. Eligible claims are paid within three to four weeks of the receipt of documentation; ineligible claims are processed within four weeks of being filed and documented. When a claim is denied, appeal instructions are provided to the claimant. Appeals are heard within 60 days of the claimant's request (contingent on the availability of hearing officers who are serving on collateral duty, and the availability of appeal representative), and decisions are rendered

within 30 days of the official close of the appeal hearing. Hearing officer findings may be appealed to the Director of the Bureau of Justice Assistance. Once an appeal is heard by the agency and a denial affirmed, the claimant may appeal directly to the U.S. Claims Court. Claims entering the Federal court system may take from six months to two years or more to resolve, depending on how rapidly the court and the claimant's attorney respond to statutory and procedural requirements.

While death reports had been steadily decreasing from 322 in 1989, to the lowest level of 204 in 1992, this trend leveled off in 1993 when 226 deaths were reported, an increase of 22 over 1992. This increase was due primarily to several incidents during which multiple deaths occurred. During 1994, death reports increased substantially, again due to several incidents during which multiple deaths occurred — 14 Federal firefighters killed fighting a Colorado forest fire; 2 Federal firefighters killed en route to a New Mexico forest fire, and 5 DEA agents killed in an airplane crash in Peru. There were 262 deaths reported in 1994, and 270 in 1995. The 1995 figure includes losses suffered in the Oklahoma City bombing. In 1996, there were 226 deaths reported, and in 1997, there were 268 reported deaths. In 1998, the number of deaths reported decreased to 262, and in 1999, the number of deaths decreased to 236. Although deaths decreased in 1999 by 26, the PSOB program experienced an increase in the number of multiple deaths. During 1999, 22 multiple deaths were reported, which included 11 firefighters and 11 law enforcement officers.

Disability claims cannot be initiated until the disabled officer has been permanently separated from his or her public safety agency and has been awarded maximum worker's compensation benefits associated with the officer's permanent and total disability. After receipt of the foregoing prerequisite disability certification from the disabled officer's employer, PSOB staff officially initiate the disability claim. This "prerequisite" procedure prevents PSOB staff from being inundated with disability claims that do not meet the "total and permanent" PSOB disability requirement. Employing agencies generally take from 60-120 days to file a complete claim. Because medical reviews are needed on all disability claims, both eligible and ineligible claims are processed within six weeks of being filed and documented. Ineligible claims may be appealed subject to the same time frames that apply for the Death Benefits Program.

The November 18, 1988, amendment to the Public Safety Officers' Benefits Act (Anti-Drug Abuse Act of 1988, P.L. 100-690) authorized the use of up to \$150,000 of PSOB funds to establish national programs to assist the families of public safety officers who have died in the line of duty. Accordingly, Concerns of Police Survivors, Inc. (COPS) has received approximately \$150,000 each year since 1989 to carry out this Congressional mandate. The Care for Police Survivors Act of 1998, P.L. 105-180, created a minimum of \$150,000 for these purposes. COPS is an organization that coordinates and directs a national network that responds with psychological and emotional support to families and coworkers of public safety officers who have died in the line of duty. This network consists of families of deceased public safety officers who have come through that deeply traumatic expérience to take up,

once again, reasonably normal, productive lives. Each May 14-16, COPS conducts their annual National Survivor Family Conference in Washington. D.C. for law enforcement survivor families throughout the Nation. This conference is held in conjunction with the National Law Enforcement Officers' Memorial Service on May 15 of each year.

The National Fallen Fittefighters Foundation provides peer counseling, training, and technical assistance to the families and co-workers of fittefighters killed in the line of duty. The Foundation also manages the National memorial service, held annually in October in Emmitsburg, Maryland, to honor the nation's fittefighters killed in the line of duty.

2001 Program Change

In 2001, BJA requests a total of \$5.483 million. Of this amount, \$4.8 million will support the Public Safety Officers' Educational Assistance (PSOEA) Program. This increase is discussed in detail on page 123 of the Current Investments Initiative.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY PROGRAM

PROGRAM/ ORG UNIT: Public Safety Officers' Benefits Programs / Bureau of Justice Assistance (Base Program)

DEPARTMENT OF JUSTICE CORE PUNCTION: (2) Assistance to Tribal. State and Local Government

DEPARTMENT OF JUSTICE STRATEGIC GOAL: (2.4) Uphold rights of, and improve services to America's victims

ANNUAL PERFORMANCE GOAL: (2.4.1) Initive designed to chause assistance to all victims and dependents

MISSION: To provide a death benefit to eligible survivors of federal, state and local public safety difficers who have died as a result of personal injury sustained in the line of duty or a disability benefit payment to federal, state, and local safety officers who are permanently and to obtailly disabled as the direct result of a causatrophic personal injury received in the line of duty and to provide educational assistance to the dependents of federal law enforcement officials who are killed or divisabled in the performance of their duties.

A. Defluktions of Terms or Explorations for Indicators and Data Sources:

BJA Files = Public Safety Officer's Benefits Program Annual Report

B. Louis Affecting 1999 Program Performance.

- o Number of death and disability claims received varies from year to year
- o. Claums received in a given fiscal year may not be paid until the following fiscal year due to delays in receiving necessary documentation from claumant.
- o The responsibility of a court appeal no longer resides with the PSOB office until adjudicated. Once adjudicated, the PSOB office is involved for closure of the closure
- or The handsing of appeals within 60 days depends on the availability of administrative hearing officers and, more often, time constraints on the part of claimants' legal representatives
- o It is important to note that the number of appeal, equests are increasing commensurate with increases in the amount of the benefit payment

C. Issues Affecting Selection of 2000 and 2001 Targets.

a/Funds include a \$4.8 million increase for the Public Safety Officer's Educational Assurance (PSOEA) Program of FY 20001

bThe federal educational assistance portion of this program was expanded on October 1, 1998, to include all state and local public safety officers as opposed to formerly including only federal law enforcement officers which likely result in a large increase in applications and dependents receiving assistance. We are unable, at this time, to project for FY 2000 and Fy 2001

- o Targets for 2000 and 2001 are estimates. Number of death and disability claims received view
- o Claims in a given Fiscal Year may not be paid until the following Fiscal Year -
- o The responsibility of a court appeal no longer resides with the PSOB office until adjudicated. Once adjudicated, the PSOB office is involved for closure of the claim
- o The handling of appears within 60 days depends on the availability of administrative hearing officers and, more often, time constraints on the part of claimants' legal representatives
- o it is important to note that the number of appeal requests are increasing commensurate with increases in the amount of the benefit payment
- a The federal educational assistance portion of this program was expended on October 1, 1998, to include all state and local public safety officers as opposed to formerly including only federal law enforcement officers which likely result in a large increase in applications and dependents receiving assistance. We are unable, at this time, to project for FY 2000 and FY 2001

D. Validation and Verification.

The Public Safety Officers' Benefits Program (PSOB) validates and verifies claums by various tracking methods, which include log books, a database system, microfilm, statistical reports, and a system of self-reporting. PSOB also pross-references data with law enforcement agencies (i.e., Concerns of Police Survivors, National Law Enforcement Memorial, National Volunteer Fire Council, etc.)

OFFICE OF JUSTICE PROGRAMS Crime Victims Fund 2001 Summary Statement and Performance Plan

Summary Statement

Services for crime victims in America are under funded and anavailable in many parts of the country. This is especially true in rural areas, many of which have neither doctors nor mental health professionals who specialize in treating crime victims. While a few communities have outstanding, comprehensive services for victims, in many communities these services are nonexistent. The 1984 Victims of Crime Act (VOCA) created the Crime Victims Fund where Federal criminal fines, bond forfeitures, and penalty assessments are deposited. These deposits are to fund programs for victims of crime.

In 1998, collections totaling \$324,038,000 were available for use in 1999. In 1999, collections totaled \$985,184,000. However, Section 620 of Public Law 106-113 delayed obligation of Fund receipts in excess of \$500,000,000 until October 1, 2000. Finally, 2000 collections are estimated to be \$575,000,000. With available receipts from the 1999 delay of obligations, a total of \$1,063,184,000 is available to the Fund. The Administration proposes, in Section 114 of the DOJ General Provisions, that obligations of receipts in excess of \$550,000,000 be delayed until October 1, 2001.

2001 Component Mission and Goals, and Relationship to DOJ Strategic Plan

The Office for Victims of Crime (OVC) is committed to enhancing the Nation's capacity to assist crime victims and to providing leadership in changing attitudes, policies, and practices to promote justice and healing for all victims of crime. OVC works with national, international, state, military, and tribal victim assistance and criminal justice agencies, as well as other professional organizations, to promote fundamental rights and comprehensive services for crime victims. OVC strives to improve the criminal justice system response to victims of crime, including Native American crime victims, through the delivery of direct service and funding, training and technical assistance, and through monitoring the implementation of statutes providing victims rights and assistance. Furthermore, OVC accomplishes its mission by sponsoring demonstration projects with national impact and by publishing and disseminating publications that highlight promising practices in the effective treatment of crime victims that can be replicated throughout the country. This program supports the Department of Justice's Strategic Plan: Assistance to Tribal, State and Local Governments.

Highlights of 1999 Mission Critical Results

OVC assists the Nation's crime victims by providing Federal leadership in changing attitudes, policies, and practices to promote justice and healing for all victims of crime and has become increasingly involved in providing services to American citizens victimized abroad. For example, during 1999, OVC actively participated in providing a variety of services for the survivors of the victims of the 1998 Pan Am 103 bombing over Lockerbic Scotland. In a \$1.5 million agreement with the State Department, OVC funds were used to cover the following costs: a Crown Office prosecutor; a Scotlish Court victim coordinator; furnishing rooms reserved for use by the families of victims at Camp Zeist in the Netherlands; and ensuring that the telecommunications system planned for the courtroom will provide a secure telecast of the trial.

In February 1999, OVC conducted the 2rd National Symposium on Victims of Federal Crime in Washington, D.C. The Symposium focused on terrorism and mass casualty response. An entire day was dedicated to mass casualty response with over 900 Federal personnel in attendance, including DOJ components, the military, and law enforcement. Panel presentations and workshops informed participants of the various criminal justice concerns raised by mass casualty incidents. Federal personnel had the opportunity to hear from people who assisted the victims of bombing of the Oklahoma City Federal building, the Atlanta Olympics bombing, the Khobar Towers bombing, and the Kenyan and Tanzanian embassy bombings. This Symposium also provided a vehicle for geographic region breakouts based on the 10 Federal Emergency Management Agency (FEMA) regions. These breakouts enabled Federal personnel to begin developing a coordinated response to any mass casualty crime that might occur within their region.

FY 2001 Performance Goals and Indicators

OVC is proposing an 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown on the Government Performance and Results Act (GPRA) charts. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act.

Congressional Appropriation Action on 1999 Collections Available for Obligation in 2000.

General provision 620 of Public Law 106-113, detays obligation of receipts deposited in the Fund in excess of \$500,000,000 until October 1, 2000. Congress provided this provision to protect against wide fructuations in receipts and the Fund and to ensure that a stable level of funding would remain available for this program in future years. In addition to these collections, \$3,000,000 reduced from the 1998 collections pursuant to Public Law 106-51 in 1999 became available for use.

2000 Collections Available in 2001	550.000
Increase/Decrease	47,000

BASE PROGRAM DESCRIPTION: The Crime Victims Fund is financed by collections of fines, penalty assessments, and bond forfeitures from defendants convicted of Federal crimes. The Fund was established by the Victims of Crime Act of 1984 (P.L. 98-473), as amended by the Children's Justice and Assistance Act of 1986 (P.L. 99-401), and reauthorized by the Anti-Drug Abuse Act of 1988 (P.L. 100-690). Funds are not available for obligation during the year of collection; rather, funds accumulate and the total is available for obligation in the following year and for expenditure during the next three years. The resources available are administered by the Office for Victims of Crime (OVC), which was created by the U.S. Department of Justice in 1983 and formally established by Congress in 1988 through an amendment to the Victims of Crime Act of 1984 (VOCA). OVC provides Federal funds to support victims assistance and compensation programs around the country and advocates, through policy development, for the fair treatment of crime victims. OVC administers formula and discretionary greats for programs designed to benefit victims, provides training for divers professional who work with victims, develops projects to enhance victims' rights and services, and undertakes public education and awareness activities on behalf of crime victims.

A major responsibility of OVC is to administer the Crime Victims Fund, which is derived, not from tax dollars, but from fines and penalties paid by Federal criminal offenders. Nearly 90 percent of the money collected each year is distributed to States to help fund their victim assistance and compensation programs. These programs are the lifeline services that help many victims heal. Federal victim assistance funds help support more than 4,000 local victim services agencies, such as domestic violence shelters, children's advocacy centers, and rape treatment programs. Compensation funds available from OVC supplement State efforts to provide reimbursement to victims for out-of-pocket expenses resulting from crime, including medical and mental health counseling costs, lost wages, and funeral expenses. Since 1988, OVC has distributed more than \$3 billion to States to support victim services and compensation.

Funds are targeted at four purpose and program areas. (1) Grants for Child Abuse Efforts. Up to \$10 million is available for grants to states to assist in developing, establishing, and operating programs designed to improve the handling of child abuse cases and the

investigation and prosecution of cases of child abuse, particularly child sexual abuse. The 1988 amendments require that 15 percent of this amount be retained by OVC to conduct projects with similar purposes aimed at Native American Indian Tribes; (2) Crime Victim Compensation. Legislation sets aside 48.5 percent of the remaining deposits to the distributed to the states on the basis of 40 percent of each state's eligible victim compensation payont during a preciding fiscal year (it available funds are sufficient); (3) Crime Victim Assistance. Another 48.5 percent of deposits are set aside for victim assistance grants, which are awarded to states for the purpose of providing services, other non-financial assistance, and limited emergency financial assistance to victims of crime. Priority must be given to eligible crime victim assistance programs that provide assistance to victims of sexual assault, spousal abuse, child abuse, and previously underserved victims of violent crime. Recipient organizations eligible for victim assistance funding include nonprofit organizations and agencies of state or local governments (or combinations of such entities) that provide services to victims of crime, including crisis intervention services, emergency aid, and assistance to victims participating in criminal justice proceedings; and (4) Training and Technical Assistance. Demonstration, and Federal Victims Assistance. Legislation sets aside the remaining 3 percent of federal crime.

Training: OVC sponsors training on a variety of victims' issues for many different professions, including victim services providers, law enforcement, prosecutors, the judiciary, the clergy, and medical and mental health personnel. Training on victim/witness issues also is provided for 70 different Federal law enforcement agencies, such as the Federal Bureau of Investigation, the U.S. Department of Defense, and the National Park Service.

Direct Services: OVC's mission includes providing direct services to people victimized on Tribal or Federal lands, such as military bases and national parks, and American citizens victimized in foreign countries. OVC supports emergency funds to provide victims of Federal crimes with needed services, such as crisis counselling, temporary shelter, and travel expenses to court when these services are otherwise unavailable. The agency also sponsors victim assistance programs in Indian Country, including the establishment and training of multidisciplinary teams to handto child sexual abuse cases and provide comprehensive victim services.

Discretionary Grants: Through discretionary grants, OVC has initiated many innovative projects that will have a national impact. For example, the Victim Services 2000 demonstration sites in Denver, Colorado; Medina County, Ohio; and the State of Vermont are working toward creating an integrated, seamless system of service delivery. OVC also has funded important reports on civil legal remedies for victims, model antistalking laws, exemplary corrections programs that assist victims and train victim advocates, and protocols for handling offenses on Tribal lands. In addition, OVC has developed numerous training curricula addressing subjects such as hate crimes, elder abuse, and the role of the elergy in assisting victims. Other OVC-funded projects include a manual for developing

Sexual Assault Nurse Examiner programs and monographs, bulletins, and videotapes designed to improve the criminal justice response to child victims.

Resource Center: OVC established the Office for Victims of Crime Resource Center (OVCRC), an information clearinghouse which provides research findings, statistics, and literature on emerging victim issues, OVCRC is a component of the National Criminal Justice Reference Service (NCIRS), the most comprehensive criminal justice library in the world. Through this resource, information is available 24 hours a day through the Internet and Fax-on-Demand. The NCIRS World Wide Web Justice Information Center menus provide information and publications from all Office of Justice Programs agencies the Office of Victims of Crime, the National Institute of Justice, the Office of Juvenile Justice and Delinquency Prevention, the Bureau of Justice Statistics, and the Bureau of Justice Assistance as well as from the Office of National Drug Control Policy. For more information and help with online services, first-time users can send an e-mail message to look@ncjrs.org. or if technical assistance or specific questions on criminal and juvenile justice topics is required, query asknojrs@ncjrs.org. Additionally, selected publications can be obtained through the Fax-on-Demand system.

Training and Technical Assistance Center: OVC has established the Office for Victims of Crime Training and Technical Assistance—Center (TTAC) to serve as a centralized access point for information about OVC's training, and technical assistance resources. TTAC allows OVC to further disseminate training and technical assistance developed under its discretionary grant program. TTAC activities include: (1) providing expert consultants, who specialize in crime victim-related areas, to support training events of Federal, State, Tribal, and local agencies and special emphasis organizations that are involved in activities related to crime victims; (2) providing intensive onsite technical assistance to meet specific programmatic and administrative requirements of agencies offering services to crime victims; (3) organizing, arranging, and facilitating national conferences, regional workshops, and meetings with diverse constituent groups, including State VOCA administrators and OVC discretionary grantees; (4) planning fucus groups that develop action plans to respond to major emerging issues; (5) developing publications and other materials, such as brochares, briefing materials, and information packets on crime victim-related issues. This activity may include the adaptation and modification of existing materials to make them suitable for various user groups; and (6) promoting information sharing and networking opportunities for administrators and leaders of similar agencies in an effort to improve response to crime victims.

Management and Administration expenses for OVC are included in the "Justice Assistance" appropriation.

2801 Program Change

٠.

The level of collections anticipated in 2000 for use in 2001 is \$550,000,000, which reflects a net increase of \$47,000,000 over the 2000 available funding of \$503,000,000.

- A. Definitions of Torses or Explanations for Indicators and Other Data Sources:
- Premising victim assistance corrections practices include victim impact panels, notification, restitution, stell victimization staff assigned to assist crime victim
- OVC initiated the Victim Assistance in Indian Country (VATC) program in 1987 to extablish rescription-haved victim assistance programs in areas of Indian Country so that services normally available in towns and cities across America would also be available to cross victims in remote areas of Indian Country. Grants are made directly to Enibest under Endors (crosses) unfoldered.
- OVC antitated the Children's hastice Act (CLA) Partnerships for fadian extensionable and repetite partnerships to improve the
 investigation, prosecution, and hapding of child abuse cases, including sexual abuse, cases, in a manner that increases support for and reduces traums to child victims. Century
 are used directly to Federally recognized Tribes.
- Federal criminal justice personnel include law enforcement officers protections, victoris accordinators, judges, and corrections personnel who are involved in the Federal criminal justice system, including the Military Services.

B. Samus Affecting 1999 Program Performance.

- * A state victim assistance academy was held in FY 99 with 100 attentions. I the additional academies were funded at the end of FY 99 and are currently in the scalemy planning states. It is anticipated that academies will be held in FY 2001
- ** Through training, technical assistance, and minimoring endeaviors. OVC solves to expand the capacity of states and continuatives to explicit data, identify gaps in services, and material vector made. However, OVC does not have stated on a material vector made. However, OVC does not have stated on mandate these reforms at the state level.
- *** This figure may fluctuate samp OVC has lable control over the indicator
- #10. The 1999 spike was due to hosting the 7th Indian Nations Conference in Tulsa. OK, in September 1999, 389 victim service providers attended from Indian Country programs. The like Indian Nations Conference is scheduled for 2002 #11. The 1999 reduction from 11,000 to 9,424 was due to as hower than anticipated needed of untrained personnel minuting, the OVC-sponsored victim assistance training conducted at the Federal Law Enforcement Training, Center (FLETC) at Giveno, GA. Plan numbers for 2000 and 2001 were also adjusted shownward.
- C. Issues Affecting Selection of 2000 and 2001 Plans.
- #1. The 2000 available collections includes a \$500M cap on VOCA.
- #2. The 2000 Plan and the 2001 Plan figures the research by \$2 to account for a new funding strategy in OVC's Victim Assistance in Indian Country (VAIC) discretionary grant program. Surviving in FY 2000, all VAIC grants with be competitive and will be awarded directly to tribes. In FY 1996 OVC provided funding directly to states who, in turn, provided subgrants to critics. In FY 1997 and FY 1998, OVC began transitioning the grant process by continuing for 2 years the 35 grants that in effect when the process began. OVC estimates that the number of discretionary grants will be discreticed to about 20 grants, a 40% reduction. The new grants will average \$30,000 each and will be for a 3 year period.
- \$12. The 2000 Plan and the 2001 Plan flames decreased to account for the 40% reduction in the number of tribes receiving VAIC grants.
- #29. OVC has determined that the plan standor was too high due to shortfalls to funding at the tribal levels and inadequate tribal leadership commitment to continue the programs. OVC plans to implement a new contract in FY 2000 to an Indian organization to train tribal tradership on the importance of operating effective tribal CIA programs when OVC funding cases.
- 939. The FY (999, FY 2000, and FY 2001 data were changed from the number of requests processed to a percentage figure which OVC believes store accurately reflects performance. The number of agencies with Federal Crime Victim Assistance Funds successed from one to two in FY 1998 and is projected to because to these additional agencies in FY 2001.
- D. Veildration and Verification: The Office for Victims of Crime (OVC) uses a system of self reporting to validate and verify performance measures. Individual project reports submitted at the count of a project and sentiment progress reports being OVC abrests of the grantee's progress. OVC suff also conduct easier monitoring and essential close templates contact to determine grantee performance.
