 to the international Antitrust Enforcement Assistance Act of 1994 (IAEAA), mutual legal assistance treaties (MLATs), positive comity agreements, and
 formal cooperation agreements. Among other things, such agreements may provide for depositions of foreign nationals, search and seizure of critical
 evidence located in foreign countries, and other assistance in the investigation and prosecution of companies, including foreign companies and
 individuals, who act to harm US businesses and consumers. This Strategy of establishing international Enforcement Agreements provides Division staff
 with a critical tool for fighting and deterring anticompetitive behavior internationally.
 - The Number of Division Requests for Law Enforcement Assistance is broader than Mulual Law Enforcement Assistance Agreements, as defined above. It not only includes requests under IAEAA eccords, MLATs, positive gereements, and formal cooperation agreements, but also tetters regatory and significant informal requests for assistance from foreign governments.

- The Dollar Volume of U.S. Commerce Affected is estimated by the Artifrust Division based upon the best available information from investigative and public sources. This value serves as a proxy for the potential effect of anticompetitive behavior. There is no antifrust "crime rate" against which to measure the Division's acriievements from Establishing and Using international Enforcement Agreements. There is, thewise, no easy or established methodology for calculating the deterrent effect of our International Enforcement Agreements, though we firmly believe in the existence of such an effect. We are thus using--as a very high-level proxy--the Dollar Volume of U.S. Commerce Affected in those cases where the Division received law enforcement assistance from foreign governments and where the Division achieved a positive outcome. While not an exactly correlated measure, the Dollar Volume of U.S. Commerce Affected does give some indication of the magnitude of our enforcement work, and speaks in part to the economic reach of our efforts.
 - A Positive Outcome in a criminal matter is a conviction, fine, jail sentence, other confinement, etc., and in a civil matter is the abandonment of a transaction or an activity, a "fix" to a transaction or an activity, a filed case with a consent decree settling the compatitive issues raised, successful higalion, etc.
- It is very difficult to quantify the seemingly apparent market effects of our Enforcement actions, so many factors determine prices that it is extremely challenging to determine the precise effect of our intervention. However, we developed a methodology to estimate the Total Dollar Value of Savings to U.S. Consumers from our Enforcement Strategies. Please also refer to the Performence Measurement Tables for our Merger, Civil Non-Merger, and Criminal Enforcement Strategies in this Section for comprehensive descriptions of this Key Performance Indicator.
- Projection Methodology: Given the inherent uncertainty about estimating future activity and performance, we nonetheless made every effort to use an objective model for projecting FY 2000 and FY 2001 Performance Plans for the Key Performance Indicators at the End Outcome level. In doing so, we have applied a calculation to base-year data (FY 1997) that takes into account the following factors where appropriate FTE, (increase), productivity (increase), inflation, and trend (up/down). For some Indicators, we use staff estimates.
- B. Issues Affecting FY 1999 Program Performance: With respect to the Number of Proposed and New Mutual Law Enforcement Assistance Agreements, we note that the MLAT process is a cooperative effort involving several key players, including the Crimina': Division and components of the State Department, with which we coordinate, as appropriate. With respect to the Number of Division Requests for Law Enforcement Assistance from Foreign Governments, the decline in FY 1999 may be due to an increase in requests under the Division's Corporate Leniency Program. Instituted in 1993, this program accords teniency to corporations reporting their illegal antifusts activities at an early stage, if they meet certain conditions. The majority of international matters have had one or more conspirators use this program in FY 1999, thus the Division has not needed to request as much assistance from foreign governments. With respect to the Dollar Volume of U.S. Commerce Affected, one particular matter in FY 1999 increased the total significantly, but this value is not expected to remain as high Additionally, the Dollar Volume of U.S. Commerce Affected is an underest-initiate of the Division's success in Enforcement Strategies that utilize International Enforcement Agreements, primarily due to inconsistencies in our data collection systems. While we have identified the matters in which Positive Outcomes were achieved we currently do not routnely collect estimates of the Dollar Volume of U.S. Commerce Affected for all matters, thus we have aggregated the figures in instances in which we have data, but note that there are matters in this category for which we do not have, and have not included, the Dollar Volume of U.S. Commerce Affected For a variety of reasons—articulated in Frontiers of the Performance Measurement Tables for our Criminal and Merger Enforcement Strategies—the Dollar Volume of U.S. Commerce Affected For a variety of reasons—articulated in Frontiers of the Performance Measurement Tables for our Criminal and Merger Enforc

C. Issues Affecting Selection of FY 2000 and FY 2001 Plans. It is difficult to develop Performance Plans for FY 2000 and FY 2001 given the number and impect of external factors which affect the Antitrust Division's International Enforcement Agreement Strategy. The number of countries to which the Division provides significant assistance under our USAID funded programs is estimated to remain under 5 in FY 2000 as the program, which included 12 countries in FY 1996, 10 countries in FY 1997, 5 countries in FY 1996, and 4 in FY 1999, continues to decline due to USAID priorities, funding limitations, and overall improvement in competition policy in certain countries and regions. In addition, the establishment of formal International Enforcement Agreements, such as IAEAA accords, MLATs, positive comity agreements, and formal cooperation agreements, requires a considerable amount of time to negotiate with foreign governments, and to coordinate within and between the executive and legislative branches of each government. Thus, the Division is requesting a program increase of one attorney to work exclusively on International Enforcement Agreements. The issue is further complicated by the importance of maintaining the confidentiality of sensitive business information. Certain formal agreements require public comment periods, or, for MLATs. Senate approval. Indeed, a formal enforcement agreement may result from years of discussion, regotiation, coordination, and approvals. Given these factors, it is extremely difficult to reliably project the number of International Enforcement Agreements that will be proposed and ultimately enter into force. The Number of Division Requests for Law Enforcement Assistance also is extramely difficult to estimate in future years since the number will in gart be determined by the facts of each international matter the Division investigates, and, to an extent, the outside parties' continued use of the Division's Corporate Leniency Program. While the increasingly international nature of the Division's operating environment suggests that the number of Division requests should trend upward, that is tempered by the fact that international antitrust enforcement cooperation is just beginning in some respects. Thus, even though assistance from a foreign country might otherwise be describe, we may not have a formal mechanism available to use to pursue evidence, withesses, or information that may he critical to the investigation. The Dollar Votume of U.S. Commerca Affected, likewise, is very difficult to project.

SECTION D: GOAL 2 -- ENVIRONMENT

To increase the procompetitiveness of the national and international environment, the Antitrust Division utilizes a number of diverse Strategies. While each Strategy is distinct in form and audience, together these Strategies represent a comprehensive effort to promote competition through further improvement of environmental conditions for competition at all levels, whether inter- or intra-governmentally, nationally or internationally. In light of the advent of deregulation in key sectors of the economy and the need for antitrust law to evolve in response to its environment, the Division currently is emphasizing the Strategies of Participation in Interagency Regulatory Processes and Development of Competitive Case Law.

The full complement of Antitrust Division Strategies employed in pursuit of this Goal is listed below, and each Strategy is subsequently described more fully. Following that, two Exemplars demonstrate the Division's use of these Strategies in response to environmental trends and in pursuit of our overarching Goals, and speak to the larger workload impacts suggested by these matters and others in the Division's purview like them. Finally, there are more specific Performance Measurement Tables for each of the current high-priority Strategies being pursued in support of this Goal, indicated in the list of Strategies by an asterisk.

Strategies

- Participation in Interagency Regulatory Processes*
- Development of Procompetitive Case Law*
- Participation in Interagency Rulemakings, Task Forces, and Policy Development Efforts
- Participation in Legislative Development
- Participation in National and International Organizations
- Consultation and Coordination with International Antitrust Authorities
- Speeches, Publications, and Press
- High-priority Strategy

Strategy Descriptions

Participation in Interagency Regulatory Processes*

As the trend toward deregulation in key industries advances, the Antitrust Division is more and more a participant in interagency regulatory processes. Although this may seem contradictory, the fact is that as certain segments of our economy are deregulated, they are given a new set of rules to play by, and the Division is often a key participant in ensuring that participants follow those rules. A recent example of this is in the telecommunications area, where passage of the Telecommunications Act of 1996 mandated a formal role for the Division vis-a-vis the FCC as Bell Operating Companies (BOCs) seek entry into long distance markets. With deregulation the watchword in industries such as banking, health care, and utilities, the Division anticipates a continued role in ensuring competition through participation in interagency regulatory processes.

Development of Procompetitive Case Law*

Where appropriate, the Antitrust Division strives to advance antitrust case law through litigation efforts. Given the latitude and flexibility of the Sherman and Clayton Acts, coupled with environmental changes such as innovation, deregulation, and globalization, the Division seeks to provide greater clarity and consistency to antitrust law and ensure that it is applied fairly. A recent example of this is the Division's successful argument to the First Circuit Court of Appeals that Section 1 of the Sherman Act applies to criminal conduct outside the U.S. that is designed to affect U.S. consumers. (See Exemplar 2 in this Section.) Another example involves the case of State Oil Co. v. Khan. 118 Sup. Ct. 275, in which the Division argued and the Supreme Court agreed that vertical maximum resale price fixing should not be deemed illegal per se.

Participation in Interagency Rulemakings, Task Forces, and Policy Development Efforts

The Anturust Division's activities within the Executive Branch include appearances before regulating bodies and ongoing participation in interagency task forces dealing with a variety of competition issues. These include trade policy, telecommunications, and sector- or product-specific matters. Whether by informal advice or formal comment, the Division's role in this regard is to advise other Government agencies regarding the competitive

impact of proposed rules and regulations, promote the inclusion of competitive principles in policy formulation, and participate directly in determining U.S. competition policy

Participation in Legislative Development

Antitrust Division officials routinely testify on or participate in drafting proposed legislation. Such testimony may support legislation designed to reduce or eliminate unnecessary economic regulation, or it may oppose efforts to extend tegulatory legislation to previously competitive markets. The Division's activities with regard to telecommunications and health care reform are examples of this Strategy. The Division played a critical role influencing the Telecommunications Act of 1996, ultimately ensuring that competitive principles and impacts would be considered by state regulatory agencies, the FCC, and, ultimately, Congress in their deliberations over telecommunications law.

Participation in National and International Organizations

The Antitrust Division participates in numerous national and international organizations to disseminate information on U.S. competition law and policy, exchange views on antitrust law, and monitor the environment to anticipate issues and improve operations. Examples of the Division's participation in or liaison with such groups include the American Bar Association, the National Association of Attorneys General, the WTO, the EU, the OEC D, and the UN Conference on Trade and Development.

Consultation and Coordination with International Autitrust Authorities

The Antitrust Division regularly consults and coordinates with international antitrust authorities in a variety of ways. The Division fourtinely receives requests from foreign governments for comments on proposed competition laws and related regulations, as well as on the competition is reason and investigative techniques used in particular cases under consideration by foreign competition offices. Division officials also frequently meet one-on-one with visiting foreign competition officials to discuss policy issues of mutual concern. In addition to the Division's routing consultation and coordination efforts, the Division and the FTC provide a joint program of technical assistance to governments in Central and Eastern Europe, Latin America, and South Africa, funded by the U.S. Agency for International Development (USAID). Proposed technical assistance programs for the Russian Federation, Latin America, the Balkans, and the Caribbean ae pending approval or funding by USAID.

Speeches, Publications, and Press

Antitrust Division officials routinely appear before Government and private organizations both domestically and abroad to speak on the full range of topics related to national and international competition policy. This includes testifying as part of interagency rulemakings or before Congress on legislative proposals, outlining U.S. antitrust policy in national and international competition fora, and publishing papers on antitrust-related issues. Through these mechanisms the Division publicizes important views on the competitive implications of various laws, policies, practices, and procedures and deters future anticompetitive behavior.

EXEMPLAR 1 - IMPLEMENTING THE TELECOMMUNICATIONS ACT OF 1996

Introduction

The Antitrust Division's role in the development and implementation of the Telecommunications Act of 1996 (the Act) is an apt example of the Division's pivotal contribution toward increasing the procompetitiveness of the national and international environment. Increasing deregulation, globalization of markets, economic expansion, and technological change are all at play in the telecommunications industry. The Antitrust Division has responded to these trends with a variety of Strategies, described below, that allow us to contribute materially to enhanced competition in this rapidly evolving industry. The picture that emerges from our telecommunications experience—a picture the Division will likely see repeated in fields such as banking, transportation, and energy, to name a few—is that the vital work of responding to these trends in pursuit of our larger Vision compels the commitment of enormous resources over extended periods of time.

Comprehensive Legislative Reforms to Further Competition Policy Objectives

The Antitrust Division has been continuously and actively involved in the telecommunications industry for more than 20 years, perhaps most prominently in successfully challenging AT&T's abuse of its local telephone monopolies to impede competition in long distance and communications equipment markets. That suit resulted in the 1982 Modification of Final Judgment (MFJ) which required that AT&T divest its tocal exchange monopolies, to be owned by the Bell Operating Companies (BOCs), separating their ownership from AT&T's long distance services and other competitive businesses so as to remove the incentives and ability for anticompetitive abuse. The result of this historic lawsuit, seen over time and in conjunction with regulatory reforms implemented by the FCC with the Division's support, has been significantly improved long distance competition, accompanied by the innovation and downward pressure on prices that result from such competition.

Beginning in 1993, the Division began actively promoting comprehensive legislative reform that would promote competition in all segments of the vital telecommunications sector of the economy. The Division played a key role by participating in a White House-led interagency working group, providing congressional testimony as well as individual Member and staff briefings, and consulting informally with the FCC, devoting significant resources

over an extended period of time to telecommunication reform. Ultimately, in February 1996, the Act was passed

The Antitrust Division has devoted considerable time and resources since passage of the Act attempting to promote and protect competition in all telecommunications markets so that Congress' goals in passing the Act-improved services, lower prices, increased innovation, and increased private sector investment—are achieved as quickly as possible. However, much critical work remains to be done.

Participation in FCC Rulemaking to Implement the Act's Competition Policy

The Act was intended to increase competition in telecommunications markets and thus reduce the need for government regulation in what had historically been regulated monopoly markets such as local telephone service. Congress recognized that, for the Act to achieve its purpose, it would be necessary for the FCC to adopt transitional regulations. In doing so, the FCC faced difficult legal and economic issues on which the Antitrust Division has relevant experience and expertise.

Therefore, very much in keeping with the ongoing Strategy of participating in interagency proceedings in order to promote rules and regulations that enhance a procompetitive environment, we filed extensive comments addressing major legal and economic issues in FCC rulemaking proceedings to implement the Act's reforms, focusing on the provisions intended to open local markets to competition. Although the Division has vast experience with the telecommunications industry, preparation of these highly technical and substantive comments required an investment of significant economic and legal staff time and resources. Our contributions were welcomed by the FCC and provided significant assistance in the development of a comprehensive set of rules to promote local competition.

Interagency Proceedings to Remove Regulatory Restrictions as Conditions Warrant

The Act also gives the Antitrust Division a special and significant role in FCC proceedings under Section 271 relating to BOC applications to provide in-region long distance services. In particular, the Act requires the FCC to consult with the Attorney General concerning such applications and "give substantial weight to the Attorney

General's evaluation." It was clearly envisioned that the Antitrust Division, on behalf of the Attorney General and the Department, would review all such applications and bring our competition expertise to bear on decisions that involve analysis of the extent to which local markets have been opened to competition and the likely competitive effects of removing or retaining restrictions on the BOCs' provision of long distance services under changing market conditions. This work is considered of the highest priority and is not discretionary.

in late CY 1996 the Antitrust Division sought input from interested parties regarding the impact of BOC entry into the long distance services market, and subsequently developed a general analytical framework for evaluating BOC entry applications. The Antitrust Division's workload related to Section 271 proceedings has been significant and will continue to grow. Given our experience with the first few complete applications received, we anticipate that fulfilling our obligations under this Section of the Act will require a substantial commitment of resources over the next few years. The Division has been and continues to meet with the FCC, state public service commission (PSC) members and staff, BOCs and their competitors, and various consumer groups in order to fully understand the competitive forces at play in the markets. It should be noted that as BOCs file applications with the FCC, other interested persons file comments with the FCC opposing or supporting approval of such applications. The Antitrust Division reviews all such submissions and, where appropriate, incorporates additional information contained therein into the Division's evaluation. (See also the Section 271 Performance Measurement Table in this Section.)

Antitrust Division Role in Litigation Under the Act

The Antitrust Division also has important roles in a variety of judicial proceedings involving the Act that require the investment of additional time and resources. In actions seeking judicial review of the FCC's regulations, the Division, representing the United States as statutory respondent, works closely with the FCC. Thus, for example, we reviewed and joined the Commission's brief in the Eighth Circuit defending the local competition rules, and we assisted the Solicitor General's Office in connection with the petitions for certiorari, Supreme Court briefs, and preparation for oral argument. This htigation (and litigation under the Act, in general) involves complex technical, economic, and legal issues; therefore, our economists, as well as our communications and appellate autorneys, are active participants. The Division also assists the Civil Division and

the FCC in monitoring and/or participating in the numerous district court and court of appeals cases involving agreements to implement the Act's local competition provisions, and appeals from FCC decisions on the BOCs' applications to provide long distance service under Section 271 of the Act. In addition, we assist the Civil Division and the FCC in defending actions in which the constitutionality of the Act's transitional restrictions on the BOCs and other competition provisions are challenged. For example, Assistant Attorney General Joel Klein successfully argued in the U.S. Court of Appeals for the Fifth Circuit that the restrictions on the BOCs do not constitute a "bill of attainder" and are not otherwise unconstitutional, and secured an important reversal of a district court decision in the BOCs' favor.

In February 1999, the Supreme Court upheld the FCC's authority with respect to implementation of the Act's local competition provisions. This is a significant victory for the FCC, the Department, and U.S. consumers. Nevertheless, we expect a heavy volume of litigation in the Federal courts to continue, and we have an important obligation to work with the FCC and other Department components to ensure that the Government's filings are persuasive, consistent, and well-reasoned.

Merger Enforcement

In addition to the Strategies employed in furtherance of the Antitrust Division's Goal to increase the procompetitiveness of the environment, we are also responding to heightened merger activity, brought on in large part by the Act. The Division has already seen a number of proposed and consummated mergers between major telecommunications companies, such as Primestar/News Corporation et al., AT&T/TCI, AT&T/Media One, AT&T/British Telecom, US West/Global Crossing, Lockheed Martin/Comsat, Bell Atlantic/GTE, SBC/Ameritech, WorldCom/MCI, SBC/PacTel, and Bell Atlantic/NYNEX. Changes in U.S. and international regulations, as well as the overall growth in the telecommunications industry fueled by advances in alternative technologies, have led many firms to consider various means of restructuring. It is the Division's responsibility to review a number of these proposed transactions for any potential anticompetitive effects.

In addition, in the radio segment of the telecommunications industry the Division has seen workload grow by several orders of magnitude. The Act changed the FCC's rules for radio station ownership, unleashing a torrent

of deals in the industry. Many of these deals have fallen within HSR reporting requirements (coming under Division review) and the Division has initiated independent inquiries of several non-reportable transactions.

Conclusion

In short, the Antitrust Division's efforts over the past six years--efforts which will continue into the foreseeable future--have employed a variety of Strategies that support the Division's Goal of increasing the procompetitiveness of the environment. By helping to develop the Act itself, by participating in FCC rulemakings to implement the mandates of the Act, by taking an active role in FCC regulatory processes required by the Act, and by coforcing the antitrust laws as necessary to ensure that the new environment created by the Act will not be undermined by anticompetitive conduct, the Antitrust Division contributes to vigorous competition in telecommunications markets

Performance Measurement Table: Presented by Initiative

A. Definitions of Tarms or Explenetions for indicators:

- The Division's Participation in Interagency Regulatory Processes—such as our role vie-à-vis-the FCC in proceedings under Section 271 of the Telecommunications Act of 1996—is put one of invertel types of interaction with other Federal agencies undertaken in support of our Environment Goal. The Division is an active participant in Interagency that forces where our view on competition issues may impact Executive Branch policies. In addition, we actively promite the pending actions of Federal regulatory agencies and are involved in relational proceedings where articulation of a procumpetitivit position may make the difference between regulations that effectively do arrithmat herm or actively promite competition in an industry. While decively also are emportant, we have emitting chosen to locus this Performance Measurement Table on our Participation in Interagency Regulatory Processes, aspecifically our responsibilities under Section 271 of the Act.
- Under Section 271 of the Act, the Antitrust Division has a special and significant role in FCC proceedings retating to Self operating carrier (8OC) applications to provide inregion long distance sent/ces. In perficultur, the Act states that the FCC is to consult with this Altomay General concerning such applications and "accord substantial weight to the Attomay General a evaluation." 8OCs must the an individual application for each state in their service territory, and each state must be evaluated separately. Once an application is Red, the FCCs rules specify that the Division has just 35 days to submit its comments to the FCC. Given the Division's anticipation that applications will be Red for 48 states and the District of Chambia (which have BCcs) over the owners of FY 1899_EX_2001, and FY 2001, and that there will be retifining for a number of attition where initial applications have been rejected, the Division has been and continues to meet with the FCC, state sublic service commentation (P8C) members and staff, state Altomays General and staff, 8CCs and their competitive, and various consumer groups in order to fully understand the competitive forces of play in the markets where the BCCs are end will be seeking entry. As BCCs file applications with the FCC, thing parties are free to submit comments to the FCC opposing or supporting approval of auch applications. To the calent that such comments are fleet, the Division's evaluation. The Division is in confact with S2 jurisdictions overall, including Alaska, Hawell, and Puerto Rice, which have no BCCs but may present relevant competitive leaves.
- Deliar Range for FY 2000 Revised Plan and FY 2001 Plan: The range of Collars for the FY 2000 Revised Plan and FY 2001 Plan represent our anticipated resource commitments to this Strategy in each of those facel years based on possible FYE allocated to Section 271 matters.
- FTE Runge for FY 2000 Revised Plan and FY 2001 Plant it is utilitiely that FTE levels will decrease for this Strategy in FY 2000 or FY 2001 because we expect the number of Section 271 filings to increase in FY 2000 and FY 2001, as compared to FY 1999. Therefore, the range of FTE for the FY 2000 Revised Plan and FY 2001 Plan includes the FY 1999 Adams FTE for the lower and of the range, and the upper end of the range is based on projected FTE commitments to this Strategy, assuming maximum utilization of authorized or recuested FTE.

- Dollar Volume of U.S. Commerce Affected Where Positive Outcome Anhered: BCC entry potentially effects commerce in two markets—local skephony services and song desance skephony services. We consider Positive Outcomes to Inolate RECC has recovered application during this facial year. The data sources used to determine the Dollar Volume of U.S. Commerce Affected are the most recent market data servicible to the Okision at the time. We currently use the FCC 1897 Statistics of Commerce Affected are the most recent market data so realizable to the Okision at the time. We currently use the FCC 1897 Statistics of Commerce Affected are the most recent market data so roung desance revenues. Based on the FCC 1897 Statistics of Commerce Affected are the most recent Certain on a nationwide basis, approximately 80% of long distance revenues were in BCC tentiory and therefore would be affected by BCC entry. The data size above that the long distance revenues were in BCC tentiory and therefore would be affected by BCC entry. The data size approximately 82.6% of local revenues in 80Cs tentiory. Extrapolating from the relationship, we estimate Dollar Volume of U.S. Commerce Affected by taking BCC local revenues in a table stretch an application is liked and adding 82.6% to this to account for long distance revenues in the SCC's tentiory of that state. The most recent financial data we have for individual BCCs is in 1986 FCC AFMIS report 43-01. Consequently, we have added an adjustment to our calculation to reflect the estimated growth of the total and long distance telephone markets in subsequent years. Beside on FCC estatistics reporting total market gives the folial form of long distance market has been approximately 6.3% one year. Thus long distance market has been approximately 6.3% one year. Thus long distance market has been approximately 6.3% one year. Thus long distance market has long growth of the indicative has recently the long distance and the long distance and the long of the long distance market.
 - 1. 1998 and 1999 revenues are calculated for states where an application has been or is expected to be filed and decided upon, based on the method above (local revenues x 1.825)
 - Year X revenue projections are determined by multiplying the previous year's adjusted revenue state by 1.063 to reflect the 6.3% industry growth per year.
 For indicator 10, Percentage of Opinions Provided to the PCC to Date that are Percentage with Respect to Court of Appeals Designed, the value in FY 1996 is 100% because the court of appeals ruled on the Outshorms appeal (filed in FY 1997) in Merch 1998. Similarly, the value in FY 1999 is 100% because the court of appeals had not the South Carolina popular in December 1998.

- 8. Festers Affecting FY 1989 Program Performance:
 - We are still in the mittal stagles of the Section 271 process, given that only six applications have been filled to date out of the 49 that can eventually be expected (exclusive of reliance of rejected applications). Four of the BCCs have filled applications are fair. SBC has filled in Ottahona, American has filled in Micholagan, BellSouth has filled once in Bouth Carolina and twice in Louders, and Bell Attantic has filled in New York. The FCC has ruled on the six applications. Comments, including BC/IE Evelusion, regarding Bell Attantic application were made after September 30, 1999 and will be reflected in the FY 2000 Actuate in the next submission to Congress. Three of the five decisions (Oldshoma, South Carolina, and Louisians) in FY 1998 were appealed. The court of appeals decision in Michona, and the court of appeals decision in December 1998 uphed the FCC's decision to reject BellSouth's application in South Carolina.
 - The Division's workload related to Section 271 proceedings is already significant and will continue to grow. For example, atthough much work had been done in advance of receiving SBC's application to provide long distance service to its outstomers in Oktahoma, in the Division was still required—within just 35 days—to review an application consisting of between 4,000 and 5,000 pages of information respect to information gleaned through previous work and in relation to the setablished transverse, review and incorporate into our enalysis over 20 third-party comments (received just 15 days prior to our deadline), and prepare our evaluation, which included an in-depth brief accompanied by multiple appendices. The amount of documentation provided with a Section 271 application has been increasing with each filling. For example, Bell-South submitted 12 boxes of supporting information along with its Section 271 filling for Louisiana, containing roughly 2,000-3,000 pages of material in each box. The Original also reviewed 37 third party comments, many of which included voluminous attachments.
 - Although preliminary estimates were high for explication filtings in FY 1999, the flow of filtings has slowed down due to four main factors:
 - 1 The court of appears decision in Oktahoms appears to limit the ability of BOCs to file their applications under Section 271(c)(1)(8) (Track 8") of the Act, instead forcing the BOCs to wait until they can submit an application under Section 271(c)(1)(A) (Track A") of the Act. United Track B, which governe circumstances for BOC applications in states where no competing provider has requested network access or interconnection. Track A inclumes that the applying BOC demonstrate it has a binding agreement to provide network access and interconnection with one or more existing uneffitted facilities-based competing providers of telephone exchange service to residential and business subsocribers.
 - 2 Close review of BOC applications at the state level has led to the delay in filings with the FCC
 - 3. The substantive standards for Section 271 approval that the FCC has found the Act to require are complex to implement and take time, particularly in areas such as operation support systems and unbundled network elements.
 - 4 The Supreme Court's decision in AT&T Corp. v. fows Utilities Board, 525 U.S. 365, 119 S.Ct. 729 (January 25, 1999), reversing in part and effirming in part fower Utilities Board v. FCC, 120 F.38 753 (8th Cr. 1997), upheld the FCC's prisolation and rearrly all of the FCC's rules for implementing local competition. However, the decision also remanded to the FCC a significant issue relating to which network elements must be unbundled by the BCCs, delaying the filing process. The FCC assued an order addressing element unbundling on November 5, 1999, which may resolve some of the Uncertainty surrounding this issue.
- C. Pactors Affecting Selection of FY 2000 and FY 2001 Plans. Given our experience with the first six applications received, we articipate that fulfilling our obligations under Section 271 of the Act will require a substantial commitment of resources over the next two years. Moreover, now that the Supreme Court has addressed and resolved many-but not effect the legal interpretations at sales, we expect that the firing process with interest, As the pace of Section 271 applications increases; the Division can principles heavy vioritosed burdens under tight time frames. Note that only approximate estimates of program performance based on healy ranges of possible fillings can be provided for FY 2000 similar burdens under tight time frames. Note that only approximate estimates of program performance based on healy ranges of possible fillings can be provided for FY 2000 similar burdens under tight time frames. Note that only approximate estimates of project with any certainty the rate of applications over time. Therefore, rather than using appetitic numbers, we continue to include what we believe to be the most probable ranges of likely litings. Nonetheless, the Antitual Division must respond to each application regardless of volume, within stabulory time frames. Primary responsibility for Section 271 workload rests with the Division's Telecommunications Tests Force, and is expected to consume a significant portion of that Task Force is resources for the foreseeable future. The Section 271 workload should increase significantly in FY 2000, due to the stower pace of fittings than expected in FY 1999 and the substantial number of first-time livings and religious anticipated applications that will be fitted during FY 2000. In order to membrain continuity in the handling of the Section 271 process, a consistent level of staffing is necessary. Other Division and the Appellate Section 271 workload include the Economic Analysis Group and the Appellate Section. In addition, senior managers, other professional staff with more

896

The Performance Measurement Table "Development of Procompetitive Case Law - Appellate Activity" is actively being revised to more accurately reflect the Division's efforts to impact the development of antitrust doctrine.

SECTION E: GOAL 3 - EDUCATION

Whether through direct contact and targeted communication with specific audiences, or via the deve syment, publication and distribution of policy guidates, the Division seeks to increase the breadth and depth of awareness of antitrust law. By reaching as many individuals, companies, agencies, or other groups as possible, while providing detailed and specific guidance on the law, the Division seeks to promote competitive behavior and deter anticompetitive behavior.

The full complement of Antitrust Division Strategies employed in pursuit of this Goal is listed below, and each Strategy is subsequently described more fully. Following that, an Exemplar demonstrates the Division's use of Guidance to the Business Community via the Business Review Program in response to environmental trends and in pursuit of the Division's overarching Goals, and speak to the larger workload impacts suggested by these matters and others in the Division's purview like them. Note that the current high-priority Strategies being pursued across the Division are associated with Goal 1 and Goal 2, as reflected in the Performance Measurement Tables. No such Tables are associated with Goal 3 at this time.

Strategies

- Guidance to the Business Community via the Business Review Program
- Outreach Efforts to Federal, State and Local Agencies, Business Groups, and Consumers
- Development and Publication of Antitrust Guidelines and Policy Statements
- Speeches, Publications, and Press

Strategy Descriptions

Guidance to the Business Community via the Business Review Program

Under the Antitrust Division's Business Review Program, 28 C.F.R. §50.6, businesses can ascertain the Division's current enforcement intentions with respect to proposed business conduct. The Business Review Program provides substantial benefits to the business community. Under this Program, businesses benefit by receiving timely information about the parameters of competition law when applied to specific situations, and the likely reaction of the Division to a proposed business action or arrangement. More business problems that may arise when a company is otherwise involved in antitrust litigation with the Government. Ultimately, this is a formal means for the Division to educate the business community and wider audiences about the parameters of competition law and the Division's enforcement priorities. (See Exemplar in this Section.)

Outreach Efforts to Federal, State, and Local Agencies, Business Groups, and Consumers

In support of our ongoing cooperative enforcement efforts with Federal, state, and local agencies (described in Section C), the Antitrust Division sponsors, with the FTC, a series of Common Ground Conferences at which officials of the two Federal agencies gather with state officials to discuss antitrust enforcement issues of mutual concern. The Division also provides training for state antitrust attorneys and investigators. In addition, the Division conducts both formal and informal outreach efforts directed toward individuals, businesses, associations, and enforcement officials at all levels in order to educate people about antitrust law, inform them of the consequences of circumventing the law, and provide them with direction in the event they have further questions or suspect violations of the law.

Development and Publication of Antitrust Guidelines and Policy Statements

Through the development and publication of antitrust guidelines and policy statements, such as those on merger analysis in general and health care in particular, the Antitrust Division seeks to communicate our enforcement policy so that businesses and consumers will have greater knowledge of and certainty about the Division's application of antitrust law. This effort ensures that businesses and consumers have more detailed information

8

about the types of activity that will receive scrutiny, so that they can more efficiently revelop merger proposals or be prepared for the issues that a certain arrangement would raise during the review process. Such guidelines and statements are coordinated prior to issuance within the Federal Government, with the states, and with the affected business communities to ensure their consistency.

Speeches, Publications, and Press

The Antitrust Division routinely communicates with the media and the public through the issuance of press releases describing significant matters such as responses to business review requests and the issuance of antitrust guidelines and policy statements. In addition, Division officials give speeches and grant interviews that relate to our guidelines and policy statements. The Division also distributes and makes widely available materials describing complaint procedures. Through these mechanisms the Division publicizes the antitrust law and our enforcement intentions and deters future anticompetitive behavior.

EXEMPLAR 1 - BUSINESS REVIEW IN HEALTH CARE

Introduction

An important public service offered by the Antitrust Division, in support of our goal to increase the awareness of antitrust law, is the issuance of Eusiness Review letters. The Business Review procedure allows business entities to ascertain the Division's present enforcement intentions with respect to proposed business conduct.

While Business Review advice has often been given on health care issues over the years, the Business Review procedure's application to health care issues was specifically acknowledged in health care policy statements first promulgated jointly by the Antitrust Division and the FTC in September 1993. The Division developed policy statements and committed to issuing Business Review guidance about any matter covered in the statements within 90 days after receiving all necessary information pertaining to the request. Matters not covered in the statements are reviewed within 120 days after receipt of all relevant information. (The only exceptions to these deadlines are requests involving mergers outside the hospital merger "safety zone." (Although these self-imposed deadlines have resulted in somewhat unpredictable workload impacts on the Division, given that they are driven by submissions of outside parties, businesses find both the letters and the assurance of having our input in a timely fashion of enormous value.

Today, health care Business Review letters represent the majority of all Business Review letters issued by the Antitrust Division. From 1980 until the issuance of our first health care statements in 1993, 21 health care Business Review letters were issued. Between 1993 and September 1999, 55 letters were issued. The health care community has embraced the procedure as a means of avoiding uncertainty as to whether arrangements being contemplated by health care providers might run afoul of the antitrust laws.

²⁾ Seven of the nine policy statements include antimust "safety zones," which describe conduct that the Division and the FTC will not challenge, absent extraordinary circumstances. Conduct that fells outside the sefety zones is not automatically illegal, but will be subject to scrutiny.

The Process

The process is initiated by submission of a written request to the Antitrust Division. Parties are expected to fully outline their proposed activities and provide documentation regarding the venture's formation or expected methods of operation. The Division will review only prospective matters; if any part of a proposal has been implemented, we decline to issue advice. After clearing the matter with the FTC (which also issues advice to health care providers in the form of Advisory Opinion letters), Division attorneys and economists review the materials submitted, request any additional information needed, and conduct a brief investigation to determine whether the proposal may have anticompetitive consequences in any relevant market.

The Process at Work: CVT Surgical Center and Vascular Surgery Associates of Baton Rouse

In April 1997, the Antitrust Division informed counsel for CVT Surgical Center (CVT) and Vascular Surgery Associates of Baton Rouge (VSA). Louisiana that it intended to take no enforcement action against their proposed merger. The groups had requested Business Review advice regarding the merger, which fell below HSR reporting thresholds. When a Business Review request involves a merger, we approach the analysis of potential market effects in much the same way that we approach a full-blown merger investigation. That is, we seek to determine whether the merger would tend substantially to lessen competition in any relevant market by creating, enhancing, or facilitating the exercise of market power.

We begin by determining the relevant "product" (service) market, and we then inquire of health care payers (especially managed care plans and large self-insured employers) in the area where they might turn for acceptable substitutes for such services if the merging groups were to raise prices by a small but significant amount. The area in which payers feel they could reasonably direct their enrollers to seek the relevant services constitutes the geographic market within which we count available substitutes and assess the market share of the merging parties as a proportion of the available physicians (or other providers) in the relevant market.

In the case of CVT and VSA, one group, CVT, consisted of six cardioviscular thoracic surgeons, while the other group, VSA, consisted of four surgeons who performed only peripheral vascular surgery. While the CVT surgeons occasionally performed some peripheral vascular procedures (such as balloon angioplasty), VSA physicians did not perform thoracic surgery (such as open heart surgery). In this case, we determined that only

the 60-odd vascular procedures that the two groups performed in common constituted the proper service market in which to assess effects of the merger. Easentially, those 60-odd "overlap" procedures were the service areas in which the two groups could be viewed as direct competitors.

After careful review, we concluded that, in any reasonably defined geographic market, the merged entity would face effective competitive constraints on its ability to exercise market power, and thus that the merger would not be likely to lessen competition substantially. Our letter to the parties noted these facts, and pointed out certain efficiencies that the two groups believed would flow from the merger, to the benefit of health care payers and consumers in the Baton Rouge area.

PROPOSED CHANGES IN APPROPRIATION LANGUAGE

Salaries and Expenses, Antitrust Division

For expenses necessary for the enforcement of antitrust and kindred laws, [\$81,850,000] \$104.966.000: Provided, That notwithstanding section 3302(b) of title 31. United States Code, not to exceed [\$81,850,000] \$104.966.000 of offsetting collections derived from fees collected during fiscal year [2000] 2001 for premerger notification filings under the Hart-Scott-Rodino Antitrust Improvements Act of 1976 (15 U.S.C. 18a) shall be retained and used for necessary expenses in this appropriation, and shall remain available until expended: Provided further, That the sum herein appropriated from the General Fund shall be reduced as such offsetting collections are received during fiscal year [2000] 2001, so as to result in a final fiscal year [2000] 2001 appropriation from the General Fund of not more than \$0: Provided further. That fees collected in access \$104.966,000 in fiscal year 2001 cannot be made available in 2001 through a reprogramming pursuant to section 605 of this Act. (Department of Justice Appropriations Act, 2000 (P.L. 106-113).)

- The Antitrust Division expects to receive \$165,000,000 in premerger filing fee revenue in FY 2001 and requests that \$104,966,000 of it be made available for expenditure in FY 2001.
- 2. The Antitrust Division expects to carry forward \$29,258,000 in filing fee revenue collected in FY 2000 into FY 2001.

PROGRAM DESCRIPTIONS

The following portion of the FY 2001 budget request is organized around the six program areas traditionally ascribed to the Antitrust Division:

- Federal Appellate Activity
- · Termination & Prevention of Private Cartel Behavior
- Preservation of Competitive Market Structure
- Policy & Legislation
- Competition Advocacy
- Management & Administration

For each program area, we provide a chart showing resource allocations by funding source, including positions, workyears, and dollars; describe the range of activities that take place within that program area; and indicate which of the Goals and Strategies presented in the previous portion of the budget request are supported by that program area. The information provided in this Section thus both supplements and complements that which comes before it.

Presented in the Executive Summary and the annual Performance Plan sections of the FY 2001 budget request are High-Level Performance Indicators which correspond with the Antitrust Division's three overarching Goals. Included in Sections C and D of the budget request are more specific or Key Performance Indicators, a suite of which applies to each of the Division's six currently high-priority Strategies that support our Goals.

Federal Appellate Activity

		2000 Enacted			2001 Base	,	:	001 Estima	4	inc	nase/Doore	aut.

The Antitrust Division maintains an Appellate Section in Washington, DC. Staff in this Section have a variety of responsibilities. Key among these is early participation in Division investigations—whether they fall under the Criminal, Merger, or Civil Non-Merger Enforcement Strategies—in order to ensure that appropriate attention is given to potential appellate arguments should matters ultimately progress through litigation. By addressing potential issues up front, the Division ensures that resources are not squandered and that matters pursued are as solid as possible from the start. Appellate Section staff have an equally critical role as hitigation ensues and Division cases end up in appellate courts. There, they rely on their advance work in conjunction with investigative staffs and their expertise in handling appeals to defend the Division's position.

In addition to handling appeals for Division cases, Appellate Section staff are responsible for preparing briefs in antitrust cases before the Supreme Court as authorized by the Solicitor General; representing the interests of the U.S. in the courts of appeals in all civil and criminal cases brought by the U.S. under the Federal antitrust laws; and reviewing challenged decisions of the Surface Transportation Board (STB), the FCC, the Federal Maritime Commission (FMC), and the Nuclear Regulatory Commission (NRC), and preparing appeal positions for the U.S. Finally, staff in the Appellate Section prepare and file amicus briefs in the court of appeals and the Supreme Court in selected private antitrust cases where we see value in presenting an institutional perspective.

Termination and Prevention of Private Cartel Behavior

Requested Increase

The perception and reality among consumers and entrepreneurs that the antitrust laws will be enforced fairly and fully is critical to the economic freedom of all Americans. Vigorous competition is also critical to assure the rapid innovation that generates continued advances in our standard of living and our competitiveness in world markets.

For FY 2001, the Antitrust Division is requesting a program increase of 64 positions, 63.5 workyears, and \$7,663,000. These resources will help address the increased globalization of markets, constant technological change, and large number of massive criminal compiracies we are encountering. These matters transcend national boundaries, involve more technologically advanced and subtle forms of criminal behavior, and impact more U.S. businesses and consumers than ever before. The requirements—whether in terms of staff time, travel and translation costs, or automated litigation support at trial—of effectively fighting massive criminal conspiracies is great, and is the area in which the Division is simply outpaced in terms of having the resources required to run the race. Matters such as vitamins, graphite electrodes, food and food additives exemplify the increasingly complex and international nature of Division workload in the criminal area, and demonstrate that successful pursuit of such matters takes time and resources. It is in support of our Termination & Prevention of Private Cartel Behavior program—that the Division seeks this program increase. We believe that additional resources will directly affect our ability to decrease anticompetitive behavior affecting U.S. businesses and consumers. (See also the Executive Summary and Sections B and C.)

Preservation of Competitive Market Structure

Requested Increase

For FY 2001, the Antitrust Division is requesting a program increase of 113 positions, 113 workyears, and \$13,292,000. These resources will belp address the increased globalization of markets, and the constant technological change we are encountering. These matters transcend national boundaries, involve more technologically advanced and subtle forms of anticompetitive behavior, and impact more U.S. businesses and consumers than ever before. The requirements—whether in terms of staff time, travel and translation costs, or automated litigation support at trial—of effectively analyzing and challenging complex merger transactions are great. It is in support of our Preservation of Competitive Market Structure program that the Division seeks this program increase. We believe that additional resources will directly affect our ability to decrease automorphitive behavior affecting U.S. businesses and consumers. (See also the Executive Summary and Sections B and C.)

Given the dynamic environment in which the Antitrust Division must apply antitrust laws, it must constantly consider possible refinements to existing law and enforcement policy. Staff in the Division's Legal Policy Section, located in Washington, DC, are primarily responsible for drafting proposals to amend antitrust laws or other statutes affecting competition; analyzing proposed legislation; and developing and publishing antitrust guidelines or policy statements aimed at particular industries or issues, as timely and appropriate. As necessary, attorneys and economists in other Division Sections or Offices with specialized knowledge provide assistance to Legal Policy staff in this work.

Many of the hundreds of legislative proposals considered by the Department each year have profound impacts on competition and innovation in the U.S. economy. For example, the Telecommunications Act of 1996—which the Antitrust Division was heavily involved in drafting—is affecting the evolution of an entire industry, not to mention substantially increasing the Division's workload in assessing the competitive consequences of new entry into long distance, manufacturing, and video markets. Health care reform proposals, which the Division spends time reviewing and analyzing, affect competition in one-seventh of the economy. Global events require that the Division assist in shaping U.S. international economic policy. Because the Division is the Department's sole resource for dealing with competition issues, it significantly contributes to the legislative development in areas where antitrust law may be at issue.

The Antitrust Division has also stepped in to fill the gap between the antitrust laws and the application of those laws, clarifying issues and educating the public about antitrust issues in specific areas. As changes in the health care industry have created new types of partnerships and agreements, for example, the Division, in cooperation with the FEC, has issued acveral iterations of statements in enforcement policy in health care. Another area in which the Division identified a need for information is in intellectual property, where an explosion of activity has taken place in the last decade. Guidelines explaining the approach to defining markets for technology and innovations, for example, have been published jointly by the Division and the FTC. The Division has a significant role to play in educating the public about antitrust, believing that access to such information plays a role in deterring anticompetitive behavior.

Competition Advocacy

As an advocate of competition, the Antitrust Division seeks the elimination of unnecessary regulation and the adoption of the most competitive means of achieving a sound economy through a variety of activities undertaken on the national and international stages. Economists in two Sections in Washington, DC—one focusing on regulatory issues and another on competition issues—along with autorneys throughout the Division and in four Sections in Washington, in particular, three foreign on regulatory issues and another on the foreign arena, support the Division's extensive competition advocacy program through participation in interagency rulemskings, task forces, and policy development efforts; participation in interagency regulatory processes; review of proposed licensing and leasing applications; participation in national and international competition and trade organizations; and coordination with foreign antitrust authorities.

The Antitrust Division actively monitors the pending actions of Federal regulatory agencies through review of those agencies' dockets and industry or other publications, and through personal contacts in the industries and in the agencies. Our involvement in relevant proceedings—where articulation of a procompetitive position may make the difference between regulations that effectively do no antitrust harm or actively promote competitive regulatory solutions and those that may negatively impact the competitiveness of an industry—is widespread and demonstrates the ubiquity of antitrust issues. The following is a representative sample of the regulatory agencies before which the Division routinely presents an antitrust viewpoint: FCC, Federal Energy Regulatory Commission, Federal Maritime Commission, Office of Thrift Supervision, Resolution Trust Corporation, Securities and Exchange Commission, and the Surface Transportation Board.

The Antitrust Division maintains an Executive Office in Washington, DC, which supports the entire Division in pursuit of our Mission and Goals. The Executive Office provides operational support functions in many areas, including information systems, personnel, procurement, budget and finance, debt collection, and training, and provides managerial support functions as required by the Division's leadership.

Autitrant Division Salaries and Expenses Justification of Adjustments to Base (Dollars in thousands)

Increases:	Perm. Pos.	Workysans	Amount
2001 pay mine. This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, 52,375,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$1,781,000 for pay and \$594,000 for benefits).	-		\$2,375
Amualization of 2000 pay raise. This pay annualization represents first quarter amounts (October through December) of the 2000 pay increase of 4.8 percent effective January 2000, and, for three-quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and the approved pay raise of 4.8 percent. The amount requested, \$546,000, represents the total amualization of pay amounts for the fiscal year plus appropriate benefits (\$410,000 for compensation and \$136,000 for benefits).	-	-	546
Within-grade increases. This request provides for the expected increase in costs of within-grade increases for slow or no growth components for FY 2000. This increase is based on an accurate model	•-		397

Incremes:	Perm Post.	Workyeara	Amount
of the Department's employee population, which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$298 for pay and \$99 for benefits.			
Increased Federal Health Insurance Costs. This request provides for the increase in agency contributions to Federal employees health benefits. In 1999, Federal health insurance premiums, including agency contributions, increased approximately 10.2 percent. Because the Government absorbed a larger proportion of the total costs, up to 75 percent, the total cost to the Government has increased substantially. This increase is based on the "increased" Government cost of Health Insurance. This request includes \$221,000 for these costs.	<u>.</u>		221
Lesse Expirations: GSA now requires all agencies to pay relocation costs associated with lease expiration. Based on prior experience the Department anticipates that 20 percent of all lease expirations will result in relocations. This request provides for the cost associated with new office relocations caused by the expiration of leases in FY 2001. No funding is requested for any build-out costs associated with lease expirations. Funding of \$489,000 is requested for the Antitrust Division.			489

Інсгеазев:	Perm. Pos.	Workyears	Amount
General Services Administration (GSA) Blue Pages. Previously, GSA has paid for all nationwide Government telephone book listings through the GSA 8 percent FTS overhead rate. As a result of the National Partnership for Reinventing Government (NPR)/GSA Blue Pages Project, the funding for these listings has been removed from the overhead rate, and agencies are being billed for actual costs incurred. The Department's FY 2001 estimated costs total \$282,000.00. Funding of \$1,000 is requested for the Antitrust Division.	••	.	1
Travel Management Center Fees. In the past, travel management services were provided at no cost, and the Department received rebates based upon ticket sales. However, current practices in the travel industry have ended this process. The new contracts will not provide rebates and will carry fees for each ticket, hotel, car and other reservation made. The Department's cost for travel management center fees is estimated at \$2,500,000.00. Funding of \$26,000 is requested for the Antitrust Division.			26
National Archives and Records Administration (NARA). The Office of Management and Budget directed NARA to convert its direct-funded records center program to a fully reimbursable program by FY 2000. This proposed legislation mandates that NARA is to remain the sole source for sgency records center services, through FY 2002, for agencies currently using its services. In 2001, NARA advises that these charges will be increased by 2.5 percent. The Department's FY 2001 estimated costs total \$6,599.584, based on current records maintained by NARA. Funding of \$4,000 is requested for the Antitrust Division.	-	-	4

137

Increases:	Perm. Pos.	Workyears	Amount
General pricing level adjustments. This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by taw or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.	-	•	657
Decresses:	,		
General Services Administration (GSA) rent. GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested decrease of \$898,000 reflects an adjustment to our FY 2000 rent estimate. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates reflecting a 5 percent increase over 2000 levels.			(1,447)

United States Attorneys Summary Statement and Performance Plan FY 2001

The United States Attorneys (USAs) are requesting a total of 9,771 permanent positions, 9,726 FTE, and \$1,291,001,000. This request represents an increase of 651 positions, 328 FTE, and \$129,066,000 over the FY 2000 enacted appropriation.

CRIMINAL PROSECUTIONS

The United States Attorneys' offices (USAOs) investigate and prosecute a wide range of criminal activities and handle a more diverse workload than ever before. The offices' caseloads include emotionally charged violent crime and international and domestic terrorism; complex and time consuming beatth care fraud; errorism and computer fraud; environmental crime; sensitive public corruption and organized crime; organized crime drug enforcement; and cases involving multiple defendants and international organizations. The nature of many of today's crimes has required the USAs and their Assistants to become conversant in diverse fields such as the banking and health care industries, computer technology, socurities, foreign cultures and languages, and manufacturing processes affected by environmental and other Federal regulations.

The USAOs handle the majority of criminal cases prosecuted by the Department of Justice. The USAs receive most of their criminal referrals, or "matters," from Federal investigative agencies, including the Federal Bureau of Investigation, the Drug Enforcement Administration; the Bureau of Alcohol, Tobacco, and Firearms; the United States Customs Service; the United States Secret Service; the United States Postal Service; and others. They also receive criminal matters from state and local investigative agencies Occasionally, criminal violations are reported to the USAs by private citizens. After careful consideration of each criminal matter, the USAs decide the appropriateness of bringing criminal charges and, when deemed appropriate, initiates prosecution. Except for misdemeanor offenses and instances in which an alleged offender waives the right to a grand jury indictment, the USAs present evidence against an alleged offender to a grand jury. The grand jurors decide whether to return an indictment. If an indictment is returned, the USAs then present the criminal charges in open court at the arrangement of the defendant.

Although historically a large number of criminal defendants enter a plea of guilty prior to trial, the USAs must always be prepared to go to trial. Consistent preparation for trial minimizes the risk of dismissal for noncompliance with the Speedy Trial Act and strengthens the government's position in negotiations with defense counsel for a guilty plea. Pretrial discovery practice also strengthens the government's position. When a guilty plea is not obtainable, a trial becomes necessary. The USAs then present

factual evidence to convince the jury, or the judge in a non-jury trial, of the defendant's guilt. If the defendant is convicted, the USAs must prepare and present evidence at the defendant's sentencing hearing. Then, the USAs defend the conviction at post-trial hearings and appeals. The USAOs handle most criminal appeals at the intermediate appellate level. After filling a brief, the USAs may be required to participate in oral arguments before the United States Court of Appeals. If there is a further appeal, the USAs may be called upon to assist a Department litigating division or the Solicitor General in preparing the case for review by the United States Supreme Court.

CIVIL LITIGATION

In the civil arena, the USAs initiate civil actions, or affirmative litigation, to assert and protect the interests of the United States. They also defend the interests of the government in lawsuits filed against the United States, referred to as defensive litigation. In other civil cases, the United States is a third party plaintiff or defendant, a creditor, or an intervener. These are the three types of civil litigation which represent the pending civil caseload nationwide.

The USAOs initiate civil actions, or affirmative litigation, to assert and protect the interests of the United States. Such affirmative litigation includes civil actions brought to enforce our nation's environmental laws, admiralty and civil rights laws; to represent the government's interests in bankruptcy actions; to recoup money and recover damages resulting from Federal program and other fraud; to enforce administrative summonses and, as addressed separately in Section III, Asset Forfeiture Litigation; to forfeit assets seized by Federal, state, and local law enforcement agencies.

The USAs also represent and defend the interests of the government in lawsuits filed against the United States, or defensive civil litigation. Such litigation includes tort suits brought by those who allege suffering as a result of government action, a lipidication of Social Security disability claims, alleged contract violations, habeas corpus petitions, and race, sex, and age discrimination actions. The USAOs represent and defend the government in its many roles -- employer, regulator, law enforcer, medical care provider, revenue collector, contractor, procurer, property owner, judicial and correctional system manager, administrator of Federal benefits, and others. In those cases where the United States is sued, the United States Attorney must be its representative.

It is critical to note that civil defensive work is unique because it is non-discretionary and non-delegable. Unlike our criminal units, civil units of USAOs cannot employ "declination" criteria to manage or reduce the civil defensive caseload. All cases filed against the government, its agencies, and employees in their official capacities must be defended.

Debts are ordered to be collected from a criminal defendant when the defendant is sentenced by the court. These debts may be in the form of restitution to victims of crime, fines imposed by the court to penalize criminals, special assessments on each criminal conviction count, costs of prosecution and other costs, and forfeitures of appearance bonds. Interest may also be collected in certain cases as part of a criminal debt. In instances where restitution is ordered, the USAs are involved in collecting Federal restitution payments, or restitution which is owed to the United States, and in collecting non-Federal restitution, or that which is owed to private individuals and entities.

The USAs are the Federal government's debt collection attorneys, responsible for litigating civil debts for Federal agencies. When, for example, Federal agencies loan money and the recipients default on repayment of the loans, or Federal agencies have paid on guaranteed loans and have not been repaid as provided for in the lending agreement, the USAs become the legal representatives for the agencies to pursue repayment of the debts. The Departments of Agriculture, Education, Health and Human Services, Housing and Urban Development, Transportation, Veterans Affairs, and the Small Business Administration are some of these client agencies. Some of the work includes filing suit to gain judgments to collect debts, foreclosing on real property, compelling physicians either to repay or fulfill their commitment to the Public Health Service in return for education grants, suing to set aside fraudulent transfers of property which could be used to satisfy defaulted loans, and managing debtor repayment schedules.

CRIMINAL AND CIVIL APPEALS

The number of criminal appeals handled by the USAs increased dramatically between FYs 1987 and 1994. Since FY 1995, however, the number of criminal appeals filled by or against the United States has remained relatively stable. The increase in appeals between FYs 1987 and 1994 resulted in part, from implementation of the Sentencing Guidelines, which became effective in November 1987. While the Guidelines have resulted in additional case-related work overall, Assistant USAs now spend far more time than before on sentencing issues, such as preparing sentencing memoranda, conducting lengthy sentencing hearings, and handling sentencing appeals. Appeals, in general, are time consuming, requiring a thorough review of the entire record in the case, the filing of a brief and reply brief and, in most cases, participation in an oral argument which requires travel to the city where the United States Court of Appeals for the circuit is located. While deemed necessary, the additional work associated with the Sentencing Guidelines has affected the USAs' ability to pursue the investigation and prosecution of more cases. Furthermore, the complexity of appellate work and the time required to handle that work increases when convictions are based on complex facts such as those found in organized crime drug enforcement and other narcotics cases, financial institution fraud, organized crime, public corruption, health care fraud, and computer crume, including computer and intellectual property fraud cases.

COMPONENT MISSION AND GOALS, AND RELATIONSHIP TO THE DEPARTMENT OF JUSTICE STRATEGIC PLAN

The United States Attorneys' FY 2001 request and performance plan presents a clear link to the mission priorities, general goals, and strategies that are included in the Department of Justice (DOI) Strategic Plan, FY 1996 - 2001. The request includes key performance goals that will enable us to provide progress reports on the actual results achieved. Summary level performance indicators are included that best represent the principal outputs and outcomes of the major programs in the USAOs and the Executive Office for United States Attorney (EOUSA).

For FY 2001, resources are requested to address the Core Functions and Goals stated in the DOJ Strategic Plan that relate to the USAs. These Core Functions and Goals are:

CORE FUNCTION: Investigation and Prosecution of Criminal Offenses

Goal 1: Reduce violent crime.

Goal 2: Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts.

Goal 4: Reduce white-collar crime.

CORE FUNCTION: Assistance to State and Local Government

Goal 1: Invest in the crime-fighting and criminal/juvenile justice system capabilities of state and local governments.

CORE FUNCTION: Legal Representation, Enforcement of Federal Laws, and Defense of Federal Government Interests

Goal 5: Represent the United States in all civil matters for which the Department of Justice has jurisdiction.

CORE FUNCTION: Protection of the Federal Judiciary and Improvement of the Justice System

Goal 3: Promote the participation of victims and witnesses throughout each stage of criminal and juvenile justice

proceedings at the Federal, State and local levels and Indian Country.

CORE FUNCTION: Management

Goal 3: Achieve excellence in management practices.

Goal 4: Make effective use of information technology (IT).

UNITED STATES ATTORNEYS' MISSION STATEMENT

The mission of the USAs is to prosecute violators of federal criminal law, seek punishment of those that are guilty of unlawful behavior, represent the United States in civil and equity actions and in administrative matters, as appropriate.

UNITED STATES ATTORNEYS' ORGANIZATIONAL GOALS

- To identify, prosecute, and convict those persons and legal entities who have committed criminal offenses against the laws of the United States;
- To protect and to advance the interests of the United States through the conduct of affirmative and defensive civil litigation;
- To collect monies owed to the United States which cannot be collected through administrative means;
- To promote the participation of victims and witnesses throughout each stage of criminal and juvenile justice proceedings; and

 To provide high quality and cost effective basic, specialized and advanced legal education to attorneys and support staff for the Department of Justice, Executive Branch Agencies, and State and local entities.

FY 2001 PERFORMANCE PLAN

The USAs propose the following Performance Plan for FY 2001, contingent upon the requested level of resources, and against which progress can be reported. This Performance Plan provides key performance indicators that represent the principal outputs and outcomes anticipated for selected programs for FY 2001.

DOJ GOAL: Reduce Violent Crime (Including Organized Crime and Gang-related Violence)

The USAs are committed to devoting the attorney resources necessary to help achieve a reduction in violent crime across the United States.

. The USAs will reduce the incidence of violent crime on Indian reservations where they have exclusive Federal jurisdiction.

Firearms Prosecutions.

The Department of Justice, along with the White House, have identified the need for federal law enforcement to be a significant partner in collaborative strategies for the reduction of firearms violence. The goal of the USAs is to continue to reduce violent crime involving the use of guns, which persists as a nationwide problem. Federal law enforcement has played an important role in many state and local jurisdictions by providing a targeted response that complements communities' overall anti-violence strategies. Many state and local governments have effectively prevented, detected, punished, and reduced the incidence of gun violence, but more can and needs to be done. In addition, many communities continue to suffer from high rates of gun violence that have not been reduced by traditional approaches and current resources.

Certain jurisdictions, such as Boston, Massachusetts and Richmond, Virginia, have been able to reduce firearms violence through collaborative efforts and strategic planning. Vigorous enforcement actions by federal, state, and local authorities have contributed to reducing rates of violent crime. These enforcement actions have been further enhanced by a variety of innovative interventions based on sharing information and analytical techniques using extensive advertising and community outreach to enlist citizen participation and to deter criminals by publicizing potential prison sentences.

Violent Crime.

During FY 1999, the USAs continued to prosecute the most violent criminal offenders under the Attorney General's Anti-Violent Crime Initiative and through use of the enhanced criminal provisions of the Violent Crime Control Act of 1994. Under the Anti-Violent Crime Initiative, the USAs work in tandem with state and local law enforcement officials and members of their communities to do what is best for each violent crime case in his or her community. Unprecedented working relationships have been forged with state and local law enforcement agencies throughout the nation to make sure that the most serious violent criminals and crime problems are addressed. The Anti-Violent Crime Initiative calls on all law enforcement officials and prosecutors — Federal, state and local — to share in the work of responding to the violence that affects all Americans. Our nation's state and local law enforcement agencies have reported decreases in violent crimes for the last several years, according to data provided in the Federal Bureau of Investigation's Uniform Crime Reporting Program. Data for 1998 indicate a four percent decline from 1996 figures, the sixth consecutive annual decrease in reported crime. The statistics show that the number of violent crimes decreased by six percent during 1996. This follows violent crime decreases of three percent in 1995 and four percent in 1994.

The USAs filed a total of 7,392 violent criminal cases against 9,175 offenders during FY 1999, representing a seven percent increase in the number of cases filed when compared to the prior year. These cases represented nearly 15 percent of all criminal cases filed by the USAs in FY 1999. The time required for Assistant United States Attorneys (AUSAs) to successfully prosecute violent crime cases has risen each year since FY 1992. During FY 1999, 13 percent of all criminal attorneys across the nation were devoted to violent crime cases, up from only ten percent as recently as 1992. A total of 6,539 violent crime cases against 8,404 defendants were also terminated in FY 1999.

Violent Gangs.

Members of violent street gangs are frequently involved in drug trafficking activities and frequently use firearms in the commission of their crimes. Collectively, these violent street gangs destroy the fabric of American communities, taking over parts of cities, flooding the streets with drugs, and terrorizing and killing innocent people. Many USAs have focused their efforts on dismantling violent criminal gangs, using Federal racketeering laws, Federal and state narcotics laws, and outstanding warrants to take violent gang members off the streets.

According to the National Institute of Justice, research into the relationship between gangs and delinquency has shown that gang members have significantly higher levels of delinquency than other youths and that law enforcement focus on gang-related crime and delinquency has consistently increased over the past two decades. Gangs, by their very nature, foster criminal behavior, especially violence. One national survey found that the most commonly reported criminal activity for gangs was violence. Other research

suggests that increases in gang violence are the result of a "contagion" effect, subsequent acts of violence -- usually in retaliation -- following an initial act of violence.

Violent Crime in Indian Country.

During FY 1999, the USAs, with exclusive jurisdiction over most serious crimes in Indian Country, continued their efforts to enhance communication with Native American Tribes and to be more responsive to the violent crime problems on reservations. Assistant USAs, designated by the USAs to respond to Native American concerns, continued to work with Multi-Disciplinary Teams to better respond to violent crime, including child abuse, and to prosecute violent crimes in Indian country.

In contrast to declining national violent crime trends, serious and violent crime in Indian Country has risen significantly in recent years. Gang violence and juvenile violence, in particular, have risen dramatically. Based on a Presidential directive, the Attorney General formed an interdepartmental Executive Committee to address this concern. USAs responded by holding an unprecedented series of consultations with tribal leaders around the country. These consultations identified a glaring problem of insufficient law enforcement resources in Indian Country. Due to the fact that law enforcement in Indian Country often fails to meet basic public safety needs, tribal governments expressed a desire to add resources and consolidate law enforcement services.

The USAs responded to these problems by designating Assistant USAs to serve as tribal liaisons and to work cooperatively with tribal police, prosecutors, and judges to address criminal issues such as juvenile violence. The Federal Bureau of Investigation (FBI), placed more agents in Indian Country and created an Office of Indian Country Investigations within its Violent Crime and Major Offenders Section. Thirty special agents were reassigned to those FBI offices with the greatest need for Indian Country resources. The Office of Indian Country Investigations has facilitated training for more than 170 investigators working to combat gang problems in Indian Country. The USAs have cooperated with the FBI in forming multi-disciplinary teams and FBI Safe Trails Task Forces. The task forces have taken an aggressive stance in combating violent crime in Indian Country and have made a difference in the communities in which they are active.

Emmigration.

In the early 1990s, as new U.S. Attorneys were appointed in the early days of this Administration, the federal prosecutors in Southwest Border districts were faced with a serious law enforcement and public safety problem. A June 1996 report from the Attorney General to the President, "Fighting Crime on the Southwest Border: A Progress Report," noted that years of neglect had left the Southwest Border an open invitation to violent crime, drug trafficking, and illegal immigration. The United States Attorneys' strategy has been to focus on felony prosecutions of the Immigration statutes on those individuals with prior criminal convictions. In January of 1999,

the Immigration and Naturalization Service (INS) finalized its new Interior Enforcement Strategy for dissemination to the field. The principles of the strategy are to identify and remove criminal aliens in the interior of the United States and minimize recidivism; deter, dismantle, and diminish smuggling or trafficking of aliens; respond to community reports and complaints about illegal immigrants and build partnerships to solve local problems; minimize immigration benefit fraud and other document abuse; and block and remove employers' access to undocumented workers.

POJ GOAL: Reduce the Availability and Abuse of Illegal Drugs Through Traditional and Innovative Enforcement Efforts

The USAs are dedicated to attacking drug distribution in our country, especially targeting the complex drug organizations that attack our neighborhoods and victimize our young people.

The USAs will continue to focus their efforts on identifying, disrupting and dismantling major drug organizations operating
in the United States.

Narcotics.

The USAs' drug strategy is to target and prosecute significant drug traffickers and highly structured drug organizations. A task force approach is used throughout the country to benefit from the expertise and criminal intelligence of Federal, state, and local law enforcement officials. An example of the success of this approach can be seen in Operation Zorro II, an Organized Crime Drug Enforcement Task Force (OCDETF) and Southwest Border Initiative case. This eight-month investigation involved unprecedented cooperation from ten Federal law enforcement agencies, more than 40 state and local agencies, and 14 USAOs. Also, more than six tons of cocaine and more than \$20 million in currency and assets have been seized.

During FY 1999, the USAs again directed substantial resources to the prosecution of narcotics and OCDETF cases. These cases represented 34 percent of all criminal cases filed during the year. During FY 1999, a total of 16,617 cases were filed against 29,846 drug defendants and classified under the Narcotics and Dangerous Drugs (Non-OCDETF) and the OCDETF program categories. This represents an increase of 10 percent in the number of cases filed and 11 percent in the number of defendants filed when compared to the prior year, and the highest number of drug cases and defendants filed over the past seven years. A total of 14,800 cases against 25,752 defendants were also terminated.

 $\chi_{i} :=$

DOJ GOAL: Reduce White Collar Crime

The USAs, in cooperation with Federal investigative agencies, and State and local authorities will identify, investigate and prosecute high priority white-collar criminal offenses nationwide.

- The USAs will focus attention on dismantling fraudulent telemarketing operations.
- The USAs will aggressively prosecute violators of the child pornography statutes.

WHITE COLLAR CRIME

The USAs handled a myriad of white collar crime prosecutions during FY 1999, including health care fraud, financial institution fraud, pension fraud, securities fraud, and computer crime. In all, 6,558 cases were filed against 8,670 defendants charged with white collar crime. A total of 6,311 cases against 8,142 defendants were also terminated. Discussions of some of the priority white collar crime prosecution areas follow.

Computer and Intellectual Property Crime.

On August 11, 1999, the Attorney General approved a new enforcement initiative to protect intellectual property rights. This was largely in response to the fact that the mode of operation of criminals who perpetrate fraud and other crimes is becoming more sophisticated with the explosive growth of the Internet. Computer-aided attacks on government and eorporate entities are growing rapidly. In fact, the theft of information and terrorism goes beyond individual computers and extends to entire computer networks. Recognizing the growth in computer crime, law enforcement entities are becoming more involved in this area and are uncovering schemes which victimize the government, non-government entities, and individuals. Some of the schemes resemble traditional thefts, except that a computer is the instrument of the crime instead of the forger's pen or fraudulently prepared documents. For example, users of today's powerful personal computers, printers and software, can create or reproduce almost any document in original quality. This counterfeiting includes currency, checks, other negotiable instruments, and identification documents. Computer crime can also include cases involving schemes in which a computer is the target of the offense, for example, computer viruses or instances where the goal is to obtain information or property from a computer or to disable a telecommunications system or data network. Prosecution of computer crime requires sophisticated knowledge of computer technology and systems. This high-tech crime represents an emerging area of concern for Federal law enforcement agencies and the USAs. During FY 1999, the USAs filed 104 computer crime cases

Child Exploitation and Pornography.

The investigation and prosecution of criminal offenses against children continues to be a high national priority of the United States Attorneys. We will ensure that those who engage in criminal child sexual abuse and exploitation are apprehended and punished to the full extent of the law.

Child pornographers, who were once relegated largely to illicit books, magazines, and mailings, have emerged as a significant problem on the Internet. This medium has enabled pedophiles to contact each other and strike up anonymous electronic conversations with or about potential victims. Also, the Internet provides pedophiles with a means to store, distribute, and exchange electronic images of child pomography. The United States Attorneys (USAs) have enjoyed great success prosecuting child pomography and sexual exploitation of children cases, but dramatic growth in Internet use promises many more cases of this type. These cases encompass a cohort of pedophiles that present an exceptionally serious threat to children -- "travelers" who seek to meet children on-line and who then travel -- or induce the child to travel -- in an attempt to meet and have sex with the child.

Health Care Fraud.

In 1996, the President signed the Health Insurance Portability and Accountability Act of 1996 which contained many provisions that strengthen the USAs' ability to combat health care fraud. Additionally, during FY 1998, new health care fraud resources were authorized for the USAOs. The Attorney General also approved new guidelines on multi-district health care fraud cases which enhances cooperation and communication between the USAs and the Department's Criminal and Civil Divisions in cases which potentially require a multi-district or nationwide strategy. Further, the Attorney General delegated authority to the USAs and to the Assistant Attorney General for the Criminal Division to issue investigative demands.

Health care fraud takes many forms, including defrauding Medicare, Medicaid, Department of Veterans Affairs or other government insurers or providers, defrauding insurance companies, and defrauding or misleading patients on quality of care issues. The fraudulent activity may include double billing schemes, billing for unnecessary or unperformed tests, or may be related to the quality of the medical care provided. The USAs prosecute those responsible for such fraudulent activities, such as health care professionals, hospitals, nursing homes and other providers, specialized business entities, pharmacies, medical supply companies, and other persons associated with these entities. The primary objective of criminal prosecution is to ensure the integrity of our nation's health care programs and to punish those who, through their fraudulent activities, abuse the health care system and the taxpayers. Civil remedies are also pursued by the USAs to obtain monetary penalties and restitution enforcement.

During FY 1999, the USAs filed 370 health care fraud cases against 504 defendants. This represents a 16 percent increase in cases filed and a 16 percent increase in defendants filed when compared to the prior year. Also during FY 1999, the USAs terminated 300 cases against 454 defendants, representing a 26 percent increase in cases terminated and a 27 percent increase in defendants terminated when compared to the prior year.

Major Financial Institution Fraud.

The USAs continued to prosecute the perpetrators of crimes that threaten to undermine our financial institutions. The enforcement strategy is a coordinated approach whereby Assistant USAs and Department attorneys from the Criminal, Civil and Tax Divisions not only send defrauders to prison, but obtain restitution for victims, criminal fines, civil monetary penalties, and forfeiture of property traceable to fraud. A major financial institution fraud case is defined as a case in which the amount of fraud or loss is \$100,000 or more; the defendant is or was an officer, director, owner, or shareholder of the financial institution; or the scheme involved multiple borrowers within the same institution.

DOJ GOAL: Represent the United States in All Civil Matters

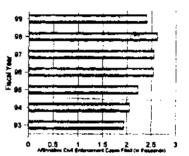

The USAs are tasked with defending the United States in all civil matters. This is a daunting task, especially considering the recently passed legislation which increased our responsibilities in areas such as Community Health Centers and contracts issued by the Bureau of Indian Affairs. The USAs also prosecute Affirmative Civil Enforcement (ACE) actions under statutes which granted USAs the statutory authority to collect monies.

Civil matters and cases represent a significant portion of the USAs' workload. As of the end of FY 1999, pending civil cases represented 67 percent of the 157,987 pending criminal and civil cases in the USAOs. During FY 1999, the USAOs filed or responded to a total of 75,603 civil cases. The cases include those filed or responded to in United States District Courts, United States Bankruptcy Courts and state courts. Of the total, the USAs filed suit on behalf of the United States in 7,556, or 10 percent. The USAs defended the United States in 50,498, or 67 percent, of all civil cases, up from 66 percent during the prior year. The United States was otherwise designated, such as a bankruptcy creditor or third party litigant, in 17,549, or 23 percent, of all civil cases.

During the same period of time, the USAOs terminated a total of 72,549 cases. Judgments were issued in 17,284, or 24 percent, of these cases, and a total of 13,907, or 80 percent, of these judgments were in favor of the United States. The percentage of civil cases in which judgments were issued, and the percent of those judgments in favor of the United States, has remained consistent for several years. Additionally, 18,656, or 26 percent, of the cases were settled. A total of 474 cases were disposed of by trial.

The USAs filed a total of 7,556 affirmative civil cases during FY 1999. The number of civil defensive cases during FY 1999-- the 50,498 cases the USAs had no choice but to defend because the government was sued--diverted time and attention from affirmative civil cases. During the same period, the offices terminated 7,120 affirmative civil cases. The court issued judgments in 3,111 of these cases. A total of 3,005, or 97 percent, of the judgments were in favor of the United States. Only 1,198, or 16 percent, of all affirmative civil cases were dismissed, as compared to the 26 percent dismissal rate achieved by the USAs in cases filed against the United States. As of the end of FY 1999, a total of 11,051 affirmative civil cases were pending and 79,497 defensive civil cases were pending.

The Affirmative Civil Enforcement (ACE) Program remains an essential part of the aggressive efforts by USAs' to recover funds which have been wrongfully paid by the United States. ACE is a powerful legal tool to help ensure that Federal funds are recovered, that Federal laws are obeyed, and that violators provide compensation to the government for losses and damages caused as a result of fraud, waste, and abuse of government funds and resources. There are a number of Federa! affirmative civil statutes designed for the express purpose of enforcing the Federal law. Among the civil enforcement actions filed by the USAs are those brought pursuant to the False Claims Act, the Clean Water and Clean Air Acts, civil enforcement of controlled substance violations, Racketeering Influenced and Corrupt Organizations (RICO), the Fraud Injunction Statute, the Anti-Kickback Act, the Truth in Negotiations Act, and the Buy American Act. The USAOs also expend significant resources in civil divestiture actions, defense procurement

fraud actions, qui tam actions, health care fraud enforcement, civil rights cases, civil actions pursuant to the Financial Institutions Reform Act, Recovery and Enforcement Act, and Food and Drug Administration cases.

During FY 1999, the USAs filed 2,421 ACE cases. A total of 2,040 cases were also terminated. As of the end of FY 1999, 4,351 ACE cases were pending, representing an increase of four percent when compared to FY 1998.

DOJ GOAL: Promote the Participation of Victims and Witnesses Throughout Each Stage of Criminal and Juvenile Justice Proceedings at the Federal, State and Local Levels.

The USAs will ensure that the rights of victims and witnesses are maintained while at the same time pursuing the cases properly through to their logical conclusion.

With the additional resources provided in FY 1998, the U.S. Attorneys' will begin planning for the implementation of a
comprehensive nation-wide Victim Notification System. Each U.S. Attorneys' office now has a dedicated Victim/Witness
Coordinator.

During FY 1999, the USAs continued their mission of guaranteeing the rights of all victims of crime through training of Assistant USAs, enhancing the services provided to crime victims, and better coordinating efforts to address victim issues. The Executive Office for USAs appointed an Assistant Director in its Office of Legal Education to educate Assistant USAs on victims' rights issues. Presentations were made to ensure that Assistant USAs understand the rights of victims and the services available to victims.

In order to better serve Indian Country and other under-served populations, seven additional Domestic Violence Counselors were allocated to Indian Country and three Counselors were allocated to the U.S. Attorney's Office for the District of Columbia in FYs 1996 and 1999. Representatives of the Executive Office for USAs continue to work closely with other Federal agencies and provate organizations to develop protocols and program plans for use in cases with numerous victims. Such planning will guarantee that all victims are identified and receive assistance. Partnerships have been forged with the Red Cross, the Federal Emergency Management Agency and the National Transportation Safety Board.

Emergency Witness Assistance Program.

The Attorney General's Advisory Committee of USAs continues it program to assist witnesses, called the Emergency Witness Assistance Program (EWAP). EWAP provides the USAOs with the flexibility to assist witnesses with emergency concerns and problems. This assistance helps to ensure witnesses will be available to the government for trials, other court proceedings, or activities related to an ongoing criminal case. Through the use of this program, the USAOs have provided services for witnesses to leave their town, city, or state; emergency phone services; temporary subsistence; child or elderly care; or temporary housing/moving expenses. This program relieves some of the fear and concerns witnesses may have about assisting the government and gives them peace of mind which ultimately enhances their ability to testify on the government's behalf.

DOJ GOAL: Provide High Quality and Cost Effective Basic, Specialized and Continuing Legal Education for Department of Justice Attorneys and Support Staff, and Executive Branch Attorneys and Support Staff.

The USAs will ensure that a high quality legal education program is available for basic and advanced legal training. Without proper legal training, the persons responsible for litigating the priority programs of the Department and the Administration would not be equipped with the proper tools to accomplish their mission.

FY 1999 marked the first full year of operation for the National Advocacy Center (NAC). The NAC is a state-of-the-art training center located on the campus of the University of South Carolina in Columbia, South Carolina. Approximately 80 percent of the programs at the NAC are conducted by the Executive Office for United States Attorneys Office of Legal Education (OLE) with the remaining 20 percent conducted by the National District Attorneys Association.

DOJ GOAL: Make Efficient Use of the Best Available Management Practices, Including Current and New Information Technology, That Will improve Program Performance and Overall Efficiency

In 1999, the Executive Office for United States Attorneys (EOUSA) replaced 13,200 outdated personal computer workstations and trained the same number of United States Attorney office staff on the new Pentium II workstations. The users are now equipped with sufficient memory to run current versions of software such as the Corel Legal Suite and on-line legal research software. Outdated network devices were also replaced with new, faster switches. Also during 1999, EOUSA developed a plan to replace 420 servers, the operating system, and an antiquated email system with the Department of Justice JCON II standard server hardware operating and email systems. The new components include larger Compaq servers, the Windows NT server operating system, and Microsoft Exchange/Outlook email system.

EOUSA began development of a data warehousing system to facilitate the retrieval of case data entered by the United States Attorneys' offices (USAOs) through the LIONS case management system. Ultimately, this will be the primary system available (via web-based, front-end software) for conducting statistical analyses, trend analyses, and workload projection: for the United States Attorneys' (USAs) civil and criminal caseloads. During 1999, the LIONS system was revised to capture fi earms charging information down to the specific subsection. A number of edits and revisions were made to streamline data entry and safeguard the entry of critical data. This initiative was established to help reconcile firearms statistics and to ensure an accurate report of the USAs firearms caseload. These changes eliminate the need for manual reporting of firearms cases by the USAOs and will ultimately result in the closeot. of the manual Triggerlock tracking system.

Finally, EOUSA has conducted Y2K compliance tests and developed contingency plans. All mission-critical hardware and software deemed to be non-compliant has been or will be replaced before January 1, 2000.

SUMMARY - LEVEL PERFORMANCE INDICATORS

The USAs provide Federal leadership in preventing and controlling crime and seek just punishment for those guilty of unlawful behavior.

• The USAs will measure performance by ensuring that an appropriate level of resources are devoted to the following high priority areas.

9/4	AUSA	Cases
W	orkyears	Handled
Narcotics	30	37,523
White Collar Crime	26	13,696
Organized Crime	4	601
Violent Crime	13	14,170
Other Criminal Program	s 27	<u>34,557</u>
Total	100	100,547

•	% AUSA	Cases
•	Workyears	Handle
Defensive Civil	48	129,436
Affirmative Civil	23	18,639
Other Civil Programs	29	32,825
Total	100	180,900

The USAs are committed to the highest possible levels of achievement and service. The Legal Education program is designed to enhance the most effective prosecutorial services to, and on behalf of, the people of the United States.

943

 This effort is supported by the number of high-quality and cost effective courses that will be provided at the NAC in support of the criminal and civil programs. The measure of this program is best expressed by the number of student days conducted for each curriculum.

OLE trained nearly 10,620 students in 261 courses in 1999, and an additional 2,250 students were trained through OLE's distance education programs. OLE also hosted staffs from 24 United States Attorneys' offices and the Executive Office for United States Attorneys in FY 1999 for Management Team Training.

The USAs promote the participation of victims and witnesses throughout each stage of criminal and juvenile justice proceedings at the federal, state and local levels.

 The primary indicator of success will be full compliance by all USAOs in the provision of victim/witness services including notification requirements.

MAJOR FY 2001 INITIATIVES

The USAs program enhancements are sorted below into program areas that support the overall mission of the Department.

2001 B	udget	Enhance	ments
--------	-------	---------	-------

			Dollars in
Initiative	Positions	Attorneys	<u>tbousands</u>
Firearms Prosecutions	163	113	\$14,518
Violent Crime in Indian Country	60	33	4,699
Computer/Intellectual Property Crime	50	28	3,948
Civil Defensive Litigation	76	36	5,744
Child Exploitation & Pornography	47	31	4,059
Immigration	48	27	3,844
Infrastructure	47	0	12,123
Child Support Enforcement	95	0	5,000
DC Superior Court	6.3	0	3,978
Short Term Protection Program	2	0	172
TOTAL	651	268	\$58,085

CRIMINAL PROGRAM

- Firearms Prosecutions 163 Positions (113 Attorneys) to conduct intensive firearms prosecution projects in United States Attorneys offices around the country.
- Violent Crime in Indian Country 60 Positions (33 Attorneys) to address violent crime in districts with Indian Country
 jurisdiction.
- Computer/ Intellectual Property Crime 50 positions (28 Attorneys) to focus on the investigation and prosecution of criminal violations involving: computer intrusions and attacks by "hackers" and other computer criminals.

- Child Exploitation & Pornography 47 positions (31 Attorneys) to vigorously prosecute referrals from law enforcement task forces at all levels that use undercover techniques to identify persons who produce new child pornography; travel across state lines to engage in sex with children; and trade images of child pornography.
- Immigration 48 Positions (27 Attorneys) to aggressively enforce immigration statutes including aliens who after deportation, attempt to re-enter or are found in the United States illegally, alien smugglers and alien smuggling organizations, and those involved in production, distribution, and sale of false U.S. Immigration documents and other identification documents.
- Child Support Enforcement 95 Positions to support the USAs' efforts to enhance Child Support enforcement and
 restitution provided to custodial parents under the Child Support Recovery Act (CSRA) and Deadbeat Parents Punishment Act
 of 1998 (DPPA).
- Short-term Protection Program 2 positions to test the need for expansion of the short-term witness program outside the
 District of Columbia.

CIVIL PROGRAM

• Civil Defensive Litigation - 76 Positions (36 Attorneys) for the defense of the United States against certain monetary claims. Consists of two parts: Torts, Title VII (Employment Discrimination).

MANAGEMENT & ADMINISTRATION

 Infrastructure - 47 Positions to provide technical and non-technical assistance to the 94 district offices of the United States Attorneys.

DISTRICT OF COLUMBIA, SUPERIOR COURT

 District of Columbia United States Attorneys' Office - 43 In-House Investigators, to be assigned to assist the sections in the Superior Court Division. These include the: Homicide, Violent Crime, Grand Jury Section, Felony Trial, Sex Offense, and Domestic Violence Sections. Also, the DC USAO requests 20 positions for Victim Witness Assistance Programs. With this funding, the DC USAO will enhance their ability to assist victims and witnesses in the District of Columbia.

United States Attorneys

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include processed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses, United States Attorneys

For necessary expenses of the Offices of the United States Attorneys, including inter-governmental and cooperative agreements, (51.161.957.000)\$1.291.001.000; of which not to exceed \$2.500.000 shall be available until September 30, [2001] 2002, for: (1) training personnel in debt collection; (2) locating debtors and their property; (3) paying the net costs of selling property; and (4) tracking debts owed to the United States Government: Provided, That of the total amount appropriated, not to exceed \$8,000 shall be available for official reception and representation expenses: Provided further, That not to exceed \$10,000,000 of those funds available for automated litigation support contracts shall remain available until expended: Provided further, That not to exceed \$2,500,000 for the operation of the National Advocacy Center shall remain available until expended; Provided further, that not to exceed \$1,000,000 shall remain available until expended for the expansion of existing Violent Crime Task Forces in United States Attorneys Offices into demonstration projects. including inter-governmental, inter-local, cooperative, and task-force agreements, however denominated, and contracts with State and local prosecutorial and law enforcement agencies engaged in the investigation and prosedution of violent crimes: Provided Further, That, in addition to reimbursable full-time equivalent workyears available to the Offices of the United States Attorneys, not to exceed 9,120 positions and 9,398 fulltime equivalent workyears shall be supported from the funds appropriated in this Act for the United States Attorneys'.

2001 Estimate	7.498	7.277	246.845
Increase/Decrease	555	279	48.692

Base Program Description

The United States Attorneys' offices (USAOs) investigate and prosecute a wide range of criminal activities and now handle a more diverse and complex workload than ever before. For example, criminal caseloads include: youth violence; international and domestic terrorism; complex and time-consuming health care fraud; financial institution fraud; computer fraud and environmental crime; sensitive public corruption and organized crime; organized crime drug enforcement; and, cases involving multiple defendants and international organizations. The nature of many of today's crimes has required the United States Attorneys (USAs) and their Assistants to become conversant in fields as diverse as the banking and health care industries, computer technology, differing cultural/ethnic backgrounds and manufacturing processes affected by environmental and other Federal regulations.

USAOs handle approximately 95 percent of the criminal cases prosecuted by the Department of Justice. USAs receive most of their criminal referrals, or "matters," from Federal investigative agencies, or become aware of criminal activities in the course of investigating or prosecuting other cases. They also receive criminal matters from state and local investigative agencies. Occasionally, criminal violations are reported to the United States Attorneys by citizens. After careful consideration of each criminal matter, the USA decides the appropriateness of bringing criminal charges and initiates prosecution. Except for misdemeanor offenses and instances in which as alleged offender waives the right to a grand jury indictment, the USA presents evidence against an alleged

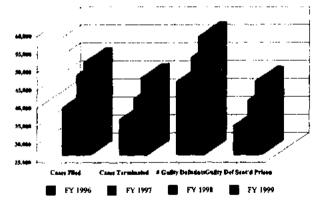

offender to a grand jury. The grand jurors decide whether to return an indictment. If an indictment is returned, the USA then presents the criminal charges in open court during the defendant's arraignment.

Historically, the majority of criminal defendants enter a plea of guilty prior to trial, yet, the USAs must always be prepared to go to trial. Consistent preparation for trial minimizes the risk of dismissal for noncompliance with the Speedy Trial Act and strengthens the government's position in negotiations with defense counsel for a guilty plea. When a guilty plea is not obtainable, a trial becomes necessary. The United States Attorney then presents factual evidence to convince the jury, or the judge in a non-jury trial, of the defendant's guilt.

Criminal Cases

FY 1996 - 1999

0

If the defendant is convicted, the USA defends the conviction at post-trial hearings and appeals. The USAOs handle most criminal appeals at the intermediate appellate level. After filing a brief, the USA may be required to participate in oral arguments before the United States Court of Appeals. If there is a further appeal, the USAs may be called upon to assist the Department hitigating division and the Solicitor General in preparing the case for review by the United States Suoreme Court.

During Fiscal Year (FY) 1999 the United States Attorneys' offices received 91,217 criminal matters. The offices reviewed and declined a total of 36,510 criminal matters during the year. The United States Attorneys' offices filed 50,779 criminal cases against 71,560 defendants in United States District Court. This represents a seven percent increase in cases and defendants filed when compared with the prior year, and represents the highest number of cases filed over the past ten years. For the third year in a row, the

United States Attorneys filed a greater proportion of cases when viewed as a percentage of criminal matters received.

A total of 46,423 cases against 64,517 defendants were terminated during FY 1999. Of the 64,517 defendants terminated, 57,876, or 89 percent, either pled guilty or were found guilty. Of these, 45,470, or 79 percent, received prison sentences, and 286 guilty defendants received sentences of life imprisonment. The rate of convicted defendants who received prison sentences has consistently exceeded 70 percent over the last seven years.

In addition to those cases filed and handled in United States District Court, the United States Attorneys' offices filed 260 criminal cases in United States Magistrate Court. Finally, the United States Attorney's office for the District of Columbia also bears responsibility for the prosecution of criminal cases in the District of Columbia Superior Court. There were a total of 9,196 felony cases and 15,397 misdemeanor cases filed during FY 1999.

During FY 1999, the United States Attorneys' offices opened a total of 84,598 criminal debts worth \$4.4 billion. During the same period of time, a total of 62,286 criminal debts were closed. The United States Attorneys reported collections of \$1.4 billion in cash and over \$2.5 billion worth of property, for a total of \$1.42 billion collected in criminal cases by their offices, the Courts, and the Bureau of Prisons. Of the total amount of cash and property collected on criminal debts during FY 1999, \$1 billion owed to the United States and \$151.6 million owed to third parties was collected. In addition, a total of \$946.6 million was collected in criminal fines.

The United States Attorneys' offices have devoted significant resources to uphold the rights of, and improve services to, America's crime victims.\(^1\) The federal government must ensure that innocent victims of crime have their rights upheld, have their dignity and privacy respected, and are treated with fairness. During FY 1999, the United States Attorneys continued their mission of guaranteeing the rights of all victims of crime through training of Assistant United States Attorneys (AUSAs), enhancing the services provided to crime victims, and better coordinating efforts to address victim issues. The Executive Office for United States Attorneys appointed an Assistant Director in the Office of Legal Education to educate AUSAs on victim's rights issues; this activity continues in the National Advocacy Center in Columbia, South Carolina.

^{&#}x27;As set forth in the Victim and Witness Protection Act of 1982, the Crime Control Act of 1990, the Violent Crime Control and Law Enforcement Act of 1994, and pursuant to the Attorney General's Guidelines for Victim and Witness Assistance of 1995.

During the prosecution stage of the process, it is the USAOs that are responsible for compliance with these mandates. Notification of victims and witnesses of the events of a case is the most rigorous and time-consuming step in the process. The Oklahoma City bombing case is a prime example of the resources required for advocacy in a multi-victim case. During FY 1996, the United States Attorney's office for the Western District of Oklahoma expanded its Victim-Witness Assistance Unit from one to six full-time employees in order to provide services to the 2,000 victims registered in the Oklahoma City bombing case. The efforts that were begun during FY 1997 to develop a nationwide computerized case and witness tracking and notification system to track all criminal cases and dates, identify all victims and witnesses, and generate appropriate notices including subpoenas, was completed in FY 1998.

ACTIVITY: CIVIL LITIGATION

	Perm.		
	Pos.	FIE	<u>Amegat</u>
2000 Appropriation Enacted	2,033	2,134	\$258,872
2001 Base	2,033	2,134	275,681
2001 Estimate	2.118	2.177	284.114
Increase/Decrease	85	43	8,433

Base Program Description

The United States Attorneys initiate civil actions, or affirmative litigation, to assert and protect the interests of the United States. They also defend the interests of the government in lawsuits filed against the United States - referred to as defensive litigation. Of all civil cases pending as of the end of FY 1999, 10 percent were affirmative litigation and 75 percent were defensive litigation. Other civil cases, such as when the United States is a third party plaintiff or defendant, creditor, or intervenor, represented the remaining 15 percent of the pending civil caseload nationwide.

Civil matters and cases represent a significant portion of the United States Attorneys' workload. As of the end of FY 1999, pending civil cases represented 67 percent of the 157,987 pending criminal and civil cases in the United States Attorneys' offices. However, except for appellate court and special master hearings, only about 10 percent of total attorney work hours in court were devoted to civil litigation.

During FY 1999, the United States Attorneys' offices received a total of 88,640 civil matters. Sixteen percent of the matters were referred for affirmative action and 60 percent were referred for defensive action. The remaining 24 percent were matters where the United States was a third party or otherwise designated, but in 80 percent of these, the United States was identified as a creditor in bankruptcy proceedings.

The United States Attorneys' offices filed or responded to a total of 75,603 civil cases in FY 1999. The cases include those filed or responded to in United States District Courts, United States Hankruptcy Courts and state courts. Of the total, the United States Attorneys filed suit on behalf of the United States in 7,556, or 10 percent, defended the United States in 50,498, or 67 percent, and was otherwise designated, such as a bankruptcy credit or third party litigant, in 17,549, or 23 percent of all civil cases.

During the same period of time, the United States Attorneys' offices terminated a total of 72,131 cases. Judgments were issued in 17,284 of these cases, a total of 13,907 of these judgments were in favor of the United States. The percentage of civil cases in which judgments were issued, and the percent of those judgments in favor of the United States, has remained constant for several years. Additionally, 18,656, or 26 percent, of the cases were settled.

Of the total civil cases terminated, 48,110 were defensive civil cases. Judgments were issued in 13,730 of these cases. A total of 10,568, or 77 percent, of these judgments were in favor of the United States.

BASE PROGRAM DESCRIPTION:

The Office of Legal Education (OLE) develops, conducts, and authorizes the training of all Federal legal personnel [28 C.F.R. §0.22 (1990)]. OLE coordinates legal education and attorney training for the Department of Justice and other departments and agencies of the Executive Branch. Continuing legal education credit is provided through OLE for many OLE sponsored courses. In Fiscal Year (FY) 1999, OLE trained 10,620 students in 261 courses. Most of these programs were conducted at the National Advocacy Canter (NAC) in Columbia, South Carolina. OLE also offers distance education programs; in FY 1999, over 2,250 employees were trained through these programs.

OLE is the primary source of instruction for Department of Justice attorneys and Assistant United States Attorneys from the 94 United States Attorneys' offices. Basic programs for newly hired attorneys include criminal, civil, and appellate advocacy; Federal practice seminars; and specialty courses in priority substantive areas of the law. Advocacy skills programs are available to new and advanced trial attorneys. The Federal Practice Program is designed for attorneys with litigation experience who are new to the Federal legal system (e.g., former state and military prosecutors), and as continuing training for Department attorneys after the basic criminal, civil, and appellate advocacy courses.

OLE uses experienced Federal trial and appellate attorneys as instructors for all its programs to present lectures, lead discussion groups, direct evidentiary exercises, and offer personalized critiques. Federal judges also participate in OLE's advocacy courses, presiding over mock trials and mock appellate arguments. The caliber of the OLE faculty and the use of sophisticated videotaping facilities provide students with unique training experiences in trial and appellate advocacy. A significant feature of the advocacy training is the use of "learn-by-doing" exercises which concentrate on courtroom skills. The exercises simulate courtroom activities and provide students with

classroom critiques and individual video replay analysis. Finally, the large number of attorneys in the United States Attorneys' offices has resulted in a high demand for attorney management training for senior criminal and civil attorneys. OLE has tried to meet that challenge by providing management courses for attorney supervisors of all levels.

OLE conducts programs on Federal civil and administrative law and practices for attorneys in the Executive Branch, including those in the Department of Justice. OLE offers training in civil discovery and trial techniques; negotiation techniques; and administrative law areas such as bankruptcy, the Freedom of Information Act, ethics, environmental law, Federal employment, regulatory processes, government contracts, legal research and writing for attorneys, management of attorneys, and computer crime. Administrative and advocacy trial skills for agency altorneys are also patterned on the "learn-by-doing" method. Course instruction emphasizes the realities of Federal practice. Federal attorneys from every agency, including the Department of Justice, are participants as well as advisors, curriculum developers, lecturers, and instructors. Most instructors come from a cadre of Federal prosecutors. On a few occasions, OLE also contracts with professional educators as instructors for these courses.

OLE operates a videotape lending library for United States Attorneys' offices and Federal agencies. Select courses offered by OLE are videotaped and made available upon request to United States Attorneys' offices and agencies of the Executive Branch. In addition, commercially produced tapes by recognized legal experts have been purchased by OLE, and the tapes are sent to offices upon request to supplement their in-house training programs. The completion of a video production studio at the National Advocacy Center will provide the capability to produce videotapes and other distance education materials. This will increase the number of tapes available and enhance our ability to keep videotaped presentations current by updating them to include recent legislation, policy changes or court decisions. This facility will allow for increased emphasis on broadening the delivery of training including distance learning. The studio project will be completed in April, 2000.

Finally, OLE develops and administers paralogal courses covering basic and advanced skills in civil, criminal, and appellate practice. These courses are offered to pers, and of United States Attorneys' offices, the Department of Justice, and agencies in the Executive Branch. Training for other support staff personnel (e.g. legal secretaries, systems managers, etc.) in United States Attorneys' offices is provided through OLE, which develops the curricula, recruits instructors, and assists local offices with administering the courses.

Presently, OLE trains approximately 500 state and local prosecutors each year in courses covering issues of importance to both Federal and state and local prosecutors. The NAC features an integrated instructional and residential facility augmented by a conference and research center with student and support services on site.

Since the opening of the NAC in April 1998, OLE has engaged in a collaborative effort with the National District Attorneys Association (NDAA) and the Executive Office for United States Trustees to create a premier training center that brings together Federal, state, and local prosecutors to train in a state-of-the-art facility. Training for NDAA personnel is paid for through a grant administered by the Office of Justice Programs.

BASE PROGRAM DESCRIPTION:

The Executive Office for United States Attorneys (EOUSA) was created on April 6, 1953, by Attorney General Order No. 8-53 to meet the need for a close liaison between the Attorney General in Washington, DC, and the United States Attorneys located throughout the 50 states, Guam, Northern Mariana Islands, Puerto Rico, and the United States Virgin Islands. The Management and Administration Decision Unit encompasses EOUSA, with the exception of the Office of Legal Education, which has its own decision unit. EOUSA provides management and policy assistance to the United States Attorneys in direct support of their litigation responsibilities. EOUSA also represents the interests of the United States Attorneys in the development of Department of Justice (DOI) policy and ensures consistency in the practice of federal litigation. EOUSA's senior management staff are the Director, Principal Deputy Director, and Principal Associate Director.

In order to support the United States Attorneys in their integrative mission, EOUSA is constantly developing and updating support programs to meet their changing needs. The Attorney General considers efforts to improve services to crime victims to be a high priority, and EOUSA coordinates issues with the Law Enforcement Coordinating Committee/Victim-Witness (LECC/VW) coordinators in the United States Attorneys' offices.

The Director of EOUSA is required under 28 C.F.R. Part 0.22 to evaluate the performance of the United States Attorneys' offices, make appropriate reports, and take corrective actions if necessary. The Evaluation and Review Staff conducts the evaluation program enabling the Director to execute her responsibility to conduct reviews of internal management controls and prevent waste, loss, unauthorized use or misappropriation in federal programs, as required under The Federal Manager's Financial Integrity Act. Equally important to meeting these regulatory and statutory requirements, the evaluation program provides on-site management assistance to United States Attorneys. In FY 1999, the EARS Staff conducted 29 evaluation visits and 19 follow-up visits to ensure those issues identified as a result of the evaluation process have been corrected.

The Counsel to the Director and Legal Counsel Staffs advise and assist the Director with Congressional and public affairs, lisison with other DOJ components, and provide legal interpretations, opinions, and advice on a variety of topics, including but not limited to, legislation, stantes, regulations, Department guidelines, ethics, recusals, conflicts of interest, Hatch Act, personnel, EEO and Standards of Conduct. Guidance provided by these offices, once approved by the Director or Attorney General's Advisory Committee (AGAC) of United States Attorneys, becomes the legal direction for the United States Attorneys. Many of the general policies and procedures relevant to the work of the United States Attorneys' offices and to their relations with the legal divisions, investigative agencies, and other components within DOJ are defined in the United States Attorneys' Manual (USAM).

The Deputy Director for Legal Programs, with guidance from the Attorney General's Advisory Committee, assists in the development of policies and provides assistance in financial litigation, affirmative civil enforcement, asset forfeiture, bankruptcy, civil issues, health care fraud, and other important program areas in the United States Attorneys' offices. In addition, Legal Programs tracks the progress of initiatives designated by the Attorney General as national priorities. Two staffs within Legal Programs dedicated to this mission are the Financial Litigation Staff and Priority Programs.

The Deputy Director for Operations manages several staffs that support the daily requirements of sustaining 94 USAO housed in over 6.4 million square feet of space in 469 locations. There are presently 189 on-going projects, and 30 pending projects for expansion, relocation, alteration, and new space assignments resulting from increased court activity, forced relocations, additional resources, lease expirations, and new continues construction projects. In FY 1999, 95 site visits were made to survey space needs. Since the Oklahoma City bombing in 1995, an ongoing security enhancement program of United States Attorneys' offices nationwide has been in place. In FY 1999, the Security Programs Staff provided on-site security assistance to 40 district offices and conducted computer security refresher training for all EOUSA employees.

The Operations Staff also supports the United States Attorneys with the latest in information and telecommunications technology.

EOUSA has taken the lead within the Department in implementing an ATM data network commonly known as the Justice Consolidated Network (JCN). This new shared network implemented in 225 U.S. Attorney office locations has tremendously improved access to network applications, including the internet. Access speed has gone from 500 milliseconds in the old packet switched network down to 60 milliseconds in the new ATM network, affording users a much greater level of productivity in their daily work. United States Attorneys continue to take the lead in the video conferencing effort for the Department of Justice. Video conferencing equipment is operational in EOUSA and in 225 United States Attorney locations and was converted to an ISDN network over the past year, making our offices accessible to the "outside world" including private counsel, state and local governments as well as international parties. EOUSA continues to operate a video bridging service which enables up to 80 locations to participate in the same video conference. Video conferencing is used by the USAOs on a daily basis, averaging 1,390 video calls per month nationwide. It has been utilized for deposing witnesses both domestically and internationally. The last year has seen a great increase in the utilization of video conferencing for court related matters.

The United States Attorneys participated in the Department's first effort to gain uniformity in its office automation efforts. The EAGLE networks were state-of-the-art automated systems which provided United States Attorneys' offices with word processing, e-mail, calendar, database management, text retrieval, and access to on-line legal research directly from users' deaks. In FY 1999, some components of the networks were replaced to resolve problems associated with the aging of the original servers and moderns. As part of this upgrade, the deaktop operating system was changed from DOS to Windows and the server operation system from a proprietary system to SCO UNIX. In FY 1999, the U. S. Attorneys began to upgrade to the Department's standard architecture, called the Justice Consolidated Office Network (JCON II). Use of the standard JCON II architecture will provide better interoperability among the components of DOI and within the USAOs.

Phase I of the project was completed in FY 1999. This included replacement of the outdated and non-Y2K compliant desktop workstations running Windows 3.11 with new PCs running Windows NT. Also included was replacement of the network controllers with 10/100 switches. Phase II includes a new cable infrastructure (replacement of CAT 3 with CAT 5 cable), new servers, also running Windows NT, and replacement of the outdated GroupWise 4.1a email system with Outlook/Exchange. Phase II began in the last quarter of FY 1999 and will be completed by the end of FY 2000. Phase III includes network management (SMS) and a new remote access system for users on travel or otherwise working outside the office.

The U.S. Attorneys are participating in the Justice Communications Network (JCN), which consolidates wide area network resources and is designed to provide faster connectivity among the various components and the USAOs.

National implementation of the Legal Information Office Network System (LIONS), the United States Attorneys' civil and criminal case management system, was completed at the end of 1998. This system allows United States Attorneys to manage the litigation workload of their offices effectively and meet their obligation to report activities to the Attorney General accurately and in a timely fashion. In evaluating the initial system, EOUSA has identified several enhancements that will simplify data entry and retrieval, and improve data validation. A new Central System® the system that collects and stores data from all United States Attorneys' districts, and from which consolidated reporting is accomplished—will be added in early 2000. This system replaces an obsolete central data recository, and provides flexible, high-performance, and easy-to-use tools that will simplify the reporting process.

Human resource programs are managed by the Personnel Staff and the Equal Employment Opportunity Staff. The Personnel Staff provides for personnel, payroll, and personnel security administration services for over 10,000 employees throughout the United States Attorneys' offices. Directly, or through over 54 USAO personnel offices, the Personnel Staff develops bureau-wide personnel programs, policies, and procedures that ensure human resource programs are effective, efficient, and operate under adequate management controls. In FY 199 21,489 personnel actions were processed throughout the offices, not counting routine pay adjustments. Also, the Personnel Staff provided training to approximately 120 USAO staff through a National Personnel Officers' Conference. The Equal Employment Opportunity (EEO) Staff provides centralized leadership, coordination, and evaluation of all equal employment efforts within the United States Attorneys' offices. The last three fiscal years has seen an increase in workload. In FY 1997, the EEO Staff received 28 formal complaints and initiated 52 informal counseling sessions. In FY 1998, the EEO Staff received 50 formal complaints and initiated 59 informal counseling sessions. In FY 1999, the EEO Staff received 50 formal complaints and initiated 59 informal counseling sessions.

The Data Analysis Staff was established several years ago to perform statistical analyses for the Executive Office for United States Attorneys' offices. The staff's work focuses in two primary areas data, trends and management analysis, and support of the United States Attorneys' budget. The staff analyzes information from the United States Attorneys' case management system and other sources to determine caseload composition, activity, and results, and to identify workload trends and management issues. Such information is provided within the Executive Office for United States Attorneys, and to the United States Attorneys' offices, the Department, Congress and other agencies. The staff is also responsible for publishing the United States Attorneys' Annual Statistical Report, preparing submissions for the Attorney General's Accountability Report to Congress, and responding to requests for narrative information, presentations, and analyses from internal and external sources. The staff also represents the Executive Office for United States Attorneys and the United States Attorneys' offices in meetings and on various working groups.

All accomplishments of United States Attorneys' offices are driven by the availability of funds, which are managed by the Deputy Director for Resource Management and Planning. The Deputy Director manages staffs with responsibilities in the areas of budget formulation, financial management, and long-range planning. The Resource Management and Planning Staff (RMPS) manages FTE allocations and a budget in excess of \$1 billion on behalf of the United States Attorneys. From the time the Staff consolidates resource needs and formulates an annual budget submission for presentation to the Department, Office of Management and Budget, and Congress, to the accountability reports at the end of a fiscal year, RMPS support is central to the functioning of the United States Attorneys offices. The Staff also develops performance measures for the United States Attorneys that are required with each budget submission in accordance with the Government Performance Results Act (GPRA).

While EOUSA's primary focus is to support the litigative and administrative needs of the United States Attorneys' offices, it also serves the general public by coordinating responses in accordance with the requirements of The Freedom of Information Act (FOIA), <u>5.U.S.C. §552</u>, and The Privacy Act (PA), 5.U.S.C. §552. In FY 1999, the FOIA/PA Staff processed 3,159 requests for information. The Staff also worked towards achieving the established backlog reduction goals. In addition, the Staff provides legal counsel to United States Attorneys' offices concerning FOIA/PA issues, represents them in administrative appeals, provides draft pleadings to Assistant United States Attorneys handling FOIA/PA cases in court, and prepares the legal documents filed in court as evidence.

FIREARMS PROSECUTIONS

	r CI 1111-		
Criminal & Management & Administration Decision Units	Pos.	FIE	Amount
	163	82	\$14,518,000

D.---

This initiative requests 163 positions (113 attorneys), 82 FTE, and \$14,518,000 to conduct intensive firearms prosecution projects in United States Attorneys offices (USAOs) around the country. Although projects have begun in select areas, there is a growing need for firearms prosecution allocations in all USAOs.

RELATIONSHIP TO THE STRATEGIC PLAN

This initiative addresses the DOJ STRATEGIC PLAN -- Core Function 1: Investigation and Prosecution of Crimina) Offenses, GOAL 1: Reduce violent crime, including organized crime and drug and gang-related violence.

As well as Core Function 2: Assistance to State and Local Governments, Goal 1: Improve the crime-fighting and criminal /juvenile justice system capabilities of state and local governments.

Also, it addresses USA GOAL 5: Coordinate and integrate DOI law enforcement activities wherever possible, and cooperate fully with other federal, state, and local agencies that are critically linked to improved operation of the Nation's justice system.

PROPOSED ACTIONS

Our goal is to increase firearms prosecutions by applying the requested resources throughout the nation to allow the districts to complement the traditional approach already being used. This will allow all districts to implement the successful pilot projects begun in selected areas, supplementing the traditional approach with a more focused effort in collaboration with other federal, state, local, and community organizations seeking to reduce gun-related violence. Currently, many USAOs do not have Assistant United States Attorneys (AUSAs) devoted exclusively to the prosecution of firearms cases.

Our strategies include:

- Prosecuting armed career criminals and assuring that they are adequately punished by using Federal firearms laws, with their comparatively longer sentences, to remove repeat violent offenders from communities;
- Focusing the requested resources in communities with the need for aggressive enforcement of federal firearms laws and that
 have local support within the law enforcement community and the community at large to maximize the effectiveness of Federal
 prosecutions;
- Developing a coordinated state, federal, and local law enforcement approach, to benefit from the expertise and criminal
 intelligence of federal/state/local law enforcement officials; and
- Applying the Strategic Approaches to Community Safety Initiative, or SACSI, concept of a problem-solving, information-driven project intended to reduce crime in twenty cities.

OVERVIEW

Gun violence represents a major threat to the health and safety of all Americans. Every day in the United States, 93 people die from gunshot wounds and an additional 240 sustain gunshot injuries. The Administration has identified the need to enhance the ability of federal law enforcement to be a significant partner in collaborative strategies for the reduction of firearms violence. The Administration's goal is to continue reducing violent crime involving the use of guns, which persists as a nationwide problem. Many state and local governments have effectively prevented, detected, punished, and reduced the incidence of gun violence, but more can and needs to be done. In addition, some communities continue to suffer from high rates of gun violence that have not been reduced by traditional approaches and current resources. Federal law enforcement has played an important role in many state and local jurusdictions by providing a targeted response that complement communities' overall anti-violence strategies. However, it is critical that state and local authorities remain the primary agencies for addressing violent crime.

Office of Analysis, Epidemiology, and Health, Firesorns Dearths and Death Rates by Intent, United States, 1996, Washington, DC: National Center for Health Septemios, Office of Analysis, Epidemiology, and Health, 1996

In order to further reduce the threat of firearms violence, the Administration's firearms prosecutions initiative is committed to:

- Ensuring effective investigation and prosecution of firearms offenders, violent felons who possess guns, and armed drug traffickers; and disrupting illegal firearms markets through collaborative federal, state, and local partnerships;
- Developing comprehensive strategic plans aimed at the prosecution, prevention and disruption of gun violence through the
 collaborative efforts of law enforcement, local government and community based groups; and
- Establishing and developing twenty SACSI teams of United States Attorney-led inter-agency teams and local research partners to evaluate and modify the gun violence reduction strategies as necessary.

The Clinton Administration is committed to doubling federal efforts in the fight to deter and further reduce gun crime. President Clinton has directed the Department of Justice and the Department of Treasury to develop a strategy aimed at the reduction of violent crimes committed with firearms. The United States Attorneys will help accomplish the Administration's goal by increasing investigation and prosecution of significant firearms violations; including illegal possession, use, and trafficking of guns; through innovative programs such as Virginia's Project Exile and Massachusetts' Operation Coasefire. Also, we plan to implement targeted deterrence of violent offenders through an increase of prosecutors. Finally, we hope to decrease violent crime by promoting problemsolving analyses and innovative strategies by working closely with community members, and increasing the public's knowledge of their community's gun-related criminal activity.

The Federal Bureau of Investigation's (FBI) Uniform Crime Report (UCR), reported that in 1996 a total of 16,914 marders were committed in the United States, approximately 11,000(65%) of which involved the use of firearms. In addition, there were a total of 364,774 violent crimes (excluding forcible rape) committed with the use of firearms in 1998. The FBI reported that firearms were the weapons of choice in nearly two-thirds of all marders and firearms accounted for approximately one quarter of all violent crime in 1998. The Bureau of Alcohol, Tobacco, and Firearms (ATF) is focusing on itlegal trafficking and has moved its resources into that area.

JUSTIFICATION

Violent Crime Prosecution as a National Priority.

The Department of Justice's Strategic Plan emphasizes its commitment to reducing violent crime. The Department will continue to support comprehensive strategies against violent crime through establishment of multi-agency, intergovernmental task forces. The United States Attorneys' offices will continue to be active members of these task forces.

Examples of Successful Firearm-Violence Reduction Strategies.

Certain jurisdictions, such as Boston, Massachusetts and Richmond, Virginia, have been able to reduce firearms violence through collaborative efforts and strategic planning. Vigorous enforcement actions by federal, state, and local authorities have contributed to reducing rates of violent crime in these two areas. These enforcement actions have been further enhanced by a variety of innovative interventions based on sharing information and analytical techniques. Both have used extensive advertising and community outreach activities to enlist citizen participation and to deter criminals by publicizing potential prison sentences. The pioneering efforts of Boston and Richmond have set an example for other jurisdictions such as Camden, New Jersey and Philadelphia, Pennsylvania to employ similar firearms prosecution programs.

Richmond, Virginia.

In 1997, Richmond's homicide rate ranked second among cities with populations of 100,000 or more. Approximately 80 percent of all homicides in Richmond were committed with firearms. In February 1997, the United States Attorney for the Eastern District of Virginia initiated "Project Exile," a coordinated approach to gun violence. This district had a persistently high murder rate in the Richmond metropolitan area. Project Exile is led by the Richmond United States Attorney's Office (USAO) in coordination with the Virginia Commonwealth's Attorney; Richmond Police Department; the Bureau of Alcohol, Tobacco, and Firearms (ATF); Federal Bureau of Investigation (FBI); and the Virginia State Police. In conjunction with the Richmond Assistant Commonwealth's Attorney's Office, the USAO reviews cases involving felons with guns, drug users with guns, guns in drug trafficking, and gun/domestic violence referrals. These cases are prosecuted in federal court when a federal nexus exists and state prison sentences or pre-trial detention are insufficient. In addition, the DEA initiated task forces aimed at the most violent drug gangs within the city; the FBI and United States Marshals worked at reducing the enormous backlog of outstanding felony warrants; and the Department of Justice's Office of Justice Programs supported improvements in the training and support of Richmond's homicide investigators. The

USAO also has collaborated effectively with federal, state, and local law enforcement agencies to implement several other initiatives targeting violent drug traffickers, fugitives, and homicide cases, while the State of Virginia has enacted new state laws (such as One-Gun-A-Month and Truth-in-Sentencing) to address violent crime.

- These collaborative efforts have produced significant results. Many simple "felon-in-possession" cases have resulted in putting
 relatively major local criminals behind bars for a long time. They are often criminals who have had lengthy records but
 repeatedly received probation or minimal sentences under state law.
- Richmond Police Department data shows homicides dropped from 140 in 1997 to 74 in 1999. Nearly all of that drop was accounted for by a docrease in firearms homicides.
- The visible results of the Project Exile program are safer neighborhoods where citizens were previously afraid to step forward.

Boston, Massachusetta.

In 1990, there were 153 murders, a historical high, in the Boston area. As a result of this high statistic, alarmed local officials began using a Neighborhood Policing approach. They created a special city-wide unit entitled the Anti-Gang Violence Unit, which was later remained the Youth Violence Strike Force (YVSF). In conjunction with the ATF, the local officials began tracing all gun recoveries. It became a national program which incorporated the United States Attorneys to use "felon-in-possession" prosecutions.

Starting in the early to mid-1990s, Boston, Massachusetts began a series of innovative public safety strategies that focused on violent youth and illicit gun markets. Using a problem-solving approach, a broad coalition of federal, state, and local governmental agencies, nonprofit community service organizations, businesses, religious leaders, parents, and resident stakeholders developed several programs to address the escalating number of juvenile homicides. In keeping with its new neighborhood policing strategy, Boston intermental numerous prevention and intervention, and enforcement initiatives. The enforcement strategies included Operation Ceasefire, the Gun Project, and Operation Night Light. These initiatives were a collaborative effort among the Boston Police Department's YVSF, the USAOs, the DEA, the ATF, and the Suffolk County District Attorney's Office. Examples of specific results from these projects include the following:

 After the second full year of Operation Coasefure, there was a 71 percent decrease in homicide offenders for ages 24 and under, and a 70 percent reduction in gun assaults by all offenders, through May 31, 1998.

- The homicide rate has continued to decease to date, with 31 homicides in 1999 representing the lowest homicide rate in 38 years.
- Under the Gun Project, the ATF and the Boston Police Department joined forces to conduct joint inspections of all federally licensed firearms dealers in Boston. In part as a result of these inspections, 65 license holders (80 percent) decided not to renew their licenses or to surrender them.
- Operation Night Light pairs one probation officer with two police officers to make surprise visits to high-risk probationers
 during non-traditional hours. In Dorchester, where the program was initiated, probation violations based on new arrests
 declined 9.2 percent between January 1994 and June 1996, compared with a statewide increase of 14 percent during the same
 period.

Camden, New Jersey.

Camden, New Jersey, based upon its population, was one of the most violence-ridden cities in the northeast. In February, 1999, the United States Attorney's Office instituted its project Ceasefire initiative based in part on the program of the same name in Boston, Massachusetts. In conjunction with the Camden County Prosecutor's Office and local law enforcement authorities, all arrests in Camden County involving weapons as well as all recoveries of weapons in the County regardless of whether an arrest cased are reviewed by an investigator from the U.S. Attorney's Office who coordinates with the local and County authorities and the Bureau of Alcohol, Tobacco and Firearms. Cases that are eligible for federal firearms prosecution are reviewed by an Assistant U.S. Attorney who coordinates with local prosecutors to see if such prosecution would be in the interest of the local and federal authorities. In addition, all guns recovered are entered into the Project LISA tracking database in order to detect patterns of purchase, distribution and recovery of weapons. In the ten months of 1999 that the project has operated, over fifty individuals were indicted. Prison terms ranging from three to twenty three years have been meted out to defendants.

- In 1999, during the period of the Ceasefire program, the number of homicides committed in Camden County with a firearm dropped twenty percent.
- Now that the enforcement effort is fully underway, the second prong of the effort, community outreach, is set to begin. Local
 business leaders and officials will be sought to reach out to community groups, schools and other organizations in conjunction

with representatives of the U.S. Attorney's Office to publicize the success of the program and educate the community on the perils of gan violence and how to further reduce its ravages.

The success of the program to date has engendered numerous requests from other local prosocutors and elected officials around
the state to expand the program beyond Camden County into other areas suffering the ravages of gun violence.

Philadelphia, Pennsylvania.

Philadelphia, Pennsylvania, the nation's fifth largest city, has averaged 400 homicides yearly for most of the last decade. Most recently, Philadelphia closed the decade with the unfortunate distinction of having over 80% of its homicides committed by firearms—the highest percentage of homicides by firearms among the nation's top ten cities. In response to this level of firearms violence, in 1998, the U.S. Attorney's Office established a partnership with the local district artorney's offices (primarily the Philadelphia District Attorney's Office), the Philadelphia Police Department, the Bureau of Alcohol, Tobacco, and Firearms, and the United States Marshal to aggressively pursue firearms offenders (Operation Cease Fire). The U.S. Attorney's Office complements the prosecution of trearms offenders in the local systems by targeting for federal prosecution the most violent convicted felons in possession of firearms; narrotics traffickers possessing, using or carrying firearms; and firearms traffickers. Furthermore, a major public education campaign has been developed to notify potential offenders about the scriousness of federal sanctions for violations of federal firearms laws.

- The U.S. Attorney's Office created a new Firearms Unit, supported by an investigatory Task Force consisting of ATF, U.S. Marshal's Service, and state and local police. In its first year (January 1, 1999 to December 31, 1999), the Unit dramatically increased federal firearms prosecutions, resulting in a 250 percent increase in the firearms docket, from an average of 60 firearms indictments per year to 231 indictments.
- In the second year, the U.S. Attorney's Office will further develop and implement a local/federal "alternative prosecution program," whereby the District Attorney's Office in lieu of some federal firearm prosecutions, will offer some firearms offenders the opportunity to plead guilty and receive a scattenee of significant state incurrectation. This will allow the Philadelphia city system to dispose of a far greater number of firearms cases for stiffer sentences than are now imposed by the state courts.

WORKLOAD INDICATORS

The United States Attorneys devoted substantial resources to the prosecution of violent crime cases from FY 1997 through FY 1999. Fourteen percent of all criminal attorney workyears were devoted to violent crime prosecutions during FY 1997 and 13 percent in both FY 1998 and FY 1999. These cases represented 16 percent of all criminal cases filed during FY 1997 and 15 percent in both FY 1998 and FY 1999. Of those convicted, 87 percent (or 5,726) of defendants received prison sentences in FY 1997, 88 percent in FY 1998, and 89 percent in FY 1999. The largest number of convictions, with 45 to 46 percent of all defendants sentenced, was for five or more years in prison.

The table below reflects the most recent firearms data involving a violation of Section 922 or 924 of Title 18, U.S. Code. These are the primary sections of the Code under which firearms violations are charged.

FIREARMS STATISTICS

(Sec. 922 & 924)
Case Information

	FY 1997	FY 1998	FY 1999	188 team (97-99)
Cases Filed	3,703	4,391	5,500	48.5%
Defendants Filed	5,150	5,876	7,057	37.0%
Cases Terminated	3,381	3,921	4,269	26.3%
Defendants Terminated	4,418	5,032	5,439	23.1%

CALCULATION OF NEED

The United States Attorneys' request for positions is based on the success rate of prior pilot programs such as the ones illustrated in Richmond, Virginia and Boston, Massachusetts as well as the need to conduct similar programs in other districts around the nation. A total of 113 storney and 50 support positions are being requested to conduct these firestma prospection programs on a national level.

ALLOCATION OF RESOURCES

The allocation of resources will be based on the following elements:

- A core allocation sufficient to support all districts throughout the nation in supplementing their traditional approach towards firearms prosecutions;
- Establishment of twenty Strategic Approaches to Community Safety Initiative (SACSI) teams in selected cities aimed at
 identifying and analyzing a particular crime problem in a community and developing comprehensive strategies, with local law
 enforcement professionals and research partners, targeted at the characteristics of each community's problem;
- Those districts with a demonstrated need for additional gun control resources based on an assessment of the violent crime problem in their district, crime trends, workload data, and available staffing;
- Those districts where investigative agencies and local law enforcement agencies have already increased (or are willing to
 increase) the resources devoted to firearm-violence reduction, deterrence, and prevention;
- A review of the future assignment of federal, state, and local investigative resources devoted to firearm-violence cases; and
- Three support positions will be assigned to the Executive Office for United States Attorneys.

ANTICIPATED RESULTS

The resources requested in this initiative will allow the USAs to develop and implement or supplement existing comprehensive strategies aimed at reducing gun-related violent crime through establishment of intensive firearms prosecution projects. With the resources provided, we expect to achieve a reduction in gun violence within targeted areas; identifiable improvements in federal and state handling of gun-related cases; and improved community public safety by offender incapacitation, enhanced deterrence, and prevention of gun violence.

VIOLENT CRIME IN INDIAN COUNTRY

	Perm,		
	Pos.	FTE	Amount
Criminal and Management & Administration Decision Units	60	30	\$4,699,000

RELATIONSHIP TO THE STRATEGIC PLAN

This initiative addresses DOJ Strategic Plan Core Function 1: Investigation and Prosecution of Criminal Offenses, GOAL 1: Reduce violent crime, including organized crime and gang-related crime.

This initiative will address United States Attorney Goal 1: To identify, prosecute and convict those persons and legal entities who have committed criminal offenses against the laws of the United States.

Our strategies to combat Violent Crime in Indian Country include:

- Fully implementing the Major Crimes Act, the Indian Country Crimes Act, the Indian Child Protection Act, the Violent Crime
 Control and Law Enforcement Act of 1994, the Anti-Terrorism Act of 1996, and the Anti-Gang and Youth Violence Act of
 1997;
- Supporting comprehensive strategies to target and fight overall violent crime, violent gangs, and youth crime through the
 establishment and continuation of multi-agency and federal and tribal task forces, such as the Safe Trails Initiatives and Weed
 and Seed designations in Indian Country;
- Continuing the United States Attorneys' support of the Department of Justice's Anti-Violent Crime Initiative;
- Providing tribal governments assistance and training to enhance their ability to address violent crime and juvenile crime at the
 tribal level; and
- Assisting tribes in developing and implementing Child Protection Teams and Multi-Disciplinary teams to address the serious problem of child physical and sexual abuse.

PROPOSED ACTIONS

Support innovative, community-based strategies simed at reducing overall violent crime, violent gangs, and juvenile crime on Indian reservations.

OVERVIEW

This initiative requests 60 positions (33 attorneys), 30 FTE, and \$4,699,000 in support of violent crime in Indian Country. Indian Country is similar to the District of Columbia in that all felony law enforcement (and, in the case of Indian tribes, a significant portion of misdemeanor law enforcement) is exclusively a federal responsibility. The Federal Bureau of Investigation (FBI) received an increase of 30 agents in FY 1999 for Indian Country and was directed in FY 2000 to reallocate 25 agents to existing DOI offices nearest to Indian reservations to investigate sexual assaults. The FY 2000 Senate report language which first mentioned the requirement indicated that non-Indian sexual predators are targeting females on Indian reservations. The Bureau of Indian Affairs (BIA) received a total of 48 additional investigators in FY 1999. Also, BIA was authorized an increase of 10 investigators in FY 2000. The Community Oriented Policing (COPS) program has funded \$68 million in grants between 1995 and 1998, this resulted in the hiring of 900 Police Officers for Indian Country. The COPS program received 355 million in FY 1999 and \$40 million in FY 2000 to improve law enforcement capabilities on Indian lands, both for hiring uniformed officers and for the purchase of equipment and training for new and existing officers.

In these districts with Federal enclaves, there are no other avenues for the prosecution of literally hundreds of violent crimes. A decision to decline a Federal case in favor of prosecuting a different federal case means that no one will prosecute the offender.

Over time, as communities, victims, and offenders see no consequences to those who commit violent crimes, public confidence in law enforcement is severely eroded. This has resulted in victims and witnesses who see no benefit to cooperating with the criminal justice system. Subsequently, violence has escalated while reporting of crimes may actually be declining.

JUSTIFICATION

An Executive Committee consisting of leaders from the Federal and tribal governments examined the law enforcement problems. This Committee determined that a substantial infusion of resources into Indian Country law enforcement is essential. At the request of the Executive Committee, U.S. Attorneys (USAs) led an unprecedented series of tribal consultations on Indian Country law enforcement

across the country during September and October 1997. The Committees' report suggested that a crime reported in Indian Country is twice as likely to be violent as a crime reported anywhere else in the United States. Despite this fact, there are fewer than half as many law enforcement officers per capita in Indian Country.

Federal investigation and prosecution of felonies in Indian Country cannot be deferred to a local (county, state, or tribal) jurisdiction. Federal law enforcement is both the first and the only avenue of protection for the victims of these crimes. A unique challenge that prosecutors must address is the issue of testifying against family members. Recently, resources have been provided to other agencies to support Indian Country. However, the USAs have not received any of our requested increases for Indian Country. Although there is a need for investigators in Indian Country, without complementary prosecutors, crimes committed may go improsecuted. The addition of the requested attorneys in FY 2001 will complement the investigative resources distributed throughout the past few years.

The number of prosecutions in Indian Country have increased in recent years. This is due to the active presence of Assistant United States Attorneys (AUSAs) who engage in victim or witness interviews or other case preparation matters. For example, on the Tobogo O'Odham reservation, as a result of the increased presence of an attorney, child sexual abuse cases have increased from 21 in FY 1996 to 70 in FY 1999. The ability to maintain a consistent presence on the reservation is time consuming but critical to ensure United States statutory responsibility is fulfilled.

In the District of Minnesota, the AUSAs are five hours north of the Red Lake and Bois Forte reservations. The AUSAs are required to travel to these reservations at least twice a month, further, weather can dramatically effect the time necessary to complete the journey. In Arizona, the closest United States Attorneys Office (USAO) to the capital of the Navajo Nation is a six hour drive, one way, from Phoenix, assuming the roads are passable. In fact, eleven of the 21 Arizona tribes are a four to six hour drive one way.

The Violent Crime Control Act of 1994 affected caseload in two principal areas: domestic violence and child sexual abuse cases. Previously, only those domestic violence cases were pursued that contained the elements of major crimes such as murder, manulaughter, assault with a dangerous weapon, assault resulting in "serious" bodily injury, forcible rape, etc. The new statute cited above allows prosecution of less egregious cases, such as severe beating without dangerous weapons where the injuries are not life-threatening but are still substantial. Provided there is an "interstate" aspect, we can charge cases where the defendant commits a crime of violence, even a crime of violence that does not by itself meet the high standards for the non-reservation federal crime. Also, we can now prosecute violation of protective orders, before there is a crime of violence.

The additional definition of "sexual act" in the 1994 Crime Act allows the USAs to prosecute aggravated sexual abuse with children when the evidence shows skin-to-skin contact with the genitalia. Child sexual abuse cases constitute a significant portion of the referrals from Indian Country. This statutory change has had a significant impact on the numbers of cases we can successfully prosecute.

Drugs are becoming more prevalent in Indian country. Often Indian Country is used as the location for distribution and manufacture of illegal drugs due to its remote nature and lack of law enforcement. Drug dealers or traffickers often take advantage of seams in law enforcement where jurisdiction is convoluted by varying state laws. Tribal leaders in South Dakota have expressed concern over the effects of illegal narcotics on their tribes. The underlying problem existing in many tribes is either a lack of tribal law on narcotics possession or tribal courts who are unable to prosecute leaving federal prosecution as the only option.

Federal law makes thefts from Indian gaming establishments a federal crime. The proliferation of Indian gaming and economic development within Indian Country has resulted in an increase in commercial activity between Indians and non-Indians. This has resulting increased corruption and white collar crime matters. These white collar cases can require long and extensive investigations which result in substantial attorney involvement.

The following information from the Bureau of Justice Statistics report, American Indians and Crime, issued February 1999, reflects Indians nationwide, not just on reservations:

- American Indians suffer 7 rapes or sexual assaults per 1,000 compared to 3 per 1,000 among Blacks, 2 per 1,000 among Whites, and 1 per 1,000 among Asians;
- The average annual violent crime rate among American Indians 124 per 1,000 persons age 12 or older is about 2 ½ times the national rate for the period 1992 - 1996;
- The aggravated assault rate among American Indians (35 per 1,000) was more than 3 times the national rate (11 per 1,000) and
 twice that for blacks for the period 1992 1996; and
- On a per capita basis, 1995 data indicate about 1 substantiated report of a child victim of abuse or neglect for every 30
 American Indian children age 14 or younger. Nationwide, this compares with a ratio of one child victim for every 58 children of any race.

The Bureau of Indian Affairs 1998 Annual Law Enforcement Program report on Indian Country stated that:

- Rane by force has increased from 383 in FY 1997 to 456 in FY 1998, or an increase of 19%.
- Robbery has increased from 157 in FY 1997 to 260 in FY 1998, or an increase of 65%.
- Aggravated Assault has increased from 3,594 in FY 1997 to 6,471 in FY 1998, or an increase of 80%.

Violent Indian Offenses

	ŧ		
	19 95	1999	Percent change 1995-1999
	480	620	29
C	355	431	21
	1,022	1,254	23
	361	602	67

In FY 1999, U.S. Attorneys offices with Indian country jurisdiction filed 620 violent crime cases, an increase of 140 cases or 29 percent over FY 1995. The cases pending increased from 355 in FY 1995 to 431 in FY 1999, an increase of 76 cases or 21 percent. The defendants guilty increased from 361 in FY 1995 to 602 in FY 1999, an increase of 241 or 67 percent.

Recently, the District of Arizona has aggressively pursued gang prosecutions. In FY 1998 there were 15 gang members charged with felonies compared to 59 in FY 1999. In the District of New Mexico the sex abuse caseload grew from 22 cases filed in 1997 to 35aacs filed in 1999.

The U.S. Attorney's offices report a substantially higher number of Violent crime cases in Indian Country cases than those captured in the Violent Crime in Indian Country cases as other than Violent Crime in Indian Country. For example a gun case which occurs in Indian Country can be classified as a Trigger Lock case as opposed to a Violent Crime in Indian Country case. Trigger Lock cases (gun cases) are captured under the program category of Violent Crime. This is an example of a violent crime case that occurred in Indian Country that is not captured under Violent Crime in Indian Country. Though these categories of cases may not be reported as Indian Country cases, they are generally handled by Indian Country prosecutors. The impact of this reporting discrepancy is that the EOUSA Violent Crime in Indian Country case statistics are understated. Without reviewing each case it will continue to be under represented of the actual violent crime caseload in Indian Country.

According to FBI statistics, 6,486 (or 83%) of the total 7,832 cases opened between FY 1994 and FY 1998 involved crimes of violence or the sexual/physical abuse of a child. Investigations involving the Child Sexual/Physical Abuse increased from 498 in FY 1994 to 647 in FY 1998, an increase of 149 or 30%. In the Phoenix field division, cases opened increased from 179 in FY 1994 to 311 in FY 1998, an increase of 132 or 74%. In the Minneapolis field division, cases opened increased from 464 in FY 1994 to 649 in FY 1998, an increase of 185 or 40%.

The bulk of Indian Country violent crimes are homicides, aggravated assaults, and sexual abuse cases -- mostly child sexual abuse cases. These cases are extremely taxing and time-consuming. Federal prosecutors handling these cases must deal with horrific crime seeme photon and autopsy reports, or try to get traumalized toddlers to talk to total strangers about embarrassing, intimate details of sexual abuse. In many Indian Country districts, logistical difficulties abound, as victims and witnesses often do not have telephones or secess to transportation, live sometimes hundreds of miles from the prosecutors' offices, may not speak English, and may be culturally resistant or conditioned not to cooperate with the federal justice system.

As District of Columbia federal prosecutors can attest, it is difficult to perform a State District Attorney role in federal court. In federal courts, prosecutors have federal motion practice, federal "Speedy Trial" cases, unwieldy federal juvenile laws, a comparative tack of judicial infrastructure and expertise in handling the immediate pretrial needs of violent crime victims. Moreover, federal prosecutors do not have the same range of options that state prosecutors have. This has allowed state prosecutors to handle larger violent crime caseloads.

Police officers provide cases directly to our offices in Indian Country. Primarily, assault cases are received, but also domestic violence, robbery, and possibly some cases involving sexual contact, abuse. Police officers are first on the scene to many crimes that can prosecuted without further investigation (such as assault).

The District of New Mexico was able to quantify the number of unaddressed cases, with totals averaging between 100 and 150 open at any given time. In some cases, the investigative agency is eventually able to pursue the matter to the point of definitive decision. Many of these referrals turn into prosecutable cases which are assigned to AUSAs and charged. The majority, though, are ultimately closed for tack of activity. Unfortunately, the victims of these violent felonies quickly lose faith in the justice system and learn not to report the next time they are abused or assaulted.

If the federal government is to make a serious and sustained effort to meet its jurisdictional responsibilities to American Indians, the additional personnel requested for FY 2001 are desperately needed.

Examples of successful prosecutions.

In the district of South Dakota, Shawn Eagle Horse pled guilty to Second Degree Murder. After a day of drinking alcohol, Eagle Horse, his brother and their victim returned to the brother's house. While the brother was out of the kitchen, Eagle Horse approached the victim from behind and slit his throat. After cutting his throat, the defendant proceeded to stab him three more times in the back and left him lying on the kitchen floor.

In district of New Mexico on February 19, 1998, Wayne Lewis Charley, of Crownpoint, New Mexico, became the first person in the nation to be sentenced to a mandatory term of life in prison under a sexual predator statute enacted on September 30, 1996. Charley was convicted after a three-day risl on four counts of sexual abuse and three counts of aggravated sexual abuse of a child. Charley, who was working as a janitor at a Laundromat, repeatedly sexually abused two sisters, ages 13 and 11. A clan brother of the girle' mother, Charley had previously been convicted in federal court of sexually assaulting his 4-year-old granddaughter. Charley had served one year in prison for that offense and was on supervised release when he committed the sexual abuse of the sisters.

Ezra Mitchell Salyers was sentenced to 97 months in prison after pleading guilty to aggravated sexual abuse of a miner white within Indian Country. The victim is Salyers' 8-year-old granddaughter. Both lived on the Uintah and Ouray Indian Reservation, however, the defendant is not Native American.

In the District of Arizona, four defendants who were members and associates of the Eastside Crips "Rolling 302" gang were convicted of various offenses after a four-week trial in federal court for their participation in a two-year crime spree on the Salt River Pima-Maricopa Indian Community. Two defendants were sentenced to life imprisonment without parole; another was sentenced to 33 years imprisonment and the final was defendant sentenced to 30 years imprisonment.

CALCULATION OF NEED

Based on a detailed workload analysis, the addition of 900 police officers funded by COPS grants provided between1995 and 1998 for Indian Country would necessitate an increase of 33 attorneys to prosecute the cases brought. A study of the USAs operations was completed, identifying aspects of data that are predictors of future resource needs. The \$68 million in COPS grants growth occurred between the FY 1995 and FY 1998 enacted budgets. COPS received in FY's 1999 and 2000 a total of \$75 million for Indian Country. We can expect a large influx of Indian Country cases as the funded officers continue to come on board.

ALLOCATION OF RESOURCES

The proposed allocation of resources will be based on the following:

- Indian Health Service assault and sexual abuse data, compared to caseload data;
- Presence of Indian Reservations where the United States Attorneys have exclusive jurisdiction;
- Distribution of Federal enforcement agencies, including FBI and BIA;
- Caseload numbers, including attorney workyears; and
- One support position will be included for the Executive Office for United States Attorneys.

Other factors include: census figures, travel time from offices to reservations, likelihood of unreported violent crime, and declination rates. Finally, one support person will be assigned to the Executive Office for the United States Attorneys.

ANTICIPATED RESULTS

If provided the requested resources, we will measure our success in this program by:

- Number of violent crime in Indian Country cases handled; and
- Number of violent gangs, including youth gangs, who have had their illegal activities disrupted.

Through the increased enforcement of federal statutes and cooperative efforts with tribal authorities, the United States Attorneys can have an impact on violent crime in exclusive federal jurisdictions, specifically Indian Country.

COMPUTER CRIME AND INTELLECTUAL PROPERTY THEFT

	1 CI CL		
Criminal and Management and Administration Decision Units	Pos.	FTE	Amount
·	50	25	\$3,948,000

This initiative requests 50 new positions (28 Attorneys) and \$3,948,000 in support of our White Collar Program in the specific areas of computer and intellectual property crimes.

RELATIONSHIP TO THE STRATEGIC PLAN

This initiative addresses the DOI Strategic Plan Core Function 1: Investigation and Prosecution of Criminal Offenses; Goal 4: Reduce White Collar Crime.

This initiative addresses the United States Attorney Goal 1: To identify, prosecute and convict those persons and legal entities who have committed criminal offenses against the laws of the United States.

Our strategies include:

- Investigating and prosecuting criminal violations involving:
 - Computer crimes using computer intrusions and attacks by "backers" and other computer criminals, as well as theft of intellectual property and other trade secrets;
 - Criminal conduct involving major embezzlements by computer, misuse of telecommunications systems, and theft of
 copyrighted works, including software and other materials, through computers and computer networks; and
 - Crimes in which computers are used to assist in the creation of fraudulent and/or counterfeited currency, financial instruments, and identification documents.

PROPOSED ACTIONS

This initiative will contribute to accomplishing the above by:

- Allocating resources to districts where the concentration of computer related and high tech industries or the concentration of investigations will yield the greatest results;
- Increasing training and development of Assistant United States Attorneys' (AUSA) computer skills to become knowledgeable
 in the fields of computer crime and intellectual property theft. Also, increasing specialized training courses for investigators
 and prosecutors at the National Advocacy Center in Columbia, S.C., and developing training programs for state and local
 officials in conjunction with the National Cybercrime Training Partnership;

OVERVIEW

This initiative requests 50 new positions (28 Attorneys) and \$3.9 million in support of our White Collar Program in the specific areas of computer and intellectual property crime. The United States' ability to protect its businesses and its citizens in a global economy depends upon our ability to deter, detect, investigate, and prosecute violations involving computers, intellectual property, and high technology.

The United States' technological edge has been threatened by domestic and international high tech criminals engaged in the theft and piracy of trade secrets, copyrighted software and other intellectual property of our nation's businesses. Investigative agencies throughout the government are devoting increased resources to Computer Crime. In response to this growing threat, the Federal Bureau of Investigation (FBI) has six National Computer Crime Squads in major high tech regions, namely: New York; Loe Angeles; Chicago; Dallas; Washington D.C.; and San Francisco. The FBI was appropriated 56 agents in FY 1999, and opened four more computer crime squads. Also, in FY 2001, the FBI is requesting 2 agent positions for Intellectual Property Theft.

The growing complexity of computer systems and the networks that allow the computers to communicate mean that the investigation and prosecution of many high-technology cases will require the expertise that is possessed by federal investigative agencies such as the FBI, and thus will require commensurate expertise and resources for the United States Attorneys. Additionally, certain computer crime is uniquely within the federal jurisdiction, such as Defense Department criminal referrals and criminal copyright infringement, including fielt of computer software. Users of today's powerful personal computers, printers, and software can create or reproduce

almost any document in original quality. This counterfeiting includes currency, checks, other negotiable instruments, and identification documents. For example, in December 1998, a 12-count indictment charged three Houston residents and a San Antonio resident with conspiracy, bank fraud, passing counterfeit securities, and access device fraud arising from their counterfeit check and credit card scheme. Alan Whitelaw Yemi Odelakon, Andrew Le, and Danielle Robers were charged with conspiring to execute and executing a scheme to defraud Houston-area financial institutions by depositing worthless, counterfeit checks during October and November 1997. An example of USA computer crime efforts can also be seen in the Western District of Michigan. This district is a test site for Office Computer Security for U.S. Attorneys Offices (USAOs) nationwide and is recognized as a leader in the investigation and prosecution of Internet fraud. Another example of the activities the USAs have recently been involved in can be seen in the June, 1999 guilty plea of Daniel Gruidl. The defendant pled guilty to computer fraud for accessing his employer's computer to give himself more than \$61,507 in bonuses and salary increases. This was the first federal computer fraud case in the District of Minnesots.

Congressional Action.

The Congress has passed three significant pieces of legislation which indicate its concern about the threats posed by computer and high tech crime. They are:

- The No Electronic Theft (NET) Act, passed on December 16, 1997, strengthens the copyrighted and trademark laws. Specifically, this law amends 17 U.S.C. to permit the Department of Justice to prosecute individuals under misdemeanor or felony provisions in cases involving large-scale illegal reproduction or distribution of copyrighted works where the infringers act willfully, but without a discernible profit motive. Also, the Copyright Act (17 U.S.C. 101 et seq.) defines financial gain to include the receipt or exportation of receipt of anything of value, to ensure that persons who illegally traffic in copyrighted works by using barter are covered by the statute.
- The National Information Infrastructure Act of 1996, effective October 11, 1996, amended the Computer Fraud and Abuse Act, 18 U.S.C. § 1030. The amendments clarified existing provisions of the statute, added new offenses, and expanded the categories of computers protected by the act.
- The Economic Espionage Act of 1996, also effective October 11, 1996, created new offenses to prohibit the theft, unauthorized copying, or knowing receipt or possession of stolen trade secrets.

JUSTIFICATION

Elements of the Computer Crime and Theft of Intellectual Property Problem.

The Clinton Administration is committed to protecting the nation's businesses and citizens from computer criminals and thefts of Intellectual Property. However, to meet this commitment, there must be additional attorneys and support staff for the investigation and prosecution of computer crime in its various manifestations. We require attorney staffing for significant cases of national interest, to thwart attempts at computer and other high tech crime, generated by the steadily accelerating role of computers in businesses throughout the nation, the personal lives of our citizens, the exploding growth of on-line services and Internet use, the vulnerabilities of computer systems to attack and abuse, and the shility of computer criminals to attack anonymously and from locations throughout the nation — and the world.

According to figures released by the Department of Commerce in June, 1999, the combined copyright and trademark industries represent the second fastest growing sector of the United States economy behind Internet-related electronic commerce. An economic study released last month by the Business Software Alliance reported that, in 1998, the software industry alone generated employment for 2.7 million Americans, generating \$28.2 billion in income tax revenue. Both the copyright and trademark industries have cited increased infringement both domestically and abroad, particularly Internet-facilitated piracy and the online distribution of counterfeit products, as presenting a significant threat to increased growth in this vital economic area. The BSA study also concluded that software piracy cost the United States 109,000 jobs and \$991 million in tax revenue in 1998.

The USAs' Computer Crime and Intellectual Property Theft initiative will also call upon the manufactureres and software designers in U.S. industry to reaffirm their support for law enforcement efforts in the Intellectual Property area. We will ask that industry refer matters for investigation and prosecution, particularly those which involve threats to offenses believed to be committed by intellectual property theft.

Every twenty minutes, "hackers" try to penetrate the Defense Department's computer networks. During Senate hearings in 1996, the Defense Information Systems Agency estimated that the Department of Defense may suffer as many as 250,000 attacks a year. Recent

^{*}Justice Department. "Justice Department, FBI and Customs Service to Compatiantiflectual Property Crime: U.S. Law Enforcement Will Target High Tech Corridors to Fight Piracy and Counterfeiting Surge." Press Release: 99-323 23 July 1999.

examples of this type of activity include the May 9, 1999 anti-NATO backing by Chinese protestors of the NATO bombing of the Chinese embassy in Belgrade. The backers forced the Energy Department and the National Park Service to shut down their bome pages for almost 24 hours when backers placed anti-NATO messages on them. The Department of the Interior (DOI) and even the White House have been recent victims of backers. The DOI web page was taken off line for over five bours on May 10, 1999 after being subjected to an attack by anti-NATO protestors. The White House web page was shut down for over 24 hours while White House officials tried to determine whether backers had tampered with the White House computer system. Fortunately, these systems, while inconvenienced, were not compromised.

Groups do not always "hack" into computer systems for political reasons. In fact, a notorious hacking gang which calls itself "Global Hell" replaced the Army's home page with the message "Global Hell is alive. Global Hell will not die" on June 28, 1999. This attack was in response to the FBI's crackdown on the group, comprised mostly of teenagers, after a series of attacks on the FBI, Department of Interior and the White House web sites, as well as various private computer systems. Although the investigation of Global Hell members is ongoing and includes many individuals, the difficulty of tracking down computer criminals is almost immeasurable. Global Hell members know this too. The group is "brazen and unskilled," according to federal law enforcement officials. Unfortunately, "(i)t's not that these are super wiz kids; it is the technology that gives them the ability to cover their tracks enough that you can have a hard time making a criminal case against them," according to a senior federal investigator.²

In a February 1999, Northern District of Ohio case involving the first-ever FBI wiretap of a high speed computer data line, a plaintiff was sentenced to 15 months in prison, 2 years of supervised release, and 100 hours of community service following his conviction for a number of computer-related crimes such as installation of a "sniffer" program on the computer network at Cleveland's Case Western Reserve University, installing "sniffer" programs on 11 computer networks, "hacking" into various college and business computer systems, including Cleveland State University, George Mason University (VA), the University of Minnesota, the University of John, the University of Arkansas, Modern Exploration, Inc., APK Net, Inc., Cyber Access (which writes software for telephone companies), New Age Consulting Service, and crimelab.com (the Internet web site for a computer security company).

^{&#}x27;Suro, Roberto, "The Hackers Who Won'i Quit "Global Hell" Typifies Compret Cops' Challenges " Washington Post 1 September 1999: A:1,10.

Also, the plaintiff was convicted of possession and computer distribution of child pornography

Also, on August 24, 1999. Hung Lin Wu pled guilty to trafficking in counterfeit labels affixed to counterfeit music CDs and counterfeit CD-ROMs that he manufactured. The value of the counterfeit intellectual property was more than \$13 million. Wu replicated copyrighted CDs, including Microsoft computer programs and music recordings. This is the first conviction under the Intellectual Property Initiative that the Department of Justice announced on July 23, 1999.

Computer Related Crime.

This category of computer crime involves offenses that inherently require the <u>use</u> of computers or networks, but are not an attack or intrusion upon a computer system itself. This category includes several types of crimes:

- Interstate and international distribution of pirated intellectual property, including computer software, sound recordings, and motion pictures. Advances in technology now permit the storage and rapid dissemination through the Internet of perfect copies of pirated software, in violation of congright;
- Theft of trade secrets, economic espionage, as well as theft of convrighted works;
- Major embezzlements by computer (misapplication of funds, "rounding" schemes, phoney payees, etc.);
- Frauds arising from Internet investments or purchases, on-line banking, and penny stock purchases;
- Threats, extortions and blackmails attempted via the Internet or an on-line service; and
- Theft of telecommunications services through cloning and "freaking," (i.e., gaining telephone service without
 payment). This area of criminal conduct includes the use of cloned cellular phones to obtain telephone access, and the
 use of personal computers to back into the telecommunications system and place free calls.

The FBI has elevated intellectual property crime to one of its white collar crime priorities. "Intellectual property criminals are organized, well-funded, and use the tools of the Internet and modern telecommunications to steal the product of our labors," Thomas J. Pickard, FBI Assistant Director, Criminal Investigations Division, said. "To effectively protect the creativity and ingenuity of our citizens, and the trade accrets they develop through research and development, we need to outmatch the criminals. That means

integrating our federal resources with the resources of domestic industries that enjoy legal protection under intellectual property laws."

A good example of this type of crime was seen in the Northern District of California, in December 1998, where four defendants were convicted on conspiracy and mail and wire fraud charges related to the theft of confidential high-technology business information. This scheme, in which proprietary information, specifically design drawings of spare parts used in the semiconductor industry, was stolen from the original equipment manufacturers by current or former employees. The defendants then used the stolen drawings to manufacture the parts and sell them at a discounted price. Estimated total money reported lost, \$136.8 million.²

Another example, also in December 1998, was seen in the Eastern District of Texas. Two defendants were sentenced to prison terms of 77 and 60 months, respectively, following their guilty pleas to charges of conspiracy to commit theft of trade secrets belonging to the Intel Corporation. In May 1998, they contacted Cyrix Corporation, offering to sell Intel Prototype "Slot II" computer central processing units they had acquired without authorization. Cyrix alerted the FBI and cooperated with authorities when the defendants offered to sell five "Slot II" units for a total of \$75,000. He then arranged to deliver two of the prototype units to Cyrix headquarters in Richardson, Texas. One of the defendants was arrested as he attempted to deliver the units, the other defendant was apprehended later. Both other were convicted under the Economic Espionage Act.

Finally, in August, 1999, the government's nationwide effort to combat telemarketing and Internet investment fraud achieved another major success with the guilty pleas of three former members of an organization headquartered in Los Angeles, but with boiler rooms in several U.S. cities, including San Diego, that defrauded more than 3,000 victims nationwide of almost \$50,000,000. The organization designed, developed, and marketed a series of "high-tech," telecommunications-related securities (including 900-number, pay-per-call services, virtual shopping malls, and Internet service providers in various U.S. cities) that were not registered as required by law and that were fraudulently described to investors as "general partnerships." The telemarketing organization of which defendants Ira Itskowitz, Daniel William Rearick, and Michael Emerson Lopuszynski were members (described on "the Enterprise") solicited victims to invest monies in "general partnerships" by using false promises and representations and omitting material facts. The defendants also destroyed the books and records used in the scheme to keep federal agents from

[&]quot;Justice Department: "Justice Department, FBI and Customs Service to Combat [ntellectual] Property Crime; U.S. Law Enforcement Will Target High Tech Corridors to Fight Piracy and Counterfeiting Surge." Frest Release 99-323, 23 July 1999.

³Computer Security Institute (CSI) 1998 Computer Crune And Security Survey 4 March 1998.

determining their profits and either did not file federal income tax returns, or file returns that did not report their fraud income. They each pleaded guilty to various counts of conspiracy, wire fraud, mail fraud, securities fraud, structuring currency transactions to avoid reporting requirements, money laundering (concealment), engaging in monetary transactions in criminally-derived property, and income tax evasion.

Computer-Assisted Crime.

This category of computer crime does not require the use of the computer, but is materially facilitated by its use. Advances in computer hardware and software have provided the criminal element with a user-friendly means of generating all forms of counterfeited documents, including currency, fraudulent cashier's checks, business checks, securities, debt instruments, and labels for pirated software. For example, some of these fraudulent items have been utilitied by Southeast Asian gangs who defraud financial institutions and businesses through the wholesafe reproduction of counterfeit checks... Other examples of this type of criminal conduct can be found in the actions of fringe groups like the "Freemen" in Montana that have cropped up around the country. These groups, which decry the nation's government and its financial system, fund their operations and their day-to-day existence with counterfeit checks and debt instruments which they seek to negotiate or pledge for hundreds of thousands of dollars. In 1998, the District of Idaho had an increase in a significant group of tax protestors and "paper terrorists" who victimize others in "Freeman style" pleadings in fictional courts. Idaho had several investigations in this area and one significant trial in which the lead defendant received a prison sentence of over 15 years.

A 1997 General Accounting Office (GAO) report stated that the Federal Reserve estimates that about \$200 - 250 billion, or up to two-thirds of the roughly \$375 billion in circulation outside of banks was shood.⁶ In fact, according to the GAO study, "the stability and worldwide acceptance of the U.S. currency, in particular, have made it a target for [terrorists and] international counterfeiters.*7

Further, GAO stated that "(w)idespread counterfeiting of U.S. currency could undermine confidence in the currency...if done on a

^{*}U.S. General Accounting Office. *U.S. Corretacy: Trousury's plans to study genuine and counterfait currency abroad.* GAO, Report NSIAD-97-104, (1997).

Total, 1997.

large-enough scale, this activity could reduce international holdings of U.S. currency and have a negative effect on the U.S. economy."

According to the Secret Service, production methods utilized in counterfeiting have evolved over the years, from the traditional method of offset printing to color copies, and more recently, to scamers, computers and inkjet printers. Since the emergence of these newer methods, the percentage of inkjet counterfeit notes passed in the U.S. has increased dramatically, from 3 percent, or \$759,588 in FY 1996, to 44 percent, or \$16,021,310 in FY 1998.* "The U.S. currency" said Secret Service spokesman Carl Meyer in 1994, "is not only the most desirable currency in the world, it is also the most easily counterfeited."

The Secret Service has found that "during FY 1997, domestically, \$40,385,661 in counterfeit currency was seized prior to circulation. Of that amount, \$3,461,138 or 8 percent, was inkjet produced. The total seizure amount of inkjet production notes does not compare with the number of domestic inkjet counterfeit plant suppressions (73.7%). This is due to the smaller seizures at the time of the plant suppression versus the amount of offset produced counterfeit, \$29,197,222, or 72.2 percent, recovered during those types of plant suppressions."

"The Customs Service and other law enforcement and intelligence sources are concerned about the increasing involvement of organized criminal gangs in high-volume counterfeiting," said Sam Banks, Deputy Commissioner of the U.S. Customs Service. "We are seizing record amounts of counterfeit products such as software, music, videos, and clothing. This is why a more focused.

coordinated approach is necessary to enhance our ability to identify and apprehend those engaging in criminal activity which cuts at the core of American business and ingenuity." 12

Investigative Agency Resources.

The Department of Justice, particularly the United States Attorneys, must continue efforts to develop the capability to keep pace with advances in technology in order to effectively prosecute computer crimes and intellectual property theft. Federal investigative agencies are seeking to increase the complement of agents dedicated to the investigation and computer related crime.

In FY 1998, the FBI had six National Computer Crime squads in major high tech regions; these were established as a result of in increase of 34 agents appropriated in FY 1998. The FY 1999 enacted level included an increase of 56 agents, which resulted in the addition of four more squads. As in FY 1998, this increase was also directed at establishment of Computer Investigative and Infrastructure Threat Assessment (CITA) Teams to address electronic intrusion into the nation's computer and telecommunications networks. Furthermore, the FBI dedicated 153 agents (that is, expended 153 FTE workyears) to the National Internet Protection and Computer Intrusion Squads (NIPCIS) in FY 1999. These efforts will continue in FY 2000. Finally, the FBI is including a request for 2 additional agents for an Intellectual Property Theft in FY 2001. United States Attorneys' Offices can also expect criminal referrals of computer crime and intellectual property theft cases from numerous other federal agencies as well. Among the agencies projecting increases in referrals are the Secret Service, (which has concurrent jurisdiction over many of the offenses set forth in 18 U.S.C. § 1030); the Internal Revenue Service; several elements of the Defense Department, (which have been charged with monitoring weaknesses in DOD computer systems and making criminal referrals of intrusions and attacks); the United States Customs Service; and elements of NASA's Office of Inspector General, (which have similar responsibilities regarding NASA's computer systems).

Increasing Workload.

The following table displays the increases we are seeing in computer crime. The data from our case management system reflects significant growth in violations of computer-related statutes from FY 1992 to FY 1999. Between FY 1992 and FY 1999, matters

¹²Institut Department, "Justice Department, FBI and Customs Service to Combat Intellectual Property Crime: U.S. Law Enforcement Will Target High Tech Corridors to Fight Pirscy and Counterfeiting Surge." <u>Press Release</u> 99-323, 23 July 1999.

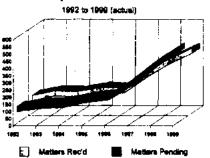

991

received have increased by 307%, or from 107 to 436. Similarly, during the same period, computer crime cases fited increased by 174%, or from 38 to 104.

WORKLOAD DATA - COMPUTER CRIME PY 1992 to PY 1999

	Matters			Cases		
	Received	Pending	Defendants Pending	Filed	Pending	Defendants Pending
1992	107	99	129	38	26	35
1993	138	121	156	53	28	31
1994	134	126	169	47	32	42
1995	162	162	216	45	43	52
1996	158	179	228	57	49	61
1997	270	279	348	66	59	75
1998	362	409	503	85	78	112
1999	436	509	613	104	81	123
% 92/99	307%	414%	375%	174%	212%	251%
% 91/99	20%	24%	22%	22%	4%	10%

Computer Crime Workload

Also indicative of the need for greater resources to combat these types of crimes is the growing number of pending matters and cases. Matters and defendants pending increased by 414 percent and 375 percent respectively, between FY 1992 and FY 1999. During that same period, cases and defendants pending increased by 212 percent and 251 percent, respectively. There is a great need for AUSA experts in each office. This is important to the drafting of subpoenas and search warrales, the examination of evidence and the preservation of evidence. "Hacking" cases are very fact specific and thus time intensive. Investigating and prosecuting one case does not necessarily make the next case easier to investigate and prosecute. Also, AUSA experts can also assist in investigations where computers are more tangentially related to the crime.

CALCULATION OF NEED

The President's FY 1999 USAs' computer crime request for 36 positions was not approved in FY 1999 appropriation. However, the FBI was appropriated 56 agents in FY 1999. The actual agent workyears expended by the FBI in FY 1999 for computer crime was 153. That number can be expected to increase in FY 2000. The FBI is requesting 2 additional agents in FY 2001. While the U.S.

Attorneys are endeavoring to redirect our already strained resources to address this need, (in accordance with the direction of the Congress), additional new resources are needed.

The FY 2001 request for attorneys will address the continually increasing caseload generated by the 153 FBI agents in FY 1999 and increase the USAs' ability keep up with the growth in computer crime cases. The United States Attorneys are requesting 50 positions (28 Attorneys, 4 paralegals, 18 support) and \$3.9 million in FY 2001.

ALLOCATION OF RESOURCES

In allocating positions for computer crime and intellectual property theft prosecutions, the Executive Office for United States Attorneys will identify those districts with the greatest need for resources to investigate and prosecute computer criminals.

The allocation plan will include an assessment of the needs of each district based on the following elements:

- Presence of federal investigative agencies with high tech squads;
- Districts that have a significant concentration of high tech businesses, or major universities;
- Districts that have a significant concentration of federal security and defense computer centers;
- Districts that are working in cooperation with local authorities in their high tech efforts to address local problems (e.g., intellectual property thefts under state trade secret laws); and
- Number of referrals from law enforcement and industry, and outreach to industry.
- One support position will be assigned to the Executive Office for United States Attorney.

ANTICIPATED RESULTS

If provided the resources, we will measure our success by:

- The number of cases terminated involving computer crime;
- Our ability to respond to high-impact major investigations conducted by our client agencies;
- Our results through sentencing rates and guilty pleas.

CIVIL DEFENSIVE LITIGATION

	P C P C		
Civil and Management and Administration Decision Units	Pos.	FTE	Amonut
	76	38	\$5,744,000

This initiative requests 76 positions (36 attorneys) 38 FTE and \$5,744,000 in support of Civil Defensive litigation in the United States Attorneys' offices (USAOs). United States Attorneys (USAs) defend the government in suits seeking monetary damages and/or challenging federal programs and policies. A recent statutory expansion of federal employee rights has already caused an explosion of complex, labor-intensive litigation that was not accompanied by any additional resources to defend the government (other than an unlimited fund to pay judgments when we lose). Another recent statutory change shifted from private insurance companies to the United States both the liability and the cost of defending medical malpractice claims for a pool of over nine million patients. Again, no legal resources were added to USAs to defend the government from the predictable onslaught of claims.

RELATIONSHIP TO THE STRATEGIC PLAN

This initiative addresses: DOI Strategic Plan Core Function 3 (Legal Representation, Enforcement of Pederal Laws, and Defense of U.S. Interests); GOAL 5 (Represent the United States in all Civil matters for which the Department of Justice has jurisdiction); and United States Attorney Goal 2 (to protect and advance the interests of the United States through the conduct of affirmative and defensive civil litigation). Our strategies include:

- Protecting the Treasury against unwarranted monetary claims, assuring appropriate payments for meritorious claims, maximizing monetary recoveries for injuries and damages to Federal property, and asserting the Federal Government's commercial interest in defensive litigation, and
- Defending against challenges to Federal programs, policy initiatives and statutes, and enforcing remedies for violations of statutorily-based Federal program requirements.

^{*} The eight one categories tracked in the "USA-5" forms that are considered "civil defonive program estigoned" are defensive-monetary, defensive-other relief, bankruptcy & receiverable, prisoner petrions, manigration-civil. Social Security claims, civil appeals, and Freedom of Information Act/Privacy Act Intigation

PROPOSED ACTIONS

This initiative will contribute to accomplishing the above by:

- Providing adequate resources to prepare for and defend properly civil lawrants against the United States, its agencies and
 employees; and
- Promoting effective defense of lawsuits through training and efficient use of resources in order to protect public funds and programs, policy initiatives and statutes.

OVERVIEW

This initiative requests 76 positions (36 attorneys, 18 paralegals, 22 support) 38 FTE and \$5,744,000 in support of Civil Defensive litigation in the United States Attorneys' offices (USAOs). The USAs wast defend the government against claims for damages. In addition to the work USAs have always done, Congress has recently subjected the government to potential monotary claims from a pool of millions of patients and millions of federal employees. Yet, Congress has not provided USAOs with any civil defensive resource increases to defend the government in over 18 years. This request is necessary to defend the government from unwarranted claims and to settle those claims that have ment for an appropriate amount. Additionally,

the courts dictate the pace of litigation.

United States Attorneys

Civil defensive work is different from most of the work of USAOs in that it is nondiscretionary and non-delegable. U. S. Attorneys have some control over their criminal and other affirmative caseloads. USAs set prosecutive guidelines for criminal matters and can decide in each criminal matter whether to devote resources to the case. Civil defensive cases cannot be declined. When someone suce the government, the case must be defended, and it is the USAOs that handle the vast majority of this litigation.

^{1.} A small sension of positions were related in PY 1991 to bandle criminal and civil introduction cases.

While attorney workyours devoted to civil defensive work have increased since before 1993 (see chert, above), no new ettorney positions have been provided by Congress during this period for civil defensive work. The civil defensive caseload handled by the USAOs has increased from 119,239 to 129,436 cases handled, or by nine percent, from FY93 to FY99 and includes:

- Employment discrimination cases;³
- Personal injury and wrongful death cases (including medical malpractice cases) brought pursuant to the Federal Tort
 Claims Act.⁴
- Bivers cases (suits seeking damages from federal officials personally for alleged civil rights violations);⁵
- Prisoner cases (habous corpus, mandamus, civil rights, torts, and miscellameous proceedings);
- Social Security disability cases;
- Immigration cases;
- Bankruptcy cases;
- Privacy Act and Freedom of Information Act cases;
- Cases challenging statutes and Congressional and governmental actions, (for example, sovironmental cases or health care reimburnement challenges); and

^{*} Employment decrementation cases brought by federal impleytes on the basis of rece, out, order, religion, handleip or customal origin.

^{*} Medical malayacous cases, automobile accident same involving fortunal ampleyace, hip and full litigation, and other minufacture texts. A text is a wroughli set, lajory, or damage for which a civil action can be brought.

^{*} Cases against federal employees seed as individuals for violation of the plaintiff's constitutional rights.

Contract cases.

Civil defensive cases have become more complex, requiring additional resources. This is evidenced by the increase in expert witness fees expended and increased disbursements from the Judgment Fund. Expert witness fees have increased by eight percent since FY 1997 alone. The vast majority of expert witness fees arise from the litigation of the civil cases described below.

The Judgment Fund is a permanent appropriation fund established by Congress to pay settlements and judgments against the United States. In FY 1995, about \$300 million was disbursed from the Judgment Fund. In FY 1997, \$325 million was paid out. By FY 1999, the figure was up to \$361 million. The need for additional resources is exacerbated by the fact that as agencies downsize, they cut back on the level of litigation support they provide to the USAs. Defensive civil units of USAOs must invest additional resources to fill the void created by the reduction of agency (titigation support.

The strategies outlined below are designed to equip USAOs to address the increasing number and complexity of defensive civil cases, particularly in the areas of Title VII and Tort Litigation.⁶ Further, the requested resources will help the United States to be better represented in actions seeking monetary damages.

JUSTIFICATION

The USAs are requesting resources for two sub-sets of civil defensive litigation; employment discrimination (sometimes referred to as "Title VII" cases) and tort litigation. Each of these areas includes a justification of need and methodology for the allocation of resources.

Other growing areas in Civil Defensive work, but not addressed in this request, are Social Sociarity disability cases, immigration cases and Buskrupsky mass.

EMPLOYMENT DISCRIMINATION LITIGATION Justification of Need.

Like private sector employers, federal agencies are liable for employment discrimination claims based on race, sex, color, religion. handicap, national origin, or retaliation. Like the private sector, the number, cost and complexity of these cases have increased significantly in the last several years due to changes in the law. In fact, federal employees are more likely than their private sector counterparts to make discrimination claims. These labor-intensive cases must be defended appropriately for both monetary and morale reasons (see chart).

Unfortunately, while the Equal Employment Opportunity Commission (EEOC) resources required to process this growing caseload have increased dramatically since 1991. USAOs have not received any additional funding for this civil defensive work. Losing employment discrimination cases is costly, not just because of the significant damage awards, but because the courts routinely require the government to pay the employee's attorney's fees, which can often exceed \$100,000 per case. With adequate resources. USAOs can defend those cases that should be defended and resolve those cases that should be settled in order to achieve the Civil Rights Act's laudable goals.

Significant changes in employment discrimination legislation have increased not only

Federal Worker Complaints de Deverable

the number, but the cost and complexity of employment discrimination cases handled by Source United States General Accounting Office, 1990 the USAOs. In November, 1991, Congress enacted substantive amendments to Title VII of the Civil Rights Act of 1964 ("Act"), 42 U.S.C. § 2000e, et sea. For the first time, the 1991 legislation allows plaintiffs to recover compensatory damages (for example, month) anguish and other "pain and suffering") up to \$300,000, no longer limiting awards to past and prospective lost wages. The Act also provides for the right to a jury trial and attorneys fees. This has increased the number of private sector attorneys willing to handle employment discrimination cases, as well as increased the amount of time those attorneys are willing to devote to these vases. Employment discrimination cases are more labor-intensive than most of the USAO caseload, with an expanded potential for much higher damages to be paid out of the Treasury's Judgment Fund or agency budget. More resources must be expended on each case.

The effects of the 1991 amendments began slowly and have continued to build in every year since then. Although statistics are not separately collected for employment discrimination litigation, all defensive Civil Rights matters and cases - of which Title VII

although no funds were appropriated to support the increased caseload and demands created by this change in the law.

employment discrimination litigation is the major component -- grew dramatically from FY93 to FY98. Specifically, from FY93 to FY99, pending defensive Civil Rights cases grew 40 percent, from 1,989 to 2,748. Some recent examples of Title VII litigation include:

- A hostile work environment case involving a Postal employee's suicide. Although the jury awarded \$5.5 million to plaintiff,
 the judge reduced that award to \$300,000 and entered judgment for \$1.7 million once front pay was added to the award.
- A sexual harassment and retalisation case that eventually took two and a half weeks of trial. Although the government "won" the case, it consumed about 75 percent of one AUSA's time for two years.
- A race, gender and multiple-disabilities discrimination case against the Defense Commissary Agency. Over 1,000 attorney
 hours were spc. 1 on this matter, including witness interviews, more than 20 depositions, discovery requests, and case
 settlement conferences. The AUSA obtained a summary judgment, which was affirmed by the Ninth Circuit.
- A race and national origin discrimination case against the Department of the Navy. The employee, who had filed more than thirty EEO complaints, alleged that discrimination caused stress and resulted in high blood preasure, headaches, and emotional difficulties. This case took roughly 500 attorney hours, and required expensive expert winesses to determine plaintiff's physical and psychological problems. Although the employee demanded \$17 million in damages, as a result of the AUSA's efforts, the case active for \$10,000.
- A handicap discrimination case against the Postal Service in connection with an employee's alcoholism. About 400 hours in attorney time was spent in trial preparation, discovery, and a successful summary judgment motion that ended the case.

The number of these cases will significantly increase in the future. These cases arrive in USAOs at the end of a "pipeline" that begins with an administrative EEO process in which employees are required to "exhaust administrative remedies." At the end of that process, which may involve bearings and appeals, cases emerge from the pipeline when the dissatisfied employee files a lawsuit in federal court. United States Attorneys do not see these cases until they are filed in court. A look at what is happening at the administrative EEO level makes clear that the pipeline is full to bursting, and the deluge of cases we have already seen will continue to flood the court system.

From 1991 to 1997, the General Accounting Office (GAO) reported a 56 percent increase in annual filings of EEOC administrative complaints which has caused a dramatic increase in the backlog of pending EEOC cases. During that time, the backlog of hearing requests increased over 200 percent (to 10,016) and the backlog of appeals increased over 600 percent (to 9,980). In order to remedy this increase in cases, the EEOC bas already increased the number of Administrative law judges 41 percent (53 to 75). This increase in judges and their ability to hold more hearings and therefore reach more decisions is partly responsible for the increase in employment discrimination cases that we have seen. But even this increase was not sufficient. EEOC predicts that with the requested increase of judges they would increase the annual hearings another 59 percent, from 10,016 in 1997 to 15,950 in 2002. Despite the fact that Congress has already increased EEOC resources to handle more cases (that fill the pipeline), USAOs have been given no additional resources to handle the cases that pour out of the pipeline at the end of the process.

The increase in EECC hearings will inevitably result in an increase of court cases that USAs must defend. United States Attorneys have not received one FTE to defend the 40 percent increase in the number of cases we have already seen. They absolutely do not have the resources to defend this expected 59 percent increase. This problem is exacerbated by the decline during the 1990s of agency support in case preparation and defense. As the number of agency counsel has declined with budget cuts and downsizing, the availability of agency counsel to assist in investigation and case preparation also has declined. This exploding, labor-intensive caseload is the direct result of a statutory amendment that simply was not accompanied by any resources necessary to protect the interests of the United States.

TORT LITIGATION Justification of Need

Under the Federal Tort Claims Act ("FTCA"), the United States is liable for personal injury, medical malpractice and wrongful death cases to the same extent as private parties. And like the private sector, the cost of defending and paying these claims has increased greatly over the last decade.

Settlements and judgments, which are the end result of most of these types of cases, are paid from the Treasury's Judgment Fund. In FY98, about \$342 million was paid from the Judgment Fund for tort cases, about one-half of the total payments. Examples of tort cases defended by USAOs range from a slip-and-fall in a post office to a medical malpractice claim by a VA hospital patient who was not diagnosed with cancer; from a "fender bender" accident caused by any of the million of federal employees to a medical malpractice claim brought by the parents of a baby born with cerebral palsy at a Navy hospital. The medical malpractice cases are often especially complex, costly, and labor-intensive.

New types of medical malpractice cases have been added by Congress to the caseloads of USAs. For example, Congress has extended FTCA coverage to medical malpractice claims at Indian health centers. More significantly, recent legislation known as the Health Centers Assistance Act of 1992, ("HCAA") provides that Health and Human Services (HHS) supported community health centers, hospitals, claims and other health facilities, along with their employees, and contractors, will be considered employees of the Public Health Service. The exclusive remedy for a patient treated in a covered Community Health Center alleging medical malpractice is now a fawauit against the United States under the Federal Tort Claims Act (FTCA) rather than against the formerly privately-insured clinics. This legislation, which was originally enacted for a three year trial period, has now become permanent.

According to an April 1997 GAO Report, 716 federally funded community and migrant workers health centers meet the criteria that make them eligible for the program.* These centers provide health care to over nine million people. The effect of the HCAA is to require USAOs to assume the litigation responsibility for all medical malpractice cases filed against all health care providers by a population equal to the size and diversity of New York City. As a result, Congress has relieved hundreds of clinics, hospitals, doctors and nurses of the expense of defending and paying medical malpractice claims. Despite adding the burden of defending these cases to the already strained caseloads of USAOs, no new USA positions have been added to defend these cases. This request is designed to remedy this fiscally imprudent situation.

Because of the delay by HHS in implementing this program, USAOs have just begun to see the serious impact of the HCAA on their workload. Before a provider can qualify under the program, it applies to HHS in a complex "deeming" process. HHS took considerable time to establish procedures for processing the applications. Only cases based on activities occurring after the deeming process are covered by the Act. Once a provider is deemed, an individual's claim for medical malpractice must be filed with HHS and the plaintiff must wait at least six months before filing a lawsuit in district court. After a slow start, HHS has now deemed the providers of health care to over nine million patients. Malpractice claims from that pool of patients are now appearing in court.

^{1 42} U.S.C. § 4506. Congress has also made the United States hable under the FTCA (FTCA extensions of the Indian Self Determination Act, 25 U.S.C. § 4506, 25 U.S.C. § 4506 (note), and 25 U.S.C. § 4504) for certain personal injury and wrongful death claims against ladger tribes, initial organizations, Indian contractors and their employants.

⁴² USC 1233

^{*} GAO/HERS-97-57

In 1997, GAO reported tort claims submitted to HHS had risen dramatically. HHS received only four claims in 1994 with a value of \$6 million and 18 claims in 1995 with a value of over \$66 million. In 1996, HHS received 76 claims worth \$252 million and 40 more from October 1, 1996, through March 21, 1997. The trends predicted by GAO

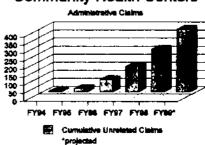

have proven to be correct. We are currently projecting the total claims filed in FY 1999 to be over 400 claims filed, with a value of about \$1.6 billion.

These cases require significant AUSA, paralegal, and secretary resources. One of the difficulties is that the defendant clinics and doctors are not really government employees, and USAOs get virtually no investigation or litigation support from HHS. Short descriptions of some of the claims filed just in January 1999, illustrate how complex these cases are and, therefore, difficult to defend:

- Alleged negligent prenatal care and failure to diagnose and treat gestational diabetes resulting in wrongful death of infant in utero;
- Alteged failure to provide adequate medical care, perform an EKG and refer the patient to a cardiologist, resulting in death;
- Alleged negligence resulting in semi-paralysis; and
- Alleged negligent prenatal care resulting in genetic blood disorder being passed to newborn who sustained massive brain damage.

When analyzing the impact of an increase in medical malpractice cases, we must consider the nature of these cases and their resource requirements. In any medical malpractice case, medical and rehabilitation experts are needed to hitigate issues of liability and the extent of physical injury. In addition, economists and actuarial experts may be needed to calculate economic damages. The need for these experts translates into greater expense and greater potential exposure for the United States. The cases arising under the HCAA, however, are expected to be even more resource intensive than the historic government medical malpractice case for two reasons. The typical patient populations at most community health centers and indian health centers tend to be poorer populations with all of the underlying health problems generated by lack of consistent well care, including good prenatal care.

Community Health Centers

In cases involving federal employees and federal institutions, USAOs normally rely on agency counsel and other federal agency employees to investigate the claim, provide a litigation report, and assist in litigation by helping in the discovery process. This type of agency litigation support has proven to be unavailable in these cases where the health care providers are not federal employees, and there is no incentive to cooperate because of lack of individual exposure to liability.

Moreover, HHS does not have the same powers to investigate claims in these cases as it would in cases involving agency facilities and employees. Finally, HHS does not have sufficient legal staff to assist in this litigation. Because the agency cannot provide a significant level of assistance to the USAOs, the USAOs must investigate the facts and circumstances of each case, locate and acquire records and other documentary evidence, and locate and interview witnesses. The consequence for the USAOs is a need to devote more attorney and paralegal time to cases filed under this Act than would be required in a more traditional government medical malpractice case. In order to adequately defend these cases, more civil defensive resources are necessary.

CALCULATION OF NEED

In the past, USAOs have had to defend a flood of new complex cases by redirecting already scarce resources from other priorities. Unfortunately, the reallocation of other resources is no longer a viable option; thus, additional resources are absolutely necessary if the interests of the United States, its agencies and employees are to be adequately protected in the future. Failure to provide the required resources will have a significant impact on our ability to defend the Treasury from unwarranted or excessive claims and tawastis and to defend federal programs and employees from unwarranted legal attacks.

As set forth above, we expect a significant increase in Title VII cases. Recognizing that we have managed with an increase of 41 percent in Title VII cases since FY 1993, this initiative only addresses the additional expected growth from 1997 to the present. This results in an increase of 505 new Title VII cases per year over current levels. We also predict an increase of at least 100 Community Health Center medical majoractice cases per year. These cases are complex and time consuming. We believe an AUSA can handle no more than eight to ten of these cases per year, allowing for a minimal amount of overtime. This would translate to a need for approximately 60 additional AUSAs. However, in an effort to maintain a more fiscally conservative request, we are seeking only 36 attorneys to help us in our efforts.

One of the ways we have been able to handle the increase in caseload in the past is to use AUSA resources more efficiently by maximizing our use of computer technology and by using paralegal resources where possible. Currently, the ratio of AUSAs to paralegals in our civil divisions has been approximately seven AUSAs to one paralegal. This is compared to law firms encased in

comparable complex litigation where the ratio is closer to two attorneys to one paralegal. By increasing the ratio of paralegals to attorneys, we will be able to more efficiently reduce the backlog that has resulted from the increase in complex cases we have had in the past and the expected increase in the future. Therefore, in addition to the 36 attorney positions, we are requesting 18 paralegal positions. Our total request for FY 2001 is for 76 positions, including 36 attorneys, 18 paralegal and 22 support positions. Two positions within this request will be dedicated for mission support in the Executive Office for United States Attorneys.

Allocation of Resources.

The distribution of new positions to handle employment discrimination litigation will be based on the increasing numbers of Title VII and Tort matters received and cases filed, plus the number of federal civilian amployees in each district.

Two support positions assigned to the Executive Office for United States Attorneys.

CHILD EXPLOITATION AND PORNOGRAPHY

	Perm.		
Criminal and Management and Administration Decision Units	Pos.	FIL	Amount
-	47	24	\$4,059,00

This initiative requests 47 new positions (31 attorneys), 24 FTE, and \$4,059,000 in support of our White Collar Program in the specific areas of Child Exploitation and Pomography.

RELATIONSHIP TO THE STRATEGIC PLAN

This initiative addresses the DOJ Strategic Plan Core Function 1: Investigation and Prosecution of Criminal Offenses; GOAL 4: Reduce White Coller Crime.

This initiative addresses the United States Attorney Goal 1: To identify, prosecute and convict those persons and legal entities who have committed criminal offences against the laws of the United States.

STRATEGY

Our strategies include vigorously prosecuting referrals from law enforcement task forces at all levels that use undercover techniques to identify persons who:

- produce new child pomography;
- travel across state lines to engage in sex with children; and
- trade images of child pomography.

PROPOSED ACTIONS

To advance this strategy, we will:

- Add additional prosecutors and support staff to U.S. Attorneys' offices in districts where these investigative task forces
 generate cases, and to jurisdictions where the presence of large internet Service Providers (ISPs) creates a substantial new
 investigative workload;
- Develop prosecutors' computer knowledge and skills through periodic exposure to hands-on training and develop remote-learning methods to keep that expertise up-to-date between such training sessions.

OVERVIEW

This initiative requests 47 new positions and \$4.1 million in support of our White Collar Program in the specific areas of child exploitation and pornography. The United States' ability to protect our children from pedophiles and other persons who engage in sexually explicit activities is threatened.

JUSTIFICATION

Child Exploitation and Pornography.

Child pornographers, who were once relegated largely to illicit books, magazines, and mailings, have emerged as a significant problem on the Internet. This medium, has enabled pedophiles to contact each other and strike up anonymous electronic conversations with or about potential victims. Also, the Internet provides pedophiles with a means to store, distribute, and exchange electronic images of child pornography.

The Congress has expressed its concern about the threats posed to children in a significant piece of legislation. The Child Pomography Prevention Act of 1996, ("The Act") effective on September 30, 1996, created new child pornography offenses and increased penalties for child abuse and pomography. The Act increased penalties for both child sexual abuse and child pomography crimes, and most importantly, created a separate statutory scheme for computer generated or altered child pomography. The USAs have responded to requirements of The Act through increased prosecutions of child pomographers. For example, in June, 1999 in the Western District of Virginia, a former Lynchburg, Virginia pediatrician was sentenced to 33 months in prison under The Act for

receiving and possessing sexually explicit images of children. He was also fined \$60,000 and sentenced to three years of supervised release following his incorporation.

Also, defendants were sentenced for child pornography offenses in three separate cases in June, 1999. Richard Dean Newberry was convicted of five counts of interrate transportation of child pornography following an undercover investigation by the East Baton. Rouge Parish Sheriff's Office. Newberry e-mailed numerous images of child pornography to a detective who was poung as a 12-year-old girl. Newberry was sentenced to 70 months in prison and ordered to comply with the Louisiana laws regarding sex offender notification and registration as conditions of his supervised release. John M. Stern was sentenced to a 33-month prison term following his guilty plea to eight counts of transportation of child pornography. Stern transmitted child pornography via America Online to undercover FBI agents on three separate occasions. In the third case, Gerald Hooper pled guilty to possession of child pornography after the local hospital where he was an administrator discovered the pornography on his office computer. Hooper was provisionally sentenced to 15 years in prison, pending a psychiatric evaluation at a federal medical center.

Crime in the age of information technology has adapted to the environment by becoming increasingly more complex and sophisticated. The technical expertise of computer information specialists is required to identify, classify, organize, interpret, describe and present evidence collected by law enforcement agencies. For example, in a report dated June 16, 1998, the FBI identified several statistics which relate to activities such as engaging or attempting to engage in child pomography or solicitation crimes online. Specifically, in operation "Innocent Images," which targeted the individuals who use America On Line (AOL) to traffic in child pomography, the FBI executed more than 363 search warrants astionwide. Two hundred and one individuals have been convicted, the remainder of these investigations are continuing. Also, 176 individuals have been indicted, and 180 individuals have been arrested.

The USAs are responsible for the prosecution of various computer crimes, including crimes involving the possession and distribution of child pornography and the sexual exploitation of children. These cases excorpass a cohort of pedophiles that present an exceptionally strious threat to children — "travelers" who seek to meet children co-line and who then travel — or induce the child to travel — in an attempt to meet and have sex with the child. The USAs have handled an increasing number of child pornography and traveler cases in the last several years; that number will assuredly increase — and increase dramatically — in the next several years. In 1998, one AUSA in the Eastern District of Virginia (EDVA), where AOL is headquartered, handled 66 search warrants — a 50 percent increase from the previous year. Historically, these cases were generated by the FBI's innocent Images Task Force headquartered in Calverton, Maryland. The Calverton-based task force has doubled in size in the last year; moreover, smaller "franchise" task forces were recently established in five other locations throughout the country and four more task forces are scheduled to begin operations this year. The U.S. Customs Service has also actively pursued child pornography cases and it, too, is expanding its efforts in this area.

Indeed, according to one FBI official, they expect the Calverton task force to open two times more cases in 1999 than they did in 1998. Clearly, law enforcement's commitment to crimes involving the sexual exploitation of children will produce a dramatic surge in AQL related search warrants. Regardless of where the case will ultimately be brought, the EDVA is responsible for preparing and obtaining the search warrant. The USAs have had great success in prosecuting child pornography and sexual exploitation of children cases, but dramatic growth in Internet use promises many more such cases. Similar to the increases in child pornography seen in the EDVA, the district of Maryland, where the FBI's Innocent Images Task Force is located, has also seen a high number of prosecutions of child pornography cases.

A recent example of the USAs' successful prosecution of pedophiles who use AOL includes a defendant who was charged with possessing child pornography in July, 1999. The indictment also sought forfeiture of his computer and the diakettes he used to store pornographic images. Federal authorities in Maryland first became aware of the defendant when they traced computer transmissions of child pornography they received to his California address. Executing a search warrant at the residence, agents found more than 100 computer images depicting minors engaged in sexually explicit conduct

The investigation and prosecution of criminal offenses against children will continue to be a high priority of the USAs. High priority will be given to cases involving large-scale distributors who realize substantial income from multi-state operations as well as prosecution of cases involving relatively small distributors, cases in which there is evidence of organized crime involvement, and distributors of obscenity over the Internet.

State Prosecutions.

Due to the laxity in state child pornography law, the USAs are often the line of last resort in the area of child exploitation and pornography. In other words, if the federal government doesn't do it, it won't get done. U.S. Attorneys Offices (USAOs) of all sizes have been impacted by the increasing numbers of child pornography cases. For example, the District of Maine has had 36 child pornography cases since March 1, 1997, with four convictions and six cases under indictment/other formal charges (of the six cases charged, two were closed after the defendants committed suicide, one was dismissed after the evidence was suppressed, and one case is still on appeal on a constitutional challenge to the statute). There currently are 18 child port.sgraphy cases under investigation.

There has been an explosion of serious child pornography cases—In Maine for example, the State pornography statute is a musdemeanor unless the evidence shows that there was monetary gain involved. Monetary gain is simply not a factor in 99 percent of the child pornography cases. Moreover, State investigators are devoid of the necessary computer foreusic capabilities required in these

cases. The result is that almost all "State investigations" are referred to either Curtoms or the FBI. USAOs are inundated with these cases, yet it is difficult to decline them given their nature. Sending them back to the State either results in a misdemeanor prosecution or outright declination.

Other examples of this type of activity include:

- In July, 1999, a defendant was indicted for possession of child pornography after a United States Customs Service undercover operation that led to the arrest of another collector of child pornography in Texas. When the Texas coffector's computer was searched, agents found contacts with the defendant via "ICQ," a software program allowing computer users to "chait" with one another and exchange files. The Customs Service served a search warrant on his residence in June 1999 and seized his computer and related equipment.
- Also in June, 1999, a defendant, a former member of the Big Brother program in the Northern District of Illinois, was sentenced to a prison term of 121 months for receiving child pornography and possession of child pornography. The sentence included an upward departure based on the defendant's limited criminal history which did not adequately represent his likelihood of future offenses. The defendant, who pled guilty to the charges, made successful and unsuccessful advances toward at least 10 ternage boys over a six-year period.

Investigative Agency Resources.

The Department of Justice, particularly the United States Attorneys, must continue efforts to develop the capability and technology to keep pace with advances in technology in order to effectively prosecute users of computers for child exploitation and computer crimes. Federal investigative agencies are seeking to increase the complement of agents dedicated to the investigation of computer related crime.

The U.S. Customs Service, in its "International Child Pornography Investigation," has effected 258 acrests since 1995, from which the U.S. Attorneys have obtained 237 indictments and 150 convictions. These efforts represent the first time that individuals who were distributing child pornography through a U.S.-based computer network were systematically identified, investigated and prosecuted. As computer and Internet use continues to increase, it can be expected that this problem will likewise increase. Child pornographers, armed with tools such as the internet have expanded their contact with other pedophiles to the international areas. For instance, on March 31, 1998, a husband and wife, both citizens of Basel, Switzerland, were sentenced to prison terms of 87 and 8 months,

respectively. They were charged with selling large quantities of child pornography through the Internet and the mails, and with physically bringing thousands of electronic files of child pornography into the country from their home in Switzerland. This case arose from a U.S. Customs undercover operation called "Tholian Web" that was operated from Buffalo, New York.

The FBI has located its innocent Images Task Force in its Calverton Office, just outside the Washington, D.C. beltway in Prince George's County, Maryland. In addition to prosecuting cases where a Maryland venue is appropriate, this office provides additional support to the Innocent Images effort involving cases that are not ultimately prosecuted in Maryland. Specifically, an attoroey is assigned for the following purposes; to render legal advice to agents, issue all grand jury subpoenss to service providers which are appropriate to aid in Innocent Images investigations, prepare and submit motions and proposed court orders under 18 U.S.C. § 2703(b) (6.6., unopened e-mail) and other applicable statutes, review drafts and provide assistance in obtaining search warrants.

The amount of work generated by the presence of innocent Images in Maryland is substantial. The FBI Task Force currently consists of a total of 22 Special Agents, 24 Intelligence Research Specialists, and 4 Investigative Assistants (50 people total). They are the primary investigators of child pornography cases all over the country. This effort has been growing and is likely to continue to grow in the future. Resources are needed in order to continue supporting this growing nationwide enforcement program. In addition, the trend seems to be that the workload will increase on out of district cases. If one looks at grand jury subpoenss as a proxy for the amount of work being generated, a sustained and increasingly high amount of work is likely to be generated by FBI agents. In the final two months of 1998 there were 95 subpoenss issued from the District of Maryland on Innocent Images matters. In FY 1999, the number of subpoenss issued has grown to over 150, an over 60 percent increase.

increasing Workload.

The following table displays the increases the USAs are seeing in child pornography and exploitation. Between FY 1992 and FY 1999, matters received have increased by 1,099 or 169 percent. Similarly, during the same period, child pornography cases filed increased by 273 percent, or from 227 cases in FY 1992 to 847 cases in FY 1999. As the workload data reflects, there was an explosion of matters received and cases filed in FY 1995 with an average annual growth in workload since FY 1994 of 24 percent and explosion of matters received. The USAs have not been able to fully recover from this growth in workload without a commensurate increase in attorney positions.

WORKLOAD DATA - CHILD PORNOGRAPHY/ABUSE FY 1992 TO FY 1999

Matters			Cases			
	Received	Pending	Defendants Pending	Filed	Pending	Defendants Pending
1992	652	565	624	227	217	223
1993	582	559	643	235	168	176
1994	619	541	586	264	194	218
1995	95B	814	896	344	268	293
1996	1,145	858	945	540	427	498
1997	1,285	1,003	1,083	582	455	530
1998	1,499	1,163	1,257	714	595	644
1999	1,751	1,357	1,445	847	686	760
% 92/99	169%	140%	132%	273%	216%	241%
% 98/99	17%	17%	15%	19%	15%	18%

ANTICIPATED RESULTS OF ADDITIONAL RESOURCES:

The United States Attorneys cannot continue to indefinitely absorb the rapid increases we are experiencing in the child exploitation and pornography areas. The United States Attorneys are currently investing resources to address the crime problems in their districts and addressing those areas which have been established as national priorities. Although there are currently no reliable estimates of the number of children who have been or are being victimized, the rate at which federal, sate, and local enforcement are encountering cases of this nature appears to be growing rapidly. It is important that the USAOs take appropriate actions to combat this increasing threat. The USAs' increasing caseload in the child pornography area is such that we need additional resources in order to means that those who engage in criminal child sexual abuse and exploitation are apprehended and punished to the full extent of the law.

CALCULATION OF NEED

The FBI dedicated 177 agents in FY 1999 to child pornography and Internet exploitation. Although the USAs have requested funding for Child Exploitation initiatives in the past, funding has not been appropriated for this continually growing area of crime. In order to address the workload backlog generated by the additional FBI agents, the USAs would need an additional 31 attorneys, three of whom will be in a supervisory capacity. Additionally, the USAs are requesting five paralegals, 11 support positions, and \$4.1 million in FY 2001.

ALLOCATION OF RESOURCES

In allocating positions for child pornography and exploitation prosecutions, the Executive Office for United States Attorneys will identify those districts with the greatest need for resources to investigate and prosecute high technology crimes against children. The allocation plan will include an assessment of the needs of each district based on the following elements:

- Districts that are working in cooperation with local authorities in their high tech efforts to address local problems;
- Number of referrals from law enforcement; and
- In addition, one support position will be assigned to the Executive Office for United States Attorneys.

ANTICIPATED RESULTS

If provided the resources, we will measure our success by:

- Our ability to respond to high-impact major investigations conducted by our chient agencies;
- The number of cases terminated involving child pornography; and
- Our results through sentencing rates and guilty pleas.

IMMIGRATION

	Perm.			
	Pos.	FTE	Amount	
Crimical and Management & Administration Decision Units	48	24	\$3,844,000	

This initiative requests 48 positions (27 attorneys), 24 FTE and \$3,844,000 in support of Immigration workload.

RELATIONSHIP TO THE STRATEGIC PLAN

This initiative addresses DOI Strategic Plan Core Function 4: Immigration, GOAL 3: Secure the land border, porta-of-entry and coasts of the United States against illegal migration through effective use of technology and personnel resources focuses on enhancing the deterrence to entry and apprehending and removing those who attempt to enter illegally.

This initiative will address United States Attorney Goal 1: Investigation and Prosecution of Criminal Offenses.

Our strategies to combat violations of Immigration offenses include:

- Ensuring that there is a sufficient United States Attorney presence to meet the steadily increasing caseload
 generated by increased INS resources.
- Aggressive enforcement of the Immigration statutes including aliens who after deportation, attempt to reenter or are found in the United States illegally, alien smugglers and alien smuggling organizations, and those involved in production, distribution and sale of false U.S. Immigration documents and other identification documents.
- Continue to build partnerships with State and local governments and law enforcement agencies to develop comprehensive immigration plans to deport illegal aliens.

OVERVIEW

The Immigration criminal cases filings have grown from 4,042 (or 11 percent of the total criminal cases filed) in FY 1995 to 11,580 (or 23 percent of the total criminal cases filed) in FY 1999. This represents an increase of 186 percent in Immigration case filings from FY 1995 to FY 1999. The United States Attorneys have received increases of 42 attorneys in FY 1995 and 8 attorneys in FY

1998.

The Immigration and Naturalization Service, the primary contributor to the United States Attorney workload, is requesting an increase of 410 Border Patrol agents and 115 inspectors in the FY 2001 Congressional submission. Authorized Border Patrol agent strength has increased by 1,000 agents each year from FY 1997 through FY 2000.

Since 1993, the U.S. Department of Justice embarked on a comprehensive strategy to restore the rule of law at the nation's borders. The augmentation of law enforcement resources on the border has resulted in a detuge of criminal referrals that the U.S. Attorneys' offices can no longer handle without additional resources.

The Immigration and Naturalization Service has recently developed an Interior Enforcement Strategy to respond more effectively to changing patterns and consequences of illegal immigration. This strategy, implemented in FY 1999, is expected to lead to increases in criminal investigation referrals in interior districts as well as border districts.

The U.S. Attorneys' immigration efforts are focused on prosecuting illegal aliens with multiple deportations who have committed criminal offenses including rape, armed robotry assault, burglary, narcotics trafficking, auto theft and child and spousal abuse.

JUSTIFICATION

Congress passed the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IRIRA). While much of the IIRIRA dealt with reforms in legal immigration, the law enforcement part of the legislation provided for increasing the number of Border Patrol Agents by 700 in FY 1996 and by an additional 1,000 each year for the next four years, for a total increase of 4,700 Border Patrol Agents by FY 2000. Additional increases were also included for INS investigators, and INS and Customs inspectors. In addition, the IIRIRA significantly increased the statutory penalties for immigration offenses of all types, including alien smuggling and document fraud. The United States Attorneys have not received a sizable increase for Immigration since the passage of the IIRIRA.

The three primary statutes involved in Immigration case filings and the number of filings are discussed below;

Statute	FY 1995	FY 1999	Percentage Increase
Title B U.S.C., Section 1324	561	1,917	242%
Title 8 U.S.C., Section 1325	541	2,879	432%
Title 8 U.S.C., Section 1326	2,740	7,323	167%

Title 8 U.S.C., Section 1324 makes it a felony to bring to this country an immigrant knowing that immigrant is here illegally, concealing or harboring such an immigrant, transporting such an immigrant, encouraging or inducing such an immigrant to come to this country, or conspiring to do any of the aforementioned.

Title 8 U.S.C., Section 1325 makes it a misdemeanor to enter the country illegally the first time and a felony any time thereafter. It also makes it a felony to enter into a marriage to evade immigration laws.

Title 8, U.S.C., Section 1326 makes it a felony to re-enter the country illegally following a deportation. The punishment escalatos dramatically for those deported following the commission of an aggravated felony.

Increased Prosecutions Along the Southwest Border

In her report to the President in 1996, Attorney General Reno wrote that "years of neglect had left the Southwest Border an open invitation to violent crime, drug trafficking, and illegal immigration." Fighting Crime on the Southwest Border: A Progress Report.

In the early 1990s, as new U.S. Attorneys were appointed in the early days of this Administration, the federal prosecutors in Southwest Border districts were faced with a serious law enforcement and public safety problem. Border communities were experiencing high violent crime rates, attributable in part to crimes committed by illegal aliens. The border with Mexico was virtually uncontrolled, with literally millions of illegal aliens and drug traffickers crossing almost at will through and between the ports of entry. For decades violations of the U.S. Immigration laws, if they were prosecuted as merely petty offenses, resulted in maximum prison terms of not more than 180 days in jail and often less, even for those offenders who had previous felony convictions.

Beginning in 1993, the Department of Justice embarked on a comprehensive plan to dramatically increase the number of felony immigration prosecutions and restore the rule of law along the border. One of the first steps taken was to deploy new Border Patrol and INS agents to the border under Operation Hold the Line in El Paso and Operation Gatekeeper in San Diego. In addition, U.S. Border Patrol and INS agents were provided new computerized identification technology, known as IDENT. The IDENT system enables agents to store an arrested alien's fingerprints and photograph in a database so that if the alien is arrested again, the alien's use of an alies in a attempt to avoid prosecution would fail.

In order to fully support these federal law enforcement initiatives along the border, United States Attorneys throughout the Southwest and elsewhere completely revised their prosecution policies to target, for the first time in Department of Justice history, thousands of criminal attems for felony prosecution under Title 8, United States Code Sections 1326 (reentry after deportation) and 1325 (illegal entry after prior conviction for illegal reentry). Today, rather than facing mere misdemeanor prosecution, these serious felons serve substantial federal prison terms.

At the same time, United States Attorneys dramatically increased the prosecution of alien smugglers under Title 8, United States Code Section 1324. For the first time, United States Attorneys employed the use of wiretaps to investigate major alien smuggling organizations. Also for the first time, United States Attorneys invoked the new mandatory minimum prison terms for certain alien smuggling offenses which were enacted by Congress under the Blegal Immigration Reform and Immigrant Responsibility Act of 1996. In addition, alien smugglers who endangered the aliens being smuggled, law enforcement personnel, and the public at large were targeted for felony prosecution.

The U.S. Attorneys have employed all the tools available to them in handling the unprecedented explosion in their caseloads. They have also worked with numerous other components of the Department, implementing ever more innovative ideas to augment federal prosecutorial resources. These measures, though, have not been sufficient to deal with the problem. As a result, all five Southwest Border U.S. Attorneys, along with numerous other affected districts, have developed immigration fast track programs designed to process illegal entry and reentry cases as quickly as possible and minimize the burden on the criminal justice infrastructure.

Immigration Cases Filed

	FY 1995	FY 1999	Change in filings
Southern District of California	851	1,664	813
New Mexico	103	754	651
Arizona	189	1,617	1,428
Southern District of Texas	299	1,363	1,064
Western District of Texas	300	1,577	1,277

Impact of Immigration Prosocutions on Crime

As the number of individuals presecuted for violating federal law continues to increase, the number of individuals arrested for violating state and local law continues to decrease in communities along the border. The impact of the United States Attorpeys efforts on crime were felt almost immediately throughout the Southwest. As Attorpey General Reno reported to the President in 1996, the crime rate dropped 30 percent in San Diego, 5 percent in Nogalos, 14 percent in El Paso and 20 percent in Brownsville, Texas.

Growth in Immigration cases filed is not exclusive to the Southwest Border as evidenced by the chart below.

District	immigrati		
	EY 1995	FY 1999	Change in filings
Utah	18	232	214
Middle District of Florida	31	168	137
Northern District of Georgia	62	148	86
Nevada	B	160	152
Northern District of New York	61	283	222

Immigration and Naturalization Interior Enforcement Strategy

The INS began developing a new Interior Enforcement Strategy in late 1997 to respond more effectively to changing patterns and consequences of illegal immigration. Progress made under the Border Patrol National Strategy significantly shifted illegal crossing patterns along the border. In turn, new crossing corridors changed the transportation routes that carry illegal workers across the country, shifting to communities in the interior of the United States some of the problems and costs associated with this migration. International illegal migration became increasingly coordinated through smuggling operations that are better organized, better financed, more sophisticated, and more ruthless than ever before. These organized networks have led to the recruitment and transportation of illegal workers to places of employment in the interior of the country, often with the full knowledge and active participation of some middle and lower-level managers.

In January of 1999, the INS finalized its new Interior Enforcement Strategy for dissemination to the field. The principles of the strategy are: to identify and remove criminal aliens in the interior of the United States and minimize recidivism; deter, diamantle, and diminish smuggling or trafficking of aliens; respond to community reports and complaints about illegal immigrants and build partnerships to solve local problems; minimize immigration benefit fraud and other document abuse; and block and remove employers' access to undocumented workers. It is anticipated that the strategy will be fully implemented over the course of the next five years. While it is too early to predict the effect of the strategy on the caseload of any individual district, it is anticipated that this increased enforcement activity in the interior of the United States will yield a substantial increase in federal immigration prosecutions in interior districts.

WORKLOAD INDICATORS

- The United States Attorneys filed 11,580 immigration cases against 12,650 defendants in FY 1999. This represents growth over two years of 67 percent in the number of cases filed and a 65 percent increase in the number of defendants filed. The USAOs also devoted 111 attorney workyears to this area, an increase of 71 percent when compared to FY 1997.
- Attorneys have been asked to assume an increasing number of cases each year for the last four fiscal years. The
 number of case defendants handled per attorney workyear has increased from 143 in FY 1995 to 168 in FY 1999.
- As a result of the increasing workload in Immigration the number of appeals filed have increased from 357 in FY 1997.

to 953 in FY 1999 or an increase of 596 or 167 percent. The number of guilty defendants has increased from 6,254 in FY 1997 to 11,206 in FY 1999 or an increase of 4,952 or 79 percent.

- The U.S. Border Patrol documented 1,528,313 apprehensions of illegal aliens in the Southwest Border Sectors during FY 1998.
- During FY 1999, 74,116 undocumented aliens were arrested attempting to illegally enter the U.S. through Ports of Entry in the Southern District of California (typically using false documents) up from 59,769 the year before. This represents an increase of 14,347 arrests or 24%.
- The United States Attorneys' translation costs have increased from \$2,227,000 in FY 1993 to \$3,837,000 in FY 1998 or a increase of \$1,610,000. This increase can be attributed in part to the growth in our immigration esses which routinely require translation services. In most cases, the defendant and witnesses do not speak English. Investigative agencies are requiring us to share the burden of the cost of the interpreters for wiretaps. The Southwest Border is not used exclusively as a route of transport for Mexican and Central American nationals; it has increasingly become a route of choice for many other nationalities. The United States Attorneys are frequently being asked to pay for translation costs starting with the investigation and continuing until the trial.

SIGNIFICANT CASES

Criminal Alien Transportation

United States v. Oswaldo Montalvo. December 7, 1999, Mr. Montalvo was sentenced to 33 months in prison for transporting illegal attens into the U.S. The defendant, driving a motor home, caught the attention of Border Patrol agents while making an illegal U-turn on approach to a border check point. With the Border Patrol agents in purnit, Mr. Montalvo jumped from the motor home and fied on foot. The motor home subsequently ran into a gasoline tanker truck. Upon arrival on the scene, the Border Patrol apprehended 47 illegal atiens.

Criminal Aliens

United States v. Juan Quinones-Zapata. On June 25, 1997, Juan Quinones-Zapata, a Mexican National, pleaded guilty to reentering the United States after having been deported. On September 19, 1997, the court sentenced Quinones-Zapata to a term of 63 months in prison, the maximum sentence available. Quinones-Zapata had been deported from the United States after having been convicted of

voluntary manslaughter in 1985 and serving his time for that offense. In addition, Quinones-Zapata had been convicted of nine other felony offenses, including rape, robbery, larceny, and possession of heroin.

Endangerment of Smuggled Aliens

United States v. Esquivel et. al... As Operation Gatekeeper has made it more difficult to enter illegally through the western portion of San Diego, we have witnessed increased attempts to smuggle aliens from Mexico into the U.S. through the more desolate, and often treacherous areas of the eastern portion of the county. In one such recent case involving alien smuggling in our east county, an Assistant U.S. Attorney prosecuted six defendants, including the two leaders, a manager, and three guides, who would arrange to smuggle aliens from Tijuana, east to the Hongo hills in Mexico, and then up mountainous terrain into the United States where they would thereafter be placed in trunks of vehicles and driven to San Diego. Based on surveillance, it was estimated that literally hundreds of aliens were smuggled into Southern California in this manner. One of the leaders of the ring was sentenced to 63 months in prison and fined \$12,000, while the other leader was sentenced to 57 months in prison. Four others were each sentenced to 36 months in prison.

Official Corruption

United States v. Quan. Prosecution of official corruption cases involving both Immigration and Customs inspectors at our ports of entry has been a high priority of the Southern District. In this case, defendant Quan, a part-time U.S. Customs Inspector assigned to the United States Port of Entry at Calexico, California, was prosecuted for his role in an alien smuggling operation that included using his mother as a scout car driver. The illegal aliens were charged \$1,500 to \$2,000 each for safe passage to the Los Angeles area. Quan was convicted in September 1998 and sentenced to 2 years in prison in January 1999.

CALCULATION OF NEED

Based on a detailed workload and caseload analysis that incorporated data collected over a five year period, the increase of 2,000 border patrol agents which has been authorized to the Immigration and Naturalization Service over the FY 1999 and FY 2000 appropriations would require an increase of the 27 attorneys as requested in this submission to prosecute the cases brought forward. A study on the United States Attorneys operations was completed, identifying aspects of data that are predictors of future resource needs, based on an analysis of historical events. The study discussed the effects of growth by our cirent investigative agencies.

ANTICIPATED RESULTS

The positions requested would continue the United States Attorneys' commitment to administer the Nation's lumnigration laws fairly

and effectively and to deter and remove those who violate them. The provision of an adequate ratio of prosecutors to investigative agency positions will ensure that the Immigration strategies developed thus far will be supported.

The United States Attorneys would allocate additional resources based on the following criteria:

- The number of previous allocations to each district and their performance;
- The number of illegal reentry cases per district pending at the beginning of the year;
- The number of Border Patrol apprehensions in each district during the most recent year available;
- New trends in cases and apprehensions; and
- One support position will be included for the Executive Office for United States Attorneys.

We will measure our results, if provided these resources, by:

- Analyzing crime rates along the border, and
- Analyzing the number of cases and matters handled by the Offices of the United States Attorneys.

INFRASTRUCTURE

Management & Administration Decision Units	Positions	FTE	Amount
	47	74	\$12,123,000

In FY 2001, the Executive Office for United States Attorneys (EOUSA) is requesting a total of \$12,123,000 and 47 positions to provide assistance to the 94 district offices of the United States Attorneys. The request is spread among the following activities: Information Technology/Network Infrastructure (\$9,286,000), Litigation Support (37 positions, 19 FTE, \$2,393,000), and Accounting Technicians (10 positions, 5 FTE, \$444,000). Virtually all of these positions will actually be located in the district offices that they will be supporting rather than in EOUSA.

RELATIONSHIP TO THE STRATEGIC PLAN

This initiative addresses the DOI STRATEGIC PLAN -- Core Function 7: Management, GOAL 3: Make effective use of the best available management practices, including current and new information technology, that will improve program performance and overall efficiency.

GOALS

This initiative supports all United States Attorneys' related DOJ Strategic Plan Core Functions and Goals.

Our strategies include:

- Ensuring that sufficient funding is available to continue the litigation brought by investigative agencies to the United States
 Attorneys' offices;
- Implementing the coming "information age" technologies as directed by the OMB and IMD policy staffs; and
- Maintaining the ability of United States Attorneys to meet the increased demands placed on them by the Administration and
 the Congress.

PROPOSED ACTIONS

This initiative will contribute to accomplishing the missions and goals of the United States Attorneys by:

- Providing highly trained and specialized personnel resources in order to maximize the utilization of information technology hardware and software in the United States Attorneys' offices; and
- Ensuring enhanced communication of the government's position during the course of litigation.

Information Technology - Network Infrastructure: \$9,286,000

This initiative requests \$9,286,000 in support the automation infrastructure of the Executive Office of the United States Attorneys (EOUSA) and the United States Attorneys Offices (USAOs)

*Oktavlew

This request is for \$9.3 million to establish funding for services to support the automation infrastructure of EOUSA and the United States Attorneys' offices (USAOs). EOUSA and the USAOs propose establishment of a line item that will support our standard office automation infrastructure, including project and task management, integration, maintenance and support services. With the mandated migration to the Justice Consolidated Network, the cost of hardware, software, installation, and a scheduled technology refresh program, are included in a Justice Management Division (IMD) budget request that includes all JCON II participants. Funding for services such as those described above are not included in the DOJ request and that is what is being requested in this document. While funding was obtained in FY 1999 to cover the costs directly associated with becoming Year 2000 compliant, this funding did not cover all costs associated with movement to the new Department of Justice standards, (i.e., JCON II) or for the cost of required services as described. The cost of additional hardware and software needed to convert to JCON II was provided in the FY 2000 Legal Activities Office Automation budget. The estimated cost of support services requested in our base, beginning in 2001, is \$9,286,000.

Justification

The cost to replace our entire infrastructure is based on the industry standard of \$1,032 per seat, for 9,000 users. This includes cable plants, network servers, network components, printers and workstations. The total estimated cost is \$92,860,000. The cost of

hardware and software maintenance, and support services to include Help Desk, on-site support, general integration services and contractor project management, is estimated at 10% of the total value of the network, or \$9,286,000.

The USAOs began installing computer networks after being awarded with the EAGLE contract in June 1989. At that time, and since, the only established funding source was the Legal Activities Office Automation (LAOA) fund, initiated in 1986 to support DOJ-wide office automation efforts for the litigating organizations, the Senior Management offices, the Solicitor General, and JMD. Since that time, all of the litigating components have joined the LAOA process. Total funding available from this source continues to be extremely limited and does not provide full support for the automation requirements of the components it was established to support. Historically, EOUSA has not received any funding to cover basic operating costs, nor have they been provided through the LAOA appropriation. In the last five years, EOUSA has received a total of \$45 million in LAOA funding. Replacement of our antiquated PCs at a cost of approximately \$37 million, although required in 1996, had to be deferred until late 1998 and 1999 because funds were not available. In Fiscal Year 1999, until the PC replacement could be completed, we paid a significant maintenance and support cost penalty to maintain the old equipment.

Auticipated Results

Introduction of a much-needed technology refreshment program as part of our infrastructure is extremely important. However, equally important is the ability to maintain the infrastructure, both hardware and software. If approved, this new base funding will provide a consistent funding source to provide these services.

Litigation Support - 37 Positions, 19 FTE, \$2,393,000

Overview

This request is for 37 positions, 19 FTE, and \$2,393,000 in support the functions of our basic office automation systems.

The USAOs have come to know first hand the truth of the "Law of Diminishing Returns" when it comes to the lack of a balance between the capital (technology) invested in USAOs without a corresponding addition of the skilled labor/human beings that make the system work. This initiative requests the specialized human resources needed to operate and manage the litigation automation support systems. These systems directly support the USAOs in their conduct of the majority of criminal prosecutions and civil litigation handled by the Department of Justice. The districts' ability to support the information technology in their offices has reached a crisis level.

Litigation Support personnel provide technical advice to litigation teams on legal automation requirements and systems capabilities to facilitate Intigation decisions, trial preparation and trial presentation. They apply knowledge of Federal Criminal and Civil procedures, court requirements, and district practices to implement new and enhanced computer applications needed for criminal and civil cases. They perform a wide range of information system analysis, development and installation in support of District litigation support activities for assigned cases. They also work with Assistant United States Attorneys (AUSAs), investigators, agenta, and paralegals to determine the details of the case and the government's strategy for proving its case; to analyze litigation support requirements; to develop or recommend appropriate strategies to meet litigation needs; and to recommend alternative methods and promote the use of automated approaches and visual presentations.

The Intigation support manager positions must assist and/or train attorneys and legal support staff in organizing voluminous case information for efficient retrieval through automated means such as scanning, indexing and controlling of documents into a data base. They assure documents are organized for efficient automated storage and retrieval by preparing appropriate indices, defining data file search criteria and indexing/coding fields. They monitor the progress of computer data entry. They prepare computerized trial presentation programs and evaluate the efficiency of httgation support technology to ensure that it is responsive to the attorney and case needs, and that it represents the best methodology available

In coordination with the office's System Manager, the Litigation Support personnel analyze automated litigation support functions and

recommend changes to increase the system efficiency and effectiveness. They monitor system use and response time, conduct costbenefit analyses, and develop implementation plans. They also study the interaction of various subsystems and recommend alternative operating procedures. They recognize possible conflicts in relationships with other systems, including the continual tests and modifications that are needed to ensure the successful transmission of data between servers throughout all USAOs.

Justification

To complement the work of the systems manager, as well as take over the management of the litigation function, we are proposing to establish 37 Litigation Support Manager (LSM) positions. Similar to such positions in the private sector, the LSM will assist in identifying the appropriate use of computer technology in any given litigation. For instance, in a large health care fraud case involving hundreds of thousands of documents, the LSM would be called upon to evaluate requirements and then define appropriate software and or applications which would provide the most effective support in the investigation and litigation efforts. The LSM would provide an early analysis of how best to accumulate and analyze a multitude of information. Additionally, the LSM would be called upon to choose the appropriate devices for communicating the information and its analysis to a jury.

The USAOs conduct most of the criminal prosecutions and civil litigation handled by the Department of Justice. They serve as the critical prosecutorial arm of the Department, responsible for ensuring that the investigative efforts of law enforcement agencies are pursued, and as the nation's legal advocates and defenders in civil suits brought by and against the government. The range of their responsibilities is staggering, from prosecuting those individuals who commit violuent or terrorist acts, to prosecuting corporations or individuals who commit fraud, to defending the nation against exorbitant civil lawsuits. The role of the LSM is critical in ensuring the most effective message is communicated in the most effective manner possible and therefore an effective link in the process of successful hingation by the Department. It is critical to their success that they have the appropriate means to communicate and display the information necessary to support their cases.

There are very few Lingation Support Managers in the districts now. Those few currently on board have been able to be hired by converting existing support vacancies into these high-tech specialists. However, more are urgently needed than can be satisfied by converting other needed support positions. These 37 positions will go to those districts with the greatest immediate need.

Calculation of Need

In considering the Information Technology Management Reform Act of 1996, now known as the Clinger-Cohen Act, Public Law 104-106, Congressional conferees agreed that federal information systems are critical to the lives of every American, the efficiency and effectiveness of the federal government are dependent on the effective use of information, and that many federal agencies lack adequate personnel with the busic skills necessary to effectively and efficiently use information technology and other information resources in support of agency programs and missions. This initiative seeks to ensure that the United States Attorneys are able to use available information technology to better manage the explosion of information involved in today's cases, to reduce case preparation and misl time, and consequently to ensure that justice and the American taxoners are better served.

Anticipated Results

If provided the 37 positions, we will measure our success by increasing productivity and satisfaction of USAO staff in using office automation equipment to its fullest capacity; ensuring that AUSAs have the most current technology to assist them in efficiently presenting the government's case in court which also should result in improved customer (including client agencies and judges) satisfaction; and ensuring a well-trained work force in the area of applied legal technology.

Accounting Technicians -- 10 Positions, 5 FTE and \$444,000

Overview

This request is for 10 Accounting Technician positions to provide a number of United States Attorneys' offices with assistance in the management of the funds.

The United States Attorneys had a FY 1999 appropriation of \$1,090,378,000 and 9,312 FTE. In addition, the United States Attorneys received funding from a variety of other sources in FY 1999, which is summarized below:

Amount	Fund Type
\$ 1.0 billion	Direct Appropriation
\$80.7 million	Violent Crime Reduction Trust Fund
\$ 5.7 million	Office of National . 3 Control Policy (HiDTA)
\$79.8 million	Organized Crime Drug Enforcement Task Forces
\$11.1 million	Asset Forfeiture Fund
\$24.7 million	Three Percent Fund
\$24.5 million	Health Care Fraud Fund
\$ 7.0 million	Miscellaneous Reimbursable Resources
\$19.5 million	Fees and Expenses of Witnesses
\$10.2 million	Office for Victims of Crime
\$ 3.0 million	Emergency Witness Assistance Program
5 1 2 million	Weed and Seed Funds
\$41.5 million	Y2K Funds
\$1,308.9 billion	TOTAL AVAILABLE RESOURCES

Justification

Funds for each of the programs listed above are allocated to the United States Attorneys' offices, who are responsible for ensuring obligations are incurred in accordance with the authority delegated to each office. In addition, over the past few years, increased

delegations and management responsibilities, for example, maintenance of a payroll management system and a budget tracking system, have been given to the United States Attorney offices with no additional resources allocated to support the increased workload. In some offices, receptionists, secretaries, and paralegals are performing duties such as draft payment clerk, draft disbursement officer, and approving official due to insufficient administrative resources.

In 1996, 1997, and again in 1998, the audit of the United States Attorneys' financial statementa indicated a need for additional resources to monitor and manage the United States Attorneys' district budgets. An accurate accounting of each funding source is necessary throughout each fiscal year to ensure no funds are lost due to errors in the posting of bolligation and payments. The importance of the accurate, complete, and timely financial statement is to provide and ensure the public sound federal financial management. Reliable financial information provides management the ability to make critical resource decisions, prepare supportable budget requests, and make other sound management decisions.

Three legislative Acts lay the foundation for the government to manage their financial operations. The overall theme of the new legislation is designed to provide better funds management oversight to federal agencies, provide better cost information for program managers, and better overall agency performance data.

The Chief Financial Officers (CFO) Act of 1990, as expanded by the Government Management Reform Act (GMRA) of 1994, provides the basis for identifying and correcting financial management weaknesses. The CFO Act requires that the Office of Management and Budget annually submit to the Congress a financial management status report and a government-wide five-year financial management plan. There is now a comprehensive set of basic accounting standards in place.

GMRA requires audited financial management statements. The audited financial statements must be submitted each fiscal year and must include the overall financial position and the results of operations. The GMRA requirements will add a great deal of work to the current heavy workload of United States Attorneys' administrative staff. To handle these additional tasks, United States Attorney personnel are working a great deal of overtime, which is resulting in the increase of staff burnout and turnover rates. Additional resources are necessary in order to maintain the accounting system accurately, which requires a lot of research, communication with requestors of goods and services, and a significant number of entries into the accounting system.

The first government-wide statutory deadline for agency strategic plans under the Government Performance and Results Act (GPRA) began in 1997. The GPRA seeks to redesign the way that Federal agencies plan, budget, manage, evaluate, and account for Federal programs. The United States Attorneys' offices plan to convert to a new accounting system that will provide the capability to account

for resources by Federal program. However, additional requirements will be imposed on the United States Attorneys' administrative staff in order to achieve the goal of the GPRA. These requirements can not be met without additional resources.

Auticipated Results

The 10 positions will be allocated to the United States Attorneys' offices based on the number of program areas the office is responsible for managing and the current level of resources dedicated to financial management. The resources will allow EOUSA to more effectively plan and manage a budget in excess of \$1.3 billion and provide increased accountability for all funds. The additional resources will increase efficiency in the management of resources provided; improve our ability to measure and report our progress in achieving goals; maintain payroll and accounting systems to produce accurate reporting and accounting of Federal resources; and measure the cost effectiveness of United States Attorneys' programs.

CHILD SUPPORT ENFORCEMENT

	Perm.		
	Pos.	FTE	Amount
Criminal and Management and Administration Decision Units	95	48	\$5,000,000

RELATIONSHIP TO THE STRATEGIC PLAN

This initiative addresses the DOJ Strategic Plan Core Function 1: Investigation and Prosecution of Criminal Offenses, GOAL 5: Coordinate and integrate Department of Justice law enforcement activities wherever possible, and cooperate fully with other Federal, State and local agencies that are critically linked to improved operation of the Nation's justice system.

This initiative addresses United States Attorney Goal 1: To identify, prosecute, and convict those persons and legal entities who have committed criminal offenses against the laws of the United States.

Our strategy is to allocate one paralegal to every United States Attorneys' office to work on Child Support Enforcement.

PROPOSED ACTIONS

- If resources were provided, there would be enhanced enforcement of the provisions of the Child Support Recovery Act of 1992.
- As a result, prosecution associated with the "Deadbeat Parents Punishment Act of 1998" (DPPA), PL 105-187, June 24, 1998, 112 Stat 618 would increase. The DPPA created two new first-offense felonies that may now be prosecuted under the CSRA for willful failure to pay child support. A delinquent child support obligor is now subject to a two-year maximum prison term and a fine for: (1) traveling in interstate or foreign commerce with the intent to evade a support obligation, if the obligation has remained unpaid for longer than one year or is greater than \$5,000; or (2) willfully failing to pay a support obligation regarding a child residing in another state if the obligation has remained unpaid for longer than two years or is greater than \$10,000. The misdemeanor section of the law, now found at 18 U.S.C. §228(a)(1), has not changed.

OVERVIEW

This initiative requests 95 positions, 48 FTE and \$5,000,000 in support of the United States Attorneys' efforts to enhance Child Support restitution provided to custodial parents. Success in this initiative can yield significant results for children in America, and a reduction in the demand on already burgeoning government entitlement programs.

President Chinton has made improving child support enforcement and increasing child support collections a top priority. The Clinton Administration has cracked down on non-paying parents and strengthened child support enforcement, resulting in record child support collections. According to a Department of Health and Human Services (HHS) Fact Sheet, in fiscal year 1998, the federal-state partnership collected \$14.4 billion from non-custodial parents, an increase of \$6 billion, or nearly 80 percent, since 1992.

Census data show that 62 percent of all custodial mothers in the United States did not receive child support in 1989.

An October, 1996 GAO report titled "Reorienting Management Toward Achieving Better Program Results" stated that in 1995, HHS' Office of Child Support Enforcement reported an estimated caseload of 20.1 million custodial parents seeking such services through the nation's child support enforcement program, an increase of about 50 percent over the total reported in 1991.

In a December 1994 report entitled Child Support Enforcement, Families Could Benefit from Stronger Enforcement Programs, the General Accounting Office (GAO) stated that greater Federal leadership coupled with equally intensive state efforts could better position the national child support enforcement program to serve the families that depend on it.

United States Bureau of the Census data quoted in the report shows that there were 9.8 million custodial mothers aged 18 years and older in 1990, or 39 percent more than in 1989.

Another study cited by GAO estimated that the gap between total child support that should be paid nationwide and total child support paid as \$34 billion in 1990.¹

Noncustodial Fathers Can they afford to pay more Child Support. (Washington, D.C. Urban Institute, Jan. 1994)

The GAO report also found that a widespread public perception exists that the child support enforcement program is failing to adequately address the nationwide problem of child support non-payment. Estimates of state child enforcement worker caseloads ranged from 300 to 2,500 cases per worker, and officials believe that many cases now take more time than ever before.

JUSTIFICATION

The Child Support Recovery Act (CSRA) and the DPPA provided the United States Attorneys' offices with new imperatives, but no additional prosecutive or investigative resources to carry them out. The 10 paralegals provided in FY 1998 enhanced the CSRA efforts in the 10 districts that received them. However, insufficient resources were available for all of the other districts who expressed the need for the paralegals in 1998. The request for FY 2001 will enable us to expand to every United States Attorneys office throughout the country.

When the Child Support Recovery Act of 1992 was passed it was hoped that the program would be implemented without the need for additional United States Attorneya' office staff because prosecutions were to be against individuals who had already been ordered to pay child support, and against whom legal action had been taken in the state courts to enforce the orders which had been issued. It was further anticipated that state agency efforts to collect delinquent child support obligations would have resulted in the creation of fully investigated, completely assembled referral packages/matters which would need little more than efficient presentation to grand juries.

The experience of the AUSAs who have prosecuted these cases, however, has been that often a substantial amount of background work is needed to amass the documentary evidence required to support these prosecutions. This work often cannot be done by state child support enforcement personnel because of their excessive caseloads or because the non-custodial parent and his or her assets are located in distant states. Responsibilities related to a successful CSRA prosecution include:

- Obtaining a copy of the divorce files;
- Obtaining copies of employment records, payroll records;
- Communicating with the state's child support enforcement agency;
- Reviewing Federal income tax returns;
- Performing a credit check in a state other than that in which the USAO is situated; and
- Searching for ownership records of real property, and other assets, again in a state other than that in which the USAO is situated.

This workload can be further complicated by the flight of the non-complying individual.

Prior to the passage of the felony provisions in the DPP.A, offenses were most often charged as misdemeanors which result in an mefficient use of attorney or agent resources. These cases are document-intensive and paralegals can gather the documents, organize the background materials, and present the package to AUSAs. The 93 additional paralegals requested in this budget will develop these cases so that they are ready for filing. This initial preparation is extremely time-consuming and can be efficiently handled by a paralegal.

The United States Attorneys have made steady progress in this type of prosecution:

-	<u> 1995</u>	<u> 1996</u>	1997	<u>1998</u>	1999
Cases filed	82	140	201	249	396
Matters Defendants Pending	461	554	625	841	1,010
Total Defendants Guilty	28	43	112	134	194
Matters received	575	519	531	811	1,000

Between FY 1995 and FY 1999, the number of cases filed has increased by 383 percent. The number of matters defendants pending has increased by 119 percent from FY 1995 to FY 1999. The total number of guilty defendants (who pled or were found guilty) has increased by 593 percent from FY 1995 to FY 1999. The number of matters received has increased by 74 percent from FY 1995 to FY 1999.

The growing size and complexity of the caseload reflect the major changes in demographic characteristics of the American family. High rates of divorce and out-of-wedlock births have resulted in more children living in single-parent households. The number of families maintained without two parents present has grown from 6.8 million in 1970 to 15.4 million in 1995 an increase of 126 percent.

The benefits this initiative provides to custodial parents who have sought to collect past-due child support payments for years cannot be measured solely in dollars. In almost every case, the defendants were also ordered as part of their sentence to report address changes and to continue to make the prospective payments on a timely basis. The threat of revocation of probation undoubtedly will be far more persuasive than that of potential contempt citations imposed by state family courts.

Examples of successful prosecutions.

In the Southern District of Florida, a defendant was sentenced following a two-day beach trial to five and one-half months in prison and ordered to pay more than \$4 million in restitution for back child support, maintenance, and alimony. At the time of his divorce in 1992, the defendant's net worth was estimated at approximately \$8.2 million. With the exception of \$10,000 paid under threat of contempt, the defendant made no child support payments after his divorce and consistently failed to comply with court orders for temporary child support. In the meantime, he led a lavish lifestyle while his ex-wife was forced to seek public assistance. The defendant was also engaged in a number of real estate transactions that netted him more than \$2 million in proceeds, which he transferred to the Cayman Islands.

In the Eastern District of Louisiana, following a two-day trial, a resident of Albuquerque, was convicted for failure to pay past due child support totaling \$82,000. From 1995 until 1999, the defendant did not pay court-ordered child support. The defendant faces up to two years in prison, up to \$250,000 in fines, and mandatory restitution of the child support.

In the District of Alaska, a defendant was sentenced to six months in prison for failing to pay more than \$50,000 in support payments and approximately \$15,000 in medical expenses for his four children. His former wife testified that, in spite of the fact that she was working two jobs and putting herself through college to obtain a teaching degree, she and her four children were evicted from their house and forced into bankruptcy because of the tack of child support.

ALLOCATION OF RESOURCES

The positions for this program will be allocated to districts based on the following factors:

- Those districts with a demonstrated need for CSRA resources based on caseload and workload data:
- Those districts where HHS resources have increased the resources devoted to CSRA investigations;
- Those distincts where the state does not have a statute making a CSRA offense a potential felony; and
- Finally, two support persons will be assigned to EOUSA.

ANTICIPATED RESULTS

We will measure our results in those districts, if provided the resources, by:

- The increase in the number of cases handled; and
- The increase in court-ordered restitution collected.

The new paralegal positions will allow the United States Attorneys the opportunity to provide a paralegal in every district for the necessary case development assistance and support to custodial parents who are the victims of the crime.

INVESTIGATIVE SUPPORT FOR SUPERIOR COURT

•	Perm.		
	Pos.	FTE	Amount
Criminal Decision Unit	43	22	\$2,863,000

RELATIONSHIP TO THE STRATEGIC PLAN

This initiative addresses DOI Strategic Plan Core Function 1: Investigation and Prosecution of Criminal Offenses, GOAL 1: Reduce violent crime, including organized crime and gang-related crime.

This initiative will address United States Attorney Goal 1: To identify, prosecute and convict those persons and legal entities who have committed criminal offenses against the laws of the United States.

Our strategies to increase public safety within the District of Columbia include:

- Strengthen the investigations of violent criminals, in order to ensure high quality investigation;
- Enhance evidence available to bridge the gap between probable cause and beyond a reasonable doubt; and
- Decrease reliance on the Metropolitan Police Department for investigation following the arrest of a suspect.

PROPOSED ACTIONS

Support the operations of the Superior Court, through professional investigation beyond the assumption of probable cause.

OVERVIEW

This initiative requests 43 positions, 22 FTE, and \$2,863,000 for investigators to support the District of Columbia. The United States Attorneys' Office for the District of Columbia (USAODC) is requesting funding to assist in the investigation and successful prosecution of violent offenders. The USAODC is unique among United States Attorneys Offices nationwide in its dual responsibility for prosecution of violations of federal criminal statutes in the United States District Court and violations of the District of Columbia

Code in the Superior Court of the District of Columbia.

The United States Attorneys Office for the District of Columbia prosecutes most violations of the criminal provisions of the D.C. Code committed by adult offenders.¹ The practical effect of this jurisdictional scheme is that the USAODC acts as the local District Attorney for the District of Columbia.

The concept of assigning investigators to a prosecutor's office is not unique. According to the National Prosecutor's Investigators Association (NPIA), a majority of local prosecutors' offices have in-house investigators. For example, the Manhattan, New York District Attorney's Office has more than 100 investigators.

JUSTIFICATION

Unlike most federal cases, where defendants are arrested after a thorough investigation, a case in the Superior Court Division usually begins with a preliminary investigation, followed by an arrest by the Metropolitan Police Department (MPD). MPD, like all local police departments, operates primarily in a reactive mode. An arrest by MPD is based on probable cause to believe that the arrestee has committed a crime. Thus, it signals the beginning, rather than the culmination of, an in-depth investigation into the circumstances surrounding the crime. Hence, MPD presents the prosecutor with felony cases that require a substantial amount of investigative effort in order to procure an indictment in the Grand Jury and to secure a conviction thereafter. However, once MPD makes an arrest, the case is considered "closed" for MPD's statistical purposes and far too often the burden of completing the investigation seems to shift to the prosecutor's office. Ironically, the only way that prosecutors can carry out this responsibility is to pall on MPD officers and detectives to go out on the streets and complete the required investigatory tasks.

These investigators would be assigned to the following sections in the Superior Court Division: the Homicide Section; the Violent Crime Section; the 5D Community Prosecution a action, the Grand Jury Section; the Felony Trial Section; the Sex Offense and Domestic Violence Section.

¹The USAODC also prosecutes juvenile offenders who are charged with marder, first degree sexual share and other serious felony offenses certified for prosecution as adults. All other juvenile offenders are prosecuted by the Office of the Corporation Counsel for the District of Colombia.

²Prosecutors' offices from 31 states were represented on the NPIA's membership rolls for 1996.

As the primary local prosecutor's office in the District, the USAODC is responsible for prosecution of approximately 5,700 Criminal cases currently pending in the District of Columbia Superior Court. In 1998 alone, the USAODC processed more than 27,800 cases; approximately 9,400 of those cases involved felony charges. With such large and growing numbers of cases and nearly 250 AUSAs dedicated to the prosecution of local District of Columbia crimes, we believe this number of investigators is necessary to adequately support our unmet requirements for investigative work. The USAODC is seeking funding for a staff of in-house investigators to assist in the prosecution of the most serious and violent of those felony charges.

White the addition of in-house investigators to the USAODC staff would not eliminate the need for MPD involvement in investigations, it would provide much needed assistance to both prosecutors and police. MPD will continue to be primarily responsible for most of the investigative work that must be done "on the street" to prepare a case for indictment and trial — processing the crime scene making arrests, following investigative leads, locating and interviewing witnesses, analyzing criminal intelligence pertinent to the investigation, and the like.

USAODC investigators will be most helpful with the myriad of post-arrest tasks related to case investigation and preparation that can be done primarily "in the office," and would address the difficulties outlined above in the following ways:

It would provide the USAODC with investigators who would be directly accountable to the USAODC to ensure that violent crimes are thoroughly investigated following the initial MPD investigation and arrest; they would be particularly useful in post-indictment work which is essential to trial preparation. MPD officers and detectives do not work for the USAODC, the USAODC can only ask them to take certain investigative steps; the USAODC cannot require them to do so. Thus, the USAODC ha. Little recourse when the speed with which an investigation is completed, the manner in which it is done, or even the failure to do it at all, is unsatisfactory and decreases the chance that USAODC will be able to convict a violent criminal.

In-house investigators could assume many of the responsibilities that do not require the service of an MPD detective, thus freeing up MPD officers, reducing the number of overtime hours MPD must allot to court overtime and producing a substantial savings for MPD. The officers and detectives who are tasked with completing the investigative process are often working on overtime. This situation leads to a significant overtime expenditure by MPD each year. During fiscal year 1998 alone, MPD spent over six million dollars on court overtime. A significant portion of that amount was expended on overtime pay for detectives conducting follow-up investigations in cases involving homicides and other violent crimes.

Relieving MPD detectives of many post-arrest tasks will free them up to spend more time patrolling the atreets and working on

unsolved cases. Thus, it will allow the police to operate more efficiently and effectively. Conducting the full range of investigatory work in "closed cases" necessarily reduces the resources available for MPD to maintain a visible pairol presence on the streets and to solve "open" cases (cases where no arrest has been made). This inability to devote resources to investigations was, in part, responsible for the creation of the backlog of over 107 unsolved homicides in the District of Columbia that was widely publicized in 1997 and continues today.

The Proposed Role of In-house Investigators at the USAODC is to maximize the efficiency and effectiveness of investigators assigned to the USAODC. They need to be employed by, paid by, and housed at the USAODC. Under the provisions of local law, these investigators would have broad, but appropriate, authority to conduct investigations on behalf of this Office. D.C. Code Section 23-109 states: "Any special investigator appointed by the Attorney General and assigned to the United States Attorney for the District of Columbia shall have authority to execute all lawful writs, process, and orders issued under authority of the United States, and command all necessary assistance to execute his duties, and shall have the same powers to make arrests as are possessed by members of the Metropolitan Police Department of the District of Columbia."

The following list highlights some of the assignments that investigators might carry out in the USAODC. Many of these assignments are different from those typically carried out by local law enforcement agencies and involve post-arrest work that would complement the work done by MPD:

- Reviewing the case file and, in consultation with the prosecutor, determining what investigative leads and tasks should be pursued;
- Coordinating with the lead MPD detective to find witnesses for the prosecutor and subpoening witnesses for grand
 jury and trial appearances;
- Participating in witness interviews;
- Taking statements from witnesses and suspects in appropriate cases;
- Where appropriate, assisting MPD in the gathering of physical evidence and ensuring that laboratory tests are conducted and completed with respect to various types of forensic evidence;
- Coordinating and communicating with local law enforcement officials to ensure their presence at grand jury
 proceedings and at trial and to ensure that all investigative tasks falling within the purview of MPD are completed;
- Coordinating with intelligence officials to ensure that all relevant information is investigated and provided to the prosecutor:
- Visiting crime scenes;

- Interviewing expert witnesses;
- Preparing trial exhibits and physical evidence for presentation at trial; and
- Conducting computer and police file checks on all witnesses and suspects.

The rationale behind assigning special investigators to the USAODC is clear: the primary means of making the streets of Washington, D.C., safer is to successfully prosecute violent offenders and incarcerate them for appropriate periods of time. Successful prosecutions depend on a thorough and professional investigation that produces strong evidence for use at trial. Succinctly stated, the prosecutions are only as good as the investigations. The quality of the investigations being conducted in D.C. would be significantly improved by the hiring of special investigators assigned to the USAODC. Moreover, the availability of such investigation should allow more time for MPD officers to patrol the street and work on unsolved cases. It should also allow MPD to expend fewer resources on costly police overtime pay for court-related tasks, making that money available within MPD to meet other pressing crime-fighting needs.

CALCULATION OF NEED

The State's Attorney's Office in Miami, Florida, has more than 40 investigators, process servers, investigative accountanta, and investigative supervisors. The Middlesex County Prosecutor's Office in New Jersey has more than 90 investigators and investigative supervisors on its staff. In addition, the District Attorneys' Offices in Dallas, Texas, and Kings County, New York, have their own investigative staffs. These prosecutors' offices are comparable to the District of Columbia USAO in their primary mission — the prosecution of violent crimes in their communities.

Prosecutors surveyed, in these offices confirm that in-house investigators have been vital to their success in conducting thorough and high-quality grand jury investigators and securing convictions at trial. They see the work of in-house investigators not as a substitute for the work of local police departments, but as a necessary complement to police efforts.

ANTICIPATED RESULTS

We will measure our results, if provided these resources, by the percentage of arrested violators who are convicted.

VICTIM WITNESS ASSISTANCE

Pos FTE Amount
20 10 \$1.115.000

Criminal Decision Unit

This initiative requests 20 positions, 10 FTE and \$1,115,000 in support of the Superior Court in the District of Columbia,

RELATIONSHIP TO THE STRATEGIC PLAN

This initiative addresses DOJ Strategic Plan Core Function 2: Assistance to State and Local Governments, GOAL 4: Uphold the rights of, and improve services to, America's crime victims.

This initiative will address United States Attorney Goal 1: To identify, prosecute and convict those persons and legal entities who have committed criminal offenses against the laws of the United States.

Our strategy is to improve services provided to victims of crime, witnesses and prosecutors by:

- Assisting in implementing the Attorney General's Guidelines for Victim and Witness Assistance;
- Improving the state of services offered to victims and witnesses by the Witness Security Section, the Community Prosecution
 Section, the Sex Offense (child victims) and Domestic Violence Section, the Grand Jury & Felony sections and the Central Services
 staff for the United States Attorney's Office for the District of Columbia; and
- Promoting the participation of crime victims and witnesses throughout each stage of criminal justice proceedings.

PROPOSED ACTIONS

To enhance the Victim Witness service provided for the Superior Court.

OVERVIEW

This initiative requests 20 positions, 10 FTE, and \$1,115,000 for victim witness services within the District of Columbia. The United States Attorney's Office in the District of Columbia is unique because it handles a huge volume of local criminal cases in addition to its significant Federal criminal cases. The Victim Witness Assistance Unit (VWAU) plays a crucial role in the success of these prosecutions by improving the cooperation of witnesses and by helping the Office implement the Attorney General's Guidelines for Victim and Witness Assistance. The VWAU staff members, who have specialized training and experience, assist many thousands of victims and witnesses who face a myriad of problems. The VWAU staff has aided victims of torture and abduction, family members and tourists who survived the slaying of two Capitol Police officers in the United States Capitol building, domestic viotence victims (including at least two who later were murdered), child witnesses whose parents were murdered execution style, family members who lost their children to random acts of violence, women who were brutally raped, and victims who suffered paralysis or permanent disability as a result of crime.

These victims and witnesses often are repeatedly exposed to traumatizing events in their communities and in their homes. Many of these people are seen by this Office as a result of gang activity, resulting in serious and ongoing concerns for their safety. Beginning in 1999, the VWAU has taken on the additional duty of notifying victims about the parole process and assisting victims in attending the hearings.

Finally, the unit's work occurs in the District of Columbia which is an international community consisting of people from numerous countries who speak many languages and present complex cultural issues.

JUSTIFICATION

As set forth in the Victim and Witness Protection Act of 1982, the Crime Control Act of 1990, the Violent Crime Control and Law Enforcement Act of 1994, and pursuant to the Attorney General's Guidelines, we must ensure that innocent victims of all crime have their rights upheld, have their dignity and privacy respected, and are treated with fairness. During the prosecution stage of the process, it is the Victim-Witness personnel who are responsible for compliance with these mandates in The 2000 Attorney General's Guidelines on Victim and Witness Assistance will be implemented during the upcoming year. These guidelines will require this Office to provide notification and other services to victims and witnesses in Superior Court which have not always been provided previously. Adding the requested security specialists and advocates will significantly increase the Office's ability to comply with the Guidelines.

The Victim Witness Assistance Unit handles responsibilities such as witness management, trial coordination and the entry and maintenance of victims' names and data into the notification system database. The VWAU advocates assist in consulting with victims; coordinating the attendance of victims at judicial proceedings; involving victims in sentencing hearings; and administering to the needs of victims and witnesses during the course of the cases.

Beyond its role of aiding the victims of crime and assisting prosecutors in obtaining more cooperative and often more crodible witnesses, the VWAU performs an instrumental role in shaping public policy. The Unit helped develop the Washington, D.C. City Wide Initiative on Children and Violence and was involved in planning the Child Advocacy Center. The domestic violence section has initiated a domestic violence fatality review team and has played a significant role in making recommendations for the Mayor's Commission Against Domestic Violence to improve the state of services in the District of Columbia. The VWAU section pioneered work on victim impact statements and has made use of community impact statements.

The increasing skill and professionalization of the VWAU staff members have resulted in a rapid increase in the utilization of the VWAU services. As the Office implements its expansion of community prosecution, the VWAU staff will become increasingly important because of their familiarity with community resources which help crime victims. Current staffing of the VWAU is inadequate to handle the existing number of cases, let alone expand services to victims not yet being reached. To comply with the Attorney General's Guidelines, the unit needs significant increases to its staff.

Witness Security Program

Requesting 2 Witness Security Specialists and 1 Witness Security Advocate

The fear of retribution from the defendant or the defendant's associates may be the most powerful deterrent to cooperation by victims and witnesses. Accordingly, the VWAU maintains a Witness Security Program (WSP) in order to help safeguard threatened witnesses and their families from potentially lethal violence, and to ensure their continuing cooperation with the government. The WSP consists of multiple program options matched to the proximity, severity, and potential duration of the threat. Currently two witness Security Specialists and a supervisor are responsible for processing victims and witnesses into all of the program options. They perform a variety of tasks that involve the intake, lodging and movement of the protected persons. These tasks are extremely process-intensive and time-sensitive. Moreover, a threat against a single individual frequently means that an entire family has been endangeted, and may have to be brought into protection or moved. Under these circumstances, the effort involved in obtaining an appropriate and satisfactory living arrangement is extremely demanding and time-consuming. The specialists carry case loads as high as 60 active cases. This is an overwhelming burden given the immediacy of the danger posed toward each witness seeking assistance. Providing two additional specialists is necessary to lessen this burden and allow each specialist to assist threatened witnesses more effectively.

Victims and witnesses who need protection bring an assortment of social service needs that must be resolved before they can be protected successfully. These needs, which may include housing, finance, employment, health care or child care, require dedicated time and attention as well as a detailed understanding of the social services systems of the District of Columbia and surrounding jurisdictions. For example, in a recent homicide case, a threatened witness critical to the prosecution was both unemployed and homeless. In addition, he required medical treatment or rehabilitation for several health problems, including an acute seizure disorder, pancreatitis and alcoholism. Because of the demands on the Specialists just to process applications, the social service needs of victims and witnesses with these kinds of

compound problems are not being addressed fully. A witness security advocate will ensure these needs are met by connecting the witnesses to appropriate social services and helping the witnesses to find safe housing.

The demands upon the WSP are expanding dramatically as the protection needs of victims and witnesses of gang-and drug-related violence, domestic violence, and sexual abuse become more apparent. For instance, one of the programs has become such an integral part of prosecution strategy, that it needed an increase in its program budget just four months into Fiscal Year 1999. The recent establishment of a Gang Prosecution and Intelligence Unit in the United States Attorney's Office virtually assures a significant increase in protection activity in that area alone. The extreme and increasing demand now placed upon the unit already has resulted in processing delays that are troubling given the critical importance of the safety of victims and witnesses.

Community Prosecution Section Requesting 5 Advocates.

1

Our Office is the first city prosecutor's office in the nation to implement Community Prosecution on a city wide basis. Under the concept of Community Prosecution, prosecutors and support staff focus on crime committed in a particular section of the city. Hefore expanding Community Prosecution city wide, we began a pilot initiative in the Fifth Police District. The Fifth District initiative handled in excess of 4,000 cases per year covering a wide range of crime from simple assaults to burglaries, robberies and homicides. The initiative's results have been extremely encouraging. Not only has the crime rate fallen in the district, but it has fallen at a faster rate than that of other districts. The Community Prosecution concept is very resource intensive, however, because it focuses on the needs of the community as well as conviction of defendants.

When we expanded the initiative to all seven police districts in November 1999, our office realigned fifty-four prosecutors and many support staff from the Homicide, Violent Crime, General Felony and Grand Jury sections into six Community Prosecution Sections. (Police Districts Two and Four are combined.) These six sections are supported by only two victim advocates. These advocates work with victims of a wide range of crimes, including homicide, carjacking, assault with intent to kill, assault with a deadly weapon, and armed robbery. Advocates provide support and referrals for services to the victims and their families. In homicide cases, advocates work with the family members of the deceased who are devastated by the sudden and senseless death of a loved one. They are among the most traumatized victims who often deal with issues pertaining to loss for years. Homicide cases involve a great deal of crisis work over extended periods of time because the family members may become extremely depressed, and the community offers few services specifically for family members of homicide victims. Similarly, the witnesses to homicide often are traumatized and may be reluctant to cooperate without special intervention.

In addition to homicide cases, the Community Prosecution Section prosecutes many cases which involve violence and, at times, bodily injury causing parameter physical impairment and/or paralysis to the victim. Routinely there are multiple victims per case. These cases often are complex, and the victims are hombly traumatized. For example, one victim was shot in the face at close range. His face was completely disfigured, and he is permanently disabled. He has undergone several reconstructive surgeries and lost one-third of his tongue, cannot control his saliva, and has a hole in the roof of his mouth. He has not been able to eat solid food and he has to keep gauze in his mouth to absorb his saliva 24 hours a day. He cannot return to his previous profession as a paralegal of a prominent law firm in Washington, D.C. He is fearful, continues to experience flashbacks and nightmares, and feels frustrated knowing that he cannot speak clearly enough for the Court or others to understand him. As more attention is paid to the needs of the community, the work load of these victim advocates is sure to increase. Therefore, we are requesting five additional victim advocates for Community Prosecution.

Child Cases

Requesting 2 Advocates

Currently there are two advocates and two child interview specialists who support the AUSAs working with child victims. These children have been physically or sexually abused or they have witnessed criminal acts (e.g., homicide). Each advocate has a caseload of about 60 cases. The VWAU child advocates provide forensic interviewing services, clinical consultation, crisis intervention, and case management of cases involving child victims and witnesses. Furthermore, they are used locally and nationally by social acrvices and criminal justice employees to provide extensive training on interviewing children. The child interview specialists interview about 100 victims per year. These cases are complex and often involve a great deal of coordination with other social services. In addition, as the advocates expand their assistance to more children who are the victims of physical abuse, there will be a need for additional advocates.

Domestic Violence Upit (DVU)

Requesting 5 advocates

In order to reflect a priority given domestic violence cases, there currently are six advocates to support the AUSAs in the DVU. This number is insufficient and will be even more taxed now that AUSAs have been added to the unit to prosecute fellony domestic violence cases. Advocates support AUSAs while working with adult victims of domestic violence as defined by the Intrafamily Offenses Act (excluding child abuse) as well as with some family members of domestic violence-related homicide victims. They conduct lethality assessments and provide ongoing safety planning to victims. They also consult with prosecutors on the dynamics of abuse and provide expert testimony in court. Their work is complicated and often involves victims who are reluctant to testify. Currently the advocates

have active exseloads of between 350 and 400. Not only is this ratio excessive for the individual advocates, but there are an additional 2,000 victims of domestic violence currently in the court system who are not receiving advocate services. Thus, despite their huge caseloads, the DVU advocates currently provide services only to a fraction of the victims in misdemeanor and felony DVU cases.

Grand Jury and Felony Trial Sections Requesting 4 advocates

According to estimates made by the Grand Jury supervisors, there are about 2,100 felony cases a year that are likely to have victima who need our services during the investigation stage. Many of the cases involve serious injury, post-traumatic stress disorder, and/or permanent injury (e.g., mayhem, kidnaping while armed, assault with intent to kill, assault with a dangerous weapon). Because there is currently only one advocate supporting the Grand Jury and Felony Sections, the vast majority of victims are not receiving VWAU services. Additional advocates are necessary to provide services to many of these under served victims.

Central Services

Requesting L Assistant Coordinator

Central Services handles vouchers, billing, and administrative issues pertaining to witness travel and payment. Over the years, there has been an increasing demand for these services. With the increase of AUSAs hired by the office and the increasing use of expert witnesses, Central Services are in heavy demand. The Central Services Coordinator is responsible for obtaining botels, interpreters and other services for witnesses. The Central Services Coordinator is required to keep current with regulations, procedures and fee schedules for all witnesses (e.g., expert witnesses), out-of-town witnesses, incarcerated witnesses). In addition, effective July 1, 1999, the Justice Management Division delegated the authority to commit funds for payment of fact witnesses to individual United States Attorney's Offices, and this is being handled by our Central Services Coordinator. Because of the volume of our Superior Court operations, this new responsibility increases the work load of Central Services. With only one Central Service Coordinator for Superior Court, this function is understaffed.

SEGRT-TERM PROTECTION PROGRAM

	Perm.		
	Pos.	FTE	Amount
Criminal Decision Unit	2	1	\$172.00

This initiative requests two positions, one FTE and \$172,000 to develop on a pilot basis the need for expansion of the short-term witness protection program to two or three other districts

RELATIONSHIP TO THE STRATEGIC PLAN

This initiative addresses DOJ Strategic Plan Core Function 6: Protection of the Federal Judiciary and Improvement of the Justice System, GOAL 3: Promote the participation of victims and witnesses throughout each stage of criminal and juvenile justice proceedings at the Federal, State, and local levels and in Indian Country.

This request will address United States Attorney Goal 3: Promote the participation of victims and witnesses throughout each stage of criminal and juvenile justice proceeding at the Federal, State and local levels.

Our strategies include:

 Expanding the Short-Term Protection Program to two or three other districts to assist with the prosecution of violent crime relating to local gang and drug activity.

PROPOSED ACTIONS

Ensure the physical safety of witnesses of violent crime so that they can testify confidently in court.

OVERVIEW

Over the past decade, the Department of Justice, largely through the United States Attorneys' offices, has 'ecome increasingly involved in the prosecution of violent crime. As a result, the problem of threats to and intimidation of witnesses in prosecutions is increasing. Witnesses to violent crime, particularly gang-related violent crime, are often the targets of intimidation, threats, and assaults. Fear of gangs can be pervasive in a neighborhood, intimidating witnesses without any explicit threat needing to be made. Effective law enforcement requires that prosecutors and law enforcement agencies be able to respond to the needs of threatened and intimidated witnesses.

JUSTIFICATION

The Short-Term Protection Program ("STPP") has been operating in the District of Columbia since 1991. The program was designed for witnesses facing serious threats if they remained in the District of Columbia, but for whom the threat did not extend beyond the District and where the expectation is that the threat will dissipate once the case in which the witness will testify has been completed. The STPP has provided services to approximately 175 witnesses since its inception in FY 1991 through FY 1997. The program has been quite successful: no witness in the program has been harmed, and the United States Attorney's office reports a very high conviction rate for cases involving STPP witnesses. The additional resources sought for this initiative will support expansion of the current program outside the District of Columbia.

Law enforcement agencies commonly encounter witnesses who are threatened by targets of investigations. The agents involved in the investigation generally deal with the problem on an <u>ad hoc</u> basis, providing services such as lodging, relocation, subsistence, and protection as required in the judgement of the agents. A large percentage of witnesses in drug and gang investigations live in some form of public or assisted housing, and it is this kind of setting that the problem of threatened and intimidated witnesses is most acute. None of the participating organizations has received any additional funding or personnel for the implementation of the program in the District of Columbia. The Department is requesting resources for the United States Marshals Service, the United States Attorneys and the Criminal Division to implement a pilot program outside the District of Columbia.

The STPP would bridge the gap between the long term witness protection program and emergency witness assistance program. The long term witness protection program provides witnesses with a new identity, relocation and housing, living expenses, employment assistance, and other services isn't necessary in cases where the threat will dissipate after the defendant has pled or a verdict is issued.

The STPP operates under the same legal authority as the long-term witness protection program, but is designed to provide a more limited range of services. An Assistant United States Attorney must sponsor the witness into the program. An application to admit the witness is submitted to the Department. Once admitted to the program, participants (and family members, if necessary) are relocated out of town for a period of time, usually six months to a year. While they are out of town, the Marshalls Service provides subsistence to participants.

In response to a survey, FBI field offices reported a number of threatened witnesses requiring assistance in the past two years ranging from zero in Honolulu to 73 in Washington, D.C. Baltimore, Boston, and Miami each reported in excess of twenty witnesses.

ANTICIPATED RESULTS

Improve the availability and quality of testimony of witnesses in violent crime prosecution.

A. Uata Validation and Vertilication:

Data Collection and Storage: Measurements for this goal includes data from the United States Attorneys' monthly Resource Summery Report System (USA-5).
The USA-5 summerizes the use of personnel resources allocated to USA offices on a monthly basis. Also, data conses from the Legal information Office
Network System (LIONS). LIONS allows incitividual districts to maintain information on pending work loads on the database and produce a variety of
reports, such as, criminal matters, cases and appeals.

Validation and Verification: Before data is entered in the system, data is reviewed by knowledgeable personnel (such as supervisory attorney or legal clerks). In each district, LIOHS has an on-line error edit that prevents invalid code entry or dates. The error list is reviewed monthly.

Data Limitations: Error edit/lists cannot be used as a sole quality control device since they can only ensure that valid codes are reported in each field.

There is no way to determine that a record has been classified and reported correctly. In an effort to mitigate data limitation, attorneys and support personnel must be held responsible to ensure that local procedures are followed for maintaining the training of the system.

8. FY 1999 Performance Report: The United States Attorneys continue to prosecute the most violent criminal offenders under the Attorney General's Anti-Violent Crime Initiative and through use of the anhanced criminal provisions of the Violent Crime Control Act of 1994. The United States Attorneys field a total of 7,392 violent criminal cases against 9,175 offenders during FY 1999, representing a seven percent increase in the number of cases fried when compared to FY 1998.

C. Issues Affecting Selection of FY 2000 and 2001 Indicators:

In contrast to declining National Violent Crime trends, violent crime in Indian Country has riser significantly in recent years. The projected performance indicator for FY2001 is based on the assumption that the requested workyears received will result in an overall increase of cases being handled by United States Altomeys.

A. Data Validation and Verification:

Data Collection and Storage: Measurements for this goal includes data from the United States Attorneys' monthly Resource Summary Report System (USA-5)
The USA-5 summarizes this use of personnel resources allocated to USA offices on a monthly basis. Also, data comes from the Legal Information Office
Network System (LIONS). LIONS allows individual districts to maintain information on pending work loads on the database and produce a variety of reports, such as, criminal metrics, cases and appeals.

Validation and Verification: Before data is entered in the system, data is reviewed by knowledgeable personnel (such as supervisory attorney or legal clerks) in each district. LIONS has an on-line error edit that prevents invalid code entry or dates. The error list is reviewed morthly.

Data Limitations: Error editiats cannot be used as a sole quality control device since they can only arouns that valid codes are reported in each field.
There is no way to determine their a record has been classified and reported consciby. In an effort to mitigate data limitation, attorneys and support personnel invisit be held responsible to ensure that local procedures are followed for maintaining the integrity of the system.

B. FY 1999 Performance Report:

United States Attorneys (USAs) directed substantial resources to the prosecution of narcotics and OCDETF cases. The cases represented 34% of all cases (fed during FY 1995. A total of 18,617 cases were filed against 29,846 drug defendants classified under the Narcotics and Dangerous Drugs (NON-OCEDETF) and OCDETF program categories. This represents an increase of ten percent in the number of cases filed and eleven percent in the symmetry of defendants filed when compared to FY 1998 and the highest number of drug cases and defendants filed over the past seven years.

C. Issues Affecting Selection of FY 2000 and 2001 Indicators:

The projected performance indicators for FY 2000 and 2001 are based on the assumption that the requested workyears received will result in an overall increase of cases handled by USAs.

DECISION UNIT/PROGRAM: UNITED STATES ATTORNEYS

A. Data Validation and Verification:

Data Collection and Storage: Measurements for this goal includes data from the United States Attorneys' nonthly Resource Summary Report System (USA-5). The USA-5 summarizes the use of personnel resources allocated to USA offices on a monthly basis. Also, data comes from the Legal Information Office Network System (LIONS). LIONS allows individual districts to maintain information on pending work loads on the database and produce a variety of reports, such as criminal matters, cases and appeals.

Validation and Verification: Before data is entered in the system, data is reviewed by knowledgeable personnul (such as supervisory attorney or legal clerks). In each district, LIONS has an on-line error edit that prevents invalid code entry or dates. The error list is not reward monthly.

Data Limitations: Error edithists cannot be used as a sole quality control device since they can only ensure that valid codes are reported in each field. There is no way to determine that a record has been classified and reported correctly. In an effort to mitigate fatts limitation, attorneys and support personnel must be held responsible to ensure that local procedures are followed for maintaining the integrity of the system.

B. FY 1998 Performance Report:

USAs handled a myriad of White Collar Crime cases during FY 1999. In all, 6,558 cases were filed against 8,670 defendants charged with white collar crime. Some priority White Collar Crime prosecution areas are: Computer and Intellectual Property Crime - during FY 1996, USAs filed 104 computer crime cases against 148 defendants. This represents a 22 percent increase in cases filed and 28 percent increase in defendants filed when compared to FY 1998. Child Exploitation and Pomography - USAs filed 847 cases a 17 percent increase when compared to FY 1998. Health Care Fraud - USAs filed 370 cases lagainst 504 defendants. This represents a 16% increase in cases filed and 16% increase in defendants filed when compared to FY 1998.

C. Issues Affecting Selection of FY 2000 and 2001 Indicators:

On August 11, 1999 the Attorney General approved a new enforcement initiative to protect infallectual property rights. Computer-aided attacks on government and corporate entities are growing rapidly. The performance indicators for FY 2001 are based on the essumption that the requested workyears received half required increase of cases being handled by USAs.

A. Dala Validation and Verification:

Data Collection and Storage: Measurements for this goal includes data from the United States Attorneys' monthly Resource Summary Report System (USA-5)
The USA-5 summarizes the use of personnel resources ellocated to USA offices on a monthly basis. Also, data connection the Legal Information Office
Network System (LIONS). LIONS allows Individual districts to maintain information on pending work loads on the database and produce a variety of records, such as criminal matters, cases and appeals.

Validation and Verification: Before data is entered in the system, data is reviewed by knowledgeable personnel (such as supervisory attorney or legal clerks) an each district. LIONS has an on-line error edit that prevents invalid code entry or dates. The error list is reviewed monthly.

Data Limitations: Error edithists cannot be used as a sole quality control device since they can only ensure that valid codes are reported in each field.

There is no way to determine that a record has been classified and reported correctly. In an effort to mitigate data limitation, attornays and support personnel must be held responsible to ensure that local procedures are followed for maintaining the integrity of the system.

B. FY 1999 Performance Report:

The Department will continue to identify, penetrate and dismantle major cholinal enterprises by emphasizing enterprise enforcement strategies largeting traditional, as well as non-traditional organized crime organizations. In FY 1999 the number of organized crime cases filed increased by seven percent compared to FY 1998.

C. Issues Affecting Selection of FY 2000 and 2001 Indicators:

The Productivity/Efficiency measures are expected to remain fairly consistent throughout the projected period even if the requested workyears are received because the additional workyears will not be used to reduce the workload on existing attempts, but retrieve to increase the overall number of cases being handled by the U.S. Attempts. The projected performance indicators for FYs 2000 and 2001 are based on the essumption that a consistent level of resources will remain as the base for the program.

A. Data Jation and Verification:

Data Collection and Storage: Measurements for this goal includes data from the United States Attorneys' monthly Resource Summary Report System (USA-5)
The USA-5 summarizes the use of personnel resources attocated to USA offices on a monthly basis. Also, data comes from the Legal Information Office
Network System (LIONS). LIONS allows individual districts to maintain information on pending work loads on the database and produce a variety of
reports, such is, criminal matters, cases and appeals.

Walidation and Verification: Before data is entered in the system, data is reviewed by knowledgeable personnel (such as supervisory attorney or legal clerius). In each district. LTONS has an on-line error edit that prevents invalid code entry or dates. The error list is reviewed monthly.

Data Limitations: Error edititists cannot be used as a sole quality control device since they can only ensure that valid codes are reported in each field.

There is no way to determine that a record has been classified and reported correctly. In an affort to mitigate data limitation, attorneys and support personnal must be held responsible to ensure that local procedures are followed for :naintaining the integrity of the system.

B. FY 1999 Performance Report:

United States Attorneys (USAs) filed 11, 580 immigration cases against 12,650 defendants. This represents growth over two years of 67% in the number of cases filed and a 65 percent increase in the number of defendants filed. United States Attorney Offices also devoted 111 attorney workyears to immigration cases, an increase of 71 percent when compared to FY 1997.

C. Issues Affecting Selection of FY 2000 and 2001 Indicators:

The Productivity/Efficiency measures are expected to remain fairly consistent throughout the projected period even if the requested workyears will not be used to reduce the workload on existing attorneys, but rether to increase the overall number of cases being handled by U.S. Attorneys.

PERFORMANCE MEASUREMENT TABLE

DECISION UNIT/PROGRAM: UNITED STATES ATTORNEYS

Department of Justice Core Function: Investigation and Prosecution of Criminal Offenses

Strategic Goal: 1.3 Reduce explonage and terrorism (sponsored by foreign or domestic groups in the U.S. and abroad when directed at U.S. citizens directed at U.S. citizens in institutions)

A Deta . ation and Verification:

Deta Collection and Storage: Measurements for this goal includes data from the United States Attorneys' morethy Resource Summary Report System (USA-5)
The USA-5 summarizes the use of personnel resources allocated to USA offices on a monthly basis. Also, data comes from the Legal Information Offices
Network System (LIONS). LIONS allows individual districts to maintain information on pending work loads on the database and produce a vertally of
reports, such as, criminal matters, cases and appeals.

Validation and Verification: Before data is entered in the system, data is reviewed by knowledgeable personnel (such as supervisory attorney or legal clerius) an each district. CIONS has an on-line error add that prevents invalid code entry or dates. The error list is reviewed monthly.

Data Limitations: Error edi/fists cannot be used as a sole quality control device since they can only ensure that valid codes are reported in each field.
There is no way to determine that a record has been classified and reported correctly. In an effort to mitigate data limitation, attorneys and support personnel must be held responsible to ensure that local procedures are followed for maintaining the intentity of the system.

B. FY 1999 Performance Report:

The United States Attorneys field or responded to a total of 75,603 civil cases. These cases include those filled or responded to in the U.S. District courts, U.S. Bankruptor courts and state courts. Of the total, USAs field suit on behalf of the United States in 7,556 cases or 10 percent of all civil cases. The USAs defended the United States in 50,498 cases or 57 percent of all civil cases.

FY 1999 ACTUAL INFORMATION WILL BE INCOVIDED BY THE SIND OF 2ND QUARTER BY 2009. FY 2009 AND FY 2009 PLAN WILL BE CONDISTENT WITH FY 1999 ACTUALS

C. Issues Affecting Selection of FY 2000 and 2001 indicators:

The measures for Productivity/Efficiency for the most part will remain fairly consistent, except for Defensive cases handled per attorney workyear, which we project will bright to decrease with the increase in workyears. Civil defensive is unique in that we have no discretion in declining these cases. All collecting decreases with the classes for collecting increased positions, the U.S. Attorneys hope to reduce this caselload to a more manageable level so that the Assistant U.S. Attorneys can best be utilized in representing the United States. Therefore the caselload per Assistant U.S. Attorneys should decrease "lightly or more resources are received. This chart does not represent the total civil program for the Offices of the United States Attorneys, but rether includes some key ("of inhightives." Therefore, workyear percentages will not total 100%.

PERFORMANCE MEASUREMENT TABLE

DECISION UNIT/PROGRAM: UNITED STATES ATTORNEYS

Department of Justice Core Function: Protection of the Federal Judiciary and Improvement of the Justice System Strategic Goal: 6.2 Enhance the level of assistance provided to crime victims and witnesses in an affort to promote increased participation in the prosecution of criminals.

A. Deta . . . detion and Verification:

Ches Collection and Storage: Measurements for this goal includes data from the United States Attemeys' monthly Resource Summary Report System.
[USA-5]. The USA-5 summarizes the use of personnel resources allocated to USA offices on a monthly basis. OLE data is reported from a data system icalled People-Ware - a student roster database. Responses are based on an evaluation by every student.

Validation and Vertification: Before data to entered into the system, it is reviewed and approved by knowledgeable personnel. The information is vertified and updated periodically.

Data Limitations:

B. FY 1999 Performance Report:

OLE trained 10,820 students in 261 courses and an additional 2,250 students were trained through OLE's distance education programs.
OLE also hosted staffs from twenty-four USAOs and EQUSA for Management Team Training.

C. Issues Affecting Selection of FY 2000 and 2001 Indicators:

The projected performance indicators are based on the assumption that a consistent level of resources will remain as the base for the program.

United States Amormeys Salaries and Expenses Justification of Adjustments to been (Dollers in thousands)

	Perm. Pos.	Work- years	Amount
2001 pay raise. This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$31,459,000, represents the pay amounts for three-quarters of the fiscal year plus apperopriate benefits (\$23,556,000 for pay and \$7,903,000 for benefits totaling \$34,459,000).			\$31,459
Annualization of 2000 pay raid: This pay annualization represents first quarter amounts (October through December) of the annotated 2000 pay increase of 4.8 percent effective January 2000, and, for three-quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and the approved increase of 4.8 percent. The annotating requested \$19,183,000 represents the total annualization of pay amounts for the fiscal year plus appropriate benefits (\$14,426,000 for compensation and \$4,757,000 for benefits)	••		19,183
Without rade increases. This request provides for the expected increase in costs of within-grade increases for slow or no growth components for FY 2000. This increase is based on an accurate model of the Department's employee population, which includes numerous factors such as anticipated pay raises, adjustments to include three-year stription or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$1,399,000 for pay and \$322,000 for benefits.	•	·	1,721
Administrative Salary Increase: This request provides for the annual pay adjustment of administratively determined salaries for the Assistant U.S. Attorneys occupying ungraded positions in the U.S. Attorneys offices (\$3,573,000 for pay and \$822,000 for benefits totaling \$4,395,000).			4,395

United States Attorages Salarite and Expenses Justification of Adjustments to bess (Dollars in thousands)

,	Perso. Poe		Work- years	Amount
Transfer of CSRS amployees into FERS retarement systems. This request provides for the increase is Federal Employees retirement system (FERS) costs, based on the transfer of Civil Service Retirement System (CSRS) couployees to FERS, as sudionized by the FERS Open Enrollment Act of 1997, and the open sensor that run from July 1, 1998 through December 31, 1998. This increase is base on the number of employees who have transferred to FERS, the grade of employees, and the corresped Government cost of FERS benefits. The request includes \$187,000 for benefits.			ib	\$187
Increased Federal Health Insurance Costs. This request provides for the increase in agency contributions to Federal employees health benefits. In 1999, Federal health insurance premiums, including agency contributions, increased approximately 10.2 percent. In 1999, Federal health insurance premiums, including agency contributions, increased approximately 10.1 percent. This request the Government best increased substantially. This mercase is based on the "increased" Government cost of Realth Insurance. This request includes \$2,727,000 for these costs.		***		2,727
General Services Administration (GSA) rest. GSA will continue to charge remal reass that approximate those charged to commercial tension for equivalent space and related services. The requested increase of \$4,239,000 is required to smoot our commutment to GSA. The costs associated with GSA rent were derived through the rate of the automated system, which uses the latest investory data and rates reflecting a 5 percent increase over 2000 levels.				4,239
Legae Experiment: GSA now requires all agencies to pay relocation costs associated with lease expiration. Based on prior experience the Department associated with new office relocations caused by the expansion of leases in FY 2001. No funding is requested for any build-out costs associated with lease expirations. Funding of \$389,000 is requested for any build-out costs associated with lease expirations. Funding of \$389,000 is requested for the United States Attorneys.				88 9

United States Attorneys Salaries and Expresses Justification of Admirtments to bear (Dollars in thomands)

	Perm. Pos	Work- years	Amoust
Anienna Fees GSA will charge the Department anienna fees in FY 2001. The fees includes all current anienna's utilized by Justice components that have anienna's atop their buildings. Funding of \$15,000 is requested.			\$15
Assistent symposium: This increase reflects the estimated billing from the Department of Labor for the actual costs in 1999 of employers' accident compensation, which will be billed in 2001. The 2001 increased cost will be \$319,000.			319
General Services Administration (GSA) Blue Pages Previously, GSA has paid for all canonivide Government telephone book listings through the GSA II percent FTS overhead rate. As a result of the National Parmership for Reserventing Government (NPR/PGSA Blue Pages Project, the funding for these listings has been removed from the overhead rate, and agencies are being billed for actual costs incurred. The Department's FY 2001 estimated costs total \$282,000.00. Funding of \$32,000 is requested for the United States Attorneys.		,	12
Travel Management Center, Fees— In the past, travel management services were provided at no cost, and the Department received rebutes based upon ticket sales. However, current practices in the travel industry have ended this process. The new contracts will not provide enhances and will carry fees for each ticket, hotel, car and other reservation made. The Department's cost for travel management center fees is extrasted at \$2,500,000.00. Funding of \$70,000 is requested for the United States Attorneys.			70
<u>General pricing level adjustments.</u> This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against those sub-object classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.			3,114

National Archergs and Records Administration (NARA). The Office of Management and Budget directed NARA to convert its direct-funded records center program to a fully restributeable program by FY 2000. This proposed legislation mandates that NARA at to remain the sole source for agency records center services, through FY 2002, for agencies currently using its services. In 2001, NARA activates that these charges will be increased by 2.5 percent. The Department's FY 2001 estimated costs total \$6,599,584, an increase of almost \$300,000, based on current records manufactured by NARA. Funding of \$41,000 is requested for the United States Attornoys.		 N _{req}	\$41
<u>Vanonal Libration Support</u> - <u>Beer Restoration</u> . As increase of \$2,590,000 is nuccessary to ensure that sufficient funding is available for the effective use of the best available management practices, including current and new information technology, that will interove program performance and overall efficiency.			2,590

USTP Goal #5
 The United States Trustee Program will maximize the return of estate assets to creditors by maintaining and promoting uniform for and expense guidelines relating to the employment of professionals and others in the landgraphty system, as well as other forms of professionals.

USTP Goal #4 The United States Frustee Program will be a resource for accurate information and practical analysis about the operation of the bushcraptcy system.

The Program's four long-range goals provide the basis for its annual performance plans.

other abuses

If the Budget submession does not take man account the substantial new duties the Program would have to perform if the Bankruptcy Reform Bills currently under consideration in Congress are enacted.

8. Highlights of 1999 hillmion ("ritical Results

The following discussion describes some of the uchies criteries of the U.S. Trustee Program in relation to its mission and long-range goals. It should be noted that the Program is experiencing a shortfall in its fundang, as a result of a decline in chapter 11 quarterly fee collections in EV 1999. The Program took concepting amount in EV 1999 to address the shortfall is insposing a hearing freeze, relacing our fusion Consolidated Office Notes (LCON) office automations support and help death by two-dairds, consoling the development of our Case Management Touchose, cluminating a number of training programs, and making case is virtually all discretionary aparaling categories. The practical result of the shartfall, however, is that the Program has affected the Program's ability to reach the goals is set for fased year 1999, and will likely afflect those set for fased years 2000 and 2001. Yet, we are continuing to make progress in achieving our long-range goals. The following describes some of our occumplishments, organised by long-range goals.

USTP Could! Ensure that cases more effectively and efficiently through the bankruptcy system.

The General Accounting Office aimed as a July 1994 report that "at alreast every level of case size, the longer it case taken to close the armaller the percentage of total receipts paid to creditors and the larger the percentages of receipts paid to professional feet." U.S. General Accounting Office, "Bookstoper, Administrations: Case Receipts Pool to Creditors and Professionals". July 1994, 18-17. The U.S. Truster Program works to name that cases are administrated promptly, effectively, and fairly. Timely administration of Nankrymers cases is critical to the integrity of the hydrogery restern and for the constraint distribution of Engletic Projectors.

Chapter 2: To ensure that the approximately 1 million chapter 7 cases filed each year are effectively and efficiently moved through the bankingtory system, the Program has implemented a comprehensive inversight process whereby we note and evidence private trusters, follow up on deficiencies, others that old cates are closed principly, and notice action when private inverses an invate private trusters, follow private inverses accordance from the private following the state private private for a first reports (1 H Rs) and trusters interesting for all next cases. The first private for all 1,200-plant good frusters. In addition, 24% of all trusters interesting are closely reviewed such were either through Oth and to on a six manuscripts. We program normalise.

- In addition, Program staff review every cose before it is closed to ensure that all suses have been disclosed and that sease funds are properly paid out to creditars. They participate in thomsonds of asset classes, file pleadings and objections, and appear in court on a daily basis. Finally, Program staff spand a considerable national time identifying undividuals who have filed under chapter 7, yet are not legally entailed to its protection, and making matricial in convert the cases to object 33 stage opinion repayment plans, or to have the case dominated.
- As a result of these oversight efforts, lodey there are only 200 cases that are over 10 years old, so opposed to the approximately 4,000 chapter 7 cases that had been impering in the opposite it 1992. In addition, only 3.9 % of the total caseload was over three years old in December 1999, compared to 8.2% in January 1992.
- Considering that chapter 7 (Hings reacted over 1 mileting for FY 1998 a 29% immunes in filings over FY 1993 the reductions in this mateliar of cases or making and 10 years old clearly shows the Program? So scores in mileting it objective to help effectively and effectively more cases through the behaviorapy system. And, considering that this 29% increase in filings is and with a corresponding 43% increase is delibra susceined with those cases, it is evident that the Program must continue by effort to have those cases to be evident that the Program must continue to affect the hove those cases to be evident that the Program must continue to affect the house cases are properly and promptly administrated to maximize the funds distributed to creditors. In FY 1999, now case flyings reached source in the Program staff's possibleness and constitution to our everywhich efforts.

Chapter II; Since the nationwide expansion of the United States Treated Progents from 18 districts to 83 districts, chapter 11 cases have been procumed more quickly and have nucleat successful on conclusions. Between 1970 and 1986, only about 17 percent of chapter 11 cause resoluted in a confirmant plan or reasynaments. Blace 1989, the confirmant plan are reasynaments. Blace 1989, the confirmant plan are reasonable 25 precesses each year, and in now above 20 percent (see Figure 1). More than 60 percent of all chapter 11 cases are other converted, dissultant.

or confirmed within the first year of filing; over 90 percent of them are disposed of within two years.

[1] S. Trustees have been unsymmental in moving these cases through the system. They recent with the debtor shortly after a case in filed to make ture the debtor known.

> Chapter 13: United States Trustness exposes and exporters chapter 13 standard trustness. and monetor and supervise cases under chapter 13 of Tide (1). The Program is also charged with enguring that manding trustees adhere to fiduciary standards. Our goal is to establish a system that provides for a thorough, economical, that and expeditions administration of chapter 13 cases

- The number of chapter 13 cases has increased degrantically in recent years, with myer 700,000 cases open at the end of fiscal year 1998. Notably, the percenting of cases that are over 50 months old has continually decreased during the last four years. For the most recent year data is available, flacal year 1996, only 0.50% of the chapter 13 cases are over 60 months and as opposed to 0.95% four years ago. Also, funds that flow through chapter 13 trust econotions have increased by almost 200% during the past decade, including an increase of over \$1 billion in the past 4 WHITE.
- Finally, the Program issued a revised Hamiltonk for Chapter 15 Standing Frances. The revised Randbook provides more thorough case administration guidance and operational policy for standing treatme.

Figure 1

Training: Durant FY 1999, the Program worked hard on as long-term need to develop a comprehensive training program for both Program emphysics to well to mainly and planding trustees. A major part of that goal, was met as February 1999, when the National Bentzuptry Trusting Institute spend its doors within the National Advectory Course in Columbia, S.C. The factions's conditionant provided a personnent site for a comprehensive employee training program as well as a national content for achievable in hundranter. With the processed participation of judges, logal scholurs, practitioners, and private treatests in addition to the experienced staff of the BOUSA, the leatitude will feater the professional development of Program personnel and the integrity of the bankrunter system.

In addition, the Program and the Chapter 7 private trustees developed and provides training continue for newly appointed trustees. This training is part of a long-term offert to devotes courses and materials that will provide continuing to new and experienced treatmen, and identify and address new jetters in bandwaters administration.

To further enhance hash representations and education the Program contributed articles for, and beload coordinate the publication of, an inter of the BOUSA's.
 <u>USA Dulletin</u> between the envelopment and protect water of hashruptery fraued. This issues was describeded to all U.S. Anometry's offices and to other law enforcement agreement, and is requisitly made a salebyle at training sections.

"Entert" Evants: In order to imprive upon its effects of entering that cases move effectively through the bankruptcy system, the Program also experimented with the idea of using a train of "experts" to ansest a round Program offices on partial Program offices on partial program offices on partial program offices on partial program offices on partial program offices on partial program offices on partial program offices on the cases as the cases of the program offices on the cases of the partial program offices on the cases of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program of the partial program

USTP Goal #2: Empre that parties aftere to the standards of the law and notice for embezziements, frond, and other above.

The need for integers is particularly resonant in harderips, because the system depends on homesty and full disclosure by debors, creditors and professionals in order to resolve disputes and in distribute manay and profess. Therefore at EY 1999, the Program continued at efforts to combat abuse of the bunkruptcy system by increasing its contacts with feelers, and less allow enforcement agencies to help reduce misconduct and frond in bunkruptcy, and to increase the number of civil inforcement actions filled in response; to such misconduct and fraud

The establishment in EV 1999 of a National Hankruph's Friend Working Urinap marked a significant milestoric toward this performance good. The National Working Critique me ludes representatives from the Programs. the U.S. Adversey's offices, DOJ's Critique ID Prosonal Divisions, the File (IE-CD), the Postal Impaction Service, the Esternative Office for U.S. Adversey's offices, and the Impaction Service, the SEC, and the Impaction Service ID IN-10. Vestrams Affairs, and the Commissions: Financial Commission. The sections of the opening group will consider the interference in Naukrupsky frault course, executions on the control investigations, ansatt districts in establishing focal buildings from the foreign state of the Control of the interference of the interference in the Interference in the Interference in Control of the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference in the Interference

The value of coordination among him enforcement agricies to imper abuse of the bankruptcy system in demonstrated by the successful actual trumphs in recent spain against access major retailers who engaged in improper debt collection practices. For example, the United States Trustee Program, the U.S. Attempy's office in Beston, the PRE, the Federal Trade Commission, and the State Attemps General journly devised criminal and civil enforcement remarks against Sears, Restrict & Co., columnating in Buses' Federality 1999 agreement to pay a \$40 million criminal practice, and the largest ever paid in a bankruptcy from cone. Sears had already paid over \$100 million in requirement to the collection with civil actions in the case.

Criminal Enforcements: Personnel: Personnel to the goal of reducing bankruptcy freed, the Program continues to increase the manher of motions it refers to the United States Antenneys for procession for bankruptcy freed and related crimins. In FY 1999, the Program referred 1,291 cases of empected bankruptcy crimen, which can range them solutively straightforward conceptement of service to complex "temberspicy foreclosure ocanis" designed to chase scores of financially distressed bonneousness and of finite property.

Successful processions by U.S. Attorneys involved both small large chans and served as a determinal for those who may consumplate bankruptcy fixed. The determination of critical because of the number controlled priorities for pronouncements resources. The following examples of bankruptcy fixed convictions were channel to illustrate the range of bankruptcy fixed convictions were channel to illustrate the

Canceshine Assays: In the Southern District of Florids a debtor from nentenced to 97 excepts imprisonment and ordered to pay more than \$5 million restitution after his October 1990 conviction on seven counts of benkrypery franck, bank freed and steamy instituting, During a Jama 1990 bond benering, the debtor payaned hismost believe the United States Maggintain Court when he restified that he find no interest in stocks or other vanets on the Turks and Cateco believe, in the half around 255 million.

wheth of shick in a publicly traded cumpusy. In addition, although he claimed he was indepent and could not pay restriction, he controlled more than \$10 million in outsite that he had by placing them in the names of family members and off-shore shell corporations. Het bankruppey convictoors resulted from a 1992 bankruppey in which he claimed in ce \$7.2 million in rest estate sale profits. The debtor laundered approximately \$250,000 of these profits by transferring the family to his wife and then using them for fiving expenses. The bank frood conviction resulted from the debtor filling false financial sufferences to obtain a \$500,000 kiso that he did not repay.

- In D. (asher 1949), a debtor, in the Western Destruct of New York, was sentenced to 27 months in prison, three years supervisory release, and ordered to pay \$235,000 in restitution. Passed on two consistency or in the country of bankrupter, fraud. The debtor had fasted to disclose in his chapter? I schedules that he owned one immanace agoncy and say 47 percent destruction and officer in neighbor instance, essence.
- <u>False Claims</u> In the District of Arrowa, as individual pleaded guilty to two counts of bankruptcy fraud arising from his actions so a creditor in a chapter 7 bankruptcy
 case. The individual loaned \$50,820 to a married couple, obstaining an insecurity product promissory note in return. A first the appealer filed for the individual country in their property. He does not a purposity in take, a security insecurity in take, a security insecurity in their property. He does not a purposity filed their property.
- In July 1999, an athency, in the Lastern District of New York, pleaded guilty to two counts of backruptcy fraud arraing from the filing of two false proofs of claims on helial (et a licensus creditor. The attorney, an assessate with a chapter? hankruptcy trustee's law firm, admitted to embeggling \$117,000 from five bankruptcy estates.
- Serial Filtry: An inite which was sentenced to five years improvement and three years supervised probation, and ordered to july restriction in the minimum of \$43,000 following his convection for earlier place. First of the property case in the Western District of North Carolina, and the Entries of South via relina for the purpose of defracting eventors by delaying force losses and eviction proceedings. An attempt from the United States Truster's United by the Original Section of South via relina for the purpose of defracting that the defendence conduct challenged and compromised the integrity of the bankrupter years. The District Court found grounds for an upward department from the centericing guidelines based on the disruption to the bankrupter years.
- <u>Pettings Mills</u> In April 1999, the Destrict Court for the District of Arizona scinences a bankrupicy perition preparer to an mouths in prison on criminal counterpart for violating a January 1997 Bankrupicy Court order herring the individual from charging more than \$200 per case for his nervices about court approval of a higher fine. However, the District Court found that the milds shall continued to routinely charge almost \$600 per Chapter 7 case. The Bankrupicy Court had previously fixed the industrial shall be corporations.
- Egectoracy Scame. In the Northern District of Texas, an individual was found guilty in June 1999 of 14 counts of bankruptcy fraud. The individual pertunded homeowners facing foreclosure to transfer a part interest in their horses to companies be controlled or individuals working with him. The companies and individuals would then file for hankruptcy to delay foreclosure. Homeowners paid the individual a \$500 "net up" for plus \$500 per month, assuming he was working to indirem their mortgage problems. They lost their houses. His co-defendant was someomed in October 1999 to 13 months in jeil, three years supervised release, and ordered to pay \$23,959 or restraint for het role on the foreclosure steam.
- In June 1999, an individual in the Northern District of Celifornia was sentenced to 57 months in federal prism and 36 months expervised relates, and unforted him to pay more than \$50,500 is resistance, based on his conviction for mail finals, criminal contempt, and minute of a Social Security Number. The non-lawyer offered to use "lettle-known federal celled programs" that is, hank-uptcy filling to help individuals facing home foreclotuse. He typically charged \$500 is \$1,000 per case, but descined only part of his feet to the Basicancey Court.

Civil Enforcement: To supplement the layered resources available for federal criminal prosecutions, the U. S. Trustee Program also uses civil enforcement remadies to combat misconduct and fraud, including actions under Biankruptcy Code Section 110 to regulate the unaccupations activities of biankruptcy position proporers, actions under

Section 707 to discuss in convert a consumer debus's chapter 7 case due to lack of good faith or "substantial abuse" of the bankropsey system, and actions under Section 727 to receive or draw a debus's hard-native discharge

The Hardenquicy Returns Act of 1994 prior ideal the G.S. Trustee Program with an important new civil remedy. Congress enacted Section 110 to regulate the motorquislous acts sixes of those bankarpicy position prepares from lawyer who prepare bankrupicy peritions for a fee), who target poor and unconfusioned debiars lacking the resonance in sixtuan competent bankrupicy counsel. The United States Trustee aggressively enforces this action und since 1994 has filled documents of indication against bankrupicy enforces in serious resonances, with 765 filled in EV 1999 alone. The following enterprise illustrate the U.S. Trustee Program's success in enforcing the section 110 previsions:

- In Spect 1999, three hash rapicy pattern prepares and associated individuals were ordered by the Bankrapicy Court for the District of New Jersey to diagongs more than \$147,000 to Systems of their scheme and no pay first exceeding \$90,000. There is contacted the vactoria, offering to eliminate all doing and allow them is also with their house are anomalously in exchange for a \$3.00 fee. Most bankrapicy cases they first were distributed for failure to first complete positionian and exhabites.
- In August 1995, the Mankingues of our fire the Western District of Washington granted the United States Trainer's request to enjoin an attorney from continuing to practice hankings of all as a hankingnes patient property. The count above terred by to the Printer Court Committee on Discipline. At a hearing, the United States Ensieve established that the attornes with their finish part to the motivation for both hankingstey court. Instead, the prepared and against, on baladful for her electric, requests to part the filting loss in installments. In second instances, who never part the filting free, or the good the feet with NSF checks assessed on but must account. In at least one case, who aboved her chem's morely other payable to the Bankingtop Court, inserting her name at the payer and depositing it may be necessar. The attorney above his world a pattern of matternium to be; closely add their cases by failing to timely file cases, fathing to attend the more actively reviewing by conduct as a result of the United States Instate's referral.

Section 707(h) of the Hunkrupicy Ciscle periods a hankrupicy case to be discussed for substantial abuse. U. S. Teasters review debtors' cases for appropriate circumstances in which is more to discuss a case, for substantial abuse, pursuant to section 707(h). These motions involve a consideration of the distor's social circumstances, including the debtor's ability to repay excellents. In J.Y. 1999 the Program filed 3,025 motions under section 707(b). However, these motions motion operations of the Program's efforts under this section of the Hankrupicy Cinic. A national to survey in 1993 showed that, for every Section 707(b) motion filed, seven other cases required additional review and follow-up from the Program but were negotiated and resolved without the need to file a motion or objection. These negotiated cases and the work involved to resolve them are not reflected in the 3,025 motions noted show. The Program's efforts to Section 707(b) have a direct impact on the ability of unaccured cradition to be repaid. Because of the interest entering the United States Trustee Program, cases are directed into chapter 13, where sunsecured cradition receive monthly payments, or they are removed from bankrupity years protection in efforts a clickage, thereby allowing creditions to seek recourte against the distor. Several examples are noted below:

- In July 1999, the United States Trustee for the Central District of California filed a motion to dismiss under 11 U.S.C. § 707 (b) because the debters smaght relief under Chapter 7 despite the fact that they appeared in have the ability to repay a substantial portion of their listed debts with their not monthly income of \$4,077. The debters have superaced that appeared to be unreasonable, including \$2,000 per month for credit card payments, \$175 per tunnels for enarminament; \$225 per month for closing for only two people, one of whom does not work; and \$75 per stonels for day closing. After making appropriate reductions for the encreasive expenses, it was estimated that debters are monthly expenses totaled \$3,367, leaving \$1,510 per month encous disposable income. With this excess disposable income, it was estimated that the debters are up up to 80% of their \$11,183 management debters over five years. Consequently, rather than risk having their case of disposable income; their case of Chapter 23.
- To August 1999, the Bankruptcy Coart for the Southern District of Olds ground the United States Trustue's medica to dismine a Chapter 7 case for "substantial abuse" under Bankruptcy Code Section 207(b). The debtors, who were doctors, listed \$626,651 in unstrained imm-priority claims, about half of which was due to disficulture requiring after their home was foreclosed upon. The debtors reported a combined monthly income of approximately \$13,000, and monthly expenses of approximately.

\$12 600, including \$1.405 for food, \$1.100 for four vehicles, \$1.750 for college, and \$600 for private school. The Court concluded that the dictors were attempting to maintain the lifestyle they had before the advent of \$1000s reduced the doctor's income.

In Charles 1999, the Stankingtory Court for the Lissiem District of Texas granted the United States Trustee's motion to dismint the Chapter 7 case of a couple as a "substantial abuse" of the Hankingtory Code. The ruling barred the debtors from discharging more than \$78,000 is unaccured debt. The court applied a "stanking of the execumstances" test to find that these factors justified disminal of the case: the debtors' consisting monthly gross income totaled \$6,400. In addition, most year, the wife is use to receive an additional \$4.413 in thorship income from a structured settlement. The debtors' excessive monthly expenses included a \$325 jagramant to a 401(k) plans, \$745 for fixed five family of times and \$191 for a timeshare vacation condominum. Furthermore, the debtors listed an undocumented \$200 post-petition increase in monthly charitable contributions, and filed multiple amendments to their achievables, including amendments filed after the United States Trustee moved to dismiss and on the execution.

Another covil entirectivent remoty is 31.11.5.C. § 727, under which the Program can file a motion to object to discharge of a bankrapicy case, thereby designing the related unique table landscapes of a bankrapicy case, the table this action when a tehtor has faired to fully comply with expositionists and forth wader the Bankrapicy Code or has suight to defeated the system by concealing or transferring assets, destroying or failing to provide financial records, or making a failse code or statemants. In FY 1999, the program filed 252 complaints weder section 727. Again, this figure only represents a fraction of the cases reviewed under this section. Many other cases are resolved prior to the need for litigation, until by the Program instating an inquiry after reviewing the cases for possible violations under this section. Below are examples of several cases that did result in mixtures field studies received.

- In June 1999, the Bankrupics Court for the Central District of California entered a default judgment, revoking a Chapter 2 debtor's discharge based on the United Status Enusies's complaint filed under Section 727. The complaint charged that the debtor failed to accurately list the value of his insurance company, leading the Chapter 7 trustee to believe it was worthless. One provide first meeting of creditors, the debtor sold his insurance business for \$140,000, even though he attributed no report in his harkrupics, schedules and conformed that to the trustee. In fact, even before filling for bankrupicy the debtor had begun negotiations in nell the business. The debtor failed to answer the United States Trustee's complaint, leading to the default industrient.
- Also in June (999, a Central District of California debtor agreed to a judgement designing feer bankruptcy discharge, based on a Section 727 complaint flant against her by
 the Chapter 7 stustee. The debtor allegedly converted \$400,000 in customer deposit received by her stavel agency. Criminal procuedings are now pending against her.
- In July 1999, the Bank copicy Court for the District of South Carolina denied a debtor's bankruptcy discharge in an adversary proceeding bringful by the Cohambia, S.C., office of the United States Trustee: In a matter of first impression for the district, the Bankruptcy Court used the theory of continuing concentrates to extend Bankruptcy Code Section 227(a)(2)'s one-year time bar. The debtor made a fishe outh during a Rule 2004 examination in his personal bankruptcy case concentrate his receipt and use of corporate funds during his business. bankruptcy case: engaged in the continuing concentration of the collection and minisperquisions of a business account receivable valued at approximately \$30,000; failed to disclose his interest in a limited partnership; and concentrated his receipt of \$10,000 from the pursuestion his personal bankruptcy case.

USTP Goal #3; Ensure that the return of estate pures to creditors in maximized by maintaining and promoting uniform for and exposur guidelines relating to the coupleyment of professionals and others in the hankruptcy system, as well as other forms of oversight.

The Program is continuing to review methods of reducing professional fiers in bankruptcy and enuming that the explaints of administrating a case are actual and accountry, as specified by statute. Every dollar that an aprent on administrative expension or professional fiers that does not must the "actual and accountry" test means that one lass dollar is

returned in creditors. This products of country attents to exceeding feet understanding for our bankrupacy system. The Program has standardized in the guidalized, purposed to a directive in the 1994 Bankrupacy Reform Act, and has implemented a prior program to test automated the review systems. In FY 1999, the Program collaborated with the chapter 7 provide resource to develop a new reporting form (Form 4) that provides a much more detailed brankdown of funds that requires disordants in a chapter 7 bankrupicy beposition. Then from will perswit closer sevelops of unity different types of physicists tands from the chapter 7 testes, such as payments, for professional services from sized by attentions, necessitates, and arctioneers.

The Program also monature concer to consert that conflicts of interest are not present. For example, in Fobreary 1999, following extensive discovery by the United States.

Treater, a debter's creditors, which made the atterney "not discontinuated and in violation of the debter's creditors, which made the atterney "not discontinuated" and in violation of the Bankruptcy Code. The Bankruptcy Come revoked the anothery's employment, deathored \$300,000 in requested feet and required the disgorgament of automatical states.

USEF (load #4; Ensure that the Program will be a resource for occurate, thorough information, and for practical analysis about the operation of the handwaystry system.

In FY 1999, the Program continued to improve its research, planting and status its capabilities through its Office of Research and Planting (ORP). The Program also continued to increase guidat access to rehable information shout the hostingstry system. Among other intentives, the Program made outjoe additions to its "on-high library of builtingstry intention, including statistics, press releases, administrative rules and decisions, case substitutes, handbooks, and the United Status Triation Manual; redusigned its FORA and Privary Act home made, and contributed light to verbates hosted by five of its 2 inclinate offices.

ORP also worked with many media meters, ranging from specialized bankruptcy publications to national TV never networks to provide the local information on the bankruptcy system. During EV 1999, Congress continued to consider and debate comprehensive legislation that would make major changes in the bankruptcy system. As in the previous year, the Progress worked chiefly with the Department and the Administration to provide inclinacial assistance regarding the various bankruptcy reform proposals before Congress. Similarly, is constituted with the Department of Junice's Office of Fields: and Office of Legislative Affairs to handle prote impairs about the Administration's national on the various bankruptcy reform (replaces proposals and consisted Progress and Office of Legislative Affairs to handle prote impairs about the Administration's national on the various bankruptcy reform (replaces proposals and consisted Progress and Cffice of Legislative Affairs to handle protection.)

ORP has conducted several expansed studies and venters reports on various bank naptcy-related topics, such as confirmation rates in chapter 11 cases and the defeated ability to pay at consumer chapter 7 cases. For example, ORP research law shows that the percentage of chapter 11 cases achieving confirmed phase has steadily increased furing the U.S. Transace's active participation in the cases. ORP staff have also contributed significantly to the important question of how changes to eighbility for chapter 7 fequidation-insight affect the amount of repayment exhibite for unsecured creditors. ORP's work in this area has received a feverable evaluation by GAO in a June 1999 report that companyed different studies addressing this issue.

In addition, ORP has provided Administration and Congressional staff with extensive information and technical assistance on the pending bankruptcy referes legislation. For example, ORP are as the U.S. Trustee's sense of contact for all insters involving debter education.

C. FY 2001 Performance Flor and Summary-level Performance Indicators

In FY 2001, the Program will continue to early out the pools noted in the FY 2000 Performance Plon. The Program will provide administrative support to assist in moving, court efficiently and effectively through the bankruptcy process. We will strive to minimum or robust the manufact of old cases remaining in the system, recognising that the

langer at takes to move a case through the system, the smaller the percentage of total receipts paid in creditors and the larger the percentage of motists paid for professional fees. Particular attention is all continues to be placed on motistering professional fees in bankruptcy, with emphasis as the increased use of computation motibals. For tracking and auditing the accuracy and appropriateness of fee applications. The Program will also work to essure dust parties to the bankruptcy process address of the law. We will profess for evolver/house, fraud and other disease. Accordingly, the U.S. Treater Program, will continue to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to inform leve entered to information or information entered to information or information, and feet, in order to maximize the return to excellent. Finally, while the Program is commonly its efforts to become a resource for accurate and thorough, information, or well as practical analysis regarding bankruptcy processes and operations summy of its automated efforts in these area have been cursoled due to bankgetney restrictions in FY 1999. Our goal to institute a member of automated inschain encountered indicators may not be acherical until FY 2000 and 2001.

UNITY Goal #1: Envery that cover more effectively and efficiently through the bankruptcy system.

In the U.S. Trastee Programs of V. 2011 Performance Plan, the Program has added now measures to help it track how well at meets its goal of emmang that coordinate effectively and efficiently iterately the hard-many system. Generally speaking, due to the correlation between case duration and administrative expenses charged by trastees, the hunges a case is in the system the less many; is as adable for creditive. Unnequently, many performance goals and indicators in this section are disagned to help the Program robust highly of time a case termins in the bank replays a stem. Other subgrads and indicators are designed to improve the Program's internal processes as well as the shift set of its employees.

Ensuring Cases are Moved Effectly six and Efficiently Through the Sankrunter System

In its efforts to ensure that chapter 7 and 13 cases do not longer in the system, the Program will my to establish what purcentage of random evaluations of 180 day reports, annual performance reviews. It's audits and field examination, will must effectively identify non-performing treatment and came that should be converted or disantanced. These cases requiring protons to dismiss or convert will be bracked and the percentage of successful motions will be noted. The Program also plans to track the number of non-passel treatment and management of soft casetions. Since most of non-passel treatment between the program and the postel due to performance problems, they have latter security to move their cases prorraptly through the bankruptcy system. It is critical that the Program number of the postel due to perform the property of the program to the continuer relation of non-passel treatment continuers and the program to the program to continue relation that the Program number of non-passel treatment of the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program to the program

Similarly, with respect to chapter II coses, the Program plans to continue its efforts to identify early intervention activities each as requiring the filling of financial data and the use of minal deleter interviews to determine the deleter's financial status. The Program will also admitfy which costs made a more pro-active approach to keep down on track or tany made to be converted to chapter 7 or 13.

Other efform to most those targets include the implementation of a pilot program to test the Program's model for impreving the suggesting of private transportant interpretable policies based on the results of a "Best Practices Review" achaduled for FY 2000, the problement of the National Bookruptcy Training Institute, and the use of "expect" assess that can be called upon for special assistance across regions.

Tecasing Oversight of Trustees

The first institutes inspecting overlight of trustees, is all begins in EV 2000. This institute is not only addresses USTP Gool #1, providing administrative appears to ensure that one office only and efficiently about the bookings by system, but is also necess USTP Gook 2 and 3, to ensure that parties adhere to the standards of the law and notice as for embryotic results and other aboves, and to wrate results to creditors.

Congress created the U.S. Trustee Program to provide oversight and supervision bookraptey case administration. The legislative hostery of the Businispity Refurm Act of 1978, P. 193, Sept. 2549. Let rust on House Report 95-595, contemplated that the U.S. Trustees would appreciate trustees, assert them in the performance of other dutes, no crew these actions, and see to it that the bookraptey laws are properly executed. With the creation of the U.S. Trustee Program, Congress natabilished one agency with responsibility for the administration of bookraptey general, to every as a "wested With the creation of the U.S. Trustee Program.

Consequently, the Program has devoted solvatantial efforts to enture that prevate trainers are held accommishe for fiduciary responsibilities. For example, the Program has implemented improper administration of cases, and conducted soldte and excises to figure trainers in the proper administration of cases, and conducted soldte and excises to figure trainers in the required instension in the private instance operation. If has above required instances in figure reports on the plants of their cases and private trainers of each case. The review of these reports, notice to sent and office a rost are removed intensive. In view of a together budget, it has been difficult for staff to beep pure with this workload. It is crucial than Program staff receive the tools necessary to accommiss, whether the problems that from the instances in intervention.

As a result, the Program will analyze the findings of its resience operations, as well as show conducted by the Department's Office of Impactor Quantul, to identify-branchis that may be decreed from largering as sustentially and regionally to destroyee a model to focus its evening to office antimothy and regionally to destroyee whether specific problems are endersor to surface verse treat prease or to specific areast of the country. It will work to develop a material understanding with private trustees regarding a hat constitute effective case administration and to improve on the existing model for measuring entires of trustee effectiveness, e.g., the level of the effects expected by those trustees to make extensed referrals or to resserv personnels for pulseastal abuse under action 107(b) of the Bendungtoy Code. Through those official the Program will descrip concrue that can be used to successfully identify in a targeted basis, hopes in accommissing that have the buildings of youthers.

Successful Practices

Another effort to superver the Program's internal administrative practices in the summare of any policies hasted on a "Secretaria" representative practices in the supervised of U.S. Training the Program forward in "Secretaria" Practices "Warring Group (SFWG) comprised of U.S. Training the Anistrat U.S. Training from these fives offices of similar supervised.

The SPWG was divided into subgroups in which offices of similar sape and caseful identified and shared their similar experiences with successful practices.

The national SPWG gathers the successful practices identified within its subgroups and dissensions to the information to all the AUST's and UST's flowingh.

"Second Process" measuremals. Examples of "Second-Inscription institutes in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscription in the Second-Inscripti

is PY 2000, the SPWO plans to expand its offerts from discominating recreated management practices to identifying best practices in the Program's day-in-day activities. With the development of its day-in-research capability and the restauge of its databases, the Program would have been able to collect god energyte information to research capability and the restauge of its databases, the Program would have been able to collect god energy information that the development of the Program is now Care Management Database, resulting from PY 1999 bedget restrictions, will pumpose the Program's goal of luning statemic policy and operations on rytishle, coupling information. Until the budget climate improves, the Program will movey employees for "Best Program" and compile the information managing. Then, in PY 2001, the Program is not a series of "Best Practices" policins during drived from the results of the review, which will provide our uttous yet and enalyse to the field with a behavior for necessarial execution.

Effects a Bankruster-Related Training

The Pringram after place to imprine the efficiency and effectiveness of its own employees and processes, by taking advantage of the National Bankruptcy Training Institute. INPITE in Columbia, S.C.—The grid is to use an established licition where standard courses can be offered to Program employees on various topics control to their day-ino-day respectively. See well as specialized courses in an asserted basis. Control will be designed with input from various sources uscluding the National Bankruptcy Fraud Working Circup, the Society of Practice Working Circup, the Program's Training Subcommittee, the American Bankruptcy Institute (ABI), the National Association of Bankruptcy Institute, and law enforcement organizations. The Institute was deducated February 9, 1999 and held in first Advanced Chapter 11 training class that week. A second class Advanced Chapter 7 training, say held in March.

"Experts" Traces

The remaining area identified in assist the Program in meeting its first goal of providing administrative support to revive cases efficiently and effectively through the hard-topic, you will be concept of "I sperie." I came. The Program stroduced the idea in its EY 2000 budget. It plans to metable a pilot project permitting the Program to draw on the specialized experience of its staff in such areas as analyzing financial data, wing prefa, or arguing cases. The Program envisioned that teams of experie would help to prevent "re-creating the it her?" except into an issue assess to a different bankruptcy forum. For example, a specialized criticity issues could be formed to provide crossed or to brigate an issue previously. Impacted or appealed in a different court or judicial district, or presenting shightly different facts. Employing this immovative approach, the 11S. Traited Program could use existing staff to help handle the caseload particularly whist-handled receiving visitions and expertage of its staff to help handle the caseload particularly whist-handled receiving to receive their that concerns one stem further.

USTP Goal #2: † neure that parties adhere to the standards of the law and police for embegatements, frond, and other phases.

Ensure that Criminal Violations are Identified and Referred to Law Enforcement Authorities

The U.S. Truster Program is increasingly heavy suged by others to the bankruptcy system - judges, trustees, and national creditor organizations - to do more to identify fraud and abuse and to ensure that its perpensions are task twiced. While the Program has identified many forms of bankruptcy fraud and abuse, there is little empirical evidence as to the extent of fraud within the x-to-term. There is reserved debecks about the extent of fraud within the x-to-term. There is reserved debecks about the extent of bankruptcy fraud.

In an effort to address this issue, the Program will improve its criminal referral database to track information such as, the mumber of referrals its receives from outside entities blue like course, trustees, debtors, and creditors, the number of criminal referrals the Program shouldes through its reviews of market 180-day reports, Trustee interim Reports. (TRA) and Fund Reports (TFRs). IG audits and field examinations, the number and type of criminal referrals the Program makes; the number referrals that lead to arrange course; and the number and type of convertions.

Program employees perform an initial review of all referrals received from outside sources; if warranted, the Program refers the complaint and supporting documentation to the FBI and/or the U.S. Attorneys office for further action. In addition, all criminal violations identified by Program shift are referred to the FBI and/or the U.S. Attorneys.

Through the data compiled in the criminal referral database, the Program's hopes to answer a range of questions including: if a referral did not result in a prosecution or conviction, who that due to the Program's point research or follow-through? If no, how can the Program renow in final referral procedures? The Program's goal is to ensure that all referrals are increase; are properly researched and supported, and lead to prosecution and conviction.

Work with Other Benkranter-Related Organizations and Law Enforcement Groups to Curtail Front and Other Abuse of the Bankranter Protests

With the recent substantial increase in hashruptcy filings and the increased interest in burkriptcy on the part of Congress, the public, and the news modific, it is appropriate that the Program with it is proceed in the Program with it is appropriate that the Program with it is proceed to be during the process from with participants. The dislogue could take the form of a national symposium on bankriptcy fraud with participants from the bushriptcy beach and ber, national circlaim ingularizations, academia, private trivities, and federal agencies that play a role in identifying, investigating and princetting bankriptcy fraud. If the Programs is to reach its long-range goal in femaning that parties adhere to the standards of the law, it must look at new ways of climinating abuse and neck the active support of all parties suffer to the standards of the law, it must look at new ways of climinating abuse and neck the active support of all parties suffer to the standards of the law.

The Program's efforts to date include its prevail role in the formation of a National Bankingstey Fried Working Group (NBFWG) comprised of members from the U.S. Attorneys: Offices, and the Executive Office for U.S. Attorneys: The NBFWG hald institut investing in March (1997 and a second increme in July 1999. It plans to meet semi-annually. The NBFWG will be instrumented in developing, training programs, consultating national found issues, and providing assistance to distinct that have not established local a Bankingstey Fraud Working Group. The Group has helped organise for all working group in approximately. To puls, addiction or adjuster to distinct the all judicial distincts have a local working group by the close of FY 2001.

The NIII WAS training circles in high a May training seven at the USI Academy in Quanties. Var for which the Program provided the course minimal and two AUSTs as instruction. The course covered basis, bankingto, I said committee, uncertagate exchanges, a survey of circl bankingtoy law for criminal investigators, typical friend achieves, undercover to language to bankingtoy friend solves, tracelyman scame, and interact friend. The local Bankingtoy friend Working Groups have also appeared training courses on certagate appear to his local Law enforcement against your collection, and Amasteri U.S. American. The MBFWG will develop formal training course for the Program's National Handringtoy institute in Columbia, S.C. In assist in this effort, it formed an education subcommittee during its associal monitoring the NISE WG also conducted freed training and developed a bankingtoy friend newsletter.

In addition, the NSFWG will be responsible for recking all hardcupicy fraud convictions, and has aptent automated treat over the part year developing a method to effectively appeare this references. These data are not only separate to the Department, but also satest the Programs in necessaring inquiring fram the private but and the match. Landy, Program members have written extensive materials in educate IND staff and the public about bankruptcy frame. These materials have been used by the U.S. America's Office of Legal Education (CET), the American Bankruptcy Institute (ABI), and the National Association of Bankruptcy Trustons (NABT).

Increase the Number of Chill Enforcement Actions

. _ ___.

To seem the effectiveness of its civil enforcement actions, the Program pleased to develop a national database that would track civil enforcement actions under Section 707(b) of the Bankruptcy Code. Due to budgetary restrictions, it is subtain whether the Program will most its target data to complete this project by the mid of this fixed year. It will require continued efforts into FY 2000.

Section 707(b) permits a bankersproy come to be descented for "substructed chapter 7. U. S. Trantous review debtars" opens for appropriate entomatements in which to bring a motion to distance the case. These envisions involve a consideration of the debtor's total circumstances, including the debtor's oblidy in repor creditors. The debtars would write; the anador of series of dispect 7 petitions that require follow-up to determine whether the chapter 7 filing was appearable; of those cases, the number oursested to chapter 13 representations such as feeded of the follow-up require; the number . . , require some action such as filing of a 707(b) matrice; and, the percentage of 707(b) positions greated, action, denied, and pending.

The Program's efforts in Section 707(b) have a timest on the shiller of sunctand continues to be repaid, because the Program's intervention offer results in the case being converted to chapter (3, where manuscured creditors receive monthly payments, or in dissipati of the case, allowing creditors to state returns against the debter.

Another cost environment national database the Program had planned to develop and activate by the end of FV 1999 would have tracked bankrupacy positions programs. Again due to budge-carry constraints. It is increase to herber the Program will be able to complete or circuital database as acheduled. Completion has been positional until FV 2010. The Bankrupacy Referen Act of 1904 provided the U.S. Transce Program with an important new circl rengely — 11 U.S.C. § 110, which places interpose requirements on all non-law years to be prepare bankrupacy petitions for compensation and establishes penalines for those individuals who negligently or fraudalently propose bankrupacy petitions. The intern of this database is in nationally track printion preparety, the legal actions pictured against them, the outcome of those legal actions, and the importancy refunds granted by defended on the content of the database of those legal actions, and the importancy refunds actions of the content of the database of those legal actions, and the importance of those legal actions.

Ensure that Trustees Adhers to Established Policies and Standards

To help trustees adhere to established policies and standards the Program periodically revises in chapter 7 and (3 handbooks and publishes administrative procedures for due pricess review of actions. Recent accompliabritists include the insurance of the revised chapter 7 and (3 handbooks to October 1994) and December 1994, respectively. To address trustee insurangement or abuses, the Program plans to publish the most current set of administrative procedures for due process review of actions at the end of FY 1999. As new Bankhays, Reform (springless) is possed. The Program has a responsibility to update these rulest and handbooks accordingly.

In course that trustees affect on three publices and standards the Program rountely audits and reviews each chapter? I trustee's financial and case administration notivities. These salars and review are performed by the Office of Impector General and by Program staff. Formerly, the Program used the Accelerated Rusticised Scape Review (ARS) for 1997, the Program undertook a project to superficiantly improve and streamline that review, resulting in the saw "UST Field Enumination." The Program deviceped a new examination procedures conducted at the trustee's office. For example, by 1997 nearly all trustees had sustained automated systems to running and report on their caselood. The UST Field Enuminations undertood at the trustee's office. For example, by 1997 nearly all trustees. The Program procedures to reduce the material office is not technologies used by trustees. The Program also streamlened its procedures to the examination is integrated with the other reviews conducted by in field offices. The PSE Field Examination contributes on the Program procedures and restrict the changes in the new Mandacal for Chapter 7 Trustees; and reports the quality and consistency of the ARS examinations by standardizing procedures and instituting new standards such as formal workpapers and a quality control review even process.

To institute the Field Examinations, a group of handruptcy analysis rivet in late 1997 to develop a draft guide for the UST Field Examination. It was field tested during 1998, and an entry 1999, the guide was applicable and adopted by the Program. Materials were developed for a training program on the area UST Field Examinations in September 1999 and actual training preprint in November 1999. The UST Field Examination was implemented as of November 1999. Every training will receive a UST Field Examination as less once every eight years. The Examinations will be conducted in tandem with the Office of Impactor General audits, so a trumpe will be audited or examinated at least once every four years.

Other efforts that also complement this youl are the prior project for targeting trustee oversight and the pilot project to conduct debtor under as a more cost-effective way to identify debtor abuses

USTF Goal 63: Ensure that the return of estate masts to creditors is maximized by maintaining and promoting uniform for and expanse guidelines relating to the misphyricant of prologonously and others to the handerspicy system, as well as other thront of oversight.

In order to excure that the return of easte aspect to evolutors is maximized, the Program will continue to review methods of rathering professional these is bankruptcy egant and excurring that the expressor of administrancy the cases are actual and necessary, as specified by plants. Every dellar that is quest on administrative explants or professional flows that do not meet the "actual and necessary" test measure that one interest meeting that it is process, the Program will neck the cust of treatment operations as a percent of flowle distributed to createurs, objections to irrespond to the dark granted, and processor of flowle distributed to createurs, objections to irrespond to the dark granted, and processor of flowled distributed to createurs, objections to irrespond to the dark granted, and processor of flowled distributed to createurs.

recently developed Form 4 Distributions in chapter for Closed Asset Cases was implemented to enhance the administration and oversight of distributions in chapter 7 cases. This new distributions report, possity developed by the Program and the National Association of Bankinspecy Trustees (NABT), will provide an effective tool for trustees to identify specific distributions to closed asset cases. It is ill also asset the United Stores Trustees in overseeing the administration of cases, and enable the Program to meet the needs of Congress by previous plant and reliable information regarding distributions to creditors. The Program also has standardized in fee guidelinin and will receive an exceled, parament to a develope in the 1994 hashingstoy Reform Act.

Expend Amounted For Review Plat is Other Areas

The Program emplemented a prior program to test automated fee review systems because it found that computerand review of fee applications remain in a more thorough review and in more specific and consistent objections filed with the bankrispicy courts. The Program planted to expand these tasts to other regions, but those plants have been delayed due to backer constraints.

Nection 707th) Notistantial Above Reviews, Debtor Audit Plint, National Success State of Coast Flind Under Chanter 13

In FY 2001, the 11 S. I make Program will also craftiate the results of na FY 2000 unitarities to establish pilot projects to improve its Sociate 707(b) automatish almos reviews, to consider already and to determine the instrustal success rate of chapter 13 cases. The businistic projects he particular considered by Congress was based on the permise stage many chapter 2 hundrings of determine to pay a greater portion of them control date. Both the Senate and House hith required the United States. Treater Program to contract to the pervisor are accounting firms for said as of defence persiston and achedules.

The United States Trising Program is mathemated under 11 U.S.C. § 207(b) to review hunterspacy cases for substantial abuse. As noted earlier, the Program has naconadally earlied untilines conversely. Vet. with interestina 1 millions chapter 2 cases filled in the 12 months ending December 31, 1998, it is important that the Program develop a way to facilitate Section 707(b) reviews, to move contry identify debiters who can repay a substantial portion of their misocard debt. Based on the contile of this project, the Programs will develop a template to determine whether a debtur has the incorrect to putton a template to determine whether a debtur has the incorrect to putton.

Similarly, based on the results of the Program's debtor suchts prior project, the Program will detectable whether more extracted one is constallative mount of signifying above. Family, the Program will analyze the success rate of chapter 13 cases to determine, for example, what percentage of chapter 13 plant are successfully completed upon the proquent pand back to unservered creditors under such plant.

USTP Goal M: Ensure that the Progress will be a resource for accorded, thorough information, and for practical analysis about the operation of the huntrapity system.

The United States Trustee Program has the susque abstry to provide information and analysis about the financial aspects of bankrapacy. No other public against each material aspects of bankrapacy who there is a great downarid from both dee private and public nectors for unbanded information and analysis about how bunkrapacy works, who uses it, what happens to those who note it, and whether creditors are receiving all that they can from its operation. Hearth of the information currently published about those material contents for information who have a direct interest in the outcomes of haptroptey cases and proceedings — those who represent creditors or debugs.

The two public maintes directly involved at bankruptcy operations are the federal courts and the U.S. Trustess. The courts collect and publish statistical information about bankruptcy care (lings and practicipates that foreign when the special distribution of the extension and the efficiency of its progress through the system. However, this search publish virtually no financial information should be system, each at their everage size, statistically no financial information in critical to an information-analizing process for both the policy and contained associated data. And payons to conditions the policy and contained associated financial insistence of inadequatery.

Effective Automotion - Cost Management Detabase

To support this poal, the Program established the Office of Revench and Planning (ORP) in FY 1998. ORP intends to systematize its data collection and similyins effort across the executivity of the development of the Program is new Case Management Dambase was planné with that office. Contributing and consolidating the Program's restrict efforts with the development of its database would believe our ability to collect and analyzes information and grow de the framework for beauty policy planning decisions and internal operations on reliable, empirical information. The contribution will be on 1) continuing and improving the methods by which ORP gathers data on no-asset chapter 7 cases, which contribute more than 90% of all bankruptcy flimps, 2) gathering beans information on chapter 13 cases, and 3) integrating the financial information as aliable on chapter 17 cases from U.S. Trustee sources with chapter 11, information available from the hand notes counts and other sources.

The U.S. Tristee Disprain hoped to deploy the first phase of its automated user management database in 1999, but because of badgetary constraint, the Programs had to put it plans on hold. Many of the melic dual measures and targets from all goals pressurely discussed were to be tracked in our new Case Management Database. We tope to common this project in 15 (200). Historically, the Supram's ability in provide Granical information regarding bankingtery has been hampered by old technology and the costs of collecting paper-based information from the courts and the private unsites. The development of our state-of-the-art case management database, coupled with the rapid and it adequated in the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circumstance of the circums

The delay in the Program's new case management database systems will not deter ORP from its primary minion - to provide the public with reliable and accurate information and satisfacid data about the bankingsey system CRP will continue to work closely with many mode outlets, ranging from spacialized landarpsey guidications to notional. IV news networks, so provide the latest information on the bankingsey system. It will store continue to continue to continue to the Department of Justice 's Office of Public Affairs and Office of Legislative Affairs he banking recovery so around media assistance. ORP will continue in conduct statistical studies and provide written reports on various bankingstry-related aspira, such as confirmation rates in chapter 11 cases and the debtors' about to provide consumer chapter 7 cases. In addition, ORP provides Administration smit and Congrussional stuff with automative reformation and exchanged assistance, as needed, no pending bankingsey reform legislations.

ORP also works with many media outless, ranging from specialized bankrupicy publications, national TV invis networks, and the Program's own with nite to provide the latest information on the bankrupicy system. It concludes to charge with the Department of Justice's Office of Public Affairs to handle great insources should be Affairs to handle great insources should be Affairs to handle great insources should be Affairs to handle great insources should be Affairs to handle great insources the country in native ring made in native.

Effective Automotion - Revenue Analysis System

The Program is developing a revenue analysis system to capture Program revenue information, including filing file and chapter 11 quarterly the data. This data is critical in determining the Program's resources and their impact the Program's ability to meet in oversight quantities. The Program completed the first mendals of its new sevenue analyses system, the Fac Information Collection System (FICS), in May of 1990. FICS curvately which the chapter 11 quarterly first deposition into the United States Tyreme.

System Fund. The Program plant to work on the development of two more modules - a filing for module integrated into FICS and a revenue forecasting module. Due to budgetary constraint, the filling for module is slaged to be completed at the end of FY 2002 and the forecasting module at the end of FY 2003. The goal of this new flannels monogeneous system is to sented the Program to meet all of its oversight responsibilities.

D. New FY 2001 Initiatives

No new initiatives are being requested for FY 2001.

P. Date Velidation and Verification Insect

The United States Trustee Program currently conducts quarterly data calls from its regions regarding the age of cases, the distribution of states assets, and the number of cristianal referrals, indictrosits, and convictoris. In addition, the Program has incorporated its Coveranteet Performance and Results Act indicesses into Phase I of the redesign of its case remangement database. However, due to budget constraints the completion and implementation of Phase I has been cancelled. The Program hopes to revise the existing ACMS instead.

Data Collecting and Storage: Currently, much of the Program's social case data is downloaded from the Singhaptry Court's system directly into the Program's legacy Automated Case Management System (ACMS). It is then manually updated as the cost progresses through the bestruptry system.

Data Validation and Verification: The data downloaded from the Courts in verified against hard copies of the potitions. Data keyed into the ACMS insteadly as the case progresses through the baselesspirey process is checked against the Courts' docket cards. ACMS hard copy reports are used to do basic error checks up data manually keyed also ACMS, that do not exceed on the part docket cards.

Data Liquitations: The existing ACMS is binisted both in terms of the our-dated burdways on which it requires and the antiquated and inflacible enters of the programming language (RPGII) in which it is written. By replacement with one designed in an ORACLE neutrinoment would have paragited mineral date storage and pairways capabilities and facilitated analysis of case information and debtor feneral information that does not appear in court docbuts. A revised ACMS will not be able to provide the degree of enhanced date storage that the new system would have one will it have the flexibility necessary to address the all-loc queries often requested from the bankrapacy community.

H. U.S. Trustee System Fund

The self-funding characteristics of the United States Treater Program was a feature of Public Lew 99-554 expected on October 27, 1984. Two consignries of fees generate almost all of the revenue for the United States Treater System Fund. The first category is the filing fee paid at the reception of such case for chapter 7, 11, 12 and 13, which constantes approximately 36 percent of the Program is finding. The second category, responsible for searly 62 percent of Program funding, is the quarterly feet paid by chapter 13 debrors for which the amounts paid are determined by cash disbursement levels of the debtor. These feet are deposited in the Fund as officialing collections and are available to the Program is specified in Appropriations Aces.

Payment of excess percentage fine collected by chapter 12 or 13 standing trustees and interest on stressed funds also generate revenue for the Fund. Revenue in the Fund that is noted for current expenses is stressed in Treatury securities, and the amount so formed accress to the Fund. This inventment monaire, thus, increases the Fund's revenues and monomers the fundament burden on the success that make you have been a fundamental burden on the success that understand the only deposit category and defined as offsetting collections was the success carried on seventments. With the present of the FY 2000 Appropriation Act, success carried on seventments is now defined as no offsetting collection as well.

in FY 1999, deposits to the final totaled \$116,206,410 12. Of this total, \$114,248,000 was available for obligation during FY 1999. The following chart displays the categories which comprises the total deposits to the U.S. Trustee System Fund in FY 1999.

United States Trustee Program Justification of Proposed Changes in Appropriation Laurence

The 1.5 2001 budget exposures on hole proposed changes of the appropriation language listed and explained below. New language is underscored and boilded, while deleted matter is enclosed in heachers.

United States Tracter Program

For necessary expenses of the Emissis fluster Program as authorized by 28.U.S.C. 589a(a), [\$312,775,000] \$327,282,889, to remain available until expended and to be derived from the United States. I tustee by seem I and Provided That, into obstanding any other provision of law, deposits to the Fund shall be available in such amounts an may be because to pay setunds the deposition. Provided from the That motive thistanding any other provision of law, [\$112,775,000] \$227,282,899, of officering editeriors derived from fees again progression and remain available until expended. Provided from the That the sum becomproposition from the Lind shall be reduced as such offsetting collections are received during fiscal year [2000] \$291, no as for result in a final first type [2001] \$292 proposition from the Lind estimated at 50. Provided from the U.S.C. 589a is senerated by striking "neaf" in subsection (high), by striking the period in subsection thick) and inserting ", and and by adding a new paragraph at follows "(9) interest carried on Fund investments ") any each final collection are produced in the period for the period in subsection (high) shall remain a plable until expended but shall not become available for obligation and Occident 1, 2001.

(Public Law 196-11), sertion 1999(ak 1), Department of Justice Appropriations Act. 2008)

Explanation of Changes

The FY 2001 hudget requests \$127.202,000 is necessarily three increases. Since the language change proposed in the FY 2000 budget request regarding a proposed fee increase and interest reclassification was enacted, the language has been defected accordingly from the above proposed appropriation language. In addition, language requesting that any fees collected in excess of \$127,202,000 in fiscal year 2001 be made available the following fiscal year short expended has been added.

Best Program Description;

The Henkespa.) Reform Act of 1978 established the United States Trustee Program on a prior baset on 18 Federal Judicial districts. With the encounent of the Bankruptcy Judges, United States Trustee Program was expanded nationwish to 88 Federal judicial districts. The act pudicial districts of North Camping and Alabamy have been exempted from the Program until the year 2007.

The major threat of the notions size reforms was to separate the adjusticative and administrative functions in biolaxuptcy cases. Congress created one agency with responsibility for the administration of beginning cycles and to serve as a "watchdog" over the entire biolaxuptcy process. The Programs completed its nationwise expansion in 1969 under the announced provisions of the 1964 Act. Currently, the Program operates 93 (Insted 5 ates. Trustee offices in 21 regions nationwise that are responsible for the everages of over one mellion produce bankruptcy cases.

Annual Performance Goal: USTP Goal 61: Provide administrative support to move cases efficiently and effectively through the benkrupicy process.

A. Data Validation and Verification:

Date: Collection and Storage: Customy, reach of the Program's tetted case date is desertanded from the Strategy Courts system directly who the Program's legicly Automated Court Strategy System (ACRS). It is their manually updated as the case programs through the bentruping system. Must not the date that the Program complete is the system ACRS and descroticity transmitted to the Program's Office of Ready and Overnight's (ORO) during that quarterly date collected from the Program's 32 links offices (USTCs). These date are offer shown that is also collected from the Program's 32 links offices (USTCs). These date are offer shown that a substance Program's Program's Across the System of System (SYSTCs). These date are offer shown the Program's visions subscriptions of the same from the Program's visions subscriptions. The same from the Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Program's Pro

Date Validation and Verification: The date theoretication from the Courts is verified against have copies of this politions. Date hepod into the ACMS memority, as the cases progresses through the benchmarcy process in chicke any first Courts double copy. ACMS had copy reports are used to do beats over chicks in date intervally heyed into ACMS, that do not appear on court double cards. Then quarterly as part of CRC's date and then complete verified verifies an antiquesed from antiquesed and antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from antiquesed from

Data Challestone: The second ACMS is invited both to both or both and defect hardware on which a resides and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and the preference and tanguage (MPCH) in which it is under. The replecement with one designed in an ORACLE proformant would have parallely between data planness and represent expeditions. and inclinated analysis of case information and district financial information that dots not assess in court dechale. For example, the integral ORO date and, expecting the date from ACMS, was written to cirty ago cares on an arread basis, it beats at cases agoned in calendar year 1995 as items years ald on January 1, 1996, regardless of whather The case was caused January 1, 1886 or December 31, 1988. This data britishes was to be addressed in the new code management develop under development well it was conceind that to instantiary complyings in FY 1880. The USTP had ficted in receive this issue by continuing this development of the new evolunt in FY 1880. However, additional Louine in the new case menagement region was not expressed in the FY 2008 agreements. Addit their the heat-time limitedians of ACAM, there are surround effort data distinct to wall. For authoria, there are neveral insuce culture of the Program's control effecting from many "all" about there may be in the project, e.g., an except may he teach arounteens and unable to be buildeded, and by definition, the number least of "till" seast in the behinders problem at a given time in a constantly significant beauti that can be inhunced by the number and notion of herbourby case films. Thirdient, the Pressum elected to charge life territ from a fixed percent to a loss than economic A.a., under 4.5%, 7.5% and 1%. Also, since the Proposite workload is consistent and it about deallow in administration in a state, the citalizat resources available have is directingual on the saffly to many cases through the hardsuping system and in parlams the represent interesting to a.g., ensuring that all participants in the hardsuping system and in participant to proving the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract yeşim iştiye iş tiş giyetinde el tiş ilim. Millerly, tiş Program desiyndi tiş qişşamy authartıy ta disan bardınıştıy asanı ar bi remiyen a nav qayışı tişiyiye bişin a ya. By deficien, san-parel bushan are franc inschen who have noon seens, but one not being analyzed raw colors. Consectly, non-parel bushan are set made analyzed opur apage jaggaga yil g parlamanag pratisan. Copur a tagang iran baan manaragi baan ibu panut, tha buatan han ilito buantiku ka manay magan buangi bag baatanging ayatan. The authority is manary arm of these care particularly levelors resided with the hardwayley exact. The enty-seconds De Program has, for dealing with a problem franks, is to prove that tracked from paper relation, as that the fractions will not be confirmed after electric and flow, whether these fractions whether to endow one them to always out hair spensialing conser an union he princible.

Annual Performance Goal: USTP Goal #1: Provide administrative support to move cases efficiently and effectively through the bankrubley process.

A. Data Validation and Vertileation:

Asitions to Millipase Data Limitedams: The USTP had hoped to resolve the technical shortcomings of its legacy system (ACMS) by occalinating the development of a new case management system in FY 2000. However, since no new funds were approved in FY 2000's appropriation, the Program will work on enhancing the excelling ACMS to the enterin possible. Unfortunately, a revised ACMS will not be able to provide the degree of sinfanced data storage that the new system would have not will be have the Redaility inscassery to address the act has question of entering the provide how the size is outside of the Program's control, the Program seconds of the All use of the Netonal Bankingto Training Institute, to provide its employees with top notch training their administrative, management, financial amelysis and oversight shifts. To offset the tech of motivation non-panel sustance have to close quit their remaining cases. Program amendoses will improve these storage quit.

B. FY 1999 Performance Report

Unimal Parlarmance Goals. There were four goals that were not met in FY 1988, completion and lesting Phase I of the new case menagement bystem, reducing the number of new-panel trustees to 400 or less. The second advances chapter I training class, and banknaptor things per authorizes position and FTE. Work on Phase I of the new case management system was currented in May of 1998 due to budgetery constraints. While the Program did not reduce the total number of non-penal trustees to less than 400, and the new case the second banknaptor cases or to remove the section to either close banknaptor cases or to remove a panel trustee from either close banknaptor cases or to remove that trustee from either close to the second with the Banknaptor Court. This only recourse the Program has to dealing with a problem trustees is to annove that trustees from each cross-constraints the second eavenced chapter 7 seeing class that to be rescribed as to however 1999 and was in fact held them. Since the Program's planned Banknaptor tallings per authorized positions and FTE are based on elemented fling numbers, it is to be expected that the actual things per indicating four than estimated.

Plants for Monthing Universit Greats on the Pubure: White, the existing ACMS is finited both in terms of the out-deted herefuence on which it readings and the entrypies of RPORT is which it is written, its replacement with one designed in an ORACLE environment would have permitted entrienced determined on the permitted and fooding the provided for a new code managing most ordinate to the door not appear in court decicies. However, also to budgeted on any other than the design of the fooding were provided for a new code managingment system in PY 2000's appropriation, the Program will attempt to revise the additional funding were provided for a new code managingment system in PY 2000's appropriation, the Program would have, nor will it have the fleeting to such as possible. However, a revised ACME will not be able to provide the degree of archanced date storage that the new system would have, nor will it have the fleeting in a consequence of the provided that are consequently and the provided the degree of archanced date storage that treated the first design of the provided the new property to address the provided that it has been been as a consequent to the provided the provided the provided that the provided the provided that are consequently and the respect to the provided the provided that are consequently and the provided that are consequently and provided the provided that are the past of each facual year.

Performance Basis versus: Actuals: All of the Program's remaining subgoals under USTP Copt at were wall man to FY 1980. For example, the number of all chapter 11 class to a person of lotal constand dropped from 7.3% in FY 1990 to 5.5% in FY 1990; two "Buccopasts Produces" managembe work isospet; and, poveral offices benefited from the copyright of the first on "Example of the first on "Example of the first on "Example of the first on "Example of the first on "Example of the first on "Example of the first on "Example of the first on "Example of the first on the first on the first on the first on the first on the first on the first on the first on the first on the first on the first on the first one first on the first on the first on the first on the first on the first one first on the first one first one first on the first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first one first on

Appreniments Outrice when Allesting Date will be Available: The date for loter number chapter 13 cases over 5 years old and loter open chapter 13 cases will be available in April when the EO receives the elevation 13 transfer Assault Reserve from publics.

Annual Performance Goal: USTP Goal #1: Provide administrative support to move cases efficiently and effectively through the bentruptcy process.

C. Issues Affecting Selection of FY 2000 and 2001 Indicators:

The Program hits twen closely reviewing its Government Performance program in hopes of improving it. In its niview, it bould a runsher of subgoals infesse indicator(s) were incorpolate (e.g. injust without outputs or adcorres) or were seriely confusing. For example, while the Program has been reporting the number of classes as a percentage of total caseload for chepter. If while in the continue of the cases and the total number of open needs (i.e., the equals) were not reported. Consequently, a number of new indicators are introduced in the FY 2001 pean had were not presented in the FY 2000 pian. These indicators are intended with the event "least" in lights, in the Type of redicator column. In addition, those that if we Program had were confusing were modified accordingly. Also, several new aubgoals were added for FY 2001 to before address the Program's efforts with regards to its responsibilities in the bankingstoy process. These too are teansible word "new" in itside, in the their or indicator column.

Nest the industor. Case Management Detablack Phase II, was oropped from the FY 2001 Plan, since, congress did not fund any of the Progress's initiatives in FY 2000 Enterior of Entiting Actific was added in an place. Nest the subgions Reviewables of Base: a) January Existence of FY 1906 Progress and B) Annualization of FY 1906 Progressian of FY 1906 Progressian of FY 1906 Progressian of FY 1906 Progressian Section (Inc.). DECISION UNIT/PROGRAM: Administration of Cases Decision Unit

Department of Justice Core Function: Administration and Improvement of the Justice System

Strategic Goal: General Goal # 4: Protect and preserve the integrity of the bankruptcy system,

maximize the dotter return to creditors, and monitor the cost of bankruptcy administration,

Annual Performance Goal: USTP Goal #2: Ensure that parties adhere to the standards of the law.

and police for embezziement, fraud, and other abuses

A. Data Validation and Verification:

Data Collection and Storage — Data regarding criminal referals made to the U.S. Altomays Office, State, total line endocentent efficials, and literature agencies along with Prote regarding criminal count initiated by the Program are collected by the U.S. Total and transmissed to OFIC as part of their quaterty distance. As discussed previously, much of the Program a initial case data is downloaded from the Bankingtoy Courts system directly into the Program compiles as artifacted from ACMS and electronically (assembled to the Program and Courts of Renew and Oversights). The their manusity updated as the case progresses through the bankingtry system. Much of the data that the Program compiles is airtifacted from ACMS and electronically (assembled to the Programs office of Renew and Oversights) (ORC) during their quality (shall calls to the field. Data is also collected from the Programs 30 field offices) (USTO). If these case are offices shorted in Louis and/orc Outside they brooked and understanded offices sources of data come from the Program's various subcommittees and working droup (MSPWQ), atc. The data they provide are typically schedules (task as the Automation Termaline), advice and Batteriote, Leaves for the NBTI, special reports.

Successive Processing Arms (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms) (Arms

Debt Validation and Verification: Crownal reterrals and ovid enforcement actions are currently self-reported by the Programs' Field Offices. There currently is no method for variating the data presented by the feat-offices. As discussed previously, data downloaded from the Courts is enforced against index opinion object of the petitions. Open layed into the ACMS menually as the case programs through the bankmore; process, is checked against the Courts' docket cards. ACMS hard copy reports ere used to do basic error checks on data menually layed nick ACMS, that do not appeal on Court docket cards. Then quarterly, as peri of ORD's data call, the does well then compiled using an entiquated programming tenguage, APCIII, converted to a database file, electromically transmitted to the EO, reports run, and hard copies printed and sent to the field offices for varification as resided. Data fracted in FICS is verified against the Court's docket cards.

Basis Limitations: With regards to the curries referrate information tracked, there are a couple of finitiations to the data reported. First, there is no real way to verify the deservament by the field offices. Second, the field offices were not given specific pulsetines as to when criminal informations attoring profition to the Executive Offices. Consequency, the numbers reported in the pleak may have been significantly understated. In addition, the statistic formation of the reported of the programman feature of the control of the control of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the reported of the repo

Annual Performance Goal: USTP Goal #2: Ensure that parties adhere to the standards of the law, and other abuses.

A. Date Validation and Verification:

Address to Minigate Balls Limitations: The Program's Bankrupky Flaud Working Group has developed a new control electrical database and reporting guidantnes in FV 1880 either him provide the Program with more limits and accurate comman Internal settled. The Program elso planned to develope proteins desbesses for patient programs and for according to the program in the PV 2000. The Program elso planned to develope the program and settled to a program elso with the US-1P had hoped to resched the technical shortcoming of its tagacy system (ACMS) by continuing the development of a new case management system in FY 2000. However sends no new funds were appropriate in FY 2000 a populopasson, the Program and with on enthering the sexisting ACMS to the eathert possible. Unfortunately, a remark ACMS we not not according to appropriated data storage in late through the remark of the program and work on enthering the development of a control of the program and work on the transfer of the furthistic programs on control the Action of the Program and the Course of the Program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the p

Annual Performance Goal: USTP Goal \$3: Maximize the return of estate essets to creditors

A. Data Validation and Vertilication:

Date Collection and Storage: One of the privacy indicators for USTP Goal 6.3 is total distinst distorated to condition for chapter 7.1, and 15 respectively. The date for the participation condition for chapter 7 case conditions for chapter 2.5, and 15 respectively. The date for the participation condition is conditionally controlled to the Program after the close of the calendar year. Building is seen in several provided to the Program after the close of the calendar year. Building, date reporting disbursaments to chapter 15 checking an explainable from the standing is seen in the program after the close of the calendar year. Building, date reporting disbursaments to chapter 15 checking an explainable from the standing individual provided from the form the Stretchptory Court's system details year bears against year bears. As discussed providually, much of the program's larger of controlled case interests and provided to the program's specific or the form the Stretchptory Court's system discussed with the Program's specific case of the standard from ACAS and electronically transmitted to the Program's action of the standard or the case programs (CRCI) during their quartery date case; to the fact that the Program complete is within the program's action of the standard from ACAS and electronically transmitted to the Program's action of Review and Oversight's (CRCI) during their quartery date case; to the fact the program of the standard from the program's action of the standard case of the case from the Program's action address actions of the case from the Program's action authors actions of programs and offices, such as the program's action of the case of the case from the Program's action of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of th

Date Velidation and Verification: Date on the trustees' Annual Reports are self-reported by the Invetoes. However, each trustee must sign the report certifying the accisions, and in the case of the chapter 13 standing trustees, each report must be audited by an Inviteorate audit from . As decused previously, date described previously, date described against hard copies of the positions. Cleak keyed into the ACMS meanually, so the case progressees through the bank-protects, in chacked against the Court's doctor cards. ACMS that do not appear on Court doctor critical. Than quarterly, as part of CMDs date and, but date are strent completed using an integrated progressers are used to do bank corror chacks on sign internally keyed into ACMS, that do not appear on Court doctor critical. Than quarterly, as part of CMDs date and, but date are strent completed using an integrated progressers are progressed using an integrated progressers are progressed using an integrated progressers and the U.S. Trustees the conflict allows for replication as needed. Opin irrectant in PICS is sprifted against the Court's doctor cards, actual depurpments, reported by the trustees to USTOs, and the U.S. Trustees System Fard Date; substances.

Capt Uniformity Chapter 7 departments are restorably collected servicinstally (Anni & Decoratory) only at this time. The Program was revising the deletance system was revising the deletance system was expended in PV 1985. Actual agrees for CV 1989 along to envisitably in March. Chapter 12 deletancements are tracked by colorably year at with. The data connect from the annual respons submitted by the standing husbes at the end of sect, colorably year. These are not recomment are tracked by floor until the beginning of April Actual chapter 13 deletancements are bracked by floor year. However, include Agures are putted from the standing involves annual respons and her not available to the Executive Office while dark the require here been modified. This suddent years provide the tracked and the end of March. Culyear figures connect to excluding projected arists, the United States Tracked Program into no reliable method of calculating the deletancement of March behaviors, and the end of March. Culyear figures connect by the satisfied projected arists, the United States Tracked Program into no reliable method of calculating the deletancement of March behaviors; in March behaviors on which it methods are the entire and the end of March. Culyear figures connect by the satisfied both in terms of the out-added between on which it entires are added and influential methods and the entire of the culture of the culture of the entire parallel continued and added and the entire of the entire of the culture of the culture of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entire of the entir

Authors to Efficient Data Unshalament: At this time future are no actions that can be believe to provide the for chapter 5, 11, 12/12 distortunated data. An elevaness' proviment, the 18/TP had hoped to converse more management system in PY 2009, appropriately, the property of the continuent of the converse more management and the PY 2009 appropriately. The Program will work an evidenting ACSMS to the material possible. Unfortunately, a revised ACSMS will not be obto to provide the dayons of evolutions that the new system visual hours are will be the foliable of the Program's content, the Program of the Content of the Program's content, the Program proposes to restore the travel of the Program's content, the Program proposes to these full use of the National Burdunglish Highly indicates the special travel of the National Burdunglish Highly indicates a complete the three lates of the National Burdunglish Highly indicates the special travel of the three within an extension of the National Burdunglish Highly indicates the second of the National Burdunglish Highly indicates the foliable of the National Burdunglish Highly indicates the second of the National Burdunglish Highly indicates and provided differ.

Annual Performance Goal: USTP Goal \$3: Maximize the return of estate assets to creditors.

B. FY 1986 Performence Report

A STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STA

Unions Purformance Goods: There were four costs that were not limply met in FV 1900, completion and leating Phase I of the new case management system. supporting the Automotivet Fee Review Plint to other green of the country, the insurance of the reviews chapter 13 handbook, and bandrugtery filtree pay sufficiently of beginning the payment of the country. FTE Work on Phase I at the new case management system was canceled in May of 1999 this to budgetary constraints. Expending the Automated Fee Review Pitot to other arms of the country was once again delayed due to budgetary constraints. The two month delay in the issuance of the revised Chapter 12 Handbook was due to an existation of the period by which community on the draft could be swimmind. Finally, since the Program's planned Sentington fillings per sufficient allowers and FTE are based on pusingsed filtre cumbers, it is to be expected that the actual filtings per authorized position or FTE will very from the "Prent". The number of authorized positions and FTEs have remained constant about FV 1998; however, acquel filtres figures for FY 1998 were 9% fower than autimated

Place for Meeting Usmat Gods in the Future: As discussed previously, since no additional funding was provided for a new case management system in FY 2000's appropriation, the Program will estampt to revise the exists of ACMS as much as possible. However, a revised ACMS will not be able to provide the degree of enhanced data. atorace that the new present would have, not will have the furtility recentary to address the aid hot burder requested from the barderactor community. Offerta to expand the Automated Fee Review Pilot to other areas of the country will be renewed in FY 2000. The revised Chipter 13 Handbook was industry becamber 1, 1908. Since the Program's filtres are suffering coefficient and FTE plan numbers are based on estimated filtres, effective FY 2000, the Program will no temper estimate filtres per " but will aimply report actual data at the end of such facal year.

Performance Godin various Asturate: The Program's remaining subgrate under USTP God #5 for FY 1999 were mut. For example, this design and leavence of the new Form 4, Distribution Report for Closed Asset Cases was completed as exheduted on April , 1989. However, the FV 1989 CEPR Plan and two indicators that were cropped from this report. The first was directed a mathest to measure asset aster easts. This purpose of this indicator was not with the focusings of the new Plant 4 Distribution Report for Classed About Course value in this report. Form 4 requires the fractions to identify specific distributions (i.e., including costs) in closed seast cases. The second indicator that has been eliminated is the Examin shortees regarding the medicule they use to product completive asset \$600. After careful complements and review, the Program distortional that the indicator, as it was originally writing, would not provide meaningful date; since, there are a limited number of methods of seed sales, e.g., entrais cales or public section.

Americanis Cultur when Mindred Colo will be Available: All Mindred data for this section should be predicted by prediction than his 2000.

C. leaves Affecting Selection of PY 2000 and 2001 Md

The Program has been gloudy makeding in Coveryment Performance program in hases, of improving E. In its review, I found a number of makeding whose indicatoris) ware prographies for a ... insular without cultures or quickeness or ware simply conflicting. Consequently, a number of new implications are introduced in the FY 2001 plan that ware not presented in the FY 2000 plan. These indicators are identified with the word "new" in ladics in the type of indicator column. In addition, those that the Pregnant felt were origing was madified appendingly. Also, neveral new subgrain were added for FY 2004 to helior polymer the Program's effort with recents in its recommittion in the narriery arresses. These two are identified with the word "new" in Ballon in the lowe of Indicator column.

tion. Do indicate, Gase Measurement Cultures Place E was dramed from the PY 2001 Place afrom constrain did not furni any of the Processia infinites in FY 2000. Britanned Britishe ACHS was mided in its black. Also, the subsect, Prosterolise of Seas: at Assemblaction of PY 1900 Positions, and Bt Assemblaction of PY 1900 Parterours, son also dropped, given the Commun. All rest secrets this request in the FY 2000 Accordation.

DECISION UNIT/PROGRAM: Administration of Cases Decision Unit

Department of Justice Core Function: Administration and Improvement of the Justice System

Strategic Goal: General Goal # 4: Protect and preserve the integrity of the bankruptcy system, maximize the dollar return to creditors, and monitor the cost of bankruptcy administration,

Annual Performance Goal: USTP Goal #4: In FY 2000, the Program will become a resource for accurate, thorough information and practical analysis about the operation of the bankruptcy system.

A. Date Validation and Verticulity:

Input Collections and Stranger. Currenty, much of the Program's Intelligence data to developed the State that State of the Collection and Collection and State of the Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Collection and Colle

Annual Performance Goal: USTP Goal #4: In FY 2000, the Program will become a resource for accurate, thorough information and practical analysis about the operation of the bankruptcy system.

A. Data Validation and Varification:

Data Validation and Verification: The data downloaded from the Courts in verified against hard copies of the petitions. Data keyed into the ACMS manually, as the case progresses through the bankingtey process, a chacked against the Courts docted cards. ACMS hard copy reports are used to do besic error chacks on data manually keyed into ACMS, that do not appear on Court docted cards. Then custerly as part of ORD's store call the data are then compiled using an antiquited programming inequality. Brightey are the compiled and sent to the field offices for writingsion as needed.

Data tracked on ECS is verified against the Court's docted cards, actual debut seministerported by the following to the Light Offices for writingsion as needed.

Data Exhibitations. The entiring ACMS is inneed both in terms of the out-dated hardware on which is resides and the antiquated and inflexible nature of the programming tenguings (RPV) is in which it is written. Its replacement with one designed in an ONACE is environment would have permitted enhanced data sucreas and recreated pages and Excitation and including and Excitation and including and Excitation and extending the data from ACMS was written to only age cases on an annual basis, at least all cases opened in calendar year 1995 as three years old on Jenuary 1, 1999, regardless of whether the ACMS was written to only age cases on an annual basis, at least all cases opened in calendar year 1995 as three years old on Jenuary 1, 1999, regardless of whether the case was opened January 1, 1990, or Occambin 31, 1995. This stat limitation was to be addressed in the need of the environment of the new system in EY 2000. However, additional funding for the new case management system as not approved in the EY 2000 appropriation. Without the resources recessary to complete its automation efforts, the impact was cased to be an order and control of data that are unimately available sectionically. Over the lest lew years, the program has only received \$1.2 million to additional and participations.

Actions to lifetigate Data Limitations. The USTP had hoped to resolve the technical shortcomings of its legacy system (ACIAS) by continuing the development of a new case management system in FY 2000. However, succe no new kinds were approved in FY 2000's appropriation, the Program will work on anheriding the assisting ACIASII to the sitent positive. Unfortunately, a revised ACIAS will not be able to provide the degree of enhanced data storage that the new system would have not will it have the flexibility nacessary to address the set for outeres often recursised from the destruction continuately.

S. FY 1998 Performance Report

- 4

Unimal Performance Goals: One goal was not mak in FY 1999, complation and leating Phase I of the new case management system. Work on Phase I of the new case, wanagement system was canoning in May of 1999 due to pudgetary constraints.

Place for fibrating Lorent Gode in the Future: Phile, the accelling ACMS is tented both in terms of the out-dested nathering on which it repides and in-fibration nature of the programming surguage (RPGIs) in which it is willion, life repidement will not obtained an an ORACLE environment would have permitted antenced date storage and restricted and footballs and football causes for against a court declarat. However, due to budgetary contempts and the fact that no additional funding was provided for a new case management system in EY 2007s appropriation, the Program will allowed the existing as much as possible. However, a revised ACMS will not be able to provide the degree of annexes date startings that the new system equily have, nor will be even the flashing receiving to accessing to access the ad not quarter collection for the information.

Annual Performance Goal: USTF Goal #1: Provide administrative support to move cases efficiently and effectively through the bankruptcy process.

B. FY 1999 Performance Report

Performance Goes versus actuels: The Program remaining subgoal under USTP Goel M. Connect remaining regions without file servats, was completed as planed. There was one indicate formerly inted under USTP Coel 9.2 Establish methods of ensuring illmely and accurate Reamole's information, which was moved to this USTP Goel and renamed Bevelop a Resemble Amalysis System.

Approximate Dates when Missing Data will be Available: There is no meany data for the section

C. Issues Affecting Selection of FY 2000 and 2001 indicators:

The Program has been closely reviewing as Government Performance program in hopes of improving 4. In its review, 8 bound a number of subganis whose indicator(s) were incomplete (a.g. most settino) and continues or outcomed to were simply confusing. For example, while the Program has been reporting the number of old cases as it is processed to a first chapter 7 and 11, the actual number of old cases and the total number of old cases and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the program and the pr

feet, the indicator. Case Management Detailable Phase 6, was dropped from the FY 2001 Plan, along, congress did not fund any of the Pringram's integrates in FY 2000. Enhanced Ensign & ACIS uses added in its plan. Alon, the subgrad, Restoration of Bases is Annealization of FY 1889 Positions, and 8) Annealization of FY 1980 Withdrawary, was also discoped, since the Congress 6d not approve the request in the FY 2000 Appropriation.

United States Trustee System Fund Salaries and Expenses

Status of Congressionally Requested Studies, Reports, and Evaluations

The House Judiciary Committee Report on the Department of Justice Authorization Act, 2000 (House Report No. 108-479, pg. 136) requested that the United States Trustee Program report on the planned number and type of bankruptcy classes to be held at the National Advocacy Center by December 19, 1999. The report is under review by the Administration and will be transmitted to Congress shortly.

United States Trustee Program Justification of Adjustments to Base Dollars in Thousands

<u>Ad</u>	gamen to the thereas	<u>wys</u>	AMOUNT
1	Play Raise: This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with the Administration pulsey included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments, as well as the general pay raise. The amount requested, \$2,457,000 represents the pay amounts for three-quarters of the fiscal year, plus appropriate bens fits (\$1.824.000 for pay and \$633,000 for benefits rotating \$2,457,000).		\$2,457
,	Annualization of 2000 Pas Raise. This pay annualization represents first quarter amounts (6), toker through December) of the anticipated 2000 pay increase of 4-8 percent effective January 2000, and, for three quarters of a year, the difference between the 4-4 percent estimated in the 2000 Prevident's budget and the approved increase of 4-8 percent. The annual requested, \$1,242,000, represents the pay amounts for the fiscal year plus appropriate benefits (\$929,000 for compensation and \$313,000 for benefits).		1,242
,	Within Grade Increase This request provides for the expected increase in costs of within-grade increases for slow or no growth components for EY (200). This increase is based on an accurate model of the Department's employee population, which includes numerous factors such as anneityated pay taxes, adjustments to include three-year altrition or separation rates, and career ladder series to reflect promotion policy for each organization. This request includes \$519,000 for pay and \$174,000 for benefits.		693
4	Irander of CRS Imployees [1:RS Retirement System] This request provides for the increase in Federal I imployee retirement System (FERS) costs, based on the transfer of Civil Service Retirement System (CSRS) employees to FERS, as authorized by the FERS Open Entailment Act of 1997, and the open season that ran from July 1, 1998 through December 31, 1998. This increase is based on the number of employees who have transferred to FERS, the grade of employees, and the increased Government cost of FERS benefits. The request includes \$41,000 for benefits.		41
5	Increased Federal Realth Insurance Costs This request provides for the increase in agency contributions to Federal employees health benefits. In 1999, Federal health insurance premiums, including agency contributions, increased approximately 10.2 percent. Because the Government absorbed a larger portion of the total costs, up to 75 percent, the total cost to the Government has increased substantially. This increase is based on the "increased" Government cost of health insurance. This request includes \$306,000 for these costs.		306

6	Leave. Lyongtons 138A now requires all aperiors to pay relocations costs associated with lease expiration. Based on prior experience the Department arise updes that 20 percent of all leave expirations will resolven relocations. This request provides for the cost associated with new office relocations caused by the expiration of leaves in 17.2 2001. No funding is requested for any build-out costs associated with lease expirations. Tunding of \$49,000 is requested for the United State Trustee Program.		49
7	General Services Administration (GSA) file Pages Previously GSA has paid for all nationwide Government lek phone book listings through the GSA-8 percent FTS overhead tale. As a result of the National Partnership for Reinsenting Conformation (NPR)/GSA Blue pages Project, the funding for these listings has been removed from the overhead rate, and agencies are being billed for actual costs incurred. The Department's 137-21011 extinated costs intal \$282,000. I uniting of \$9,000 is requested for the United States Trustee Program.	***	9
	Travel Management Lyttle, Lees. In the past, travel transcens in services were provided at two costs, and the Department received relates based upon treket sales. However, current practices in the travel industry have ended this process. The new contracts will not private relates and will carry fees for each tacket, hotely car and other reservations made. The Department's cost for travel management center fees is estimated at \$2,500,000. Thisding of \$12,000 is requested for the United States Frustee Program.		12
4	Ligheral Pricing Level Adjustments. This request applies OMH pricing pandance to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against times subsolic totalses where the prices that the Government pays are established through the market system instead of by Law or regulation. Correctly, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.		267
10	National Archives and Record Administration (NARA) The Office of Management and Budget directed NARA to convenits direct funded records centur program to a fully reimbursable program by EV 2000. This proposed legislation mandates that NARA is to remain the sole source for agency records services, through EV 2002, for agencies currently using its services. In 2001, NARA advises that these charges will be increased by 2.5 percent. The Department is EV 2001 estimated costs total "5,599,584, and increase of almost \$300,000, based on current records maintained by NARA. Funding of \$9,000 is requested for the United States Trustee Program.		,
11	Accident Compensation This increase reflects the estimated billing from the Department of Labor for the actual costs in 1999 of employees' accident compensation, which will be billed in 2001. The 2001 increased cost will be \$23,000.		23

FOREIGN CLAIMS SETTLEMENT COMMISSION

Foreign Claims Sattlement Commission Sugmary Statement Fiscal Year 2001

The Foreign Claims Settlement Commission is requesting a total of 11 permanent positions, 11 workyears, and \$1,214,000 for 2001. This request represents a net increase of \$35,000 from the 2000 requested level.

The Commission consists of a Chair and two part-time Commissioners, who are appointed by the President with the advice and consent of the Enasts. The part-time Commissioners receive compensation at the Executive Level V rate of pay for performance of official business of the Commission at t) direction of the Chair.

The principal wission of the Commission is to adjudicate claims of U.S. nationals against foreign governments, exercising jurisdiction conferred by the International Claims Settlement Act of 1949, as amended, and other authorising legislation. To date, the Commission has compiled and evaluated such claims against 18 countries: Yugoslavis, Panama, Bulgaris, Mangary, Romania, Italy, the Soviet Union, Czechoslovakis, Poland, Cuba, China, the former German Democratic Republic (East Germany), Vietnam. Ethiopia, Sypt. Iran. Albenia, and the Federal Republic of Germany.

The operating expenses of the Commission ultimately are borne only partially, if at all, by the tampayer. In virtually all instances, the legislation authorizing the adjudication of claims has provided for deduction of a percentage of the funds obtained from foreign governments for payment of the Commission's awards to the credit of miscellaneous receipts in the United States Treasury to defray the administrative expenses of conducting the claims programs. Since 1950, the expenditures of the Commission and its predecesors have amounted to approximately \$35 million, but during that same period the amounts paid into the United States Treasury as a result of claims programs have been in excess of \$40 million.

In 2001, the Commission will research and respond to requests for information concerning properties expropriated by the Castro regime in Cubs, in support of the Department of State's continuing implementation of the Cuban Liberty and Democratic Solidarity (LIBERTAD) Act of 1998 (the "Relam-Burton Act"). In addition, the Commission will be registering claims and engaging in other preliminary planning for a major program involving thousands of claims squinst Ird. The Commission also will provide, upon request, technical assistance to the Department of State in conducting government-to-government claims mattlement negotiations. Under the Mar Claims Act of 1948, as bended, the Commission will continue to have authority to award compensation to American military prisoners of war held in Southmeant Asia during the Vettnam conflict, or their survivors, for insdequents rations and inhumans treatment while in captivity.

The Commission will continue to furnish information contained in the records pertsining to the 44 completed international and war-related claims programs it has conducted, as requested by claimants and their heirs, attorneys, researchers, and other members of the public. Upon request, it will also provide advice on policy determinations, preliminary planning, evaluation of pending claims legislation, and listen with Congressional committees considering legislation intended to provide for adjudication of additional types or claims of claims.

Foreign Claims Settlement Commission Salaries and Erronness Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Epthion Claims Settlement Commission Salaries and Engeness Program Performance Information Government Performance and Results Art Requirements

Mission:

To protect the property rights of U.S. citizens abroad and promote the international rule of law through adjudication of claims by thitad States nationals against foreign governments.

Organizational Goals:

- . To research and respond to requests for information concerning decisions in the Commission's Cuban Claims Program (conducted from 1955-72), in aid of the Department of State's continuing implementation of the Cuban Liberty and Democratic Solidarity (LIBERTAD) Act of 1996 (the "Melma-Burton Act").
- . To adjudicate the outstanding claims of U.S. nationals against the Government of Iraq, upon enactment of authorizing legislation or referral to the Commission by the Secretary of State.
- . Upon request, to assist the Department of State in negotiations for the settlement of Claims against foreign governments, including, in particular, claims against Russis and the other original constituent republics of the former Soviet Union, which were adjudicated under Public Law 285, 84th Contrass.
- To award compensation to American POMs held in Southeast Asia during the Vietnam conflict, or their survivors, for inadequate rations and inhumans treatment while in captivity.
- . To advise other agencies and Congress concerning potential future claims programs and to analyze and comment on pending legislation.
- . To advise on policy determinations relating to the settlement of international claims.
- To assist the Department of the Tressury in making distribution on past awards certified by the Commission.
- To provide executive departments and private attorneys with legal precedents issued by the Cosmission.
- . To provide general information concerning past programs and to respond to requests about specific decisions the Commission has made on past claims.

Base Program Description:

In addition to its principal function of adjudicating United States nationals' claims against foreign governments, the Commission provides continuing informational services to claiments (and, where applicable, their legal successors) with regard to the 44 completed international end wer claims programs it has conducted. It also provides advice on policy determinations, preliminary planning, and evaluation of proposed legislation intended to authorize adjudication of claims of new categories of claimants, and limison with Congressional committees considering such legislation.

Foreign Claims Settlement Commission Salaries and Empenses Justification of Adjustments to Base (Dollars in thousands)

adiu	stment-to-lane Increases:	Atomi
1.	2001 pay raise. This request provides for the proposed 3.7 percent pay raise to be effective in Jenuary of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Sudget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$21,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate banefite (\$17,000 for pay and \$4,000 for benefite totaling \$21,000).	\$21
2.	Annualization of 2000 pay raise. This pay annualization represents first quarter amounts (October through December) of the 2000 pay increase of 4.8 percent and. For three-quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and the approved increase of 4.8 percent. The amount requested, 53,000, represents the total annualization of pay amounts for the fiscal year plus appropriate benefits (\$8,000 for compensation and \$1,000 for benefits).	,
3.	Increased Federal Health Insurance Costs. This request provides for the increase in agency contributions to Federal employees health benefits. In 1899, Federal besith insurance premiums, including agency contributions, increased approximately 10.2 percent. Because the Government absorbed a larger proportion of the total costs, up to 75 percent, the total cost to the Government has increased substantially. This increase is based on the "increased" Government cost of Health Insurance. This request includes \$1,000 for these costs.	1
4.	General Services Administration (G&A) rank. GRA will continue to theree rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested increase of \$8.000 is required to meet our committeent to GRA. The costs associated with GRA rent were derived through the use of the automated system, which uses the latest inventory data and rates reflecting a 5 percent increase over 2000 levels.	ı

UNITED STATES MARSHALS SERVICE

Department of Justice United States Marshala Service Salaries and Expenses Summary Statement and Performance Plan Fiscal Year 2001

For 2001, the United States Marshals Service (USMS) requests 4,312 permanent positions, 4,014 workyears and \$586,469,000 in the Salaries and Expenses appropriation. This request represents an increase of 381 positions, 171 workyears, and \$40,120,000 over the anticipated 2001 base of 3,931 positions, 3,843 workyears, and \$546,349,000. This increase will address infrastructure requirements related to both operational and administrative workload areas.

A. USMS Mission and Goals, and Relationship to DOJ Strategic Plan

The USMS' 2001 budget request and performance plan directly support the overall core functions and law enforcement goals included in the Department of Justice's (DOJ) Summary Performance Plan. This request incorporates information on performance measurement that will lead to better accountability regarding actual results achieved. The USMS Strategic Plan establishes the connection between DOJ Strategic Goals and those shorter-term objectives set forth in the USMS Tactical Plan.

USMS Mission

The mission of the USMS is to protect the federal courts and ensure the effective operation of the judicial system. In accordance with existing statutes and regulations, the USMS must:

- Protect judges and other participants in the federal judicial system by securing court proceedings;
- Provide security for federal court facilities by eliminating security deficiencies;
- Provide secure confinement, transportation, and production of prisoners for judicial proceedings by using safe and cost effective means whenever possible;

- Apprehend violent fugitives as quickly as possible by using sophisticated surveillance techniques;
- Execute court orders, including the seizure, maintenance, and disposal of assets;
- Ensure long-term safety of protected government witnesses; and.
- Collect fees and make payments in support of prisoners in non-federal institutions and disburse funds as directed by the Attorney General.

USMS Long-Range Goals

Unless otherwise indicated, meeting many of these objectives is contingent upon the requested 2001 resources being provided.

Protection of the Judiciary

The USMS will ensure the integrity of judicial proceedings. The USMS will ensure that adequate security is in place at all court facilities to preserve the effective operation of the federal judicial system and to protect judicial officials, members of the court family, and the public. The USMS will ensure that adequate personnel resources are distributed to respond to the increased workload demands generated by other law enforcement personnel and new courthouse openings.

This directly relates to the DOJ Strategic Plan, CORE FUNCTION 6, PROTECTION OF THE FEDERAL JUDICIARY AND IMPROVEMENTS OF THE JUSTICE SYSTEM, Goal 6.1: Protect the federal judiciary and ensure the anfe and necure operation of the federal court system. In 2001, the USMS will conduct an annual Court Security Facilities Survey, and recommend improvements and prioritize them within 60 days of review.

Detention and Transportation of USMS Prisoners

The USMS will transport prisoners in a safe and cost effective manner. The USMS will use ensure that prisoners are transported and detained in a cost effective manner utilizing procedures that safeguard the court family, USMS personnel, and the public. In addition, the USMS will make arrangements to ensure persons in custody reach their destination in a timely manner.

Prisoner transportation directly relates to the DOJ Strategic Plan, CORE FUNCTION 5, DETENTION AND INCARCERATION, Goal 5.1: Provide for the safe, secure and humane confinement of persons who are detained while awaiting trial or sentencing, hearings on their immigration status, or deportation. In 2001, the USMS will use the most cost effective mode of transportation to move approximately 62,000 USMS prisoners and detainees by ground and 58,461 by air without sacrificing the safety of the public, USMS employees, or those in custody.

Fugitive Apprehension

The USMS will apprehend fugitives as quickly as possible to prevent more acts of violent crims. The USMS will increase its abilities to apprehend federal fugitives by improving electronic surveillance techniques, applying special analytical investigative methods, and upgrading the use of automated information systems.

This directly relates to the DOJ Strategic Plan, CORE FUNCTION 6, PROTECTION OF THE FEDERAL JUDICIARY AND IMPROVEMENT OF THE JUSTICE SYSTEM, Goal 6.1: Protect the federal judiciary and ensure the eafs and secure operation of the federal court system. In 2001, the USMS will close 80 percent of the 28,817 new Class 1 warrants within one year; and reduce the number of backlog warrants by 5 percent.

Management of Seized and Forfeited Assets

The USMS will increase accountability of the asset forfeiture program. The USMS will increase efforts to improve the timeliness of property disposal, the effectiveness and cost efficiency of program support and oversight functions, and the training of personnel responsible for the operation of the Asset Forfeiture Program.

This directly relates to the DOJ Strategic Plan, CORE FUNCTION 6, PROTECTION OF THE FEDERAL JUDICIARY AND IMPROVEMENT OF THE JUSTICE SYSTEM, Goal 6.1: Protect the federal judiciary and ensure the safe and secure operation of the federal court system. In 2001, the USMS will sell 85 percent of real properties at 85 percent or more of their fair market value and dispose of 80 percent of real properties within one year.

Automated Data Processing (ADP) and Telecommunications

The USMS will continue to integrate and connect all major computer systems in the USMS. The USMS will increase its ability to manage personnel, financial resources, and detained information. The USMS will improve safeguards against unauthorized access or use of the systems by investing in the ADP infrastructure.

B. Highlights of 1999 Mission Critical results

Protection of the Judiciary

- Provided protective services to 97 members of the judiciary, security services to 160 judicial conferences, and personnel and additional security measures for 156 trials. USMS also evaluated 702 inappropriate communications against the judiciary, of which 345 were classified as threats.
- Developed a comprehensive requirements manual for judicial security systems, encompassing electronic security, hardware devices and procedures for all areas where the U.S. Court pays rent. The manual will serve as a complementary guide to the U.S. Courts Design Guide and other technical supplements used by architects and engineers to develop new U.S. courthouses nationwide.
- Used Special Security Officers (SSOs) in lieu of Deputy U.S. Marshals to provide perimeter security around the federal
 courthouse in the Southern District of New York. The cost of the SSOs was significantly less than the cost of using
 Deputy U.S. Marshals for the same level of security.
- Awarded eight Court Security Officer contracts and two Small and disadvantaged business (%) contracts totaling \$609 million to three different security companies.
- Initiated an effort to collect information from every State and territory pertaining to the limited use of drivers license and vehicle registration information on the federal judiciary and other court family members. The USMS reviewed the federal statute regarding this subject and contacted several Department of Motor Vehicle (DMV) offices to cultivate awareness of it. A memorandum was published with the results and distributed to each U.S. Marshal and Chief Deputy U.S. Marshal, recommending that they share this information with the federal judiciary community.

Fugitive Apprehension

- Received 25,517 fugitive Class 1 warrants and cleared 27,627 cases, including 10,355 by physical arrest. This is the
 first time that the USMS has cleared more cases than were received.
- Met the Attorney General's one-year initiative to reduce backlogged Class 1 warrants by 20 percent within 1 year. In
 October 1999, the number of backlogged Class 1 warrants totaled 10,677. By the end of FY 1999, it was reduced to
 8,185.
- Closed three USMS "15 Most Wanted Fugitive" cases by arrest.
- Closed 219 major cases, a significant increase when compared to the 132 cases closed in FY 1998. A major case focuses on one or more of the following: a career criminal with a history of violence or weapons conviction, a major narcotics distributor, or an escaped criminal. These closures included the arrests of suspected railway serial killer Rafael Resendez-Ramirez and alleged cop killer Jeffrey McGec.
- Used electronic surveillance in 1,163 cases, resulting in 729 physical arrests.
- Finalized a Memorandum of Understanding with the Social Security Administration, Office of the Inspector General, for the exchange of database information on federal fugitives receiving social security benefits.

Asset Forfeiture

- Transferred seven real properties with a collective value of \$10,350 to community organizations who in turn used the properties for housing and educational centers.
- Disposed of 46,021 seized properties including real and personal properties.

Automated Data Processing and Telecommunications

- Completed a 90-day pilot project that used commercial database services for fugitive investigations. As a result of the
 project's success and additional funding received for 2000, all districts will be provided access. The commercial
 database services provide the USMS with several resources for locating fugitives, with on-line access to billions of
 public information records.
- Installed 26 Automated Booking Stations (ABS) in district offices. Two pilot district offices successfully submitted fingerprints electronically to the FBI's Integrated Automated Fingerprint Identification System (IAFIS).

C. FY 2001 Performance Goals and Indicators

The USMS is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results. These 2001 goals, organized around ongoing USMS priorities, will establish a baseline upon which future performance may be tracked and reported, as required by the Government Performance and Results Act (GPRA). The USMS will continue to improve and add goals and measurements as needed. Listed below are the long range goals, objectives, and performance indicators that highlight major program activities.

Unless otherwise indicated, meeting many of these objectives is contingent upon the requested 2001 resources being funded. Following the objectives are summary level performance indicators that measure how well the USMS performs in meeting the objectives. The USMS intends to meet all objectives and in turn support all long-range goals.

Long Range Goal: Maximize Agency Effectiveness and Efficiency in Performing the USMS Law Enforcement Mission

In 2001, the USMS will implement the following to ensure a sufficient level of security at each court facility:

 Increase district resources to address the additional workload generated by the opening of courthouses and other DOJ law enforcement agencies. Conduct an annual court security facilities survey; review the results within 30 days of receipt; recommend and
prioritize improvements within 60 days of review; and begin implementing improvements within 90 days of prioritizing
recommendations.

Level Performance Indicators:

- Number of assaults against judges and U.S. attorneys.
 - This indicator measures the quality and effectiveness of security procedures put in place to protect the judiciary from intimidation and physical harm.
- Number of assaults against protected federal witnesses.
 - This indicator measures the quality of protection and security procedures put in place to ensure witnesses are available for judicial proceedings.
- Number of U.S. courthouse facilities not meeting USMS security requirements.
 - This indicator measures the overall progress towards renovating USMS space in U.S. courthouses to eliminate severe security deficiencies. (The workload measurements are found in the GPRA table in the Construction Appropriation.)

Long Range Goal: Transport Prisoners and Detainees in a Safe and Cost Effective Manner

In 2001, the USMS will use the most cost effective mode of transportation to move USMS prisoners without sacrificing the safety of the public, USMS employees, or those in custody. The USMS will:

- Move approximately 58,461 USMS prisoners by JPATS aircraft at an estimated cost-per-seat charge of \$490.
- Support an estimated 62,000 USMS ground movements.
- Use JPATS air transportation whenever it is more cost effective or safer than ground transportation.

Summary Level Performance Indicators:

- Number of USMS prisoner escapes.
 - This indicator measures the effectiveness of USMS prisoner transportation operations. No escapes from USMS custody indicates an effective operation.
- Number of USMS prisoner and USMS personnel injuries.
 - These indicators measure the safety record of USMS prisoner transportation operations. The fewer injuries to prisoners and USMS personnel, the safet USMS operations.
- Number of USMS prisoners transported by air.
 - This indicator measures the number of USMS prisoners moved by JPATS aircrafts. Air movements are used when deemed to be the most cost effective and expeditious method of transportation.
- Number of USMS prisoner ground movements.
 - This indicator measures the number of USMS prisoner ground movements.

 Ground movements are in support of the JPATS airlift or are deemed the best mode of transportation.

USMS Long Range Goal: Apprehend Fugitives as Quickly as Possible to Prevent More Acts of Violent Crime

In 2001, the USMS will continue to apprehend Class I fugitives as quickly as possible and decrease the fugitive backlog. There are three types of Class I fugitive warrants: 1) fugitives with violent criminal convictions; 2) fugitives wanted on drug-related charges; and 3) all other felony fugitives where the USMS has primary responsibility for capture. The USMS will:

- Clear 80 percent of the 28,817 new Class 1 warrants within one year of receipt of the warrant.
- Reduce the projected fugitive backlog (warrants over one-year old) by 5 percent.

Use electronic surveillance techniques to apprehend the most violent fugitive offenders. Of the projected 1,517
instances in which electronic surveillance techniques will be used, the USMS anticipates an arrest 37 percent of the
time.

Summary Performance Indicator:

- Average number of days to clear a Class I felony warrant.
 - This indicator measures the progress in how quickly the USMS apprehends dangerous fugitives, and the effect on violent crime. The basic assumption is that the Class I fugitive is likely to continue to commit violent crimes while at large. Capture of these individuals renders them incapable of committing further acts of violence against society. (Data collection to maintain this indication is time intensive because records are examined manually. Beginning in FY 2000, the USMS will develop a new performance indicator for this program.)

USMS Long Range Goal: Improve Accountability of the Asset Forfelture Program

In 2001, the USMS will improve accountability, control, and oversight of the Asset Forfeiture Program by ensuring that:

- All real property is disposed of within 12 months upon receipt of the final order of forfeiture. The USMS also has
 established disposal time frames for cash, vehicles, jewelry, art, antiques, aircraft, and other personal property.
 However, because of the dollar value of real property, the USMS has highlighted this area to improve accountability
 and has included it in the GPRA table.
- All real property is sold at no less than 85 percent of its fair market value.

Summary Level Performance Indicator:

- Percent of real property disposed of within 1 year.
 - -This indicator measures whether real property is disposed of within 12 months so that the government is not maintaining properties and expending resources longer than necessary.

- Percent of real property sold at 85 percent or more of its market value.
 - This indicator measures whether management controls are in place to ensure proper valuation of properties seized and
 prevent the unnecessary loss of revenue.

USMS Long Range Goal: Continue to Integrate and Connect All Major Computer Systems in the USMS

In 2001, to invest in the USMS technology infrastructure, the USMS will:

- Continue installation of Booking Stations.
- Continue developing and installing a Joint Financial Management Improvement Program (JFMIP) compliant
 accounting system in all districts.

Summary Level Performance Indicators:

- Increase customer satisfaction using the Booking Station Module.
 - This indicator measures the overall customer satisfaction with the Booking Station Module of the Justice Detaniee Information System (JDIS). The USMS will continue to administer a customer satisfaction survey. During 1999, the USMS surveyed district users after they received the Booking Station Module software to establish a baseline of customer satisfaction with the software. During 2000 through 2002, the users will be surveyed again to determine how their level of satisfaction has changed as the software is improved.
- Meet the Joint Financial Management Improvement Program (JFMIP) core financial system criteria.
 - This indicator measures the progress towards meeting all JFMIP criteria. Currently the USMS meets 96.5 percent (166 out of 172) of the total core financial management system criteria. Once a new accounting system is fully implemented, the USMS anticipates meeting all 172 criteria.

B. New FV 2001 Initiatives

All of the requested program increases are tied to core mission requirements and infrastructure improvements that are critical for the USMS to accomplish its mission. There are three major initiatives:

Initiative	Positions	(\$000)
Protect the Federal Judiciary	283	\$29,056
Prisoner Security	64	6,584
Infrastructure	<u>34</u>	4.480
Total	381	\$ 40,120

Initiative: Protect the Federal Indiciary (283 positions and \$29,056,000) The USMS requests 283 positions and \$17,056,000 for the workload growth associated with the opening of courthouses and the hiring of new positions at the FBI, DEA, INS and U.S. Attorneys. In addition, the USMS requests 55,000,000 for special assignments to protect high threat trials and \$7,000,000 for courthouse security equipment, telephone systems, relocation, and furnishings in courthouses scheduled to open in 2001.

Initiative: Prisoner Security (64 positions and \$6,584,000) The USMS requests 43 positions and \$2,063,000 to hire detention enforcement officers, 21 positions and \$1,008,000 to decrease injuries and incidents in the D.C. Superior Court cellblocks, and \$3,513,000 for movements of USMS prisoners.

Infrastructure (34 positions and \$4,480,000) The USMS requests the following resources to strengthen administrative infrastructure requirements: \$2,965,000 for permanent change of station moves; 32 positions and \$1,415,800 to establish agency-wide financial management improvements; and 2 positions and \$100,000 to manage the Cooperative Agreement Program.

E. Data Validation and Verification Issues

Protestion of the Judiciary

The USMS uses data from the Weekly Activity Report (USM-550) and the Incident Reports. These reports document the number of threats and actual assaults against judges, protected federal witnesses, and USMS personnel. This information is collected manually and validated by program managers in the Judicial Security Division.

Prisoner Transportation

The USMS uses data from the Accident Investigation Report (USM 210), Firearm Discharge/Assault Report (USM 133), and the Report of Investigation (USM 11) to document the number of reported accidents, injuries and escapes. Before data is disseminated, it is validated by program managers in the Prisoner Services Division.

The USMS uses data from the Automated Prisoner Scheduling System (APSS) to report the number of USMS prisoners transported by air and the number of USMS prisoner ground movements. This information is validated by program managers in the Prisoner Services Division.

Fugitive Apprehension

The USMS uses data produced from the Warrant Information Network (WIN) to track the number of Class 1 warrants received and cleared. The information is validated by program managers in the Investigative Services Division. The information is entered by district personnel and validated by program managers in the Investigative Service Division. USMS district also use WIN to transmit data on wanted persons into the FBI's National Crime Information Center (NCIC). On a monthly basis, the FBI sends the USMS a random sampling on NCIC entries for data validation. The USMS verifies these NCIC entries against paper records maintained in the districts.

Assets Forfeiture

The USMS uses data produced by the Consolidated Assets Tracking System (CATS) to track the sale of real properties at 85 percent or more of their fair market value and the percent of real property disposed of within one year. This information is validated by the program managers in the Assets Forfeiture Office, Business Services Division.

ADP and Telecommunications

The USMS uses an in-house survey to measure customer satisfaction with the Justice Detainee Information System (JDIS). Survey scores are based on a scale from 1 (very dissatisfied) to 5 (very satisfied). This information is validated by the Information Technology Services staff.

The USMS follows guidelines established by the Joint Financial Management Improvement Program (JFMIP). Data is collected manually during yearly sudits of USMS financial records. This data is used to assist the USMS in meeting government standards for financial reporting and internal controls. This information is validated by the Office of Finance, Management and Budget Division.

United States Marshals Service Salaries and Expenses Estimates for Fiscal Year 2001 Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is italicized and underlined with deleted matter enclosed in brackets.

Salaries and Expenses

For necessary expenses of the United States Marshals Service; including the acquisition, lease, maintenance, and operation of vehicles, and the purchase of passenger motor vehicles for police-type use, without regard to the general purchase price limitation for the current fiscal year, [\$333,745,000] \$586.469.000, as authorized by 28 U.S.C. 561(1); of which not to exceed \$6,000 shall be available for official reception and representation expenses; and of which not to exceed \$4,000,000 for development, implementation, maintenance and support, and training for an automated prisoner information system shall remain available until expended.[; and of which not less than \$2,762,000 shall be for the costs of conversion to narrowband communications and for the operations and maintenance of legacy Land Mobile Radio systems; *Provided*, That such amount shall be transferred to and administered by the Department of Justice Wireless Management Office. In addition, \$209,620,000, for such purposes to remain available until expended, to be derived from the Violent Crime Reduction Trust Fund].

(18 U.S.C. 1963, 3053, 3059, 3192, 3521-3528, 4008 19 U.S.C. 1613; 21 U.S.C. 881; 28 U.S.C. 510; 524, 561-562, 565, 567, 569-572, 1921; 48 U.S.C. 1424(b), 1614(c), 1694(b)(3); Department of Justice Appropriations Act, 2000. (P.L. 106-113).)

Explanation of Changes:

- 1. The first deletion removes language associated with the permanent transfer of funds for the cost of conversion to narrowband communications and for the operations and maintenance of legacy Land Mobile Radio systems.
- 2. The second deletion removes language associated with the Violent Crime Reduction Trust Fund. Authorization of this fund expires in 2000, and no funds are requested in 2001.

Congressional Action: Congress disapproved the movement of 13 positions, 13 FTT, and \$1,942,000 from reimbursable sources to the direct appropriation. The remaining 135 positions, 55 FTE, and \$24,283,000 were program increases and adjustments to base that Congress disapproved

Transfers Batween Accounts: Transfers of \$2.762,000 to the DOJ Wireless Management Office

Government-wide Resciption Congress numbered a government-wide rescission of 3R percent from discretismany budget authority in FY2000 (H.R. 1426).

Adjustments: A decrease of 196 positions and 139 FTF reflects the amount of staffing the USMS can not afford with evailable funding

ACTIVITY: PROTECTION OF THE JUDICIAL PROCESS

	Perm.	Work-	
Protection of the Judicial Process	Pos	YEARS	Amount
2000 Appropriation Enacted	2,183	2,094	\$270,937
2001 Base	2,183	2,122	280,474
2001 Estimate	2,509	2.265	311,593
Increase/Decrease	326	143	\$31,119

BASE PROGRAM DESCRIPTION:

The Federal judicial system must be one that is open, accure, and free from corruption. Making this possible has been the historical role and mission of the United States Marshals Service. The USMS maintains the integrity of the judicial accurity process by: 1) ensuring that each Federal judicial facility is secure -- both physically safe and free from intrusion by technological devices designed to subvert court proceedings; 2) guaranteeing that all Federal judges, magistrate judges, bankruptcy judges, prosecutors, witnesses, jurors, and other participants can conduct uninterrupted proceedings in an open, safe environment; 3) maintaining the custody, protection, and safety of prisoners who are brought to court for any type of judicial proceeding; and, 4) limiting opportunities for criminals to tamper with evidence or use intimidation, extortion, or bribery to corrupt judicial proceedings.

Certain trials require higher levels of security to prevent disruption. Such cases are identified through the districts' assessments of facility and personnel security requirements. Where a situation is deemed high risk, the district develops an operations plan at least 7 days before the start of the trial. When situations are regarded as extraordinary high risk events, Court Security Inspectors prepare operations plans at least 30 calendar days before the trial. Once the trial is completed, an after-action report is written describing the effectiveness of the operations plan.

New and renovated courthouses require additional USMS personnel to insure an adequate level of security. In some locations, the USMS must staff multiple courthouses which leads to unavoidable duplication in the staffing of celliblocks, offices, and courtrooms.

The Witness Security function provides protection for government witnesses and their families whose lives may be endangered. These witnesses agree to provide critical testimony concerning organized criminal activity, terrorism, or other serious crimes in exchange for security and freedom from prosecution. This protection is provided 24 hours a day to all such witnesses while they are in a "threat" environment, including trials and other court appearances. Witness Security Inspectors administer all matters relating to new identities, relocation, and program services to the witnesses and their family members.

The Special Assignments Reserve provides temporary supplemental resources to those districts unable to fulfill operational missions within base resources. Funding and the temporary re-assignment of deputies from other districts enables the USMS to secure high threat trials, provide protective details, and secure other special events. The Reserve is administered by headquarters staff who reimburse districts for costs associated with hiring guards or temporary personnel to replace deputies on assignment, overtime, travel, equipment, and per diem.

The Special Operations Group (SOG) is a specially trained unit that is deployed in high-risk law enforcement situations. Their primary mission is to support district offices and headquarters operational divisions during dangerous fugitive apprehension missions, national emergencies, civil disorders, natural disasters, or any situation ordered by the Attorney General, Director, Deputy Director, or their designee.

SOG consists of full-time operational and administrative employees at the Special Operations Group Tactical Center in Pineville, Louisiana, and collateral-duty members who have met the USMS and SOG standards for physical fitness, mental ability, and strength of character. Both full-time and volunteer operational members are on call 24 hours a day and can be assembled anywhere in the United States fully equipped, self-supporting, and operationally ready. Volunteer SOG members perform the full range of deputy duties in their respective districts when not engaged in SOG activities. SOG is authorized and responsible for the selection of its own weapons, animunition, special munitions, diversionary devices, and non-lethal weapons.

ACTIVITY: PRISONER TRANSPORTATION

	Perm.	Work-	
Prisoner Transportation	Pos	YCATS	Amount
2000 Appropriation Enacted	89	87	\$39,659
2001 Base	89	87	40,090
2001 Estimate	89	8 .7	43,603
Increase/Decrease	Ö	_	\$3,513

BASE PROGRAM DESCRIPTION:

The USMS is responsible for the production, transportation, and custody of all Federal detainees. This includes receiving prisoners into custody and processing them through the cellblock, producing them for court proceedings, and transporting them to Federal institutions and contract jails. The USMS must perform these functions in a safe and cost effective manner. When the travel distance exceeds 250 miles, USMS prisoners are transported by Justice Prisoner and Alien Transportation System (JPATS) aircraft. Like all JPATS customers, the USMS is charged on a cost-per-seat basis and transfers funds to the JPATS Revolving Fund through a reimbursable agreement.

Shorter prisoner movements are accomplished using USMS varis and sedans. These ground movements include daily prisoner trips to nearby courthouses, detention facilities, medical facilities, and the JPATS airdift. The modes of transportation must constantly be adjusted to reach the desired destination on time. When JPATS aircraft or USMS vans and sedans are unavailable or are not cost effective, the USMS uses chartered or commercial aircraft, air ambulances. Bureau of Prisons buses, commercial buses, and trains.

ACTIVITY: FUGITIVE APPREHENSION

	Perm.	Work-	
Fugitive Apprehension	Pos	years.	Amount
2000 Appropriation Enacted	894	680	\$107,084
2001 Base	894	880	109,430
2001 Estimates	<u> 194</u>	880	109,430
Increase/Decrease	0	٥	\$0

BASE PROGRAM DESCRIPTION:

The USMS has primary responsibility for apprehending Federal fugitives from justice: prison escapees, bail jumpers, parole, and probation violators. The USMS also enforces warrants from agencies without arrest power, bench warrants issued by Federal judges, and warrants referred by the DEA. The USMS coordinates multi-agency task forces by teaming up with other Federal, State, and local law enforcement agencies to concentrate apprehension efforts on violent fugitive felons and drug offenders. Through the use of electronic surveillance equipment and specially trained investigators, the USMS is able to track and trace fugitive communications. The USMS also applies special analytical methods and uses automated information systems to assist in the investigation and apprehension of fugitives.

In addition to domestic fugitive investigations, the USMS reaches beyond the boundaries of the United States to arrest fugitives who have fled the country. As a member of the International Police (INTERPOL), the USMS works with foreign law enforcement officials and cooperates with DEA and FBI officials in foreign locations to apprehend and extradite fugitives.

ACTIVITY: SEIZED ASSETS MANAGEMENT

	Penn.	Work-	
Seized Assets Management	Pos	Years	Amount
2000 Appropriation Enacted	179	175	\$14,209
2001 Base	40	40	4,000
2001 Estimate	40	40	4,000
Increase/Decrease	70	76	ŧn

BASE PROGRAM DESCRIPTION:

The Asset Seizure and Forfeiture Program is one of the most potent weapons against organized crime in the Department of Justice, particularly when it targets large illegal drug enterprises. The success of the program relies on the close coordination between the FBI, DEA, INS, the U.S. Attorneys Office, and the USMS. The USMS has two primary roles as it relates to the asset forfeiture program: operational and administrative. Deputy Marshals are responsible for executing court orders by physically seizing and securing assets. Administrative staff are responsible for establishing contracts with private sector vendors and memorands of understanding with other Federal agencies to ensure that assets are properly maintained while forfeiture action is pending. Once forfeited, the USMS ensures that assets are disposed of in a timely and commercially sound manner. The 2001 budget recommends that the salaries of U.S. Marshals Service (USMS) administrative personnel responsible for the Program's property custodial functions be reimbursable from the Assets Forfeiture Fund. The property management function is critical to program success. Without a sound property management

program, seized assets would fall in disrepair, would lose value and would be more difficult for the Government to dispose os in a timely manner. This budget shifts costs from discretionary spending to mandatory spending beginning in 2001. (A portion of the AFF excess unobligated balance will be retained for this purpose.) Annual funding for this purpose is not expected to exceed \$14.2 million. No salary costs of Deputy U.S. Marshals will be funded.

During fiscal year 2000, the Department of Justice also intends to undertake a formal review of the costs and operational effectiveness of its management and disposal of assets seized for forfeiture. The purpose of the study is to: 1) determine how best to coordinate, organize and deliver this program in the Department; 2) establish a standard profile of property management functions that reflects different demands of different types of property; 3) assess the strengths and weaknesses of Department performance of these functions; 4) compare Departmental practices to industry best practices, where appropriate; 5) associate Departmental costs with the functions and asset types; and 6) identify opportunities for lowering Departmental costs while improving Departmental performance. The Treasury Department will be invited to participate in this contract review so that the majority of Federal forfeiture activity is covered, and improvements to common practices are facilitated.

ACTIVITY: D.C. SUPERIOR COURT

	Perm.	Work-	
D. C. Superior Court	Pos	year	Amount
2000 Appropriation Enected	192	189	\$17,712
2001 Base	192	189	18,594
2001 Estimates	213	199	19.602
Increase/Decrease	21	10	\$1,008

BASE PROGRAM DESCRIPTION:

The USMS Superior Court office performs the same duties as all other USMS district offices, as well as functions for the District of Columbia which are typically performed by a sheriff or similar local official. The USMS Superior Court also performs duties that are outside Federal jurisdiction in other districts, such as serving civil and small claims bench warrants, and executing court-ordered evictions.

The USMS Superior Court provides judicial security for 69 judges, 20 senior judges, 15 full-time magistrates, and 17 part-time magistrates. Court activity is conducted in 94 courtrooms and hearing rooms located in three separate buildings. Deputy U.S. Marshals are assigned to all criminal courtrooms and one civil courtroom where the proceedings are so volatile that the judges demand

the attendance of a DUSM. The court operates 6 days a week, including all holidays, and handles a wide variety of judicial cases including: criminal folonies, traffic felonies, misdemeanors, civil, domestic relations, contested divorces, contested custody, mental health hearings, small claims, D.C. traffic, preliminary hearings, arraignments, and special matters (chief judge criminal cases and tenant disputes).

Not only does the volume of prisoners alone puts Superior Court DUSMs at more risk for injury than other USMS districts, the type of prisoners that Superior Court handles also increases that risk. Many of Superior Court's prisoners are violent gang members. Approximately 40 percent of new prisoners are charged with murder, assault, and rape; another 40 percent are charged with narcotic violations; 5 percent are charged with theft; 5 percent are fugitives; and 10 percent are charged with multiple offenses. In addition, four to five courts hear "capital crime cases" daily even though D.C. laws prohibit capital punishment.

ACTIVITY: SERVICE OF LEGAL PROCESS

	ram.	WORK-	
Service of Logal Process	Pos	YCHIL	Amount
2000 Appropriation Enacted	125	123	\$14,069
2001 Base	125	123	14,674
2001 Estimate	125	123	14.674
Increase/Decrease	<u></u>		\$0

BASE PROGRAM DESCRIPTION:

Every year, the USMS executes thousands of summonses, writs, mandates, and other legal process for the Federal courts, U.S. Attorneys, private litigants, Federal agencies, and foreign governments. Service of legal process includes summons and complaints in civil actions, subpoenas in both civil and criminal cases, writs of babeas corpus, and enforcement of major injunctions. The Anti-Drug Abase Act of 1982 provided for the collection of fees and commissions for the personal service of non-government civil process by DUSMs. The statute was further amended to permit the Attorney General to set fees and commissions. At times, summonses and complaints filed in debt collection cases require significant investigation by DUSMs to locate individuals attempting to avoid being served. The quantity and complexity of the USMS workload are determined, in large part, by decisions made by the U.S. Attorneys, investigative agencies, and the courts.

ACTIVITY: TRAINING ACADEMY

	Perm.	Work-	
Training Academy	Pos	FTE	Amount
2000 Appropriation Enacted	26	26	\$3,879
2001 Base	26	26	4,005
2001 Estimate	26	26	4,005
Increase/Decrease	<u>_0</u>	<u></u>	\$0

BASE PROGRAM DESCRIPTION:

The USMS Training Academy, located at the Federal Law Enforcement Training Center (FLETC), provides and oversees the training of USMS personnel. A wide range of programs is offered to address the needs of both operational and administrative personnel. Additional courses are specifically designed to assist State and local law enforcement. Regional and management training classes that cannot be accommodated at the FLETC are conducted at various locations throughout the country to ensure that personnel are current on all aspects of their program area. The Academy responds to the ever-increasing demands for new courses to produce a highly competent and professional work force. The Academy's goal is to ensure that all personnel within the USMS receive, on a scheduled basis, the knowledge and skills necessary to support the mission of the agency.

ACTIVITY: ADP AND TELECOMMUNICATIONS

	Perm.	Work-	
ADP and Telecommunications	Por	FIE	Amount
2000 Appropriation Enacted	94	92	\$27,538
2001 Base	94	92	28,086
2001 Estimate	94	92	28.046
Increase/Decrease	0		- 50

BASE PROGRAM DESCRIPTION:

The ADP and Telecommunications program is comprised of the Information Technology Services (ITS) staff, senior systems administrators, and collateral-duty systems administrators. The goal of the ITS program is to provide Automated Information System (AIS) support and communications management support to all USMS employees in the districts and at headquarters, and to provide a complete range of major AIS applications through the best postible information technology systems.

The basis of AIS support for USMS users is the Marshals Service Network (MNET) which provides users incomposed the agency with access to shared software applications and national databases. All district and headquarters offices have direct access to MNET and major USMS applications for prisoner, warrant, and financial information. The USMS is also installing Partial Automated Booking Stations (a smaller yet fully compatible version of DOI's Joint Automated Booking Station) throughout the districts.

The Communications Management program includes telephone and accure radio communications. The USMS is in the process of replacing all analog radios with digital narrow-band radios. These new units provide the privacy and accurity required by Federal law. The Service's telephone support staff is responsible for the design, installation, maintenance, and upgrade of all telephone systems at headquarters and in the districts. Periodic travel to the districts ensures that telecommunication requirements are met with regard to current and future office layouts, system size, and system type.

Increase/Decrease	34	18	\$4,480

TT 1

BASE PROGRAM DESCRIPTION:

The Besieve Services Division (BSD) is responsible for a variety of programs related to the USMS infrastructure. BSD purchases and maintains the USMS vehicle fleet; administers the property management program which consists of more than 50,000 items of accountable property having an aggregate value in excess of \$100 million; and reviews all contracts to ensure adherence to Federal regulations and USMS policies.

The Management and Budget Division (MBD) is responsible for a variety of management and budget functions. MBD formulates budget requests; oversees the USMS budget execution process and all financial operations; develops the Service's management and productivity improvement initiatives; directs the strategic planning process; and audits district operations.

The Human Resources Division (HRD) provides a full range of personnel services for all USMS employees nationwide: staffing and classification, benefits and payroll, employee and labor relations, health and safety, career programs, background investigations, and suitability adjudications.

The Prisoner Services Division develops and administers USMS prisoner medical program policies; provides technical assistance on prisoner medical issues to the field; coordinates interagency prisoner medical care and infectious disease control; and oversees medical cost initiatives.

The Executive Services Division (ESD) includes congressional and public affairs and internal investigations. ESD promulgates all USMS policy, publishes the U.S. Marshals Manual, provides information to the general public, responds to congressional inquires, and performs integrity-related internal investigations of alleged misconduct, illegal activity, or malfeasance by USMS employees and contractors. The division also serves as the hiaison with the DOI Office of Inspector General, Office of Professional Responsibility, and FBI when assisting with investigations of USMS employees.

INITIATIVES

Protection of the Indicial Process

	Penn.	Work-	
	Pos	Years	Amount
Mission Support Staffing	283	121	\$17,056
Detention Enforcement Officers for Prisoner Handling	43	22	2,063
Courthouse Security Equipment	0	0	7,000
Special Assignments	Q	Q	5.000
Total, Protection of the Judicial Process Initiatives	326	!43	\$31,119

Proposed Actions

This initiative seeks to address the following objectives:

- To acquire sufficient personnel to handle the increased workload generated by other law enforcement agencies and staff new countrouses scheduled to open in 2001.
- 2. To hire Detention Enforcement Officers (DEOs) in districts with the greatest use of guards.
- 3. To provide security systems, telephone systems, relocation, and furnishings for courthouses scheduled to open in 2001,
- To provide additional resources necessary for high threat trials and other special assignments.

Mission Support Staffing

An increase of 283 positions (283 Deputy U.S. Marshale (DUSMs), 22 detention onforcement officers (DEOs), and 56 administrative personnel), 121 FTE, and 517,856,800 is requested to address the projected increase in workload facing the agency in 2001. This request comes at a time when the USMS will have been under a hiring freeze for two years. The current authorized level of positions for the USMS is short of the staffing required to address the apticipated increases in workload (e.g., prisoners in custody).

The USMS performs unique functions within the Federal criminal justice system. From judicial security to prisoner services and fugitive apprehension, the workload facing the USMS is the result of the work performed by other components throughout the Federal criminal justice system. The opening of new courthouses also generates additional requirements because the USMS is required to protect more courtrooms, manage additional cellblock space, and produce more prisoners for interviews, hearings, and other judicial proceedings.

Moreover, increased arrests by the Federal Bureau of Investigation (FBI), Drug Enforcement Administration (DEA), and Immigration and Naturalization Service (INS), together with more criminal cases generated by the U.S. Attorneys (USA), produce a significant amount of workload for the USMS. In some districts with the largest average deity prisoner population and criminal proceedings, the shortage of law enforcement officers has forced the USMS to hire an extraordinary number of contract guards. This initiative seeks to provide the necessary positions to:

- . Handle the increased workload generated by new agents and attorneys at the FBI, INS, DEA, USA; and,
- Secure new and renovated U.S. courthouses scheduled to open during 2001.

At the time this budget is being prepared, USMS senior management is in the process of restructuring the operational workforce. Currently, all DUSMs are in the GS-1811 (Criminal Investigator) series. The plan is to hire personnel in the GS-082 series who will be called Deputy U.S. Marshals. The existing personnel in the GS-1811 series (currently called Deputy Marshals) will then be called Criminal Investigators. Rather than rely primarily upon Criminal Investigators (GS-1811 series) as the USMS has for the last few years, the USMS intends to hire DUSMs (GS-082 series) and DEOs (GS-1802 series). This change in hiring will re-institute the GS-082 series and effectively create three types of operational positions within the agency. It is believed that this type of stratified workforce is more appropriate because it matches employee skills with duties. Criminal investigators will concentrate on fugitive investigative work and protective details; Deputy U.S. Marshals will concentrate on courtroom security; and DEOs will provide prisoner handling and security in the cellblocks.

Secure U.S. Courthouses Opening in 2001

The USMS requests an increase of 89 positions, 45 FTE, and \$6,711,800 to secure U.S. Courthouses opening in 2001. Each courthouse construction project expected to be completed by FY 2001 was reviewed. (Courthouses opening in the fourth quarter of FY 2001 were excluded because completion dates are likely to slip into FY 2002. Several courthouses that had already opened in FY 1999 were also included because no positions had been appropriated for these facilities.) Based on courthouse project information

from the General Services Administration (GSA), the Administrative Office of the U.S. Courts (AOUSC), and the districts, the USMS determined the number of positions required to provide appropriate security and support for the court and its tenants based on:

- the number of judges, senior judges, magistrate judges, and judicial vacancies in each court city slated for a new or renovated facility;
- the number of countrooms to be utilized in the new counthouse compared to the number of countrooms utilized in the old counthouse; and,
- the number of new courtrooms in the renovation project.

Excluded from the request are courtrooms occupied exclusively by judicial officers who left an existing courtroom. Work performed by a judicial officer in a new courtroom was derived from the courts' pending caseload. Project sites were provided by AOUSC. Occupancy dates were provided by GSA. The table below displays the 89 positions for new or renovated courthouse facilities (65 DUSMs, 7 DEOs, and 17 administrative support positions) that are a direct result of additional countroom utilization.

The request reflects the new operational structure and includes Deputy U.S. Marshals (GS-082) rather than Criminal investigators (GS-1811). USMS management believes that the workload associated with courtroom protection and prisoner security can and should be accomplished with deputies, whose positions are less expensive than Criminal Investigators because the grades are lower and the occupational series does not require law enforcement availability pay.

Handle the increased Workload

The USMS requests an increase of 194 positions, 76 PTE and \$18,345,000 to handle the increased workload generated by new attorneys at the U.S. Attorneys Office and new agents at the FBI, INS, and DEA. Agents and attorneys hired by these agencies do not immediately create work for the USMS. It is estimated that a two year lag exists between the time positions are authorized in these taw enforcement agencies and when their work has an impact on the USMS. The lag time covers the time to recruit, hire, and train new agents and attorneys before they become productive. Therefore, the additional workload affecting the USMS in 2001 is based on the increase in new agents and attorneys hired in 1999. The following table shows the staffing changes by agency.

Agency	FY 1996	FY 1997	FY 1998	FY 1999	Change
FBH	10,972	11,306	1(5)	0,40	10
DEA	3,716	1,993	4,238	4,515	317
BNS .	(2,2)1	13,822	14,680	15,680	1,000
USA	4,563	4,793	4,841	4,907	44
Tabel	31,554	11,824	35,291	34,783	1,491

To determine the amount of staffing required by the increase in these law enforcement agencies, the USMS examined past trends in the following workload factors compared to the hiring in other agencies: prisoners in custody, magistrate proceedings, trips in support of JPATS, process served, criminal bench hours, prisoners produced, criminal trial hours, fugitive warrants cleared, prisoners received, and assets seized. Using regression analysis models incorporating these independent variables, the USMS projects the following additional workload in 2001: 3,155 prisoners in custody; 33,672 magistrate proceedings; 3,435 trips in support of JPATS; 1,117 criminal bench hours; 19,972 prisoner productions to court; 7,243 non-criminal trial hours; 1,826 Class I fugitive warrants; 5,988 prisoners received; and i,550 assets seized.

Thus translates into 194 additional positions needed to handle the increased workload. Of this amount, 138 are Deputy U.S. Marshals, 15 are detention enforcement officers, and 41 are administrative personnel. Again, this request reflects the cost to hire Deputy U.S. Marshals (GS-082) rather than Criminal Investigators. Although the increased workload generated by other law enforcement agencies also includes investigative work more appropriate for Criminal Investigators, the USMS acknowledges that the agency already has a sufficient amount of staff to perform this work. The USMS intends to reallocate Criminal Investigators within the agency and backfill their positions with Deputy U.S. Marshals. In doing so, the USMS will be able to meet the increased workload and minimize personnel costs. The USMS intends to continue hiring Deputy U.S. Marshals (GS-082) to perform prisoner-related and court-related work. Criminal Investigators (GS-1811) will be primarily responsible for fugitive apprehension, including extraditions, financial investigations, and surveillance.

Furthermore, in order to maximize the effectiveness of existing USMS personnel, the USMS is conducting a "bottom-up" review during 2000. This review examines the missions, activities, staffing, and expenditures of all USMS functions with the goal of exablishing performance standards for all districts and headquarters entities. Both district and headquarters personnel are participating

in this review. By applying performance standards across the agency, the USMS plans to objectively determine which districts and headquarters offices are maximizing their resources. Thereafter, the USMS may be able to implement directed moves to reallocate DUSMs. By applying the performance standards based on the results of the bottom-up review, the USMS may be able to identify where personnel are needed most and move DUSMs accordingly. The requested positions for 2003 assume that base staffing resources have been allocated based on existing workload. New positions are to address the new workload generated by other law enforcement components.

Courthouse Security Equipment

The USMS requests an increase of \$7,800,000 to provide security systems, telephone systems, relocation costs, and famishings for courthouse construction projects. Requested funds are for the following eight courthouses scheduled to open during FY 2001. (A ninth project, located in Wheeling, West Virginia, already opened during 2000 but was not funded previously.) Updated occupancy dates were obtained from the Administrative Office of the U.S. Courts in December 1999.

	Locations	Occupancy Date	Security Equipment	Furnishings	Relocation	Telephone Systems and Cabling	Total
1	Las Vegas, NV	06/00	\$750,000	\$130,000	\$0	\$143,000	\$1,023,000

1	Heicna, MT	05/01	525,000	58,000	25,000	50,000	638,000
•	Wheeling, WV	10/00	245,000	0	¢	۰	245,000
	Totals		\$5,700,000	9673,000	\$130,000	\$397,000	57,000,000

Security equipment provides central control during a crisis and records possible assaults in the courthouses. Installing and maintaining electronic security devices are critical to the safety of judges, USMS personnel, and the public. Security breeches occur daily and

place judges, witnesses, the public, and USMS personnel at risk. By installing electromagnetic locks, ballway cameras, and monitoring equipment, the "GMS is able to secure prisoner movement space with fewer operational personnel. Using equipment and architectural designs that enhance security, the USMS is able to minimize threats and incidents in a more cost effective manner.

The installation of courthouse security equipment is a process that can take two years to complete. The process begins with USMS security specialists laying out the complete security system on "95 percent complete" construction blueprints and making an estimate of the associated costs. The USMS security specialists send blueprints and a Scope of Work to the rational security systems contractor for a cost estimate. The contractor has 30 days to return a price estimate. If both parties agree on the price, a delivery order is issued; if not, negotiations take place until a price is agreed upon. Once the delivery order is issued and funding is obligated, the equipment is ordered. Installation time varies by courthouse size: 3-6 months in a small courthouse, 4-8 months in a medium sized courthouse, and 6-12 months in a large courthouse.

A typical courthouse security system consists of six parts: entrances to USMS office; holding cell areas behind the courtnoms; prisoner movement areas and hallways connecting the prisoner elevator to the holding cells; prisoner elevators; all doors (including cell doors) in the cell block; and all cell block areas, including the prisoner/attorney interview moons, vehicle sally ports, and prisoner receiving areas. All devices, including durers areas in the judges' chambers and fices, are wired into the main control panel in the cell block. The USMS acknowledges that in today's environment an agency must be fiscally conservative. However, installation of adequate security systems is imperative to the safe and secure operation of the courthouse.

Telephone systems and cabling must be purchased three to six months before the courthouse opening because lines must be installed during the construction phase. Funds for telephone systems and cabling include both voice and data communications lines, which includes all horizontal cable runs to the workstations. GSA only installs cables to each telephone closet, not to the employees' offices. The USMS requires a minimum of three jacks per workstation for voice, data, and local area network. Funding also provides telephone system equipment and telephone instruments, installation, and programming. To support the mission of the office, cabling may be required between more than one floor or between buildings. Where distance limitations prevent the installation of copperbased wiring, the USMS uses fiber optic cable.

Funds for relocation services are required in FY 2001 because the General Services Administration (GSA) no longer covers this expense. During FY 1999, GSA notified all customer agencies that they would no longer pay the expenses related to moving equipment and furniture from old buildings to new buildings. Historically, GSA has always covered relocation expenses as part of

new courthouse construction costs. Since this is no longer the case, the USMS requires either a base transfer of funds from OSA or a base increase of funds for this necessary expense. The USMS has no base funding for this purpose.

Funding for new courthouse furnishings is required because construction does not always replace existing courthouse facilities, but often supplements them. A new building requires the minimum office and support space furnishings to conduct business. During renovation, the USMS makes every attempt to salvage and reuse furniture. In most cases the USMS installs modular furniture in order to make the most effective use of office space. Modular furniture in an open office environment enables the USMS to fit more employees per square foot than using conventional furniture in private offices. Since most renovation projects provide limited space for the USMS, modular furniture is a necessity.

Special Assistancests

The USMS requests \$5,000,000 to increase base funding for special assignments, which provides supplemental resources to those districts unable to fulfill extraordinary operational missions within bace resources. DUSMs are temporarily re-assigned from other districts to enable the USMS to provide ongoing security for judicial protective details and high threat trials. At the conclusion of a special assignment, a DUSM returns to his/her home district. Special Assignments funding reimburses districts in which the special assignment is taking place as well as the districts that send DUSMs to provide temporary assistance. Reimbursable costs include travel, overtime, and per diem for the district with the special assignment, and if necessary, guard backfill or temporary personnel to replace DUSMs on assignment for those districts providing assistance. Costs associated with renting, leasing, or purchasing specialized support equipment for establishing temporary command posts are also reimbursed.

As a result of the costs associated with the World Trade Center bombing, the USMS was forced to decrease other resources to pay for ongoing judicial protective details. The details are 24 hours-a-day, 7 days-a-week. For the first time, the USMS has had to provide perpetual protection for judges. The USMS must fund these protective details at the expense of other high threat trials. The requested funding will enable the USMS to staff other high threat trials by temporarily reassigning DUSMs between districts.

In order to minimize costs, the USMS is implementing three cost savings measures in FY 2000. First, based on a review of the special assignments program in FY 1999, the USMS will streamline the procedures related to starting, funding, and reimbursing special assignments. For example, the USMS will make better use of rotating shifts to eliminate overtime and will obtain reimbursable agreements prior to initiating any special assignment that includes multi-agency participation. This will reduce the financial burden on the USMS. Second, the USMS is conducting a "bottom-up" review which will examine the mission, activities, staffing, and past expenditures of all USMS functions with the goal of establishing performance standards. Both district and headquarters personnel are

participating in this review. The USMS will apply these standards across the agency to objectively determine how to maximize resources and performance. Third, by applying the performance standards resulting from the bottom-up review, the USMS should be able to identify where personnel are needed most and move DUSMs accordingly in 2001. (The USMS is also requesting an increase of \$2,965,000 for permanent change of station moves in 2001.)

Detention Enforcement Officers for Prisoner Handling

An increase of 43 positions, 22 FTE, and \$2,963,000 is requested to hire detention enforcement officers (DEOs) to secure cellblocks and holding cells and provide prisoner security in the districts with the greatest use of contract guards. The USMS uses a mix of deputies, DEOs, and guards throughout the country to provide prisoner security. Guards are typically off-duty law enforcement officers and persons with law enforcement backgrounds. The USMS increased all the time the need arises. Although the USMS goes to great lengths to screen guards prior to their hire, they are one of the largest security risks the USMS must deal with on a day-to-day basis, especially as the frequency of their usage continues to grow.

As the USMS increases the use of guards, the ability of deputies and DEOs to supervise this large contract workforce becomes more difficult. Guards with USMS background checks are not always available, requiring the use of guards that are not acreened or trained as thoroughly. This limited acreening process could miss potentially dangerous character flaws, which can present a security risk. Another security risk is that guards may not be in top condition at the time they are called to serve; they may be physically and mentally exhausted from their primary employment, thus increasing the chance of error in judgement and reaction time that could lead to injury to themselves and others. In addition, their physical condition could prevent them from functioning at peak performance should an emergency arise. Although guards have law enforcement backgrounds, each guard has potentially received different training. Some training may not be appropriate for use with Federal prisoners. In any case, it is impossible to anticipate the guards' reactions in emergency situations since they did not receive their training from the USMS. This can result in unnecessary injuries to the deputy, guard, or prisoner.

USMS will continue to hire guards on an ast-needed basis is a valuable staffing resource. This initiative is to provide DEOs in the top ten districts where guard usage is consistently at a high level and/or where courthouse security standards are not being met. Of the following ten districts, four are along the Southwest Border: Southern Texas, Western Texas, Arizona, District Court, Northern California, Central California, Eastern New York, Southern New York, Southern California, and Massachusettes.

Prisoner Transportation

	P erm .	Work-	
	Pos	Years	Amount
Movement of Prisoners	0	0	\$3,513

Proposed Actions

This initiative seeks to address the following objectives:

- To move 58,461 USMS prisoners by JPATS aircraft in 2001.
- To provide district support for JPATS flights.

Movement of USMS Pricences

The USMS requests \$3,513,000 for the movement of USMS prisoners. Of the requested amount, \$3,220,000 is for the air movement of USMS prisoners on the Justice Prisoner and Alien Transportation System (JPATS) and \$293,000 is for district support to JPATS flights. District support to JPATS flights includes expenses for guards, overtime, ground transportation, and air charters. In special circumstances, the USMS uses air charters and air ambulances to support airlift demands for high threat security flights and medical emergencies.

In FY 2001, the USMS estimates that prisoner air movements will increase to 58,461. With the 2001 base of \$25,426,000 and a \$490 per seat charge, the USMS has funding to move 51,890 prisoners. The projected increase in air movements will require an additional \$3,220,000. The table below shows the additional funding required in FY 2001.

Fiscal Year	Base Funds	Cost-Per-Seat	Est. Moves	Est. Total Cost	Cumulative Deficit
FY 1999	\$23,128,000	5448	51,625	\$23,128,000	\$0
FY 2000	\$25,426,000	5491	51,784	\$25,426,000	\$0
FY 2001	\$25,426,000	\$490	58,461	\$28,646,000	(\$3,220,000)

The USMS also requests \$293,000 for the USMS prisoner movements in support of JPATS. The USMS currently has \$4,835,000 in base funding for prisoner movements in support of JPATS. By 2001, the USMS will require \$5,128,000 in base funding. This estimate is based on the average 6 percent growth rate in the movement of USMS prisoners from 1995 through 1999. Currently, the USMS uses commercial strilines to move prisoners from Hawaii to San Francisco because of the detention space shortage in Hawaii. However, in 2000, the USMS is rerouting these commercial flights to Los Angeles instead of San Francisco, thereby saving approximately \$300 per ticket. Over the course of the year, the USMS will save enough funding to cover the 2000 increase in prisoner movements. In 2001, however, the growth in prisoner movements will overcome these cost savings, necessitating a program increase of \$293,000.

In 2002, BOP is scheduled to open a detention facility in Hawaii. Of the 670 beds slated for this facility, 546 beds will be made available for USMS detaineds and 124 will be reserved for BOP prisoners. The new detention facility will decrease, if not eliminate, the need for commercial flights to Hawaii. Funds for USMS prisoner movements (to and from Hawaii) in support of JPATS may then be reallocated to regular JPATS air movements.

D. C. Superior Court

	Perm.	Work-	
	Pos	years.	Amount
Celiblock Operations	21	10	\$1,004

Proposed Actions

This initiative seeks to address the following objectives:

- To provide additional staff to support cellblock operations.
- To reduce the number of prisoner assaults on judges and USMS personnel.

D.C. Superior Court Staffing

An increase of 21 positions, 10 FTE, and \$1,008,000 is requested to support D.C. Superior Court cellblock operations. These 21 Detention Enforcement Officer (DEO) positions will provide security in the prisoner cellblocks and holding cells. D.C. Superior Court processes more prisoners each day than any other USMS district. The Superior Court cellblock operates 6 days a week and averages 400 prisoners a day. The adult cellblock operates 16 hours a day while the juvenile cellblock operates 13 hours a day. Other USMS districts follow a standard 8 hour shift, 5 days a week. Currently, D.C. Superior Court has 28 DEOs staffing the cellblocks and holding cells. The detainer-to-DEO ratio is 11 to one. This is an unacceptable staffing ratio which puts USMS personnel at great risk.

During FY 1999, D.C. Superior Court reported 10 assaults to personnel and 10 incidents in which DUSMs had to discharge Oleoresin Capsicum gas (OC spray) to subdue prisoners. Following are examples of incidents occurring within the last year that illustrate the need for additional DEO:

- On April 20, 1999, two DUSMs led a juvenile assailant to the cellblock area where the juvenile resisted restraints and refused
 to be placed into the cell. The prisoner had to be forcibly restrained.
- On July 17, 1999, a DUSM was involved in a physical struggle with a prisoner in the traffic lock-up cell. The prisoner broke
 free and attacked the DUSM. There were no other available operational personnel in the cellblock area. Another DUSM
 observed the altercation in the main cellblock area and used OC spray to gain control of the prisoner.

With additional DEOs, situations like these could be avoided or minimized. The lack of proper staffing has increased the risk of harm to judges, prisoners, jury members, and deputies. While deputies provide security in the courtrooms, DEOs monitor prisoners in the cellblocks to ensure that prisoners do not escape, harm themselves, or harm other prisoners. Due to the current shortage of DEOs, the Superior Court must assign deputies and guards to cellblock duty, which is not an effective or productive use of personnel resources. Also, other operational activities are not being completed in a timely manner.

Management and Administration

	Репп.	Work-	
	Pos	YCAT1	Amount
Permanent Change of Station Moves	0	0	\$2,965
Financial Management	32	17	1,415
Cooperative Agreement Program Staff	2		100
Total, Management and Administration	34	18	\$4,480

Proposed Actions

* · · · · · ·

This initiative seeks to address the following objectives:

- To support Permanent Change of Station (PCS) moves.
- 2. To improve financial integrity.
- To provide additional staff to manage the Cooperative Agreement Program.

Permanent Change of Station Moves

The USMS requests \$2,965,000 to support Permanent Change of Station (PCS) moves. This additional funding will allow the USMS to better manage limited personnel resources and reallocate deputies within the districts based on need. Instead of heavily relying on special assignments funding to temporarily staff districts with out-of-town deputies, PCS funds enable the USMS to permanently relocate deputies to districts with large numbers of high threat trials, protective details, and other criminal proceedings.

Traditionally, the USMS has used PCS funds to move deputies selected through the merit promotion process to fill Chief Deputy, Assistant Chief Deputy, Supervisory Deputy, and headquarters operational vacancies. The USMS recognizes that directed moves must be used to realign resources to meet the operational needs of the agency, such as the largest districts, including the Southwest Border and major metropolitan areas.

At an average cost of \$55,000 per move, the requested funding will allow the USMS to move \$4 deputies in 2001. In order to maximize the effectiveness of limited PCS funds, the USMS instituted the following cost-cutting restrictions on all PCS moves:

1) relocation company services are withheld until employees have attempted to sell their homes themselves for 90 days; and 2) temporary quarters will be provided for only 60 days rather than the current 90 days.

Financial Management

The USMS requests an increase of 32 positions, 17 FTE, and \$1,415,000 to improve the agency's financial integrity. This request consists of nine accountants, fifteen accounting clerks, and eight computer specialists. These positions will enable the USMS to: provide sufficient staffing to increase financial oversight and policy compliance to meet standards necessary for audited financial statements; operate the USMS' Standardized Tracking Accounting and Reporting System (STARS); improve financial accountability; and replace current contractor support with USMS personnel.

In the 2000 conference report language, Congress remained "scriously concerned about the Marshals Service's inability to accurately project its funding requirements and effectively manage the resources provided." Specifically, Congress directed the USMS, in conjunction with DOJ, to "conduct a comprehensive review of the budget and financial management practices" in order to "remedy its budget and financial management weaknesses." As directed, the USMS will submit a report to Congress in February 2000 detailing a comprehensive review of budget and financial management practices. Throughout FY 2000, the USMS will improve its budget practices to correct existing weakness. However, in order to correct financial management weaknesses, the USMS requires additional positions. Even before the conference report was issued, the USMS recognized that the entire USMS financial system was slowly deterioration. This deterioration was evident based on the following events:

- The inability of the USMS to obtain a clean financial opinion from the Office of the Inspector General (OIG) auditors;
- The difficulty of the USMS to respond to financial inquiries;
- The reduction of services being performed by the USMS financial staff;
- The lack of adequate review over aspects of the financial system;
- The increased reliance on contractor support; and,
- The users uncertainty of the financial data's accuracy.

During FY 1999, the USMS has made every effort to obtain a clean financial opinion: contract staff have been hired; USMS personnel have been temporarily reassigned to the USMS Audited Financial Statement Review team; and DOJ staff have been temporarily detailed to the USMS. With this concentrated effort, the USMS anticipates an unqualified opinion in 1999. In order to maintain this level of financial integrity, it is critical for the USMS to obtain additional staff.

Contractor support is a special concern of the DOJ Office of Inspector General (OIG). The OIG stated in congressional testimony that "any gain in financial management within the USMS might be short lived because contractor support is only a short term solution." As of April 1999, the USMS has three accountants, twelve accounting clerks, and three computer specialists under contract to support financial management. This level of staffing is inadequate to ensure the agency's financial integrity.

Financial Operations

The USMS requests 19 positions, 10 FTE, and \$755,000 to improve financial operations. This request (four accountants and fifteen accounting clerks) will address the financial staffing shortages in accounts receivable, records management, accounts payable, financial control and financial reporting, and travel voucher processing:

- One position to improve accounts receivable. This position will allow the Service to improve supporting documentation for
 revenue and accounts receivable, improve the accuracy of billing and collection data displayed on the agency's financial
 statements, and perform quarterly reviews of the status of accounts receivable.
- One position to enhance financial records management. This position will be responsible for the quality control of USMS financial records, maintenance of the financial files, and responding to requests for financial documents.
- Seven positions to expedite accounts payable. These positions will be responsible for processing vendor invoices in a timely manner. Prompt payment of invoices will eliminate the excessive prompt payment interest penalty currently being paid by the USMS.
- Two positions to produce financial controls. These positions will perform periodic and complete reconciliations of financial data to ensure all financial activity is captured in the USMS accounting system.
- Four positions to improve financial reporting. These positions will be responsible for preparing accurate obligation, outlay, and receivable reports for USMS senior level managers, DOJ, OMB, and the Department of the Treasury.
- Four positions to expedite travel voucher processing. These positions will improve the accuracy and timeliness of travel reimbursements, maintain a three-day response standard, and improve customer support for updated travel information.

STARS Support

The USMS requests 8 positions, 4 FTE, and \$466,000 to support the STARS. Eight computer specialists are required to provide STARS with daily systems maintenance and support to ensure proper operation and security of USMS accounting data. The STARS/ Accounting System is the backbone of the Service's entire financial operation.

Although the USMS has used base funding to install and operate STARS at headquarters, the USMS has not expanded installation to the districts. Districts continue to use the USMS Financial Management System (FMS). In effect, the USMS continues to use two separate accounting systems. In doing so, the OIG DOJ Annual Financial Statement for Fiscal Year 1998 (Audit Report 99-05) noted the following weaknesses:

- There are no written policies or procedures for granting user access to the Unix system, or the STARS application that resides on the Unix system;
- An experienced data base administrator was not designated to monitor the performance of the database or perform necessary maintenance; and.
- The configuration of the system that runs the STARS application was inadequate to ensure that only authorized users can access the application programs and data files.

The USMS will apply the requested positions to correct the weaknesses cited by the OIG report. Specifically, the computer specialists would provide database administration, system security monitoring, user support, and all system interfaces. In addition, they will enable the USMS to recompile interface STARS activity with external data sources (i.e. NFC, FMS) and enhance system reporting capabilities.

Financial Oversight and Policy Compliance

The USMS requests 5 positions, 3 FTE, and \$254,000 to increase financial oversight and policy compliance. The five accountant positions will directly support the audited financial statement process.

As a result of the Chief Financial Officers Act, the USMS has undergone multiple reviews of its financial operations and accounting systems. In 1998, the accounting firm hired by the DOJ OIG to conduct a financial studit of the USMS' financial statement issued a disclaimer opinion due to "internal control weaknesses, insufficient supporting documentation for obligations, and other problems related to accounts receivable, leases, leasehold improvements, and beginning balances for the balance sheet." Under internal control

weaknesses, the OIG identified inadequate change management and inadequate testing of new systems as problems. In addition, the OIG made several recommendations for the USMS to review procedures and establish USMS financial management polices.

Although the USMS has established a plan to temporarily address the problems cited in the audit report, the long term cause for the disclaimer opinion is a lack of positions to perform necessary financial oversight. This request provides the positions to permanently resolve these problems. These positions will establish financial guidance, provide oversight to USMS offices, and ensure corrective actions are taken to resolve audit findings. They will also perform independent verification and testing of the accounting system and implement procedures to ensure that the USMS adheres to internal controls and government accounting standards.

STARS/ Accounting System

The USMS requests \$2,000,000 from the Department of Justice Working Capital Fund Unobligated Balance for costs associated with implementation of an automated financial system. Since 1996, the USMS has been in the process of replacing its two existing automated financial systems: the Financial Management System (FMS) used in the 94 districts and the DOJ's Financial Management Information System (FMIS) used at headquarters.

While both systems allowed the USMS to track its financial status, they fell short of satisfying Joint Financial Management Improvement Program (JFMIP) requirements. The USMS requires a single, integrated, real-time financial system. In 1998, the USMS signed a memorandum of agreement with the Department of the Treasury, Center for Applied Financial Management who agreed to analyze USMS accounting requirements and suggest a commercial-off-the-shelf product that would meet JFMIP standards. The Center recommended the Information Engineered Federal Accounting and Reporting System (i.e. FARS) developed by Computer Data Systems, Inc. (CDSI). In addition, a cross servicing agreement was signed by the USMS so that the Department of Commerce, Office of Computer Services would provide computer and technical support. Because CDSI made software modifications on behalf of the USMS as part of the customization to meet USMS requirements, FARS, the system was renamed the Standardized Tracking, Accounting, and Reporting System (STARS). During 1998, STARS was implemented in all USMS Headquarters offices.

Originally, the USMS planned to implement STARS in all 94 district offices once the system was operational at headquarters. Unfortunately, the system exhibited considerable defects which CDSI was unable to resolve in a timely manner. Additional problems developed as a result of system difficulties from the Department of Commerce. Consequently, the USMS terminated plans for any further deployment to the field. In 2000, CDSI did not renew i.e. FARS on the GSA Financial Management System Schedule (FMSS) because CDSI has discontinued commercial software development of their product. Despite requests, CDSI was unable to provide the USMS with access to the software source code. Moreover, CDSI has not delivered the software fixes to repair the defects. The USMS seeks to stabilize the operation of STARS pending a search and replacement of the accounting system.

Cooperative Agreement Program Staff

The USMS requests 2 positions, 1 FTE, and \$190,900 to support the Cooperative Agreement Program (CAP). The CAP program is administered through the Federal Prisoner Detention Appropriation with the USMS serving as program manager. On December 23, 1999, a Memorandum of Understanding (MOU) between the United States Marshals Service (USMS) and the Immigration and Naturalization Service (INS) was signed establishing a single Department of Justice Cooperative Agreement Program (CAP) administered by the USMS.

To implement the MOU, detailed operating procedures and policies must be developed and followed by each agency. The USMS will utilize INS detention standards and other appropriate INS programmatic guidelines to administer the CAP program for INS. The USMS will be responsible for CAP budget requests for both INS and the USMS. The USMS will be responsible for all the steps necessary to negotiate, award and administer INS CAP agreements. The USMS will develop Intergovernmental Service Agreements (IGSA) for INS CAP projects. This includes: 1) conducting an IGA pre-audit; 2) establishing the jail day rate; 3) including any special services required by INS; and 4) determining future jail day rates or other agreement changes. The USMS will utilize INS standards and requirements when developing IGSA, for INS CAP projects.

A major problem facing the USMS and INS is a shortage of detention space. CAP has proven to be an effective tool for acquiring detention space. CAP awards are made in areas where intergovernmental Agreement (IGA) bedspace is not available. The CAP provides capital investment funding to selected State and local governments to renovate, construct and upgrade detention facilities. In return for the funding, the USMS receives long-term, guaranteed jail space for Federal prisoners or illegal aliens. In addition to providing guaranteed bedspace, the CAP acts as a stimulus to the local economy, both through the initial capital investment, and through the per diem rates paid to the local governments when Federal detainces are actually housed in these jails.

The USMS has approximately 226 CAP agreements with 59 new CAP agreements awarded from FY 1996 to FY 1999. Currently, two CAP Specialists (GS-1101-13) handle the program. The CAP specialists are responsible for: 1) determining critical needs in 94 districts for guaranteed bedspace under CAP; 2) analyzing CAP project proposals from State and local governments nationwide; 3) conducting on-site negotiations with State and local governments; 4) performing contract administration to include notification of formal awards to support official fund obligations, changes in scope of work modifications, funding modifications, and requests for reimbursement of completed project work; 5) maintaining and validating all CAP program and financial records; 6) tracking all CAP progress and closeout reports; 7) tracking CAP utilization of bedspace to determine if any breaches have occurred; and 8) assisting in resolving sudit, detention and legal issues. CAP awards can remain active for up to 20 years and require monitoring during the entire period they are active.

The two additional positions will enable the USMS to provide the same level of support to the CAP program as a result of adding the INS-related workload. For 2001, the CAP funding base is \$35 million.

DECIMON UNIT: PROTECTION OF THE JUDICIARY

LONG RANGE GOAL: Maximist opency effectiveness and efficiency in performing the USMS law unforcement mission.

2001 PERFORMANCE GOAL: In 2001, the USMS will conduct as annual Court Security Facilities Survey, and recommend improvements and prioritize them within 40 days of review, laughtment ingrovements within 90 days of prioritizing, if funds are sytaliable.

- 3-8.4 A thought in any expiricit or implied declaration with intent to exacult, instinuidate, or interfere with the fodoral judiciary, their staffs or families. A threat may be written, oral, or pictorial. All threats are inappropriate communications, but not all inappropriate communications are threats. Indirect threats are caused when the winness or his/her family members do not follow program publishes. A direct threat occurs when a witness is threatened with huma.
- 5. Prior to 1998, this statistic was included in the number of threats against members of the judiciary and was not accurately tracked. An imageropriate communication is any serificat, orsi or pictorist message that threatens or harmans a USMS protectee. An explicit threat is any inappropriate communication containing surrenceable dumands, irrational statements, improper advances or inappropriate language. On the GPRA table, the number of inappropriate communications includes the number of threats. Threat statistics are on times 3 and 4.
- 5. This information was collected after a two month survey of all districts. Of the 21,000 proceedings attended with prisoners during this time, over 14,000 were with the innercontate numbers of DUSMs and yourds. A similar survey was not conducted during FY 1999, however, the same level of performance is assumed.
- 11. A Level 2 event requires an on-site security detail because the anticipated security risk is determined to be generally non-tainatous, yet at the same time, there are indications of some potential for damption or violence. A Level 3 event requires a 24-hour security detail because the anticipated security risk is determined to present a substantial opportunity for description or violence. Also, a Level 3 environment will exist for all circuit conferences, the Indicial Conferences in the United States, and whenever a Supreme Court India is attendence.
- \$3. The key word in this definition is "during" indicini proceedings, and that being the case, there are zero recorded incidents.
- 14. Assault An attempt to inflict bodily hurst.

B. Factors Affecting FY 1999 Program Performance.

- 9 The Court Security information System was down for several months and the data was enterful manually. Some data may have been omitted due to the transition of staff loading data until the system was restored.
- 13 'Thiy is a difficult indicator to predict investigators and program managers base the 1999 plan from the past two years and current activities. The USMS believes that the 1999 acreads are a one-year event; the USMS does not anticipate a continued decrease in future years.

C. Factors Affecting Selection of I'Y 2000 and 2001 Plans.

- 1. A 2. In 2001, VCRP is eliminated at a generate expression. The reduced resources for the protection of the fulficiary reflect a permanent representation.
- 3. Threats against the members of the judiciary are expected to increase in 2000 and 2001 this to the increase multibar of international crims that may have an impact in the United States.
- 9. Personal protective details requested are expected to increase in 2000 and 2001. In 1999, Supreme Court fudges' travel decreased however, the USMS expects these judges to increase their continue to travel in 2000 and 2001.

DECISION UNIT: PRISONER TRANSPORTATION

LONG SANGE GOAL: Transport Prisoners and Detainess in a Safe and Cost Effective Manner

2001 PERFORMANCE GOAL: In 2001, the USMS will use the most cost effective mode of transportation to move approximately 120,461 USMS prisoners and detainees by ground and by air without sacrificing the pulse, of the public, USMS amployees, or those in custody.

PERF	ORMANCE INDICATOR INFORMATION		PERFORMANCE REPORT AND PERPORMANCE PLANS

A. Dellaities of Terms or explosations for indicators:

- 1. 9. Print to 1999, the term "printners" included USMS detainers, BOP printners, BNS allens, and state/local/military printners. Beginning in 1999, printners will include only USMS printners.
- 3. The Automated Prisoner Scheduling System (APSS) is the prisoner scheduling module. This indicator measures the trainber of requests that are received (by Prisoner Transportation) for the appropriate of USAdS detained. Upon receipt of a request, Prisoner Transportation determines the type of movement(s) required to get the detained to their detained to their detained.
- 4. The Purformance Management Plan (PMP) is the districts' named self-assessment which excauses their compliance with USMS standards. Districts report on their own compliance to this standard in their assess PMP. For this sequence, the USMS sequence that baseline compliance is 79 out of 94 districts.
- 5,6,4.7. Incident reports are filled out by districts and sout to HQ whenever a prisoner excepts or in injured, or If USMS personnel are injured white on duty. Data excludes D.C. Emperior Court.
 9. Prisoner uneventants in support of JPATS include expanses for guards, overtime, ground transportation, and air character.
- B. Factors Affecting FY 1999 Program Performance.

- 2. Beginning in 1999, Aunting, FTEs and workload data reflect USMS prisoners and detainess unity. BOP, INS, DOD and state/local prisoner workload figures are reflected in the IPATS.
 Revolving Fund (IPRA table).
- 1 & 2. With the creation of the IPATS Revolving Fund in 1999, 113 positions, 129 workycars, and \$10,300,000 were transferred out of the USMS S&E appropriation into the Fund. This explains the reduction in resources and workload.
- 3. The exacted plan was entered incorrectly in the CMB submission. The number of requests for transportation of prisoners is below the goal because approximately 3.000 judgement and commitments (that were the responsibility of the Bureau of Prisons) were inadversently included in the USMS plan.
- 5. The USMS recorded 5 injuries to USMS personnel (excluding D.C. Superior Court) in 1999. As the detained population rises, so does the chance of injury, particularly in districts with a shortage of staff or counthouse security equipment.
- C. Factors Affecting Selection of FY 2000 and 2001 Plans.
- 1 & 2 Decreased resources reflect a permanent reprogramming request.

DECISION UNIT: FUGITIVE APPREHENSI N

ħ.

LONG RANGE GOAL: Apprehend (ugitives at quickly as possible to prevent more acts of violent crime.

2001 PERFORMANCE GOAL: In 2001, the USMS will close 30 percent of the 28.817 new Class I warrants wishin one year, reduce the number of backlog warrants by 5 percent, and use electronic surveillance techniques to apprehend the most violent flagitive offenders 37 percent of the sine.

A. Definition of Terms or explonations for fediculars:

WDI - Warrant Information Network.

- ISD investigative Services Division.
- 3. Clean I Registive warrants are printery federal fugitive cases such as escapes, bond defaults/fallures to appear, parale/profusion violators, warrants generated by agencies without arrest powers, and agencies with which the USMS has a mentorandom of understanding to provide investigative pagences.
- 4. The Electronic Servelliance Unit assists in USMS 15 Most Warned cases, USMS Class 1 cases where the flagitive has a bistory of violent crisms, USMS Major Cases, secape cases and cases where the flagitive is considered by DEA to be a high level violator, i.e., violent or violent gang related. The criterie for a Major Case must focus on one or more of fifs following: a curve criminal with a history of violence or weapons conviction, region receives d-enfined, and any shysted cassodied secape.
- 6. As interruptional flightlyr in a person who is wanted for a crime committed in the U.S. and has fled to prother country. While most of these individuals are U.S. citizans, they can be foreign-from nationalists as well.
- 7. A foreign flagility is a person who is wanted for a crime committed in a foreign country and has fired to the U.S.
- 8. Class 2 fidency warrants are warrants where other agencies have primary exaponeibility for capturing the figitive.
- 9. Cleared includes arrest, sevender, directed errest, errest by another agency, dismissed, and taking cases by after a detainer is looped
- 13. The good to redgen warrant backlos has been not at 5 percent, however in FY 1999, the Attorney General set the USMS and for one year at 20 percent.

B. Factors Affecting FY 1997 Preprint Performance.

- 5. The number of functive rank forces in which the USMS was the lead energy did not most the ternet because of lack of available funds and staff.
- 4. Regarding intermetional Suptime investigations, the two deposits restrigated to Mirako sid not have a full year to work on warrants along started during the second quarter of 1989.
- 8. The number of Class 2 warments received did not except the target hecknes is excluded Class 2 followy warment. The USMS is not responsible for collecting Class 2 followy warment. date. This date is collected by other law enforcement agencies.
- 9. The projected warrants clotted includes backlogged on hand and pay wirrunts received.
- 10. The manufact of extracitions are controlled and inseed by the State Department.
- 11. The number of Clear 2 warrants cleared did not ment the target because of the USAS' fects on Clear 2 warrants Suring 1999. The FY 1996 date includes Clear 2 felony date from either laws adequate an appearing Event and the Sasta of the WRN system will include the ability of the WRN system will include the ability to Clear 2 felony date for FY 2001. The FY 1999, Clear 2 Warrants Cleared exclude non-follow warrants. It weren, include ineffs visitations and misdlessessors.
- 12. At the direction of the Abstracy Connect, the USASS intensified efforts to capture the most violent Cines is flagitive in 1999. The 20 percent good was initiated in PY 1998 and cannot in PY 1999. Effective in 1999, backing warrants exclude warfants in which the haptive is known to be inconnected as 2 a detailer from boos ledged; those warrants in which the flagitive in known to be in a finetige country from which having other cannot be extended or in in the process of being extradition, 222, whose warrants where DEA has retained becomingstive jurisdiction.

C. Parture Affecting Selection of FY 2000 and 2001 Plans.

- 1, & 2. Internated resources for Souther approbation reflect a personnest representation request.
- 7. The projected warrants cleared includes backlogged on hand and park warrants received.
- 15. Only collection to registrate that indicator is their intentive because records are examined registrally. Beginning to PY 2000, the USAS will develop a new and outcome conferences indicate for this progress.

Department of Justice United Stated Marshala Service Salaries and Expenses Estimates for Fiscal Year 2001

Status of Crystressionally Required Studies, Reports, and Evaluations

Comprehensive Budget and Financial Review

The Senate Report related to the Department of Justice Appropriations Act, 2000 (Public Law 106-113 Report, page 137) requires the U.S. Marshals Service to conduct a comprehensive review of USMS budget and financial management practices. The USMS must report to the Appropriations Committees on an action plan to remedy budget and financial management weaknesses. A report of activities will be submitted by February 15, 2000.

Sentencing Requirements

The conferees (H.R. 3194) expect the USMS to work with the Executive Office of United States Attorneys, Justice Management Division, and the Administrative Office of the Courts to determine the causes of sentencing delays. A report containing joint recommendations for expediting the sentencing process is to be submitted by April 15, 2000.

Service of Process

The conference agreement directs the Attorney General and the USMS to work with the Administrative Offices of the U.S. Courts to study alternatives for the service of process where no law enforcement presence is required. The USMS is required to report back to the Committees on the alternatives. A report of activities will be submitted by April 1, 2000.

Courthouse Security Equipment

The conference expects the USMS to consult with the Committee prior to any deviation from the plan noted in the Conference Report for the installation of courthouse security equipment. The committee expects to be notified through a formal reprogramming 15 days in advance. Specifically, the committee expects the USMS to give priority to those facilities scheduled to nome on line in the first half of the fiscal year 2000, and expects to be notified in accordance with section 605 of this Act prior to any deviation from the distribution. No changes are expected at this time.

District of Columbia Transfer of Duties

Congress concurs with the recommendation included in the Senate report regarding the reallocation of personnel resulting from the defederalization of District of Columbia Superior Court operations. When defederalization occurs, the USMS is directed to notify Committees of such reallocation in accordance with section 605. It is recommend that the Director meet with the DC Mayor initially. At this time there has been no move within the D.C. government to defederalize D.C. Superior. The USMS will notify the Committee when talks begin on the defederalization.

Department of Justice United States Marshals Service Congressional Estimates for Fiscal Year 2001 Justification of Adjustments to Base (Dollars in thousands)

	Penn Pos	Work- Years	Amount
Increases:			
2001 pay raise. This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$10.265,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits \$7,801,000 for pay and \$2,464,000 for benefits totaling \$10,265,000.			\$10,265
Annualization of 2000 pay raise. This pay Annualization represents first quarter amounts (October through December) of the 2000 pay increase of 4.8 percent effective January 2000, and, for three-quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and the enacted 4.8 percent. The amount requested \$5,068,000, represents the total Annualization of pay amounts for the fiscal year plus appropriate benefits (\$3,852,000 for compensation and \$1,216,000 for benefits).	•••		5,068
Annualization (third year) of additional positions approved in 1999. This provides for the third year Annualization of 54 additional positions received in the 1999 appropriation.			1,304
Annualization of additional positions approved in 2000. This provides for the second year annualization of 56 additional positions received in the 2000 appropriation. This request includes a decrease of	n	28	1,233

(\$1,422,000) for one-time items associated with the increased positions, and increase of \$2,645,000 full-year costs associated with these increases, for a net increase of \$1,223,000.

Transfer of CSRS employees to FERS retirement system. This request provides for the increase in Federal Employees Retirement System (FERS) costs, based on the transfer of Civil Service Retirement System (CSRS) employees to FERS, as authorized by the FERS Open Enrollment Act of 1997, and the open season that ran from July 1, 1998 through December 31, 1998. This increase is based on the number of employees who have transferred to FERS, the grade of employees, and the increased Government cost of FERS benefits. This request includes \$94,000 for benefits.	Perm. Pos. 	Work Years 	Amount \$94
Increased Federal Health Insurance Costs. This request provides for the increase in agency contributions to Federal employees health benefits. In 1999, Federal health insurance premiums, including agency contributions, increased approximately 10.2 percent. Because the Government absorbed a larger portion of the total costs, up to 75 percent, the total cost to the Government has increased substantially. This increase is based on the "increased" Government cost of Health Insurance. This request includes \$1.161.000 for these costs.	***	177	1,161
Lesse Expirations. GSA now requires all agencies to pay relocation costs associated with lease expiration. Based on prior experience the Department anticipates that 20 percent of all lease expirations will result in relocations. This request provides for the costs associated with new office relocations caused by the expiration of leases in FY 2001. No funding is requested for any build-out costs associated with lease expirations. Funding of \$363,000 is requested for the U.S. Marshals Service.			363
Antenna Fees. GSA will charge the Department antenna fees in FY 2001. The fees include all current antennas utilized by Justice components that have attenness stop their buildings. Funding of \$634.000 is requested for the U.S. Marshalls Service.	-++	127	634
Accident Compensation. This increase reflects the estimated billing from the Department of Labor for the actual costs in 1999 of employees' accident compensation, which will be billed in 2001. The 2001 increased cost will be \$698,000.	***		698

	Perm. Pos.	Work Ysaea	Attount
General Services Administration (GSA) Blue Pages. Previously, GSA has paid for all nationwide Government telephone book listings through the GSA 8 percent FTS overhead rate. As a result of the National Partnership for Reinventing Government (NPR)/GSA Blue Pages Project, the funding for these listings has been removed from the overhead rate, and agencies are being billed for actual costs incurred. The Department's FY 2001 estimated costs total \$282,000. Funding of \$6,000 is requested for the U.S. Marshals Service.		***	36
National Archives and Records Administration (NARA). The Office of Management and Budget directed NARA to convert its direct-funded records center program to a fully reinsbursable program by FY 2000. This proposed legislation mendates that NARA is to remain the sole source for agency records center services, through FY 2002, for agencies currently using its services. In 2001, NARA advises that these charges will be increased by 2.5 percent. The Department's FY 2001 estimated costs total \$6,599,584, based on current records maintained by NARA. Funding of \$1,000 is requested for the U.S. Marshala Service.		-	ı

Decreases:	Perm. Pos	Work Years	Amount
Nonrecurring Equipment. This decrease is to remove one-time expenses associated with hiring 56 new positions in 2000, purchase electronic surveillance equipment for fugitive investigations and purchasing courthouse security equipment.	**1		(4,852)
Seized Assets Management. This decrease was taken to remove the administrative duties of Seized Asset program and the associated administrative positions from the USMS. No Deputy U.S. Marshals are included in this decrease. As a result, a reduction of 139 positions, 135 FTE and \$10,209,000 will be removed from the USMS base allocation. These resources will be reimbursed back to USMS from the Asset Forfeiture Fund beginning in 2001.	(139)	(135)	(10,20 9)

Denortment of Justice United States Marshals Service Construction Estimates for Fiscal Year 2001

Summary Statement and Performance Plan

The United States Marshals Service (USMS) requests a total of 9 positions, 9 workyears, and \$6,378,000 in the Construction Appropriation. This request represents an increase of 4 workyears and \$378,000 over the FY 2001 base of 9 positions, 5 workyears, and \$6,000,000.

This funding will facilitate the renovation of USMS space in U.S. Courthouses and federal buildings. These renovations include the construction of secure prisoner movement areas, the expansion of prisoner cell blocks, and the addition of prisoner interview rooms, as dictated in the <u>USMS Requirements and Specifications for Special Purpose and Support Space Manual</u>. U.S. Courthouses need secure prisoner movement areas to ensure that federal prisoners are moved into the courtrooms in a secure manner, without any interaction with the public. Secure prisoner movement areas include vehicle sallyports that lead directly to the cell block, secure prisoner hallways where the public does not interact with the prisoners, and prisoner elevators so that prisoners can be taken to the courtrooms without access to the public.

A. USMS Mission and Goals, and Relationship to DOJ Strategic Plan

The USMS FY 2001 budget request and performance plan directly support the overall core functions and law enforcement goals included in the Department of Justice (DOJ) Strategic Plan, 1997-2002. This request incorporates information on performance measurement that will lead to more accurate performance assessments. The USMS Strategic Plan establishes the connection between DOJ Strategic Goals and the short term objectives set forth in the USMS Tactical Plan.

USMS Mission

The mission of the USMS is to protect the federal courts and ensure the effective operation of the judicial system. In accordance with existing statutes and regulations, the USMS must:

- Protect judges and other participants in the federal judicial system;
- Provide security for federal court facilities; and,
- Provide secure confinement, transportation, and production of prisoners for judicial proceedings.

USMS Program Goals and Relationship to DOJ Strategic Plan

Protection of the Judiciary

The USMS will provide personal and physical security to ensure the integrity of judicial proceedings. The USMS will ensure that adequate security is in place at all court facilities to preserve the effective operation of the federal judicial system and to protect federal judges, U.S. Attorneys, USMS personnel, and the public.

This directly relates to the DOJ Strategic Plan, PROTECTION OF THE FEDERAL JUDICIARY AND IMPROVEMENTS OF THE JUSTICE SYSTEM, Goal 6.1: Protect the federal judiciary and ensure the safe and secure operation of the federal court system.

B. Highlights of 1999 Mission Critical Results

During 1999, the USMS completed 15 major courthouse renovation projects to meet established security requirements. The USMS also initiated renovation projects in 18 facilities to meet USMS security standards. Altogether, 332 U.S. Courthouse facilities with prisoner-holding areas do not meet USMS specifications for courthouse security.

C. 2001 Performance Goals and Indicators

The purpose of the Government Performance and Results Act (GPRA) table is to demonstrate improvements in performance as additional resources are dedicated to mission critical long range goals. Goals and accomplishments are based on the level of requested funding for 2001.

Lung Range Goal: Renovate USMS Space in U.S. Courthouse Facilities to Etiminate Severe Security Deficiencies

In 2001, to improve existing security levels, the USMS will:

Renovate 13 U.S. Courthouses to meet security standards contained in the <u>USMS Requirements and Specifications for Special Purpose and Support Space Manual.</u>

Summary Level Performance Indicators:

- Number of additional USMS-controlled space in U.S. Courthouses and federal buildings being renovated to meet USMS accurity standards.
 - This indicator measures the overall progress towards climinating severe security deficiencies.

D. New 2001 Initiatives

No major new initiatives are planned for FY 2001.

E. Data Validation and Verification issues

In 1998, the USMS Central Courthouse Management Group distributed 391 surveys to all foderal courthouse facilities in the United States, Guam, Puerto Rico, and the Virgin Islands. In July 1998, all 391 surveys were completed and returned. Survey results were based on the 353 facilities having prisoner movement areas. Each courthouse facility was evaluated according to the requirements and specifications manual and all security deficiencies were identified. The USMS then graded the security of each courthouse on a 100 point scale. A score of 100 indicates that a courthouse meets all security specifications. A score of 0 indicates that a courthouse meets none of the USMS security specifications. Based on the findings, approximately 90 percent of the facilities do not meet 70 percent of the security measures. Survey data has helped the USMS identify which courthouse facilities are not meeting security requirements and prioritize construction projects. The USMS will update survey results as courthouse repovations are completed.

BASE PROGRAM DESCRIPTION:

The federal judicial process must be open and secure. The United States Marshals Service's (USMS) role is to ensure that the court system is able to operate without interruption. The USMS oversees all new construction and renovation of USMS-controlled space in U.S. Courthouses and federal buildings which includes: detention cellblocks, secure prisoner circulation corridors, courtroom holding cells, prisoner/attorney interview rooms, prisoner elevators, vehicle sallyports, and secure vehicle parking.

The <u>USMS Requirements and Specifications for Special Purpose and Support Space Manual</u> provides specifications and requirements for architects, engineers, and other construction professionals to develop USMS space within U.S. Courthouses and federal buildings. The Department of Justice, the Administrative Office of U.S. Courts, and the General Services Administration have approved the manual. Of the \$6,378,000 in bese funding, \$5,768,000 is to initiate 13 renovation projects in 2001 and \$610,000 is for personnel compensation.

INITIATIVES:

No program increases are requested.

PROGRAM: CONSTRUCTION

LONG RANGE GOAL: Reservest USAG aport in U.S. Courthouse facilities to obtaining severe assertey deficiencies.

2001 PERFORMANCE COAL: In 2001, the USMS will initiate 13 emovation projects and complete another 25 renovation projects to eliminate incurtry dath leading.

A. Definition of Terms or Expisantions for Indicators:

4. USMS renovation projects often are not completed in the same year they are initiated. Most projects are multi-year renovation projects.

3. The National Security Survey Report was completed in March 1999. FY 1998 Sigarus are based on estimates provided by the USMS Central Counthouse Management Group. The FY 1999 actual figures are based on the survey results. The USMS has space in 391 counthouse facilities. All 391 facilities were surveyed. Of this arrowed, 533 facilities here prisoner movement areas requiring security. The other 38 facilities were christoated from the survey report because prisoners are not moved at these sizes. Of the 353 facilities with prisoner movement areas, 332 facilities for the 1935 specifications for counthouse security.

B. Factors Affecting FY 99 Program Performance.

Events beyond USMS control offers during construction projects. Price fluctuations depending on labor costs and the age of the buildings being renewated. For these reasons, the USMS was unable to apply funding to all projects originally planned.

C. Factors Affecting Selection of FY 2000 and 2001 Plans.

The USAS selects renovation projects based on their receiving store, planned OSA renovation date, prisoner population, and size of USAS staff.

Estimates for FY 2001

Summary of Congressionally Requested Studies, Reports, and Evaluations

Courshouse Construction

The conferees expect to be notified in accordance with Section 605 of the Department of Justice Appropriations Act, 2000. The USMS is to consult with the Committee prior to any deviation from the construction plan noted in the Conference Report. The Committee expects to be notified through a formal reprogramming 15 days in advance. No changes are expected at this time.

Department of Justice United States Marshala Service Lustice Prisoner and Alien Transportation System Fund Estimates for Fiscal Year 2001 Summary Statement and Performance Plan

For 2001, the Justice Prisoner and Alien Transportation System (JPATS) Fund reflects revenue and expenditures related to the movement of detainees and prisoners. Program funding requirements are identified in the budget of each customer agency.

A. Justice Prisoner and Alien Transportation System Mission and Goals, and Relationship to DOJ Strategic Plan

The IPATS 2001 budget request and performance plan directly support the overall core functions and law enforcement goals included in the Department of Justice's (DOJ) Strategic Plan, 1997-2002. This request incorporates information on performance measurement that will lead to better accountability of achievements. The United States Marshals Service (USMS) Strategic Plan establishes the connection between DOJ Strategic Goals and the shorter-term objectives set forth in the USMS Tactical Plan.

JPATS Mission

The mission of the IPATS is to transport federal detainees and prisoners. The IPATS Fund is the account used to track revenue and expenditures related to the movement of detainees and prisoners. Detainees and prisoners include pretrial, sentenced, and deportable aliens, whether in the custody of the USMS, Bureau of Prisons (BOP), or the Immigration and Naturalization Service (INS). IPATS also provides prisoner transportation to the Department of Defense (DOD) and State and local law enforcement agencies on a reimbursable, space-available basis. IPATS transports prisoners and detaines in a cost-effective manner without sacrificing the safety of the public, federal employees, or those in custody.

USMS Long-Range Goals and Relationship to the DOJ Strategic Plan

Detention and Transportation of Prisoners and Deportable Aliens

The USMS will transport prisoners is a safe and cost-effective manner. The USMS, in coordination with INS and BOP, will ensure that detainees, prisoners, and deportable aliens are transported and detained in a cost-effective manner, utilizing procedures that safeguard the coun family, USMS personnel, and the public. In addition, the USMS will make prudent arrangements to ensure persons in custody reach their destinations in a timely manner.

Prisoner transportation directly relates to the DOJ Strategic Plan, DETENTION AND INCARCERATION, Goal 5.1: Provide for the safe, secure, and humane confinement of persons who are detained while awaiting trial or sentencing, a hearing on their immigration status, or deportation.

B. Highlights of 1999 Mission-Critical Results

JPATS continues to exceed expectations in the air movement of federal prisoners, detainees, and deportable aliens. In 1999, JPATS handled a total of 140,286 prisoner air movements. Over the past two years, the JPATS airfleet has been enhanced by: 1) acquiring an excess DC-9 aircraft from the Department of Energy (which replaced a commercially leased aircraft); 2) acquiring a third B727 which was purchased with funds from the DOJ Working Capital Fund; 3) leasing newer commercial aircraft to replace aging government-owned aircraft; and 4) entering into reimbursable agreements with other federal agencies such as Federal Aviation Administration, Federal Bureau of Investigation, and Department of Energy. During the past year, JPATS provided onboard medical personnel and equipment; made progress towards automating requests for prisoner movements; increased the overseas flights for INS deportation, added additional airtist stops to reduce ground movement and expedite transit time; expanded resources on the second to provide full-time availability of a USMS-owned aircraft; and, staffed the Business Management Office. The Business Management Office is staffed with a business manager, budget officer, accountant, cost analyst, and procurement specialist. As managers of the revolving fund, the Business Management Office issues contracts, performs cost analyses, develops long-range strategic plans, certifies invoices, and prepares financial statements.

C. FY 2001 Performance Goals and Indicators

JPATS proposes a 2001 Performance Plan that is attainable within the proposed level of reimbursement and will have demonstrable results as shown below. The 2001 goals, organized around ongoing priorities, establish a baseline upon which future performance may be tracked and reported as required by the Government Performance and Results Act (GPRA).

The current GPRA table lists specific objectives for the long range goal. Each objective has summary level performance indicators that measure USMS performance in meeting the objectives. The USMS intends to meet all objectives which support the long range goal.

Long Range Goal: Transport Prisoners in a Safe and Cost-Effective Manner

In 2001, IPATS will transport prisoners, detaines, and deportable aliens in a cost-effective manner without sacrificing the safety of the public, IPATS employees, or those in custody. As part of this long-range goal, IPATS will continue to implement the IPATS Five-Year Strategic Plan. In 2001, IPATS will:

- Move an estimated 174,885 federal prisoners, detainees, and deportable aliens, a 25 percent increase over the 140,286 prisoner air movements in 1999. JPATS strives to move all prisoners requested by USMS districts, INS, BOP, and other federal agencies in the most cost effective way. When seats are available, the USMS will also transport DOD and State and local prisoners on a cost-reimbursable basis.
- Perform domestic air movements at a cost-per-seat charge of \$490. This amount reflects a \$1 decrease from the 2000 cost-per-seat charge.
- Request long-term leasing of aircraft to exceed 5 years. This is in lieu of purchasing aircraft.

Summary Level Performance Indicators

- User satisfaction.
 - This indicator measures the satisfaction of JPATS customer agencies.

D. New FY 2001 Initiatives

No new initiatives are requested for 2001.

R. Data Validation and Varification Issues

Currently, the USMS relies on both system generated and manual reports to collect PPATS performance data. The USMS validates requests for the movement of prisoners and the number of prisoners transported through the USM-106, Request for Prisoner Transportation. Districts send these requests to Prisoner Transportation where flight manifests are generated and returned to the districts for confirmation. Internal incident reports and weekly status reports provide data regarding the aircraft and related maintanance, medical related incidents, and any incidents on IPATS aircraft. This information is sent from the districts to headquarters where it is compiled manually. Also, STARS Reports (the USMS accounting system) provide accounting data used to track costs associated with air movements. As the USMS continues to implement the Automated Prisoner Scheduling System, data collection and validation will become increasingly automated.

Department of Justice United States Marshals Service Justice Prisoner and Alien Transportation System Fund Estimates for Fiscal Year 2001 Justification of Proposed Changes in Appropriation Language

The 2001 budget request includes proposed changes in the appropriation language listed and explained below. New language is underscored and italicized with deleted matter enclosed in brackets.

Justice Prisoner and Alien Transportation System Fund

Beginning in fiscal year 2000 and thereafter, payment shall be made from the Justice Prisoner and Alien Transportation Systems Fund for necessary expenses related to the scheduling and transportation of United States prisoners and illegal and criminal aliens in the custody of the United States Marshall Service, as authorized in 18 U.S.C. 4013, including, without limitation, salaries and expenses, operations, and the acquisition, lease, and maintenance of sircraft and support facilities: Provided, That the Fund shall be reimbursed or credited with advance payments from amounts available to the Department of Justice, other Federal agencies, and other sources at rates that will recover the expenses of Fund operations, including, without limitation, accrual of annual leave and depreciation of plant and expipment of the Pund: Provided further, That proceeds from the disposal of Fund aircraft shall be credited to the Fund: Provided further, That amounts in the Fund shall be available without fiscal year limitation, and may be used for operating equipment lease agreements that do not exceed (5) 10 years. (Department of Justice Appropriations Act, 2000. P.L. 106-113)

Explanation of Change:

This change will allow the USMS to enter into operating equipment lease agreements for up to 10 years. The USMS lease suthority currently prohibits contracts exceeding five years. A longer lease authority will expand the market of available contractors and also result is significant cost average for lease agreements. This provision complies with the lease scoring requirements of the Balanced Budget Act of 1996 and OMB Circular A-11 on capital leases. The USMS has established an internal review mechanism that will ensure any sintraft base decision adheres to the A-11 principles that the lease: 1) may not exceed 90 percent of the fair market value of the capital saset; 2) will not exceed 75 percent of the economic life of the asset; and 3) will stipulate that the U.S. Government will not own the saset upon expiration of the lease term.

Increase/Decrease		_	

BASE PROCERAM DESCRIPTION: The Justice Prisoner and Alien Transportation System (JPATS) was formed on October 1, 1995, by merging the USMS and INS air transportation systems. JPATS is responsible for moving by eir all federal prisoners and detainess, including sentenced, pretrial and deportable aliens, whether in the custody of the U.S. Marshale Service, Bureau of Prisone or Insurgation and Naturalization Service. JPATS also provides prisoner transportation services to the Department of Defense and State and Incal law enforcement agencies on a reimbursable space-available basis. The JPATS goal is to move prisoners and deportable aliens more efficiently by maximizing the neasement payload capacity on JPATS aircraft.

On October 1, 1998, JPATS began operating as a revolving fund activity with operating costs being reindursed by customer agencies. The scheduling and movement of detainess, prisoners, and deportable aliens are accomplished on a cost-per-seat charge paid by the customer agencies via reindursable agreements. The USMS estimates the 2001 cost-per-seat charge at \$490 (a \$1 decrease from the 2000 rate), based on JPATS personnel and operational costs for an estimated 154,885 decreated movements. In developing the rates, the USMS has taken into account expected costs and additional resource requirements to the JPATS program (see below). The total operational costs are then divided by the total number of anticipated domestic prisoner accountants to obtain a cost-per-seat. Movement requirements are provided by the customer agencies (i.e., USMS, INS, and BOP) and non-federal movements are estimated based on historical data.

Reputriation movements are overseas flights that require leased sircraft capable of flying extremely long distances. Repathistion flights have a much higher cost which is not included in the cost-per-seat charge. These flights are priced independently of domestic movements and fully charged to INS. The 154,885 domestic and 20,000 repatriation movements bring the total estimated JPATS air movements to 174,885 in 2001.

Included in the cost-per-sest charge are resource requirements for the projected 8.2 percent increase in domestic sir movements. In 2001, JPATS expects to lease three and one-half additional aircraft. These sircraft will support the increased domestic sir movements of 11,677 over the 2000 estimate of 143,208 and increased repatriation movements of 8,000 over the 2000 estimate of 12,000. In 2001, JPATS expects to spend \$1.103 million to perform the following required aircraft maintenance: \$250,000 for a heavy maintenance D-check for the DC-9 that was acquired from the Department of Energy in January 1999; and \$853,000 to replace the deteriorating senting and floor covering in three B-727s.

United States Marshala Service Federal Prisoner Detention Estimates for Fiscal Year 2001 Summary Statement and Performance Plan

The United States Marshals Service (USMS) requests a total of \$597,402,000 for the Federal Prisoner Detention (FPD) appropriation. The FPD appropriation pays for the jail days, subsistence, medical costs, and medical guard services of federal detainees in USMS custody. This request provides the resources to fund 9,573,000 Intergovernmental Agreement (IGA) and contract jail days and represents an increase of \$64,355,000 over the 2001 base of \$533,047,000.

Although the Office of Justice Programs appropriation provides funding for the Cooperative Agreement Program (CAP), the USMS maintains management of the program. The USMS, in conjunction with the Immigration and Naturalization Service (INS), requests \$35,000,000 for 2001, an increase of \$10,000,000 over the 2000 level. CAP provides funding to selected state and local governments for renovation, construction, and equipment purchases for detention facilities in return for long term, guaranteed, jail space.

A. USMS Mission and Goals, and Relationship to DOJ Strategic Plan

The 2001 requested increase will fund mission activities that directly support the core functions, priorities, and goals set forth in the Department of Justice's (DOI) Strategic Plan for 1997-2002. The request funds increases in the jail rate and the number of jail days necessary in 2001 to house detainess. In addition, this request funds jail days, subsistence, medical costs, and medical guard services to secure the detainess while in local medical facilities. Funds for the Federal Prisoner Detection appropriation relate directly to DOI's Strategic Plan function of "Detection and Incarceration." The request supports the DOI Goal 5.1: "Provide for the safe, secure and humane confinement of persons who are detained while swaiting trial or sentencing, hearings on their immigration status, or deportation." The CAP request supports not only the core function of detention and incarceration, but also the function of "Assistance to State and Local Governments" by providing capital investment funds to the State and local governments for improvements to their detention facilities.

USMS Mission

The USMS is responsible for administering the FPD appropriation for the federal government. The FPD account provides funding for housing, subsistence, medical care, and medical guard services for all federal detainees in USMS custody. The USMS acquires detention space at the lowest possible cost to the government through the use of federal detention facilities, IGAs, cooperative agreements with State and local governments, and private jail facilities.

Organizational Goals

Detention

House all detainees remanded to USMS custody.

This relates to the DOJ Strategic Plan, CORE FUNCTION 5: DETENTION AND INCARCERATION, Goal 5.1: Provide for the safe, secure and humane confinement of persons who are detained while awaiting trial or sentencing, a hearing on their immigration status, or deportation

Provide required medical care and services for federal detainees consistent with community expectations and standards.

This relates to the DOI Strategic Plan, CORE FUNCTION 5: DETENTION AND INCARCERATION, Goal 5.1: Provide for the safe, secure and humane confinement of persons who are detained while awaiting trial or sentencing, hearings on their immigration status, or deportation.

B. Highlights of 1999 Mission Critical Results

The USMS continues to successfully house an ever-growing detainee population nationwide. Between 1996 and 1999, the USMS average detainee population grew 37 percent (from 23,374 to 32,119). During the same period, the Southwest Border districts' (Arizona, New Mexico, Southern Texas, Western Texas, and Southern California) average population has collectively grown 91 percent (from 4,925 to 9,425). Most of the growth in the Southwest Border districts is a result of illegal and criminal immigration

issues. Successfully housing a detained population of this magnitude, both nationwide and specifically in the Southwest Border districts, represents an unparalleled accomplishment.

In addition to successfully housing the federal detained population, the USMS strives to reduce and comiain detained medical care costs. In 1995, the USMS began retrospective medical bill reviews in a limited number of districts, reviewing and recalculating bills at Medicare rates. This produced a cost avoidance of \$3.4 million in 1998 and \$2.8 million in 1999. In 1996, the USMS initiated a managed care network in New York City which reduced medical care rates for federal detaineds, resulting in medical care cost avoidance of \$4.6 million in 1998 and \$4.5 million in 1999.

C. 2001 Performance Goals and Indicators

The USMS is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results. These 2001 goals will establish a baseline upon which future performance may be tracked and reported, as required by the Government Performance Results Act (GPRA)

The FPD appropriation funds the following: bed space for detainees in IGA and private jail facilities, subsistence, detainee medical services, and medical guard service. OMB Circular A-87 establishes the guidelines used to determine amounts paid for IGA determine space but local economic factors determine the cost of the other required services. The USMS endeavors to care for and house all detainees remanded to its custody in the most economical manner possible. The USMS has set milestones to chart the progress related to the effectiveness of the FPD appropriation as required by GPRA:

- Fund 9,573,000 IGA and contract jail days for detainees in USMS custody.
- Fund medical, guard, and other services at a level consistent with community expectations and standards for federal detainees.

D. New 2001 Initiatives

The USMS requests a program increase of \$64,355,000 to cover the increase in jail days, subsistence, medical costs, and medical guard services. The erratic growth in the federal detained population and resultant number of contract and intergovernmental agreement (IGA) jail days needed to house the detained population is rising, resulting in a corresponding increase in the number of IGA and contract jail days needed for housing. The

requested funds will allow the USMS to house an estimated average daily IGA detained population of 26,227, with a total of 9,573,000 projected jail days at an average daily rate of \$56.55.

E. Data Validation and Verification Issues

The USMS uses the following reports and data systems to validate prisoner population, jail days, jail rate, and costs associated with the FPD program. USM-268 and USM-268A, produced from the Prisoner Tracking System (PTS), Jail Utilization report, produced from the Access database; and the USMS Status of Funds report, produced from the Standardized Tracking Accounting and Reporting System (STARS). The USM-268 report validates prisoner population; the USM-268A report validates jail days; the Jail Utilization report validates jail rates, and, the Status of Funds report contains accounting information.

Core Function 5.1, DOJ Strategic Plan Goal 5.1.1, Detention and Incarceration	\$460,395,000	\$525,000,000	\$597,402,000

Dollars include direct, reimbursable and carryover funds; they exclude CAP funding.

G. DOJ Summary Performance Plan, Performance Goals, Targets and Actuals

Key Summary Level Indicators	1998 Actual	1999 Planned/Actual	2000 Planned	2001 Planned
Average daily detention population in custody (Includes federal and non-federal detainces)	28,692	32,000/32,119	35,156	38,531
Jail Day costs	\$54.86	\$58.95/\$55.41	\$55,99	\$56,55

United States Marshals Service Federal Prisoner Detention Estimates For Fiscal Year 2001 Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and italicized with deleted matter enclosed in brackets.

Federal Prisoner Detention

For expenses, related to United States prisoners in the custody of the United States Marshals Service as authorized in 18 U.S.C. 4013, but not including expenses otherwise provided for in appropriations available to the Attorney General, [\$525,000,000] \$527.402.000, as authorized by 28 U.S.C. 561 (i), to remain available until expended: Provided That, subject to appropriations in advance, the United States Marshals Service may enter into multi-year contracts with private entities for the confinement of Federal prisoners. Provided further. That hereafter amounts appropriated for the Federal Prisoner Detention shall be available to reimburse the Federal Bureau of Prisons for solaries and expenses of providing transportation, guard services, and medical care outside of Federal penal and correctional institutions to prisoners awaiting trial or sentencing. (Department of Justice Appropriations Act, 2000. P. L. 106-113)

Explanation of changes.

- This first change will allow the USMS to enter into multi-year contracts and other agreements with private entities for the
 confinement of prisoners. Long-term contracts and agreements will limit the renegotiation of jail day costs and result in significant cost
 savings.
- 2. The second change will allow the USMS to reimburse the Federal Bureau of Prisons for salaries and expenses incurred in transporting, guarding, and obtaining medical care for USMS detainees outside of the Federal penal and correctional institutions in which they are being held. This is a pilot program that is the result of the DOJ Detention and Incarceration Study, which was requested by Congress. This study recommended that the financial and operational responsibilities for providing medical care for USMS prisoners housed in BOP facilities be consolidated into the BOP.

2001 Base			533,047
2001 Estimate			597,402
Increase			\$64,355

BASE PROGRAM, DESCRIPTION: The USMS administers the FPD program for the federal government using funding appropriated specifically for the care of U.S. prisoners. The FPD appropriation provides the financial support for the housing, subsistence, medical care, and medical guard service. In federal detainees remanded to USMS custody. The responsibility begins when a prisoner is initially brought into USMS custody, continues through the trial process, and ends when a prisoner is acquitted or arrives at a designated Bureau of Prisons (BOP) facility to serve sentence. The USMS pretrial population is generated by public policy and multi-component investigative and prosecutorial efforts within the Department of Justice or other Federal law enforcement initiatives and efforts, the USMS has no control over the number of detainees remanded to its custody and has no option other than to bouse and care for the detainees

The USMS depends on State and local governments and the BOP to house detainees. Detention bed space for federal detainees is acquired at the lowest cost to the government through: 1) Intergovernmental Agreements (IGAs), where a daily rate is paid; 2) Cooperative Agreements with State and local governments, where capital investment funding is provided in exchange for a guarantee of

a certain number of bed spaces, for which a daily rate is paid when these bed spaces are used; 3) federal detention facilities, where the government must pay for construction and operation of the facility, and 4) private juit facilities.

As mentioned above, the FPD appropriation also provides funding for medical care and guard service for detainees requiring hospital care. Medical needs range from simple dental and medical services requiring no hospitalization to major surgery requiring months of hospitalization for recovery.

Proposed Actions

This initiative seeks to address the following objectives:

- 1. House all detainees remanded to USMS custody.
- 2. Maintain an average daily population of 26,227 detainees
- 3. Provide adequate medical care for all USMS detainees.

The USMS requests a program increase of \$64,355,000 to house and care for detaineds for 9,573,000 non-federal jail days. This request includes \$63,180,000 for increased jail days, \$675,000 for medical costs, and \$500,000 for prisoner medical guard services. Federal law enforcement agencies continue to increase their pursuit and prosecution of violent criminals, drug offenders, criminal aliens, and terronists. To effectively support these efforts, it is critical that the USMS receive sufficient resources to house detaineds.

With the resources requested, the USMS will be able to house detainees for a total of 9,573,000 non-federal jail days. This equates to an average non-federal daily prisoner population of 26,227, or approximately 70 percent of the total requirement. The balance, approximately 30 percent, will be housed in federal detention facilities. The USMS assumes federal jail days will increase slightly through 2001 to the level of 4,491,000, or an average federal daily population rate of 12,304. This assumption is based on information provided by the Bureau of Prisons (BOP). BOP projects that three new federal detention centers will be available to the USMS in 2001: Philadelphia, Pennsylvania; Houston, Texas; and Brooklyn, New York. The USMS will lose the use of the Otisville facility once the Brooklyn facility is opened. The remaining 9,573,000 jail days will be housed in State and local jails, and private contract facilities. The non-federal average daily population is projected to be 26,227.

	1999	2000	2001
	Actual	Estimate	Estimate
IGA and Contract Jail Days	8,370,957*	8,858,000**	9,573,000
Federai Jail Days	3.490.968	3.974.000	4.491,000
Total Jail Days	11,861,925	12,832,000	14,054,000

^{*}Actual days reflect reimbursable funding of \$4 million.

A majority of the USMS detained population growth is directly attributable to the continued crackdown on illegal aliens. The largest impact of this crackdown occurs in the districts along the Southwest Border: Arizona, New Mexico, Southern Texas, Western Texas, and Southern California. Collectively, the average daily prisoner population of these districts grew from 4,925 in 1996 to 9,425 in 1999, a 91 percent growth. The total population for the rest of the country grew only 37 percent during the same period. In 1994, prior to the aggressive prosecution of immigration cases, the Southwest Border districts comprised 18 percent of the USMS total population, versus 29 percent in 1999.

The cost per jail day is projected to increase by 1 percent from 2000 to 2001. Based on current information, the USMS believes the average jail rate in 2000 will be \$55.99 and \$56.55 in 2001. The program increase is calculated by first deducting 402,000 jail days in 2000 that were covered by the \$22,493,000 one-time carryover and then applying the new rate to the anticipated growth in non-federal jail days (9,573,000-(8,858,000 - 402,000) = 1,117,000).

^{**}Includes 402,000 days that will be funded by the \$22,493,000 carryover.

In conjunction with the increased resources needed to house federal detainees, the USMS also requires an increase for medical and medical guard resources. As the detainee population increases so do detainee medical costs. When federal detainees become ill or injured, the USMS must provide medical services which vary in complexity and cost. In certain cases, the treatment requires the detainee to be transported to a medical facility outside of the detention facility. When this happens, guard services must be provided to prevent detainee escapes. If adequate medical and guard funding is not provided, funding for jail days must be used which reduces the number of jail days the USMS can fund.

The USMS estimates that total medical and guard funding required in 2001 will be \$56,049,000. Of this amount, \$38,491,000 is for medical and \$17,558,000 is for guard and other miscellaneous expenses. The average medical cost per detainee has been on the increase. Although the USMS is taking steps to reduce individual detainee medical costs by increased scrutiny of medical bills, paying Medicare rates, and implementing detainee medical care networks, these steps have only slowed the increase in the national average medical cost per detainee. Medical costs are expected to increase from an estimated \$35,000,000 in 2000 to \$38,000,000 by 2001. To belp offset the increase, the USMS requests an increase of \$675,000.

Similar to medical costs, payments for medical guard services have also steadily increased over the years. Guard usage has become increasingly important in the transportation and security of Federal detainees during trips to and from medical facilities. Deputy Marshals are increasingly required to staff multi-defendant trials and to travel further distances to house detainees. This makes the deputies unavailable for medical trips. In 2000, USMS medical guard payments are expected to increase to \$11,357,000 and to \$11,959,000 in 2001. The USMS requests \$500,000 to help offset this increase.

This request encompasses the requirements necessary to fulfill the FPD mission in 2001. If the USMS does not receive the requested funding to support additional jail days, prisoner medical, and prisoner medical guard services, the USMS will be unable to house the number of detainees projected to be remanded to its custody.

PERFORMANCE MEASUREMENT TABLE

LONG RANGE GOAL: House all detainees in USMS custody, provide required medical care and contract medical guard services consistent with community expectations and standards.

FY 2001 PERFORMANCE GOAL: Fund 9,573,000 IGA just days in State and local facilities for detainees in the custody of the USMS and fund medical and contract medical guard services at a level consistent with community expectations and standards.

PTS-USMS Prisoner Tracking System

- 1. Amounts reflect base funds for non-federal init days.
- 4. Number of detainess provided services The indicator is equal to the average daily population of detainess in USMS custody whether in federal determined facilities. Detaines Services include, but are not limited to: medical trestment, hospitalization, guard service while in a medical facility, and other miscellaneous requirements
- 3. [GA (Intergovernmental Agreement)- Agreement entered into between the federal government, and State and local jurisdictions to house federal detaineds with the understanding that the federal government will reindure the jurisdictions' costs associated with the housing of federal detaineds.
- 9. The cost per detainer for services Calculated by dividing the total estimated detainer population (federal and non-federal) by the total expunses for services.

B. Factors Affecting FY 99 Program Performance.

The number of detainess remanded to USMS costody and the rate of change in the jail day rate will affect the requirement for and the ability to acquire non-federal determine space

C. Factors Affecting Selection of FY 2000 and 2001 Plans.

In addition to 1GA costs, the Federal Prisoner Detention (FPD) appropriation funds modical service payments for detainees in the USMS' custody. Positions [and their related costs] that support the FPD appropriation are funded out of the USMS Salaries and Expenses (S&E) appropriation.

ACTIVITY: COOPERATIVE AGREEMENT PROGRAM

	Work-		
	Pos	Years	Amount
2000 Appropriation Anticipated			\$25,000
2001 Base	1		25,000
2001 Estimate	**		35,000
Increase	-		\$10,000

BASE PROGRAM DESCRIPTION: The Cooperative Agreement Program (CAP) resources for the USMS and INS are included in the Office of Justice Programs appropriation. An MOU between the USMS and INS establishes that this program will be managed and administered by the USMS. As a result, the USMS, in conjunction with INS, is submitting the 2001 CAP resource request and justification as part of the FPD request.

A major problem the USMS and INS face is a shortage of detention space. CAP is an effective tool in acquiring detention space. The CAP provides capital investment funding to selected State and local governments for the renovation, construction and upgrading of detention facilities. In return for the funding, the USMS and INS receive long-term, guaranteed jail space for federal prisoners or illegal aliens. In 2001, the USMS and INS will be able to acquire approximately 700 guaranteed jail spaces, at an average cost of \$35,000 per bed, with base resources of \$25,000,000.

Each CAP project is unique in nature—CAP provides partial funding to State and local governments enabling them to add new jail capacity, renovate existing jail space, or upgrade existing facilities. In some cases, the renovation or facility upgrades are needed to establish acceptable conditions of confinement and detention services in accordance with federal, State and local detention standards. In addition to enabling the governments to renovate their facilities, this program provides an economic stimulus to the local economies through both the initial capital investment and the per diem payments that are made when the bed spaces are actually used to house

federal prisoners. As stated in the Federal Detention Plan, the acquisition of jail bed space through the CAP program helps avoid the most expensive bed space acquisition option, the construction of federal jail beds

The CAP program is instrumental in obtaining scarce detention bed space in cities which have large detained populations but limited detention facilities, and has averted the loss of vital jail space for federal detaineds. Obtaining scarce detention bed space relates directly to the DOJ priority." .. to provide for the safe, secure and humane confinement of persons who are detained." Goal: "Ensure that sufficient prison capacity exists so that violent and other serious criminal offenders are imprisoned" The ultimate outcome of the increase in funding and the CAP itself is the reduction/elimination of areas reporting detention shortages.

INITIATIVE

		Perm. <u>Pos.</u>	FIE	Amount
COOPERATIVE AGREEMENT PROGRAM	(CAP)			\$10,000

The USMS, in conjunction with INS, requests a program increase of \$10,000,000 for the CAP. This request, when added to the base, is consistent with the continued implementation of the Federal Detention Plan, and will enable the Department to acquire approximately 1,000 guaranteed beds based at an average estimated cost of \$35,000 a bed. As stated in the Federal Detention Plan, the acquisition of jail bed space through the CAP program avoids the most expensive bed space acquisition option, the construction of federal jail beds.

Failure to receive additional CAP funding will increase the numbers of detainers that must be housed far from their federal court city and make the housing of illegal aliens awaiting processing more difficult. The lack of funding will result in increased security risks and will jeopardize INS' ability to accomplish its mission. Additionally, the USMS will incur increased costs in transportation and overtime due to increased travel distances to produce detainers for court appearances.

The CAP program is instrumental in obtaining scarce detention bed space in critical cities and has, in many instances, averted the loss of vital jail space for federal detainees. Obtaining scarce detention bed space relates directly to the DOJ priority: "Provide safe, secure and humane correctional facilities with adequate bed space for ... detainees and others in pre-trial status" Goal: "Ensure that sufficient prison capacity exists so that violent and other serious criminal offenders are imprisoned" The ultimate outcome of the increase in funding and the CAP itself is the reduction/elimination of areas reporting detention shortages.

Increases:		Work- Years	Amount
шки одаф.			
 Medical Hospital Service Costs The Department of Health and Human Services projects an increase in health care costs. The Department applies a factor of 3.8 percent against medical services. An increase of \$1,350,000 will be required for 2001. 		-	\$1,350
2. Jail Day Rate Increase This request re-costs the number of State and local juil days projected to be available at the 2000 funding level by applying an increase for the annual nationwide average rate increase. The requested increase reflects the additional resources required to fund the same number of jail days in FY 2001 as could be funded in 2000. Jail day costs are projected to rise by an average of 1 percent, from \$55.99 to \$56.55.	,		5,273
 Security Guard Services The requested increase reflects the additional resources required to fund the guard services for detainees requiring hospital care. Guard services are expected to increase 8 percent. An increase of \$1,424,000 is required in 2001 to partially offset this added expense. 	 —	 _	1,424

<u>Summary Statement</u> Fees and Expenses of Witnesses

For the fees and Expenses of Witnesses (FEW) appropriation, the Department requests a total funding level of \$156,145 000 for 2001 to remain available until expended. This resource level includes a program increase of \$60,978,000, and is \$61,145,000 above the 2000 Appropriation. Most of the additional funding will be used to fund expert witness expenses, including extraordinary expenses being incurred in cases such as <u>MINSTAR</u> and <u>COBECU</u>, and the imminent litigation against the tobacco industry. Additional funding is also sought to enhance the Private Counsel and Alternative Dispute Resolution activities.

The Fees and Expenses of Witnesses activity provides for all fees and expenses associated with the provision of testimony on behalf of the Government. Specifically, there are two types of witnesses that are compensated under the provisions of this activity. Fact witnesses testify as to events or facts about which they have personal knowledge. These witnesses are paid a statutorily established rate of \$40 per day plus reasonable amounts for travel and certain other costs associated with their appearance. Expert witnesses provide technical or scientific testimony and are compensated based on negotiations with the respective Government attorney. Funding allocated to this activity is also used to pay the fees of physicians and psychiatrists who examine defendants upon order of the court to determine their mental competency.

The Protection of Witnesses activity provides for the security of Government witnesses, or potential Government Witnesses, and their families when their testimony, concerning organized criminal activity, may jeopardize their personal security. This program provides funding for expenses of witnesses enrolled in the Witness Security program. Such expenses include, but are not limited to, subsistence, housing, medical and dental care, travel, documentation, identity changes, one-time relocation, costs associated with obtaining employment, and other miscellaneous expenses.

The Victim Compensation Fund was established by Section 1208 of the Comprehensive Crime Control Act (Title II of P.L. 98-473). The Fund is used by the Attorney General to "pay restitution to, or in the case of death, compensation for the death of any victim of a crime that causes or threatens death or serious bodily injury and that is committed by any person during a period in which that person is provided protection under this chapter." In the case of death, an amount not to exceed \$50,000 may be paid to the victim's estate. Moreover, the act authorizes payment of an amount not to exceed \$25,000 to the estate of any individual whose death was caused by a protected witness before the enactment of this law.

The Private Counsel activity was established under 28 C.F.R. 50.15 and 50.16, whereby, the Civil Division is authorized to retain private counsel to represent Government officers and employees who are sued, charged or subpoenaed for actions taken while performing their official duties. Further, funding allotted to this activity is used to pay private legal representation expenses associated with the provision of testimony before Congressional committees in instances wherein Government counsel is precluded from representing Government employees, or in instances wherein private counsel is otherwise appropriate.

The D.C. Superior Court Informant Program (SCIP) was established upon passage of the 1991 Dire Emergency Supplemental Appropriations Act. Unlike the Witness Security program, which provides permanent relocations and identity changes, the SCIP provides temporary relocation and protective services to witnesses who provide prosecution testimony in D.C. Superior Court cases.

The Alternative Dispute Resolution activity will fund the expenses of hiring third party neutrals and expert witnesses in resolution proceedings.

Fees and Expenses of Witnesses

Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is stalicized and underlined, and language proposed for deletion is bracketed.

Fees and Expenses of Witnesses

For expenses, mileage, compensation, and per diems of witnesses, for expenses of contracts for the procurement and supervision of expert witnesses, for private counsel expenses, and for per diems in lieu of subsistence, as authorized by law, including advances, [\$95,000,000] \$156,145,000, to remain available until expended; of which not to exceed \$6,000,000 may be made available for planning, construction, renovations, maintenance, remodeling, and repair of buildings, and the purchase of equipment incident thereto, for protected witness safesites; [and] of which not to exceed \$1,000,000 may be made available for the purchase and maintenance of armored vehicles for transportation of protected witnesses; and of which not to exceed \$5,000,000 may be made available for the purchase, installation, and maintenance of secure telecommunications equipment and a secure automated information network to store and retrieve the identities and locations of protected witnesses. (Department of Justice Appropriations Act, 2000, as enacted by section 1000(a)(1) of the Consolidated Appropriations Act, 2000 (P.L., 106-113).)

Explanation of Changes:

1. The FY 2001 budget requests \$5,000,000 for the purchase, installation, and maintenance of secure telecommunications equipment and a secure automated information network to store and retrieve the identities and locations of protected witnesses.

Base Program Description:

This program provides for payment of fees and expenses of expert witnesses who appear on behalf of the Government when scientific or technical expertise is required in the prosecution or defense of a case. The pursuit of complex litigation by the Department would not be possible without qualified experts to testify and to refute the non-legal particulars of individual cases. The testimony of expert witnesses is essential to the successful outcome of such litigation. While a wide array of specialized disciplines are involved in the Department's litigation, experts from certain disciplines are used extensively. For example, approximately sixty percent of expert witnesses used by the Department in 1989 were either physicians, psychiatrists, appraisers, engineers, or economists. Also, the testimony of fact witnesses is used in court proceedings by the Department's legal divisions and the U.S. Attorneys. Fact witnesses are needed in a wide range of court proceedings, as well as pre-trial conferences. Fees and expenses paid to fact witnesses are intended to defray the costs of appearing to testify and are set by law and/or regulation. Further, the importance of this program is underlined by the need to protect the rights of accused individuals. Courts often order the Government to pay the costs associated with mental competency examinations conducted by physicians or psychiatrists. These examinations are performed in an attempt to determine whether an accused person is mentally competent to stand trial and/or was mentally competent at the time of the offense.

Planned Base Initiatives:

To continue to provide adequate funding for payment of fees and related expenses incurred by individuals who provide factual, technical or scientific testimony on behalf of the United States or court designated indigent individuals, as provided by law. Funds provided for this activity also guarantee the right of accused persons to a fair and impartial trial by ensuring that the accused is mentally competent to stand trial and that the court has testimony regarding the mental competency of the accused at the time of the alleged offense.

To provide reasonable compensation for expert witnesses, who testify on behalf of the United States, at rates established by the Attorney General or the Assistant Attorney General for Administration, pursuant to 28 U.S.C. 524.

To provide adequate resources to compensate fact witnesses who testify on behalf of the Federal Government for the expenses associated with the attendance at legal proceedings. The court-attendance fee paid to fact witnesses is set by law [28 U.S.C. 1821]. As a result of Public Law 96-346 (September 10, 1980), the amounts authorized for travel, per diem and mileage are set by regulations governing official travel by Federal employees and promulgated by the Administrator of the General Services Administration.

To provide adequate resources to compensate fact witnesses used by those defendants designated as indigent by the courts. Expenses are paid to those witnesses who appear in criminal proceedings in Federal court for the indigent defendants.

To provide payment for the fees and expenses of psychiatrists who perform court-ordered evaluations to determine the mental competency of defendants, pursuant to 18 U.S.C. 4241 and 4242.

INITIATIVES

Expert Witnesses

Projected expert witness costs for fiscal year 2001 are expected to increase for several of the Dapartment's larger expert witness users. The need for a significant portion of the requested increase of \$120,760,000 will be generated in the Civil Division (CIV) where expert witness costs are projected to be approximately \$42.3 million, or an increase of \$13.3 million over anticipated costs for 1999. By fiscal year 2001, the CIV expects total expert witness requirements to increase as several factors unfold: {1} there could be as many as 100 active WINSTAR cases requiring the services of testifying experts; {2} Tobacco litigation will require the expertise of economists, epidemiologists, and medical experts to demonstrate the impact of tobacco use on federal health care expenditures; {3} numerous lawsuits following the decennial census, which will require a significant amount of expert witness participation; and {4} the need for additional funding to address workload increases in the Division's core litigating areas.

Also, the Environment Division (ENR) expects a significant increase in the number of experts hired to provide highly specialized assistance for a host of multi-site mega-CERCLA defensive contribution cases similar to the claims recently filed by Alcoa, Dupont and Lockheed in which the Government is faced with potential liability in the billions of dollars. In addition, ENR foresees a wide variety of large, resource-intensive cases requiring teams of complementary experts defending challenges to the Army's chemical weapons demilitarization program, and help prove ownership and liability for thousands of abandoned mines which are leaking toxic materials into surrounding aquifers. The Division will also be confronted by an expected rise in the number of cases involving restoration of water sheds and protection of Federal and tribal water rights, which once lost are lost forever. ENR's total expected need for 2000 is \$13 million, or \$4 million over the 1998 allotment.

Further, the Tax Division (TAX) expects to increase its use of expert witnesses as the Division increases its efforts to implement new initiatives to stem the tide of international tax evasion, the use of off-shore tax havens to promote tax scams. In FY 2001, TAX will initiate two new enforcement efforts; one that will combat international tax fraud, and another that will expose abusive trust tax scams run from off-shore tax havens. The need for these new initiates is generated by increasing attorney caseloads and increasing attorney hours devoted to these enforcement efforts. In developing the full range of enforcement tools to assist the Division's lawyers, there will be additional demands for expert witnesses to prepare and present testimony in cases with international origins.

Legal Activities Oustification of Program and Performance

Activity Resources Summary
(In thousands of dollars)

Activity: Protection of Witnesses

	Perm.	FTE	Amount
	Pos.		
2000 Appropriation Anticipated			\$27,485
2001 Base			27,485
2001 Estimate			27,485

Base Program Description:

The procedure for designating a person as a protected witness is set forth in Department of Justice OBD Order 2110.2 "Witness Protection and Maintenance Policy and Procedures." This order places within the U.S. Marshals Service the responsibility for the security of these witnesses and their families. This program provides for their financial maintenance including the following: subsistence expenses; housing; medical and dental expenses; travel; documentation expenses for identity changes; one-time relocation; costs for obtaining employment; and other miscellaneous expenses. This activity also provides for construction and maintenance of strategically located safesite facilities to house protected witnesses before and during trial.

Planned Base Initiatives:

To increase the effectiveness of the Department's efforts to combat criminal activity in such areas as organized frime, drugs or narcotics, and murder or conspiracy to commit murder, by ensuring the safety of endangered or threatened witnesses.

To protect witnesses and their families when the testimony of the witnesses may jeopardize their personal security.

To compensate witnesses for subsistence costs such as housing, food, relocation, and incidental expenses as provided by the Witnesses Security Reform Act of 1984.

To provide orientation, documentation and family-oriented services to new WITSEC Program entrants.

Activity: Victim Compensation Fund

	Perm.	FTE	Amount
	Pos.		
2000 Appropriation Enacted			(\$1,000)
2001 Base			(1,000)
2001 Estimate			0
Increase/Decrease			1,000

Base Program Description:

This program provides resources to compensate individuals who are victimized by protected witnesses. Section 1208 of the Comprehensive Crime Control Act of 1984 (Title II of P.L. 98-473), enacted October 12, 1984, authorized annual appropriations not to exceed \$1,000,000 for the Victim Compensation Fund. The Fund was initially funded by the 1985 Supplemental Appropriations Act (P.L. 99-88).

Restitution will not exceed \$50,000 for those victimized since the establishment of the Pund. Restitution not to exceed \$25,000 shall be paid to the estate of victims killed as a result of crimes committed by persons who have been enrolled in the Witness Security Program if such crimes were committed prior to enactment of P.L. 98-473.

Planned Base Initiative:

To provide compensation to those individuals, or, in the case of death, to the individual's estate, who are victimized by a protected witness.

To pay restitution, or in the case of death, compensation for the death, to any victim of a crime committed by a protected witness that results in death or serious bodily injury.

Legal Activities Fees and Exosuses of Witnesses Program Performance Information Activity Resource Summary (In thousands of dollars)

Activity: Private Counsel

	Perm.	FIE	Amount
	Pos.		
2000 Appropriation Enacted			\$1,600
2001 Base			1,600
2001 Estimate			4,500
Increase/Decrease			2,900

BASE PROGRAM DESCRIPTION:

This activity provides funding to allow the Department to retain outside private counsel to represent Government officers and employees who are sued for actions taken while performing their official duties. As provided for under 28 C.F.R. 50.15 and 50.16, the Civil Division is delegated the authority to retain such counsel and further provided that payments for such services will be payable from the Department of Justice appropriations.

Planned Base Initiatives:

To continue to defend Federal employees personally sued for carrying out official duties.

To retain private counsel to represent Government officers and employees who are sued for actions taken while performing their official duties.

INITL..IVES

Private Counsel

Two major factors are responsible for the increasing demand for private counsel funding: (1) a sharp increase in the number of counsels hired (a 25 percent increase between 1998 and 1999; and (2) a 25 percent increase in the hourly rates paid to outside counsel.

The increase in demand for private counsel services is a direct result of the increased number of people called to provide testimony or to deliver depositions in judicial proceedings, Independent Counsel investigations and congressional inquiries. For example, in <u>Cobell vs Rabbitt</u>, six separate law firms were needed to represent the relevant parties. Similarly, multiple counsel are often needed in matters wherein more than one party is involved.

The increase in hourly rates was necessary to accommodate higher fees demanded by outside counsel. The previous rate of \$99 per hour was significantly below prevailing market rates, thereby impeding the Department's sbility to reimburse private counsel for numerous cases. While the Department attempts to hold these rates as low as possible, the cost of providing adequate counsel in today's market is prohibitive.

Following are three examples of cases in which private counsel are needed:

Harris vs Roderick. This case arose from the shooting of Kevin Harris during the Ruby Ridge incident. Mr. Harris has asserted claims against 14 FBI and U.S. Estabala Service officials: consequently, six separate law firms were retained to represent the various group; of federal defendants. The case has expanded in full discover which involves a large number of depositions conducted throughout the country, large scale document review and production and the retention and preparation of many expert witnesses by both sides.

Alverez-Machain vs United States. This case arose out of the forcible abduction of Dr. Humberto Alvarez-Machain from Maxico to the United States for trial on a federal criminal indictment of federal murder and kidneping charges based upon his alleged participation in the torture and murder in Mexico of DEA Special Agent Enrique "Kiki" Camerena-Salazar.

Trantaque vs Enited States. Kenneth Trents due was a federal prisoner who died while incarcerated at the federal Transfer Center in Oklahoma City, Oklahoma. Mr. Trents dues's family contends that he was murdered by Bureau of Prison guards and that there is a Department of Justice conspiracy to cover up the true cause of his death. There are a large number of witnesses and exhibits in this case. The Department expects to incur costs for some time in relation to this trial as private counsel and plaintiffs are expected to appeal various rulings after the close of the trial.

Legal Activities Fees and Expenses of Witnesses Program Performance Information Activity Resource Suspany (In thousands of dollars)

Activity: Superior Court Informants

	Perm.	FTE	Amount
	Pos.		
2000 Appropriation Snacted			51,400
2001 Baye			1,400
2001 Escimate			1,400

Base Program Description:

This program provides for funding for the protective services offered to D.C. Superior Court witnesses. Specifically, funding is provided for subsistence expenses; travel; temporary relocation; and other miscellaneous expenses. Funding in 1995 was provided from available balances.

Planned Base Initiatives:

To increase the effectiveness of Pederal prosecutions in the District of Columbia by providing funding to temporarily relocate D.C. Superior witnesses who face potential danger as a result of their participation in Superior Court prosecutions.

To provide funding to temporarily protect Superior Court witnesses and their families when the testimony of the witnesses may jeopardize their personal security.

To compensate Superior Court witnesses for subsistence costs such as food, temporary relocation, and other expanses incidental to their protection.

BEVI ALTINI

For 2001, the Department proposes to expand the current Superior Court Informant Program (SCIP) to two additional locations.

Over the past decade, the Department, largely through the U.S. Attorney offices, has become increasingly involved in the prosecution of violent, often drug- and gang-related, crime that historically had been the province of the states. One of the results of this trend is that witness security has become a more serious problem. Mitnesses to violent crime, particularly gang-related violent crime, are often the targets of intimidation, threats, and assaults. Fear of gangs can be pervasive in a neighborhood, intimidating witnesses without any explicit threat needing to be made. Effective law enforcement requires that prosecutors and law enforcement agencies be able to respond to the needs of threatened and intimidated witnesses.

The justification for the proposed expansion is consistent with the rationale originally cited for the SCIP. That is: the threate faced by witnesses in violent crime cases are often local rather than national or international; danger to the witnesses generally ends upon conviction of the defendant(s); and most witnesses are unwilling to sever all ties with the local community as required by the long-term Witness Security program.

No additional funding is sought for this initiative because the Department believes that the expansion can be accomplished within the existing resource level for the current SCIP, which for the past two years has maintained a prior year carryover balance of roughly half the enacted amount.

² The new locations are as yet undetermined.

Activity: Alternative Dispute Resolution (ADR)

	P¢≠m.	FTE	Amount
	Pos.		
2000 Appropriation Enacted			\$1,000
2001 Base	• • •		1,000
2001 Estimate			2,000
Increase/Decrease	• • •		1,000

Base Program Description:

Alternative Dispute Resolution (ADR) encompasses a wide range of problem-solving and conflict management techniques including mediation, early neutral evaluation, arbitration and mini-trials. ADR processes offer the opportunity to settle pending civil litigation in ways that can be more efficient than unassisted negotistions, and on terms that can be more advantageous to the parties. According to the National Performance Review, ADR can enhance the public's access to justice by reducing delays and costs associated with government litigation. ADR can provide quick solutions in government disputes which, in turn, produce savings in interest payments on outstanding debts that the government owes in cases in litigation. ADR can provide flexibility, creativity, and control that lawyers and clients do not enjoy in litigation. And ADR often produces better, more comprehensive long-term solutions to problems.

Planned Base Initiatives:

To attempt resolution of civil disputes and litigation by using professional services of a mediator, arbitrator or other alternative dispute resolution provider.

To provide funding to pay the Government's share of the costs incurred during ADR proceedings.

INITIATIVE

Alternative Dispute Resolution processes such as mediation and arbitration offer the opportunity to settle pending civil litigation in ways that can be more efficient than unassisted negotiation, and on terms that can be more advantageous to the respective parties. Accordingly, the Department has placed a significant emphasis on using ADR in civil proceedings. To promote this program, the Attorney General has directed that all attorneys be trained in the use of ADR, and that ADR be used whenever it is appropriated to do so. Thus, many attorneys in Washington, D.C., including all attorneys in the Civil Rights Division, and more than 1,000 Assistant U.S. Attorneys across the country, have been trained in ADR advocacy. Moreover, pursuant to the ADR act of 1998, all district courts are required to have an ADR program for civil litigation. Hany of the court programs already in existence use private mediators who charge for their services. The requested enhancement is needed to fund the costs of ADR services in instances wherein the Department has taken the initiative to use ADR and in those matters wherein the courts have directed the parties to attempt a settlement using mediation or some other ADR process.

Summary Statement and Performance Plan for FY 2001

The Community Relations Service (CRS) is requesting a total of 86 permanent positions, 71 work years, and \$9,829,000 in its Salaries and Expenses appropriation. This request represents an increase of 30 positions, 15 work years, and \$2,350,000 over the 2001 base appropriation of \$7,479,000. The program increase for 2001 would resume the restoration of services and activities begun in 1999, and will extend the improved and expanded delivery of conciliation and conflict resolution services to local jurisdictions through addition of 15 conciliation specialists and 10 new field offices. The additional conciliators and offices will provide CRS services where there are "gaps" in our ability to respond. New headquarters personnel will provide management and conditionation of conciliators' activities, strategic planning for CRS response to emerging situations of racial and ethnic tension, expert technical assistance to conciliation specialists on a number of service areas, including administration of justice, hate crimes, and youth violence associated with racial tension and conflict, and management and evaluation of all of CRS services, from field operations to staff development. A detailed explanation of CRS FY 2001 program increases is described on page 17, and a corresponding explanation of CRS base program is described on page 12.

B. Component Mission and Goals, and Relationship to DOJ Strategic Plan

CRS' 2001 Request/Performance Plan directly supports the overall priorities, goals, and strategic plans of the Department of Justice. The plan establishes an improved ability to track and account for actual performance and results in the framework of the respective missions and goals of the Department and CRS, as prescribed by the Government Performance and Results Act of 1993 (GPRA).

The CRS mission is to assist States and local communities to resolve conflicts and prevent racial and ethnic violence, and to develop the capacity of such communities to address such conflicts and violence on their own. CRS services are conducted in accordance with Title X of the Civil Rights Act of 1964 (42 U.S.C. §2000g), which mandates that CRS provide assistance to communities and persons in the prevention and resolution of disputes, disagreements, and difficulties relating to perceived discriminatory practices based on race, color, or national origin. CRS is the only federal agency assigned this legislative mandate.

CRS provides services on a voluntary and cost-free basis. It relies on impartial mediation practices and established conflict resolution procedures to help local officials and community leaders resolve conflicts, and restore and maintain community stability. CRS has no law enforcement authority and does not impose solutions, assign blame or fault, or investigate or prosecute cases. CRS concitiation specialists are required by law to conduct their services without publicity and are prohibited from disclosing confidential information.

A description of CRS mission-critical functions and their alignment with the Department's strategic goals follows:

- Conflict resolution and violence prevention: CRS provides conflict resolution and violence prevention services to those communities that experience or are vulnerable to tensions, conflict, and violence arising from issues of race, color, or national origin. This function directly relates to the Department's Strategic Plan, Core Function 2, Assistance to State and Local Governments, specifically under Goal 3 (Support innovative, community-based strategies aimed at reducing crime, delinquency, and violence in our communities)
- 2. <u>Establishment of Law Enforcement and Community Cooperation and Partnerships.</u> CRS improves communications and cooperation between minority communities and law enforcement agencies by creating problem-solving processes by which formal and informal agreements are reached, resulting in increased community confidence and safety, and reduced potential for violent police-community confrontations and civil disorders. This function directly relates to the Department's Strategic Plan, Core Function 2, Assistance to State and Local Governments, specifically under Goal 3 (Support innovative, community-based strategies aimed at reducing crime, definquency, and violence in our communities).
- 3. Improvement of Preparedness for Civil Disorders and Unrest: CRS assists in improving the readiness of States and local governments to respond to civil unrest and disorder, including potential violence and domestic terrorism associated with organized hate group activity by providing assistance with the development of response plans, including early warning systems and other racial tension assessment instruments. This function directly relates to the Department's Strategic Plan, Core Function 2, Assistance to State and Local Governments, specifically under Goal 3 (Support innovative, community-based strategies aimed at reducing crime, delinquency, and violence in our

communities) and is linked to Core Function I (Investigation and Prosecution of Criminal Offenses), specifically under Goal 3 (Improved Response Capability to Domestic Terrorism).

4. Enhancement of Local Conflict Resolution Capacity: CRS improves conflict resolution and violence prevention capabilities in communities and organizations, including law enforcement, schools, and colleges and universities, so that local institutions will have the skills and tools to independently resolve racial conflicts, including youth violence. CRS helps create mechanisms for constructive resolution of conflicts and disputes based on race and ethnicity, promotes the application of alternative dispute resolution methods, and helps establish conflict resolution approaches to address racial conflict and violence. This mission directly relates to the Department's Strategic Plan, Core Function 2, Assistance to State and Local Governments, specifically under Goal 3 (Support innovative, community-based strategies aimed at reducing crime, delinquency, and violence in our communities).

B. FY 2001 Performance Plan and Summary Level Performance Indicators

CRS proposes a FY 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown below. These FY 2001 goals will establish a baseline upon which future performance will be tracked and reported upon, as required by the Government Performance and Results Act (GPRA).

The FY 2001 Plan will transition CRS to the use of different performance measures, adding to "time and motion" indicators other measures which track both specific outcomes of CRS services and customer satisfaction with those services.

The Justice Management Division's Management Planning Staff (MPS) recognized in its <u>Strategic Management Review of the Community Relations Service</u>, (April 28, 1998) that CRS is one Departmental component for which impact or outcome performance measurement is very difficult. "Prevention, resolution, and mitigation of disorder are negatives, that is, events which did not occur or were less severe. It is nearly impossible to measure a negative quantitatively in the short run." Thus, CRS concurs with the MPS recommendation that CRS adopt a customer-driven model which documents customer satisfaction with outcomes, processes, and services.

Beginning in FY 1998 and 1999, CRS modernized its information technology infrastructure. The new system will include a revised case management system which allows for better data collection and information retrieval. The new system will allow CRS to develop strategies, programs, and priorities which address the most urgent needs of its customers, focus CRS on determining the requisite services and organization; and establish customer satisfaction as an essential measurement for both organizational and individual performance.

Until this new Performance Plan is in place, CRS will continue to operate under the structure of its existing Performance Plan.

Departmental Summary Performance Plans

In FY 2001, DOI will play a more active role in assisting communities to respond to and resolve racial and ethnic violence and conflict. Through the Community Relations Service, the Department will provide conflict resolution and violence prevention services to communities.

Community Relations Service Summary Performance Indicators:

- In FY 2001, there will be an increase in the number of jurisdictions assisted by CRS in which violence is prevented or reduced, and/or local capacity to respond to racial conflict and violence is enhanced.
- In FY 2001, CRS will provide increased conflict resolution and violence prevention services as a result of greater
 availability and accessibility of CRS conflict resolution professionals to local communities, development of improved
 service delivery and management systems, and improved information technology and training.
- CRS conciliation specialists will increase the number of alerts filed, assessments made, and cases opened and closed by 15 percent in FY 2001.
- CRS conciliation specialists will increase the number of conflict resolutions, consultations, and other services provided to State and local governments in FY 2001 by 15 percent.

CRS will increase its ability to respond on-site to requests for services from communities experiencing racial or ethnic conflict and violence, and report a measurable reduction in the levels of racial and ethnic tension in those communities, based on accepted CRS tension assessment methodology.

C. Major FY 2001 Initiatives: Ensuring "Peaceful Communities" through Local Conflict Resolution and Violence Prevention Services and Coordination with Federal, State, and local Governments

In FY 2001, CRS will place 15 additional conciliation specialists in strategic, "high risk" locations throughout the country. This initiative also creates 10 additional CRS Field Offices, and follows closely the recommendations contained in the JMD Management Planning Staff report, Strategic Management Review of the Community Relations Service (April 24, 1998). The Field Offices will be located in cities and states where a set of selection criteria has determined the greatest need for additional CRS conflict resolution and violence prevention services. This initiative is consistent with the Department's Community Crosscut planning process for FY 2001, and will ensure that CRS can facilitate the local coordination of Federal, State, and local Government agencies when conflict and violence are imminent in communities. Localized services will maximize the benefits derived from the unique credibility and trust CRS staff establishes with local officials, law enforcement agencies, and civic leaders.

Community Relations Service Salaries and Expenses Justification of Proposed Changes in Appropriation Language

The 2001 budget estimate includes proposed changes in the appropriations language listed and explained below. New language is italicized and underscored, and language proposed for deletion is enclosed in brackets.

Salaries and expenses

For necessary expenses of the Community Relations Service, established by Title X of the Civil Rights Act of 1964, [\$7,199,000] \$9,829,000, and, in addition, up to \$1,000,000 of funds made available to the Department of Justice in this Act may be transferred by the Attorney General to this account: Provided, That natwiths fanding any other provision of law, upon a determination by the Attorney General that emergent circumstances require additional funding for conflict prevention and resolution activities of the Community Relations Service, the Attorney General may transfer such amounts to the Community Relations Service, from available appropriations for the current fiscal year for the Department of Justice, as may be necessary to respond to such circumstances. Provided further. That any transfer pursuant to this section shall be treated as a reprogramming under section 605 of this Act and shall not be available for obligation or expenditure except in compliance with the procedures set forth in that section. (Department of Justice Appropriations Act, 2000, P.L. 106-113)

Base Program Description

Conflict Prevention and Resolution - Program Operations has base resources of 56 positions, 56 work years, and \$7,479,000. All positions are occupied by staff directly engaged in conflict resolution and prevention work. Staff in this decision unit assist communities to prevent and resolve conflicts and disputes based on race, color, or national origin by the provision of conflict resolution and violence prevention services.

CRS helps States, local communities, and tribal governments resolve racial violence and conflict. Four major <u>customer groups</u> request CRS services: law enforcement agencies; courts, State and local governments, and Federal agencies, including U.S. Attorneys, the FBI, HUD, ATF; schools, colleges, and universities; community groups; and other organizations. Through its program cross-cutting efforts with other Department of Justice components and their grantees, CRS provides services in situations that threaten program initiatives. CRS' case tracking system classifies the tangible <u>outcomes</u> of services provided.

The demand for CRS conflict resolution and violence prevention services continues to be acute. Police excessive use of force incidents created community-wide tensions with the potential for violence and division in both urban and suburban communities. A series of high profile hate crimes, including the brutal murder of James Byrd, Ir., in Jasper, Texas, required CRS' involvement to restore community calm. The generalized increase in racial tension was marked by a resurgence of incidents involving the Ku Klux Klan and other organized hate groups, and continued church humings. CRS continued to respond to an increasing number of incidents involving community racial tension arising from issues of accommodation and assimilation of new immigrants by local communities

CRS' limited resources remain stretched beyond the capacity to respond to all requests for assistance. CRS applied lessons acquired from more than thirty five years of experience: there is no substitute for on-site service, and no substitute for experienced impartial conciliation specialists who have worked directly with local officials and community leaders in developing local solutions to racial violence and conflict. CRS continued to respond to the most urgent and explosive situations to help ensure public safety and reduce the prospect of new or continued racial violence.

Civil Disorder Response and Police-Community Cooperation: A great majority of CRS services supports and assists law enforcement agencies. CRS services included: mediating and contiliating conflicts before they turn violent; assisting police agencies to work with residents to identify and address "hot spots" and other points of conflict; helping police and civic leaders to work together to address the underlying causes of racial conflicts before "triggering incidents" provoke civil unrest and serious disturbances.

CRS helps to quell violence and contain civil disorder by engaging community leadership in responding to violence, ensuring coordination among Federal, State, and local agencies and community groups, and providing effective information and rumor control. CRS developed a series of "best practices" protocols to help guide law enforcement officials to manage and avoid violence in potentially explosive situations. In the wake of violence, CRS provides services to help agencies aven new violence and improve overall police-community relations. CRS works to establish and sustain communications between law enforcement and community groups through mutual understanding and working partnerships

CRS deployed conflict resolution teams to Riverside, Chilfornia to help city officials and community groups
respond to community tensions following a fatal police shooting in December 1998, of Tyisha Miller, a young

Btack woman. CRS helped city officials and a citywide clergy group develop improved policies and procedures governing response to similar circumstances. When the Riverside County District Attorney was ready to announce in May, 1999, the results of his criminal investigation into the police shooting, CRS helped local officials and community groups respond to tensions at four local high schools and other that spots." CRS facilitated sessions to help residents express their feelings about the District Attorney's findings. When national and local civil rights leaders announced and staged a series of civil disobedience actions, CRS conciliated between police and protestors on the arrangements and ground rules for the arrest. For a number of other rallies and marches, CRS helped assure that enough self-marshals were prepared to prevent serious confrontations CRS teamed from police debrieflings that its conciliation services both preserved order and improved in police enforcement strategies.

- CRS responded to increased racial tensions in the Mixmi, Florida area, prompted by strong community reaction to a series of immigration-related issues, including the custody of Elian Gonzalez, a juvenile Cuban rafter whose mother died on the journey from Cuba; and the treatment of Haitians arriving on Florida shores. CRS helped officials and protesters plan for non-violent demonstrations, arranged face to face meetings between Cuban and Haitian leaders with INS and other government officials, and fostered good communications and factual information.
- Following the shooting of Amadou Diallo in New York City, CRS, at the request of the New York Police Department, worked with local and Federal officials, and civil rights organizations to ease community racial tensions. CRS secured agreement between police and march organizers on ground rules for demonstrations and arranged for effective self-marshaling of these events.
- CRS completed a bulletin on "Police Use of Force Addressing Community Rucial Tensions" in collaboration with a committee of police executives. The bulletin provides examples of "best practices" in response to use of force incidents where there are pre-existing community tensions between the police and minority residents. The best practices represent the combination of law enforcement perspective provided by police chiefs, and CRS' collective experience resolving conflict and preventing violence in response to "triggering incidents," such as a use of force situation.

- Conflict Resolution and Violence Prevention in Schools: As catastrophic incidents of school violence have shown, there is a tremendous potential for conflict and violence in our schools. CRS services help schools address racial conflicts and violence, reduce tensions, develop plans to avoid potential incidents, and prepares students, teachers, and administrators for effective conflict resolution and mediation. CRS services were requested in 1999 by more than 150 school districts and 100 colleges and universities. The "Student Problem Identification and Resolution Program" (SPIR) is illustrative of CRS theory and approach to school conflict and violence. SPIR is a conflict resolution program which helps schools identify and defuse racial tensions involving students at junior and senior high schools. Through a carefully structured process that brings students, teachers, and administrators together, underlying causes for racial conflict are identified and a joint plan is developed to address the issues. CRS helps school administrators, local community leaders and police officers to identify conditions which may lead to conflict and violence, and to conduct these programs. This strengthens cooperation between police and schools. CRS work helps to build the infrastructure to allow communities to address these issues independent of CRS involvement.
 - After a racial melec at the Inglewood, California high school, CRS conducted a two-day session with a crosssection of over 90 students. Through SPIR students were helped to diagnose school race relations issues and propose joint solutions to school administrators. A permanent mechanism, a SPIR Council, was established to work with the school principal, to implement the recommendations. CRS helped members of the Los Angeles County Human Relations Commission, California Youth Authority, and School Law Enforcement Partnership carry out the program at other school locations.
 - In response to a increasing community racial tensions and protests in December, 1999, arising from the expulsion of seven Black students from the Decatur, Illinois schools, CRS worked with local officials and demonstration leaders to assure that a series of protest activities would be conducted without incident. Then, while the Federal District court held hearings on the expulsion issues, CRS secured agreement from city leaders, local college officials, and community leaders to join in mediated discussions on ways to improve race relations in Decatur for the long term.

3. Hate Crime Response: CRS services help local officials maintain and restore stability when hate crimes heighten community tension and the threat of violence. CRS prepares police to recognize and respond to hate crimes, and strengthens hate crime reduction programs in schools, colleges, and universities.

CRS, as part of the Department's Hate Crime Initiative, and in partnership with the FBI and national police and prosecutors' organizations, designed new curricula for police executives, investigators, and patrol officers on "best practices" when responding to hate crimes.

CRS conciliators were on-site in Jusper, Texas almost continuously for two months following the brutal murder of James Byrd, Jr. CRS met with local officials, community leaders, and residents at the grass roots level to develop plans for managing protests and counter-demonstrations by the Ku Klux Klan and New Black Panther Party, convened strategic meetings of key city, religious and other community leaders to plan for racial reconciliation in Jasper; and prepared the school system's staff and students for effective, independent conflict resolution and crisis response.

Initiative: Ensuring "Peaceful Communities" through Local Conflict Resolution and Violence Prevention Services and Coordination with Federal, State, and local Governments

<u>Program</u>	Positions	Work years	Amount
Conflict Resolution	30	15	\$2,350,000

This request includes the following positions: one Deputy Director, 15 Concritation Specialists, 10 Administrative/Intake Specialists, and four Program Specialists/Management Analysts.

CRS is requesting a program increase of \$2,350,000 to address racial violence, disorders, and conflict in States and local communities. The program increase for FY 2001 would resume the restoration of services begun in FY 1999 and will extend the improved and expanded delivery of conciliation and conflict resolution services to local jurisdictions through addition of 15 conciliation specialists and 10 additional field offices. CRS will determine the cities and states where the new offices will be located based on the following criteria.

- Levels of community volatility, vulnerability, and a history of racial and ethnic violence;
- Documented requests for services from public officials that were unmet by CRS;
- Demographic and socio-economic shifts resulting in increased racial conflict and tension; and
- Issues of accessibility, cost of service, and response time to remote locations.

The 10 new field offices will allow more sustained CRS involvement in communities and will maintain the ongoing working relationships with local officials, law enforcement agencies, and civic leaders, especially during critical times of community unrest and disorder. The additional conciliators will provide CRS services where there are "gaps" in our ability to respond. The program increase will also create 10 administrative assistant positions intended to support the work of the Headquarters and Regional offices, further relieving Regional Directors, conciliation specialists, and Headquarters staff from clerical tasks to conduct conflict resolution services. New headquarters personnel will provide management and coordination of conciliators' activities, strategic planning for CRS response to emerging situations of racial and ethnic tension, expert technical assistance to conciliation specialists on a number of service areas, including administration of justice, hate crimes, and youth violence associated with racial tension and conflict, and

management and evaluation of all of CRS services, from field operations to training of staff. This initiative restores to CRS administrative, financial, and personnel capabilities and services which had been provided by EOUSA from 1996 through 1999.

The program increase includes \$2,350,000 of modular costs for the new positions. Each of the new positions has first year, non-recurring costs of approximately \$6,000 for additional office space and associated administrative costs associated with the creation of new positions and hiring of new staff.

This initiative supports the Attorney General's and the Department's Strategic Plan, Core Function 2, Assistance to State and Local Governments, specifically under Goal 3 (Support innovative, community-based strategies aimed at reducing crime, delinquency, and violence in our communities). The initiative is directly related to the Attorney General's priorities to assist communities to bridge facial division and lessen destructive community racial violence and conflict.

The program increase is consistent with the findings and reorganization recommendations contained in the JMD Management Planning Staff report, <u>Strategic Management Review of the Community Relations Service</u> (April 24, 1998), which called for a redesigned field structure to provide a more responsive, customer-oriented service delivery system. Based on interviews with more than 150 public officials and civic leaders across the country, MPS reported that "... the Community Relations Service is needed today more than ever" and that "... many officials interviewed were visibly frustrated and angry that the Federal government had reduced the resources for CRS under these circumstances." It concluded that "current conditions argue persuasively that there is more demand for CRS community conciliation than can be met today."

The proposed enhancement can also be justified on the basis of independent analyses of growing racial violence and conflict and projected added demand for CRS services. According to researchers and law enforcement experts, the current level of racial tension and conflict will increase the potential for violent outbreaks in many localities. As communities become more diverse, racial conflicts and tensions are predicted to rise and the calls for CRS service are expected to continue to grow. Given the fundamentally different and more complex racial and ethnic landscape in America today, issues of accommodation and assimilation will create a greater demand for CRS services are in greater demand than ever.

Criminologists project a greater potential for racial violence based on demographic shifts, economic dislocation, and disparate urban youth unemployment over the next decade. In areas where there have been changes in the composition of the community, there have

Community Relations Service FY 2001 Authorization and Budget Request for the Congress

been marked increases in crimes against minorities, hate crimes, and crimes committed by newly formed youth gangs. Hate crime incidents and retaliatory actions have risen sharply in the last few years. In addition to an increase in hate crimes, groups which advocate race-based violence are on the rise. According to <u>Klan Watch</u>, a publication which monitors the activities of the Ku Klux Klan and other hate groups, taw enforcement and human relations officials throughout the United States are reporting the reappearance of large numbers of Skinheads in their communities.

First hand tension assessments by CRS Regional Directors show an increased demand for CRS services to help resolve community racial conflict, based on community tensions arising from intensified immigration and drug enforcement activities; incidents and complaints of excessive use of force by police; tribal/State conflicts over sovereignty issues; and campus violence and conflicts in response to demographic changes. Without the resources requested for 2000, Regional offices continue to decline or postpone requests for conflict resolution and violence prevention services.

CRS experience indicates that outbreaks of civil disorder may be attributed to the existence of two volatile community dynamics known to create extraordinary tension and a triggering incident. The first community dynamic is a perception that severe inequities exist in certain areas of the social structure. The second dynamic is the lack of confidence in the interest or capability of government or other institutions to provide effective remedies to perceived inequities. A triggering incident is a tension-heightening event that catalyzes discontent and allows for civil disorder. CRS Regional managers report that the inability by CRS to respond in a timely fashion increases the likelihood in many communities of a triggering incident and its destructive consequences.

Community Relations Service FY 2001 Authorization and Budget Request for the Congress

Justification of Adjustments to Base

Community Relations Service Congressional Authorization and Budget Request Estimates for FY 2001

Increases: Adjustment to Base	Permanent Positions	Work years	Amount
FY 2001 pay increase. This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$136,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$99,000 for pay and \$37,000 for benefits).		-	\$136
Annualization of 2000 pay increase This pay annualization represents first quarter amounts (October through December) of the 2000 pay increase of 4.8 percent to be effective January 2000, and, for three-quarters of a year, the difference between the 4.4 percent provided for in the 2000 President's budget and the approved increase of 4.8 percent. The amount requested, \$73,000, represents the total annualization of the pay amounts for the fiscal years plus appropriate benefits (\$53,000 for compensation and \$20,000 for benefits)	•	-	73
Increased Federal Health Insurance Costs. This request provides for the increase in agency contributions to Federal Employees health benefits. In 1999, Federal health insurance premiums, including agency contributions, increased approximately 10.2 percent. Because the Government absorbed a larger portion of the total costs, up to 75 percent, the total cost to the Government has increased substantially. This increase is based on the "increased" Government cost of Health Insurance. This request includes \$9,000 for these costs			9

Community Relations Service FY 2001 Authorization and Budget Requesi for the Congress

Increases: Adjustment to Base	Permanent Positions	Work years	Ameust
Travel Management Center Fees. In the past, travel management services were provided at no costs, and the Department received rebates based on ticket sale. However, current practices in the travel industry have ended this process. The new contract will not provide rebates and will carry fees for each ticket, hotel, car and other reservations made. The Department's cost for travel management center fees is estimated at \$2,500,000. Funding of \$10,000 is requested for CRS.	٠		\$ 10
General Services Administration (GSA) rent. GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested increase of \$52,000 is required to meet our commitment to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates, reflecting a 5 percent increase over 2000 levels.	٠	•	52

Independent Counsel, Permanent Indefinite Appropriation

Summary Statement

Fiscal Year 2001

In the 1988 Appropriations Act, Congress established a permanent indefinite appropriation to fund the expenses of Independent Counsel investigations and prosecutions. Under this appropriation, all necessary costs and expenses incurred in the pursuit of these investigations will be funded from amounts available in the Treasury.

Independent Counsel investigations were authorized by Congress in the 1978 Ethics in Government Act. The Authorization expired December 15, 1992, five years after the enactment of the Independent Counsel Reauthorization Act of 1987. However, the provisions of the chapter remained in effect for on-going investigations. In June 1994, the Independent Counsel Reauthorization Act of 1994 was signed into law. On June 30, 1999, the Reauthorization Act of 1994 expired. To-date there has been no reauthorization.

Upon expiration of the Reauthorization Act of 1994, ongoing Independent Counsel investigations will continue their operations to conclusion. Expenditures for these operations will continue to be funded from the permanent indefinite appropriation.

Mission: To implement the provisions of the Ethics in Government Act of 1978 (28 U.S.C. 591 et. seq., as amended), pertaining to the appointment and functions of the various Independent Course).

Organisational Goals:

- To investigate allegations of misconduct by high-level officials of the Executive branch whenever a preliminary investigation by the Attorney General results in an application for appointment of an Independent Counsel.
- 2. To conduct proceedings before grand juries and other investigations.
- 3. To review all documentary evidence from any source.
- To initiate and conduct prosecutions in any court of competent jurisdiction, including the framing and signing of indictments, the filing of information, and the handling of all aspects of cases.

2001 Base	9,500
2001 Estimate	9,500
Incresce/Decresce	

BASE PROGRAM DESCRIPTION: Independent Counsel investigations were authorized by Congress in the 1978 Ethics in Government Act. The authorization expired December 15, 1992, five years after the enactment of the Independent Counsel Reauthorization Act of 1987. However, the provisions of the chapter remained in effect for ongoing investigations. In June, 1994, the Independent Counsel Reauthorization Act of 1994 was signed into law. On June 30, 1999, the Reauthorization Act of 1994 expired and to-date there has been no reauthorization. The provisions of the chapter remain in effect for ongoing investigations.

In order to facilitate functioning of these counsel and maintain their independence from the Department of Justice, a working arrangement was implemented in 1986 between the Administrative Office of the U.S. Courts (AOUSC) and the Department of Justice for the Indinistrative support of Independent Counsel investigations. In a letter of agreement between the Department and AOUSC, the Department was responsible for funding the appropriate costs of any Independent Counsel, while AOUSC was responsible for the disbursement and accounting of such funding. The Independent Counsel Reauthorization Act of 1994 directs AOUSC to provide administrative support and guidance to each Independent Counsel.

The Department provides funding periodically to AOUSC. This funding is available to pay the appropriate costs of any active Independent Counsel. Under P.L. 100-202, an Act making further continuing appropriations for 1988, a permanent indefinite appropriation was established. This authorization is included within the General Legal Activities appropriation language (101 Stat.

1329-9). All necessary funding is to be provided from general funds in the Treasury on an as needed basis. The Congress has directed the Comptroller General to conduct semiannual financial audits.

Programment of Justice Assets Forfaiture Fund Organization Chart Fiscal Year 2001

JUSTICE MANAGEMENT DIVISION

Department of Justice Sassis Forfatture Fund Summary Statement and Performance Plan Fiscal Year 2001

Summary Statement:

The Department of Justice is requesting \$485,838,000 for expenses of the Assets Forfeiture Fund (the Fund) for 2001. Sased on current projections, receipts to the Fund in 2001 will be \$490,986,000 including approximately \$41,000,000 in interest earned on cash balances, of which \$879,000 is not available for general operations of the Fund. Included in the 2001 budget plan is an estimate of \$462,838,000 for mandatory Program Operations Expenses of the Fund. This is \$201,234,000 less than the estimate for 2000, primarily due to decreases in equitable sharing expenses associated with non-recurring forfeiture activity in prior years. Also included in this estimate is \$23,000,000 in definite authority for Investigative Expenses of the Fund.

The primary purpose of the Fund is to provide a stable source of resources to cover the costs of an effective smeat forfeiture program, including the costs of solving, evaluating, inventorying, maintaining, protecting, advertising, forfeiture, program and disposing of property saired for forfeiture. Prior to creation of the Fund in 1985, costs of these activities had to be diverted from agency operational funds. The more effective an agency was in maining property, the greater the drain on its appropriated funds. Creation of the Fund is responsible, in large measure, for the growth in the Department's forfeiture program over the past decade. A secondary benefit of an aggressive and well-managed forfeiture program is the production of surplus revenues to assist in financing important law enforcement programs. If the forfeiture program ceases to function effectively in its primary role, these surplus revenues will not be generated.

Pollowing the creation of the Fund, the asset seizure and forfeiture program graw rapidly. The inventory of property in custody increased from 3,664 properties valued at \$313.2 million at the end of 1985 to 28,983 properties valued at about \$364.3 million at the end of 1999 (8780.2 million excluding mir Bank of Commerce and Credit International (8CCI) cash assets). Pollowing a decline in 1995 and 1996, seizure activity increased from about 40,500 assets valued at \$675 million in 1997 to about 45,000 assets valued at \$718 million in FY 1998. Through 1999, 50,073 assets were seized, valued at approximately \$974.7 million. Receipt levels including BCCI activity from 1995 to 1999 were at \$487.5 million, \$338.1 million, \$445.6 million, \$448.9 million, and \$699.7 million. Excluding the effect of BCCI funds, the receipts in those years were \$483.0 million, \$379.5 million, 443.0 million, \$448.8 million, and \$598.3 million. Although receipts in 1999 showed an upswing due to the Hamser David, Duboc, and Bicycle Club cases, a long-term substantial upward trend in deposits is not projected.

Receipts are available to pay the Program Operations Expenses, i.e., mandatory expenses, of the forfeiture program, to recognize the equity of immount third parties and liamholders, and to recognize the efforts of state and local law enforcement agencies that helped produce the forfeitures. For 2001, the Department is

estimating \$462,838,800 for these purposes. Included in this amount, providing net receipts support this expense level, is \$33.9 million to continue to pay overtime expenses and other costs of state and local law enforcement officers engaged in joint operations with Federal law enforcement agencies participating in the Fund. The Department's authority to incur Program Operations Expenses, including recognition of the equity interests of others and the efforts of law enforcement agencies, is limited only by the level of receipts deposited into the Fund. To the extent that receipts exceed the amounts necessary for program expenses, the Fund may be used for authorized investigative expenses.

The Fund has served as a cetalyst to involve more federal, state and local investigative agencies in the forfeiture program. In 1991, the U.S. Park Police and the Bureau of Alcohol, Tobacco and Firearms joined the Department of Justice's asset forfeiture program, and in 1992, the U.S. Secret Service joined the program. As one result of the effectiveness of asset seizure and forfeiture as a law enforcement tool and the Assets Forfeiture Fund as a resource to support important law enforcement quels, the Treasury, Postal, and General Government Appropriations Subcommittee enacted legislation that created a separate Treasury Forfeiture Fund that became operational in 1994, replacing the Customs Forfeiture Fund and pulling Treasury agencies out of the Justice Department Fund. In 1994, the Office of Criminal Investigations, Food and Drug Administration joined the Department of Justice asset forfeiture program, and in 1998, the U.S. Department of Agriculture Imspector General joined the Justice asset forfeiture program. Currently, a memorandum of understanding is being developed for the Commerce Department's Eureau of Export Administration to join the Justice program. It is increasingly important to recognize that the benefits to be achieved through inter-departmental cooperation and standardization of policies and procedures are enormous, not only from a program management perspective, but also from the perspective of preserving the due process rights of citizens. While some recovery of the program is evident, the significant effect of a less than aggressive forfeiture program is that criminal organizations have hundreds of millions of dollars more in their coffers to support their illicit operations each year.

In summery, the asset forfaiture program not only represents an effective law enforcement tool against criminal organizations but also provides financial support to other Federal law enforcement efforts. Without this resource, agency funds would be seriously taxed to maintain and preserve saised assets and liquidate forfaited assets; and law enforcement projects supported by the Fund could not be undertaken or would have to await the possibility of funding through other avenues. The recent progress in reinvigorating use of the asset forfaiture sanction must be maintained and expanded. Continuing to support aggressive training, case evaluations, funds management, and contract support are keys to extracting the greatest benefit to our society from application of the asset forfaiture sanction.

A. Mission, Goals, and Relationship to DOJ Strategic Plan

Mission

The Assets Forfeiture Fund's 2001 request/performance plan directly supports the Department's strategic goals to investigate and prosecute criminal offenses and to provide assistance to tribal, state and local governments. In addition, the Fund incorporates information on performance measurement that should lead to better accountability regarding actual results achieved. In support of the Department's goals, allocations in excess of \$501 million were provided in 1999 for program operations, investigative expenses, joint law enforcement operations, and equitable sharing. This was made possible by 1999 revenues of \$609.7 million from the forfeiture of cash, sales of forfeited property, and investment of funds.

The mission of the Asset Forfeiture Program is to disrupt, damage and dismantle criminal organizations, through the use of civil and criminal forfeiture, by removing those assets that are essential to the operation of those criminal organizations, and to punish the criminals involved by denying them use of the proceeds of their crimes.

Goals and Relationship to DOJ Strategic Plan:

(1) The Pund will provide monies to federal agencies engaged in the asset forfeiture program in a minner designed to support use of the asset forfeiture sanction against the financial infrastructure of criminal organizations, to eliminate the burden of forfeiture-related costs as a disincentive to use of the asset forfeiture powers, to facilitate the efficient execution of forfeiture program responsibilities, and to enhance program accountability by ensuring the availability of current and accurate information on the status of all assets seized for forfeiture.

Goal 1 directly relates to the DOJ Strategic Plan, Core Function 1: Investigation and Prosecution of Criminal Offenses.

(2) The Fund will provide funds to state and local law enforcement agencies for the purpose of encouraging cooperation in development and execution of criminal investigations.

This goal directly related to the DOJ Strategic Plan, Core Function 2: Assistance to Tribel, State and Local Governments.

B. Eighlights of 1999 Mission Critical Results

Masser-David Case: In December, 1998, \$89,016,022 was deposited in the Fund, representing the U.S. Government's share of proceeds repatriated from the Swiss Government as a tesult of the Drug Enforcement Administration's (DEA) successful efforts to forfeit millions in drug proceeds from a Colombian drug trafficking family responsible for smuggling tons of marijuana and cocaine into the United States in the 1970s and 1980s. The seizure, which occurred in 1995, totaled approximately \$276 million. About 65 percent of the total, or \$180 million, was on deposit in Swiss bank accounts. It is estimated that as much as 70 percent of the \$89 million will be shared with state and local law enforcement agencies who participated in the investigation leading to the seizure and forfeiture of assets in this case. Sharing with the state and local agencies will likely occur in 2000, and, to a lesser extent, in 2001.

Reiners Case: In June, 1997, Edward J. Reiners pled guilty to bank fraud and money laundering. In his plea agreement, Mr. Reiners agreed to forfeit all of the property and proceeds of, or traceable to, the bank fraud and money laundering. This Federal Bureau of Investigation (FEI) case was pursued initially as a forfeiture case. However, in the end, the forfeiture was dismissed in favor of restitution. The victims in this case were banks who were unwilling to dismiss their claims to the seized funds in favor of petitions for remission. The FBI's efforts to pursue this case under forfeiture and identify and trace assets, yielded hundreds of millions of dollars. More than \$200 million in restitution was made to the victim banks.

Equitable Sharing with Colombia: In May, 1997, more than \$36 million was deposited in the Fund from Luxembourg, representing cocaine drug proceeds generated by José Gonzalo Rodriguez Gacha, a leading member of the Medellin Cartel in Colombia. Of the proceeds, \$19 million was to be shared with Colombia. Due to Colombia's decertification by the President for not fully cooperating in international narrotics control, the Department has been unable to release the money. Early in 1999, Colombia was re-certified. The Department's Criminal Division has been working with Colombian Government officials on a plan to disburse the monies due the Colombians to support defined projects designed to improve the effectiveness of law enforcement related to the suppression of narcotics twefficking, and the investigation, prosecution, and forfeiture of property and proceeds of narcotics trefficking. In November 1999, approximately \$6 million was disbursed to Colombia. The remainder is expected to be distributed during 2000. Through the funding made available from the forfeiture of assets in the Gacha case, the United States and Colombian Governments are now in a position to cooperate in the fight against illicit drug trafficking and related crimes.

C. FY 1001 Performance Goals and Indicators

The Fund is proposing a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results. These 2001 goals will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act (GPRA). With regard to the number of assets in inventory and their value, annual objectives are not established in advance of a fiscal year in order to avoid even the appearance of targeting or a "speed trap" approach to forfeiture.

During 1998, at the direction of the Attorney General, the Department began to focus attention on the strategic use of asset forfeiture against criminal organizations, in further support of the strainment of the goals and objectives of the Department's strategic plan. The strategic approach focuses on the use of our law enforcement powers to identify, analyze, attack and eliminate a criminal enterprise. The strategic

approach (1) requires a strong intelligence function that provides all-source information on target organizations to permit the assessment of vulnerabilities and the identification of key structural assets; (2) transcends specific cases to coordinate and target enforcement actions against the vulnerabilities of the underlying criminal organization; and (3) focuses on removal of the assets that are key to the functionality and viability of the criminal organization. Special emphasis is placed on creative ways to use the proceeds of asset forfeiture, in conjunction with other funds available to our investigative and prosecutive offices, to support operations that focus on the disruption and destruction of criminal organizations and not morely on the conviction of individuals and forfeiture of their personal property.

This challenge also requires the dedication of greater human resources to development of the financial aspects of criminal operations. Continuing education in conducting financial investigations, tracing assets, presenting financial evidence in court, and managing and disposing of sophisticated properties is needed to develop and support experienced law enforcement professionals capable of dismantling criminal enterprises. The increasing use of sophisticated technology by criminals and the relative ease of operating across international boundaries also present special challenges for law enforcement that must be set if the power of the asset forfeiture sanction is to be realized. The Department will continue to seek opportunities to use asset forfeiture funds to advance the shility of our investigators, prosecutors, and other professionals to meet these challenges successfully.

D. Date Validation and Verification Issues

The financial management of the Fund is supported by the Justice Management Division's Financial Management Information System (FMIS), the U.S. Marshale Service's Standardized Tracking and Reporting System (STARS) and Financial Management System (FMIS), and the Consolidated Asset Tracking System (CATS). THIS is a computerized, general purpose accounting and reporting facility that exists to support the financial operations of the Department. STARS is the U.S. Marshale Service (USMS) headquarters financial management system and FMS is the USMS field offices' financial management system. CATS is an integrated system providing services to the asset forfeiture community and serving as a subsidiary system for the financial accounting and reporting of the seized and forfeited inventory.

Among the issues affecting data validation and verification of the Fund and the Seized Asset Deposit Fund (SADF) is the 1996 disclaimer opinion on the financial statements. Three reportable conditions and two material weaknesses were identified, which affect inventory and financial data. Several actions have been taken to correct these conditions and weaknesses. First, the Asset Forfeiture Management Staff (AFMS) created a specialized unit to monitor the general quality of the data in CATS, to review data integrity, and improve invantory data.

Second, new SADP subobject classifications have been activated in the appropriate financial systems to permit more precise identification of financial transactions affecting the SADP. It is hoped that this fine-tuning will permit easier reconciliation of the SADP general ledger belance with SADP activity reported in CATS.

Third, the Department's Justice Management Division issued new policies and procedures to correct accrual accounting problems associated with posting of accounts payable and delivered orders in PMIS. Fund agencies who work with PMIS received training and began utilizing the new procedure during 1999. To further assure improvement in this area, APMS has implemented a twice yearly review of Fund agencies accounts payable and delivered orders.

It is expected that the resolution of the audit issues will provide adequate supporting documentation for the performance measures. PMIS is the system of record for the Fund and SADF. PMIS information comes directly from STARS and FMS and indirectly from CATS. As enhancements or refinements are made in these systems, they will strangthen the data supporting the activities of the Fund and SADF.

B. Bess Program Description

Identifying, seizing, and forfeiting illegal assets plays an increasingly important role in the Federal Government's efforts to stop crime and punish criminals. While even the highest individual criminals within a crime corporation are replaced quickly and easily, the removal of bank accounts, real property and other assets of the enterprise can disrupt operations severely. This, in turn, can create further opportunities to penetrate and compromise these illicit syndicates. However, not until 1985 was there a suitable funding source to cover the direct expenses associated with an aggressive asset forfeiture program, such as storage, security, maintenance, liens, mortgages, auctions, and advertising. The Comprehensive Porfeiture Act of 1984, part of the Comprehensive Crime Control Act of 1984, (P.L. 98-473, Title II, Chapter III), remedied this problem by creating the Justice Assets Forfeiture Pund.

Once the Pund was created, the Department placed greater amphasis on the identification, location, seisure and forfeiture of essets as a standard aspect of major investigations. The Department also obtained authority to share forfeited assets with state and local law enforcement agencies and foreign governments that assisted in the law enforcement effort leading to the forfeiture. Today, hundreds of joint investigations involving thousands of state and local law enforcement officials are occurring across the country. Also, there are a greater number of cases involving assets in foreign countries.

After seizure, the Foderal investigative agencies have a critical role in getting the legal forfeiture process started by: (1) providing personal notice to the owner, and advertising the seizure to the public; (2) handling claims for the property from owners. Lienholders, and state and local agencies with an "equitable share" in the property; and, (3) if the forfeiture is uncontested, issuing a "Declaration of Forfeiture", closing out the case file, and notifying interested parties of the outcome. If the asset under seizure is real property or valued in excess of \$500,000, or if a claimant files a claim and posts a cost bond, then the case is referred to the appropriate U.S. Attorney's Office for judicial forfeiture proceedings. Following a forfeiture determination, whether judicial or administrative, there are often petitions from innocent owners that need to be investigated and enswered. Finally, if the forfeited property

is not transferred to a federal, state or local agency for official use, or destroyed, it must be marketed and sold. Only then can revenues be deposited in the Fund.

Depending on the type of property involved, the strength of the market, the need to address petitions, and other factors, the entire forfeiture and disposal process may take 12 to 30 months. During this process, the property must be properly maintained to protect its value and efficiently disposed of after forfeiture to ensure the maximum return to the taxpayer. The Pund is used to pay the expenses incurred during completion of the forfeiture action. Later, any receipts from the disposal of the property are used to replenish the Fund. Under current law, proceeds from all forfeitures under any law enforced and administered by the Department of Justice are generally deposited in the Fund, including proceeds from the sale of assets seized by the U.S. Postal Service, the U.S. Park Folice, the U.S. Department of Agriculture-Inspector General and Food and Drug Administration's Office of Criminal Investigations if the assets are forfeited judicially. There are also statutory exclusions for certain fish and wildlife statutes, the proceeds from administrative forfeitures by the non-Justice agencies, and the net proceeds from forfeitures under the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA). Once property is sold, the proceeds are deposited into the Fund and are available for distribution. Costs incurred by the Fund in managing the asset, paying off lienholders, and achieving the forfeiture are deducted.1 In appropriate cases, payment of restitution to victime of the crime has priority for distribution of any remaining proceeds. If proceeds a ill remain, any equitable interest, earned by direct participation in the case, is distributed to the appropriate state and local law enforcement agencies. Often, in lieu of sale of property, the property is placed into official use by a participating state or local law enforcement agency or by a federal agency.

For several years, the federal agencies involved in the forfeiture program worked together to build a unified federal forfeiture program, with consistent policies and procedures applicable to all agencies. The U.S. Customs Service was the only significant forfeiture agency operating under independent authority. However, in 1993, Congress enacted a major division in the federal forfeiture program by creation of the Treasury Forfeiture Pund to replace the Customs Forfeiture Pund. Beginning in 1994, three Treasury law enforcement agencies formerly participating in the Department of Justice forfeiture program joined the Customs Service in forming an independent Treasury forfeiture program. All Treasury agencies now deposit assets they seize with a Treasury property custodian pending forfeiture, after which forfeited proceeds are deposited into the Treasury Pund. In those instances where the seizure resulted from a joint operation involving an agency participating in the Justice Fund, a sharing of the proceeds with the Justice Fund will occur. The reverse is also true. Efforts to coordinate the practices and policies of both forfeiture programs and Funds continue in order to ensure the vitality and integrity of this important law enforcement tool.

Costs that may be deducted include seisure, storage, security, disposition, immount third party interests, awards for informanta based on the forfeiture, litigations expenses, contract support personnel, U.S. Marabels Service administrative support costs, state and local officer overtime and associated costs, and other docts invested in the case producing the forfeiture. For many low value assets, these costs succed the proceeds of sale. Not only are there no not proceeds from which to pay restitution or equitable shares, but the Fund Incurs a loss on these assets.

Definitions of Terms or Explanations for Indicators and Data Sources:

- <u>Case summort costs</u> Expenses incurred in support of specific asset forfeiture actions. Included are costs incurred for asset management and disposal, third party payments, case related expenses, special contract services, contracts to identify assets, and awards for information based on the amount of the forfeiture.
- Fund receipts regular receipts, excluding BCCI interest income.
- <u>Wet case deposits</u> Derived from net deposits by subtracting income from investments, transfers in from the Treasury Forfeiture Fund and other agencies, and adding back refunds to the Treasury Forfeiture Fund, Postal Inspection Service, and other agencies.
- Net case income Derived by subtracting case support costs from net case deposits.
- <u>Met deposits</u> The total of income and refunds from all sources for the current year. Excludes BCCI interest income.
- <u>Net Income</u> This represents the results of the year's operations. It is derived by subtracting all program operations expenses from net deposits.
- <u>Program operation expenses</u> All costs incurred in support of the federal asset forfeiture program. It includes case support costs plus ADP equipment, training and printing, and other program management. Excludes equitable sharing and joint law anforcement operations.

Issues Affecting PY 1989 Program Performance:

1

In reference to End Outcome, Item 13, as a result of forfeitures associated with cases such as Masser-David, Duboc, and Bicycle Club in 1999, accruals have been increased by \$100 million. These accruals will increase obligations in 2000 and, possibly to a lesser extent, in 2001, depending on how quickly the equitable sharing payments are executed.

Further on Item 13, the percent of net income available to federal law enforcement is calculated as 1 - percent of the net income available to state/local/tribal governments under Core Function 3, Item 8.

Definitions of Terms or Explanations for Indicators and Data Sources:

<u>Case sumport costs</u> - Expenses incurred in support of specific asset forfeiture actions. Included are costs incurred for asset management and disposal, third party payments, case related expenses, special contract services, contracts to identify assets, and awards for information based on the amount of the forfeiture.

Pund receipts - regular receipts, excluding BCCI interest income.

<u>Wet case deposits</u> - Derived from net deposits by subtracting income from investments, transfers in from the Transury Forfeiture Fund and other agencies, and adding back refunds to the Transury Forfeiture Fund, Postal Inspection Service, and other agencies.

Met case income - Derived by subtracting case support costs from net case deposits.

<u>Met denomits</u> - The total of income and refunds from all sources for the current year. Excludes BCCI interest income.

<u>Met Income</u> - This represents the results of the year's operations. It is derived by subtracting all program operations expenses from met deposits.

Issues Affecting FY 1999 Program Performance:

Under Item 4, Enacted Plan, a projection of agencies receiving aquitable sharing is not available.

In reference to Item 8, as a result of forfeitures associated with cases such as Nasser-David, Duboc, and Bicycle Club in 1999, accruals have been increased by \$100 million. These accruals will increase obligations in 2000 and possibly to a lesser extent in 2001, depending on how quickly the equitable sharing payments are exacuted. Further, the percent of net income available to state/local/tribal governments is calculated as equitable sharing payments/net income. The remaining percentage is distributed for federal law enforcement purposes (see Core Function 1, Item 13).

Issues Affecting Selection of FY 2000 and 2001 Plans: See second paragraph under 1999 issues.

Department of Justice Assets Forfaiture Fund Justification of Proposed Changes in Appropriation Language Fiscal Year 2001

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Assets Forfeiture Fund

For expenses authorized by 28 U.S.C. 524 $\{c\}$ (1) (A) (ii), (B), (F), and (G), as amended, \$23,000,000, to be derived from the Department of Justice Assets Forfeiture Fund.

(28 U.S.C. § 524; Department of Justice and Related Agencies Appropriations Act, 2000, P.L. 106-113.)

Explanation of Changes: No substantive changes.

Changes in the Estimates: Permanent, Indefinite Authority

It appears that the Attorney General's 1997 call for efforts to reinvigorate the use of asset forfeiture, as well as the major program success in recent U.S. Supreme Court decisions, have generally reversed the recent decline in program activity. As a result of forfeiture receipts in 1995 of \$609.7 million, an increase of \$160.8 million from 1995 levels, liabilities for equitable sharing expanses were incurred and accrued and thereby nonatitute a major share of the increase in program operations. The remainder of the change in estimates is attributable to modest increases in program operations other than equitable sharing. Start-up expanses for 2001 will be increased by \$14.2 million to meet USMS SEE costs of administrative support personnel associated with the forfeiture program. No funding will be provided for the personnel costs associated with Deputy U.S. Marshale.

The 2001 budget recommends that the salaries of USNS administrative personnel responsible for the Program's property custodial functions be reimbureable from the Assets Porfeiture Fund. The property management function is critical to program success. Without a sound property management program, salaed assets would fall into disrepair, loss value, and be more difficult for the Government to dispose of in a timely manner. This budget shifts costs from discretionary spending to mandatory spending beginning in 2001. Annual funding for this purpose is not expected to exceed \$14.2 million. No salary costs of Deputy U.S. Marshals will be funded.

During 2000, the Department of Justice also intends to undertake a formal review of the costs and operational affectiveness of its management and disposal of assets seized for forfeiture. The purpose of the study is to

Includes anticipated obligation of \$22,209.000 in prior year super surplus assunts.

See Section D.L.e. of the <u>httprosy General's Guidelines on Saised and Porfsited Property</u>, deted July 1990.

(1) determine how best to coordinate, organize and deliver this program in the Department, (2) establish a standard profile of property management functions that reflects different demands of different types of property, (3) assess the strengths and weaknesses of Department performance of these functions, (4) compare Departmental practices to industry best practices, where appropriate, (5) associate Departmental costs with the functions and assets types, and (6) identify opportunities for lowering Departmental costs while improving Departmental performance. The Treasury Department will be invited to participate in this contract review so that the majority of federal forfeiture activity is covered and improvements to common practices are facilitated.

Department of Justice Agents Forfeiture Fund Receipts and Program Marrative Fiscal Year 2001

For 2001, the Department estimates that receipts to the Fund will be about \$490,986,000, a decrease of \$12,014,000 to the estimate for 2000. Receipts in 2001 do not include non-recurring deposits such as the 1999 Masser-Devid case which cause high fluctuations at irregular intervals. Receipts include estimates of \$160,085,600 in forfeited cash, \$90,021,400 in proceeds from the sale of property, \$80,000,000 in interest income generated through the investment of seized and forfeited cash and unobligated amounts deposited to the Fund throughout the year, and \$879,000 in other miscallaneous income. Factors considered in arriving at the total 2001 nst income estimate include:

- (1) Based upon the direction of the Attorney General to Department operating components to re-vitalize their forfeiture efforts, the Pund is anticipating a moderate but continuing increase in forfeiture activity. By 2001, we expect receipts to continue to reflect the results of longer term investigations initiated in 1998. While 2001 expenses are less than 2000, we are not projecting less forfeiture activity; rather we are projecting the continuation of forfeiture activity that is recurring in nature.
- (2) A current debate in Congress over reform of the asset forfeiture laws, particularly those authorizing civil forfeiture, may have an effect on future program operations. A civil forfeiture reform bill has been passed in the House. A Senate reform bill was introduced in December 1999. Certain reforms are viewed as very hostile to civil forfeiture.
- (3) The increased emphasis on money laundering and international forfeitures could generate substantial additional receipts annually. Billions of dollars in illegal proceeds have been secreted overseas. If progress is made in pieccing the international banking well, more of these funds will be subject to repatriation and forfeiture. As demonstrated by the \$89 million in Nesser-David funds deposited in 1999, repatriation of foreign assets holds potential as a significant source of the fund receipts. The Department has made significant progress in recent years in explaining and convincing foreign governments that such cooperation is in their best interest. Over 100 countries have signed and ratified the Vienna Convention which provides, inter alia, for forfeiture sesistance in drug and drug-related (i.e., money laundering) cases. Already, countries are allowing the "extradition" of assets for forfeiture by United States laws. The Department generally shares a significant part of any repatriated funds with its international partners. These cases are very difficult to negotiate and often take years to come to fruition. Sowever, several sajor cases are under development and could be brought to closure in the ment three years.

PY 2000 Estimate

FY 2001 Estimate

Increase/Decrease

Management and Disposal of Seized Assets

844.000.000

\$40,000,000

-\$ 4,000,000

As seisures are projected to increase, an accompanying increase in the costs of asset management and disposal is projected for recurring activity. The primary purpose of the Department of Justice AFMS Fund is to ensure an adequate and appropriate source of funding for the management and disposal of property seized for forfeiture, as well as forfeited assets, which would otherwise be paid by saining agencies out of operating budgets funded by taxpayer dollars. The Fund puts criminals' money to work for the taxpeyer. Growth in costs in recent years is reflective of higher rates tharged for services and the government to more comprehensive management and maintenance services. Also requiring funding is the assessment, containment, removel and destruction of (1) hazardous materials seized for forfeiture, and (2) hazardous wasts contaminating property seized for forfeiture. The number of clandestine lab clusnups has rises dramatically. DEA anticipates that the number of clandestine labs seized will continue to increase due to DEA's Methamphetemine Initiative, as well as DEA's continued sesistance to state and local law enforcement agencies. The USDS and DEA will continue to utilize the Pund for disposal of toxic and hasardous substances when necessary for forfeiture or the disposition of forfeited property. The Fund has been instrumental in funding the development of an environmentally-conscious method for disposal of hazardous materials. These costs include the expenses of packaging, transporting and destroying procursor chemicals and other hazardous materials seized at clandestine lab sites by certified hazardous waste disposal firms. The Department of Justice is also using the Army Corps of Engineers, on a reinbursable basis, to provide site surveys and assessments of environmental dasage on seized properties with suspected hazardous waste contamination. The Corps also provides setimated costs for the clean up of such properties, which facilitates more informed decisions on the forfeiture or release of such property. This category also finances an estimated \$5 million in non-personnel costs of the DEMS seized seets program.

FY 1900 Patients

FY 2001 Retinate \$41,000.000

Increase/Decrease -\$ 4,500,000

Other Asset Specific Expenses

141,500,000

This category includes payments of amounts to satisfy third-party interests, including lienholders and other innocent parties, pursuant to 28 U.S.C. \$ 524(c)(1)(D); payments in connection with the remission and mitigation of forfeitures, pursuant to 28 U.S.C. S. 524(c)(1)(E); and direct expenses incurred in perfecting the forfeiture. Horsally, payments of liens are deducted directly from sales proceeds, using procedures customary in real estate

Increase/Decrease

-\$182,034,000

settlements. Nowever, in some cases, forfeited cash and proceeds from the gala of forfeited property are first deposited to the Fund, and then disburgements are made to impodent lienholders. Also included in this expense category are expenses associated with the prosecution of a forfeiture case or execution of a forfeiture judgment, such as advertising. traval and subsistence, court and deposition reporting, courtroom exhibit services, and expert witness costs. In appropriate cases, the services of foreign counsel may be necessary. In this ares, the costs of advertising are a major expense. Under current law, the Department quant advertise each seigure three consecutive weeks in a newspaper of general circulation in the area of the seisure. In addition, we must also incur the cost of providing personal notice, by certified mail or other means, to all individuals or entities we can identify as having a potential legal interest in the property. If a claim and cost bond is filed, and the forfeiture process is converted from an administrative process to a judicial process, the entire notice and advertising process is repeated -- doubling the cost. This expense is directly related to the volume of seixures and the volume of claim and cost bonds. An increase in advertising costs is projected for 2001 for recurring activity. It is essential that these expenses be pet in order that the asset title conveys properly, while ensuring due process rights of citizens.

Zouitable Sharing Payments

The amount of equitable sharing obligations in 2000 were increased by 1939 accruals estimated at \$100,000,000 for non-recurring deposits. These accruals will increase obligations in 2000 and possibly to a lesser extept, in 2001, depending on how quickly the equitable sharing payments are executed. Equitable sharing payments represent the transfer of portions of federally forfeited cash and proceeds from the sale of forfeited property, to state and local law enforcement agencies and foreign governments that directly assisted in targeting or saiging the property. Most task force cases, for example, result in property forfeitures whose proceeds are shared among the participating agencies. A substantial number of cases by the FSI and DRA include participation by state and local law enforcement agencies. The FBI estimates that approximately 60 percent of its cases, involving about 40 percent of asset value, involve state and local agencies. For DEA, about 70 percent of its cases, involving about 50 percent of seest value, involve sharing. As more joint task forces were formed between federal, state and local agencies, the percentage of net proceeds shared increased over the years. Under Department policy, equitable shares are to be paid from the net proceeds of a case after recovering costs invested in the case from the Fund. In 1997, guidance was issued reminding agencies of their obligation to record costs properly so that they may be deducted before computing equitable shares. As cost recovery improves, the rate of sharing should decline

2414, 172,000

FY 2000 Estimate FY 2001 Estimate

\$232,138,000

4. Special Contract Services

The Department of Justice asset forfeiture program is making extensive use of contract personnel to manage the massive paper flow associated with forfeiture, including data entry, data analysis, word processing, file control, file review, quality control, case file preparation and other process support functions. These workers have become an integral part of the asset forfeiture program. Without this contract support, it would be impossible to maintain automated data bases, process the tens of thousands of equitable sharing requests, and maintain the tens of thousands of forfeiture case files. For all practical purposes, without this support the forfeiture program would grind to a halt, income to the Fund would reduce to a trickle, expenses for maintenance and storage would increase, and the market value of property languishing in inventory would be adversely affected. The decrease for 2001 reflects the return to more normal forfeiture activity.

PY 2000 Retimete PY 2001 Retimete Increase/Decrease \$34,000,000 \$30,000,000 -\$ 4,000,000

ADP Squipment

CATS was initiated in 1990 and fully implemented in 1997. From an automation viewpoint, 1997 was a major milestons for the asset forfeiture program. CATS began to provide nationwide telecommunications and processing capabilities that tie together all agencies involved in the Department of Justice asset forfeiture program. Legacy agency data bases were converted to CATS, operating procedures updated, and system users re-trained. For the first time, on a full-year basis in 1997, the Department of Justice prepared complete reports on all asset forfeiture activity on a contemporaneous basis; investigative and prosecutive agencies had available the actual results of their efforts: and office, agency and Department managers were able to assess the efficiency of the forfeiture program and estimate future program results in a wore informed manager.

CATS ties several hundred locations together into a national telecommunications network, provides modern technology to perform many tasks formerly done manually and makes automated tasks more efficient, eliminates redundant entry of information, provides consistency from the agencies performing the same functions, provides current information to field personnel on the status and results of cases, integrates limited financial analysis capabilities into the inventory management process, provides a retional process for the astimation of program income and expenses, provides a formal basis for the assessment of staffing requirements, and provides the capability for agency and Department Managers to review and assess program activity dynamically.

Funds requested for 2001 will provide for: (1) recurring costs of operation and maintenance of the CATS telecommunications network; (2) recurring costs of system and equipment maintenance; (3) recurring costs of the user support facility (e.g., a "help' line); (5) data center charges in support of CATS; and (6) software development directed at meeting

new requirements. Plans for 2000 include efforts to transition CATS telecommunications support and services from the Treasury Communications System to the Department of Justice Communications Network and the U.S. Marshels Network. In addition, plans are being developed to transition individual agency CATS users to their respective agency telecommunications systems.

The Department's PMIS performs most accounting functions for the Assets Forfeiture Fund and the associated Seized Asset Deposit Fund. The USMS accounting system has accounted for most deposit and disbursement transactions, feeding summary information to PMIS on a monthly basis. In 1998, the USMS installed a new accounting system. Discussions are ongoing with the USMS and the Department to ensure that accounting data is integrated into CATS on a daily basis to produce more informative financial statements that reflect the full economic activity of the asset forfeiture program, as well as improve the process of investing Pund Delances.

FY 2000 Estimate	FY 200) Recimate	Incresse/Decresse
\$ 10,000,000	\$ 9,000,000	-\$1,000,000

Training on forfeiture and forfeiture-related subjects peaked in 1998 because of the constant evolution and development of asset forfeiture law and policy and the addition of new staff. Smphasis on the training of agents and attorneys will continue in 2000 and 2001 as part of the Attorney General's call for reinvigoration of the Department's use of the forfeiture sanction in all appropriate cases. Because of the availability of Fund monies, forfeiture training has been integrated into topical training activities, such as money leundering, financial investigations, FIRREA, Organized Crime Drug Enforcement Task Forces, and international cases. This outreach is extremely important because relatively few positions are dedicated solely to the forfeiture program. If the full value of this sanction is to be realized, the Department must reach the thousands of agents and attorneys and teach them to integrate asset seizure and forfeiture into their normal patterns of case development. This can only be done through an effective and aggressive training program.

Training and Printing

The Criminal Division and the U.S. Attorneys will continue to sponsor approximately 6-10 training conferences per year, including basic and advanced seminars for forfatture attorneys, training courses for all support personnel, and specialized criminal and civil forfatture courses for select Assistant U.S. Attorneys, etc. This plan includes funding for money laundaring conferences, support for conferences by other Federal, state, and local law enforcement agencies, and international conferences. Printing costs reflect the continuing need to provide current legal advice and support. Expenses include updating and distributing the forfatture manual and printing numerous pamphlets directly relating to forfatture lasues, policies, and procedures.

-8 3.000.000

FY 2000 Estimate PY 2001 Retimate Incresso/Decresse Other Program Management Expenses \$ 8.000.000 \$19,000,000 \$11,000.000

This category includes several types of expenses that are important to the overall management of the asset forfeiture program: management analysis, performance assessment, problem analysis, requirements analyses, policy development, and other special projects designed to improve program performance. This funding will provide travel and per diem funds for temporary duty assignments needed to correct program deficiencies. In addition, funding is provided for the USMS, when it learns that the sergure of a business is imminent, to obtain the necessary professional services for the valuation of business inventory, assessment of assets and liabilities of the business, or performance of other related services to facilitate informed decisions on the management and disposal of the seized business. Other activities funded under this heading include the annual audit of financial statements of the Assets Forfeiture Fund and the Seized Baset Deposit Pund by an independent accounting firm, and special assessments and reviews. This category also finances the costs of the APMS, Justice Management Division. Beginning in 2001, expenses will be increased by \$14.2 million to meet USMS costs of administrative personnel associated with the forfeiture program. No funding will be provided for the SAE costs associated with Deputy U.S. Marshale.

FY 2000 Estimate FY_2001 Estimate Increase/Decrease Contracts to Identify Assets \$8,000,000 \$5.000.000

Investigative agencies use these funds for subscription services to nationwide public records data systems, and for acquisition of specialized assistance, such as reconstruction of seized financial records. Demand for these services will increase as more agents graduate from the training programs and attempt to use the agest forfeiture senction in their cases; however, it is anticipated that costs will be controlled because of volume economiss. Resources requested for 2001 will be used to identify assets during the investigative stage of the case, where such research will anhance effective use of the saset forfeiture sanction. If the government can improve upon the identification of ill-gotten assets, the insidious nature of the criminal wrongdoing can be better demonstrated and reinforced before the jury. Such evidence stands to result in stiffer penalties for hard-core criminals who have dodged such penalties in the past by successfully concessing such assets, only to be released to finance further criminal activities with such assets. It is just this kind of "criminal financing" that the forfeiture laws are intended to derail.

Storage, Protection, and Destruction PY2000 Estimate FY 2001 Estimate Increase/Decrease of Controlled Substances \$1,500,000 \$1,000,000 -\$ 500,000

This is an uncontrollable asset-specific expense consisting of the costs of warehousing and quarding controlled substances, and the removal, transportation, and destruction of these

substances. This funding is also used to purchase safes for the storage of controlled substances.

.0. Joint Pederal/State and Local \$33,900,000 \$33,900,000 \$0

Public Law 102-393, referred to as the 1991 Treasury Appropriations Act, amended Title 28 U.S.C. § 524(c), enacted new authority for the Fund to pay for "overtime, travel, fuel, training, equipment, and other similar costs of state or-local law enforcement officers that are incurred in a joint law enforcement operation with a Federal law enforcement agency participating in the Fund." Such cooperative efforts have significant potential to benefit Federal, state, and local law enforcement efforts. The Department has implemented a policy for the silocation of resources for this new authority, and, during 1994, §10.4 million under this authority was provided to the Administration's Meed and Seed program. In 1999, resources totaling \$34.4 million were applied to state and local law enforcement expenses, and an additional \$9.0 million was set aside for continued Weed and Seed projects. In 2000 and 2001, providing receipts materialize as projected, a total of \$33.9 million is proposed for these activities. Such expenditures are fully consistent with the Attorney General's top program priorities, including those efforts to reduce violent crime, the insidious expansion of organized crime, etc.

PY 1000 Estimate PY 2001 Estimate Increase/Docrease \$18,000,000 \$14,000,000 -\$4,000,000

 Awarde For Information Leading to a Forfeiture

Section 114 of Public Law 104-208, dated September 30, 1995, amended the Justice Pund statute to treat payments of awards based on the amount of the forfeiture the same as other costs of a forfeiture. Ristorically, this authority represented less than 10 percent of award payments. We estimate approximately \$15 million in such awards in 2001.

INVESTIGATIVE EXPENSES

Definite, appropriated (discretionary) authority

		PY 2000 Estimate	PY 2001 Estimate	Increase/Decrease
1.	Awards for Information and	\$20,000,000	\$20,000,000	\$ 0
	Purchase of Evidence			

Awards payable from the Fund directly support law enforcement efforts by encouraging the cooperation and assistance of informants. The Fund may also be used to purchase evidence of

Increase/Decrease

5 0

violations of drug laws. Racketeering Influenced and Corrupt Organizations (RICO), and criminal money laundering laws. Payment of awards to sources of information creates tremendous motivation for individuals to assist the government in the investigation of criminal activity and the seizure of assets. Many cases would be impossible to bring to trial without the information from cooperating individuals. Even when the government has reason to believe criminal activity is occurring, an inside informant can facilitate the cost-effective deployment of investigative resources to obtain the greatest results. These expense categories are used in support of the Attorney General's highest priority programs, and represent resources that become ingressingly precious as law enforcement budgets are curtailed to meet deficit reductions goals. It is importative that investigative authority of the Fund remain at a viable level.

2 Equipping of Conveyances

This category provides funding to equip conveyances for law enforcement functions, but not to <a href="https://doi.org/10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001/journal-10.1001

\$1,000.000

Given the great expense involved, it is only through Fund resources that many of these surveillance vehicles are available to the field districts that need them. DEA uses surveillance vans as stationary and mobile platforms to conduct surveillance and gather intelligence, the cornerstone of cases against most major drug violators. In addition, evidence obtained through the use of such surveillance often provides the audio and video documentation necessary for conviction.

These funds are also used in support of the Attorney General's expressed highest priority, including, but not limited to, suppression of illegal immigration. Through 1999 over \$6 million has been allocated to the Immigration and Naturalization Service (INS) to equip law enforcement care that might not otherwise have been placed in Service. Punds continue to used for the equipping and rehabilitation of helicopters used for enhanced border patrol activities. There is significant benefit to law enforcement to meet unforesseen equipping emergencies through these resources. It is essential that investigative authority of the Pund not deteriorate further to avoid loss of this valuable support.

Department of Justice Radiation Exposure Compensation Administrative Expenses Summary Statement and Performance Plan Fiscal Vear 2001

The Department of Justice requests \$2,000,000 in budget authority for 2001 to administer the Radiation Exposure Compensation Program. This funding level is the same as received in 1999 and 2000.

H its to amend the Radiation Exposure Compensation Act have been introduced by Schalor Hatch, Senator Bingaman, Representative Until Representative Skeen and Representative Mink. With the exception of the Mink proposal, these bills are very expansive and, if enacted, world increase the Program's workload. The stated request assumes that no statutory changes will be implemented in 2001.

Program regulations were revised by the Department of Institute on April 21, 1999. These changes, which are intended to bring the Program in Inc. with current scientific and medical knowledge apply to the statutority-defined categories of claimants: downwarders, onsite participants and inmers. Receipts and the resultant workload, which increased moderately in 1999, are projected to peak in 2000 and decline in 2001.

Radiation Exposure Compensation Program Mission and Goals, and Relationship to the Department of Justice Strategic Plan

The Radiation Exposure Compensation Program's 2001 request and estimates directly support the following goals in the Department of Justice Strategic Plan—to represent the United States in all civil matters and to meet or exceed the expectations of our customers.

Radiation Exposure Compensation Program Mission

The Radiation Exposure Compensation Program fairly and expeditiously adjudicates claims, fully consistent with the Radiation Exposure Compensation Act and regulations; educates the public about the Act; and develops strategies for improving the Program.

The Radiation Exposure Compensation Act offers an apology and monetary compensation ranging from \$50,000 to \$100,000 to individuals exposed to radiation released during above-ground nuclear weapons tests and underground uranium mining. Payments to affected individuals come from the Radiation Exposure Compensation Trust Fund authorized by the Act. The Attorney General is responsible for the disbursement of the Trust Fund and has delegated the administration of the Fund to the Civil Division's Radiation Exposure Compensation Program. Since its inception in April 1992, the Program has adjudicated more than 7,500 claims and appeals and upproved compensation exceeding \$241 million.

Radiation Exposure Compensation Program Long-Range Goals and Strategies

The primary strategies employed by the Civil Division's Radiation Exposure Compensation Program to achieve its long-term goals are listed following each goal. All goals depicted below correspond to the goals set forth in the Department of Justice Strategie Plan.

Represent the United States in all civil matters.

- Protect the U.S. Treasury against unwarranted monetary claims and assure appropriate payments for meritorious claims.
- Administer, improve and, where appropriate, expand programs to fairly resolve classes of claims such as the Radiation Exposure Componiation Program

Meet or exceed the expectations of our customers.

Provide information to the public and to stakeholders in at open, funcly and complete manner

Radiation Exposure Compensation Program 2001 Performance Plan

The Civil Division's Radiation I voosure Compensation Program proposes a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown below. These 2001 goals will establish a baseline upon which future performance may be tracked and reported, as required by the Government Performance and Results Act (GPRA).

Represent the United States in all civil matters.

Meet or exceed the expectations of our customers.

- Develop a web-page to reach greater numbers of individuals through internet access.
- Maintain timely processing of claims by sending 95 percent of claimants an acknowledgment letter within 5 days of receiving a claim, and by sending 95 percent of claimants whose claims require additional information, a request for that information within 40 days of sending the acknowledgment letter

The Fund is used to compensate individuals exposed to radiation released during above-ground nuclear weapons tests and unarium righting. In 1992, the Civil Division of the Department of Justice was appropriated funds to implement the program. Beginning in 1993, funding was scored against the Defense functional classification and made available to the Civil Division of the Department of Justice under Object Class 25.3

The Civil Division administers the Radiation Lyposure Compensation Program, ensuring that all claims are adjudicated fairly and expeditionsly, fully consistent with the Radiation Exposure Compensation Act of 1990 (RECA). Through December 1999, the Program has adjudicated 7.553 claims and appeals and approved compensation totaling \$241,492,606. It strives to educate the public about the Act and to develop strategies to improve the Program.

Proposed Statutory Changes

Senator Hatch, Senator Bingaman, Representative Udali, Representative Skeen and Representative Mink have introduced separate bills to aniond RECA. With the exception of the Mink proposal, all of the proposed amendments would significantly after the Program, resulting in substantial increases in recepts, awards and payments. The current statute sets out several factors determining payment eligibility, including (1) who can apply, (2) payment amount, (3) compensable diseases, (4) affected time period and (5) geographic location. The major legislative proposals would broaden each of these categories, expanding the Program's workload. Because the legislative and implementation timetable for the proposed RECA amendments is uncertain, the workload estimates contained herein assume that no statutory changes will be in place in 2001.

Regulators Changes

On April 21, 1999, the Department of Justice adopted revised Program regulations. These changes, which are intended to bring the Program in line with current scientific and medical knowledge, apply to the statutorily-defined categories of claimants: downwinders, onsite participants and numers. The major regulatory changes (3) allow claimants to submit affidavits in support of a claim to

establish smoking and alcohol consumption histories, (2) allow biopsies to prove compensable respiratory disease, (3) consider any former smoker who ceased smoking 15 years before diagnosis of certain compensable diseases to be a non-smoker; (4) expand the definition of primary careers of the lung to include in still lung cancers, and (5) define pulmonary impairment standards that are consistent with the recommendations of the American Thorace Society. Over 3,200 notifications have been sent to previously defied eliminates, alvocacy groups and attorneys whose practices include RECA elamination. Several staff members traveled to many of the affected communities in the symmetr of 1999 to provide information about the regulatory changes. These efforts have resulted in no reased fillings, particularly from inners.

2001 Resource Requirements

The Civil Division's request will cover costs under the current RECA statute and regulations. The current budget authority of \$2,000 (00) will be sufficient to cover costs associated with chains processing through 2001.

Program Performance

The Radiation I sposure Compensation Program provides a service directly to the public. Since the Program's inception, management has set performance goals which measure the government's responsiveness in claims processing, while maximizing claimants' opportunities to complete their claims, fulfill enteria and receive compensation

In the Civil Division's 1999 Performance Plan, the R1 CA Program set the following performance goal: Send 100 percent of the previously denied changanic notification of changes to the Program within 75 days of the effective date (April 21). This objective was achieved with over 3 200 notifications sent by April 15. The Program also tracks how promptly applicants are notified that a claim has been received, as well as: if additional information is required to resolve the claim. In 1999, 96 percent of claimants were sent an acknowledgment letter within five days of receipt of their claims and 93 percent of claimants whose claims required additional information were notified within forty days of the dispatch of the acknowledgment letter.

A goal of the 2001 Performance Plan is to develop a web-page to reach greater numbers of individuals through Internet access. The chart which follows shows the Program's performance results and plans, successful performance will be measured by the indicators displayed to the chart

A. Definitions of Terms or Explanations for Indicators:

- All Indicators: The data source for all indicators is CASES, the Civil Division's fully automated case management system.
- ◆ All Indicators: The numbers in the "1998 Enacted Plan" column are as reported in the 1999 Congressional budget submission
- * All Indicators: The numbers in the "1999 Enacted Plan" culumn are as reported in the 2000 Congressional budget submission
- Indicators 1, 2, 3 and 4: Counts for these indicators were based on an analysis of historical frends and the impact of revised regulations, improved access to claimant records and the effect of recent appeal decisions
- Indicator 5 An "Acknowledgment" letter notifies claimants that a claim has been received, apprises them of their claim number and informs them of when they can expect to receive a decision
- Indicator 6. A "Request" letter notifies claimants of definencies in a claim, and informs them of the information needed to fulfill eligibility criteria and receive compensation.
- * Designates an indicator descript by a requested increase (to the Trust Fund appropriation)

B. Factors Affecting FV 1998 and FY 1999 Program Performance:

• Indicators 3.4 and 8: Widerespect to 1998 performance the "1995 hazerd Plan" assumed that the regulatory changes would be implemented during 1998, resulting in increases in workload facility and compensation approved accusal implementation was April 1999. With respect to 1999 performance, underlying the "1999 Enacted Plan" estimates was an overall approval rate of 44 percent, the actual approval rate in 1999 was 62 percent.

C. Factors Affecting Selection of FY 2000 and 2001 Estimates:

- ◆ Indicators 2, 3, 4 and 8. The estimates assume that the impact of the regulatory changes will peak in 2000. A direct Fund appropriate of \$13.7 million has been requested for making payments in 2001.
- Indicators 5, 6 and 7. The Radiation 4 sposure for openication frograms will commune to strive for the optimism in service to claimants.

Department of Justice Radiation Exposure Compensation Trust Fund Summary Statement and Performance Plan Fiscal Year 2001

For 2001, the Department of Justice requests a Radiation Exposure Compensation Trust Fund appropriation of \$13,727,000 to make payments for claims expected to be approved. Bills to amend the Radiation Exposure Compensation Act (RECA) have been introduced by Senator Hatch, Senator Bingaman, Representative Udall, Representative Skeen and Representative Mink. With the exception of the Mink proposal, these bills are very expansive and, if enacted, would require substantial funding. Since the legislative amplementation trimetable for the proposed RECA amendments is uncertain, this request does not seek additional funding to provide for statutory changes; the workload and payment estimates contained herein assume that no statutory changes will be in place in 2001.

Radiation Exposure Compensation Program Mission and Goals, and Relationship to the Department of Justice Strategic Plan

The Radiation Exposure Compensation Program's 2001 request and estimates support the following goals in the Department of Justice Strategic Plan: to represent the United States in all civil matters and to meet or exceed the expectations of our customers.

Radiation Exposure Compensation Program Mission

The Radiation Exposure Compensation Program fairly and expeditionally adjudicates claims, fully consistent with the Radiation Exposure Compensation Act and regulations; educates the public about the Act; and develops strategies for improving the Program.

The Radiation Exposure Compensation Trust Fund was established to permit the payment of claims from individuals exposed to radiation as a result of atmospheric nuclear tests and underground uranium mining and who developed specified diseases. The statute provides for payments to claimants, based on the type of xposure: \$50,000 to individuals who lived downwind of the Nevada Test Site, \$75,000 to persons who participated onsite in atmospheric nuclear tests and \$100,000 to individuals employed as underground uranium miners. Through December 1999, 3,262 awards, valued at over \$241 million have been approved.

Radiation Exposure Compensation Program Long-Range Goals and Strategies

The primary strategies employed by the Civil Division's Radiation Exposure Compensation Program to achieve its long-term goals are listed following each goal. All goals depicted below correspond to the goals set forth in the Department of Justice Strategic Plan.

Represent the United States in all civil matters.

- Protect the U.S. Treasury against unwarranted monetary claims and assure appropriate payments for meritorious claims.
- Administer, improve and, where appropriate, expand programs to fairly resolve classes of claims such as the Radiation Exposure Compensation Program

Meet or exceed the expectations of our customers.

Provide information to the public and to stakeholders in an open, timely and complete manner.

Radiation Exposure Compensation Program 2001 Performance Plan

The Civil Division's Radiation Exposure Compensation Program proposes a 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown below. These 2001 goals will establish a baseline upon which future performance may be tracked and reported, as required by the Government Performance and Results Act (GPRA).

Represent the United States in all civil matters.

Meet or exceed the expectations of our customers.

- Develop a web-page to reach greater numbers of individuals through Internet access.
- Maintain timely processing of claims by sending 95 percent of claimants an acknowledgment letter within 5 days of receiving a
 claim, and by sending 95 percent of claimants whose claims require additional information a request for that information
 within 40 days of sending the acknowledgment letter

Radiation Exposure Compensation Program 2000 and 2001 Estimates

At the start of 2000, the Trust Fund had a balance of \$8.4 million. The 2000 appropriation of \$3.2 million, along with projected interest, provides nearly \$11.8 million available to make payments in 2000. With about 225 approvals projected, valued at about \$18.3 million, the Trust Fund will be exhausted during 2000. Payments for as many as 120 awards may be deferred until 2001. In 2001, a total of 205 new approvals valued at \$16.6 million are projected. An appropriation of \$13.7 million is requested for 2001.

	Perm.		
	Pos.	FIE	Amount
Radiation Exposure Compensation Trust Fund			
2000 Appropriation Enacted			\$3,200
2001 Estimate			\$13,727

The Radiation Exposure Compensation Act of 1990 (RFCA) offers an apology and monetary compensation for specific diseases to anderground urantum numers, persons who participated onsite in atmospheric nuclear tests or individuals downwind of the Nevada Test Site. It created the Radiation Exposure Compensation Trust Fund, which is administered by the Civil Division. From April 1992 when the first claims were received—through December 1999 a total of 7,121 claims have been filed and 3,262 awards, valued at \$241,492,600 have been approved.

There is growing interest in amending the program in ways that will substantially expand its scope. Bills to amend RECA have been introduced by Senator Hatch, Senator Bingaman, Representative Udall, Representative Skeen and Representative Mink. With the exception of the Mink proposal, these bills are very expansive and, if enacted, would require substantial funding. Because the legislative and implementation timetable for the proposed RECA amendments is uncertain, this request does not seek additional funding for statutory changes, the workload and narment estimates that follow do not include projections for statutory changes.

Workload Extimates

Trust Fund requirements are driven by the number of claims approved and the distribution of claims across the three types of claims. Approvals depend upon a variety of factors including: the number and distribution of new fillings, the extent to which the pool of applicants meets the eligibility criteria and the pace at which applications are processed. Because most of these factors are outside the control of the Program, it is difficult to predict accurately the number of approvals that will be made in a given year. Accordingly, the analysis which follows is based on assumptions which are subject to change over time.

Filings. In 1999, there was an increase in the total number of new claims filed, reversing a downward trend which has been in effect since the beginning of the Program. Filings on behalf of miners led the upturn, increasing by 23 percent from 1998. This growth was likely spurred by new Program regulations adopted by the Department of Justice, effective April 1999. These changes, which are

intended to bring the Program in line with current scientific and medical knowledge, apply to the statutorily-defined categories of claimants indownwinders, onsite participants and miners.

The imajor regulatory changes (1) allow claimants to submit affidavits in support of a claim to establish smoking and alcohol consumption histories; (2) allow biopsies to prove compensable respiratory disease; (3) consider any former smoker who ceased smoking 15 years before diagnosis of certain compensable diseases to be a non-smoker; (4) expand the definition of primary cancers of the lung to include in situ lung cancers; and (5) define pulmonary impairment standards that are consistent with the recommendations of the American Thoracic Society.

Over 3,200 notifications about the regulatory changes have been sent to previously defined claimants, advocacy groups and attorneys whose practices include RECA claimants. New filings in 2000 may increase by about 33 percent over 1999, assuming that there will continue to be a significant response to the outreach activities that have been conducted in the wake of the regulatory changes. Thereafter, new filings are expected to decline

Qualifications. Another reversal in long-term trends occurred with respect to approvals. For six years, the number of approvals had dropped. However, between 1998 and 1999, the number of approvals increased nearly 50 percent, from 153 to 227. While only 42 percent of 1998 adjudications resulted in awards, nearly 62 percent resulted in awards in 1999. This higher approval rate pre-dated implementation of the regulatory changes and was evident in all three categories of claimants. One explanation is that far more comprehensive data on inner work histories is available now, compared with earlier years of the Program. Social Security, NIOSH, the Colorado Plateau Study and private firms' work history data bases are now accessible by the Program. In prior years, the burden of documenting work history, and the required "working level months" (WLMs), fell primarily on the claimant. With access to these additional sources, the Program can augment the claimant's submission if the required WLMs are not fully documented.

Another factor commuting to the increase in approvals was a decision on an internal appeal relating to onsite participants. The decision expanded the geographic area of eligibility to include the entire Nevada Test Site installation, not just the immediate area around the actual test site.

The regulatory changes contributed somewhat to the increase in approvals in 1999. As more and more of the new filings are reviewed and processed in 2000, it is reasonable to expect that the number of claims approved in 2000 will be about 228 — on par with 1999 approvals. However, it is unlikely that this level of approvals will be sustained over the long term. Accordingly for 2001, total approvals are projected to decline by about 10 percent, to 205.

Claims Processed. Between 1998 and 1999, the number of claims adjudicated remained stable. While we expect a modest increase in productivity, no sharp change in the number of claims adjudicated is expected through 2001

The following chart provides detailed workload estimates for the RECA Program for 1996-2001.

Award and Payment Estimates

The statute sets the compensation amount for each category: downwinders receive \$50,000, onsite participants receive \$75,000 and miners receive \$100,000. The value of total awards in a given year is based on the number of awards approved in each category. The award total drives the payment total, however, in a given year, payments differ from total awards due to the timing of the actual payments. On average, two months clapse from approval of an award, to claimant's acceptance, to payment of the award.

The table which follows depicts the estimated Trust Fund payments and balances through 2001. In 1999, a total of 227 awards, valued at nearly \$17.5 million, were approved and payments in 1999 totaled \$13.8 million. At the start of 2000, the Trust Fund had a balance of \$8.4 million. The 2000 appropriation of \$3.2 million, along with projected interest of \$137,000, provides nearly \$11.8 million available to make payments in 2000. Of the \$11.8 million available, over \$3 million is needed just to make payments on claims approved, but not paid, in 1999. The remaining \$8.7 million falls substantially shy of the estimated \$18.3 million in claims that may be approved in 2000.

Radiation Exposure Compensation Trust Fund (Dollars in Thousands)

	1998 Actuals	1999 Actuals	2000 Estimate	2001 Estimate
Starting Balance	\$28,952	\$20,994	\$8,431	0
+ New Appropriation	4,381	0	3,200	13,727
+ Prior Years' Adjustment		1,017		•
+ Interest Earnings	0	259	137	162
- Payments	12,339	13,839	11,768	13,889
Ending Balance	20,994	8,431	0	0

In 2001, a total of 205 approvals, valued at \$16.6 million, are projected. The \$13.7 million requested for 2001, together with expected interest will be used to make payments for the unpaid awards from 2000 as well as a portion of the 2001 approvals. The value of the average RECA award is expected to climb significantly from 1998 due to the predominance of miner awards. In 1998, the average award was under \$71,000; in 1999, the average climbed to \$77,000. In 2000 and 2001, the average award is expected to exceed \$80,000 — an all-time Program high.

Program Performance

In the Civil Division's 1999 Performance Plan, the RECA Program set the following performance goal: Send 100 percent of the previously denied claimants notification of changes to the Program within 75 days of the effective date (April 21). This objective has been achieved, with over 3,200 notifications sent by April 15. A 2001 Performance Plan goal is to develop a web-page to reach greater numbers of individuals through Internet access

Interagency Crime and Drug Enforcement Organized Crime Drug Enforcement Task Force Program Summary Statement and Performance Plan Fiscal Year 2001

The Organized Crime Drug Enforcement Task Force program (OCDETF) program is requesting a total of 3,030 permanent positions, 2,988 workyears, and 5328,898,000 in its Interagency Crime and Drug Enforcement appropriation. This request represents an increase of \$12,112,000 (4%) over the FY 2000 anticipated appropriation of 3,030 positions, 2,988 workyears and \$316,786,000.

Component Mission and Goals, Relationship to <u>Department (DOI) Strategic Plan (1997-2002).</u>

The OCDETF program's FY 2004 request/performance plan directly supports the overall doug law enforcement priorities, general goals and strategic approaches that are included in the <u>DOI Strategic Plan (1997-2002)</u>. In addition, it incorporates information on performance measurement that should lead to better accountability regarding actual results obtained.

The <u>DOI Strategic Plan</u>, under the functional areas: Investigation and Prosecution of Criminal Offenses and Management, establishes the connection between strategic goals and those shorter-term objectives set for the OCDETF program for FY 2001.

U OCDETF Mission

OCDETF was created in 1982 to mount a comprehensive attack against high-level drug trafficking and related criminal enterprises, including large-scale money laundering organizations, in order to destroy and dismantle these criminal enterprises. The OCDETF program constitutes a nationwide structure which combines member agencies' resources and expertise in concentrated, long-term operations to mount an intensive and coordinated campaign against international and domestic drug trafficking organizations.

2. OCDETF Program Goals and Objectives

The goal of the OCDETF program is to dismantle or discrept the operations of those organizations.

To **disrupt** is to cause significant interference in the conduct of business by the targeted criminal organization.

Disruption occurs when the normal and effective operation of a specific enterprise is significantly impacted as a result of an affirmative law enforcement action. Indicators of disruption include changes in organization leadership, trafficking patterns, drug production methods, and violence within and between organizations.

To dismuntle is to put the criminal organization out of existence or break it up to the extent that reconstruction of the same criminal organization is impossible.

Pursuing this goal has resulted in a greater number of quality cases against high-level drug traffickers, which in turn, has had an appreciable impact on illegal drug trafficking.

Program Objectives

The objectives of the OCDETE program are to

- Larget, investigate and prosecute indisoduals who organize, direct, finance, or are otherwise engaged in high-level illegal drug trathology and related criminal enterprises such as large-scale money laundering organizations, and includes providing intelligence to assist in targeting and investigating these organizations and individuals.
- b. Promote a coordinated drug enforcement effort across district, regional, and national boundaries and encourage the maximum cooperation and coordination among all Federal, State, and local drug and drug related law enforcement agencies, and the United States Attorney offices; and
- Make full use of financial investigative techniques, including tax law enforcement, enforcement of Titles 18 and 31 currency and money laundering statutes and the related asset forfeiture provisions in order to identify, prosecute and convict high-level traffickers and dismantle money laundering operations, and to enable the government to seize and forfeit assets and profits derived from high-level drug trafficking.

These objectives are accomplished by fostering improved interagency coordination and cooperation in the investigation and prosecution of major drug trafficking and related cases and by supplementing Federal resources for the investigation and prosecution of major drug trafficking and related organizations.

Relationship to DOJ Strategic Plan (1997-2002).

Law Enforcement Outcomes

Measuring the effect of law enforcement efforts on countering narcotics trafficking organizations presents a unique challenge because it is difficult to isolate the particular effects of Federal law enforcement activity from other factors. However, we know that the enforcement of drug laws is a primary way to reduce the availability of illegal drugs and stem the tide of drug trafficking and its attendant criminal activities. The Department, through the Drug Control Strategic Plan working groups, will identify the appropriate measures that we can use to evaluate our efforts.

Target Levels

In a number of areas, the Department of Justice does not establish numerical targets. The Attorney General has emphasized that the judgement and actions of Department personnel must never be perceived as being influenced by "bounty hunting" — i.e., striving to reach a targeted goal or activity level for its own sake, without regard to the activity's larger purpose. The Department will maintain its policy of not projecting targeted levels of performance for certain indicator types (such as arrests, indictments, convictions and asset seizures). The Department will, however, report prior-year actuals for these types of indicators because they provide valuable context to the nature and level of enforcement activity.

The discussion of major OCDETF case examples reflected within the "FY 2001 Performance Plan -- Highlights of 1999 Mission Critical Results Section" of the budget clearly demonstrates the success achieved in meeting the OCDETF goal to disrupt and dismantle drug trafficking organizations.

Department Goals and Strategies

Relevant excerpts from the <u>September 1997 DOJ Strategic Plan (1997-2002)</u> that relate to the OCDETF program goals and objectives include the following:

Core Function 1 - Investigation and Prosecution of Criminal Offenses

Goal 1.4: Reduce violent crime, including organized crime and drug gang-related violence.

Violent drug trafficking organizations have become aggressively active across broad sections of the country. Organized gaugs involved in violent crime as well as drug trafficking are a high priority for OCDETF. With the escalation of drug-related violence, OCDETF has focused on criminal organizations which use or threaten to use harmful means to conduct their criminal drug related activities.

OCDETF investigations initiated targeted organizations suspected of being involved in violent activities.

Goal 1.2 Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts.

Overall, the OCDETF strategy has been to immobilize drug trafficking and money laundering organizations by prosecuting and incarcerating organization members or, where appropriate, seeking their extradition or deportation, and by divesting them of their profits through forfeiture of organizational and individual assets. The OCDETF program has attacked organized drug trafficking from the top, instituting in-depth investigations leading to the prosecution and conviction of the highest level drug traffickers. The program's member agencies, acting in concert with numerous State and local agencies, have dismaniled major drug trafficking organizations by removing the key individuals who provided these organizations with leadership, capital, and expertise.

Goal 1.5: Coordinate and integrate DOJ law enforcement activities wherever possible, and cooperate fully with other Federal, State and local agencies that are critically linked to improved operation of the nation's justice system.

The OCDETF program's synchronizing of multiple investigations against common target organizations, its effective use of attorneys at the early stages of investigations, its use of financial investigations to reach otherwise invulnerable targets and its unprecedented success in fostering collaboration among Federal, State, and local law enforcement agencies from all jurisdictions has led to the success of the program's efforts to disrupt and dismantle drug trafficking organizations.

Core Function 7 - Management

The OCDETF program's objectives cannot be achieved without a management approach and commitment to those management goals identified in the DOI Strategic Plan.

<u>Goal 7.1</u> Strengthen oversight and integrity programs, ensure consistent accountability, and emphasize our core mission responsibilities.

Goal 7,2: Meet or exceed the expectations of our customers

Goal 7.3: Achieve excellence in management practices.

Goal 7.4: Make effective use of information technology.

Goal 7.5: Ensure a motivated and diverse workforce that is well-trained and empowered to do its job.

The OCDETF program continues to monitor and evaluate its effectiveness and efficiency and where appropriate, implement streamlining initiatives to enhance our performance. The following actions represent our continuing effort to strengthen the OCDETF program.

- OCDETY Budget Formulation Rationale and Process: The DOJ Drug Strategic Plan provides a comprehensive framework to initiate discussions about the Department's drug enforcement goals and how OCDETF program resources could support those goals. The Deputy Attorney General met with the agency heads to announce the FY 2001 formulation process, reiterate his support for the OCDETF program, and acknowledge the benefits derived from their participation. Subsequently, the OCDETF Executive Office held working incettings with both Justice and Treasury to coordinate the development of their OCDETF requests.
- Enhancement of the OCDETF-HIDTA Relationship: OCDETF program representatives have played a
 critical role in furtherance of the Department's objective of strengthening the level of coordination and
 integration of these (wo programs. All of these efforts have led to a greater understanding of the nature of the
 relationship between the two programs and the henefit of increasing the mutual participation. It has also
 directly resulted in the growth of HIDTA-generated OCDETF cases.
- OCDETF Assistance to Development of District Drug Strategies: Over the next six months, the OCDETF Insecutive Office will be providing its assistance to all the United States Attorney offices to support them in developing updated district drug strategies -- which are part of the Attorney General's District Initiative and part of the DOJ Drug Control Strategic Plan.
- OCDETF Regional Annual Reports: The OCDETF Advisory Councils will be submitting Regional Annual Reports to the Attorney General that address drug enforcement threats, strategies for effectively targeting and attacking these drug threats, resource requirements to support those strategies, and the results of OCDETF investigations in terms of impact against major drug trafficking organizations.
- Enhanced Role of the Regional and District Coordination Committees: A Working Group will be
 established to strengthen the role of the Regional and District Coordination Groups in screening, monitoring,
 and evaluating OCDETF cases.
- The OCDETF Management Information System (MIS): The OCDETF Executive Office continues to pursue
 changes that will reduce the paperwork burden placed upon U.S. Attorney's offices and investigative agencies
 in reporting OCDETF case data.

B. Highlights of Mission-Critical Results. (Statistics reported are derived from the OCDETF Management Information System and the United States Attorney's Case Management System)

Overview

From its inception, the OCDETF program has focused resources and expertise against high-level drug organizations. Since 1982, more than 11,703 OCDETF investigations have been initiated resulting in more than 33,736 indictments, charging more than 106,036 defendants; over 71,844 members of trafficking organizations have been convicted, and more than 64,841 individuals have been sentenced to prison terms.

Growth

The OCDE II: program continues to be strengthened by its agencies' commitment to work together to achieve success through coordinated drup enforcement efforts. This commitment is indicative of the agencies' belief that Federal, State, and local partnerships are the most effective means of combating drug-related crime.

In 4-Y (999, the OCDETF program had a number of successful convictions against major drug trafficking and money faundering organizations. Overall there was a 29% increase in the number of convictions over those achieved in FY 1998. The following statistics are an indication of the results of OCDETF investigations.

- In FY 1999, 3.332 OCDETF indictments were charged against 9,345 defendants. This represents a 36% increase over the FY 1998 level. The number of defendants indicted increased by 42% for the same time period.
- In FY 1999, a conviction rate of 89 percent was achieved against the 6,395 defendants convicted; and 92% of those
 convicted were sentenced to prison terms.
- In FY 1999, 51.3 percent of the OCDETF defendants received more than five years of imprisonment, as compared to 33.4 percent for non-OCDETF defendants. This reflects a continuation of the trend from fiscal year 1992 to 1999, where 52.5 percent of OCDETF defendants received five years or more imprisonment, as compared to 38.0 percent for non-OCDETF defendants.

Case Quality

The quality of investigations has remained high. The OCDETF model works in every district in the country, integrating investigators from a variety of agencies with their singular expertise, including state and local departments, and involving an Assistant United States Attorney from the beginning of the OCDETF case. OCDETF cases target organizations responsible for the importance of the distribution of all classes and categories of drugs and target major drug trafficking networks operating in mitually every region of the globe. OCDETF investigations initiated in FY 1999 ranged from those coordinated by the Special Operations Division which target the national priority organizations identified by DEA, FBI and Customs, e.g. the Cali Cartels and Mexican Maha, to street corner gangs which bring homeides, shootings, and fear to our cities' neighborhoods.

OCDLTE investigations continue to locus on multi-defendant, high-level organizations and the investigations are often international in nature. In an analysis of the OCDETE Investigation Initiation forms submitted during the first 6 months of FY 1999; the significance of recent investigations was reflected. The analysis indicates that 30% of the investigations targeted Mexican durg trafficking organizations or organizations connected to them; 11.2% of the investigations targeted Colombian durg trafficking organizations or related organizations, and 8.9% targeted Caribbeon-based organizations or related organizations.

OCDETF/IIIDTA Case Activity

CCDETF and HIDTA managers continue to work toward ensuring that the two programs are collaborative and mutually supportive. As a result there has been a steady increase in OCDETF cases generated by HIDTA-funded task forces. In FY 1996 there were 55 indictments in OCDETF cases resulting from HIDTA initiatives; by FY 1999 there were 401 such indictments and 1,092 detendants charged.

OCDETF Case Complexity and Significance

Case filing statistics should not be viewed in isolation, but should be seen in combination with other statistical information when assessing the success of the Department's drug enforcement efforts. The Department will evaluate the significance of drug trafficking organizations and its members based upon the following criteria:

Level and importance of defendant within an organization, as well as the number of defendants at all levels within an
organization, reflecting the impact that successful prosecution has on the structure of the organization as a whole;

- Sophistication of techniques necessary to conduct the investigation (court-authorized electronic surveillance, undercover operations, and use of financial analyses);
- Agent and attorney resources contributed to the case by Federal, State, and tocal law enforcement agencies;
- Gravity of charges filed against defendants -- in terms of Continuing Criminal Enterprises, RICO charges, conspiracy, etc.; and
- Length of sentences resulting from defendants' convictions.

Inter-Agency Participation in OCDETF Program

Effective and comprehensive attacks on major drug trafficking organizations are often beyond the capacity of a single agency. Agencies working together can accomplish things that the same agencies working separately cannot. A multifaceted attack on these organizations requires many kinds of expertise, combined into a comprehensive and orchestrated investigation.

Consistent with the cooperative multi-agency approach of the OCDETF program, 95 percent of all investigations reflected the involvement of three or more agencies.

Historically, agency commitments (at the time of investigations initiated) have involved:

Number of Agencies	Percentage of OCDETF Investigations
Three (or more) agencies	95 percent
Four (or more) agencies	83 percent
Five (or more) agencies	64 percent
Six (or more) agencies	44 percent
Seven (or more) agencies	28 percent
Eight (or more) agencies	16 percent

Investigative Techniques of OCDETF Program

Clearly, OCDETF makes extensive use of a wide variety of investigative methods, some of which require considerable sophistication and persistence to exploit properly. Undergover techniques have been used in 56.1 percent of OCDETF cases, investigative grand juries in 53.5 percent. Innaicial analysis in 22.8 percent and pen register records in 25.7 percent. Also, confidential informants were used in investigations that resulted in 60.7 percent of OCDETF indictments, and immunity was used in investigations that resulted in 16.5 percent of OCDETF indictments. It is also apparent that it is typical to employ several investigative techniques during the course of any particular investigation.

The increasing diversity and sophistication displayed by asset-rich criminal enterprises and the utilization of advancing technology associated with OCDETE targeted organizations requires a greater emphasis on financial analyses, and the use of court-authorized electronic surveillance, in order to make the strongest case possible against organizational leaders.

- OCDI II electronic survedlance requests commue to represent a high percentage of total drug-related requests in 1999.
 Of the 1.342 drug related electronic survedlance applications (originals and extensions) processed in 1999, 818 or 61.0% were for OCDETF investigations. This reflects a projected increase in OCDETF-related Title IIIs of about 18% over 1998.
- Another strong indication of the level of complexity of an OCDETF investigation as well as significance of the individual suspects within a trafficking organization is the use of financial investigative tools, reflected primarily by the participation of IRS criminal investigative agents. Historically, IRS/CID has been involved in 58% of all OCDETF cases. IRS/CID, because of its limited criminal investigative resources, limits its involvement in OCDETF investigations to those cases that target the highest level of individuals within an organization and that necessitate the use of money laundering, tax evasion, or net worth investigative procedures to build the strongest possible case prosecution. Many United States Attorneys report that IRS participation is one of the most critical aspects of an OCDETF case.

OCDETF Convictions and Sentencing

The OCDETF conviction rate has been consistently high (between 84 and 89% over the last seven years), even though OCDETF cases represent the highest level and most difficult to reach members of major drug trafficking organizations. During 1999, the OCDETF program achieved a conviction rate of 89%.

When we compare the OCDETF sentencing data to all non-OCDETF drug sentencing, we (ind that the percentage of OCDETF detendants who receive sentences greater than tive years is significantly higher than non-OCDETF drug defendants.

	1999		1992-199	y (Average)
	OCDETE	non-OCDETF	OCDETF	non-OCDETF
54 years	49.4%	32.9%	50.4%	37.4%
lite	1.9%	514	2.1%	.6%

OCDETF Case Highlights and Accomplishments

The country's most significant, high profile cases have typically been OCDETF cases and FY 1999 was no different. Recent OCDETF case activities illustrate the continued force and strength of our efforts to dismantle large drug organizations.

- The 2,000 unde border with Mexico has been particularly plagued by transnational drug trafficking, violent crime, and contraband snuggling. By successfully prosecuting major drug trafficking cases along the Southwest Border, the Department targets the Incrureby and intrastructure of the major occame, heroin, methamphetamine, and marijuana trafficking organizations along that border. The Organized Crime Drug Enforcement Task Force (OCDETF) program, the Special Operations Division (SOD) and the HIDTA program continued to work closely together against the most significant drug trafficking organizations threatening this area as well as other areas of the United States.
 - On August 17, 1999, more than 60 individuals in at least 11 cities were arrested in *Operation Southwest Express*, an OCDETF and HIDTA operation coordinated through the Special Operations Division (SOD), designed to dismantle a U.S. transportation and distribution network believed to be supplied by a Mexican drug trafficking organization based in Ciudad Juarez, Mexico. The distributors transported the drugs by railway, tractor trailer, and vehicles with hidden compartments, often times concealed in bundles of used clothing. Members of the organization also collected drug proceeds and transported the proceeds in bulk money shipments back to Mexico. Federal prosecutors from 10 United States Attorneys' offices and five federal law enforcement agencies, working in cooperation with more than 20 state

- and local agencies, brought drug conspiracy, drug distribution and money laundering charges against 100 individuals believed to be connected to the transportation and distribution network.
- Operation Rio Blanco, a multi-district OCOETF investigation, was also a successful SOD operation, in which 55 individuals were arrested and more than 3,000 kilograms of cocaine and over \$15 million in U.S. currency were seized. The principal targets included high-ranking associates of the Arellano Felix organization in Mexico responsible for smaggling substantial quantities of cocaine into the United States.
- ** **Decration Impunity* resulted in the arrest of 93 individuals believed to be connected to the foreign and United States transportation and distribution network of the Amado Carrillo-Fuentes Mexican drug trafficking cartel. The impact of this operation is significant. Since this nationwide effort began, it has resulted in the seizure of considerable amounts of cocaine, marquana and become More than \$19 million in U.S. currency has been confiscated. This Operation was a coordinated effort, unfizing the resources of many agencies including DEA. Customs, the FBI, INS, the Border Patrol, the U.S. Marshals Service, the IRS, testeral prosecutors, and countless state and local law enforcement personnel.
- With the escalation of drug-related violence, the OCDETF program has also focused on criminal organizations which use or
 threaten to use violence to conduct or facilitate their criminal drug related activities. OCDETF continued to achieve significant
 successes against these offenders. The following is an example of a case brought in the Southern District of California under
 this initiative:
 - On January 6, 1999, as a result of an OCDETF investigation initiated by a Safe Streets Task Force, three members of the Logan Heights street gang pleaded guilty and were sentenced to 200 months, 215 months, and 238 months, respectively. Based on the evidence presented, a San Diego grand jury returned an indictment against ten gang members for violence related to their involvement with the Arellano Felix Organization. This Organization is one of the most vicious, ruthless criminal organizations involved in drug importation and distribution in the United States and used Logan Heights gang members to murder rival drug traffickers, protect drug shipments, and conduct other violent enforcement activity all in furtherance of this criminal enterprise. Charged as an overt act in the indictment was the May 1993 murder of Cardinal Juan Posados Ocampo at the Guadalajara Airport. Two of the remaining seven defendants are in custody in Mexico, four others are still fugitives, and another is deceased.

- Another violent crime investigation resulted in a dramatic decrease in the number of shootings and the murder rate in New Orleans. On September 20, 1999, five members of the drug trafficking organization known as the Seventh Ward Soldiess were each sentenced to life in prison, plus additional time of 5-20 years, following their jury convictions for marketing crack creating and murdering and shooting other drug dealers and witnesses. Police records indicate that since these gaing members were taken into custody, the community they previously terrorized has experienced a 42 percent decrease in the number of shootings and a 42-8 percent decrease in the murder rate.
- The formieral side of the drog trafficking organization's intrastructure is also targeted by OCDETF investigations through antimoney fundering investigations.
 - On June 18, 1999, in the Southern District of Florida, Eli Tisona, a former Israeli jet-selter, was sentenced to 235 months in prison and fried \$50,000 for conspiracy and money laundering. In one of the nation's largest drug money laundering cases, Tisona was convicted on 146 counts of disguising more than \$45 million in Colombian drug cash profits through a family jewelry business. Among the charges were filing false bank statements and making illegal overseas wire transfers. Tisona owned a fish farm in the Colombian drug capital of Cali and was considered one of Israel's biggest mobsters. His daughter, Kineret Kashii, her husband, Yehuda, and a third co-defendant were charged in the same case, but they jumped bond and fled to Israel in December 1997.
- The success of OCDIT4F as a program that supports multi-jurisdictional, coordinated investigations targeting international
 organizations that use suphisticated mechanisms to distribute drugs is exemplified by the following case summaries:
 - On January 14, 1999, Richard R. Pena pled guilty to a 14 count indictment charging him with leading a violent criminal enterprise that brought large amounts of cocaine and marijuana into the New Orleans area and was responsible for eight drug-related murders. Pena will receive a life sentence without the possibility of release and a \$4 million fine. Pena's criminal enterprise began in 1990, with drugs supplied by sources in Miami, Houston, and Mexico. In 1995 DEA, FBI, and the Customs Service investigations were combined under an OCEDTF investigation, Operation "N.O. Rap, Inc." In April 1997, Pena and other defendants were arrested. To date, the operation has resulted in 30 convictions.

On April 26, 1999, Juan Bautista Alonna-Torres was sentenced to life in prison following a jury conviction in the Western District of North Carolina. Adomia-Torres was prosecuted for his role as the leader of a Colombian drug organization, known as "The Line", that smuggled between three and four hundred kilograms of cocaine into Charlotte, North Carolina, Irom 1989 to 1997. The organization used ports in Charleston, Wilmington, Houston, New York, Lampa, New Orleans, and Baltimore to import cocaine. It employed a fleet of vehicles rigged with hidden compartments to transport drugs and money. Six co-defendants have been sentenced and are serving terms ranging from 4 to 13 years. Three others await sentencing, and four are fugitives.

C. FY 2001 Performance Goals and Indicators.

The OCDF 11 program is proposing a FY 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, within the OCDF 1F program's three major objectives, as shown below. These FY 2001 goals will establish a baseline upon which future performance may be tracked and reported, as required by the Government Performance and Resolts Act iGPRAF.

 Target, investigate and prosecute individuals who organize, direct, finance, or are otherwise engaged in highlevel illegal drug trafficking and related criminal enterprises such as large-scale money laundering organizations, and includes providing intelligence to assist in targeting and in investigating these organizations and individuals.

Through the OCDETF program, the Department will increase its focus on major drug trafficking organizations operating within the United States. OCDETF investigations are categorized as "umbrella" activities which include multiple agency cases, agency investigative matters. United States Attorney matters and indictments as defined by the agencies and the United States Attorneys offices.

The Department's counterdrug efforts are particularly focused on the Southern Frontier (Southwest Border and in the Caribbean Basin) because of the significant threat posed by the Colombian and the Mexican drug trafficking organizations. The OCDETF program will continue to play a significant role in support of these and other drug enforcement-related initiatives.

OCDETF will collect and monitor the following information in order to report on its counterdrug efforts:

- Number of new OCDETF investigations initiated;
- Number of OCDETF drug cases and drug defendants charged by U.S. Attorneys;
- Number of OCDETF drug defendants convicted;
- Distribution of OCDETF prison sentences.
- Number of federal OCDETF drug prosecutions (cases and defendants) involving violent come; and
- Distribution of sentences for OCDETF federal drug prosecutions (cases and defendants) involving violent crime

Under development is a "Performance Measurement Report" that would be completed at the end of each investigation.

This report will require data on whether the objectives of the investigation are met, and most importantly, the extent to which the goal of dismantling and/or disrupting drug trafficking and related organizations has been reached.

Promote a coordinated drug enforcement effort across district, regional, and national boundaries and encourage
the maximum cooperation and coordination among all Federal, State, and local drug and drug related law
enforcement agencies, and the United States Attorney's offices.

In FY 2001, the Department will continue to strengthen the OCDETF program by promoting a coordinated drug enforcement effort among the OCDETF regions, all Federal drug and drug-related law enforcement agencies, and the United States Attorney's offices, as well as the State and local law enforcement and prosecution agencies. In addition, significant focus will be directed to:

 Work with the Advisory Councils and the participating agencies at the headquarters level to maintain effective communication and coordination among OCDETF agencies, to ensure their success in disrupting the operations and dismantling the infrastructure of large-scale, well-organized drug traffickers;

- Further the relationship between the OCDETF program and the High Intensity Drug Trafficking Area (HIDTA)
 program.
- Raise law enforcement agencies' awareness of the benefits of applying investigative and prosecutorial resources
 against the most dangerous drug traffickers -- those that direct the organization's operations, and especially
 those who engage in acts of extreme violence to enforce their directives and protect their interests; and
- Continue to pursue innovative multi-agency strategies and initiatives that enhance law enforcement efforts
 against major drug traiticking organizations.
- 3. Make full use of financial investigative techniques, including tax law enforcement, enforcement of Titles 18 and 31 currency and money laundering statutes and the related asset forfeiture provisions in order to identify and convict high-level traffickers and dismantle money laundering operations, and to enable the government to seize and forfeit assets and profits derived from high-level drug trafficking.

Department Money Laundering Efforts

I material crimes pose a grave national security threat because they threaten the integrity of the financial system while fueling monerous other types of criminal activity. Attacking drug-related money laundering is an essential element of the Department's efforts to undertuine drug trafficking organizations as they annually launder billions of dollars. Thwarted by fougher anti-money laundering measures in the United States, traffickers are increasingly attempting to singigle cash out of the United States into foreign countries.

OCDETF will track the following information in order to report on its anti-money laundering results:

- Number of OCDETF investigations/operations targeting money laundering operations; and
- Number of OCDETF drug money laundering prosecutions (cases and defendants).

Enhancing Asset Forfeiture Efforts

The primary goal of asset forfeiture is to take the profits of crime away from drug traffickers and destroy their economic base of operation. Asset forfeiture can be a useful tool to deprive criminals of their ill-gotten gains, thus reducing crime and enhancing public safety. In addition, strategic use of the asset forfeiture weapon can aid in obtaining detailed investigative information about the hierarchies and financial associations within criminal organizations.

OCDETF will track the following information in order to report on its asset forfeiture results:

- Percent of OCDETE cases in which assets were seized for forfeiture;
- Percent of OCDFTF cases that included criminal forfeiture counts or pursued administrative or civil forfeiture;
 and
- Percent of OCDETE cases that resulted in an order(s) or declaration(s) of forfeiture.

Financial investigative techniques play a major role in OCDETF investigations as reflected below:

- Money laundering violations were ested in 63.6% of the investigations initiated in 1999;
- Tax violations were anticipated in 20.4% of the investigations initiated in 1999;
- Financial backing activities were expected in 9.1% of investigations initiated in 1999; and
- In 1999, IRS participated in 44.1% of OCDETF investigations initiated.

In FY 2001, OCDETF agencies will strategically use asset forfeiture to help disrupt and dismantle criminal organizations and prevent criminals from keeping their illegally acquired benefits.

D. Data Validation and Verification Issues

Data Collection and Storage Process

The OCDETF Management Information System (MIS) consists of three (3) major forms supplemented by special reports: the <u>Investigation Infranton Form</u> is used to explain each investigation considered for Task Force approval, the <u>Indictioent/Information Form</u> is used to record each indictment returned in Task Force cases; and the <u>Disposition and Sentencing Report</u> is used to verify all charges in Task Force cases and to record their outcome. These forms are prepared at the Field level and submitted to the OCDETF Executive Office for inputting into the OCDETF MIS.

The <u>CC(D):11-Management Information System (MIS)</u> is designed to meet the management needs of the OCDETF Executive Committee, Washington Agency Representatives Group, the United States Attorneys, other participating agency officials, and the regions. In addition, the information system provides the data necessary to evaluate OCDETF program performance used in reports to the Attorney General, the President, the Congress, and the public

Results of the OCOETF program's efforts are rescaled through data collected at three key points in the course of case maturation. At case initiation, OCDETF Coordinators review agency-submitted investigations to compare them with OCDETF Guidelings criteria and determine their suitability. If the decision is made to accept a case, projections are made concerning which investigative and prosecutorial methods will be pursued and what resources can be allocated for these purposes. Unique to the process of case initiation is the review by the Coordination Group with its multi-agency resources and by the inclusion of prosecutorial expertise.

When indictments and informations are returned, another set of data is collected. At this point, the pooled investigative efforts of the agencies have begun to bear fruit. Certain of these data arrays re-use the categories which projected case investigation needs, but they now capture occurrences, investigative methods used compared to those projected. More significant are the quantified indicators of investigative productivity, such as numbers of indictments or informations returned and numbers of defendants indicted. To these are added such potentially useful information as how many indictments were associated with each investigative method, with various types of criminal activities, with each of several drugs, with each participating agency, etc.

At disposition and sentencing, a final set of data is collected that includes numbers of defendants convicted and not convicted, numbers who pleaded guilty or were found guilty, and the kinds and duration of sentences imposed.

Data Validation and Verification.

The OCDETF Program currently collects data from agents and attorneys working on investigations within each district through regional coordinators. This data is verified by the District Coordination Group, the Regional Coordination Group, and the OCDETF Executive Office. A Quality Control Assurance Plan is under development to ensure the accuracy and completeness of the data being input into the OCDETF MIS.

The Executive Office for United States Attorneys (EOUSA) and the U.S. Attorneys collect a number of statistics on OCDETF unfectments, convictions and sentencings through the MIS in each U.S. Attorneys Office. This information is used to supplement and venity data collected through the OCDETF MIS.

Since the data currently collected does not provide managers and policy level executives with the information needed to fully evaluate results, new reporting requirements are being implemented and the data collection system is being redesigned. The new data captures will provide managers and policy makers with more results oriented information.

Annual Report to the Attorney General/Development and Coordination of District Level Drug Strategic Plans

The <u>OCDETF Program Guidelines</u> direct that each OCDETF Regional Advisory Council, which consists of the United States Attorneys and senior officials of each OCDETF investigative agency within the region, submit an annual report to the Attorney General and Deputy Attorney General advising them of drug enforcement issues within their region.

In order to prepare the OCDETF regional reports, each United States Attorney must report, on a continuing basis, the nature of the drug threat in their district and the strategy that has been developed to deal with these threats. This requirement was developed concurrently with the Department of Justice's efforts to develop a <u>Drug Control Strategic Plan and its Semiannual Report</u> to Congress on progress toward the goals specified in that plan.

It was determined that the United States Attorneys were the key to successfully developing strategic drug enforcement plans at the local level and assessing the impact of our efforts on their communities as well as the Nation. As the chief Federal law

enforcement officers of their districts, the United States Attorneys work with Federal, state, and local law enforcement to establish and coordinate local law enforcement strategies and priorities, to include drugs, violence, and related criminal activities. The United States Attorneys are also responsible for coordinating the collaborative efforts of nine Federal law enforcement agencies working in conjunction with state, tichal, and local law enforcement agencies under the OCDETF program to target the highest level traffickers within a community as well as drug trafficking organizations that operate nationally and internationally.

A strategic planning contractor is being utilized to facilitate, support, and assist the Department, the United States Attorneys, and Festeral law enforcement agencies in developing drug strategic plans for their districts, establishing a district structure/process for maintaining the viability and usefulness of these plans, and ensuring consistency and uniformity in outlining these plans, establishing performance indicators, and reporting results

The contractor will assist the United States Attorneys and other Department components in developing the 94 District Drug Strategies and Performance Plans, preparing time regional OCDETF reports to the Attorney General that incorporate the district strategies and performance plans for each region, and integrating these district strategies and regional reports into the DOD Drug Control Strategie Plan and Semi-annual Report to Congress.

Customer Service Plan

To further demonstrate that OCDETF helps foster interagency partnerships, the OCDETF program will incorporate its clients' views (headquarters agencies and the nine regions) into its Performance Measurement Plan. Strengthening the effectiveness and working relationship between the OCDETF program and HIDTA will also be a key element of this plan.

The Executive Office, in conjunction with the Washington Agency Representatives Group, will develop customer service plans and standards to ensure that we meet or exceed the expectations of OCDETF customers. This will be accomplished by obtaining feedback through the use of format surveys and periodic site visits.

Data Limitations/Planned Upgrades:

Conversion of AS/400 Application to Oracle

The CX'DETF Executive Office is transitioning from its current AS/400 application to Oracle. A contractor is working exclusively with the OCDETF staff to review our requirements and design and develop a new Oracle based application. Oracle has become the deflactor standard database for the Department of Justice. The new Oracle based application will provide the same foretunality as the existing application but with the following improvements.

- Descript a Web interface to provide standard reports for the U.S. Attorneys offices. This would allow U.S. Attorney personnel to run OCDETF reports from their own workstations;
- Develop a Web hased interface for remote data entry. This would allow U.S. Attorney personnel to enter data directly into the OCDETF MIS, and
- Develop a report distribution system designed to distribute nonsensitive reports to Member Agency Representatives using Internet e-mail capabilities.

- A. Data Validation and Varification: (Reference narrative discussion provided on pages 16 22)
- 8. FY 1999 Parlamence Report:
- The GCDEFF program continues to be strengthened by its agencies' commitment to work together to achieve success through coordinated drug enforcement

efforts. This communities is subcassed the agencies between their federal, State , and local partnerships are the most affective means of combining drug-related name.

in FY 1999, the OCOETF program had a number of successful convictions against major drug trafficking and money laundening organizations. Overall there was a 29% increase in the number of convictions over those accessed in FY 1998.

The following statistics are an extration of the residue of OCDETS investigations

In FY 1999 ID 332 OCDEFF indictments were charged against 9 345 detendants. The represents a 38% increase over the FY 1998 level. The number of detendants indicted increased by 42% for the same time period.

In FY 1999 a convection take of 89 percent was active ediagons) the 6,095 defendants convected, and 92% of those convected were sentenced to presentering.

In FY 1999, 51.3 percent of the OCCETF defendants received more than fine years of impresonment — as compared to 33.4 percent for non-OCDETF defendants. This year is 1911 to 1999, where 52.5 percent of OCDETF defendants received five years or more impresonment, as constant in 38.0 received five years or more impresonment, as constant in 38.0 received from Inc. OCDETF feterodants.

However, with a current withing of over 4,900 open cases, significant dedication of agent and attorney resources will be required to bring friese cases to closure. It should be entyresized that OCDETE cases seedage from 18 months to 24 months in duration. As a result, it is entobasted that the humber of new OCDETE propers.

OCDETE instructionations will design unless additional resources are accorded for the OCDETE propers.

Reference should also be made to those external factors document of <u>Justice Strategy Plan</u>. The factors include: demographics, emergencies and other impredictable events, therefore issuador responsibilities, changing rechnology, the effectiveness and capacity of our lew enforcement parmage at the Federics. State and local levels, the strength and visitor of our social economic and political institutions, cultural etitudes and practices, and developments oversees.

C. leaves Affecting Selection of FY 2000 and 2001 Indicators

It should be noted that asses identified herein would also affect the expected performance for DCDETF General Goals 2 and 3

As part of OCDETF's continuing afforts to more accurately reflect its role and success in the Department's total drug antercement efforts, the OCDETF Executive.

Office is working with the investigative apencies and the United States Attorneys to develop additional performance measures that will be ancluded in OCDETF's future OPPA exhibits Under development is a proposed "Performance Measurement Report" that would be completed at the end of each investigation. This report will require due to which this proposation has been demanded and/or departation for the event report will require on whether the objectives of the investigation are may and find a section to which this proposation has been demanded and/or departation.

QCDETF General Goal 2 Promote a coordinated thing enforcement effort screep district, regional, and national boundaries and encourage the maximum outpuredism and coordinates arrang all Foderal, State, and local drug and drug related law enforcement agencies and the United States Attended offices.

Department of Justice Care Function. Investigation and Presecution of Criminal Officeous.

<u>Bratests Gest</u>: Gest 1 5 Coordinate and integrate DOJ law anforcement activities whenever possible and cooperate fully with other Federal, State and local agencies that are children's that to improved aparation of the Nation & Justice System.

BASE PROGRAM DESCRIPTION

The Law Enforcement activity has a base of 1.935 positions, 1,935 FTE, and \$222,955,000.

OCDETF investigations focus on the organized criminal enterprise leadership involved in drug trafficking and the breakup of the infrastructure of organized criminal enterprises. This includes the seizure and forfeiture of assets of organized criminal enterprises involved in narcotics trafficking.

The coordination of investigative and prosecutorial activities and the sharing of information are at the heart of the OCDETF approach. OCDETF principles reflect a recognition of the drug trafficking problem as one demanding a national and international approach and a realization that localized programs alone will not suffice because most drug trafficking cases represent only one piece of a much targer puzzle. In an environment in which large-scale drug trafficking networks can involve multi-national suppliers, sophisticated money launderers, and multiple domestic distribution organizations, an approach based on coordinated activity and shared information is imperative.

Experience has made it clear that major drug trafficking organizations routinely violate many different statutes in multiple jurisdictions. The ability to bring to bear expertise from agencies with a wide variety of skills and missions and to operate effectively across jurisdictional boundaries is a key element in the effectiveness of the OCDETP approach. This approach of cooperation and shared information has been nurtured in the context of a concerted effort to develop a consensual or cooperative relationship among participating agencies.

The criteria for selection of CCDETF cases are designed to assure that each case is of a type and magnitude that will derive maximum benefit from utilization of the OCDETF approach and merits commitment of interagency resources. Cases that would benefit from the application of resources and expertise of more than one investigative agency and that involve major drug trafficking organizations likely or known to be involved in other criminal or violent activities are prime candidates for consideration as OCDETF cases. The effectiveness of OCDETF case management is majorially enhanced by involvement of an Assistant U.S. Attorney (AUSA) at the early stages of the investigation.

F. Headquarters and Field Organization

The Attorney General has delegated policy and administrative inanagement and oversight for the OCDETF program to the Assistant Attorney General for the Critinnal Division. In cooperation with headquarters representatives from the participating agencies (known is the Washington Agency Representatives Group), the Critinnal Division monitors OCDETF activities nationwide and resolves any program and policy issues that arise, and provides source information to the Attorney General and the Deputy Attorney General. The OCDETF Executive Office, located in the Critinnal Division, supports headquarters and field OCDETF activities by acting as a clearinghouse for OCDETF issues and information, by collecting and maintaining OCDETF statistics submitted by the regions, and by preparing and managing OCDETF funding.

During 1997, the OCDETF program implemented a regional restructuring plan that reduced the number of regions from 13 to 9. The new OCDETF regions, which were formally established on October 3, 1997, are designed to respond more effectively to current and emerging drug trafficking patterns, to cluster districts with common problems, and to enhance communications and coordination within and among the regions. Within each OCDETF region, the United States Attorneys and Special Agents-in-Charge address drug trafficking issues and formulate coordinated and aggressive regional and national strategies for strengthening the Federal. State, and local law enforcement response. The new regional structure better enables OCDETF to support drug enforcement initiatives that impact OCDETF investigations, such as the increasing number of HIDTA initiatives, the Southwest Border Initiative, and both the National Methamphetamine and Marijuano Strategy. The OCDETF regional

restructuring is consistent with the <u>National Drug Control Strategy</u> and <u>Department Strategic Plan</u>, as it provides an opportunity to focus greater attention, expertise, and resources against those criminal organizations that are responsible for the greatest volume of drugs and violence in our country.

A principle component of the OCDETF restricturing is the activation of Advisory Councils, made up of the United States Attorneys and senior agency officials within each region. These Advisory Councils assumed primary responsibility for the successful implementation of the restricturing, monitoring drug enforcement activities and the availability or resources for investigations and prosecutions, and taking appropriate and coordinated action within their region. Each Advisory Council is assisted in its endeavors by a regional coordination group consisting of one Assistant United States Attorney and one representative from each OCDETF investigative agency, assigned full-time to the OCDETF coordination activities.

2 State and Local Participation.

From the programs inception. Stare and local has enforcement elements have worked closely with OCDETF. The OCDETF Guidelings promote the coordinated involvement of State and local authorities in investigating, apprehending, and prosecuting major drug traffic sers and their organizations. State and local participation significantly expands the available resources and broadens the choice of venue for prosecution.

Since its exception, OCDLTF has entered into approximately 13,000 agreements with State and local governments nationwide involving more than 35,000 State and local officers. Although these local agencies continue to pay the safaries of their investigators into wors on OCDLTF cases, they are assisted in meeting the costs of overtime, travel, and per diem expenses resulting from their participation.

In 1999, \$7.0 million in funding for this program is being provided through the Department of Justice Assets Forfeiture Fund (AFF). In addition, the Treasury Department is providing approximately \$1 million from its Asset Forfeiture Fund for State and local overtime requirements on OCDETF cases in which one of the three Treasury bureaus serves as the sponsoring agency.

3 Member Agencies

According to the <u>OCDETF Guidelines</u>, one of the program's main objectives is "—to promote a coordinated drug enforcement effort in each region, and to encourage maximum conperation among all drug enforcement agencies..." Throughout its years of operation, the OCDETF program has pursued this objective

Many of the OCDETF investigations are so complex and labor intensive that they could not have been conducted without cooperation among participating agencies. Most, if not all, of these investigations require a mix of skills, experience, and jurisdiction possessed by no single agency. Each of the Federal OCDETF members brings its own special skills and methods to the program. Use of the OCDETF model can help bridge the gaps in enforcement between those efforts that are uniquely Lederal and those that are successfully undertaken by State and local authorities. In this way, all levels of drug trafficking — from the international suppliers through the transportation and financial service providers, to the wholesalers, to the street connected after a can be targeted by low enforcement.

a. The Department of Justice

Participating (OO) agencies funded through this appropriation include the Drug Enforcement Administration (DEA), the Lederal Bureau of Investigation of BD, the Immigration and Naturalization Service (INS), the U.S. Attorneys' offices, and the U.S. Marshals Service. Support for the program is also provided by the Department's Tax and Criminal Divisions. The effective use of the expertise of these components is an indispensable tool in the OCDETF program.

<u>DEA</u> is among the agencies must actively involved in every aspect of the OCDETF program. Throughout the history of the OCDETF program, DEA has been among the perennial leaders in number of cases brought to the OCDETF DEA is the only Federal agency in OCDETF which has narcotics law enforcement as its sole responsibility. DEA's vast experience in this field, its knowledge of international drug distribution chains, and close working relationships with State and local authorities have made DEA essential to OCDETF. DEA has long recognized that varied forms of expertise and cooperative efforts are required to combat the complexity of the drug trade.

The <u>FBI</u> is one of the charter members of OCDETF and shares with the Drug Enforcement Administration the distinction of having drug enforcement authorities under Title 21 of the United States Code. The <u>FBI</u> brings to OCDETF its extensive experience in the investigation of traditional organized crime, white collar crime and financial

crimes. The FBI quickly adapted its ability to gather and analyze intelligence data and deploy and manage sophisticated electronic surveillance and undercover techniques to its drug investigations under the OCDETF program. The FBI continues to focus its OCDETF resources on the totality of the drug organization. Consistent with the OCDETF philosophy, the FBI strives for the arrest of drug organization leaders, the dismantling of their organizations, and the servere and forfeithire of their ill-gotten gains.

During the first three years, <u>INS</u> was available to OCDETF Coordination Groups as needed. Because of its strong commitment to curtailing alien involvement in parcotics trafficking, the Attorney General decided to include INS's livestigations. Division as a full member of the OCDETF program in 1986. (However, INS did not receive OCDETF funding for its participation until 1990.) Enactment of the Anti-Drug Abuse Act of 1986 and the Immigration Reform and Control Act of 1986 further cultanced INS's success in locating, apprehending, investigating, and removing critical flug traffickers from the United States. This combination of actions strengthened tNS's ability to pursue extrateritorial prosecutions and extraditions of drug traffickers.

Because of its unique role in Federal law enforcement, <u>USMS</u> designates an agency Coordinator in each of the OCDLTE regions to ensure and coordinate appropriate USMS resources and support for OCDETF cases. In support of these investigations and prosecutions, the USMS Coordinators are responsible for ensuring the availability of the following services related to OCDLTE cases.

- protection against attempts at jury tampering, assaults on Federal prosecutors, prison escapes, and civil disruption in the courtroom.
- movement of defendants into and out of the courtroom, and transportation of prisoners to and from detention centers.
- handling of subpoenas, summonses, and other court orders;
- physical security and protection of witnesses through the Federal Witness Protection program,

- identification, seizure and management of the "fruits of crime," personal and physical property, real estate, eash
 that criminals acquire as a result of their participation in illegal activities through the National Asset Seizure and
 Fortesture Program, and
- apprehension of Federal fugitives

5 The Department of Transportation

The Department of Transportation participates in the OCDETF program through the <u>United States Coast Guard (USCG)</u>. USCG is printarily an interdictive agency. Because OCDETF is comprised of primarily investigative and procedulorial agencies. USCG has found uself in a unique position, assuming a variety of functions that support the work of OCDETF. The USCG Coordination in each of the coastal OCDETF regions is the maritime expert for OCDETF, and provides valuable intelligence and guidance on cases with maritime connections and implications. Second 1 SCG Coordinators act as valued biasons, not only with the Coast Guard itself, but also with the military services and the National Narcotics Border Interdiction System.

The Department of the Treasury

Participating Department of the Treasury agencies include the Bureau of Alcohol, Tobacco and Firearms (ATF); the Internal Revenue Service (IRS), and the U.S. Customs Service (USCS). Beginning in 1998, Treasury agency participation in the OCDETF program was funded through a separate appropriation in the Department of the Treasury.

Like the other OCDETF agencies. AIF plays a special role in the program. As increasing numbers of drug violators use treatins and explosives, they make drug enforcement much more hazardous. The introduction of these hazardous weapons has provided a special access to use the ATF expertise in firearm legislation to enhance prosecution efforts against drug traffickers. The use of deadly weapons may give rise to charges which are sometimes more easily proven than drug violations. As the agency responsible for enforcing Federal firearms, explosives, and arson laws, ATF comes into frequent contact with drug violators. ATF's jurisdiction and expertise make it a well-suited partner to other agencies participating in the war against illegal drugs. In OCDETF, ATF special agents focus on major drug traffickers who have also violated laws that it enforces. To be prepared when the need arises, ATF monitors all investigations through its Coordinators.

IRS has been an active participant in OCDETF from the beginning. As OCDETF's financial experts, IRS's criminal investigators are called upon to analyze the documentary evidence collected in almost all cases. Other OCDETF members recognize IRS's imagine ability to identify "professionals" who profit from involvement in narcotics trafficking. Historically, these individuals were not often targeted by drug enforcement agencies because there were no incass of obtaining firm informational or evidentiary links between them and narcotics. Often, the only viable means of attack against this class of criminal has been through financial investigations where the paper trail of money earned from the sale of narcotics has been tracked to its ultimate beneficiaries.

One of <u>USCS's</u> missions is to disrupt the movement of narcotics into the United States. Among the tools at USCS's disposal are automated systems which permit the pre-arrival review of a carrier's manifest, centralized examination stations for the presentation of pre-selected merchandise for inspection, and a processing system that targets certain high risk compacterial containers for intensive enforcement examination.

ESCS participation in OCDI-1F also provides access to its data base of financial information, collected pursuant to the Blink Secrecy Act, for identifying and targeting suspected money faunderers. Also, through its Financial Intelligence Branch, USCS has the ability to provide OCDI-TF investigators with a documented audit whenever currency is recycled through USC banks. In addition, cash flow analysis of transactions supplies investigators with a relatively simple tran through the intrastructure of drug organizations. This trail helps to identify those principals and members of these groups who tend to keep their distance from daily operations and who are extremely difficult to identify through traditional methods.

Increase/Decrease		***	

BASE PROGRAM DESCRIPTION:

The Drug Intelligence activity has a base of 176 positions, 176 FTE, and \$15,495,000.

In 1993, Congress first funded the Regional Drug finelingence Squads (RDIS) through the OCDETF appropriation. The mission of the RDIS is to establish multi-agency squads first in High Intensity Drug Trafficking Areas, and as soon as possible in all OCDETF core enters. These squads gather, analyze, and disseminate raw and processed data for strategic, tacheal and operational intelligence support of drug trafficking investigations. They also provide the regional intelligence linkage to the National Drug Intelligence Center (NDIC) and to respective agency headquarters.

Participants in the RDIS program include State and local law enforcement agencies, the host agency Federal Bureau of Investigation, Drug Imborcoment Administration, U.S. Customs Service, Internal Revenue Service, Immigration and Naturalization Service, Bureau of Alcohol. Tobacco and Fireaums, the United States Maishals Service, the Department of Defense, and the National Guard Bureau. Squads have been established in the following cities. Los Angeles, New York City, Washington, D.C., Houston, Miami, Phoenix, Chicago and Athanta.

The Department of Justice, the Office of National Drug Control Policy, and the Central Intelligence Agency have coordinated an interagency effort (including the Departments of Treasury, State, Defense and Transportation) to review the U.S. drug intelligence architecture. Recommendations are pending.

ACTIVITY: PROSECUTION

200 Estimate	<u>907</u>	<u>865</u>	<u>88.776</u>
Increase/Decrease			

BASE PROGRAM DESCRIPTION:

The Prosecution activity has a base of 907 positions, 865 FTE, and \$88,776,000.

This funding is used to reimburse the Department of Justice U.S. Attorneys, Criminal Division, and Tax Division for their investigative support and prosecutorial efforts on OCDETF cases. Litigation efforts are targeted selectively on the criminal leadership involved in drug traificking and are intended to dissolve organized illien enterprises. This includes activities designed to secure the seizure and forfeiture of the assets of these enterprises.

A fundamental purpose of the prosecution effort is: (1) to apply limited Federal resources against those targets where successful prosecution can have the greatest and most lasting effect on the nation's drug abuse problem and (2) to build upon lessons learned from previous experience to enhance prosecutive effectiveness.

The prosecution activity employs several tactics that are particularly well-suited for use against priority targets. Among them are proven devices, such as retunice upon criminal enterprise charges, including Continuing Criminal Enterprise (CCE) and Racketeering Influenced Criminal Organization (RICO); increased concentration of financial investigations; expanded use of electronic surveillance and undercover operations, and vigorous enforcement of asset forfeiture statutes. Utilization of these investigative/prosecutive tools, supplemented by the enhanced sentencing guidelines, has been instrumental to the success of the OCDETF effort.

The United States Attorneys

One of the foundations of OCDETF is early attorney involvement in the development of case strategy. OCDETF affords prosecutors the time they need to participate in the development of this strategy and to provide the necessary legal services and counsel that investigators require. Federal prosecutors are not expected to rush cases to completion, but rather to move deliberately toward successful and comprehensive conclusions. And while OCDETF attorneys carry a caseload of fewer cases, theirs are typically more intricate and long-term than those of their non-OCDETF counterparts.

The assignment of experienced attorneys to OCDETF cases takes full advantage of their critical litigative counsel and skills to successfully prosecute the most serious drug trafficking offenders. Take, for example, the use of electronic surveillance or the mounting of undercover operations. For investigators and attorneys alike, these activities are especially time-consuming since they require extensive legal paperwork. A wiretap requires a detailed application for initial approval and repeated affidavits for

renewal. The preparation of the necessary documents has become a virtual art form, and OCDETF attorneys have proven themselves equal to the challenge. The number of attorneys experienced in handling these matters has increased, a significant development in an area where maintaining investigative momentum is crucial.

Another feature cited by the OCDETF attorneys themselves is the enhancement of their knowledge of matters relating to narcotics dealing. The courts now recognize these attorneys for their greater acumen in interpreting the narcotics environment. When applying for warrants for wiretaps, searches, or arrests, they can articulate more authoritatively the information contained in the supportive affidavits of the investigative agencies; for example, the probability of finding narcotics fedgers or financial books and records that will show the fruits of drug trafficking, even in locations where drugs themselves are not likely to be found. Similarly, they can better represent drug dealers' eryptic conversations when applying for extensions of ongoing court-authorized electronic surveithance or for new, supplementary surveillance. The development of such expertise in U.S. Attorneys offices is primarily attributable to the close working relationship among OCDETF attorneys and experts from the investigative agencies under the aegis of the OCDETF program.

2 Criminal Division

In addition to its role as the Department of Jostice tocal point for OCDETF policy guidance and oversight, and support of the OCDETE 1 securive Office, the Commat Division also offers direct operational support to U.S. Attorneys offices and agencies working OCDETE cases. The Office of Enforcement Operations (OEO) assists agents and attorneys by providing guidance on the justification and the development of applications for electronic surveillance. In addition to review and analysis of electronic surveillance applications, OEO collects information on the results obtained through the use of this investigative tool. OEO also assists in screening and facilitating the entry of witnesses into the Federal Witness Protection program when their personal safety is endangered by criminal elements. A prosecutor seeking to arrange for the protection of a witness, g.g., providing guards, relocating the witness out of the danger area, securing a new identity for the witness, etc., must submit a request to the Criminal Division for review as to the qualification of the witness for the program and a determination as to the level of protection to be afforded to the witness.

Under certain conditions, the Division's Narcotics and Dangerous Drugs Section provides assistance or participates directly in prosecutions when requested to do so by the United States Attorneys' offices. With the increasing complexity and scope of OCDETF cases, senior attorneys are called upon with greater frequency to assist in the supervision and prosecution of OCDETF cases.

3 Tax Division

The Tax Division provides nationwide review and coordination of all tax charges in OCDETF cases. An experienced Tax Division attorney is assigned as a harson official to each of the OCDETF regions. These liaison attorneys work closely with each regional Assistant United States Attorney Coordinator and Internat Revenue Service Coordinator, as well as the Assistant United States Attorneys and Internat Revenue Service Special Agents assigned to investigation of tax crimes. Liaison attorneys provide advice, guidance and expenses in developing and handling the tax investigations. They communicate trequently with regional IRS Coordinators to remain apprised of new developments which might be of particular importance to the successful prosecution of the case. The Tax Division also trains new Assistant United States Attorneys and OCDETF investigators in tax matters, and maintains a clearinghouse of legal and investigatore materials and information that is a mailable to OCDETF personnel.

BASE PROGRAM DESCRIPTION

The Administrative Support activity has a base of 12 positions, 12 FTE, and \$1,672,000.

The OCDETF Executive Office operates under the supervision of the Director, as a part of the Department of Justice Criminal Division. The Executive Office assists the OCDETF Executive Committee, the Washington Agency Representatives Group, the Regional Advisory Councils, and the Regional Coordination Groups in supporting the needs of the OCDETF program by performing the following management and administrative functions:

- Providing OCDETF staff support to the OCDETF Executive Committee, to the WARG representatives and other participating
 agency officials, and to the regional Advisory Councils and Coordination Groups, through the development of policies,
 practices, and procedures that serve the interests of the OCDETF program and its participants;
- Scheduling and staffing the recetings of the Washington Agency Representatives Group;
- Reviewing all OCDETF investigation initiation forms to monitor drug categories, trafficking patterns, and agency
 participation, and to report unusual or emerging trafficking activities to the WARG and to the regions;
- Providing administrative services to the OCDETF Executive Committee, to the regions, and to members of the WARG, including.
 - Collecting, analyzing and reporting on caseload and other statistical data for the regions;
 - Producing periodic informational memoranda to keep headquarters and regional agency personnel apprised of events occurring throughout the program, and
 - Producing reports and other analyses as directed by the Attorney General, the Deputy Attorney General, or the Assistant Attorney General for the Criminal Division
- Assisting the United States Attorneys, the Advisory Councils, and the Coordination Groups in the management of the regions;
- Managing and disbursing the State/local overtime fund;
- Coordinating the development and presentation of the annual OCDETF budget for the Department of Justice and Treasury;
- Assisting the WARG in developing appropriate and informative program performance measures, and monitoring and reporting
 the results of these measures in compliance with the Government Performance and Results Act (GPRA) requirements;
- Developing and coordinating training for OCDETF personnel in consultation with the WARG and, when appropriate, with the Regional Coordination Groups; and

Collecting and disseminating drug trafficking trend information and analyses, as well as reports on significant investigative and
prosecutorial activities on OCDETF cases to appropriate field managers and Departmental Public Information Offices.

interagency Law Enforcement Interagency Crime and Drug Enforcement

Status of Congressionally Requested Studies, Reports, and Evaluations

1. The Conference Report relating to the Department of Justice Appropriations Act, 2000 directs the Department of Justice to conduct a comprehensive review of the Organized Crime Drug Enforcement Program and provide a report to the Committees on Appropriations no later than Junuary 15, 2000, with any recommendations for improvements. After consultation with Appropriations Committee staff, the deadline for the report has been extended until March 1, 2000. The Department is currently in the process of selecting an outside contractor to nection the study.

FEDERAL BUREAU OF INVESTIGATION

Mees 1/2:493

Federal Bureau of Investigation Summary Statement and Performance Plan Fiscal Year 2001

For 2001, the Federal Bureau of Investigation (FBI) is requesting a total of \$3,280,749,000 in direct budget authority, 25,635 permanent positions (10,752 agent), and 24,646 direct workyears for its Salaries and Expenses and Construction appropriations. This request includes direct program increases totaling 65 new agent positions, 295 new support positions, and \$165,692,000 to address new and increasing investigative responsibilities, and to provide necessary investigative assistance and infrastructure services as follows:

- Salaries and Expenses: Funding totaling \$3,277,562,000 and 25,635 permanent positions (10,752 agent), and 24,646 direct
 workyears is requested for Salaries and Expenses for 2001. Program increases totaling 360 new positions (180 workyears) and
 \$163,792,000 are proposed for Salaries and Expenses.
- Construction: Funding totaling \$3,187,000 is proposed for construction projects. A program increase totaling \$1,900,000 is requested to address environmental and safety concerns at the FBI Academy Firearms Range Modernization Project.

Reimbursable Resources. In addition to direct funded resources, the FBI proposes a total of 3,586 reimbursable positions (1,076 agent) and 3,453 reimbursable workyears for 2001. Pursuant to the Health Care Portability and Accountability Act of 1996 (P.L. 104-191), the 2001 budget request reflects 776 positions (445 agent), 752 workyears, and \$88,000,000 for FBI health care fraud investigations, an overall program increase of 30 field agent and 18 field support positions (24 workyears), and \$12,000,000 from the previous year. For user fee programs of the Criminal Justice Services program, including the National Instant Criminal Background Check System (NICS), a total of 1,434 positions and 1,325 workyears are requested. For 2001, the Administration proposes to implement user fees to fund the operations of the NICS. Under this proposal, NICS will require a total 642 positions and workyears in 2001. Under the Interagency Crime and Drug Enforcement program, the 2001 budget request proposes 981 total positions, (592 agent), 981 workyears, and \$112,468,000 for FBI drug and gang-related task force operations and program activities. The remaining reimbursable positions and workyears are used to facilitate a number of activities, including name checks, pre-employment background investigations, and detail assignments to other agencies.

Summary Performance Plan

FBI Strategic Direction:

Through its Strategic Planning Process, the FBI has identified the following three general, functional areas, or tiers, that describe the variety of threats that it must address to realize the goal of enhanced national and individual security. These functional areas effectively define the FBI's strategic priorities. The intended result of identifying priorities is an alignment of management attention and resources in a manner which best supports the overall mission of the FBI. There is no implication that investigative priorities identified in the second and third tiers are not important to the FBI; indeed, the FBI takes great pride in its work in these areas. In a world of scarce resources, however, issues which have the potential for the gravest of consequences must receive priority. The FBI's goal must be to prevent horrific acts such as the Oklahoma City or World Trade Center bombings from occurring. While terrorist incidents or attacks using weapons of mass destruction are mercifully rare, the consequences are so dire that the FBI must have the capacity to respond in a competent and robust fashion. However, FBI management's decision to establish these strategic priorities included the recognition that the FBI must maintain capacity to execute all aspects of its mission, i.e., the FBI must continue conducting investigations in all three tiers. The FBI also recognizes that investigations within each tier are not of uniform significance; an individual case in any tier can command significant investigative effort by the FBI due to community impact or other factors.

· Tier One: National and Economic Security

Foreign intelligence, terrorist, and criminal activities that directly threaten the national or economic security of the U.S. These offenses fall almost exclusively within the jurisdiction of the FBL Issues arising in this area are of such importance to U.S. national interests that they must receive priority attention. To succeed, we must develop and implement a proactive, nationally directed program.

Tier Two: Criminal Enterprises and Public Integrity

Crimes that affect the public safety or undermine the integrity of American society. These offenses fall within the traditional jurisdiction and core competency of the FBI. They are associated with criminal organizations that exploit social, economic, or political circumstances at a significant cost to the Nation. Success in this area depends on the FBI's ability to use lawful tools at its disposal to target, attack, and dismantle criminal organizations and related enterprises.

· Tier Three: Individuals and Property

Crimes that affect individuals and crimes against property. The FBI has traditionally prided itself on its ability to serve the interests of the American people by responding quickly and efficiently to serious criminal acts when they occur. The FBI's strategy should reflect the public's expectation that the FBI will respond to serious criminal acts that threaten the community and bring those responsible to justice. Investigative strategies recognize the generally primary role of state and local law enforcement. FBI resources will be deployed to the extent that local circumstances indicate a clear need for FBI expertise or manpower.

The stated priorities do not imply abandonment of FBI responsibility in personal and violent crimes, but rather acknowledging that, as a national organization, the FBI must first address those issues which are national in scope and those crimes which threaten the security of the Nation.

With this tiered framework, the FBI has significantly sharpened its focus on allocating available resources by establishing nine strategic goals and support/infrastructure strategies that concentrate on the most significant non-operational challenges to accomplishing its operational mission. In the implementation of these strategies, the FBI will be guided by its core values and will capitalize on its core competencies,

FBI Performance Measures/Results Focus: While developing the Strategic Plan and evaluating the FBI's capacity to achieve its strategic goals in early 1998, significant deficiencies were identified across the organization. These deficiencies, ranging from a lack of intelligence to inadequate training of the FBI workforce, have led to less than optimal performance (current FBI capacity and performance is below that needed to appropriately address the full depth and breadth of the criminal and intelligence threats facing the nation) in many FBI mission critical areas. During 1998 and early 1999, FBI program managers developed Program Plans to guide their respective programs and address mission critical deficiencies. Improving or completely eliminating these deficiencies is the current agenda for action and was the basis for the FBI's FY 2000 and FY 2001 budget requests. The initiatives detailed in this submission have been developed to specifically address the shortfalls identified in both operational and support strategies within the FBI Strategic Plan and operational Program Plans, and will ultimately enhance the safety and security of the Nation and its people.

The development of a relevant and comprehensive strategic plan was the critical first step in the FBI's strategy to build a results-oriented management focus across the organization. With a clear strategic direction in place for the organization, the FBI put in place the major elements of a comprehensive strategic management system discussed above. Because of the FBI's significant shift to preventing rather than merely reacting to crimes and foreign intelligence activities, many of the programs within the organization have

dramatically altered their direction, goals, objectives and strategies. Program managers constructed program plans and program performance logic models that specifically relate planning elements to performance measurement levels in a way that provides for clear and consistent thinking about the relationship between planning and performance measurement and the resources and support activities required to effectively implement the program plan. The result? Performance measures effectively "tell the story" of the program by logically flowing from activities to outcomes. That is, resources fund activities that result in a stream of outputs intended to accomplish specific outcomes.

A complicated measure relevant to many FBI programs is deterrence. Deterrence is generally defined as the provision of a threat to successfully prevent an action or event. Deterrent performance measures relate the positive behavior of the FBI to the absence of an event which, it is believed, would have otherwise taken place. In essence, if the FBI strategy requires the prevention of terrorism in certain areas, a deterrent strategy will be one that identifies specific FBI activities that will be undertaken with the primary purpose of preventing or mitigating criminal activities which would support or cause terrorist acts. While "proving" deterrence is difficult, the standard of "best evidence" means that the FBI is entitled to make a plausible assertion that its activities, once put in place and successfully concluded, which are associated with an absence or reduction in targeted criminal activity, creates compelling evidence that the deterrent sought by the FBI was in fact successful. Traditional performance measures are still valid and included in this document, measures that capture the non-occurrence of an event, (i.e., deterrence and prevention) and capacity are still being developed. In those areas where specific outcomes have not been fully developed, this summary plan presents a narrative description of the types of outcome measures we anticipate developing for each of the strategic priorities as well as traditional workload and output measure charts.

FBI Operations Strategy: The following pages detail the FBI's strategic goals in each of the three tiers, list the Department of Justice strategic goals that they support, and present performance charts that capture traditional workload and output performance measures for 1998 - 2001. Included at the end of this section is a narrative summary of 1999 FBI performance. The spirit of the Government Performance and Results Act (GPRA) seeks to not only capture the direct results of agency resources, but also the indirect results. Thus, the following accomplishment statistics contain Federal, state and international data for which the FBI contributed to the outcome. For example, an arrest made as a result of a Safe Street Task Force (SSTF) or other task force involvement would be counted as an FBI accomplishment.

٧.

Tler One: National and Economic Security

Tier One efforts support the following Department of Justice Goals:

- Reduce espionage and terrorism (sponsored by foreign or domestic groups in the United States and abroad when directed at U.S. citizens or institutions.)
- Reduce white collar crime.
- <u>Tier One FBI Strategic Goal</u>: Identify, prevent, and defeat intelligence operations conducted by any foreign power within the U.S. or against certain U.S. interests abroad that constitute a threat to U.S. National Security.

Foreign intelligence operations directed against the United States reflect the complexity and fluidity of the new world order. While the national goals of many traditional rivals have changed, their capabilities and willingness to target traditional objectives, such as national defense information, plans and personnel, have not. Concomitantly, many of these rivals have increased their activities in other sectors affecting our national interests, such as in economic competitiveness, and now target U.S. interests in these areas. They join a formidable array of other foreign powers jockeying for economic or political preeminence, whose success in these areas is dependent upon effective intelligence operations directed against the United States. Knowledge about the intentions, methods of operation, and capabilities of many of these nontraditional threats must be developed, as should the precise application of existing policies and guidelines to these threats, particularly those foreign powers conducting activities in previously atypical targeting areas. Human source acquisitions against both traditional and nontraditional threats must be improved. In some areas, strategic analysis is needed to provide basic direction to field investigative programs. Such analysis requires more detailed and timely reporting on all foreign intelligence activities. Technical surveillance capabilities in some areas have not kept pace with current needs.

The single most important element of the FBI's Foreign Counterintelligence (FCI) program is effective human-source coverage of foreign powers that pose a national security threat. The FBI must improve the capacity to evaluate threats posed by the intelligence activities of foreign powers. This analytic capability should produce operational intelligence of broader scope and improved timeliness, as well as long-range, strategic FCI studies addressing the intelligence collection plans, methods, intentions, capabilities, and personnel of foreign powers. To meet the FCI program's collection and analysis requirements, the FBI will also have to develop, deploy and support new technologies.

Skills: FBI investigative programs cut across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology. The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identify and forecast trends, effect an appropriate response to emerging issues, and assess operational effectiveness. This requires an information technology capacity for systematic intelligence collection and reporting, structured and complex analytical methods, and rapid widespread secure dissemination. This capability at the FBI could be improved beyond the Integrated Intelligence Information Application (IIIA), the analytic tool currently available to national security analysts. Agents and analysts need a wide range of automated tools available to conduct analyses of data and enable them to link subjects of investigations, link various cases, and identify patterns of illicit activity.

Operational Processes:

- Conduct a 21st century baseline reassessment of the foreign intelligence threat to the U.S.
- Actively recruit assets with access to knowledge of foreign intelligence activities, as well as assets with access to diplomatic
 establishments, commercial establishments, media organizations, and foreign nationals living and working in the United States.
- Enhance strategic and tactical analysis through more comprehensive reporting, improved acquisition and integration of information, better dissemination of analytic products, improved training of analysts, and the acquisition of cutting-edge analytic tools.
- Sustain or expand the FBI's intelligence base based on potential country and issue threats and expand assets to neutralize existing
 and future foreign intelligence activities.
- Enhance liaison with domestic and foreign entities to secure and share information to assist the FBI in the conduct of its foreign counterintelligence investigations.
- Identify specific technical and translation needs during the conduct of FBI counterintelligence investigations and ensure the availability of technical and translation support.
- Provide comprehensive foreign counterintelligence training to Special Agents, analysts, and management.

Anticipated Outcome Measures: Counterintelligence threats can never be eliminated given that their origin and impetus lie primarily with sovereign states. They are planned, authorized and financed by government entities beyond our boundaries and the reach of our laws. Measures of success in these areas will gauge the FBI's capacity to detect potential hostile activities by foreign powers against the United States, In addition, the FBI will analyze its record at preventing and defeating these hostile activities in comparison to the

best available estimates of the magnitude of hostile foreign intelligence operations.

[The performance chart for this goal is classified]

Tier One FBI Strategic Goal: Prevent, disrupt, and defeat terrorist operations before they occur.

Terrorism, both international and domestic, poses arguably the most complex threat of any of the threats for which the FBI has a major responsibility. State-sponsored terrorism, though still of concern, is no longer the only terrorist problem. New perpetrators – loosely affiliated international radical extremists and ad hoc coalitions of foreigners motivated by perceived injustices, along with domestic groups and disgruntled individual American citizens – have attacked U.S. interests at home and abroad. They have chosen nontraditional targets and increasingly have employed nonconventional weapons. The dilemma, of course, is that new perpetrators, targets, and weapons exist in almost unlimited numbers, while law enforcement resources arrayed against them are finite.

To deal effectively with international and domestic terrorism, the FBI must concentrate on both prevention and response. To this end, the FBI has developed a 5-level strategy which focuses on building maximum feasible operational capability in order to identify, prevent and deter terrorist activities. Level One of the Counterterrorism (CT) strategy focuses on maximizing the FBI's capacity to respond to terrorist issues as they present themselves in FBI field offices. Level Two seeks to maximize the capacity of Headquarters to receive, react to and disseminate information pertaining to CT issues. Level Three is aimed at maximizing proactive capabilities to utilize FBI resources throughout the Bureau in support of CT programs and initiatives. Level Four uses the establishment and maintenance of sound and productive relationships with external counterparts in the intelligence and law enforcement communities, defense establishments, foreign governments and state and local governments to obtain maximum support. Finally, Level Five seeks to build capacity by using all the necessary assets and capabilities of the FBI and external components of the U.S. Government to support and initiate complex domestic and international investigations and operations designed to get ahead of the threat by penetrating and neutralizing terrorist organizations. Each of the successive capability levels require a slightly increased sophistication and maturity because the issues to be addressed by the FBI become more complex at each level. It is important that the FBI develop maximum capability in all five levels to ensure successful identification, neutralization and penetration of targeted terrorist organizations to both prevent and effectively respond to terrorist activities.

Skills. FBI investigative programs cut across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identity and forecast trends, effect an appropriate response to emerging issues, and assess operational effectiveness. This requires an information technology capacity for systematic intelligence collection and reporting, structured and complex analytical methods, and rapid widespread secure dissemination. This capability at the 4BI could be improved beyond the Integrated Intelligence Information Application (IIIA), the analytic tool currently available to national security analysts. Agents and analysts need a wide range of automated tools available to conduct analyses of data and enable them to link subjects of investigations, link various cases, and identify patterns of illicit activity

Operational Processes—The following issues must be addressed to improve the development of maximum feasible capability in the FBI's Counterterrorism Program.

- Development of an intelligence capability that can receive information on a timely basis, evaluate and exploit relevant information, and disseminate information appropriately.
- Development of a comprehensive training program for Special Agents, analysts, and management.
- Dramatic improvement in the capability to provide foreign language translators to important investigative operations.
- Improvement in interagency coordination and liaison, including personnel exchanges, shared access to relevant information, and enhanced participation in multi-jurisdictional and multi-organizational task forces.
- Improvement in the capability to provide comprehensive national program management.

Anticipated Outcome Measures: By developing maximum feasible capability at all five levels, the FBI will be able to achieve desired outcomes that will contribute to the identification, neutralization, and penetration of targeted terrorist organizations. The FBI's success in restraining all types of groups engaged in acts of terrorism will be measured by the ability to respond to terrorist threats before terrorist attacks occur. Also, all elements of crisis and consequence management at the Federal, state, and local levels throughout the country will have developed and implemented integrated terrorism response plans. The ultimate outcome measure will be the absence of major terrorist incidents as well as the FBI's ability to identify, locate, apprehend, and prosecute those responsible for terrorist acts when they do occur.

DECISION UNIT/PROGRAM: Counterterrorism.

DOJ CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses.

DOJ STRATEGIC GOAL 1.3: Reduce esplonage and terrorism (sponsored by foreign or domestic groups in the U.S. and abroad when directed at U.S. citizens or institutions).

DOJ PERFORMANCE GOALS 1.3.1-1.3.3: Prevent, investigate, and prosecute terrorist acts and improve response capability to terrorist acts.

TIER t: National and Economic Security STRAFEGIC GOAL: Prevent, disrupt, and defeat terrorist operations before they occur. A. Data Validation and Verification:

In order to officially receive credit for terrorist act <u>preventions</u>, FBI Field Divisions must send an official memorandum to FBIIIQ that describes the details of their major. Counterterrorism investigations. An official "iterrarist incident prevented" is a "documented instance in which a violent act by a known or suspected terrorist group or individual with the means and a proven propensity for violence is successfully interdicted through investigative activity." The Assistant Director of the Counterterrorism Division gives final approval to the classification of any Counterterroram investigation as a prevention.

MAR - The FBI's Monthly Administrative Report (MAR) is a system that tracks the number of cases opened, pending, and closed within any given time period. Data is verified through the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to source documents contained in the FBI files.

ISRAA - The FBI's Integrated Statistical Reporting and Analysis Application (ISRAA) is a centralized database through which the FBI tracks statistical accomplishment of cases from inception to closure, e.g., arrests, locates, informations, indictments, and convertions. Before data are entered into the system they are reviewed and approved by an FBI field manager. They are subsequently verified though the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to source documents contained in the FBI files.

CV Program - The CT Program collects and verifies data internally.

B. FY 1999 Performance Reports

In accuratnce with the Atlanney General's Guidance of not projecting targeted levels of performance for certain indicator types

C. Issues Affecting Selection of FY 2000 and 2001 Plans

For the FY 2001 summary performance plan, new indicators are included to better measure the development of maximum feasible capability in all five levels of the Countemerterism Program's strategy. Including indicators that measure training, liaison, management, and readiness provides a more complete picture of the program's effectiveness.

D. Additional Factnotes:

Definitions of Terms or Explanations for Endkators and Data Sources

- This is a recently developed measure and, therefore, does not have planned levels for 1998 and 1999.
- *** The # of terrorist acts prevented is not a projectable number as it is unknowable how many will be planned or attempted. However, it is the goal/intent of the program to prevent any terrorist attack from occurring against U.S. interests.
- Tier One FBI Strategic Goal: Deter the unlawful exploitation of emerging technologies by foreign powers, terrorists, and
 criminal elements.

The rapid technological advancements of the information age have rendered crime fighting efforts increasingly complex and opened new avenues for global criminal activities. The increasing interconnectivity of our critical infrastructures through cyber and information systems has created new vulnerabilities as criminals, terrorists, and foreign intelligence services are learning to exploit the power of cyber tools and weapons. Enhancing U.S. national security through the prevention of debilitating infrastructure damage is one of the FBI's most compelling Tier One priorities. The National Infrastructure Protection and Computer Intrusion Program (NIPCIP) is currently utilizing a multifaceted approach to developing the capacity to detect, deter, prevent, assess, investigate, and respond to cyber attacks on the nation's infrastructures.

To combat cyber and physical threats/atlacks, the NIPCIP will identify and rectify weaknesses in security and strengthen its intelligence base by maintaining a database of information concerning key assets within each field division and a mechanism for information sharing among the public and private sectors. The National Infrastructure Protection Center (NIPC) is working in conjunction with the FBI's Terrorism Program to employ a five level strategy to develop a maximum feasible capability to identify, neutralize, and penetrate terrorist organizations involved in cybercrimes from both a reactive and increasingly *proactive* field, headquarters, and interagency standpoint. The NIPC is also working with the National Foreign Intelligence Program on state-sponsored infrastructure threats, and with the Criminal Investigative Division on criminal threats to the infrastructure.

Skills: FBI investigative programs cut across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities. More specifically, the high tech nature of the investigative work conducted by the National Infrastructure Protection Center requires specialized computer expertise and the recruitment of agent and support personnel with the appropriate technical, analytical, and intelligence skills for activities involved in the investigation of cyber threats and incidents targeting critical infrastructure components.

Information Technology: In its continuing effort to identify, prevent, deter, and defeat computer intrusions, the NIPCIP continually faces new challenges in accordance with advancements in information technology. To address these evolving challenges, the NIPCIP seeks to identify and rectify weaknesses in security and strengthen its intelligence base by further developing and maintaining its database of information concerning key assets within each field division and the mechanism for outreach and information sharing among the public and private sectors, infraGard.

Operational Processes:

- Develop an expert computer intrusion capability in FBI Field Offices and Headquarters through recruitment of agents and analysts with specialized computer expertise.
- Provide training and continuing education in the methods and tools of computer incident investigations and infrastructure protection to FBI agents, analysts, and public and private sector partners.
- Enhance liaison with public and private sector stakeholders to ensure information flow to and from the NIPC through InfraGard and other contacts.
- Develop an indications and warning network for federal computer systems, in conjunction with other federal agencies.
- Collect information on "key assets" for Key Asset database and infrastructure risk assessments.
- Keep up-to-date on research and development (R&D) and provide state-of-the-art tools, technologies, and intellectual capital
 related to computer intrusions and infrastructure protection for FBI investigators and analysts.

Anticipated Outcome Measures: The FBI is currently in the process of developing indices to more adequately capture the nuances of complex investigative concepts such as capacity building and preparedness. These composite, weighted measures will give a more holistic view of the FBI's progress toward achieving its strategic goals by looking at a combination of relevant indicators which better capture the multifaceted nature of infrastructure protection.

Near-term success indices will measure the FBI's capacity to develop all necessary assets and capabilities (equipment, personnel, training, point of contacts, intelligence base) to support and initiate complex operations designed to disrupt or defeat threats to the critical infrastructures. Long-term success indices will measure the FBI's success in utilizing resources to identify and analyze threats, put safeguards in place, establish protection and prevention requirements, develop contingency plans to respond to attacks, and conduct exercises to test response plans. The ultimate outcome indices will measure the extent to which computer intrusion and infrastructure threats are prevented, disrupted, and defeated through early watch & warning capability and preventative measures.

DECISION UNIT/PROGRAM: National Infrastructure Protection and Computer Intrusion Program

DOJ CORE FUNCTION I: Investigation and Prosecution of Criminal Offenses

DOJ STRATEGIC GOALS 1.3: Reduce espionage and terrorism (sponsored by foreign or domestic groups in the L.S. and abroad when directed at U.S. citizens or institutions).

DOJ PERFORMANCE COALS 1.3.4: Further capabilities to respond to cyber and physical threats to the Nation's critical infrastructure and 1.4.3 Further develop capacity to respond to cyber-attacks, computer thefts and intrusions affecting consumers, businesses, and government.

TIER 1: National and Economic Security

STRATEGIC GOAL: Deter the unlawful exploitation of emerging technologies by foreign powers, terrorisis, and criminal elements.

A. Data Validation and Verification:

ISKAA - The data source for the number of arrests, locates, informations, indictionis, convictions, recoveries, and restitutions is the integrated Statistical Reporting and Analysis Application (ISRAA). The data is reliable as ISRAA is an un-line application where new accomplishments are continuously entered into the system from Special Agents TD 515 forms after being reviewed and approved by an Fist field instance. The data is also subsequently scrifted through the Fist Inspection process.

Key Assets - Key Assets are an organization, group of organizations, system, or group of systems, or physical plant of which the loss would have widespread and direction minical impact on a national, regional, or local basis. The data source for the number of key assets identified is the NIPC's Key Asset database. As each Key Asset is identified, it is entered into this database from which maps are created that help determine any overlapping or secondary Key Assets that are linked. The mapping process helps to verify that an "asset" is a critical Key Asset and any others that have not been identified. This results in a continual process of validating the information. Although the numbers provided are cumulative, the delta between any two years may not be a true indicator of activity given that as new assets are identified other assets may no longer meet the Key Asset tritters and are removed from the database.

MAR/ACS - The data source for the number of computer intrusion investigations (cases pending/opened & closed) is the Monthly Administrative Report Automated Case Support (MAR/ACS) system.

The data source for the computer intrusion training measures is the NIPC program's internal training database

			Performance Report Performance Plans				
Type of Indicator	Performance Indicator	Data Source	1998 Actuals	<u>1999</u> Enacted Plan	Actuals	<u>2000</u> Plan	2001 Plan

B. FY 1999 Performance Report:

C. lasues Affecting Selection of FY 2000 and 2001 Plans

In accordance with the Attorney General's Guidance of not projecting largeted levels of performance for certain indicator types.

D. Additional Footnotes:

Definitions of Terms or Explanations for Indicators and Data Sources:

- The 1999 plan included \$10 million from the AG CT fund and \$4.25 million from the Working Capital Fund.
- ** The growth in the number of Key Assets, from 400 at the conclusion of FY 1998 to a projection of 2,745 at the end of FY 1999, was the result of the NIPC's modification of the criteria used by the field offices to identify and report Key Assets. Prior to this modification only Key Assets of national significance were reported. The new gouldance also allows for the identification and reporting of Key Assets that are significant on a state and regional level, as well as the identification and characterization. Of true interdependencies between Key Assets, which is certain to cause the number of national-level Key Assets to fluctuate.
- *** The FBI is presently working to develop NIPC performance indices to gauge the flureauls overall capacity to use its assets and resources in support of operations to disrupt and defeat critical infrastructure threats. The performance indices are intended to increase the validity of the NIPC measures through incorporation of multiple indicators to demonstrate progress cowards the program's ultimate protection and prevention outcomes and assignment of weights to reflect the level of severity of indicators such as intrusions, key assets, and threat and warning notifications.

STAL- Special Technologies Applications Unit. Previous data reflected the number of Computer Emergency Support Team Consultations and Deployments. A reorganization of the NIPC resulted in these functions being reassigned to the STAU.

ASAC- Assistant Special Agents in Charge.

Analytical Products Products Products Products of this indicator reflects the number of analytical articles produced by the Analysis and Information Sharing Unit in publications that include the Infrastructure Protection Digest (quarterly), Cybernotes (biweekly), and Critical Infrastructure Developments (biweekly). Previous data reflected the quantitative measure of the types of products distributed.

NA- Not Available.

VIII. <u>Tier One FBI Strategic Goal</u>: Create an effective and ongoing deterrent designed to prevent criminal conspiracies from defrauding major U.S. industries and the U.S. Government.

Private industry in the U.S. controls trillions of dollars in assets, an inviting target for criminal schemes ranging from technological attacks on a corporation's intellectual property to more traditional attempts to defraud. If major U.S. industries were to collapse because of massive and widespread fraud, the resulting economic chaos could threaten the economic stability of the U.S. and world financial markets. The primary challenge facing the FBI in this area is to create and maintain a strong deterrent capability that will

prevent criminal organizations from defrauding, and thereby weakening U.S. industries. To prevent significant levels of fraud, the FBI must be able to identify emerging trends and industry vulnerabilities and enlist the cooperation of the private sector.

The number of frauds committed each year far exceeds the FBI's capacity to investigate each individually. Accordingly, the FBI with concentrate on the most significant crime problems, leveraging limited resources through cooperative efforts with affected industries and other law enforcement agencies, and implementing a preventive strategy that will rely heavily on improved intelligence, rather than investigating frauds once they have occurred.

The FBI uses three criteria to designate certain white-collar crime problems as priorities:

- a) Significance of the Threat -- The potential threat to society from fraud in an industry will be assessed by taking into account the size of the market or business sector affected, the importance of the industry to society, and the estimated amount of economic loss in the industry due to fraud.
- b) Level of Risk.— This factor takes into account the risk that the above threat will actually be realized. Although the threat posed by fraud may be potentially disastrous, FBI program managers must consider how immediate the threat is to a particular industry absent an FBI response.
- c) FBI Jurisdiction The FBI is not the only agency with responsibilities in combating fraud. In fact, the FBI shares concurrent jurisdiction with other Federal agencies in several white collar crime (WCC) areas. However, many of those agencies are very small or lack the expertise to work cases in which the fraud is massive, complex, or requires a long-term commitment or the utilization of sophisticated investigative techniques. In these instances, the FBI must give a higher priority to a response to properly address the investigation.

Given the above criteria and applying them to currently available empirical data and anecdotal information, the FBI has identified and classified the following three types of fraud as top-ranked national priorities: Health Care Fraud, Financial Institution Fraud, and Government Fraud. The FBI's WCC program has also designated Public Corruption as a priority area, but this is referenced under Strategic Goal #7.

Skills: FBI investigative programs cut across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology: Technology affects the Department not only as the object of crime, but also when criminals use high-tech tools to commit crimes. Presently, the FBI's White Collar Crime program is pursuing funding for the enhancement of the White Collar Crime Case Management System. This system will greatly enhance capabilities to track and monitor crime cends, as well as

coordinate response and efficiently allocate resources.

Operational Processes.

- Substantially reduce the duration of traditionally long term complex loan fraud investigations.
- Prevent the anticipated increase in Cyberbanking and computer facilitated fraud and abuse against financial institutions.
- Successful investigation of "large scale" national health care providers who engage in fraud.
- Identification of fraudulent billing patterns within the health care provider categories most susceptible to fraud.
- · Ability to collect and review data of Health Care expenditure for indications of fraud
- Implementation of HCF Task Forces in divisions where HCF is a priority crime problem.

Anticipated Outcome Measures. The FBI is shifting its WCC strategy away from the reactive "pay and chase" mode where criminals are pursued after rampant fraud has been detected and is concentrating on proactive actions such as data analysis of trends in priority crime problem areas. A good example of this is in Health Care Fraud. health care billings offer data that can be analyzed for trends that are an early indicator of potential fraud and abuse. This approach will lead to high-impact investigations of nation-wide schemes to undermine the Nation's health care system, such as systemic abuse from large scale medical corporations. Industries and markets that have been defined as endangered by egregious fraud will be monitored for reductions in the economic loss and frequency of fraud as a result of the intervention of targeted FBI programs.

DECISION UNIT/PROGRAM: White-Collar Crime

1 DOJ CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses

DOJ STRATEGIC GOALS: 1.4 · Reduce white-collar crime, including public corruption and fraud; 3.2 · safeguard America's environment and natural resources; & 3.3 · promote competition in the U.S. economy through enforcement of, improvements to, and education about antitrust laws and principles.

DOJ PERFORMANCE GOALS: 1.4.2 - Health Care Fraud; 1.4.4 - Financial Institutions, Telemarketing, and Other Fraud; 3.2.1 - Enforcement of Natural Resource Laws; 3.3.1 - Promotion of Competition

TIER 1: National and Economic Security

STRATEGIC GOAL: Create an effective and ongoing deterrent designed to prevent criminal conspiracies from defrauding major U.S. industries and the U.S. Government.

SAR - The Suspictinus Activity Report (SAR) data used for these measures are provided to the Financial Crimes Enforcement Network (FinCEN) by financial institutions that suspect illion activity in 18 different categories of feated. Data in earlier performance plans were supplied by 1911 D-467 reports. Since the protocols for collection of FD-467 data and current SAR data. In future performance reports, the FHI with rety upon FD-467 data dating back to 17 1999. These data are year-to-date as of 5/11/99. Find Divisions largeted for check and counterful check fraud are. Althoris, Boston, Charlotte, Chicago, Cleveland, Da las, Denser, Detroit, Las Vegas, Los Angeles, Newark, New York, Philadelphia, Phoenix, San Diego, San Francisco, and Seattle. Field Divisions targeted for mortgage loan fraud are. Althoris, Los Angeles, Newark, New York, San Diego, and San Francisco. Excluding the data of the consumption of fauld are. Althoris, Los Angeles, Newark, New York, San Diego, and San Francisco.

The Department's data source for the Health Care brand performance goal reflect Health Care Financial Administration (HCLA) frauditargets. The Medicare consimeration measurements for this performance goal include payments for all clinical lab tests and anitio bace services billed to Medicare during the reported period. A new HOD indicationing measured for FY 2001, Home Health Agesices fraudicists reflect three largesed states. Florida, Texas, and Louisiana. Validation and verification of the data takes place primarily at its collection point, HCFA. The FBI reviews the data received from HCFA for consistency and reliability. Since data from HCFA is provided on a calender year, billings can be received up to one year after services. Therefore, complete FY 1999 data will not be available unit. CY 2001. Changes in the Medicare payment system affecting an identifiable area due to legislative in regulatory action (e.g., implementation of a prospective payment system) would fix all date any comparison to data for previous years.

			Performance Report Performance Plans						
Type of Indicator	Performance Indicator	Deta Source	1998 Actuals	1999 Enacted	2000 Plan	2001 Plan			
				Plan Actual]			

B. FY 1999 Performance Report:

- ** The Financial institution Fauld (FEF) program anticipates that I ff will be getting worse in the coming years, due to advances in technology and increased activity of criminal groups conducting negotiable instrument fraud and less fraud. The program is currently reviewing how to strategically approach the problem
- *** HCFA believes that Home Health Agencies have under-reported during the first half of 1998.
 1) The Financial Institution Fraud (FIF) program anticipates that financial fraud with be getting worse in the coming years, due to advances in technology and increased activity of criminal groups conducting negotiable institution fraud and lone fraud. The program is constantly rethinking its strategy to address the problem.

C. Issues Affecting Selection of FY 2000 and 2001 Plans

FBI is constantly directing its attentions to new targets in health care froud investigations, and the current performance report reflects an updated list of HCF fraud targets. The FBI has recently increased its attention to fraud in Home Health Agencies. The above data reflects three targeted states. Florids, Texas, and Louisiana. The Durable Medical Equipment (DME) previously reported in FY 2000 will only achieve further reductions through regulatory enforcement, so these items have been diopped from the data list for the FBI performance indicators.

D. Additional Footnotes:

Definitions of Terms or Explanations for Indicators and Data Sources

- In accordance with the Attorney General's Guidance of not projecting targeted levels of performance for certain indicator types
- These numbers do not include liegat.
- The following FBI Field Divisions have formal and informal (i.e., unfunded) FIF task forces who engage local prosecutors in working FIF cases that fall below Federal prosecutorial guidelines: Atlanta, Boston, Buffalo, Chicago, Cleveland, Dallas, Denver, Houston, Jacksonville, Las Vegas, Newark, New Haven, New York, Oktahoma City, Omaha, Philadelphia, Phoenix, Sacramento, San Francisco, Seattle, Tampa, & Washington DC.
- 1. The above IICF measures include billings for all clinical lab tests and all ambulance services billed to Medicare during the reporting period. The FBI, working in conjunction with other agencies such as the Office of the Inspector General for the Dept. of Health and Illuman Services(OIG-HIS), found that fraudulent billings of these services were rampain across the country. Since data from HCFA is provided on a Dept. of Health and Illuman Services(OIG-HIS), found that fraudulent billings of these services were rampain across the country. Since data from HCFA is provided on a Dept. of Health and Illuman Services(OIG-HIS), found that fraudulent billings of these complete EY 1998 data will not be available for sometime.
- 2 The Health Insurance Portability and Accountability Act of 1996 (HIPAA), mandated the establishment of a Health Care Fraud and Abuse Control Program. The HIPAA will provide funding for the FBE in the amount of \$88,000,000 in 2001, an increase of \$12,000,000 over 2000.

Highlights of Tier One FY 1999 Performance:

David Sheldon Boone, a retired Army Sergeant, was arrested by the FBI on October 10, 1998, and charged with three counts of
violating Title 18, United States Code (USC) Section 794, espionage. On December 18, 1998, he pled guilty and was sentenced to
24 years and three months. Boone worked as an agent of the KGB from 1988 to 1991, while employed as a signals intelligence

- analyst employed with the National Security Agency at Ft. Meade, Maryland, and Augsburg, Germany.
- Theresa Marie Squillacote, Kurt Alan Stand, and James Michael Clark were convicted on four counts of violating U.S. criminal
 espionage statutes following a two week trial.
- On July 13, 1999, Hsu Kai-Lo pled guilty to the attempted theft of trade secrets. Specifically, Mr. Kai-Lo attempted to covertly
 purchase a patented, cutting-edge formula for the anti-cancer drug Taxol on behalf of the Yuen Foong Paper Company. Taxol is an
 ovarian cancer drug treatment which is the proprietary economic information of the Bristol-Myers Squibb Company and generates
 annual sales of approximately \$1 billion per year. Mr. Kai-Lo was sentenced to 22 months and a \$10,000 fine. The Yuen Foong
 Paper Company has agreed to pay the U.S. Government \$300,000 in a civil settlement.
- Seventeen individuals have been indicted in connection with the bombings of U.S. Embassies Kenya and Tanzania. As of 11/1999, nine of those individuals are in custody in the United States and London. Khalfan Khamis Mohammed, who was indicted in connection with the bombing of the U.S. Embassy in Dar es Salaam, Tanzania, was captured in Cape Town, South Africa, and rendered to the United States during November 1999.
- On April 14, 1999, Aryan Nations member Kale Todd Kelly was arrested by the FBI's Cincinnati field office and charged with firearms violations. On May 7, 1999, Mr. Kelly, a previously convicted felon, pled guilty to these violations.
- In October 1998, several individuals who identified themselves as members of "The New Order" were sentenced after having been
 charged with conspiracy and/or illegal weapons charges. The men were conspiring to commit terrorist violence against several
 prominent targets.
- During 1999, several members of the North American Militia, which is based in Michigan, were convicted of weapons violations
 and other criminal charges relating to their plot to bomb federal buildings, destroy major road intersections, and kill federal agents
 and suspected informants.
- Within hours of learning about the Melissa Macro Virus, the NIPC coordinated with key cyber response components of DOD and the Computer Emergency Response Team at Carnegie-Mellon University. Warning messages were sent to federal agencies, state and local law enforcement, FBI field offices, and the private sector. As the virus became more widespread, the FBI undertook the unusual step of issuing a public warning on the NIPC's website. These steps helped mitigate the damage by alerting computer users of the virus and of protective steps they could take to prevent being infected by it. Information provided to the New Jersey State Police from America Online, and their follow-up investigation with the FBI's Newark Field Office, led to the arrest of David L. Smith on April 1, 1999. On December 9, 1999, Mr. Smith plead guilty to one count of Title 18, U.S.C., Section 1030. Mr. Smith stipulated to affecting one million computer systems, causing \$80 million in damage. Mr. Smith is awaiting sentencing.
- In September 1999, two members of a group dubbed the "Phonemasters" were sentenced after their conviction for theft and
 possession of unauthorized access devices and unauthorized access to a federal interest computer. The "Phonemasters" are an

- international group of criminals who penetrated the computer systems of MCl, Sprint, AT&T, Equifax, and the FBI's National Crime Information Center.
- In FY 1999, the FBI's Health Care Fraud program completed the Columbia/HCA investigation, resulting in the conviction of two
 former executives and a pretrial diversion agreement with another defendant.

Tier Two: Criminal Enterprises and Public Integrity

Tier Two efforts support the following Department of Justice Strategic Goals:

- Reduce violent crime, including organized crime and drug and gang-related violence.
- Reduce white-collar crime, including public corruption and fraud.
- Protect the civil rights of all Americans.
- Tier Two PBI Strategic Goal: Identify, disrupt, and dismantle existing and emerging organized criminal enterprises whose activities affect the U.S.

Profound changes in the world over the past five years have directly impacted the FBI's ability to address problems associated with Organized Crime (OC). These changes include: passage of the North American Free Trade Agreement (NAFTA); the fall of Communism and the breakup of the Soviet Union; the increased possibility for corruption in emerging nation states; the development and growth of the Internet and worldwide communications, including the use of global electronic banking; the availability and ease of international transportation; the increase in revenues associated with illegal drugs; and the availability of nuclear, chemical and biological weapons of mass destruction. These factors have contributed to the growth and complexity of domestic and international organized crime and have severely strained current resource levels.

OCEs by their nature bring a extensive network of resources to bear which cannot be matched by law enforcement agencies. OCE's are generally entrenched in the community and use fear, intimidation, and violence to deter citizens from freely cooperating with authorities. Also, they are structured to ensure that their leadership is far removed from direct criminal activity, making it very difficult to link overt crimes to the leaders of the organization.

This requires the FBI to develop strategies targeted primarily at the disrupting and dismantling the entire criminal organization,

resulting in the imposition of lengthy prison terms and the seizure of the organization's ifficit assets. The FBI distinguishes OCEs, not primarily involved in drug trafficking, in the following three distinct groups: 1) traditional, well-entrenched organizations such as the La Cosa Nostra and Italian Organized Crime: 2) structured Russian and Eastern European organizations that have emerged — and fall of the Soviet Union; and 3) Asian Criminal Organizations.

The FBI has three objectives in addressing existing and emerging organized crime: (1) to eliminate existing organized criminal enterprises, as a significant crime factor; (2) to prevent new organized crime groups from establishing a national infrastructure; and (3) to significantly reduce the number of violent, multi-jurisdictional gangs.

The FBI employs two law enforcement techniques to disrupt and dismantle the OCE: the criminal enterprise theory of investigation and the application of intelligence. Success depends on improving organized crime intelligence through the collection, storage, retrieval and most importantly the analysis and dissemination stages. This requires the consistent application of the criminal enterprise theory and better training with special emphasis on informant development and the use of intelligence and electronic surveillance.

La Cosa Nostra

While the "traditional" LCN has suffered significant setbacks due FBI investigative efforts, the new LCN is re-inventing itsen now a criminal organization that is utilizing technology and new schemes to re-emerge as a critical criminal factor. This diversification into a "new business line" has fueled the LCN's efforts to coordinate with other newly forming groups.

To dismantle traditional organized crime groups such as the LCN, the FBI must make a sustained commitment against all the families in the criminal enterprise. Without such an effort, progress against one family will only be mitigated by the expansion of another. The emerging organized crime groups are typically more complex and fluid than the LCN because they are usually based outside the United States and can quickly change their operations to avoid law enforcement detection.

Skills. The Department requires the skills agents, attorneys, analysts, and linguists. Linguists are also critical to supporting criminal and national security investigations and intelligence success.

Information Technology. The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identify and foremost trends, effect an appropriate response to emerging issues, and assess operational effectiveness.

Operational Processes

- Significantly reduce, by 25 percent, LCN influence in organized labor unions and specific industries. These targeted LCN influenced unions are the ILA, LIUNA, Feamsters, and HEREIU. The targeted LCN influenced industries are Carting, Construction, Convention Centers, Gaming, Garment and Maritime industries.
- Significantly reduce, by 25 percent, the leadership, national influence, and active membership of the Genovese and Gambino LCN Families.
- Reduce the active membership of all LCN families nationwide by at least 25 percent.
- Allocate manpower resources commensurate with the identified LCN crime problem and continually assess resource needs to reallocate as necessary.

Anticipated Outcome Measures: Long-term indicators of success include the measures of the extent to which traditional organized crime groups have been dismantled and the degree to which free competition has been restored in industries traditionally dominated by the LCN. Performance measures in the area of emerging organized crime include indicators of disruption and dismantlement, as well as estimates of changes in the amount of criminal activity engaged in by these groups in the U.S.

A. Data Validation and Verification:

ISRAA - The FBI's Integrated Statistical Reporting and Arialysis Application (ISRAA) is a contralized database through which the FBI tracks statistical accomplishment of cases from integration to casting, e.g., arrests, licetes, informations, indictiments, and constituons. Before data pre-entered into the system they are reviewed and approved by an Italian are relieved as a subsequently verified though the FBI's inspection process. Inspections occurring a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to source documents contained in the FBI files.

Operation Station Down Annual Report - This annual report serves as the primary mechanism whereby LCN, labor racketeering, and related onton and industry statistical percomplishments are collected.

B. Fy 1999 Performance Report:

C. Issues Affecting Selection of FY 2000 and 2001 Plans:

In accordance with the Attorney General's Guidance of not principle targeted levels of performance for certain indicator types

D. Additional Footnates:

Definitions of Terms or Explanation for Indicators and Data Sources

- 11 Engages du not include (legat Workyears and include the direct portion of OCOE resources utilized. Outyear projections for the direct portion of OCOE are flat-lined.

 For the "Activate" column, the numbers and amounts include both the OCOE direct funded field program activity and the OCOE, overfourn within the FBT's direct.
- appropriations. For the "Plan" columns, the numbers and amounts my ude only the OCE direct funded field program activity.
- Due to a new reporting mechanism within the LCN Program, indicationts and convictions of "made members" can now be tracked separately.
- ** This number is separate and apart from Genovese and Gambino family members indicted and convicted
- *** Prough its monitoriship of suspected UCN influenced labor unions, the PBCs LCN program currently makes a subjective determination of the degree of LCN influence within these cutons. This monitoring consists of a trustee relationship between the FBI and targeted labor unions that facilitates the identification and expeditious removal of LCN influenced union interbers. The LCN program is in the process of establishing a formal data collection mechanism for readity obtaining these data. The Court ordered monitorship of the Hotel Employees and Restaurant Employees International Union (HEREIU) was initiated on 09/05/1995 and concluded on 08/05/1995.

Eurasian Criminal Enterprises

Eurasian Criminal Enterprise (ECE) groups are becoming increasingly more sophisticated in their domestic U.S. and worldwide criminal operations. This has become especially apparent in their international money faundering and bank fraud activity. ECE groups have purchased controlling interests in banks and other financial institutions and have skillfully utilized these assets to hide or transfer the proceeds of their various criminal enterprises. In addition, ECE groups are acquiring state-of-the-art communication encryption capabilities to safeguard their communications network. These factors, combined with their characteristic transnational mobility, have enabled ECE groups to expand and diversify their criminal enterprises at a pace which exceeds that of traditional LCN groups. As such, FBI strategy must rely upon an integrative investigative approach which utilizes the entire range of investigative techniques and programs that are presently available.

Criminals from the former Soviet Union, as well as from other Eurasian countries, have established a large presence in the New York/New Jersey/Pennsylvania region and engage in a wide variety of crimes that range from sophisticated frauds to narcotics trafficking to murder. Evidence also shows that members of disparate domestic Russian-emigre crime groups have the potential to develop into one of the most formidable organized crime challenges to law enforcement since the advent of La Cosa Nostra. These groups are also active in Miami, Chicago, Los Angeles, and San Francisco.

ECE groups represent a significant criminal force internationally. Through a network of world-wide criminal entermises, headquartered in the Russian Federation, they have amassed great wealth, political influence, and economic power. Closely allied with corrupt interests within Russia, these groups exert a high degree of influence over that nation's emerging financial and market structures. They are flexible, mobile and expansionist and have sought to establish themselves in various countries around the world, including the United States. However, unlike their criminal counterparts in the La Cosa Nostra, they have yet to establish a firm foothold here. This is due to a combination of factors including the early and effective intervention of U.S. law enforcement and the failure of other countries to recognize the threat, thus making their countries more attractive to these groups.

The threat posed by ECE organized crime groups was recognized by the FBI which, early on, adopted a multi-agency and international investigative approach to this problem. This has enabled the FBI to mount several successful investigations which interrupted attempts by several ECE groups to organize criminal activity on a large scale within the U.S. In addition, the FBI has taken a leading role in assisting and training foreign law enforcement, including former Soviet Union law enforcement agencies, in sophisticated strategies and techniques necessary to combat modern organized crime.

Addressing the threat posed by ECEs requires the FBI to follow a dual strategy. In the near term, efforts will be concentrated on addressing identified criminal cuterprises that have the potential to engage in complex criminal conspiracies and, inflict substantial harm to American economic interests. By being vigilant, major ECE organizations will have less incentive to engage in criminal activity in the United States. Simultaneously, the FBI strategy must focus long term efforts to assist vulnerable foreign governments in building their own capacity to prevent the success of criminal organizations. This strategy will gradually, but significantly, reduce the number of countries within which ECEs can freely operate. This effort, critical to strengthening new democracies, places a priority on foreign liaison, Legal Attaches, intelligence and training.

Skills: The Department requires the skills agents, attorneys, analysts, and linguists. Linguists are also critical to supporting criminal and national security investigations and intelligence success.

Information Technology: The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identify and foremost trends, effect an appropriate response to emerging issues, and assess operational effectiveness.

Operational Processes:

- Identify the three most significant R/EE/ECEs in the United States or whose operations in foreign countries pose a significant criminal threat to the American public.
- Enhance the overall capacity to develop intelligence and conduct investigative operations targeting the identified R/EE/ECEs.
- Develop increased liaison with foreign law enforcement agencies.
- Enhance the overall intelligence base on R/EE/ECEs including the number of criminal informants/cooperating witnesses and ET Sources reporting on R/EE/ECE matters.

Anticipated Outcome Measures: By the year 2003, the FBI will have significantly disrupted ECE operations in the United States and, through fiaison and cooperation, will have disrupted ECE criminal operations in foreign countries in order to sufficiently impede their ability to establish operations in the United States.

DECISION UNIT/PROGRAM: Organized Criminal Enterprises/Eurasian Criminal Enterprises

DOJ CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses

DOJ STRATEGIC GOAL 1.1: Reduce violent crime, including organized crime and drug and gang-related violence.

DOJ PERFORMANCE GOALS (.1.1 and 1.1.2: Work to restore open and free economic competition in industries influenced by organized crime and identify, disrupt, and dismantle emerging organized criminal enterprises.

TIER 1: Criminal Enterprises and Public Integrity

FBI STRATEGIC GOAL: Identify, prevent, and disrupt existing and emerging organized criminal enterprises whose activities affect the United States.

- # For the "Actuals" column, the numbers and amounts include both the OCE direct funded field program activity and the OCDE overburn within the FBI's direct appropriations.

Asian Criminal Enterprises

The ACE problem clearly poses a threat to the public safety. Traditional ACEs, such as the Chinese Triads and Japanese Boryokudan,

have hundreds of thousands of members worldwide and financial resources equal to some small countries. ACEs will continue to pursue profitable criminal activity, including financial crimes, public corruption and narcotics trafficking, wherever and whenever the opportunity exists. A different but equally alarming threat exists from emerging non-traditional ACEs, such as the violent gangs active in our ethnic Asian emigre communities (i.e. Vietnamese, Laotian, Cambodian, Thai, etc.)

ACEs have a propensity for violence and are fluid and a highly mobile in nature. These factors coupled with language and cultural barriers render local law enforcement officials efforts generally ineffective in addressing the ACE threat. Moreover, their criminal diversity, including robbery, extortion, sophisticated fraud schemes, home invasions, and drug trafficking. The transience of ACE members, and the mability to fully overcome language and cultural impediments have made the identification of the ACE members and criminal extensiveness difficult to discern.

Near term investigative efforts will concentrate on identifying the most significant groups, their leadership, full scope and territory of their criminal activity. A near term effort will also be to focus on building confidence in the Asian-American community by establishing permanent presence, using agents that share language and cultural affinity, and successfully prosecuting violent offenders.

Skills. The Department requires the skills agents, attorneys, analysts, and linguists. Linguists are also critical to supporting criminal and national security investigations and intelligence success.

Information Technology: The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identify and foremost trends, effect an appropriate response to emerging issues, and assess operational effectiveness.

Operational Processes:

- Identify the 12 most significant ACEs to be targeted on a national and international level.
- Coordinate priority ACE investigative matters on a national and international law enforcement level and ensure that field
 offices with ider ified links to priority cases are focused on those matters.
- Enhance workin, relationships with state, local and foreign law enforcement agencies in targeting the most significant ACEs.
- Seek to enhance looperation in the Asian-American communities, to ensure the effective targeting and investigation of significant ACEs

Anticipated Outcome Measures: By the year 2003, the FBI will dismantle a significant number of ACEs operating in the United States

and, through liaison and cooperation, will contribute intelligence aimed at disrupting ACE operations in foreign countries, leading to slow the growth of ACEs in the Unites States.

DECISION UNIT/PROGRAM: Organized Criminal Enterprises/Asian Criminal Enterprises

<u>Tier Two FBI Strategic Goal</u>: Identify, disrupt, and dismantle existing and emerging organized criminal enterprises whose activities affect the U.S.

The National Drug Intelligence Center Gang Symposium reports that gang members migrate from large to smaller cities and communities for a variety of reasons, to include the relocation of families; avoidance of apprehension and prosecution; avoidance of retribution from rival street gang members; and establishment of new criminal markets. The emerging gangs are comprised of older, more experienced, and hardened criminals that have formed networks with counterparts across the nation. These gangs are more violent than their predecessors and their criminal activity is far more sophisticated, targeted in specific business sectors, and far better coordinated among one another. The emergence of these violent gangs, the resources at their disposal, and the extent to which the activity lies in their multi-state, multi-jurisdictional capacity are beginning to outstrip the ability of the state, local, and federal law enforcement efforts that are organized along state and local lines. The increase in gang activity, including migration into prev ously gang-free communities, has resulted in an increase in violent crime and drug trafficking. Left unchanged, gang crime can destabilize urban, suburban and rural communities, adversely impacting the quality of life and is a significant threat to the integrity of American society.

The FBI, in conjunction with other affected federal, state and local law enforcement agencies, consider major domestic violent street gang/drug enterprises as significant threats to the integrity of American society that must be addressed through sustained, multi-divisional and/or multi-jurisdictional, coordinated investigations that support successful prosecution. These enterprises are identified in the FBI's National Gang Strategy which consists of seven national target groups which are, the Bloods (Pirus), Crips, Folk Nation, People Nation, Prison Gangs, Domestic Violence Gangs, and the Outlaw Motorcycle Gangs (OMG). Eliminating violent gangs in the U.S. requires unprecedented coordination among Federal, state and local law enforcement.

Skills: FBI investigative programs cut across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology: The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identify and forecast trends, effect an appropriate response to emerging issues, and assess operational effectiveness. Currently, FBI agents and analysts have limited automated means, through non-global "stove-pipe" systems to link subjects of investigations, link various cases, and identify patterns of illicit activity.

Operational Processes:

- FBI program managers must select 30 of the most significant investigations that target certain violent street gangs.
- Select cases based upon the targeted gangs multi jurisdictional nature, violent activity, affiliation with a National Gang Strategy group, and/or deleterious affect on the community.
- Field offices identify cases that are deemed most significant and should be considered for inclusion among the FBI's <u>Top 30</u>.
 Targeted Gang investigations.

Anticipated Outcome Measures: Successful output indicators for violent gangs will reflect steadily increasing arrests and seizures leading to the dismantling of targeted gangs in the majority of jurisdictions in which street gangs are identified as a major crime problem. This will be accomplished by dismantling 15 gangs over the next 5 years identified as being the most dangerous. These 15 gangs are comprised of subsets or cliques identified to have a connection to the seven national targets or that meet the requirements set forth by the VCMOP.

DECISION UNIT/PROGRAM: Violent Crimes/Violent Street Gapes

DOJ CORE FUNCTION: Investigation and Prosecution of Criminal Offenses

DOJ STRATEGIC GOAL 1.1; Reduce violent orime, including organized crime and drug and gang-related violence.

DOJ PERFORMANCE GOAL 1.1.3: Reduce the level of violent crims by taking violent criminals and gangs off our streets.

TIER 2: Criminal Enterprises and Public Integrity

STRATEGIC GOAL: Identify, disrupt, and dismantle existing and emerging organized criminal enterprises whose activities affect the U.S.

A. Date Validation and Verification:

MAR - The FBI's Monthly Administrative Report (MAR) is a system that tracks the number of cases opened, pending, and closed within any given time period. Data is verified through the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to source documents contained in the FBI files.

ISRAA - The FBI's Integrated Statistical Reporting and Analysis Application (ISRAA) is a centralized database through which the FBI tracks statistical accomplishment of cases from inception to closure, e.g., arrests, locates, informations, indicatents, and convictions. Before data are entered into the system they are reviewed and approved by an FBI field manager. They are subsequently verified though the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to source documents contained in the FBI files.

VCMO Program - The VCMO Program collects and verifies data internally.

B. FY 1999 Performance Report:

- In FY 1998, the FBI started tracking both disruptions and dismantlements of violent street gangs accomplished through the Safe Streets program. Beginning in FY 1999, a tracking system has been implemented that will enable separate identification of dismantlements of these target groups.
- This is the first year for this measure and should continue to rise as more agents classify the appropriate cases as dismanilements rather than traditional arrest statistics.

C. drawes Affecting Selection of FY 2000 and 2001 Plans

- The baseline of 30 will be constant from year to year, and will be comprised of the top 30 cases pending at the beginning of the year. This will be determined by association to the seven national target groups and outside intelligence sources. These cases often are longer than a year in duration and illustrate a significant accomplishment. The five year goal of distinanting 15 targeted gangs identified as being the most dangerous is comprised of the projected 10% reduction of the 30 baseline gangs each year. Over five years this will account for a total of 15 distinanted gangs.
- 1 In accordance with the Attorney General's Guidance of not projecting targeted levels of performance for certain indicator types.

Tier Two FBI Strategic Goal: Identify, disrupt, and dismantle targeted international and national drug-trafficking organizations.

The FBI's expertise in attacking the infrastructure of criminal organizations will play a critical role in implementing the National Drug Strategy. As an integral part of a coordinated investigative approach, the FBI will focus its efforts on dismantling those regional/national distribution networks utilized by the most notorious drug trafficking organizations operating in South America, Mexico, and the Caribbean. In this effort, the FBI will concentrate its limited drug enforcement resources on these trafficking organizations which have an identified "link" to the large international cartels and vill apply pressure by focusing on key support elements, (e.g., their affiliates, command and control apparatus, communications networks, and financial structures.) Given the level of resources available, the FBI drug enforcement strategy must be designed to, reflect the FBI's unique capabilities and have a recognizable impact in the overall U.S. drug enforcement effort. The result will be the comprehensive dismantlement of those targeted, multi-jurisdictional, national drug distributions networks/outlets utilized most by the 14 National Priority Targets (NPTs).

The FBI's focus on major national drug targets is characterized by long-term, comprehensive investigations that probe the full scope of the organization and its network of affiliates. Moreover, given the breadth of the FBI's investigative authority and jurisdiction, these in-depth investigations can lead to the discovery of a wide array of federal violations that offer the potential for imposing long-term prison sentences on an organization's leaders, dismantling the organization's financial operations, and dismantling the organization's infrastructure. Additionally, the FBI can employ various investigative techniques, such as court-authorized electronic surveillance and cooperating witnesses, to support the efforts of other Federal, state and local authorities. This strategy should preclude the need for FBI investigations not directly tied to nationally targeted organizations, thus enabling the focusing of resources in areas and against organizations deemed to have the highest impact.

In order to address the serious iflegal drug problem, the FBI and Drug Enforcement Administration (DEA) will continue to emphasize the Southwest Border Project (SWBP) to disrupt and dismantle the most significant Mexican Criminal Enterprises (MCE) operating along the Southwest Border region of the U.S. FBI, DEA and U.S. Customs Service offices along the Southwest Border work hand-in-hand with the five U.S. Attorneys responsible for these jurisdictions and the Criminal Division, Department of Justice, in Washington, D.C.

Results will depend on the FBI's ability to make substantial strides in the timely collection, analysis, exploitation of information, and the attendant capacity to direct a nationwide effort.

Skills: FBI investigative programs cut across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology: The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identify and forecast trends, effect an appropriate response to emerging issues, and assess operational effectiveness. Currently, FBI agents and analysts have limited automated means, through non-global "stove-pipe" systems to link subjects of investigations, link various cases, and identify patterns of illicit activity.

Operational Processes:

Direct investigations against those national/local organizations that support the 14 National Priority Targets.

- Each Field Division must ensure that at least 75% of its drug resources are directed against the most significant national/local drug trafficking organizations operating in the Division.
- Ensure that field division targets are related to FBI priority targets.
- Identify national/local DTOs most significant to the international drug organizations and ensure FBI investigations are directed
 against these targets.
- Dismantle organizations targeted by field and FBIHQ.

Anticipated Outcome Measures: Performance indicators reflect the extent to which targeted drug trafficking organizations have been disrupted, the extent to which organization leaders have been successfully removed, and the extent to which organizational assets have been removed.

DECISION UNIT/PROGRAM: Organized Criminal Enterprises/Drug Program

DOJ CORE PUNCTION: Investigation and Prosecution of Criminal Offenses

DOJ STRATEGIC GOAL 1.2: Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts.

DOJ PERFORMANCE GOALS 1.2.1-1.2.5, 1.5.2: Improve land border defense against drugs, continue efforts to disrupt and dismantle the command and control operations of major drug trafficking criminal enterprises, relines the production and quantity of lilegal drugs, actively cooperate with foreign governments and enlist their support to investigate and prosecute major drug organizations, strengthen investigative intelligence programs, and strengthen the centralized management and coordination of the Organized Crime Drug Enforcement Task Force.

TIER 2: Criminal Enterprises and Public Integrity

STRATEGIC GOAL: Identify, disrupt, and dismantle targeted international and national drug-trafficking organizations.

PERF	PERFORMANCE INDICATOR INFORMATION			PERFORMANCE REPORT AND PERFORMANCE PLANS

Outcome	Number of U.S. based drug organizations affiliated with the 14 national priority targets that have been dismantled*	ISRAA	N/A	N/A	ß	50	75			

A. Data Validation and Verification;

ISRAA - The FBI's Integrated Statistical Reporting and Analysis Application (ISRAA) is a centralized database through which the FBI tracks statistical accomplishment of cases from inception to closure, e.g., arrests, locates, informations, indictments, and convictions. Before database entered into the system likely are reviewed and approved by an FBI field manager. They are subsequently verified though the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to sounte documents contained in the FBI's files.

[•] In 1999, the Organized Crime/Drug Program (OCADP) began to focus its attention towards the dismontenent of drug organizations affiliated with the 14 national priority targets (NPTs). Although data are available on the dismantlement of drug organizations in general, these data will now be focused upon this select group of drug organizations. This year, OCADP will track which of these dismantlements fall into the targeted category. At the present time, the program is identifying which drug organizations in the easeload fall into the targeted category. Presently, 64 domestically-based, drug trafficking organizations have been identified as being linked to one of the NPTs.

B. FY 1999 Performance Report:

C. Issues Affecting Selection of FY 2000 and 2001 Plans:

D. Additional Pootnotes:

- In accordance with the Attorney General's Guidance of not projecting targeted levels of performance for certain indicator types.
- Figures include the direct portion of OCDE resources utilized and gang matters worked in the VCMO program, but do not include Legal Workyears. Outyear projections for the direct portion of OCDE including OCDE Gangs are flat-lined.

<u>Tier Two FBI Strategic Goal</u>: Reduce Public Corruption at all levels of government with a special emphasis on law enforcement operations.

The FBI's Public Corruption strategy focuses on allegations of corruption by public officials that pose the greatest *potential* threat to 'American society. Although many investigations may be reactions to public reports of corrupt behavior, proactive investigative measures are prioritized in the following manner:

- Obtain reliable and continuous intelligence on suspicious activity engaged in by members of legislatures and the judiciary.
- Target emerging law enforcement and judicial corruption in regions with entrenched drug activities (e.g., the Southwest Border region, Puerto Rico and the U.S. Virgin Islands).
- 3) Pursue cooperation with local authorities, particularly police departments, in cities with histories of corruption.
- 4) Address emerging international business corruption matters under the authority of the Foreign Corrupt Practices Act (FCPA).

Skills. FBI investigative programs out across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology: Technology affects the Department not only as the object of crime, but also when criminals use high-tech tools to commit crimes. Presently, the FBF's White Collar Crime program is pursuing funding for the enhancement of the White Collar Crime Case Management System. This system will greatly enhance capabilities to track and monitor crime trends, as well as coordinate response and efficiently allocate resources.

Operational Processes:

Obtain reliable and continuous intelligence on suspicious activity engaged in by members of legislatures and the judiciary to

enable immediate FBI response.

- Target emerging law enforcement and judicial corruption in regions with entrenched drug activities such as the Southwest Border region.
- Cooperation from local authorities, particularly police departments, in areas with histories of corruption.
- Establish the capacity to address emerging international business corruption matters under the FCPA.

Anticipated Outcome Measures. Indicators of success will include the degree to which corrupt public officials have been identified and subsequently removed. Specifically, success will be measured by the reduction in the corrupt activity of targeted law enforcement agencies that have adopted procedures recommended by the FBI to reduce corruption.

DECISION UNIT/PROGRAM: White-Collar Crime/Public Corruption

DOJ CORE FUNCTION: Investigation and Prosecution of Criminal Offenses

DOJ STRATEGIC GOAL 1.4: Reduce white-collar crime, including public corruption and fraud.

DOJ PERFORMANCE GOAL 1.4.1: Combat corruption through the investigation of alleged wrongdoing by officials and employees at all levels of government and take appropriate prosecutorial action.

TIER 2: Criminal Enterprises and Public Integrity

STRATEGIC GOAL: Reduce public corruption at all levels of government with special emphasis on law enforcement operations.

A. Data Validation and Verification:

ISRAA - The Departments's measurements for this goal include data from the I'BI's Integrated Statistical reporting and Analysis Application (ISRAA). ISRAA is a centralized database whereby the FBI tracks statistical accomplishments of cases from inception to closure e.g., arrests, locates, information, indictments, and convictions.

Before data are entered into the system they are reviewed and approved by an FBI field manager. They are subsequently verified through the FBI's Inspection process.
Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods data in the ISRAA is traced back to source documents contained in FBI files. There is high confidence in the rehability of this data.

B FY 1999 Performance Report:

C. issues Affecting Selection of FY 2009 and 2001 Plans

this accordance with the Attorney General's Guidance of not projecting targeted levels of performance for certain indicator types.

D. Additional Feetnotes:

The Public Corruption Unit (PCU) at FBHIQ has targeted 16 cities where law enforcement corruption is a priority crime problem. In FY 1998, PCU conducted law enforcement corruption training sessions in three cities, one of which was a priority city. Five more training sessions in priority cities were planned for FY 1999, and four more for FY 2000.

Tier Two FBI Strategic Goal: Deter civil rights violations through aggressive investigative and proactive measures.

Civil rights and hate crimes problems cannot be significantly reduced until those directly and indirectly affected, victims and local law enforcement, recognize these crimes and report them to the FBI. Disparate statistics suggest the absence of a commonly accepted understanding of civil rights crimes, and more particularly hate crimes, in the U.S.. Clarifying the scope of the problem requires better liaison with representatives of special interest/minority groups through personal visits from FBI executives and better liaison with law enforcement agencies and their Internal Affairs investigative entities. Access to records of incidents maintained by such groups could help to define the true extent of the phenomenon and shed light on specific crimes. Given the importance of trust in, and awareness of, the FBI by victims of civil rights/hate crimes, the FBI is undertaking a comprehensive outreach program, including identification of targeted populations and issues, possible solutions, and methods to assess the effectiveness of outreach efforts.

To date, the FBI's response to this crime problem has been primarily reactive. The hate crimes problem in the U.S. demands a more dynamic, progressive, and coordinated approach. The FBI will take an aggressive, proactive approach by forging partnerships with local law enforcement and local communities. Further, the FBI will identify trends in agencies, geographic areas or particular officers or groups of officers. Through these partnerships, training and education models will be developed to be used by law enforcement and communities to identify, investigate, and prevent hate crimes.

Skills. FBI investigative programs cut across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology: The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identify and forecast trends, effect an appropriate response to emerging issues, and assess operational effectiveness. Currently, FBI agents and analysts have limited automated means, through non-global "stove-pipe" systems to link subjects of investigations, link various cases, and identify patterns of illicit activity.

Operational Processes:

- Field office analytical support is critical to the success of the Civil Rights Program goals due to the dependance of the Civil Rights Analytical Center in conducting thorough and reliable trend analysis upon receiving comprehensive data from the field offices.
- Information currently available from active investigations should be supplemented with data from other agencies and from
 civil rights and other interest groups. Implementation and usage of the Civil Rights Information System (CRIS) is needed in

- order to accumulate all civil rights data available within the FBI.
- The HCWG are critical to the success of the CRP goals, since the FBI will need the cooperation of the minority community leaders, civil rights organizations, other law enforcement agencies, and others participating in these groups to identify, report, investigate, prosecute, and prevent hate crimes.
- Intelligence reports on the incidents of civil rights violations in specific geographic regions and/or departments should be considered by FBIHQ in making decisions about training for state and local police. Training Division in concert with CID will need to provide training to FBI personnel in all aspects of CRP issues and investigative responsibilities.

Anticipated Outcome Measures: Success of the strategy will be reflected in the increased identification of hate crimes, as well as the increase in the proportion of targeted law enforcement agencies and communities that adopt and use the training and education models developed by the FBI.

DECISION UNIT/PROGRAM: Violent Crimes/Civil Rights

DOJ CORE FUNCTION 3: Legal Representation, Enforcement of Federal Laws, and Defense of U.S. Interests

DOJ STRATEGIC GOAL 3.1: Protect the civil rights of all Americans.

DOJ PERFORMANCE GGALS: 3.1.1 - Hate Crimes, 3.1.2 - Pattern or Practice Civil Rights Violations, 3.1.3 - Protection of Voting Rights

TIER 2: Criminal Enterprises and Public Integrity

STRATEGIC GOAL: Deter civil rights violations through aggressive investigative and proactive measures.

Before data are entered into the system they are reviewed and approved by an FBI field manager. They are subsequently verified though the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to source documents contained in the FBI files.

FBI CR Program - The CR Program collects and venilies data internally.

• The FBI is required by DOI to report on the status of civil rights cases within 21 days of opening of the case. This status check does not mean that the case has been completed, only that the initial complaint has been addressed. The Color of Law Unit in the Corruption/Clvil Rights Section of CID prepares a Civil Rights Field Office Program Review for all 36 field offices on the delinquency rate of these status reports.

B. FY 1999 Performance Report:

C. Isanes Affecting Selection of FY 2000 and 2001 Plans

† In accordance with the Attorney General's Guidance of not projecting targeted levels of performance for certain indicator types

Highlights of Tier Two FY 1999 Performance:

- Luchese LCN Family acting boss, Joseph Defede, was sentenced to six years in prison on 3/22/99 after pleading guilty to
 extortion.
- Colombo LCN Family boss, Andrew T. Russo, was convicted on 1/26/99, by a jury in Federal District Court, Eastern District
 of New York, for jury tampering and obstruction of justice related to his efforts to communicate with an alternate juror during
 the 1994 racketeering trial of Russo's son, Joseph Russo.
- John A. Gotti, aka: "Junjor," pled guilty to one RICO count in the Southern District of New York and was sentenced on 9/3/99
 to six years in prision. Gotti admitted to bribing a Teamsters union official; a \$50,000 extertion from a construction project;

- operating an illegal gambling business; making false statements on a mortgage application; loansharking; and federal income tax violations. Gotti agreed to forfeit \$358,000 in cash that was seized from his Long Island home, as well as properties in the Pocono Mountains of Pennsylvania, and Sullivan County, New York.
- On 12/9/98, the New York Division concluded a Group I Undercover Operation titled "RED HOOK" with the arrest of nine individuals on a 43 count federal indictment for engaging in a long-term \$2.7 million money laundering scheme. Two of the individuals were arrested at an undercover meeting where they delivered \$910,000 in cashier checks and money orders as their part in a reverse money laundering deal. Three of the arrests were made in the Boston Division. In addition to the nine arrests, six search warrants were executed and 64 bank accounts, three residences and other assets totaling approximately \$2 million were seized. This operation to date has identified 47 subjects who have criminally facilitated reverse money laundering transactions.
- During an investigation of the Grape Street Crips, the Los Angeles and Little Rock Divisions of the FBI used an array of
 investigative techniques to include undercover operatives and electronic surveillance. This investigation culminated in the
 execution of 73 federal arrest warrants and five federal search warrants in Los Angeles, California; Little Rock, Arkansas; El
 Paso, Texas; and Baltimore, Maryland.

Tier Three: Individuals and Property.

Tier Three efforts support the following DOJ goals:

- Reduce violent crime, including organized crime and drug and gang-related violence.
- Reduce white-collar crime, including public corruption and fraud.
- Tier Three FBI Strategic Goal: Reduce the impact of the most significant crimes that affect individuals and property.

Crimes Against Children (CAC)

The number of crimes against children investigated by the FBI is anticipated to continue to rise. Awareness of the FBI's jurisdiction, responsibility and investigative capability in CAC has grown among tribal, local, state and other federal law enforcement and the public. Education, community outreach and successful multi-agency investigations have facilitated a better identification of the scope of the crime problem and more incidents of crimes against children being reported or identified for investigation. The most significant CAC problem confronting the FBI is child pomography/sexual exploitation of children (CP/SEOC) facilitated by the use of on-line

computers which the FBI investigates through its Innocent Images National Initiative (IINI). Between FYs 1996 and 1998, there was a 546 percent increase (108 to 698) in the number of IINI cases opened.

Skills: FBI investigative programs cut across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology: The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identify and forecast trends, effect an appropriate response to emerging issues, and assess operational effectiveness. Currently, FBI agents and analysts have limited automated means, through non-global "stove-pipe" systems to link subjects of investigations, link various cases, and identify patterns of illicit activity.

Operational Processes:

- Continue development of the CAC Resource Teams. Document the composition of each CAC Resource Team and its
 available services and resources and make available to all investigative personnel within the division.
- Develop a planned approach and facilitate franchising of Innocent Images where appropriate. Continue development of the
 Innocent Images case management system (CMS), which allows the FBI and other law enforcement agencies to store and
 retrieve information on preferential sex offenders who use on-line services and the Internet to exploit children.

Anticipated Outcome Measures: In the area of crimes against children, indicators of successful implementation of the strategy will be determined by an increase in the percentage of victimized children safely returned, as well as an increase in the identification and apprehension of child pornographers.

DECISION UNIT/PROGRAM: Violent Crimes/Crimes Against Children

DOJ CORE FUNCTION: Envestigation and Prosecution of Criminal Offenses

DOJ STNATEGIC GOAL I.1: Reduce violent crime, including organized crime and drug and gang-related violence.

DOJ PERFORMANCE GOAL 1.1.4: Improve overall response capability in child abduction cases and increase efforts against those who commit sexual exploitation offenses against children, including those who traffic in child pornography.

TIER 3: Individuals and Property

STRATEGIC GOAL: Reduce the impact of the most algairleant crimes that affect individuals and property.

A. Data Validation and Verification:

MAR - The FBI's Monthly Administrative Report (MAR) is a system that tracks the number of cases opened, pending, and closed within any given time period. Data is verified through the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced hack in source documents contained in the FBI files.

ISRAA - The FBP's Integrated Statistical Reporting and Analysis Application (ISRAA) is a centralized database through which the FBI tracks statistical accomplishment of cases from inception to closure, e.g., arrests, locates, informations, indictments, and convictions. Before data are entered into the system they are reviewed and approved by an FBI field manager. They are subsequently verified though the I'BFs inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to snarce documents contained in the FBI files.

INT - Innecent Images National Initiative (IINI) maintains a separate case management system (CMS) in Calverron, MD - ISRAA tracks statistics at the file number level, however all HNI cases are opened under the same file number, with different sub-file numbers - The CMS captures all sub-file statistics for HNI, however this will change for EY 2000 because a separate classification has been added to ISRAA to bely track these numbers.

VCMO Program - The VCMO Program to lects and verifies data internally

The "Innocent Images" national surjustive, which targets SEOC predators on the Internet, maintains a Case Management System that supplies these data. The performance reporting of these data started with EY 1998.

B. FY 1999 Performance Report:

C. Issues Affecting Selection of FY 2000 and 2001 Plans

1 In accordance with the Attorney General's Guidance of not projecting targeted levels of performance for certain indicator types.

Critical Incidence Response Group (CIRG)-National Center for the Analysis of Violent Crime (NCAVC)

The National Center for the Analysis of Violent Crime (NCAVC), is one of the major components of the FBI's Critical Incident Response Group (CIRG). NCAVC combines investigative/operational support functions, research, and training in order to provide assistance to Federal, state, local, and foreign law enforcement agencies investigating unusual or repetitive violent crimes.

The NCAVC maintains a specially trained group responsive to a variety of both FBI and non-FBI investigations. For the past 10 years, the Uniformed Crime Report (UCR) has reported over 20,000 homicides annually. While the incidence rate of homicide has remained high, the clearance rate has consistently continued to decline. For the past two years, the UCR has reflected an increase in the number of cases where the relationship between the victim and offender is unknown, thereby inferring more stranger type murders. Many times these stranger type murders are committed by serial offenders who pose a serious threat to individuals and the sense of security in the community and law enforcement. NCAVC targets these type of cases where serious threats to individuals persists and

has developed the VICAP database to track, and help provide further analysis when new cases arise.

Skills: FBI investigative programs cut across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology: The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identify and forecast trends, effect an appropriate response to emerging issues, and assess operational effectiveness. Currently, FBI agents and analysts have limited automated means, through non-global "stove-pipe" systems to link subjects of investigations, link various cases, and identify patterns of illicit activity.

Operational Processes:

- Effectively manage and track regional requests for services.
- Conduct offender research aimed at understanding the criminal mind thus enhancing the crime analysis process.
- Enhance the threat assessment process.
- Distribute the new VICAP software capability to all 50 State Police Agencies and to as many major municipalities as possible.

Anticipated Outcome Measures. In the area of NCAVC, indicators of successful implementation of the strategy will be determined by an increase in the number of significant investigative leads connecting police agencies to homicides.

DECISION UNIT/PROGRAM: Critical Incident Response Group (CIRG): National Center for the Analysis of Violent Crime (NCAVC) DOJ CORE FUNCTION: Envestigation and Prosecution of Criminal Offenses

DOJ STRATEGIC GOAL 1.1: Reduce violent crime, including organized crime and drug and gang-related violence.

TIER 1-3: National and Economic Security, Criminal Enterprise and Public Integrity, and Individuals and Property FBI STRATEGIC GOAL: Reduce the Impact of the most significant crimes that affect Individuals and property.

A. Data Validation and Verification:

ACS - Automated Cases Support database that captures all information pertaining to administration of cases

NCAYO / VICAP Records - The NCAYO / VICAP programs collect and verify data internally.

B. FY 1999 Performance Report:

** The distribution of a PC-based VICAP System to police agencies, the accompanying system conversion, and the resulting uploading of back-logged cases, will result in a dramatic increase in the number of forms submitted.

C. Isaues Affecting Selection of FY 2000 and 2001 Plans

D. Additional Footpoles

- These figures represent serial rape, threat assessment, and equivocal death cases
- *** These figures include requests for assistance by FBI Field Offices
- **** These figures represent training provided to international police, National Academy students, and other Federal, state, county, and local law enforcement.

Violent Crime Major Offender Program-Reactive

The FBI must retain its capacity to respond to and investigate other violent crimes that impact on the American public. For example, the Internet has become a versatile mechanism for extortionists who transmit their demands to and from a variety of locations making it virtually impossible for local law enforcement to address the problem. The FBI recently investigated an extortion case in which a subject attempted to extort \$5 million from the CEO of Microsoft Corporation. The subject requested that all responses to his demands be sent to an address on the Internet and the money sent to a bank in Luxembourg. This investigation involved leads in several states as well as a foreign country. This was one of the first investigations in which a court authorized intercept was utilized on the Internet. Similar problems surround kidnaping investigations where abductors use cellular telephones and digital communication devices to transmit ransom demands thwarting local law enforcement efforts to safely recover the victims.

The FBI must also maintain its commitment to assist local law enforcement in the location and apprehension of fugitives. A larger number of criminals are fleeing interstate and abroad. Technological advances that allow the making of false identification and passports makes it easier for subjects to flee the jurisdiction in which the crime was committed. Many local and state jurisdictions continue to depend on the FBI to utilize its resources and expertise to locate and apprehend these violent offenders. These violent fugitives, left unabated, continue to commit crimes of violence and other crimes that have a significant impact on society. These matters often require resource-intensive and multi-jurisdictional investigations.

The immediacy of these situations for potential harm to individuals and/or the public, the multi-jurisdictional and geographical involvement, as well as the employment of other complex and manpower intensive investigative techniques, requires FBI expertise and rapid response to such incidents.

Skills: FBI investigative programs cut across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology: The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identify and forecast trends, effect an appropriate response to emerging issues, and assess operational effectiveness. Currently, FBI agents and analysts have limited automated means, through non-global "stove-pipe" systems to link subjects of investigations, link various cases, and identify patterns of illicit activity.

Operational Processes.

- Maintain and enhance a reactive capability to address traditional incident driven violent crime investigations.
- Bank robbery investigations: Maintain and enhance the FBI's capability to address interstate, serial and takeover bank robberies.
- Liaison: Maintain a strong working relationship with state, local and other federal law enforcement agencies as well as with the banking and financial community.

Anticipated Outcome Measures: Successful output indicators will reflect steadily increasing resolutions of bank/armored car robberies, with the arrest and conviction of subjects and the recovery of stolen items/money. Outcome measures will include the number of serial bank robbers, bank robbery gangs and takeover robbers arrested and convicted. These performance indicators will be tracked through the FBI's Bank Robbery Statistical Applications (BRSA) program. BRSA will track total violations and resolutions, number of arrests and convictions and will track recovery of stolen money. In addition this system allows investigators to query the system to search for similarities in events, to include modus operandi, subject descriptions and other valuable data in an effort to link cases nationwide.

DECISION UNIT/PROGRAM: Violent Crime Major Offenders Program (VCMOP) Reactive

DOJ CORE FUNCTION: Investigation and Prosecution of Criminal Offenses.

DOJ STRATEGIC GOAL: Reduce the level of violent crime by taking violent criminals and gangs off our streets.

TIER 3: Individuals and Property

PBI STRATEGIC GOAL: Reduce the impact of the most significant crime that affect individuals and property.

A. Data Validation and Verification:

MAR - The FBI's Monthly Administrative Report (MAR) is a system that tracks the number of cases opened, pending, and closed within any given time period. Data is verified through the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to source docurrents contained in the FBI files.

ISRAA - The FBI's Integrated Statistical Reporting and Analysis Application (ISRAA) is a centralized database through which the FBI tracks statistical accomplishment of cases from inception to closure, e.g., arrests, locates, informations, indictments, and convictions. Before data are entered into the system they are reviewed and approved by an FBI field manager. They are subsequently verified though the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to source documents contained in the FBI files.

BRSA - Bank Robbery Statistical Application is a system that tracks the data pertaining to bank robberies from the original incident until final resolution.

VCMOS Program - The VCMOS Program collects and verifies date internally.

B. FY 1999 Performance Report:

C. Isanes Affecting Selection of FY 2000 and 2001 Plans

1 In accordance with the Attorney General's guidance of not projecting targeted levels of performance for certain indicator types

D. Additional Featuries:

VCMO reactive matters include such violations as bank robbernes, fugitives, kidnipings, extortions, assaulting or killing Federal officers, Hobbs Act violations, and serial killings.

Reflects the first six months of 1999, the most current statistics available.

Major Theft (MT)

The strategic approach for the MT program focuses upon identifying, disrupting, and dismantling the criminal organizations and professional theft groups responsible for creating the increase in the interstate theft crime problems. This investigative strategy includes the Enterprise Theory of Investigation and targets the most significant organizations. It seeks to create an effective and ongoing deterrent designed to prevent criminal conspiracies from defrauding major U.S. industries, and identify, disrupt and dismantle existing and emerging organized criminal enterprises whose activities affect the United States.

Three major areas of concern in the Major Theft program are: 1) cargo and high tech thefts, 2) national and international vehicle theft, and 3) organized thefts of other high value commodities by professional theft groups and criminal organizations. The impact of these crimes nationally has been magnified in recent years. At the same time, local and state law enforcement have also de-emphasized theft matters or respond to them in a strictly reactive posture. Further contributing to this crime problem is the ever increasing sophistication and extensive networking of many of the professional groups, criminal enterprises, and foreign criminal groups which are responsible for a significant portion of these thefts.

Skills: FBI investigative programs cut across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology: The FBI's operational strategic goals depend on a robust intelligence and analytical capability to proactively identify and forecast trends, effect an appropriate response to emerging issues, and assess operational effectiveness. Currently, FBI agents and analysts have limited automated means, through non-global "stove-pipe" systems to link subjects of investigations, link various cases, and identify patterns of illicit activity.

Operational Processes:

- Data collection and analysis of IT information, trends and patterns must be improved to reveal existing and emerging crime problems and to identify criminal organizations to be targeted by the field.
- interstate theft task forces must be adequately funded, trained and technically supplied.
- Focus resources on quality cases targeting those organized criminal groups and enterprises involved in cargo/high tech theft, national and international vehicle theft, and organized thefts.

Anticipated Outcome Measures: In the area of Major Theft, indicators of successful implementation of the strategy will measure the FBI's success in disrupting and dismantling targeted professional/organized theft groups and criminal enterprises, reducing the rate of interstate shipment theft, reducing the economic loss to individuals and businesses due to fraudulent activity, reducing the number of stolen motor vehicles, and increasing the percentage of stolen motor vehicles recovered. The success of this program will no longer be solely based on the number of indictments, arrests, and recoveries obtained. Evaluation of this program will be based on reductions in the overall theft numbers based upon statistical data and law enforcement/industry surveys.

DECISION UNIT/PROGRAM: Violent Crime Major Offenders Program (VCMOP): Major Theft Program (MT)
DOJ CORE FUNCTION: Investigation and Prosecution of Criminal Offenses.

DOJ STRATEGIC GOAL: Reduce the level of violent crime by taking violent criminals and gangs off our streets.

TIER 3: Individuals and Property

FBI STRATEGIC GOAL: Reduce the Impact of the most significant crims that affect individuals and property.

The TURK System provides data which measures the areas in which investigative efforts are expended, identifies trends, and provides quantitative data used in the budgetary proces;

9. PY 1999 Performance Report:

C. Lause Affecting Selection of FY 2000 and 2001 Plans

** Recent FBI intelligence has indicated crime organizations for significant levels of interstate theft. The FBI is dumently identifying these organizations and will begin focusing resources on dismantlements.

† In accordance with the Attorney General's guidance of not projecting targeted levels of performance for certain indicator types.

D. Additional Postnotes:

Definitions of Torms or Explanations for Indicators and Data Sources

For FY 2000, the VCMO Program reorganized its subprogram areas and the above statistics reflect this reorganization.

Reflects the first six months of 1999, the most current statistics available.

Telemarketing Fraud-Internet Fraud

To counter frauds committed against unsuspecting individuals, an effective blend of criminal, civil, and administrative enforcement actions must be promoted. Furthermore, investigative and intelligence information must be shared with all levels of law enforcement. The FBI is bracing itself for the disastrous potential of Internet Fraud as a new means for experienced criminals to reap huge amounts of illicit gains. The low cost of accessibility for criminals, combined with the increasing cost of tracking them down by law enforcement, presents a serious problem for the FBI in the future to protect individual consumers. Strategies to coordinate information within law enforcement and regulatory authority at the federal level, as well as across other levels of government and the private sector, will be crucial. This increase in intelligence gathering must be integrated with a high degree of training and technical infrastructure buildup in order to operate within this new and complicated territory for investigations.

Skills: FBI investigative programs out across a variety of disciplines and require a wide range of investigative, analytical, research, language and technical skills and abilities.

Information Technology: Technology affects the Department not only as the object of crime, but also when criminals use high-tech tools to commit crimes. This system will greatly enhance capabilities to track and monitor crime trends, as well as coordinate response and efficiently allocate resources.

Operational Processes.

- Reduce the number of U.S. citizens being victimized by fraudulent Canadian telemarketers.
- Coordinate federal and state telemarketing investigations/prosecutions.
- Development of telemarketing fraud prevention programs and enhance intelligence base.
- Provide increased training on investigation of domestic and international fraud.
- Increase liaison and outreach to government and industry.

Anticipated Outcome Measures: Although success in these types of investigations will still be important to gauge in terms of economic loss, the FBI must attend to ways to simplify the investigative process as criminals switch from traditional forms of fraud to Internet-based fraud.

DECISION UNIT/PROGRAM: White Coller Crime/Telemarketing Frand-Internet Fraud

DOJ CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses

DOJ STRATEGIC GOAL 1.4: Reduce white-collar crime, including public corruption and fraud.

DOJ PERFORMANCE GOAL: 1.4.3 - High Technology/Computer Crime; 1.4.4 - Financial Institutions, Telegrarketing, and Other Fraud.

TIER 3: Individuals and Property

STRATEGIC GOAL: Reduce the impact of the most significant crimes that affect individuals and property.

DECISION UNIT/PROGRAM: White Collar Celme/Telemarketing Fraud-Internet Fraud*

A. Data Validation and Verification:

The data for relementating fraud measures is collected in FBI centralized databases.

Before data are entered into the system they are reviewed and approved by an FBI field manager. They are subsequently verified through the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods data in the databases are traced back to source documents contained in FBI files. There is high confidence in the reliability of this data.

B. FY 1999 Performance Report:

- C. Issues Affecting Selection of FY 2000 and 2001 Plans
- † In accordance with the Attorney General's Guidance of not projecting targeted levels of performance for certain indicator types
- D. Additional Footgates
- * The FSH is in the process of developing its Internet Fraud program, and currently does not collect data based on Internet Fraud as a distinct classification of crime.
- ** These data are estimates for FY 1999

Highlights of Tier Three FY 1999 Performance:

- A coordinated investigation by the FBI, state and local agencies led to the safe recovery of Ashley Taggert on April 29, 1999, and identification of a subject who was arrested and charged locally with kidnaping, attempted murder and rape. Ashley Taggert was abducted from her backyard in Lancaster, Ohio.
- On January 28, 1999, Joseph M. Klein, a Broadway musical director, was arrested after he traveled from New York to Maryland for the purpose of meeting with a 13 year-old boy (actually a UCA from the online relationship) with the intent of engaging in illicit sexual activities. A search of Klein's Manhattan residence uncovered in excess of 5,000 pornographic images of children as young as five-years old engaged in various sexual acts or poses, as well as numerous other incriminating documents. Review of this material identified 45 potential child victims and numerous subjects who were trading in child pornography or attempting to entice children online into illicit sexual conduct. Klein pled guilty to a two count federal information and criminal forfeiture of his computer system.

Summary of FBI Accomplishments for 1999

While the FBI is working to develop outcome oriented performance measures, the following is a summary of traditional FBI workload and accomplishments:

During FY 1999, the FBI had significant success under each of its nine goals in terms of traditional accomplishments (arrests, indictments, convictions). Overall, the FBI indicted 18,280 individuals, convicted 21,256 individuals and arrested 35,031 individuals on various federal and state charges. In addition, the FBI's National Instant Criminal Background Check System (NICS) denied firearm purchases to 60,061 individuals having a disqualifying record, such as a criminal history, dishonorable discharge, or restraining order. Within this population, the FBI identified 1,706 fugitives from justice. FBI efforts also led to \$664,833,337 in fines,

\$412,612,017 in recoveries and \$3,911,833,065 in restitutions, nearly one-third more than the entire FBI budget,

The added dimension of prevention has new and significantly different challenges, especially in the areas of intelligence, predictive analysis, liaison, and information technology. Prevention requires more, better, and faster access to information. It also requires a holistic approach to crime problems where FBI resources are leveraged with those of other federal, state and local law enforcement, private sector organizations, community groups, international law enforcement and the intelligence community. During FY 1999, the FBI made substantial progress in these areas, including reorganizing FBI Headquarters to include a new Investigative Services. Division that will focus on intelligence and predictive analysis and a new Counterterrorism Division that will build capacity to prevent terrorism against the U.S. Further, in FY 1999, FBI relationships and partnerships improved with all of the above-mentioned groups across all program areas.

2001 Budget Initiatives

For 2001, the FBI is proposing program increases for 8 budget initiatives that directly support the operational and support strategies identified in the FBI Strategic Plan for 1998 - 2003. These initiatives include: Counterintelligence, Information Collection and Analysis, Training, Investigative Support, Counterterrorism, Violent Crimes, Technology Crimes, and Law Enforcement Services. Proposed program increases focus on eliminating the deficiencies that have led to the "performance gap" in critical mission areas.

Initiative Summary by Appropriations Account (Direct Funding) (Dellars in thousands)

Federal Bureau of Investigation Salaries and Expenses Justification of Proposed Changes in Appropriations Language

The 2001 budget estimates include proposed changes in the appropriations language listed and explained below. New language is italicized and underlined, and language proposed for deletion is bracketed.

Salaries and Expenses

For necessary expenses of the Federal Bureau of Investigation [for detection, investigation, and prosecution of crimes against the United States]; including purchase for police-type use of not to exceed [1,236] 1.432 passenger motor vehicles, of which [1,142] 1.225 will be for replacement only, without regard to the general purchase price limitation for the current fiscal year, and hire of passenger motor vehicles; acquisition, lease, maintenance, and operation of aircraft; and not to exceed \$70,000 to meet unforeseen emergencies of a confidential character, to be expended under the direction of, and to be accounted for solely under the certificate of, the Attorney General, [\$2,337,015,000] \$3,277,562,000; of which not to exceed [\$50,000,000] \$100,000,000 for automated data processing and telecommunications and technical investigative equipment and not to exceed \$1,000,000 for undercover operations shall remain available until September 30, [2001] 2002; of which not less than [\$292,473,000] \$300,473,000 shall be for counterterrorism investigations, foreign counterintelligence, and other ac ities related to our national security; of which not to exceed \$10,000,000 is authorized to be made available for making advances for expenses arising out of contractual or reimbursable agreements with State and local law enforcement agencies while engaged in cooperative activities related to violent crime, terrorism, organized crime, and drug investigations; [and of which not less than \$50,000,000 shall be for the costs of conversion to narrowband communications, and for the operations and maintenance of legacy Land Mobile Radio systems: \(\) Provided, iThat such amount shall be transferred to and administered by the Department of Justice Wireless Management Office: Provided further I. That not to exceed \$45,000 shall be available for official reception and representation expenses[: Provided further, That no funds in this Act may be used to provide ballistics imaging equipment to any State or local authority which has obtained similar equipment through a Federal grant or subsidy unless the State or local authority agrees to return that equipment or to repay that grant or subsidy to the Federal Government l.

[In addition, \$752,853,000 for such purposes, to remain available until expended, to be derived from the Violent Crime Reduction Trust Fund, as authorized by the Violent Crime Control and Law Enforcement Act of 1994, as amended, and the Antiterrorism and Effective Death Penalty Act of 1996.] (Department of Justice Appropriations Act, 2000, as enacted by section 1000(a)(1) of the Consolidated Appropriations Act, 2000 (P.L. 106-113).)

Explanation of changes

- 1. Modify language to achieve conformity and consistency with other Department of Justice Components.
- 2. Change in motor vehicle purchase authority is based upon a proposed increase in new positions for 2001.
- Change in carry-forward authority to support on-going automated data processing and telecommunications and technical investigative equipment projects.
- Strike House language regarding transfer of radio funding; proposed 2000 transfer would be permanent. The amount of \$50,000,000 is included as radio funding in the Narrowband Communications account.
- 5. Delete language restricting ballistics imaging equipment due to new Memorandum of Understanding (MOU) signed by the FBI and BATF on December 2, 1999. Under the new MOU, the FBI no longer provides ballistic imaging equipment for state and local law enforcement.
- Language for Violent Crime Reduction Trust Fund is deleted. No appropriation from the Violent Crime Reduction Trust Fund
 is requested in 2001 because authorization for this fund expires in 2000.

BASE PROGRAM DESCRIPTION:

Organized Criminal Enterprises (OCEs) are a continuing and self-perpetuating criminal conspiracy employed by groups that are hierarchical in structure. These organizations use fear, intimidation and manipulation to control and corrupt anyone that stands in their way. OCE's are driven by one thing - the potential generation of profits, and they will stop at nothing to maximize their return on investment. This singular cause leaves thousands of victims in its wake, destroying the lives of innocent people and threatening the social fabric that holds local communities, towns, states and the nation together.

The FBI's organized crime and drug investigations are increasing in complexity. The criminal enterprises being targeted enjoy access to technology and ease of mobility that was unimaginable a few years ago. OCEs maintain their position through the use of violence or threats of violence, corruption of public officials, and extortion. These groups engage in commonly known activities such as drugs and arms trafficking, smuggling of automobiles and people, and trafficking in stolen art. However, much like the multinational conglomerates, they have expanded their activities into areas such as smuggling of embargoed commodities, industrial and technological espionage, financial market manipulation and the corruption and control of groups within and outside of the legal state system. With their successful forays into these areas, tremendous amounts of illegal profits are laundered through multiple investments in banks, financial institutions and businesses around the globe.

The same crime organizations that threaten U.S. cities also conduct these crimes on an international scale. The threat to U.S. interests from these emerging international crime; groups grows more serious every day. These international crime organizations corrupt key officials in major industries, economic and customs positions, and continue to run large-scale money laundering operations by utilizing banks, stock exchanges, venture capital opportunities and commodities markets, all of which undermine the financial security of world markets. These organizations, with their wealth and power, can manipulate financial sectors, jeopardizing the pensions and savings of ordinary citizens.

Whether addressing domestic or international organized crime, the efficient use of resources and the effective investigation of crime require dependable intelligence gathering and sharing function. If the most serious criminal enterprises are to be identified and investigated the scope and sophistication of existing and emerging criminal enterprises pose a complex investigative challenge to law enforcement. Criminal enterprises are fluid. They change their operations frequently to avoid apprehension and utilize modern telecommunications technology to frustrate law enforcement efforts. Accurate intelligence, more than ever, has become the "eyes and ears" that allow law enforcement to know which investigative techniques to use, and when and where to apply them.

Among the pertinent strategies for the OCE Decision Unit include:

- Identify, penetrate, and dismantle major organized criminal enterprises, including street gangs engaged in illegal activity;
- Implement a multi-year approach to disrupt and dismantle all major organized criminal enterprises;
- Support comprehensive strategies against violent crime through the establishment of multi-agency task forces;
- Improve international cooperation against violent and organized crime through enhanced liaison and international training activity;
- Reinforce the Southwest Border Initiative and strengthen the centralized management and coordination of the Organized Crime Drug Enforcement Task Forces activities;
- Expand and improve our overseas law enforcement presence, with a focus on better liaison and cooperation with foreign governments; and
- Increase methamphetamine investigations, and counter the rapidly emerging problem of Mexican-base heroin trafficking.

2001 Budget Initiatives:

For 2001, the FBI is requesting an increase of \$7,100,000 for the OCE Decision Unit within the following initiatives:

	Pos.	(Agents)	WYs	Amount
	108	(Vikenia)	# 13	~ 3300.
Information Collection, Management, and Analysis		()		\$5,000
Investigative Support	414	نسا	244	2,100
Total		()	•••	\$7,100

Justifications for program increases requested are included in the respective budget initiative presentations.

2001 Estimate	<u>4.338</u>	4.184	484.134
Increase/Decrease	8	4	612

BASE PROGRAM DESCRIPTION:

United States citizens and businesses lose billions of dollars each year due to criminals engaged in non-violent fraudulent enterprises. The globalization of economies and financial systems, dramatic technological advances, declining corporate and individual ethics, and the sophistication of criminal organizations annually increase the volume of illegal acts characterized by deceit, concealment, or violations of trust. The loss thus incurred is not merely monetary, for it contributes to a potential loss of confidence and trust in financial institutions, public institutions, and industry.

Private industry in the United States controls trillions of dollars in assets, an inviting target for criminal schemes. Frauds against businesses range from embezzlements to technological attacks on a corporation's intellectual property. The U.S. Government also manages billions of dollars to carry out public policy. The General Accounting Office estimates that as much as 10 percent of funds appropriated for domestic programs is lost to fraud in the procurement and contracting process.

Through the White Collar Crime (WCC) program, the FBI targets criminal enterprises that seek illicit gains through fraud and guile.

From the overwhelming number and variety of WCCs, the FBI has identified and classified the most egregious crime problems into 11 national priority crime problem areas: Health Care Fraud, Public Corruption, Financial Institution Fraud, Government Fraud,

Insurance Fraud (non-health care), Securities and Commodities Fraud, Telemarketing Fraud, Bankruptcy Fraud, Environmental Crimes, Money Laundering, and Intellectual Property Rights Violations.

2001 Budget Initiatives:

For 2001, the FBI is requesting an increase of 8 positions (2 agents), 4 workyears, and \$612,000 for the WCC Decision Unit in the following initiative:

				Amount
	Pos.	(Agenta)	WY3	\$000
Technology Crimes	8	(2)	4	\$612

2001 Estimate	10.625	10.312	1,329,838 @
Increase/Decrease	228	115	41,743

BASE PROGRAM DESCRIPTION:

Through the Other Field Programs, the FBI investigates crime in Indian Country, criminal street gangs, violations of the bank robbery statutes, carjackings, crimes against children, crimes on government reservations, thefts from interstate shipment, interstate transportation of stolen property and motor vehicles, assaults/iterests to federal officers, assaults on the President, theft of and/or destruction of government property, counterterrorism, and sectority countermeasures issues. The Other Field Programs is responsible for the location and apprehension of federal, state and local flugitives charged under the Fugitive Felon Act with unlawful flight to avoid prosecution or confinement for violent crimes and other serious felony offenses. The FBI is able to conduct simultaneous investigations in multiple jurisdictions and has demonstrated its ability to coordinate and successfully resolve the most complex, sensitive and organizationally focused investigations. Given the ever changing nature of crime in the United States, FBI mission responsibilities require the maintenance of full operational capabilities in each of these areas.

In addition, by Congressional mandate, the FBI is the only federal law enforcement agency that conducts criminal investigations of violations of Civil Rights statutes. The Civil Rights Program investigates violations of the federal Civil Rights Statutes and provides assistance in the investigation of allegations of violation of applicable federal laws which protect the civil rights of all persons in the United States. The FBI is mandated as the lead federal agency to investigate and deter hostile acts of terrorism, and when necessary.

to apprehend those individuals and groups whose aim is to harm the United States through the acts of terrorism,

The Other Field Programs also contains the FBI's Critical Incident Response Group (CIRG). CIRG was established in 1994 to facilitate the coordination of FBI responses to major law enforcement crises and special investigations. The CIRG responds to crimes which pose great dangers and require skills that are not routinely available in many law enforcement agencies. When faced with complex incidents, CIRG responds by providing trained, well equipped and experienced negotiators, crisis managers, tactical and aviation personnel, supported by pertinent research of successful techniques used in similar situations. Behavioral science experts advise tacticians, negotiators, and crisis managers regarding subjects and potential strategies. These resources greatly enhance the potential to successfully resolve complex crisis situations or investigations that require such expertise.

Terrorism, violent crime and anti-government crime are priority areas of concern for the FBI. The bombs that damaged the World Trade Center and destroyed the federal building in Oklahoma City are vivid examples of how these types of crimes impact on our society and give some indication of the minds of these criminals. Presidential Decision Directive (PDD)-39 and the Director of Investigative Agency Policies Resolution 12 reemphasizes the role of the FBI as the lead federal agency in major domestic situations.

The cost of crime has two dimensions: a dollar amount calculated by adding up property losses, productivity losses, and medical bills, and an amount less easily quantifiable because it takes the forms of pain, emotional trauma, injury and death. Researchers have found that crime victimization generates \$105 billion annually in property and productivity losses and outlays for medical expenses. This amounts to an annual "crime tax" of roughly \$425 per man, woman, and child in the United States. From the small business owner who is literally crippled because he refuses to pay "protection" money to the neighborhood gang, to the families who are hostages within their homes, living in neighborhoods ruled by predatory drug trafficking gangs, the harmful impact of gang violence on its victims individually, and on society collectively, is both physically and psychologically debilitating. The destabilizing effect of criminal gangs on our communities, while difficult to quantify, is enormous. Perhaps the most disturbing trend is the rise in crimes related to the sexual exploitation of children and the growing use of the Internet to share pornographic pictures of minors and to use it as a tool to identify and recruit children into sexually illicit relationships.

2001 Budget Initiatives:

For 2001, the FBI is requesting an increase of 228 positions (63 agents), 115 workyears, and \$41,743,000 for the Other Field Programs Decision Unit within the following initiatives:

	Pos.	(Agents)	WYs	Amount \$000

			5,300

BASE PROGRAM DESCRIPTION:

While the United States continues to be plagued by traditional crime problems, the globalization of crime and the increased sophistication of new crimes presents challenges that law enforcement must be prepared to overcome. From complex cyber-crimes to intricate fraud schemes, the skill set required to solve crimes today is far different from even ten years ago. Moreover, advances in technology and travel coupled with the emergence of a "borderless" world mean that the skills and abilities of law enforcement must be continually enhanced at an alarmingly fast rate. The FBI must meet these challenges at a time when, due to recent large increases in new agent hires, approximately 30 percent of the FBI's agent workforce has less than 4 years of experience.

The FBI is committed to meeting these challenges by providing high quality training to its personnel and the law enforcement community at large. The cornerstone of FBI training efforts is the new agent training program, which provides comprehensive instruction to ensure that entry level Special Agents possess the basic knowledge and skills required to serve the American public. Among the components of the new agent training curriculum are behavioral science, communications/interviewing, ethics, legal instruction, informant development, physical finess/defensive tactics, evidence, firearms, EEO/sensitivity training, and practical problems. Agent trainees also receive instruction in each of the FBI's investigative programs: organized crime, drugs, violent crimes,

white-collar crimes, counterintelligence and civil rights. During FY 1999, the FBI trained 718 new agents through the new agent training program.

There is also a continuing need to provide training and development courses for FBI personnel assigned to field offices and FBI Headquarters. This training is necessary to maintain and enhance the professional skills of FBI personnel in their present assignments, to equip personnel to handle new investigative and administrative requirements, and to develop the leadership and management skills of potential supervisors, managers, and executives. During FY 1999, the FBI trained 11,250 employees through in-service courses at the FBI Academy.

The FBI also provides instruction for state and local criminal justice practitioners, both at the FBI Academy and throughout the United States at state, regional, and local training facilities. The principal course for state and local law enforcement officers is the FBI National Academy, an 11 week multi-disciplinary program for officers who are considered to have potential for further advancement in their careers. During FY 1999, 1,069 state and local law enforcement officers attended the National Academy.

In addition to sessions offered at the FBI Academy, the FBI conducts and participates in courses and seminars at state, regional, and local training facilities. These training sessions cover the full range of law enforcement training topics such as hostage negotiation, computer-related crimes, death investigations, violent crimes, criminal psychology, forensic science, and arson. During FY 1999, 117,599 criminal justice personnel received training at state, regional, and local training facilities from FBI instructors.

Because of the increasingly global nature and mandate of many of the FBI's investigative initiatives, the FBI has in recent years emphasized the need to train its foreign law enforcement partners through the International Training and Assistance Program. In 1999, the FBI provided training to 6,122 international police officers and executives representing 95 countries.

The FBI's precrainent law enforcement role has been forged by its ability to consistently recruit, retain, and manage one of the world's most talented workforces. The FBI's Applicant Program must continue to focus on all segments of society to ensure that we identify and recruit individuals who possess the required knowledge, skills, and abilities needed by the FBI. Dedicated employees with specific areas of expertise are vital to continued success in the FBI's effort to support the criminal justice community in the fight against crime and violence.

The FBI's total funded staffing level for FY 1999 was 28,731 positions. The on-board staffing level at the end of 1999 was 28,422

1561

employees, of which 11,667 were Special Agent and 16,765 support. To support the FBI's applicant program throughout the 56 field office territories, approximately 1,700 contract special investigators are utilized to conduct background investigations of persons being considered for all but the most sensitive positions. The FBI continues to provide recruitment processing, overall management and assignment of background investigations. Additionally, FBI personnel specialists review the results of contract background investigations for completeness and to determine the need for further inquiries.

2001 Budget Initiatives:

For 2001, the FBI is requesting an increase of \$5,300,000 for the Training, Recruitment and Applicant Decision Unit in the following initiative:

				Amount
	Pos.	(Agenta)	WY4	_ \$00 0

2001 Estimate	823	732	146,406
Increase/Decrease	105	52	25,970

BASE PROGRAM DESCRIPTION:

The successful investigation and prosecution of crimes requires, in most cases, the collection, examination, and scientific analysis of evidence recovered at the scene of the incident and obtained during the course of the investigation. Oftentimes, the availability and presentation of physical evidence is used in court to demonstrate the guilt, either directly or circumstantially, of the person on trial. In other instances, evidence can exonerate individuals wrongly accused of crimes. The Forensic Services program supports the operations of the FBI Laboratory, one of the largest and most comprehensive criminal laboratories in the world and the only full-service civilian federal forensic laboratory in the United States. The FBI Laboratory performs examinations of evidence for all duly constituted law enforcement agencies—federal, state, and local—in the United States.

The FSI Laboratory is recognized as a leader in the scientific analysis and solution of crime in the United States. Since its inception, the FSI Laboratory has consistently strived to enhance its service to the law enforcement and criminal justice communities. Through exhaustive analysis, appropriate methodologies are developed to apply the most recent scientific and technological innovations to the examination of forensic evidence in criminal investigations. The reliability of these techniques is crucial, not only to the law enforcement profession, but to the public it serves.

Examinations of evidence are performed, free of charge, for all duly constituted law enforcement agencies in the United States that do not have access to the sophisticated instrumentation and/or expertise necessary to perform forensic examination(s). During 1999, the FBI Laboratory examiners and technicians conducted \$66,778 examinations. Additionally, 1,417,819 latent fingerprint comparisons were performed and 1,023 suspects were identified by those exams. State and local investigations accounted for approximately 16 percent of forensic examinations in 1999.

The FBI Laboratory also provides investigative support for such programs as the Polygraph Program and the Field Photo Program. In 1999, the FBI conducted 6,400 polygraph examinations and produced 2,000,000 photographs.

2001 Budget Initiatives:

For 2001, the FBI is requesting an increase of 105 positions, 52 workyears, and \$25,970,000 for the Forensic Services Decision Unit within the following initiatives:

2001 Estimate	605	562	221.580
Increase/Decrease	15	7	57,272

BASE PROGRAM DESCRIPTION:

The Information Management, Automation and Telecommunications (IMAT) decision unit serves the American public through its support to all functional areas of the FBI: investigative; intelligence; law enforcement support; and administration. The mission of the IMAT program is to provide secure information management and information technology (IT) services support for the FBI's worldwide operational and administrative activities. The IMAT's goal is to provide IT systems capable of performing effective and efficient case management, information analysis, and intelligence sharing, both internally and with other law enforcement entities so that the FBI's success as an organization is realized and cooperation with other law enforcement entities is maximized.

The IMAT decision unit oversees activities associated with electronic information and productivity tools. It supports FBI investigative and administrative operations by providing the means for and assistance in management of information resources. IMAT resources include technology support and management personnel, computer data centers, and information technology centers. The program is responsible for maintenance of over 39 FBI computer systems and employs approximately 400 employees to support various automation systems. The IMAT supports an expansive inventory of intelligent workstations and peripherals, related software, data communications networks, voice communications, and rental of automated data processing equipment and commercial services.

The IMAT also maintains the FBI's central files, processes name checks for other federal agencies, and supports all telecommunications equipment and expenditures, as well as rental of other equipment to support the daily activities of all FBI employees. In addition, the IMAT implements the Communications Assistance for Law Enforcement Act, working to insure the continued capability of all law enforcement to conduct lawfully authorized electronic surveillance.

The FBI stands at the forefront of law enforcement agencies with its world-wide mission of predicting and deterring crime and protecting the nation's security interests. To accomplish this mission in an environment of international criminal, terrorist and hostile intelligence threats, all of which increasingly operate in cyberspace, the FBI requires enhanced information management and exchange capabilities. The FBI's current mainframe-based IT infrastructure is limited in its functionality for providing the types of information processing needed to satisfy today's investigative requirements. Success as an organization depends upon thorough and timely information collection, processing and dissemination. FBI field agents and analysts need superior computing capabilities to pursue their investigations. A stable, state of the art, IT infrastructure is fundamental to developing and implementing these enhanced capabilities and is, therefore, critical to investigative success.

The number and complexity of FBI cases continues to escalate, coordination with other law enforcement organizations is more critical than ever before, and computer crime and fraud investigations continue to increase in number. At the same time, FBI field offices function much as they have for many years, relying on people-intensive processes, paper-based systems, and traditional computer technology and office equipment. Many of the FBI's large-scale, mission-critical applications, still in use today, were developed and implemented in the mainframe environment. These legacy systems currently do not have the capability to process information such as externally prepared text documents, images, videotapes, and photographs. The FBI developed and implemented the Automated Case Support (ACS) system to electronically store and manage investigative case files. However, ACS is only capable of storage and retrieval of internally generated text documents. Imaging technology and communications capabilities that would facilitate handling large files has only recently matured and become commercially viable. Additionally, the FBI telecommunications infrastructure has reached its capacity and does not have sufficient additional capacity or speed to transmit multimedia files to and from various locations. For these reasons, enhancement of the FBI's IT infrastructure and systems is essential if the FBI is to successfully handle the complex, multi-jurisdictional, long-running investigations which are becoming more common, in today's world.

1556

2001 Budget Initiatives:

For 2001, the FBI is requesting an increase of 15 positions, 7 workyears, and \$57,272,000 for the IMAT Decision Unit within the following initiatives:

	Pos.	(Agents)	WYs	Amount _\$000
	4.94	C PRAIRE.	<u> </u>

. . . . ,

ACTIVITY: LAW ENFORCEMENT SUPPORT

Technical Field Support and Services	Perm. Pos.	Work-	Amount
2000 Appropriation Anticipated	241	229 .	\$138,985
2001 Base	241	229	141,888
2001 Estimate	245	231	167.083
Increase/Decrease	4	2	25,195

BASE PROGRAM DESCRIPTION:

The Technical Field Support and Services (TFS&S) program supports the investigative, national security, law enforcement services, and management and direction missions of the FBI through a variety of service and support programs that can be grouped along four general functional areas: (1) electronic surveillance; (2) technical operations; (3) wireless communications and engineering services; and (4) automotive fleet and property management. The mission of the TFS&S program is:

To provide engineering services, technical support, and equipment to FBI field offices and conduct necessary research and development to adapt technology for deployment against criminal and terrorist activities; to provide a fieldwide radio and wireless communications system services which are both spectrally efficient and provides attained levels of interoperability with other federal, state, and local government radio users where demands and increased reliance on interagency coordination and cooperation are essential; and to provide safe and reliable automotive fleet services to support FBI investigative requirements.

The FBI seeks to ensure there is a sufficient inventory of basic equipment to satisfy the demands of investigators and other personnel for technical equipment and services. Technical equipment often serves as part of a critical safety net to agents who must operate

under life-endangering or high-risk situations. The value of technical equipment and systems to investigations is directly tied to its availability and operability. The FBI will draw upon the expertise of in-house staff, other federal agencies, national laboratories, universities, and the private sector to develop solutions to new and emerging technologies that have an impact on law enforcement operations and capabilities. Special emphasis programs will continue in areas where the FBI has assumed leadership roles on behalf of the entire law enforcement community: electronic surveillance, technical operations and wireless communications. In conjunction with the Department of Justice Wireless Management Office, the planning, design, and implementation of a new nationwide wireless communications system will be carried forward. Efforts will be directed at ensuring the FBI has available trained and proficient electronics technicians and Technically Trained Agents (TTAs) to meet expected workload demands and provide scheduled maintenance of equipment and technical resources. Improved turnaround times for conducting forensic examinations of audio and video evidence, as well as examinations of other electronic devices, will be emphasized.

Through the programs, initiatives, and resources available to the TFS&S program, the FBI expects to:

- Provide technical equipment in support of field investigations.
- Provide new technologies and address critical shortfalls in technical investigative capabilities including electronic surveillance, technical operations, physical surveillance, special search techniques and training of personnel.
- Extend the lifecycle of already deployed equipment which cannot be replaced through scheduled preventative and corrective maintenance.
- Conduct research and development of new technologies in an effort to produce state-of-the-art investigative techniques, improve investigative and national security operational effectiveness and efficiency.
- Ensure the FBI maintains a sufficient corps of trained and experienced computer specialists, electronics technicians, and TTAs
 to support field office operations, both criminal and national security investigations, through the use of technical equipment
 and techniques.
- Provide safe and reliable automobile transportation with less vehicle downtime and cost for repairs and maintenance, thereby increasing investigative ability.

2001 Budget Initiatives:

For 2001, the FBI is requesting an increase of 4 positions, 2 workyears, and \$25,195,000 for the TFS&S Decision Unit within the following initiatives:

	Pos.	(Agenta)	WY:	Amount
Information Collection, Management, and Analysis	***	()		\$15,000

Criminal Justice Services (CJS)		Perm. <u>Pos</u> .	Work- <u>years</u>	Amount
2000 Appropriation Anticipated		2,290	2,182	\$210,066
2001 Base	-	1,732	1,624	149,604
2001 Estimate		1.732	1.624	149,604
Increase/Decrease				

BASE PROGRAM DESCRIPTION:

Through the CJS program, the FBI furnishes identification and criminal history record services to agencies who are authorized by federal statutes, regulations, and Executive Orders to utilize these services. Major services encompassed by the CJS program include: 1) Integrated Automated Fingerprint Identification System (IAFIS)- the automated system used for both civil and criminal fingerprint processing. IAFIS is designed to achieve a 2-hour response on electronic criminal submissions, thus increasing the positive identification of repeat offenders and wanted individuals prior to release; 2) National Crime Information Center (NCIC) 2000- used for the compilation, dissemination, and exchange of timely and critical criminal justice and law enforcement information, such as criminal history data, wanted person information, stolen vehicle data, etc.; 3) National Instant Criminal Background Check System (NICS)- was established to determine the eligibility of persons purchasing firearms. The President believes that the modest cost of a background check under NICS should be borne by those desiring to establish their eligibility to purchase a gun. Therefore, in 2001 the FBI is requesting the establishment of a user fee to fund the NICS program. With NICS funded on a reimbursable basis, the CJIS 2001 base was decreased by the corresponding amount; 4) Law Enforcement On-line (LEO)- provides a communications mechanism to link all levels of the law enforcement, criminal justice, and public safety communities in all parts of the United States, supporting broad, immediate dissemination of information concerning the best technologies and practices in their disciplines; and 5) Uniform Crime Reporting/National Incident Based Reporting System (UCR/NIBRS)- crime reporting information, cellected and retrieved through local, state, and federal systems, provides the criminal justice community with consistent crime statistics, which are essential if these entities are to continue to effectively and efficiently serve the public. Through the use of this data, policy makers can study crime trends and allocate personnel resources according to these trends.

2001 Estimate	2,149	2.024	194,384
Increase/Decrease			600

BASE PROGRAM DESCRIPTION:

The Management and Administration (M&A) encompasses several FBI entities responsible for providing organizational leadership and overall administration of the FBI, including the Offices of the FBI Director and Deputy Director, the Office of General Counsel, the Inspection Division, the Office of Equal Employment Opportunity Affairs, the Office of Professional Responsibility, the Finance Division, the Administrative Services Division, and the Office of Public and Congressional Affairs. Collectively, these entities enable the effective direction, control, and administration of the FBI's resources.

The various functions within the M&A Decision Unit have a common focus, which is to provide the best possible leadership, direction, and support to the FBI's employees who are assigned to field offices and other locations throughout the FBI. The mission statement for M&A Decision Unit is as follows:

To lead the FBI effectively through the challenges and changes which are continuously presented to federal law enforcement; to provide effective direction and support to investigative personnel who bravely and willingly place their lives in jeopardy each day; and to ensure there are adequate resources to address the FBI's criminal investigative, national security, and law enforcement support responsibilities.

1562

2001 Budget Initiatives:

For 2001, the FBI is requesting an increase of \$612,000 for the M&A Decision Unit in the following initiative:

				Amount
	Pos.	(Agents)	′ <u>WYs</u>	\$000
Counterterrorism	***	()	124	\$600

Initiative: Counterintelligence

			Amount
Decision Unit	Pos.	<u>WYs</u>	<u>(\$000)</u>
Other Field Program (OFP)	138	69	- \$19.115

In an effort to become more effective and responsible in addressing major crime and national security problems facing the United States and the American people, the FBI undertook an exhaustive strategic planning process during 1998. This process required the FBI to rethink its strategic approach to its national security mission. As a result of this process, the FBI developed the FBI Strategic Plan: 1998-2003, which sets the agenda for the FBI by concentrating on specific five-year, strategic goals and key functional strategies for achieving those goals.

A cornerstone of the FBI's Strategic Plan for 1998 - 2003, relative to foreign counterintelligence investigations and activities, is the following strategic goal:

Identify, prevent, and defeat intelligence operations conducted by any foreign power within the United States or against certain U.S. interests abroad that constitute a threat to U.S. National Security.

In connection with the aforementioned strategic planning process, each of the FBI's operational/investigative programs and field offices have developed five-year program plans which identify the crime problems and issues that must be addressed, establish long-term goals and objectives, delineate the critical success factors that affect performance, and identify the resources and initiatives necessary to support accomplishment of the established goals. While conducting the assessments required to develop these program plans, as well as its strategic plan, the FBI identified a number of performance gaps in its mission-critical areas. Improving on these requirements within the FBI is the basis for the total requested level of resources within the FBI's FY 2001 budget request,

The FBI's Foreign Counterintelligence (FCI) program has identified that the single most important factor in accomplishing the identification, prevention, and defeat of foreign intelligence operations is the expansion of human source coverage. Several steps have been taken in support of this overall strategy, including guidance to FBI field offices and mechanisms for validating human sources on a regular basis.

Coordination with the U.S. Intelligence Community (IC) and with private sector entities to identify and counter emerging intelligence threats is also critical to the FCI Program. In this regard, the FBI's National Security Division has expanded its liaison relationship

with elements of the IC in an effort to more fully address emerging intelligence threats from countries of the former Soviet Bloc, and the FBI has significantly enhanced liaison with other IC agencies regarding surveillance operations. Liaison with the private sector has also been increased through the Awareness of National Security Issues and Response (ANSIR) Program, which serves as the FBI's primary point-of-contact for all industry inquiries regarding national security matters. Through ANSIR E-mail, the FBI provides regular warnings regarding techniques used to clandestinely acquire corporate proprietary information to approximately 40,000 corporations.

To realize the critical success factors and implement near-term actions associated with this strategic goal, the FBI proposes a counterintelligence initiative for 2001.

Justification for Resources Requested

Item: OFP - Other Field Programs, 138 positions, 69 FTE, and \$19,115,000

As noted within the FBI Strategic Plan: 1998-2003, the single most important factor in accomplishing the goals and objectives associated with the FBI's FCI Program is the expansion of the program's human source coverage. For this reason, the field offices containing major FCI Programs have been provided guidance describing the types of human sources that are required to support the FCI Program at a national level.

In this regard, it was also recognized that the FBI must implement a mechanism for conducting uniform reviews of the bona fides, reliability and anomalies associated with FCI human sources on a regular basis. Pursuant to this requirement, the FBI developed a methodology for conducting Asset Validation Assessments (AVAs). An AVA is a determination, supported by multiple forms of evaluation, such as operational testing and personality assessment, that establishes that a human source is reliable and under the FBI's operational control and providing operationally valuable services.

Moreover, the FBI Strategic Plan: 1998-2003 established that enhancement of the FBI's technical collection capabilities are critical to the accomplishment of the goals and objectives associated with the FBI's FCI Program. Recognizing the need to meet the current demand for technical support while at the same time increasing the level of resources dedicated to research and development efforts, the FBI has implemented the National Foreign Intelligence Surveillance Act (FISA) Evaluation Program (NFEP). The NFEP serves as a mechanism to maximize the efficiency of collection operations and thereby increase the number of personnel and the amount of funding available to support the development of new collection methodologies. Activities associated with the NFEP focus on

evaluating the effectiveness of FISA-authorized techniques against each FCI target and affect recommendations for discontinuing/adding techniques where appropriate.

The FBI's FCI Program has recorded several successes relative to the identification, prevention and defeat of intelligence operations conducted by foreign powers. Specifically, the NSD, in coordination with other elements of the IC, has directly responded to illegal activities of intelligence services and helped to affect a strong diplomatic response to several instances involving inappropriate behavior on the part of diplomats from foreign countries.

The requested enhancement would enable the FBI to more aggressively address counterintelligence investigations related to national security threats. Without these resources, the FBI would be unable to dedicate the resources necessary to reduce the success of foreign intelligence services.

Initiative: Information Collection, Management, and Analysis

Decision Unit	Pos.	WYs	Amount
Information Management, Automation			
and Telecommunications (IMAT)	15	7	\$40,838
Technical Field Support Services (TFS&S)			15,000
Organized Criminal Enterprises (OCE)		-11	5,000
Other Field Programs (OFP)	59	30	13.389
Total	74	37	74,227

The 2001 budget request is designed to provide the FBI with a comprehensive and coherent intelligence infrastructure that will address the weaknesses identified in the FBI Strategic Plan and support the individual investigative program plans developed to implement the strategy. The infrastructure addresses all aspects of the intelligence process—collection, analysis, exploitation and dissemination of information, and addresses both Headquarters and the Field. Creating a single program manager responsible for all FBI intelligence information and assessments activities will ensure standardized protocols for the collection and dissemination of FBI information; a professional development program for FBI intelligence analysts; exploitation across programs of new analytic tools; and exploitation on behalf of all investigative programs of the full range of FBI information and expertise.

The goal of the new intelligence infrastructure is to provide a broader and higher level of analysis and research to FBI investigators, managers, and executives and enhance FBI's strategic partnerships with other law enforcement and intelligence agencies. The products provided by the intelligence infrastructure will include:

- Tactical analytic support to operational units at HQ and the Field that exploits information derived from cases as well
 as other internal and external sources.
- Program level analysis that allows investigative program managers to determine regional, national and international
 criminal, terrorist, or espionage trends and develop high impact investigative strategies to counter them.
- Strategic analytic support to PBI executives that allows them to set priorities among divisions and programs and to
 anticipate emerging problems and act to prevent or mitigate them.
- Finished reports and analytic products that can be disseminated not only to FBI customers but also as appropriate to

other law enforcement and intelligence agencies and to national policymakers.

The new intelligence infrastructure is grounded in the concept that to enhance pro-active and predictive intelligence the FBI must maximize cross program sharing of information and expertise. Analytic units in the Investigative Services Division will be integrated teams in which tactical and strategic analysts from particular disciplines — such as organized crime, counterintelligence, counterterrorism, and financial fraud — are collocated with required personnel and database specialists to maximize understanding of the problem or threat.

Benefits include:

- Cross-pollination of analytic methods and approaches.
- In-depth analysis of target areas.
- Better leveraging of resources.
- Coherent and consistent integration of tactical, program and strategic findings, judgments and consistent.
- Independent strategic assessment for executives and decisions makers balancing all program equities.
- Professional standards across all programs.

Intelligence Collection and Analysis - Program Objectives

The five year intelligence strategy that supports the Strategic Operational Plan is based on four objectives;

- Each FBI program must develop a strong intelligence base to include well-placed, bona fide human sources, and the
 exploitation of technical, open, and public source information. Strategic, program, and tactical information reporting
 requirements must be established for each program.
- The FBI must create a professional intelligence cadre of experienced and trained Special Agents and analysts characterized by
 definitive career opportunities, progressive training, and rotating field assignments. This must begin with the recruitment and
 development of individuals with specialized skills and expertise that will enhance each of the FBI's investigative programs.
- An effective intelligence program requires an automated intelligence information capability that can support the collection, analysis, and dissemination of intelligence for all FBI programs. The system must assure that relevant information is shared across program lines and that sensitive or compartmented information is protected.

The FBI must establish close working partnerships with the U.S. Intelligence Community as well as national and local law
enforcement agencies to leverage their collection and analytic expertise in support of FBI investigations.

The 2001 budget request is designed to enhance existing FBI intelligenc.., information handling and monitoring infrastructure to proactively identify and forecast trends, initiate an appropriate response to emerging issues, and assess operational effectiveness. Also, the request is designed to address the significant backlog of work for our current language translators.

Justification for Resources Requested

Item: TFS&S - Computer-Based (Digital) Collection Systems (Digital Storm), \$15,000,000

The Electronic Surveillance Support Program (ESSP) ensures the FBI's continued ability to collect evidence and intelligence through the development, deployment and support of centralized electronic surveillance information management systems and the deployment and support of electronic surveillance collection systems. Through the use of electronic surveillance, the interception of the command and control communications of a targeted criminal organization is one of the most effective ways to fully identify the nature and scope of a criminal organization and simultaneously obtain compelling evidence of criminal activity.

The FBI's investigation of organized criminal enterprises is grounded on the Enterprise Theory of Investigation (ETI). The ETI is committed to utilizing sophisticated investigative techniques in its investigation of various criminal enterprises. In 1998 for the criminal programs, there were 704 lines of Title III intercept and approximately 7,100 lines of Pen Registers conducted using analog tape-recording. A line of intercept is one target telephone line. Through 1999, over 1,100 lines of Title III intercept and 10,514 lines of Pen Registers/Trap and Trace have been conducted, which is indicative of the increased reliance on electronic surveillance by the criminal investigator.

Currently, a majority of electronic surveillance interceptions are being conducted with technology that was developed decades ago and remains unchanged. This technology is generically referred to as analog collection and involves the use of traditional tape-recording equipment. The relience on tape recordings is time consuming and burdensome. During the course of a typical case, multiple telephone lines or microphones are simultaneously intercepted. Each line typically generates hours of conversation on a daily basis. It is common for these types of investigations to last 60 to 90 days or longer. Using analog tape-recording technology to collect the intercepted conversations generates hundreds of tapes.

Although the analog or old-fashion reel-to-reel recorders and analog dialed number recorders last for years and need little more than maintenance and replacement for worn out or broken parts, analog technology is incapable of intercepting digital communications. Today, the Public Switched Telephone Network (PSTN) is virtually all digital with the exception of the line between the carrier and the customer. This line is also digital if the customer uses Private Branch Exchange (PBX), Integrated Services Digital Network (ISDN) or a Digital Subscriber Line (DSL). Consequently, as the use of a PBX, ISDN and DSL increases, the PSTN will become entirely digital.

Technologies with capabilities such as facsimile, modems, cellular phones, and pagers will continue to converge. Products such as highly mobile personnel digital assistants, which combine paging, multimedia communications, and personal computing into a single device, will become commonplace in commercial, government, military, and criminal environments. Without implementing digital technology, the FBI would gradually lose the ability to effectively conduct successful intercepts. Due to advancements in telecommunications technology, the number of digital intercepts continues to increase. In 1997, the FBI conducted five digital intercepts, 40 digital intercepts were conducted in 1998, and to date, more than 200 digital intercepts were conducted in 1999. Additionally, with the implementation of CALEA, analog access to conduct Title IIIs and Pen Registers will go away and possibly all intercepts will have to be done digitally after that point.

One of the objectives within the ESSP is the development, deployment and support of computer-based collection capabilities. Computer-based collection systems record the intercepted conversations into computer memory using digital technology. In addition to producing much higher quality and clearer recordings, the use of computer-based technology allows the field agent to easily and efficiently manage the recordings electronically. Rather than having to sort, retrieve, and physically manipulate hundreds of tapes, an agent can find and listen to any previously recorded conversation with a few keystrokes on a computer. This greatly facilitates the review and examination of the information and also dramatically increases the efficiency of trial preparations. Computer-based collection systems also allow innovative techniques such as faster or slower play-back, looping through selected portions of intercepts, and even the instantaneous playback of the beginning of a lengthy conversation while the conversation is still ongoing. These techniques exponentially increase the utility and value of computer-based intercepts. Finally, computer-based collection systems support electronic (or digital) files of Title III intercepts can be transferred to a remote or distant field office for translation/transcription.

A goal of Digital Storm is to replace the 1,290 lines of analog (reel-to-reel or cassette) Title III capability currently available in the field. Base level funding will only allow the FBI to field full capability computer-based collection systems at two field offices and to migrate 80 lines of intercept to a computer-based collection system. To complete this migration relying solely on base funding will take more than 10 years with completion projected for calender year 2010 or beyond. Funding is not available for additional

installations or for expanding the ability to provide electronic file transfer in support of remote translation/transcription.

Personnel resources consist of one Electronics Engineer (EE) Program Manager and two Electronics Technicians (ETs). Non-personnel funding of \$3,500,000 is available to address the acquisition of capital equipment (hardware and software), maintenance contracts, and travel related to installation/training.

An increase of \$15,000,000 is requested to provide fully-capable computer-based collection systems. These systems will take advantage of already available, state-of-the-art technology through the use of commercial-off-the shelf (COTS) equipment to increase the FBI's ability to rapidly process, analyze, and translate/transcribe multiple forms of intercepted communications (telephony, data, video, etc.), even at locations remote from the collection site.

The FBI has prioritized the deployment of the Digital Storm systems through 2001 based upon historical workload data with regard to the number of Title IIIs conducted by field office and available funding. The proposed deployment schedule of Digital Storm is to phase in capabilities over a five-year period. The plan is to provide minimum capable (six-line) systems in 1998 that 2000 to about 24 field offices. Some of these offices will be upgraded to minimum 12-line systems per FBI priorities. In 1999, the FB! started utilizing an existing Drug Enforcement Administration (DEA) contract for the procurement of these base line systems and will utilize that same contract to procure and upgrade to the fully capable Digital Storm Systems starting in 2001. The DEA contract was a multiple award five-year effort with four years remaining. Any competitive bid process by the FBI would have been duplicative because the DEA has now adopted the FBI Digital Storm requirements to meet their electronic surveillance needs as well.

The three base level personnel and one contract employee will be used to support the installation of the 26 interim capability systems with six-line capacity installed in 1998 and 1999. The FBI is currently on schedule with all deployments and will have all systems installed by end of calendar year 1999. All deployments beginning in 2000 are full capability systems. Field offices with interim systems will be upgraded to full capability systems in the year indicated on the following chart. A small system (S) is up to 15 line of intercept and/or transcription/translation capability; a medium (M) system is up to 30 lines; and a large system (L) is up to 50 lines or more. The following table indicates the field offices and the year the computer-based collection equipment would be received with enhanced funding. The number of lines of Title III intercept needed or the relative size of the system is based upon historical data and the need to provide field wide transcription/translation capability.

	D	igital Storm Locat	tion by Field Office		
1990 Installs*	1999 installa*	2000 Plant**	2001 Plane**	2002/20	03 Place**

^{*1998} and 1999 deployments are 6 line interim systems.
**2000 through 2003 will be upgrades to previous deployments as well as new installations to those offices which have not received a

system yet.

In 2001, some additional field offices will receive a Digital Storm system for the first time and the first major roll out of Digital Storm upgrades will be available (i.e. converting New York from six-lines to 50 or more lines of Title III). The Fiel will not begin to realize the true benefits of Digital Storm until enhanced funding is available in 2001.

Training is currently provided to each field office upon installation of computer-based collection systems. Training is generally offered to the Technically Trained Agents (TTAs), ETs, Technical Advisors (TAs), Language Specialist (LS), as well as investigators, Intelligence Research Specialists, and any other personnel identified by a particular field office as being essential to the operation. Approximately 40 TTAs and over 250 LSs have received training on Digital Storm systems. These six-line interim Digital Storm systems represent about 40 percent of the desired functionality of a fully compliant system. Pending available resources, when fully compliant systems are deployed, these individuals, as well as anyone else who would operate the system, would be trained and or retrained.

The following displays the performance measures for Digital Storm:

DECISION UNIT/PROGRAM: TFS&S - Electronic Surveillance Support - Computer Based Digital Collection Systems
DEPARTMENT OF JUSTICE CORE FUNCTION: Investigation and Prosecution of Criminal Offenses

STRATEGIC GOAL: Supports Goals 1 - 5

COMPONENT ANNUAL PERFORMANCE GOAL: To provide computer-based digital collection systems in support of CID Title III investigative needs, including remote monitoring, transcription, and translation.

	PERFORMANCE INDICATOR INFORMATION		PERFORMANCE REPORT AND PERFORMANCE PLANS				MANCE
			Peri	ormance Re	port	Performa	ince Plans
Type of Indicator	Performance Indicator	Data Source	<u>1998</u> Actuals	1999 Enacted Plan	<u>1999</u> Actuals	<u>2000</u> Plan	<u>2001</u> Plan
Activities	Number of Field Offices Requiring Digital Computer-Based Collections Systems	Criminal Investigative Division	56	56	56	56	56
Outputs	Minimally Capable Digital Computer-Based Systems Deployed Fully Capable Digital Computer-Based Systems Deployed Number of Digital Lines Supported	Actual based on system configuration	12 0 72	24 0 144	24 0 288	29 0 318	10 19 590

- A: Data Validation and Verification:
- 1) Data is a result of lawfully authorized electronic surveillance.
- 2) The telecommunications intercepts are verified by the telecommunications service provider.

This enhancement would facilitate a detailed understanding of the identities, roles, relationships and activities of individual members of OC/Drug groups, allowing the development of effective strategies against them by significantly enhancing the FBI's ability to exploit the information obtained through Title IIIs. Through the use of computer-based collection systems, enhanced archive and retrieval capabilities will reduce the time required to review and report the results of collected audio information. These new systems would provide a superior quality item of evidence, smoother administration of the Title IIIs, the ability to monitor the target for the collection of evidence anywhere in the country and/or download the intercepted audio to LSs in offices around the country.

Item: Other Field Programs - Digital Callection for Foreign Intelligence Surveillance Act (FISA), 4 Positions, 2 FTE, and \$10,300,000

A digital collection system for FISA is required to provides the foundation for an up-to-date, flexible digital collection infrastructure. Deployment of this system will significantly enhance system interoperability through electronic information transfer in a common mode format. The digital collection will also allow for transfer of collected data, ensuring more efficient utilization of available translation services.

Base resources are classified. Please refer to the FBI's classified budget submission.

The FBI is requesting an enhancement of four support positions and \$10,000,000 in non-personnel funds to support the digital collection capability in support of national security investigations. The field-wide deployment of a digital collection system will consolidate existing telecommunication collection capabilities into a single system, affording multi-line, multi-source collection, monitoring, recording, playback, and reporting capabilities.

The requested resources would facilitate achieving the goal of having an all digital collection FISA infrastructure. These resources would significantly enhance the FBI's ability for collecting and processing large amounts of telephony related information. Because of this, field offices will be able to process more information, thus, allowing for the ability to intercept additional lines. This requires additional hardware. This digital collection system configuration is user friendly interface that is tailored to the way the FBI does its collection and post-processing.

Successful implementation of this project is dependent upon having an adequate number of ETs to deploy, maintain and pro equisite training on these computer-based collections systems.

For additional information related to this digital collection system, please refer to the FBI's classified budget submission.

The Performance Measures are classified. Please refer to the FBI's classified budget submission.

The receipt of the requested resources would facilitate the FBI's achievement of its goal to have a digital collection infrastructure. These resources would significantly enhance the FBI's capability to collect and process large amounts of telephony-related information. An enhanced capability in this regard would allow for the more productive and efficient utilization of field office

Language Specialists. As such, FBI field office investigative and analytical personnel will receive translations of information gathered in a more timely manner, which will have a positive impact on the FBI's ability to respond to the threats posed by foreign intelligence services collection activities.

(tem: TFS&S - Casa De Web, (\$10,000,000 Earmark in Assets Forfeiture Super Surplus Fund)

A goal of the FBI is to have an effective intelligence sharing program. Currently, a capability does not exist that allows for automated information sharing of collected electronic surveillance intelligence or evidentiary material. Casa De Web will provide a uniform interface capability to existing legacy and new digital electronic surveillance collection systems. It archives audio, data, and reports produced on these collection systems. It provides access to this investigative information through an Intranet (web browser) access to investigative agents, transcribers, and translators within a field office. It allows users who collect electronic evidence in remote areas to receive automated language translation and transcription services, if it is not available in that area. It facilitates the sharing of electronic surveillance evidentiary data (Title III) and intelligence (Title 50) between FBI field offices. It automates the capability to prepare reports and to locally conduct investigative analysis. It provides users with analytical tools for automated speaker identification, text key word spotting and voice key word spotting and speaker identification. It can be achieved by using secure point-to-point connectivity, virtual private networking, and/or combinations of both. This is the same schema that is utilized by the FBI today in the transporting of intercepted communications under a lawful Title III intercept.

The Casa De Web system will consist of two separate (or bifurcated) databases, one for Foreign Counterintelligence data and one for criminal law enforcement data from Digital Storm. The system will have significant built-in features to prevent data from being routed to unauthorized destinations. Firewalls will be installed between all collection systems and the system Local Area Network to prevent external access to the collection systems and to block collection system operators from accessing the Wide Area Network (WAN). In addition, each of the two system databases will have its own web server and database server and will be connected to the WAN through a firewall. This architecture will allow data to flow only to the appropriate database and will prevent unauthorized access to stored data. The deployment plans for Digital Storm and SpiderNet lead Casa De Web by almost two years.

Base personnel resources consist of one EE Program Manager and \$3,100,000 in non-personnel funding.

The 1999 base funding of \$3,100,000 was used for contractor support to develop the system and to initiate the New York system. In 2000, base funding will be used to purchase two systems, upgrade the New York system started in 1999, and for contractor support. It is proposed that non-personnel funding of \$10,000,000 be provided from the Asset Forfeiture Super Surplus Fund to support the

requirement for information sharing, to include shared access and shared processing of electronic surveillance evidentiary data and intelligence among FBI field offices, criminal justice agencies, and of national security information with the intelligence community. The \$10,000,000 will provide systems for 13 field offices. Additional funding will be required in future years to complete all field offices.

The typical system sizes are predicated on the amount and complexity of hardware/software, analytical tools, and contractor support needed to field the system. The size category varies depending on the size of the field office, the equipment required, the amount of on-line storage capacity, and archive storage capacity. The following shows the capital expenditures, analytical tools, contractor support, training and technology upgrades necessary for the successful installation and integration of Casa De Web.

Capital Equipment Estimates by FY

Capital Edisparent Estimates by 1.1									
Espenditures	FY 1999*	FY 2000	PY 2001	FY 2002/2003					
Large System	\$2,255,000**	\$280,000**	\$4,726,000	\$0					
Medium System	\$0	\$970,000	\$4,850,000	\$5,121,000					
Small System	\$345,000	\$0	\$345,000	\$9,671,000					
Analytical Tools	\$0	\$750,000	\$179,000	\$1,500,000					
Training	\$0	\$250,000	\$250,000	\$\$00,000					
Contractor Support	\$500,000	\$500,000	\$2,000,000	\$4,000,000					
Technology Upgrades	\$0	\$350,000	\$750,000	\$6,550,000					
Total Required	\$3,100,000	\$3,100,000	\$13,100,000	\$27,342,000					

^{*} Systems were initiated in 1999, but will not be completed until 2000.

Casa De Web is an integration of Commercial Off the Shelf (COTS) products, it is not an item that can be purchased directly off the shelf. This project requires a substantial amount of engineering in the way of software writing and assimilation of COTS products to

^{**}The cost of the first large system (slated for New York) will be apread out over two years.

be implemented as a system. Capital expenditures for a typical field offices include databases, servers, routers, power supplies, network cards, Jukebox storage, computer workstations, and all the software to assimilate these and various other items into a system. The capital expenditures also include manufacturers maintenance and installation agreement costs.

Analytical tools include building software to aid analysts, agents, translators, and transcribers in finding text, language translation, language identification, key word spotting, and automatically typing some text via voice recognition. These tools are new and will require development as well as training of personnel. The costs of these analytical tools cannot be applied on a per system basis. Once a tool is developed, it can be applied as a networked resource and made available through any Casa De Web system. For example, an analytical capability to do key-word spotting may consist of a very large computer or central server that resides at Quantico and is connected to the FBI networks. This would allow any agent or analyst to have access to this capability through their respective Casa De Web system. The analytical tools being developed are of no value without the Casa De Web information management systems. Casa de Web is the database upon which these analytical tools will be applied.

Training will include the training of analysts, Special Agents, translators, transcribers, technicians, and other support personnel on the use of Casa de Web. Contractor support is needed for contract management, documentation preparation, integration of the systems, installation into the field offices, and dedicated support in the field.

Technology upgrades are driven by information technology advances, which continue to outpace our ability to design, develop and implement corresponding systems adequately and in a timely manner. We must continue to replace outdated hardware and software on a three year cycle to stay current with the technological challenges of the future. The following table displays the field offices and the activities that would occur with enhanced funding. This table lists the planned action, the year equipment is scheduled to be purchased, installed, and upgrade year. The letter in parenthesis indicates whether the field office installation is going to be small (S), medium (M), or large (L).

Casa De Web Deployment by Location

The following displays performance measures for Casa De Web:

DECISION UNIT/PROGRAM: TFS&S - Electronic Surveillance Support - Casa De Web

DEPARTMENT OF JUSTICE CORE FUNCTION: Investigation and Prosecution of Criminal Officers

STRATEGIC GOAL: Supports Goals 1 - 5

COMPONENT ANNUAL PERFORMANCE GGAL: To provide automated information sharing of collected electronic surveillance instilligence or evidentiary material.

PEI	PERFORMANCE INDICATOR INFORMATION		PERFORMANCE REPORT AND PERFORMANCE PLANS					
			Performance Report Perform			Performa	ormance Plans	
Type of Indicator	Performance Indicator	Deta Source	1991 Actuals	1999 Enacted Plan	1999 Actuals	2000 Pien	2 <u>00 i</u> Plen	
Activities	Number of Case De Web Systems Required	Historical information	57*	57*	57*	57*	57*	
Outputs	Number of Casa De Web Systems Installed Upgrades of Analytical Tools Installed	Historical information	0 0	2 0	5	4 0	17 1	

A. Data Validation and Verification:

- 1) Data is a result of lawfully authorized electronic surveillance.
- 2) The telecommunications intercepts are verified by the telecommunications service provider.

* One system for each field office and one system at the Engineering Research Facility.

The building of the Casa De Web system would support and enhance the FBI's major criminal and investigative initiatives. It would support the requirement for information sharing, to include shared access and shared processing, of electronic surveillance investigative information among FBI field offices and criminal justice agencies.

This enhancement would augment the FBI's ability to exploit the evidence and intelligence obtained through our collection systems and aid the FBI with automated support. This system would greatly increase productivity of the FBI's investigative, translation and transcription efforts, and allow for more effective and efficient exploitation of obtained evidence and intelligence.

Item: IMAT - Information Sharing Initiative, 15 positions, 7 FTE, and \$40,838,000

The Information Sharing Initiative (ISI) is the execution and implementation of the FBI's information technology (IT) strategic plan in support of the FBI Strategic Plan. The strategic operational plan depends directly on the successful execution of the IT strategic plan in order to achieve its operational objectives. These objectives are at the center of the FBI's national security and criminal investigative missions. For example, the FBI Strategic Plan states that the FBI will "prevent and deter..." the use of weapons of mass destruction, efforts to disrupt the stable operation of the nation's information infrastructure, and any criminal or terrorist effort to destabilize our banking systems. To execute this plan requires a sophisticated intelligence capability that depends on information collection, processing, analysis and dissemination. This information must be all-inclusive, timely, and compiled in a manner that enables decision making. The IT demanded of this plan presently does not exist within the FBI, but is at the core of the activities to be implemented in the ISI.

As stated in the IT Strategy, operational strategic goals are dependent on a robust intelligence capability to proactively identify and forecast trends, effect an appropriate response to emerging issues, and assess operational effectiveness. This requires an IT capacity for systematic intelligence collection and reporting, structured and complex analytical methods, and rapid widespread secure dissemination. The FBI does not have this capability globally. There is no enterprise database that contains all case information. Analysts do not have a standard suite of automated tools available to conduct analyses of data. Many analyses cannot be performed using manual methods due to the volumes of data collected during the course of an investigation. FBI agents and analysts do not have an automated means to link subjects of investigations, link various cases and identify patterns of illicit activity; this is all accomplished by reviewing stacks of paper documents looking for the "right" information to solve cases. A detailed plan on the implementation of ISI is forthcoming.

In 1999, a total of \$60,000,000 was available for the ISI consisting of \$20,000,000 in base funding and \$40,000,000 from the DOJ Working Capital Fund. In 2000, base funding of \$20,000,000 is available. With base funding of \$20,000,000 in 2001, a cumulative total of \$100,000,000 is available for the development and deployment of the ISI.

A total of \$40,838,000 consisting of 15 positions and \$838,000 in personnel funding and \$40,000,000 in non-personnel funding is requested to augment the \$20,000,000 base funding for the ISI. Non-personnel funding of \$60,000,000 would be used to acquire hardware, software and associated integration and training services necessary for upgrading the FBI's IT infrastructure and for the deployment of an investigative intranet. An enhancement of 15 Computer Specialists and \$838,000 are requested to provide the

requisite technical support for the ISI implementation and operations.

The ISI is designed to have direct operational impact as illustrated in the following example. The FBI's response to the Oklahoma City bombing investigation required on-site collection, analysis and physical dissemination of information. This response required hundreds of employees to remain in travel status at the Command Post site from the initial incident in April, 1995 until 1997. The ISI will provide the capability to collect the full contents of information from various locations regardless of the media type, to include images, photographs, forensic information, audio and video and assimilate it for investigative purposes. In essence, it will permit the FBI to conduct the analysis on-line wherever the investigation leads. Without the requested resources, the deployment of investigative applications will not be realized and the outdated information collection and internal sharing methods will remain extant.

In addition, failure to replace the outdated desktop computers and printers will impact the ability of FBI personnel (i.e., agents and analysts) to accomplish their mission in a timely and reliable manner. Failure to deploy the upgraded EMS will impact the IT workforce's efforts to proactively monitor and repair fault and performance conditions on the network and computing devices.

Item: OCE - Language Services Program, \$5,009,000

FBI investigations are increasingly affected by international criminal activities and emerging organized criminal enterprises. The FBI's success in investigating matters is measured not only by our ability to effectively and expediently react to crises, but also in our success at preempting the proliferation of such activities through the use of all available investigative techniques. The large and ever-increasing number of Title III intercepts provide a wealth of information for FBI investigations and DOJ prosecutions. However, much of this information is gathered in languages other than English. Before an analyst can analyze intelligence, or an agent can investigate and make an arrest, a linguist must translate this information from the foreign language into English. Immediate translation capability is critical to the growing number of electronic interceptions and consensual monitorings supporting the FBI's criminal and national security investigations.

Increasingly, the FBI relies upon contract linguists for short-term, but mission-critical criminal and national security investigations. In FY 1999, the FBI spent approximately \$9.5 million on contract linguist services and an additional \$1.6 million on contract linguist travel. These amounts are expected to increase dramatically over the next several years due to the FBI's increasingly international focus and increases in hourly rates paid to improve the FBI's competitive posture. Contract linguists have been used to meet approximately 60 percent of the 1,200 requests for translation services since 1997.

With the continuous growth of FBI cases involving less commonly spoken languages, the FBI recognizes the need to broaden the

available pool of contract linguists in support of criminal and national security investigations. Accordingly, a total of \$5 million is requested to allow for such increases.

Contract Linguist Expenditures, 1997 - 2001

Flocal Year	Hourly Rate	Translation Hours Required	Contract Linguist Funding Required
1997 Actual	\$24	354,167	\$8,500,000
1998 Actuals	\$28	353,583	\$9,870,075
1999 Actuals	\$28	339,285	\$9,757,448
2000 Estimate	13 3	400,000	\$13,257,000
2001 Estimate	\$37	493,432	\$18,257,000

^{*} Excluding Overtime and Travel Expenses

Type of Indicator	Performance indicator	Data Source	1998 Actuals	<u>1999</u> Initial Plan Actuals	lnitisi Plan	2000 Current Plan	2001 * Plan

A. Data, Validation and Varification: Language Services Workload Survey - The FBI's Language Services Program has mainstreamed the data collection process through which the FBI tracks the workload by language and field office. At the end of each fiscal quarter, each FBI field office reports the data from the Language Services Field Workload Survey which provides production and capacity metrics for the Foreign Language Program. This survey information is downloaded from digital collection systems in order to maximize reporting accuracy. However, current reporting capabilities within these digital collection systems are limited and since much of the audio/video generated remains in an analog format, professional estimated and duty logs are still necessary. All data submitted to HQ Language Services is reviewed and approved by as FBI field manager. It is expected that by the end of calendary tear 2001, all audio/video intercepts will be collected digitally. This fact, coupled with the anticinated desolvement of more advanced digital collection systems, i.e., SpiderNet and Digital Storm, will ensure the most reliable data reports.

B. FY 1999 Performance Report: - The data collected in 1998 was unreliable. The 1999 Actual data represents the baseline figures.

C. Issues Affecting Selection of FY 2000 and 2001 Indicators: The demand for linguistic services will continue to escalate as a result of the FBI's increasingly international focus and it expected to be driven to a much greater degree by the deployment of more advanced digital collection systems, i.e., Digital Storm and other programs. Once fully deployed, these systems will provide the FBI with much greater line capacity which, in turn, is expected to increase the number of FISA and Title III lines by as much as 300 percent over the next ten years. Since these systems are being deployed in phases and will provide at least 20 percent greater line capacity each year, a proportional increase in work generated (20 percent) is expected to occur. Although linguists will also experience greater processing efficiencies through their use of these systems, any such anticipated processing improvements will be more than offset by the tremendous growth of work generated. Accordingly, the 2000 and 2001 performance indicators have been adjusted to account for the anticipated increase in work generated (increased line capacity) and work produced (increased processing efficiency). Occurring backlogs were not carried over.

D. Other: The FBFs Language Services Program supports all investigative needs including criminal and national accordy matters. Therefore the language translation request supports the Department of Justice's Core Functions 1-3 and all the supporting Strategic Goals and Annual Performance Goals. The Language Services Program supports the Program Supports the Program Supports the Program Supports the Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Program Supports and Prog

The foreign language requirements of FBI investigations are increasing tremendously and without additional resources, the FBI's language capabilities will be stretched to a point that would ultimately lead to unacceptable impacts on criminal and intelligence-related investigations. Even today, hundreds of criminal and national security investigation requests are going unaddressed. Without additional contract linguist support the current investigative deficiencies resulting from a lack of linguistic support will increase precipitously. This will have a chilling affect on the FBI's and the Department of Justice's investigative and prosecutive missions.

Overall, the FBI is not able to address all requests for translation, interpreting, and monitoring requirements. This backlog of work has resulted in many investigative deficiencies. The following examples illustrate this point:

- An Assistant United States Attorney in Miami, Florida, in charge of health care fraud investigations, recently advised the FBI that his office will decline to prosecute future health care fraud cases unless timely submissions of consensual monitoring conversations are turned over to the United States Attorney's Office (USAO). The Miami-metropolitan area has the largest ongoing health care fraud investigation in the country, with Medicare and Medicaid losses estimated to the United States Government to be in excess of \$3 billion dolfars. Also in Miami, many undercover operations cannot proceed on schedule due to the overwhelmingly large number of Spanish conversations that cannot be addressed/translated on the time lines established by the USAO.
- In the FBI's New York field office, the emergence of Russian organized crime has resulted in the shift of additional investigative resources to a Russian Organized Crime Task Force (ROCTF) formed in 1994. Incongruously, a proportional increase in linguistic capabilities did not occur. In the last year alone, the New York Office's ROCTF has conducted 234 days of Title III coverage on Russian criminal cases. The crime problem associated with Russian speaking individuals in the New York metropolitan area is expected to increase, resulting in several spin-off cases and the need for even more translation support.

As the global community grows smaller with advances in modern transportation and continued socio-economic assimilation, the FBI must be prepared to react to linguistic needs spawned from international criminal activities, organized criminal enterprises, international terrorism, and foreign counterintelligence activities

Item: Other Field Programs - Intelligence Field Positions, 28 positions, 14 FTE, and \$1,675,900

Analysis is an integral part of the activities the FBI conducts to address its investigative mission. For this type of investigative and operational support, the FBI relies on a professional cadre of all-source analysts, Intelligence Research Specialists (IRSs). Field IRSs analyze and evaluate reports and intelligence and investigative information in conjunction with the initiation and conduct of investigations regarding foreign intelligence collection activities. They also monitor case activities and offer assessments based on experience regarding targeted individuals/groups and intelligence support required. Support furnished to investigations include, but is

not limited to financial, telephone toll, document and event analyses, identification of potential witnesses, and witness statement corroboration. The IRSs' efforts directly complement the agent's effort by contrasting/comparing reporting with information already in the intelligence base; seeking corroborative data; and assessing individual pieces of information in the context of the broader case, or series of cases.

The FBI Strategic Plan: 1998 - 2003 established that in order for the FBI to fully exploit the information that it collects relative to foreign intelligence collection activities, it must improve its capacity to analyze the information gathered and provide useful guidance to the decision makers who are the end users of this information. The IRSs in the field are closest to raw, unfiltered information, and are in the best position to set intelligence collection priorities and address time-critical intelligence gaps that could affect the direction or advancement of an investigation. As such, the FBI must improve its tactical analytical capabilities by increasing the number of IRSs available within its field offices to provide support to ongoing investigations.

In 1999, there are 507 field intelligence analysts to support all investigative programs.

The FBI Strategic Plan: 1998 - 2003 emphasizes that "tomorrow's complex international and domestic threats cannot be countered" with yesterday's techniques, and this is nowhere more true than in the present state of FBI intelligence." The Baseline Assessment of Intelligence Community Analytic Capabilities, which was published in May, 1999, echoes the FBI's stated need to invest in an analytic work force that "requires a more diverse set of skills and increased flexibility." Similarly, the DCI's Strategic Intent for the IC, which was published in March, 1999, advises that the IC must "give the highest priority to making full use of the intelligence we glean from sensitive sources and methods." As field office IRSs receive the raw data obtained from these sources and methods, they are in the best position to identify approaches to exploit this data in the furtherance of ongoing investigations. The requested enhancement of 28 positions enables the FBI to begin to meet its analytical needs.

FBI attempts to develop an analysis capability for operational and strategic use have been less than completely successful because of resource constraints at FBI Headquarters and at the field offices. Due to a lack of a sufficient number of IRSs within the FBI's field offices, the FBI Headquarters analytical staff has had to concentrate on furnishing analytical support to ongoing investigations. As such, FBI Headquarters IRSs must frequently provide on-site analytical support for field offices. One example was the temporary assignment of two analysts to an investigation in the Philadelphia field office. Analysis traveled to Philadelphia for several weeks at a time. Additionally, FBI Headquarters IRSs have traveled to the New York and Washington field offices almost on a monthly basis to provide on-site tactical analytical support. Requirements of this nature have diminished the capacity of the FBI Headquarters IRSs to conduct long-range, strategic assessments.

The lack of a sufficient number of IRSs within the FBI's field offices has resulted in an immeasurable amount of information that has been collected not being analyzed or evaluated for intelligence value in the furtherance of ongoing investigations. Also, participation in multi-jurisdictional, multi-segrecy investigations not only exponentially increases the volume of information to be loaded into FBI automated systems, it also increases the volume of information that must be analyzed and disseminated by field office personnel. In view of the preceding, the FBI must increase the number of IRSs available within its field offices to provide tactical support to ongoing investigations and to furnish strategic analytical support in the furtherance of the field offices' efforts to neutralize foreign intelligence collection efforts within their respective territories.

To address this deficiency, an enhancement of 28 analytical personnel are requested to provide analytical support in FBI field offices. The requested enhancement would provide field offices with improved capacities to:

- furnish intelligence to ongoing investigations, to include real-time case support using databases and state of the art
 analytic tools with emphasis on perishable, actionable intelligence;
- provide systematic reviews of case and source information for leads to expand support to ongoing investigations
 from new or unique sources:
- develop target analysis packages to support the initiation of new investigations;
- identify vulnerabilities in local criminal or terrorist organizations; and.
- conduct periodic assessments of local and regional crime problems and emerging trends.

The FBI will not succeed in accomplishing the proactive approach outlined in its Strategic Plan or the Director of Central Intelligence's (DCI) Strategic Intent for the Intelligence Community (IC) without the development of a field office tactical analytical capability, as well as the resulting ability of IRSs at FBI Headquarters and the field offices to provide an increased level of strategic analytical support. These goals can only be achieved by enhancing the level of analytical resources at the field office level.

Item: Other Field Programs - Investigative Services Division, 27 Positions, 14 FTE, and \$1,414,000

Over 20 years ago, the FBI dedicated personnel to the task of analysis in support of its investigative mission. Today, the degree to which the FBI accomplishes its objectives is often dependent on the research and analytical support provided by its cadre of IRSs at FBI Headquarters.

Currently, FBI Headquarters IRSs are being called upon to perform the following responsibilities:

- provide research and analytical support to various speciality investigative programs;
- identify trends and key developments in foreign intelligence collection activities and operations;
- prepare and disseminate threat assessments and counterintelligence and foreign intelligence reports;
- assist in the preparation of briefing books, talking points, and presentations for FBI executive management;
- respond to Intelligence Community (IC) requests for information; and,
- participate in various IC working groups,

The FBI Strategic Plan. 1998-2003 recognized that the FBI must improve its capacity to analyze the information gathered and provide useful guidance to the programmatic and strategic decision makers who are the end users of this information. These strategic analyses will be used by personnel at FBI Headquarters to provide an enhanced level of guidance to field office investigative and analytical personnel in connection with their efforts to identify and respond to intelligence collection activities. These studies will also be used by managers assigned to FBI Headquarters to develop and implement new investigative strategies and approaches.

Due to the sheer volume of investigations undertaken by the FBI annually, the IRSs at FBI Headquarters almost exclusively furnish tactical analytical intelligence support. Consequently, for the FBI to accomplish the proactive approach outlined in its Strategic Plan or the DCI's Strategic Intent for the IC, it must enhance the level of analytical resources available at FBI Headquarters to conduct long range, strategic analyses, assessments, and studies.

The FBI recognizes that enhancing the number of analysts is not the only solution; a professional intelligence cadre of experienced and trained analysts characterized by definitive career opportunities, progressive training, and rotating field assignments is also required. To accomplish this objective the FBI must recruit and develop individuals with specialized skills and expertise. The FBI must also reexamine the existing cadre to assure they have the skills required for the new challenges and that specialized training is available for those who do not measure up. The Administrative Services Division, in conjunction with the Criminal Investigative, National Security, and Counterterrorism Divisions, have completed a comprehensive study of intelligence analyst positions at headquarters and the field that will be used to develop fair, valid, and legally defensible selection and promotion criteria. This piece of the intelligence development initiative must be supplemented with training and other career enhancing opportunities if the high standards we are setting for intelligence analysts is to be met and maintained.

The FBI has identified an FSL of 289 support personnel from all investigative programs to be transferred to the new Investigative Services Division.

As foreign intelligence operations against U.S. interests are becoming more complex and more dissimilar to previous, known patterns of activities and modes of operation the FBI is able to sustain principally a reactive analytical capability. In short, the FBI has an insufficient number of IRSs in key investigative programs to address programmatic and strategic needs. Without enhancements, (see needs will go largely unaddressed.

In view of the preceding, the FBI is requesting 27 IRS positions to expand its capability to provide analytical support. The requested IRSs will provide distinct functions to support the goal of building the intelligence infrastructure of the FBI. This infrastructure will enable the FBI to expand its conduct of strategic and programmatic analytical studies. This expansion will allow the FBI to develop a better understanding of the new emerging, sometimes overlapping, patterns of intelligence collection activities that are present in the complex world of today. This knowledge will enable the FBI to focus investigations on the most significant targets which have been identified through the application of sound analytical principals.

In addition, the requested enhancements are required to sift, integrate, and give meaning to ever increasing sources of information and data that must be assimilated in order to bring the best analytical judgements to bear on cases. FBI sources of information have expanded with the increased use of old technologies, as well as the advent of new technologies, to fight crime and national security threats. This is coupled with significant increases in external information as cooperation among law enforcement and IC agencies continues to grow and expand.

Add to this, the explosion and availability of open source information, and the number of information bases and data sources that can and should be searched becomes formidable. Searching and data mining these resources is time intensive and requires specialized knowledge and fluency in computer software. In order for the agents assigned to FBI Headquarters to effectively manage and oversee the FBI's efforts to respond to the threats posed by foreign intelligence collection activities, these data mining activities are best left to FBI Headquarters IRSs who are skilled in research and analysis.

Current FBI analytical resources have not allowed the FBI to develop routine, standardized, widely distributed intelligence projects at all levels of analysis—tactical, programmatic, and strategic. Products are currently produced on an ad hoc basis and are often not comparable in the types of information they convey to the consumer.

The requested enhancements would provide the FBI with the capability to transition from a system in which collection requirements are

derived to fill the needs of individual investigations to one that allows for the monitoring and evaluating of collection requirements on a programmatic and national level. In this way, information collected could be leveraged against established national investigative priorities.

Without the requested enhancements, the FBI will lack the ability to create an information assessments and analysis program that integrates information derived from all FBI investigations and brings it to bear on individual cases, national, regional, and local programs, and the strategic direction of the FBI's investigative programs. As a result, the FBI's ability to pursue proactive strategies and will result in investigative efforts to be more reactive in nature than is desired.

Initiative: Training

Decision Unit	Pos.	WYs	Amount (\$000)
Training, Recruitment, and Applicant (TRA)			\$5,300
Technical Field Support and Services (TFS&S)	4	2	1.195
Total	4	2	\$6.495

As the FBI enters the 21st century it faces difficult and complex challenges from crime, threats of terrorism, and hostile intelligence services. The FBI's ability to successfully meet these threats is fully dependent on the dedication, commitment and skills of its nearly 28,000 employees. A well-trained workforce is critical so that employees possess the skill sets needed to successfully fulfill the FBI's strategic objectives. The importance of training is heightened by the rapid pace of technological change and by the expanding scope of the FBI's investigative mission. The FBI is committed to providing its workforce with the training to successfully accomplish this mission. In April 1999, the FBI adopted a comprehensive policy for the continuing development and training of FBI employees that emphasizes the importance of training and continuous learning. Under the new policy, all FBI agents and support employees are now required to obtain the equivalent of no fewer than 10 hours of developmental training annually, and over a three-year period, not less than 50 hours of developmental training. The FBI will need to use traditional "classroom" training at the FBI Academy, distance learning, and computer-based, interactive learning to satisfy this requirement.

The requested enhancements would allow the FBI to improve its training programs in support of these directives and the overall Strategic Plan. First, these increases would provide the FBI with sufficient student travel funding to fully utilize the additional Academy space made available as a result of the DEA's move to the Justice Training Center in April 1999. Second, the requested funding would allow for an increase in employee training opportunities in support of the new developmental training requirement by expanding the FBI's distance learning program. Finally, the compelling need to upgrade analytical and technical training would be addressed by implementing a comprehensive training program for the FBI's analysts and by expanding training programs for Electronics Technicians and Technically Trained Agents.

Justification for Resources Requested

Item; TRA-FBI Academy Training (To/From Quantico Student Travel), \$2,800,000

The large influx of new agent personnel to the FBI in recent years, combined with the overall reduction of in-service training, has resulted in a severe reduction in the expertise available to FBI programs of all types. Inexperience in fundamental investigative techniques is seriously hampering a workforce that has endured the retirements of an inordinate number of veteran agents in recent years. An increase in various kinds of in-service training would benefit all FBI programs and initiatives as employees receive specialized knowledge from these training sessions.

Currently, the FBI lacks sufficient student travel funds required to bring the Academy to full capacity in order to take advantage of its many educational/training resources. This deficiency must be erased if the FBI is to take full advantage of its training potential.

In April 1999, the DEA moved from FBI space to the Justice Training Center, freeing up approximately 20 percent of the total dormitory space at the Academy for permanent FBI use. The vacated space can accommodate approximately 7,000 students taking one-week classes. The To/From Quantico student travel account did not fund the travel of DEA agents, and the FBI has now assumed funding for in-service students that will fill this space. The requested enhancement would provide sufficient funding to allow the FBI to fully provide for the anticipated increase in the number of Academy trainces. If the FBI Academy is to be used at its optimum level, additional student travel funding is essential.

The current base level funding for the To/From Quantico student travel account totals \$3,973,000. The account pays travel costs of students (both FBI and non-FBI personnel) who travel to the Academy for training. Funding allows the FBI to provide for student travel costs in support of a wide range of training programs, including New Agent training, FBI in-service courses, National Academy training, and other state and local personnel training (this category includes the Laboratory Division's forensic training schools, the Survival Awareness Task Forces, and several executive development programs - Law Enforcement Executive Development Program, the National Executive Institute, and Major City Chiefs/Major County Sheriffs). Additionally, the account funds a variety of special programs, including the Instructor Loan Program (which supports the FBI's Field Police Training Program), the Mexican American Law Enforcement Training Program, bus and shuttle service costs between the Academy and Washington area sirports, and travel costs for course counselors and speakers. As a result of the movement of the DEA to the JTC and the additional space available for FBI use, existing base funding is not sufficient to meet the anticipated increase in Academy student trainees.

An increase of \$2,800,000 is requested for student travel funds to accommodate an anticipated increase of approximately 7,000 Academy student trainces. To determine the projected amount for this requirement, the FBI used an average travel cost of \$400 per student per round trip airfare to Washington, D.C. and multiplied this estimate by the anticipated number of students that it would be able to accommodate with the additional vacated DEA space (7,000 students), yielding a requirement of \$2,800,000 (7,000 students X \$400 per round trip = \$2,800,000).

The requested travel funds would allow thousands of FBI employees to participate in a number of different training courses at the Academy. For example, the FBI has a significant population of inexperienced agents in need of core skills training in the areas of informant development, interviewing/interrogation, report writing, and case management. Professional development and management training is required so that FBI managers and supervisors receive the training needed to perform well in their areas of responsibility. Moreover, with the current level of resources, the FBI is unable to keep pace with the administrative and mandated training needs of its employees. As a result, managers and other designated support employees lack specialized skills in such critical areas as the Drug Deterrence Program, Employee Assistance Program, Evidence Recordkeeping, Procurement Update, Office of General Counsel Training, and many others. Finally, programmatic in-service training across all investigative areas is required if the FBI is to maximize the effectiveness of its workforce.

The requested resources would also allow the Academy to hold specialized courses on computer crime and forensic training. Computer sciences change so rapidly that FBI personnel must be proficient with newer technology in order to be able to sufficiently investigate cyber crimes. Cyber-crime training is needed across all investigative areas, as the FBI must be able to keep its agents abreast of how the criminals use computers to commit and facilitate crime.

The following chart displays performance measures for FBI Academy training programs:

DECISION UNIT/PROURAM: Training, Recruitment, and Applicant (Training Division)

DEPARTMENT OF INTRODUCAM: Framing, Necrolandess, and Applicant (Framing Division)
DEPARTMENT OF JUSTICE CORE FUNCTION: 1) Investigation and Prosecution of Criminal Offenses 2) Assistance to Tribal, State, Local Governments
STRATBOIC GOAL: Supports Goals 1.1 - 1.5 of Core Function 1; Supports Goals 2.1 - 2.5 of Core Function 2
COMPONENT ANNUAL PERFORMANCE GOAL: To provide the training and education necessary to ensure that each FBI employee and our state, local
and international law enforcement training partners are capable of contributing to the fight against crime at their highest level of computence.

A. Data Validation and Verification

BFA - Budget Formulation Application (BFA). The FBI's budget formulation system which accounts for congressionally authorized budget authority, positions, and workyears.

TD Staff's Training Division maintains compaterized records of classroom training provided to students. The output data are based on information contained in these databases. The outcome data reflects the recent approval of the new developmental training requirement. The Training Division is developing a record-keeping system to track this data and exticipates that a system will be in place by the close of FY 2000.

R. FY 1999 Performance Report

Outcome manages—The new outcome measure information reflects a new policy on mandatory developmental training for all FBI employees that became effective in April, 1999. Core skills training data will also be tracked for agents. FY 1999 nembers are estimates (see data verification section) and are reflective of planning conducted prior to the implementation of the policy.

C. Imust decting Solvetion of FY 2000 and 2001 Indicators

New outcome measures reflect a new policy on developmental training for all employees.

Throughout the development of the FBI's Strategic Plan, program managers identified in-service training in the operational programs - White Collar Crime, Organized Crime, Violent Crime, Counterterrorism, and Foreign Counterintelligence - as critical to accomplishing the strategic goals of the FBI. In fact, almost unanimously, FBI program managers believed that without an increased

level of training, the FBI would fail to meet its strategic goals and lose substantial ground in the fight against criminal threats to the security of the United States and its citizens.

By ensuring that the Academy reaches its full training capacity, the requested travel funding would provide agents and support personnel with the basic and specialized skills and tools they require to fulfill their operational and investigative responsibilities. Requested funding would allow the FBI to fully utilize the Academy and provide the maximum benefit possible in support of its investigative programs. Without the training, employees throughout the FBI would be less prepared to handle their duties, which would have a detrimental effect on their individual performance, and, in the aggregate, on the organizational mission of the FBI. The FBI must take the proper steps to ensure that this does not happen.

Item: TRA - Interactive Multimedia Courses, \$1,500,000

The FBI Training Division (TD) is responsible for providing quality training programs to more than 28,000 employees, and also trains members of the domestic and international law enforcement community. The FBI Academy, the institutional anchor for FBI training, has taught traditional in-service training programs since 1972, but this mode of training cannot meet the growing demands of FBI and law enforcement related training.

The FBI recognizes that it must provide employees with a substantially increased level of training if it is to equip them with the skills they need to fulfill its investigative mission. The Director's recently adopted policy for the continuing development of FBI employees requires a minimum level of annual developmental training. The new policy also requires all agents to obtain training in the core areas of informant development, interviewing and interrogation, and case management. The FBI must provide its agents with the required core skills training needed to successfully perform basic investigative functions while also ensuring that all employees have adequate training opportunities to meet the new training requirement.

The FBI can no longer rely solely on traditional training methods if it is to provide its workforce with the increased level of training needed to meet the investigative challenges of the future. Technology-based training methods provide an opportunity to deliver more training, to more employees, with a high degree of effectiveness, at substantial cost savings over traditional modes of training. The FBI recognizes that technology-based training methods can effectively complement or replace traditional classroom instruction and believes that these new training platforms must become an integral part of its overall training strategy.

The FBI currently has base funding of \$1,785,000 for Academy technology services (distance learning, interactive multimedia, and computer technology and service). Base funding is utilized to maintain the existing level of service and is used for the FBI Training Network (FBITN) satellite teleconferences, taped programs, video teleconferencing (VTC), two contract associate producers, and related joint efforts in training with other federal, state, and local law enforcement. The FBI is requesting \$1,500,000 for technology-based training. The request is comprised of \$1,300,000 to develop four interactive multimedia courses and \$200,000 for two contract multimedia and web-based instructional designers to support the development of these projects.

Interactive Multimedia Courses. Interactive multimedia courses disseminated via CD-ROM technology exemplify the potential of technology-based training. These sophisticated software packages deliver training content through interaction with the trainee. Because courses are fully user interactive they allow the trainee to choose the direction, action, and outcome of the overall experience. This mode of training has several distinct advantages over traditional methods of instruction.

Convenience: Interactive multimedia courses allow trainees to receive training at times and places and for durations that are convenient for them.

Cost: Interactive multimedia training offers substantial cost savings. The elimination of student travel and per diem expenses, maintenance expenses for classroom facilities, and instructor salary costs allow for a substantial overall reduction in cost.

Better retention of training content: A growing body of academic research suggests that interactive multimedia training results in equal or higher quality of student learning than traditional instruction.

Better consistency: Interactive multimedia training is typically more consistent, both in content and in the manner that the content is delivered, than traditional instructional methods.

Relevance: Interactive multimedia training is "just in time" training - the training takes place exactly when the trainee requires training. In turn, performance tends to increase significantly because of the immediate applicability of the material to job tasks.

The success of the FBI's one existing interactive multimedia course, titled "Interview and Interrogation" powerfully demonstrates the exciting potential of technology-based training. Developed in 1997 by Johns Hopkins Applied Physics Lab at a cost of \$350,000, this interactive multimedia course was developed to help agents develop interview skills by providing meaningful experience in detecting

deception during interviews. This training tool emulates human behavior using a computer-simulated person in a realistic scenario. The course gives the trainee experience in asking proper questions and distinguishing between deceptive and truthful responses. It also provides a critique and numerical score for the interview. As their skills develop, students can see their critiques improve and their scores rise. "Interview and Interrogation" supplements and reinforces traditional classroom instruction by giving the trainee an opportunity to practice these important skills. 'Interview and Interrogation' has already been incorporated into the new agent training curriculum as trainees now have the opportunity to use the program to supplement classroom based study. In FY 1999, the FBI's 718 new agent trainees voluntarily used the software for a total of 3,900 hours, an average of 5.4 hours of training for each student. Due in part to the success of the course, 10,000 CD-ROMS of the program have been distributed to federal, state, and local law enforcement agencies through the FBI's field offices.

The requested enhancement of \$1,300,000 would allow the FBI to develop four additional interactive multimedia courses, at an approximate cost of \$325,000 each, to be disseminated through CD-ROM technology, on the topics of Informant Development, Basic Criminal Investigation, Leadership and Management, and Ethics.

Multimedia and Web-Based Instructional Designers. The development of interactive multimedia courses is a time-consuming process and the developmental time frame for these courses is generally longer than the traditional face-to-face course. While the content is generally the same, the delivery of content is more complex via distance technology. The TD does not have the skilled personnel to develop and create interactive multimedia courses. Two contract multimedia and web based instructional designers, at an approximate cost of \$100,000 each, are needed to support the development of this project.

Development of the requested multimedia courses is an essential component of the FBI's plan to provide its workforce with the training opportunities needed to implement the Director's training requirement and to provide its relatively inexperienced agent workforce with a sufficient amount of training in core investigative skills. Though the development of interactive multimedia courses requires a high initial expenditure of funding, the long-term costs associated with this mode of training are lower than more traditional methods. The FBI's current technological infrastructure cannot yet support web-based training opportunities. Thus, interactive multimedia courses are one of the few currently viable options the FBI has for meeting its increased, mission-critical training demands. Development of these interactive multimedia courses and their subsequent dissemination via CD-ROM technology offers a proven way to deliver training to thousands of FBI employees at minimal cost. Without this enhancement the FBI will forego an opportunity to ensure that its employees receive adequate training opportunities to meet the challenges of the future and will be unable to replace a significant amount of technology-based training opportunities with traditional methods of instruction.

Item: TRA - Development of Analytical Capabilities, \$1,000,000

The FBI cannot achieve the goals of its strategic investigative plan without a substantial improvement in the skills and expertise of its analytic cadre. All investigative program managers have cited weakness in analytic capability as a key shortfall in their ability to undertake proactive investigations and identify emerging groups and crime trends. In May 1999, a congressional committee reviewing the loss of sensitive U.S. technology to China, specifically criticized the FBI's "inability to centrally locate, retrieve, process, evaluate, analyze and disseminate foreign intelligence and counter-intelligence information." Another congressional committee investigating national security concerns regarding China also cited the need for the FBI to "undertake and maintain a current all-source analysis" capability. In July 1999, a Department of Justice Inspector General's report on the FBI's campaign finance investigation criticized shortfalls in FBI's ability to provide information to senior officials. The FBI recognizes that these weaknesses are perpetuated by the lack of training available to FBI analytical personnel.

To correct these shortfalls and to assure quality analysis, all FBI analysts must achieve a high standard of professional skill and expertise. A comprehensive, standardized analytical training program must be implemented if the FBI is to substantially enhance the skills and expertise of its analysts. The importance of analytical training is particularly acute in an era where globalization and exponential growth in technology and information systems have combined to create a more complex and rapidly changing world in which the power of information is paramount. More than ever, specialized analytical expertise and training are needed to assess changing or emerging threats, such as in the health care fraud and cyberbanking industries, or changing modes of operation and trade craft used by terrorist or foreign intelligence organizations and their agents. In this new era, the success of proactive investigative initiatives increasingly depends on sophisticated target analysis by highly skilled and well trained analysts who can provide a detailed understanding of the identities, roles, relationships, and activities of individual members or overall vulnerabilities of groups, cells, or organizations being investigated. It also requires that the FBI be able to produce strategic assessments and predictive analysis in order to inform program resource decisions and investigative efforts.

The FBI recognizes that a trained, expert cadre of analysts, both in the field and at FBI Headquarters, is essential to successfully meet its investigative mission and has begun a multi-year effort to enhance its existing capabilities. This initiative, the Intelligence Capabilities for the Millennium (ICAP-2000), will overhand the existing analytical infrastructure based on standardized core skills competencies, expertise, and personal attributes. ICAP-2000 will include a validated training curriculum which will be developed by Instructional Systems Specialists hired specifically for this purpose. The training curriculum will be based on the identified core competencies and will be linked to promotions and professional development opportunities.

The development and implementation of a comprehensive, standardized training program is a central component of this effort and is critical to the success of the ICAP-2000 initiative, as not only new analysts, but also the existing cadre must receive training to meet these goals.

In FY 1999, approximately \$211,000 in base level funding was available for analyst training. With over 850 Intelligence Research Specialists (IRS) to train, this allows only \$247 per analyst which is less than would be required for the basic courses currently available to the FBI. For example, the commercial vendor Anacapa Sciences, Inc., offers a two-week basic analytic course for criminal analysts, at a cost of about \$685 per analyst, and the CIA offers a one-week intermediate level intelligence course at a cost of about \$400 per person. In addition, FBI analysts need specialized courses in investigative techniques and subjects directly relevant to the unique mission of the FBI and its various Criminal and National Security investigative programs. Many analytic personnel are in need of developmental skill training.

The FBI requests a total of \$1,000,000 to implement a comprehensive, continuing development and training program for its analytical positions. Funding would be used to provide a wide range of training opportunities tailored to the FBI's investigative mission and specific training needs, significantly strengthening the FBI's analytic capabilities. First, the enhancement would provide every analyst with the same basic training in FBI investigative programs and techniques, analytical thinking, briefing techniques, report writing, and critical analytic technologies such as telephone analysis. The request would ensure that every analyst has been provided with the basic training necessary to establish a foundation for long-term success. Second, the FBI would be able to provide its analysts with specialized training on particular substantive issues, such as money laundering, narcotics trafficking, denial and deception techniques and foreign area studies. Most significantly, this enhancement would enable the FBI to offer a sufficient amount of training to establish and implement a standardized, comprehensive training program that would upgrade the skills of the existing analytic cadre to help ensure that the goals established by the ICAP-2000 initiative are met.

The FBI recognizes that it must create a professional intelligence cadre of experienced and trained analysts characterized by definitive career opportunities, progressive training, and rotating field assignments. On point with the recent reorganization of FBI Headquarters is the Information, Analysis and Assessments Branch within the newly created Investigative Services Division. This branch will address the shortfalls cited by Congress and DOJ, and will enhance FBI investigative capability by integrating analysts and information from all programs. To assure a more effective analytic cadre, the Branch includes a unit dedicated to analyst professional development and training.

The requested enhancement would allow the FBI to establish an analytical training program that would enhance and refine the skills of its analytic cadre, resulting in a more diversified and better equipped intelligence capability that would be more responsive to tactical investigative needs and more proactive in identifying potential leads or targets. Training in areas such as money laundering, narcotics trafficking, denial and deception techniques, cybercrime, or foreign intelligence techniques, would provide analysts with the skills and knowledge needed to improve identification and assessment of emerging crime, terrorist, and foreign intelligence threats and patterns. The requested training would also improve analysts' ability to determine associations and relationships among individuals or groups engaged in criminal, terrorist, or counterintelligence activities and improve the FBI's understanding of the vulnerabilities of groups or individuals under investigation. An analytical training program tailored specifically to serve the FBI investigative mission would enhance the full range - tactical, programmatic, and strategic - of intelligence products, thereby ensuring a solid foundation of intelligence that would provide "real-time" case support to ongoing investigations, long-range assessments that would inform planning and resource decisions, and predictive analysis that would provide guidance to investigative programs.

Item: TFS&S-Electronics Technician/Technically Trained Agent Training, 4 positions, 2 FTE, and \$1,195,000

Utilization of new and emerging telecommunications technologies such as Personal Communications Services (PCS), encryption, voice over data, satellite communications, and other digital communications challenge the FBI's ability to implement court-ordered electronic surveillance. The FBI must maintain the capability to respond rapidly and effectively in these technologies through the development of new equipment and techniques coupled with aggressive technical training for technical investigative personnel. Training courses which address new technologies and intercept methodologies must be developed and delivered to field personnel immediately.

Technically Trained Agent (TTA) Training Program. The field TTA is responsible for the collection of evidence in court-ordered electronic surveillance matters for criminal and national security investigations. The majority of the FBI's successfully prosecuted cases rely heavily on the technical collection of evidence to support direct testimony. Knowledge of telephone company operations and network architectures is essential to the TTA's ability to conduct digital telephone intercepts. A thorough understanding of the telecommunications architecture and capabilities is required for the TTA to respond quickly in life threatening situations.

TTAs must also effectively employ other technical investigative techniques to include the use of transmitters, digital body recorders, thermal imaging equipment, closed circuit television, and other electronic surveillance technologies. Constant commercial development in these areas drives an intensive advanced training requirement. Further, technological advances in Global Positioning Satellite (GPS)/NavTrack, Range Bearing, Directional Finding Tracking Systems, Celiular Telephone Tracking and Locating, and

Special Technical Surveillance Vehicles will greatly enhance the FBI's ability to conduct criminal and foreign counterintelligence surveillances. A thorough understanding of these technologies is needed by FBI technical, surveillance, and investigative personnel in order for the FBI to maintain critical evidence collection capabilities in national security and criminal investigations.

The TTA Training Program is responsible for providing training to 295 field TTAs and 65 On-the Job Trainees (OJTs). Delivery of effective technical training is a formidable task, especially in an environment of rapidly changing technology. Additional full-time instructors, cognizant of course development and modern adult learning methods, are needed to support the expansion of the existing TTA training curriculum.

Electronics Technician (ET) Training Program. The ET Training Program is responsible for the design, development, implementation, and evaluation of all radio, data, video, and intrusion detection systems training required by ETs in the performance of their duties. The ETs support all FBI investigative operations by providing radio and data communications support. In addition, the ETs provide all FBI facilities (field offices, resident agencies, off-sites, etc.) video and intrusion detection protection against clandestine entries from criminal or foreign intelligence agencies. The impact of technology on FBI investigative, management, and administrative functions will increase significantly during the next five years. Since ETs maintain the data and communications systems, in order to ensure the success of the Information Sharing Initiative (ISI) and the Integrated Digital Wireless Communications System (IDWCS), it is imperative that relevant technical training courses be continuously developed and delivered to ET personnel.

In 2001, the TTA Training Program personnel resources include one SSA Training Manager, one ET instructor, and one Training Technician. Base non-personnel resources consist of \$430,000. ET Training Program personnel resources consist of one Training Manager, one Training Technician, and eight ET Training Instructors. Base non-personnel funding consists of \$170,000.

TTA Training Program. A total of \$845,000 is requested consisting of four technical TTA instructor positions and \$445,000 in personnel funding and \$400,000 in non-personnel funding. The current TTA certification process consists of a three-week Basic Electronics and Telecommunications Course (BETC), a four-week TTA Certification Course (TTACC), and a one-year period of formal OJT under the supervision of the field office Technical Advisor (TA). During the initial training process, prospective TTAs receive instruction on technical topics including basic electronics, telephony, cyber technologies, digital video collection, digital communications, encryption, signal analysis, telephone outside plant operations, electro-optics, video, surveillance tracking systems, phototelesis equipment, locking system technologies, and field safety procedures. The BETC and TTACC are taught at the Engineering Research Facility (ERF) by FBI and contractor personnel. Following certification, additional instruction on specialized

technical topics is provided to maintain the TTA's level of technical knowledge and to orient him/her with new equipment, techniques, and technologies.

A total of 63 field TTAs are currently eligible for retirement and an additional 106 field TTAs are eligible for retirement within three years. During 1999, the TTA Program lost 42 experienced technical investigators through retirements, promotions, transfers, and intra-office reassignments. The replacement of lost technical personnel requires effective recruiting, OJT, certification training supplemented with regular specialized technical instruction. Although the TTA certification process takes a minimum of one year to complete, it typically takes almost three years of full-time experience for a TTA to develop a high level of technical proficiency. The TTA certification process requires significant training resources. During FY 1999, a record 28 weeks of classroom training at the ERF was devoted to basic TTA certification training.

One ET instructor is solely responsible for instructing the BETC which is a prerequisite for all OJTs seeking to attend the four-week TTACC. This instructor also provides significant instructional support during the TTACC, Advanced Technical In-service, Advanced Microphone Course, Basic Technical Surveillance Countermeasures Course, and other technical training classes. During 1999, this instructor provided approximately 32 weeks of TTA training to approximately 320 students. This demanding schedule, which will be repeated during 2000, precludes the instructor from devoting sufficient time to update existing courses, design and evaluate new courses, and develop his own technical and instructional skills. Presently, the program has no one available to replace this instructor in the event of illness, non-medical emergencies, or annual leave. One additional technical instructor is requested to support these training responsibilities.

The second TTA Training Program instructor is responsible for the development and delivery of all computer-related TTA training. This individual alone must identify specific training requirements and build courses to meet TTA training needs regarding computer technologies. Additional instructors are required to support existing computer training initiatives and to pursue the development of other subject areas.

There is an urgent need to respond to the technological advances made in the telecommunications field to guarantee the FBI's continued ability to perform court-approved electronic surveillance, an integral part of almost every successful investigation as most FBI electronic techniques require the proper coordination and use of telecommunications facilities. Telecordia (formerly Bellcore), in conjunction with TPU, has developed a series of five telecommunications courses for field TFAs. These courses address relevant topics including telephone company operations, network architectures, digital signaling and packet switched systems. Integrated

Services Digital Network (ISDN), Synchronous Optical Network (SONET), Advanced Intelligent Network (AIN), wireless communications services, specialized telecommunications equipment, and other advanced telephony issues. Subsequent to the TTACC, all field TTAs are expected to attend the first three courses in the series.

Customized courses have also been developed in the Bell Atlantic, Pacific Bell and U.S. West operating area to provide TTAs with instruction on telephone company operations unique to their respective field office territory. Efforts are currently being made to develop similar training courses in other Regional Bell Operating Company regions.

The annual TTA training schedule lists approximately 45 technical training courses, which are available to all field TTAs and, in some cases, to OJTs. During 1999, a total of 569 requests for enrollment in these courses could not be fulfilled due to limited course availability, resulting in a deficiency of approximately 2,690 training days. (This is based on 569 unfulfilled training requests and an average course length of 4.73 days or 569 requests x 4.73 days = 2,691.4 training days).

An enhancement of \$400,000 is requested to adequately outfit training facilities for specialized TTA training requirements in Internet, cyber technologies, and data communications intercepts. This funding will support new courses on Internet, T-I, and other digital technologies. These training facilities are required to ensure the FBI maintains the capability to effectively implement electronic surveillance in the dynamic telecommunications environment. Presently, the existing facilities at the ERF cannot support development of these new courses. The emergence of sophisticated digital technologies and the rapid growth of the Internet, and data communications, threatens to outpace the FBI's ability to train field TTAs to implement and oversee Title III and Title 50 Interceptions of these technologies and their related investigations. The implementation of state-of-the-art training facilities is essential to the successful interception of the Internet, data and communications in support of field office investigations.

ET Training. The demand for ET training will continue to increase as the result of the hiring of new ET personnel, and the deployment of new technologies in the radio, data, video, and intrusion detection systems. Funding totaling \$350,000 is requested for the development of seven distance learning courses in conjunction with the Department of Energy (DOE) Central Training Academy in Albuquerque, New Mexico. The TTA and ET Training Programs are responsible for providing state-of-the-art training on techniques, technologies, and equipment to approximately 800 personnel field wide. These technical personnel operate in an environment in which new technologies and equipment are deployed on almost a daily basis. The training programs must be capable of providing critical training to large numbers of personnel in an effective and timely manner. The training programs must also

maintain the capability to address new training requirements with limited personnel and non-personnel resources. One solution is the development of a broad-based distance learning program for TTAs and ETs.

The ET and TTA Training Programs are currently pursuing a number of distance learning technologies, including satellite interactive television (ITV), computer-based, Internet/Intranet-based, and videotape training. The goal is to initially establish the capability to deliver courses via satellite ITV in selected Bureau field offices. Satellite ITV provides a high quality one-way video/two-way audio link between the instructor and the students. Effective delivery of the technical subject matter in existing technical course curriculums demand this high quality interactive link. The major advantage of ITV is that the satellite transmissions can theoretically reach all FBI downlink sites using one satellite broadcast. ITV is ultimately a cost-effective delivery method for reaching a large audience across the nation. The most costly component of the ITV system is the uplink studio. The TTA/ET Training Programs recently established a partnership with the DOE in pursuit of this training initiative. The DOE Training Academy, which has an operational uplink studio, has offered its expertise and uplink studio facilities to the TTA/ET Training Programs on a space available basis.

The training programs have established an initial goal of developing seven technical training courses using the satellite ITV medium. This number was derived based on available instructor resources and the number of existing course curriculums suitable for delivery via this medium. The one-week TTA Advanced Technical In-service, which is delivered three times per year to a total of 48 TTAs, is ideal for ITV. The need exists to provide this training to all 300 TTAs; however, limited classroom facilities, funding and work schedules preclude conducting additional classes. The estimated travel and lodging costs associated with conducting the Advanced Technical In-service at Quantico for 300 TTAs is approximately \$225,000 per year. The course could be delivered via ITV to 10 regional sites for approximately \$150,000. This figure primarily represents one-time equipment purchase costs and future courses could be delivered for less than \$5,000. Comparable savings would be realized by conducting other TTA and ET courses via satellite ITV. Because typical courses delivered via ITV can reduce course length by as much as 40 percent, savings in both travel and employee work days would also be realized.

The following chart displays performance measures for the ET/TTA Training Programs.

DECISION UNIT/PROGRAM: TESAS - ET/TTA Training Program

DOJ CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses

STRATEGIC GOAL: Supports Goals 1 - 5

COMPONENT ANNUAL PERFORMANCE GOAL: To provide state-of-the-art training to ETs, TTAs, and investigative personnel.

A. Data Validation and Verification:

ET/TTA Program Training Staff - Represents the number of projected personnel

Post FY98 Training Report - Report posted each year which documents the days of training provided to TTAs and ETs. The data updated and archived yearly.

Due to the rapid evolution of technology, the sophistication level associated with ensuring the security of the United States in foreign intelligence matters and obtaining intelligible electronic surveillance evidence in criminal investigations is increasing. Advances in telecommunications systems will make technical investigations even more difficult. TTAs must maintain the capability to respond

rapidly and effectively to emerging technologies through the development of new equipment and techniques coupled with an aggressive training curriculum. The dynamic and increasingly complex nature of telecommunications networks will, without additional training, challenge the TTA's ability to conduct technical investigations and the ability to respond quickly and effectively in life threatening situations. The requested enhancements are essential to ensure that TTAs and ETs possess the knowledge, skills, and capabilities to perform in a rapidly evolving digital technology environment.

Due to the limited training opportunities, field technical personnel are becoming compartmentalized, thereby eliminating the well-rounded journeyman. The compartmentalized personnel negatively impacts field operations, inasmuch as an individual who has received the training must be located, possibly diverted from other task, to perform the required function. On occasion, technical investigations are delayed due to scheduling problems associated with the compartmentalized TTA.

Initiative: Investigative Support

Decision Unit	Pos.	WY	Amount (000s)
	<u> </u>	77 1	TANASI
Information Management, Automation			
and Telecommunications (IMAT)	0	0	\$16,434
Organized Criminal Enterprises (OCE)	θ	θ	2.100
Technical Field Support and Services (TFS&S)	<u>_0</u>	_0	2,000
Total	0	0	20.534

The Investigative Support Initiative provides for the daily basic operational requirements of the field investigations and includes operational resource enhancements that support the FBI's Strategic Plan and cross traditional program lines. The FBI's strategic plan identified those funding requirements that are vital to supporting operations in the field.

Justification for Resources Requested

Item: IMAT - Telecommunications Services/Asynchronous Transfer Mode (ATM) Circuits, \$14,334,000

The FBI currently relies on a telecommunications infrastructure that was designed in 1991 to support the FBI's Systems Network Architecture (SNA)/token ring network. This network serves over 600 separate FBI locations and has been maintained with few changes since 1991, except for a recent change to accommodate Transmission Control Protocol/Internet Protocol (TCP/IP). That design is ill-suited to modern investigative processes using electronic case files. An ATM-based network will support the FBI's increased bandwidth requirements for transmitting images, video, and voice, as well as large case files including imaged documents, video/voice segments, and intelligence analyses. The FBI's future plans, of which this investment is one element, call for use of the Justice Consolidated Network's (JCN's) ATM backbone network, established by the Department of Justice (DOJ). The JCN will provide a common or shared, high-bandwidth network infrastructure for all DOJ components. This investment will enable the FBI to modernize its current, technically outdated network and enable the FBI to take full advantage of the benefits being afforded by the JCN ATM backbone.

The enhancement requested for the FBI's telecommunications system will reinforce strategic FBI mission and performance goals by providing the additional bandwidth required to support the FBI's planned increased capacity requirements. This increased workload will result from a widening of the scope of investigative operations being performed by the FBI and the incorporation of new enhanced applications which will consume greatly increased amounts of bandwidth. The result will be more cases solved more quickly.

Unless ATM is implemented, planned applications for supporting the FBI's increased workload and increasing the FBI's investigative effectiveness through incorporation of imaging, video, and voice into case file systems and other IT systems requirements will not be implemented because of tack of telecommunications support. The FBI will be constrained to operate in its current outdated and fragmented mode of operation. Also, the FBI will not be able to accomplish its planned integration into the DOI's JCN.

Base resources of \$9,500,000 are available to support the existing SNA/Token Ring architecture and will be used to begin the migration to ATM circuit requirements.

An enhancement of \$14,334,000 is requested for Tiers 1 and 2 of the JCN ATM circuits required to support the transmission of case file documents. Workload projections and the corresponding increased transmission requirements can only be addressed through the requested incremental increase in transmission capability afforded by an ATM backbone. However, to fully utilize the JCN's ATM backbone, much of the FBI's network must be modernized and enhanced. Network capacity and equipment from FBI sites to the JCN concentration points must be upgraded so that the high bandwidth capability offered by JCN is eventually available to all 56 FBI field offices, their Residem Agencies, and other specialized locations. This investment addresses leased circuits and associated costs for establishing operational capability of the circuits. The projected costs for the leased services were provided by the DOJ JCN Program Office to the FBI. As the FBI implements an electronic case file application, increased bandwidth will be required to support the transmission of large files such as imaged documents or video segments. The JCN offers the FBI the vehicle for moving into an ATM environment; however, with increased bandwidth comes increased circuit costs.

In 2001, the associated deployment of the FBI's new Intranet will require the implementation of DS-3 ATM circuits (45 Mbps) for 25 large offices (more than 250 personnel), which include 8 concentration sites, 14 field offices, FBI Headquarters, Quantico, and Clarksburg. It is expected that the larger field offices will serve as concentration points for other field offices and Resident Agencies. Transmission of analytical and graphical information, as well as video traffic processed through applications, will require significantly larger circuits than currently available. FBI Headquarters, Quantico, and Clarksburg will support large local personnel complements and will own large databases which will be accessed by all field activities, as well as having interchanges of large amounts of graphical information and video. All 25 sites require bandwidth support for services such as Non Investigative Intranet (NII), Investigative

Intranet (II), Intelink, and National Infrastructure Protection Center. The cost for Tier 1 is estimated to be \$8,635,500.

The second tier of ATM implementation includes DS-1 ATM circuits for Resident Agencies. Large bandwidth is required to make the necessary interchanges for files, print, email, NII and II services among Resident Agencies, field offices, FBI Headquarters, Clarksburg, and Quantico. The estimated cost for Tier 2 is \$15,198,500. The implementation of the requested ATM circuits will also support the use of Sniffer-type devices and the Enterprise Management System used to monitor bandwidth consumption and performance on a real-time basis. The following displays the resources required in 2001:

FY	Tier	ltem	Amount
2001	1	25 DS-3 ATM circuits in 8 concentration sites, 14 large field offices (more than 250 personnel) and FBI Headquarters, Quantico, and Clarksburg	\$8,635,500
2001	2	DS-I ATM circuits in larger Resident Agencies	\$15,198,500
2001	1, 2	Total Tiers 1 and 2	\$23,834,000
2001		Less FY 2001 Base Funding	-\$9,500,000
2001	1, 2	Total FY 2001 Enhancement Funding Required	\$14,334,000

The following displays workload and performance measures for this item.

DECISION UNIT/PROGRAM: Information Management, Automation and Telecommunications/Telecommunications Services
DEPARTMENT OF JUSTICE (DOJ) CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses
STRATEGIC GOAL: Supports Goals 1 - 5

COMPONENT ANNUAL PERFORMANCE GOAL: To provide the data circuits required to support the transmission of large files that comprise FBI electronic case files.

	MANCE INDICATOR FORMATION		PERFORMANCE REPORT AND PERFORMANCE PLANS						
				Performance Repo	ort	Perfor	mance Plans		
Type of Indicator .	Performance Indicator	Data Source	1998 Actuals	1999 Enacted Plan	1999 Actuals	<u>2000</u> Plan	2001 Plan		
Enputs	Number of locations with installed DS-3 and DS-1 ATM executs	eFBI Plan	N/A	N/A	N/A	21	472		
Intermediate Outcome	Increased services available	eFBi Plan	N/A	Text and limited image capability over network.	Text and limited image capability over network.	Increased capability for text documents and image sharing for 21 sites.	Faster response times. Increased ability to send text, image, audio, video over network to larger number of sites.		

- A. Data Validation and Verification: 1. The data source for the 21 targer offices to be given DS-1s in FY 2000 and 472 offices in FY 2001 (25 larger offices plus 447 resident agencies) is analysis for eFBI submissions. For FY 2000, the FBI will implement 21 offices (10 concentration offices, one pilot office, and 10 resident agencies of the pilot office). This number of offices was chosen because of limitations of funding, time, and resources, including scarcity of encryption equipment and availability of JCN circuit capability. The FBI currently has on hand or on order for delivery in early calendar year 2000, twenty-eight FASTLANE ATM encryptors. Delivery time for newly-ordered FASTLANE encryptors if approximately one year.
- 2. The data was verified through consultation with the ICN Program Office (i.e., capability to supply circuits) and National Security Agency (i.e., lead time for ordering of encryption equipment).
- 3 Limitations on this data include failure to obtain required funding for equipment for sites under eFBI, extended delivery of ordered encryption equipment, and inability for JCN to supply circuits at required FBI locations.
- 4. The FBI will take actions to purchase and implement the planned circuits as funds and equipment become available. Progress will be tracked as funds are spent and circuits are implemented, and will be presented in reports to DOI, as required in order to mitigate any data limitations.

The FB1 has been mandated by the DOJ to transition existing FB1 data circuits to the Department-wide JCN. The JCN consists of DS-3 ATM circuits versus the dedicated point-to-point DS-1 and 56 Kbps circuits currently in use by the FB1.

This conversion to ATM technology at higher speeds will result in substantially greater bandwidth which is required by the FBI. It will enable FBI employees to include new and more efficient methods of working to perform their investigative and administrative tasks with bandwidth-on-demand capabilities. The ATM technology will permit rapid transport for transmitting images, video, voice, as well as large case files including imaged documents, video/voice segments, and intelligence analyses. The current backbone network will not support tiese applications.

Without the required enhancement the FBI will be forced to operate on its present obsolete telecommunications backbone. Planned applications listed above will not be implemented causing increased delay in developing and fielding systems with the new capabilities called for in the DOJ and FBI's plans for usage of the ATM infrastructure. Full advantage of the benefits provided by the JCN ATM backbone will not be realized.

Item: OCE - Criminal Case Funds, \$2,100,000

Investigations which use the Enterprise Theory of Investigation represent the core competency of the FBI's efforts against organized criminal groups, drug traffickers, and violent gangs. These investigations are typically long-term and require the use of sophisticated techniques, such as electronic surveillance and undercover operations, to be successful. These investigations target the leadership of the criminal organization and all associated criminal enterprises. The goal of these investigations is to disrupt or dismantle the entire criminal organization, resulting in the imposition of lengthy prison terms and the seizure of the organization's illicit assets. Increasingly these investigations are conducted by FBI-led joint task forces with federal, state and local law enforcement agencies. The long-term nature of the investigations and the associated sophisticated techniques require a substantially greater expenditure of funds to support the investigations.

The criminal organizations and groups targeted by the FBI are sophisticated, mobile and use modern, commercially-available technology, such as wireless communications, encryption, and the Internet, to support their criminal enterprises. These groups are often organized on an international level and frequently coordinate their illicit schemes with other criminal organizations. This necessitates an increase in the FBI's operational case funds to allow investigators the same mobility and access to advanced technology as criminal organizations.

Criminal informant funding is a critical investigative tool that enables the FBI to fulfill investigative responsibilities by providing the information necessary to successfully counter challenges presented by complex and violent criminal organization. Criminal informant funding is used to pay for information and all the costs associated with cooperating informants and/or cooperating witnesses such as travel and housing.

The FBI requests \$2,100,000 for case operational funds and the purchase of information. The FBI's Strategic Plan recognizes the importance of gathering, analyzing, and disseminating intelligence and of investigative efforts against crime groups with a regional, national, and/or international nexus. Information supplied by informants and cooperating witnesses often serves as the predicate for these types of major investigations. Leadership of organized crime groups, drug trafficking networks, and gangs seek to insulate their direct involvement in criminal activity; oftentimes the only avenue to obtaining direct evidence of these individuals involvement in crime is through the use of informants. Informants are one of the essential investigative tools required by the FBI when conducting these complex, long-term, and international investigations. Another critical investigative tool that is successful in targeting the leadership of criminal enterprises is lawful electronic surveillance. Criminal organizations of the type, scope, and complexity investigated by the FBI have both illicit wealth and intense internal loyalty (maintained by the fear of violent reprisal) that frustrate traditional law enforcement investigative efforts. To counter this challenge, the FBI uses investigative techniques such as countapproved telephone and microphone interceptions, interception of cellular telephone and pager devices, and pen register coverage of telephones and pager devices. Case operational funds also provides for other critical case needs. These include the rental and ancillary costs (utilities, furniture, etc.) of off-site space used for monitoring plants, covert vehicles, safe houses, and undercover operations; witness protection expenses and covert travel expenses; and costs lease lines and telephone expenses for court-approved interceptions of communications.

If the FBI is unable to adequately provide confidential funding for investigations, the ability to dismantle significant organizations will be severely affected. The importance of this these investigative tools to fighting crime is shown by the following cases:

In 1999, an FBI cooperating witness was critical to initiating a significant undercover operation (UCO) targeting the drug
trafficking and money laundering operations of the Oscar Roldan drug trafficking organization, which is associated with the
Alberto Orlande Gamboa, also known as "Caracol," Colombian drug organization. Roldan, an independent Medellin, Colombiabased trafficker, operated a drug organization with cells in major metropolitan areas in the United States. As a result of this
investigation, which involved extensive use of court-approved interception of communications, a total of 2,053 kilograms of
cocaine was seized in six separate drug seizures. Additionally, \$240,000 in real estate, \$120,000 in vehicles, an aircraft valued at

\$40,000 and \$275,000 in U.S. currency, were also seized.

A cooperating witness enabled the infiltration and successful investigation of the Alberto Valencia Drug Trafficking Organization
(DTO). The Valencia DTO is part of the Miguel Angel Rodriguez-Orejuela Cali Cartel, which has imported multi-ton quantities
of cocaine into the United States. Over 200 subjects involved in cocaine trafficking and money-laundering were identified, 21
subjects were indicated, and over two tons of cocaine were seized.

Item: TFS&S - Digital Body Recorders, \$2,000,000

Audio recording technology has been, in the past few years, rapidly changing from an analog to a digital format. The investigative environment in which this technology has been deployed is becoming an increasingly high risk environment. In order to minimize the risk of discovery of the recording device, whether it is on a person or hidden within a concealment, it is important that the FBI take advantage of the technology afforded it through deployment of the Solid State Digital Recorder (SSDR). The ramifications of discovery range from safety of the wearer of the device to case compromise should the device be discovered. Off the shelf technology available to targets of FBI investigations/operations, as well as media coverage of numerous FBI investigative techniques utilized in past operations, substantially increase this possibility. Digital technology allows for much smaller devices, enhancing concealment techniques as well as minimizing the susceptibility to counter measure technology. The digital signal facilitates the intelligibility, post processing and enhancement requirements necessary for evidence in court room presentations.

Presently, the FBI has 6,000 analog tape-based body recorders in its inventory that must be replaced by digital technology. The size of these recorders alone preclude them from being utilized in any high risk environment. As a result of their age and the lack of replacement parts, they are no longer considered dependable, reliable, or safe as an investigative technique. In addition, through liaison with a number of manufacturers in the magnetic tape industry, the FBI has learned that analog, reel-to-reel tape will no longer be produced by the end of calendar year 2000, shortly followed by the cessation of the audio cassette format. This industry decision will basically negate the utilization of analog recorders as a viable means for the FBI to collect audio evidence.

Base funding of \$1,079,000 permits the acquisition of approximately 343 SSDRs depending on the type purchased. An enhancement of \$2,000,000 is requested to deploy and support SSDRs in all field divisions. The total number of SSDRs required by the field offices for investigative use in 1999 totaled 2,459. With an enhancement of \$2,000,000 per year, the FBI will be able to procure approximately 3,059 additional SSDRs by 2003. The following displays the number of SSDRs which could be procured with base and enhanced funding:

Actual and Planned SSDR Procurements, 1999 - 2003

·	1999	2000	2001	Total
SSDRs procured with base funding	267	343	343	953
SSDRs procured with enhanced funding	*1,028	0	527	1,555
Total SSDRs procured	1,295	343	870	2,508

^{*}Due to investigative priorities, funding was reprioritized from other technical procurement activities which were delayed until 2000, which allowed for the one time purchase of additional body recorders in 1999. The following displays performance measures for the body recorder program.

DECISION UNIT/PROGRAM: TFS&S - Digital Body Recorders

DOJ CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses

STRATEGIC GOAL: Supports Goals 1 - 5

COMPONENT ANNUAL PERFORMANCE GOAL: To ensure the ability to gather critical evidence through the provision of body recorders.

PERFORMANCE INDICATOR INFORMATION			PERFORMANCE REPORT AND PERFORMANCE PLANS				
Type of Indicator	Performance Indicator	Data Source	Performance Report			Performance Plan	
			1998 Actuals	1999 Enacted Plan	<u>1999</u> Actuals	2000 Plan	<u>2001</u> Plan
Inputs	Body Recorder Program Positions Body Recorder Non-personnel in \$000s	Historical Data	3 \$1,350	3 \$1,350	3 \$4,382*	3 \$1,350	\$3,350
Activities	SSDRs Required	Field requests	2,404	2,137	2,459	1,514	1,621
Outputs	SSDRS Deployed	,	262	267	1,295	343	870

A. Validation and Verification: Data is obtained directly from field office input/requests. All inputs/request are maintained in internal databases. Databases are regularly updated to ensure accuracy of status of data received. Data is dependent upon accurate reporting from field components.

^{*}Due to investigative priorities, funding was reprioritized from other technical procurement activities which were delayed to 2000.

With the requested enhancement, the FBI will be able to maintain a valuable investigative technology which provides essential evidence in many of the FBI's cases. Law enforcement generally, and the FBI specifically, is constantly being tasked to redevelop its investigative strategy to address barriers resulting from industry technology proliferation. Body recorders are used in a high percentage of criminal cases and produce evidence that may not otherwise be obtained, especially with the arrival of encryption. SSPR technology allows for a broader range of technical deployments to obtain this critical evidence.

Nam: 181AT - Communications Assistance for Law Enforcement Act (CALEA) Implementation Support, \$2,100,000

The FBI's CALEA implementation responsibilities include, but are not limited to: (1) developing consensus law enforcement electronic surveillance requirements for *all* telecommunications technologies; (2) facilitating the industry's design, development, and deployment of CALEA-compliant solutions; (3) identifying, publishing, and ensuring deployment of capacity requirements in accordance with Section 104 of CALEA; (4) assisting in the development of a uniform enforcement policy; (5) analyzing the merits of all available reimbursement mechanisms; and (6) developing a prioritized plan for the effective reimbursement of the industry for the deployment of CALEA solutions.

The FBI has taken a three-phased approach toward achieving CALEA implementation. Phase One (Descriptive) consists of working with telecommunications manufacturers and carriers to describe law enforcement's technical capability and capacity-related electronic surveillance needs. Phase Two (Resolution) consists of resolving and finalizing the legal and regulatory issues regarding implementation. Phase Three (Institutionalization) consists of ensuring CALEA compliance by working with carriers as solutions are deployed, assisting carriers as Systems Security and Integrity (SS&I) rules and procedures are adopted, and seeking enforcement against carriers for noncompliance. These phases remain consistent regardless of the specific telecommunications technology being pursued. The FBI's current focus is to drive wireline, cellular and broadband PCS into and through the third phase (deployment).

By 2001, issues currently before the Federal Communications Commission (FCC) regarding electronic surveillance technical requirements, telecommunications carriers' SS&I issues, and cost recovery rules and regulations will have been resolved. Among FBI responsibilities in 2001 will be the reimbursement of the telecommunications industry for deployment of new and innovative technical solutions for technologies currently being proposed and to assess compliance with these solutions across the country. The FBI, through its expanded technical initiative and law enforcement liaison programs, will be responsible for overseeing the development of technical solutions and ensuring that those solutions made available to law enforcement are, in fact, deployed in the 150 high-intercept areas in the United States. Additionally, the FBI will monitor crime trends and develop strategies to address increases in intercept

capacity in areas that have emerging intercept requirements.

The FBI will be responsible for ensuring that technical intercept capacity is available in specific areas of the country. The Final Notice of Capacity was published in the <u>Federal Register</u> on March 12, 1998. Accordingly, telecommunications carriers provided information that articulated to the FBI those areas in their respective networks that could not provide capacity as published in the referenced notice. Those telecommunications carriers indicating that they could not meet the capacity requirements are eligible for reimbursement for any modifications incurred in order to provide the required capacity to law enforcement. The telecommunications industry must be in compliance with the actual capacity requirements three years after publication of the Final Notice or March 12, 2001. The FBI anticipates extraordinary reimbursement activity will be required to address capacity requirements in High Intensity Drug Trafficking Areas (HIDTA) and the Southwest Border area of the United States.

As CALEA implementation efforts continue to progress, resource requirements have significantly increased. Current efforts require working with manufacturers as their software design and development processes are completed; evaluating solutions in conjunction with the law enforcement community; and assisting carriers, as necessary, to deploy the CALEA features in their networks. The FBI also works with telecommunications carriers as they assess their ability to meet their capacity requirements and to determine which carriers will be eligible to receive reimbursement based on law enforcement priorities. In the near term, the FBI must assist the DOJ in the development of a uniform enforcement process to address noncompliance for capability and capacity requirements. Finally, and most pressing, is the need to address other technologies and services covered by CALEA. By 2001, emerging technologies service providers of Enhanced Specialized Mobile Radio (ESMR), two-way paging, and Mobile Satellite Service (MSS) will have also grown and possibly exceeded the number of cellular and personal communications services (PCS) carriers today. These technologies fall within the scope of CALEA and require adherence to law enforcement technical requirements and capacity requirements.

The FCC's imposed June 30, 2000 deadline for telecommunications carriers to be in compliance with law enforcement's technical requirements and CALEA's deadline for the industry to comply with the published capacity requirements by March 12, 2001 have placed a significant burden on the FBI's limited funding resources to address current technologies (over 4,000 wireline, cellular and PCS telecommunications carriers providing service in the United States). The increase in funding requested is to accommodate the additional requirements for the testing and verification of manufacturer proposed CALEA solutions for wireline, cellular and PCS, and the necessary work that needs to be accomplished to address other technologies and services that must be in compliance with CALEA. These new technologies and services that must be addressed represent an increase of over 200% in the number of distinct technologies

and services undergoing active CALEA implementation.

Additionally, without an increase in funding resources, the FBI will not be able to initiate critical new work efforts for telecommunications technologies and services other than wireline, cellular, and broadband PCS. As a result, the FBI will not be able to adequately address any of the technical, financial, programmatic, or strategic issues related to CALEA compliance for those new telecommunications technologies and services. Finally, as the June 30, 2000 capability compliance date nears the FBI will not be able to adequately provide the necessary deployment support to ensure that equipment, facilities, and services of highest priority to law enforcement is made compliant with CALEA.

Base non-personnel resources consist of \$9,600,000. For 2001, a total of \$11,700,000 will be required to support the proposed operational and contract activities of the FBI in support of CALEA, an increase of \$2,100,000. The following displays the non-personnel funding required and available:

CALEA Implementation Requirements, 2001

Item	2001 est.
Contractor Support	\$9,203,656
Facilities	807,344
Operational Expenses	1,689,000
Total	11,700,000
Less Base Funding	-9,600,000
Requirement	2,100,000

A total of \$9,203,656 would be used to provide operational support, program management, prioritization and reimbursement planning, and technical expertise. Current subject matter expertise regarding telecommunications systems is provided by an outside contractor. Outside contractors provide subject matter expertise in the following CALEA Sub-programs: Interface, Standards, Solutions Assurance, Law Enforcement Liaison, Capacity, Prioritization and Reimbursement, and Regulatory. The current level of funding

provides contractor support for approximately 52 subject matter experts.

Facilities expenses include space lease costs, travel, maintenance of facilities and equipment, telecommunications services, subscriptions, and related costs. Operational expenses represent primarily travel, temporary duty, and related expenses of state and local law enforcement participating in CALEA working groups or detailed to the FBI, training, and services. An additional \$807,344 would provide facility costs. Finally, \$1,689,000 would support the Law Enforcement Technical Forum, travel related to consultation, standards, regulator, and CALEA solution development activities.

The variety of multi-disciplinary issues which need to be addressed by the FBI include, but are not limited to: (1) developing and maintaining an environment in which effective liaison with the industry may take place in order to facilitate the industry's design, development, and deployment of CALEA compliant solutions; (2) developing consensus law enforcement electronic surveillance requirements for all telecommunications technologies required to comply with CALEA; (3) effectively educating and informing Congress and the FCC to ensure law enforcement's ability to conduct electronic surveillance is not compromised; (4) identifying, publishing, and ensuring deployment of capacity requirements in accordance with section 104 of CALEA; (5) providing support for all pending hitigation against Rules and Notices promulgated by the Government; (6) developing a legally-based, persuasive argument to ensure that all necessary electronic surveillance capabilities are adopted by the industry or FCC; (7) developing a prioritized plan for the effective deployment and tracking of CALEA solutions; (8) analyzing the merits of all available reimbursement mechanisms, including those not originally envisioned by the legislation; (9) assisting in the development of a uniform enforcement policy for telecommunications carriers not in compliance with CALEA; and (10) establishing an outreach plan to pro-actively inform all CALEA stakeholders of implementation activities, roadblocks, and short- and long-term objectives.

DECISION UNIT/PROGRAM: Communications Assistance for Law Enforcement Act Implementation Support DOJ CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses

STRATEGIC GOAL: Supports Goals 1 - 5

COMPONENT ANNUAL PERFORMANCE GOAL: To preserve the existing capabilities of Federal, State, and local law enforcement agencies to lawfully conduct court-authorized electronic surveillance requirements and to effectively articulate law enforcements electronic surveillance requirements and deployment priorities to the telecommunications industry.

Successful implementation of CALEA will provide for continued collection of vital intelligence through the use of lawfully authorized electronic surveillance, a fundamental capability integral in all three tiers of the FBI's strategic plan and national priorities. CALEA preserves law enforcement's ability to conduct lawfully-authorized electronic surveillance in order to ensure national security and public safety, while remaining cognizant of the public's right to privacy, and the policy of the United States to encourage the provision of new technologies and services to the public.

Initiative: Counterterrorism

Dramatic changes in the international and domestic environments have produced credible and serious threats that were not present a few years ago. Each of these threats, which include the hostile efforts of international terrorists, the growing threat of the criminal use of weapons of mass destruction (WMD), and criminal acts perpetrated by domestic terrorist groups and associated individuals, present the FBI with a very clear, but very difficult threat. As the result of these emerging threats, the number of "players" capable of carrying out a devastating terrorist attack against the United States has greatly increased. One of the most alarming trends in terrorism today is the rise in the number of groups for which political or religious beliefs constitute sufficient motivation for terrorist attacks. To the individuals associated with and/or following the teachings of these groups, violence is often viewed as an end in itself. For individuals belonging to or following the teachings of terrorist groups, there is no incentive to moderate their violence. Rather, indiscriminate violence and mass casualties serve their ends by intimidating large population groups and instigating societal instability. Within the broad range of threats facing the FBI's Counterterrorism Program, the following are the most significant:

At the forefront of counterterrorism planning and preparation efforts is the threat of chemical and biological terrorism. Internationally, there is credible intelligence that terrorist organizations are attempting to obtain a WMD capability. Domestically, a growing number of "lone offender" and extremist splinter elements of right-wing groups have obtained or attempted to develop and employ chemical, biological or radiological materials. The fear generated by a WMD threat or attack fuels its continued use as an effective disruption tool available to both terrorists and criminals. As the public's awareness of WMD has increased, so has the number of threats, to include a dramatic increase in hoak anthrax threats.

Usama Bin Ladin, a Saudi-born multimillionaire, and his organization, Al-Qaida, are currently the most immediate threat to U.S. persons and interests around the world. On February 23, 1998, Bin Ladin issued a "fatwa", which was reissued in May of 1998, claiming that it is the duty of all Muslims to kill American "civilians and military" whenever possible. Usama Bin Ladin and his

associates are currently under indictment in the Southern District of New York for various charges relating to their killing of US nationals employed by the US military who were serving in Somalia and on the Arabian Peninsula, as well as the killings of US nationals employed at the US embassies in Nairobi, Kenya, and Dar Es Salaam, Tanzania.

in responding to these threats, the FBI has placed a high priority on developing a much more comprehensive understanding of the intentions of terrorist groups and organizations and has initiated action designed to counter those efforts. These efforts require a closely coordinated effort between FBI field offices, the U.S. Intelligence Community (IC), and FBI Headquarters in the collection, analysis, and dissemination of information related to specific threats. In addition to partnerships being forged among our federal partners, the FBI and the interagency National Domestic Preparedness Office (NDPO) must continue to foster the promulgation and dissemination of cooperative domestic preparedness initiatives in support of state and local emergency responders.

To deal effectively with international and domestic terrorism, the FBI must concentrate on both prevention and response. To this end, the FBI has developed a five-level strategy which provides a framework to help focus FBI efforts to build maximum feasible operational capability in order to identify, prevent and deter terrorist activities. Level One of the strategy focuses on maximizing the FBI's capacity to respond to terrorist issues as they present themselves in FBI field offices. Level Two seeks to maximize the capacity of Headquarters to receive, react to and disseminate information pertaining to CT issues. Level Three is aimed at maximizing the proactive capability to fully utilize resources throughout the FBI in support of CT programs and initiatives. Level Four uses the establishment and maintenance of sound and productive relationships with external counterparts in the intelligence and law enforcement communities, defense establishments, foreign governments and state and local governments to obtain maximum support. Finally, Level Five seeks to build capacity by using all the necessary assets and capabilities of the FBI and external components of the U.S. Government to support and initiate complex domestic and international investigations and operations designed to get ahead of the threat by penetrating and neutralizing terrorist organizations. Each of the successive capability levels requires an increased sophistication and maturity because the issues to be addressed by the FBI become more complex at each level. The FBI is striving to develop maximum capability in all five levels to ensure successful identification, neutralization and penetration of targeted terrorist organizations to both prevent and effectively respond to terrorist activities.

The requested increases in this initiative would support the FBI's efforts in the identification, neutralization and penetration of targeted terrorist organizations. This initiative includes enhancements which expand Advanced Render Safe Teams for rapid deployment in each region (Level 1); enhance the level of funding to support the crisis management planning efforts in connection with the 2002 Winter Olympic Games in Salt Lake City, Utah (Level 4); provide base level funding for WMD preparedness (Level 4); improve and

expand the FBI's program for state and local bomb technician training (Level 3/4); and increase guard support at select FBI facilities (Level 1).

Justification for Resources Requested

Item: OFP - Weapons of Mass Destruction (WMD) Preparedness, \$3,500,000

1

An increase of \$3,500,000 is requested for FBI WMD preparedness programs, including \$1,294,000 for training conferences and assistance initiatives under the auspices of the National Domestic Preparedness Office (NDPO) and \$2,206,000 for WMD countermeasures initiatives within the FBI's Counterterrorism Division.

NDPO Training Conferences. The National Domestic Preparedness Office (NDPO) was established to serve as the focal point for federal efforts in support of the state and local emergency response community. The NDPO assists state and local emergency response agencies by concentrating and targeting the expertise and assets of the federal government to reduce confusion and duplication of effort, as well as to improve the quality of assistance offered. The NDPO includes representatives from each federal agency with responsibilities, programs, or assets involving domestic preparedness, including the Department of Defense (DOD), Health & Human Services (HHS), Federal Emergency Management Agency (FEMA), Department of Energy (DOE), Environmental Protection Agency (EPA), Office of Justice Programs (OJP), Department of Transportation (DOT), Department of Treasury, and the National Guard Bureau, as well as representatives and experts from the state and local emergency responder community.

The NDPO is organized around six program areas focused to establish, and maintain, a robust crisis and consequence management infrastructure within the United States capable of providing an effective response to a conventional, or non-conventional, attack. The six program areas are as follows; Planning, Training, Exercises, Equipment/Research & Development, Information Sharing and Outreach, and Public Health and Medical Services.

Funding totaling \$563,000 is required to fund two principal stakeholders conferences, one major program conference, and six NDPO functional area conferences. In order for the NDPO to effectively accomplish its outreach responsibilities, it will be necessary for it to regularly sponsor conferences for its "stakeholders." These conferences will enable NDPO management to advise/consult with the "stakeholders" regarding ongoing and planned initiatives, as well as afford the NDPO an opportunity to implement a training regimen which will provide federal, state and local participants with the skills required to plan for and respond to an incident involving a

WMD. FBI personnel, contractors, employees from OGAs, and state and local experts will combine efforts to design and implement a well rounded schedule of advisory and training conferences. The estimated cost of the principal stakeholder's conferences is \$85,000 per conference. The major program conference is estimated to be \$85,500. The estimated cost of each of the six functional area conferences is \$51,250.

NDPO Chemical/Biological Helpline. For 2001, the NDPO it is anticipated that the NDPO will assume responsibility for the Chemical/Biological Helpline currently funded by the Department of Defense. The Chemical/Biological Helpline provides emergency responders and planners across the United States with the information they need to plan, mitigate and prepare for the effects of a chemical or biological terrorist incident. The Helpline also offers technical assistance in non-emergency cases to local and state emergency responders. Dedicated operators are trained to listen and respond to questions from the field pertaining to CB preparedness issues, quickly retrieving the most current information relevant to the specific question. The CB Helpline is staffed weekdays from 9 a.m. to 6 p.m. Eastern Time, Monday through Friday. On weekends, holidays and after business hours, callers can leave a voice message. To assume helpline operations, an increase of \$731,000 is required.

Chemical/Biological Hotline. The Chemical/Biological Hotline serves as an emergency resource for first responders to request technical assistance during a chemical or biological incident. For 2001, it is anticipated that the FBI will assume responsibility for the Chemical/Biological Hotline. The projected cost for the Hotline is \$2,206,000 for both operations and contract technical expert services. The Hotline is a joint effort among the Coast Guard, FBI, FEMA, EPA, HHS and DOD. The National Response Center (NRC) is the entry point for the Hotline. The NRC receives basic incident information and links the caller to the DOD and FBI's chemical, biological and terrorism experts. These and other federal agencies can be accessed within a few minutes to provide technical assistance during a potential chemical or biological incident. If the situation warrants, a federal response action may be initiated. Trained operators staff the Hotline seven days a week, 24 hours a day. Available to the operations are medical experts and technical responders from Fort Detrick, Maryland.

The requested resource enhancement for 2001 would provide increased travel funding which would assist the NDPO in carrying out its primary function as a coordinating mechanism for the improvement of the state and local communities' capabilities to respond to a WMD incident. The FBI does not have sufficient funds to assume the costs of the proposed transfer of Chemical/Biological Hotline operations. The requested enhancements would allow for a smooth transition of the program without a degradation or disruption of the program's capabilities.

Item: OFP-Winter Olympics Support, \$1,100,000

Security and public safety planning is currently underway for the 2002 Winter Olympic Games in Salt Lake City, Utah. In connection with responsibilities for intelligence collection and crisis management, as set forth in PDD-39 and reaffirmed in PDD-62, for a national special security event (NSSE), the FBI is coordinating its efforts with the United State Secret Service, other federal, State, and local law enforcement and consequence management agencies. Endeavors are ongoing to establish adequate capabilities to house a joint operations center (JOC) and joint intelligence center, as well as to ensure that appropriate crisis management plans are developed and exercised. These planning and preparation efforts will reach their focal point during 2001. For 2001, the FBI requires an increase of \$1,100,000 to fulfill its requirements to plan and provide security for the 2002 Winter Olympic Games. Funding requested would provide for specialized equipment (\$386,750), telecommunications/office equipment (\$515,250), and training exercises (\$198,000).

Specialized equipment will be required to enable the FBI to fully address Olympic safety, security, and critical incident response requirements. For the 2002 Olympic Games, the FBI will be required to carry out this mission in a cold weather environment that will require specific equipment for such adverse conditions. The FBI would purchase, test, and evaluate this equipment during 2001 to simulate the same cold weather operational requirements. Obtaining this equipment one year before the Olympics will afford maximum familiarity with the equipment.

Telecommunications and related equipment are required to outfit the joint operations center to support intelligence and operations. This equipment includes: communications (mobile radio, venue, and pager systems), computer workstations, printers, cryptographic equipment, facsimiles (secure and standard), copies, lease telephone lines and circuits, satellite communications uplink, and radio repeaters.

In order to insure that federal, state, and local law enforcement officials are prepared for all contingencies and all systems and plans are interoperable, on-site exercises will be held in 2001. Approximately 86 FBI personnel from outside the Salt Lake City area will be traveling to Salt Lake City to participate in these exercises at a cost of \$618 per person (\$500 airfare, \$118 per diem). To ensure that the state and local law enforcement community can engage in exercises that go beyond the normal shift requirements, \$145,000 is requested to subsidize state and local law enforcement agencies participating in these exercises.

DECISION UNIT/PROGRAM: Other Field Programs/Counterterrorism

DOJ CORE FUNCTION I: Investigation and Prosecution of Criminal Offenses

DOJ STRATEGIC GOAL 1.3: Reduce esplorage and terrorism (sponsored by foreign or domestic groups in the U.S. and abroad when directed at U.S. citizens or institutions).

DOJ PERFORMANCE GOALS 1.3.1-1.3.3: Prevent, investigate, and prosecute terrorist acts and improve response capability to terrorist acts.

TIER 1: National and Economic Security

STRATEGIC GOAL: Prevent, disrupt, and defeat terrorist operations before they occur.

A. Dots Vaistation and Verification:

- : In accordance with the Attorney General's Guidance of not projecting targeted styrts of performance for certain indicator types
- In order to officially receive credit for terrorist act preventions. FBI Field Divisions must send an official memorandum to FBIHQ that describes the details of their major Counterfactherism investigations. An official "terrorist incident prevented" is a "documented instance in which a violent act by a known or suspected terrorist prote or industrial.

major Counterferrorism investigations. An official "terrorist incident prevented" is a "documented instance in which a violent act by a known or suspected terrorist group or individual with the means and a proven propensity for violence is successfully interdiscide through investigative activity." The Assistant Director of the Counterterrorism Division gives final approval to the classification of any Counterferrorism investigation as a prevention.

The resources requested to support the 2002 Winter Games would ensure that the FBI possesses the ability to adequately prepare the public safety infrastructure in Salt Lake City to meet the demands to both preempt and mitigate the potential for threats and acts of terrorism directed at this major event. The funding for equipment and travel would contribute significantly to law enforcement's ability to operate at peak levels of efficiency and capability in a cold weather environment. Purchasing equipment one year in advance would contribute to proficiency and familiarity, which in turn will translate into a more capable and responsive law enforcement supporting the 2002 Olympic Games.

Item: FS-Hazardous Devices School permanent base funding, \$2,900,000

The Hazardous Devices School (HDS) is the only formal domestic training school for state and local law enforcement to learn safe and effective bomb disposal operations. Located at Redstone Arsenal, Huntsville, Alabama, the HDS is managed by the FBI's Bomb Data Center. Pacilities and support are provided by the U.S. Army through an Interagency Support Agreement. The purpose of the HDS is to prepare civilian public safety bomb technicians to locate, identify, render safe, and dispose of improvised hazardous devices, including those containing explosives, incendiary materials and materials classified as weapons of mass destruction (WMD). This program also includes training in the use of specialized equipment and protective clothing needed for the safe disposal of explosive materials. Bomb technicians are trained at HDS to deal with the criminal aspects of bombing matters including proper procedures at a bombing crime scene, and the unique elements associated with bombing investigations.

The bomb technician profession is an evolving one with regard to threat, technologies used by bomb builders, and the technologies in rendering safe and safety standards. Current bomb technologies are capable of producing more lethal bombs than those constructed 15 years ago. The deployment of a bomb today is rarely accomplished with a warning. HDS has adjusted its training to meet the challenge of today's threat. The Attorney General's <u>Five Year Interagency Counterterrorism and Technology Crime Plan</u> recognizes the importance of improving state and local capabilities in this area. The plan calls for increased availability of pre and post-blast technical training for first responders, and better preparation of bomb technicians to address incidents involving a combination of explosives and chemical, biological or radiological agents.

The HDS is the only location where bomb technicians receive their basic training and are certified as bomb technicians in accordance with the standards established by the National Bomb Squad Commanders' Advisory Board (NBSCAB). It is also where all technicians return for mandatory recertification every three years.

HDS reviews all applications for accreditation submitted by bomb squads across the country for compliance with standards set by NBSCAB. In addition, the HDS began teaching a WMD Emergency Actions Course for Bomb Technicians in close coordination with the National Domestic Preparedness Office, to better prepare bomb technicians to recognize and respond to incidents involving WMD materials; a Robotics Course, designed to enhance the robot operating skills of bomb technicians through a program designed around the theory of robotics, maintenance and repair, practical problems and evaluated exercises, and an Executive Management Course designed specifically for the non-Bomb Technician supervisor or commander responsible for the bomb squad. This course has proven to be effective in providing a greater understanding of the limitations and capabilities of bomb technicians and their equipment as well as reinforcing compliance with the standards set by NBSCAB for certification and accreditation.

The FPI anticipates training 1,335 students in 2001. To train at this capacity, \$4,600,000 will be required. Base level funding for the HDS is \$1,700,000. The FBI requests an additional \$2,900,000 for HDS training programs. Program costs for 2001 include: \$1,200,000 for student travel; \$2,900,000 for Department of the Army reimbursement (includes instructor wages); and \$500,000 for equipment, supplies, training materials and explosives

DECISION UNIT/PROGRAM: Forensic Services/Hazardous Devices School

Department of Justice Core Function. Assistance to Tribal, State, and Local Governments

Strategic Goal. Improve Domestic Preparedness

Annual Performance Goal: Provide training and grants for the procurement of equipment to local jurisdiction, states, and territories in order to improve the nation's capacity to respond to terrorist incidents involving weapons of mass destruction

A. Data Validation and Verification

- 1. Includes obligation of prior-year carryover funding.
- 2. Includes carryover balances from prior-year funding.
- Based on number of bomb technicians trained in the basic course vs. the number of bomb technicians in the nation, accounting for attrition.

B. FY 1999 Performance Report:

Though performance goals were not met in some areas, performance goals were exceeded in others. The variation is based on state and local demands for training.

Item: FS - Counterterrorism Research and Development, \$5,000,000

The greatest present and future challenges facing the FBI are the rapidly evolving and inconsingly complex technological threats associated with criminal, terrorist and counterintelligence problems. In 1999, the FBI Laboratory responded to numerous incidents involving suspected chemical or biological threats. The FBI must adapt to be adequately prepared to quickly respond, assess and counteract these threats. The FBI Laboratory conducted a strategic assessment of current capabilities to include instruments, methods, and research. The Laboratory has identified a number of critical technological and staffling needs necessary to provide value-added products in support of FBI national program goals. FBI field investigative personnel and Laboratory program managers are working cooperatively to develop new approaches to support investigative requirements. The degree to which the FBI is able to anticipate challenges and develop the capacity and capability to address them will be a major determinant of the FBI's success and effectiveness in the future. Lack of planning and decisive action now will leave the FBI overwhelmed by the challenges of the next decade.

There is a pressing need for the FBI to play a leadership role in designing, acquiring, and operating the technical infrastructure necessary to effectively deal with terrorist threats, including those that involve biological, chemical or nuclear materials. Significant enhancements of FBI resources have been used in the past year to add Special Agent and support staff to greatly improve counterterrorism operational capabilities. Those investments need to be balanced with improved technical systems to rapidly identify toxic materials at the scene of an incident, resolve any issues of public safety, and through forensic examinations support investigative efforts toward attribution and prosecution.

The FBI Laboratory can significantly contribute to accomplishments of the FBI's national priority objectives by executing several strategies. Specifically, there must be more effective utilization of existing capabilities to address present investigative requirements, development of new capabilities to meet future requirements and greater emphasis on a "best practices" program focus on every aspect of FBI operations. Accomplishment of these strategies will ensure that applied science and technology capabilities are optimal and available to assume a more critical role in long-term operations.

There must be greater attentiveness and receptivity to innovative ideas and emerging technologies. For example, the FBI has responsibility for coordinating responses to terrorism in the U.S. involving weapons of mass destruction. Biological agents are one such class of weapons potentially available to terrorists. There is a necessity to develop rapid DNA-based methodologies for the detection of infectious and pathogenic microorganisms which may have been dispersed by a terrorist or other criminal.

The FBI Laboratory is recognized as a world leader in the scientific analysis of evidence. Since its inception in 1932, the FBI Laboratory has consistently strived to enhance its services to the law enforcement and criminal justice communities through the research, development, and deployment of new or advanced forensic techniques and protocols. Through the Forensic Science Research Unit (FSRU), located at the FBI Academy in Quantico Virginia, the FBI Laboratory conducts research to develop new techniques of forensic analysis. For instance, the FSRU was instrumental in the pioneering development of forensic DNA applications that are accepted by courts nationwide and the use of laser technologies for latent fingerprints. However, as the scientific and technical aspects of forensics continue to become more challenging and complex, it has become increasingly difficult for the FBI to stay on the cutting edge of technology. In order for the FBI Laboratory to meet 21st century challenges, it must develop a sufficient research and development (R&D) funding base.

The R&D base level funding for the FBI Laboratory is \$400,000. The 1998 Justice Appropriations Act provided one-time funding of \$5,000,000 from the Attorney General's CT Fund for FBI Laboratory research and development. The focus of this funding is for explosives detection and CT research. The FBI initiated 17 CT R&D projects with the Department of Energy (DOE) and is funding 11 CT projects with industry and academia. With these funds, the FBI initiated CT R&D projects in a variety of explosives detection and forensic science areas, including: portable instrumination and sensors for rapid detection and analysis of explosives and hazardous materials; enhanced exploitation of trace materials and other evidence; analytical databases to support trace materials and other highly discriminating or informative analyses of evidence; miniaturized robots or sensor packages for surveying, imaging and documenting large or dangerous crime scenes (i.e., bombing incidents); safe handling, sampling, assessment and tracing of evidence; rapid diagnostics for on-site analyses of biological hazards; and methods and techniques for the safe conduct of traditional forensic analyses of physical evidence contaminated with biological or chemical agents or materials. Many of these initiatives are multi-year efforts. A permanent funding base must be available to provide the uninterrupted support for these on-going R&D initiatives. Currently, 10 of the DOE projects and all 11 projects with industry and academia are active; seven DOE projects have been completed. The following chart depicts a summary of the counterterrorism projects that were initiated and funded with 1998 Attorney General Counterterrorism Fund monies.

Status of FBI Laboratory Counterterrorism Research and Development Projects

Project	Description of Deliverables	Deliverable Duc	Status
MANPADS Expert Forensic System	Integrated Resource Database and Investigator's Guidelines	4/99	Delivered

Handheld fon Mobility Spectrometer	Handheld Ion Mobility Explosives Detector	4/99	Delivered
Explosives Damage to Metals	Metallographic Examination Procedures for Explosives Debris	9/99	Delivered
Standoff Explosives Detection by Microwaves	Proof of Principle Microwave-Based Explosives Detector	1/00	Delivered
3-D imaging and Ranging	Handheld Crime Scene 3-D Measurement and Imaging System	1/01	On-Target
Serial Number Restoration	Metallographic Non-Destructive S/N Recovery Methods	9/99	Delivered
Elemental Profiling of Metals as Evidence	Laser Ablation ICP/MS Metal Fragment Analysis Procedures	9/00	On-Target
Statistical Treatment of Class Evidence	Enhanced "Match" Criteria Statistical Procedures	6/00	On-Target
Enhanced Trace Evidence Discrimination	Fiber Dye Identification Methods by Capillary Electrophoresis	3/00	On-Target
Small Robotic Vehicle Evaluation	Small Haz-Mat Crune Scene Robotic Vehicle	9/99	Delivered
Solid Phase Micro Extraction	Solid Phase Micro Extraction Field Test Kill and Procedures	4/99	Delivered
Trace Botanical Identification	Grass Stain ID using Hypervariable Chloroplast DNA	2/00	On-Target
Degradation of Drugs in Embalmed Tissue	Identify Post-Mortem Drug/Formaldehyde Reactions	9/00	On-Turget
Automation of MtDNA	Laboratory Robotics for Automated MtDNA Analysis	3/00	On-Target
Crime Scene Reconstruction	3-D Video Crime Scene Documentation Software	2/00	On-Target
Active Thermography for S/N Restoration	Thermal Imaging Equipment for Serial Number Restoration	3/00	On-Target

Veterinary Science Resources	Compilation of National Veterinary Resources	9/99	Defivered
Institutional Knowledge Preservation	Subject Matter Expert-Tacit Knowledge Preservation	3/00	On-Target
Event Counters	Vulnerability Attacks for Electronic Sensors	3/00	On-Target
Rapid DNA Profile Identification	Reman Spectral Database of Hazaruous Materials	3/00	On-Target
Sem X-Ray Spectral Database	SEM X-Ray Spectral/Digital Image Database Software	12/99	Delivered
Keman Spectral Dalabase	Raman Spectral Database of Hazardous Materials	12/99	Delivered
Development of Distance Learning Modules	Crime Scene Management Web-Based Training	2/00	On-Target
Latent Fingerprints in Blood	Chemical and Spectral Enhancement of Bloody Latents	12/99	Delivered
Flourescent Cyanoacrylates	Polymerization Studies and Colored Superglue	9/99	Delivered
Database of 5,000 MtDNA Sequence	Database of 5,000 MtDNA Samples	9/00	On-Target
Facial Reconstruction	Computerized Facial Reconstruction Software	3/00	On-Target
First Responder Web-based Training	Contaminated Individuals/Evidence Handling	1/00	Delivered

A strategic review of the current capabilities of the FBI Laboratory has identified a number of technological gaps in critical areas. The current base level funding is inadequate to meet the increasing demands for forensic investigative support of counterterrorism, drugs, environmental crimes and violent crimes. The forensic community at large looks to the FBI Laboratory for increasingly sophisticated and state of the art methods and technologies for the examination of evidence. For a number of the R&D initiatives, the FBI requires outside expertise and resources. The Laboratory R&D initiatives require a substantial increase in base level funding to efficiently and effectively support these efforts. To support the Laboratory's CT R&D efforts, \$5,000,000 is requested.

Success in this area will be measured by:

- The ability to identify, assess, develop, and implement an aggressive and comprehensive CT R&D program to fully exploit advanced technologies within the national laboratories, private industry, and academia;
- Development or precurement of value-added products which are integral to counterterrorism prevention, detection, and

deterrence:

- More robust evidence collection leading to more successful operations, arrests and convictions. In field identification, threat
 assessment and abatement capabilities are improved:
- Completely exploit scientific and technical evidence for all probative information. Field agents receive more timely analysis of evidence:
- Improved applied science and engineering technology transfer between the FBI Laboratory and other law enforcement, military
 and intelligence, national labs and the forensic community; and
- Increase the number of cases solved using techniques introduced within last 12 months.

Without additional resources and funding, the FBI will not be adequately prepared to meet and counteract the rapidly evolving and increasingly complex technological threats associated with terrorist activities. The FBI must adapt to be adequately prepared to meet and counteract these threats. The degree to which the FBI is able to anticipate challenges and develop the capacity and capability to address them will be a major determinant of the FBI's success and effectiveness in the future. Lack of planning and decisive action now will leave the FBI overwhelmed by the challenges of the next decade. Without continued funding for ongoing projects and new initiatives, improvements in the FBI Laboratory's handling of evidence in counterterrorism cases will be negatively impacted. This will severely impede or compromise the investigation of these crimes. Moreover, this will jeopardize the response of law enforcement, first responders and public safety personnel near the crime scene.

Hem: M&A - Contract Guard Services, \$600,000

The FBI is committed to upholding the standards contained in the Department of Justice (DOI) report of June 1995 entitled "Vulnerability Assessment of Federal Facilities." The security vulnerabilities for each field office and resident agency are being assessed as current leases expire. The FBI is relocating field offices and resident agencies to sole tenant facilities to maintain an acceptable security risk level.

As new leases are attained, guard services must be provided to ensure the safety of the facilities and the personnel assigned to them. However, base level funding for the expansion and relocation of field offices and resident agencies has not kept pace with the FBI's requirements in this area, and the General Services Administration (GSA) does not pay for the enhanced level of security (Level 4) required for the FBI to maintain an acceptable level of security. As the FBI addresses space-related issues, the shortfall in funds needed to provide 24-hour guard service for sole tenant structures continues to be a significant security concern. Twenty-four hour security

guard services cost \$200,000 annually per field office. The number of sole tenant facilities provided contract guard services has increased from 14 in 1997, to 13 in 1998, 18 in 1999, and 20 in 2000. An increase of \$600,000 will allow the FBI to hire contract guard services for three additional field office locations. This enhancement will allow the FBI to continue to address the need for contract guard services and provide the minimum standard security requirement at FBI facilities nationwide.

Initiative: Violent Crimes

			Amount
Decision Unit	<u>Pos</u> .	FTE	(\$000)
Other Field Programs (OFP)	31	16	\$3,234
Forensic Service (FS)			
Total	31	16	4.639

The focus of the Violent Crimes budget initiative is to enhance task force operations, the examination of evidence, and victim witness assistance in Indian Country (IC). The FBI has criminal jurisdiction in Indian Country (IC) for major crimes under the IC Crimes Act (18 USC 1152), the IC Major Crimes Act (18 USC 1153) and the Assimilative Crimes Act (18 USC 13). Thirty-two field offices have some degree of investigative responsibility in IC, ranging from exclusive federal jurisdiction -- 19 field offices -- to concurrent federal and state jurisdiction. The Violent Crime Control and Law Enforcement Act of 1994 expanded federal criminal jurisdiction in IC in such areas as guns, violent juveniles, drugs and domestic violence. Under the Indian Gaming Regulatory Act, the FBI has jurisdiction over any criminal act directly related to casino gaming, even in those states in which there is otherwise no federal jurisdiction in IC. Other crimes occurring in IC for which there is federal jurisdiction include civil rights violations, environmental crimes, public corruption and government fraud. Although the violent crime rate declined significantly nationwide between 1992 and 1997, violent crime rose sharply in IC. A study published in February 1999 by the Bureau of Justice Statistics/DOI, indicated that the rate of violent victimization among American Indians is more than twice as high as the national average. The bomicide rate in IC remains three times greater than the national average. Crimes against children continue to plague IC. Youth gangs are a threat to safety in IC and drug trafficking is becoming a major problem. As a result, the majority of the FBI's personnel resources are being used to address the high volume of violent crime and crimes requiring proactive investigative approaches are largely unaddressed.

For 2001, the FBI is requesting increases totaling 31 positions (16 workyears) and \$4,639,000, including: \$634,000 for Safe Trails Task Force (STTF) operations; \$1,405,000 for examination of evidence resulting from crimes committed in IC; and \$2,600,000 for 31 Victim Witness Specialists to be assigned to FBI Resident Agencies (RA's) serving IC.

Justification for Resources Requested

Item: OFP-Safe Trails Task Force Overtime, \$634,000

The FBI has sought to devise partnerships and strategies with its tribal and Bureau of Indian Affairs (BIA) law enforcement counterparts to investigate all federal crimes occurring in IC. One strategy was the adoption, in 1994, of the Safe Streets Task Force (SSTF) concept for use in IC to maximize the use of limited FBI, tribal and BIA personnel resources to effectively address significant violent crime problems of mutual concern and responsibility. The first Safe Trails Task Force (STTF) - Operation Safe Trails - was implemented in the Phoenix Field Office to work on the Navajo Nation in Asia Trails Task Force (STTF) and informations and indictments (I/I) and 292 convictions/pre-trial diversions (C/PTD) obtained by the Phoenix Field Office in IC related investigations between 1995 and 1998, Operation Safe Trails - comprised of 5 FBI agents and 15 tribal law enforcement officers - were responsible for 138 (44%) of the I/I and 134 (45%) of the C/PTD.

By partnering five of its agents with its tribal law enforcement counterpart in a multi-agency task force environment, the FBI benefitted from the investigative efforts of 20 persons to investigate violations of federal law on the Navajo Nation in Arizona. Criminal Investigators from the Navajo Nation Department of Law Enforcement routinely conduct investigations and present them to the United States Attorney's Office for prosecution without having an FBI agent participate in every stage of the investigation. As of August 19, 1999, 5 approved STTFs eligible for overtime funding are operating in Gallup, NM; Carson City, NV; Green Bay, WI; Flagstaff, AZ; and Monticello, UT. Five more task forces are operating in Riverton, WY; Rapid City, SD; Tucson, AZ; Phoenix, AZ; and Glasgow, UT, some of which have asked to be formally approved as STTFs so they, too, will be eligible to receive overtime funding. As of August 19, 1999, there are 31 FB1 agents, 2 BIA criminal investigators, 49 tribal and 19 local and state law enforcement officers participating on the 10 task forces. In some areas of IC, an obstacle to the full-time participation of tribal law enforcement agencies, diverting limited financial resources to pay overtime to its investigators. For some tribal law enforcement agencies, diverting limited financial resources to pay overtime to a full-time STTF participant decreases the resources available to the agency to provide other necessary policing services to the tribal community it serves. In order for the FBI and tribal law enforcement agencies to take advantage of pooling limited personnel resources, funding to pay overtime for tribal criminal investigators to participate full-time on the STTFs is critical.

For 1999, \$198,580 of Violent Crime Reduction Trust Fund and Asset Forfeiture Fund moneys provided to support SSTFs was used to pay for the overtime of 22 tribal and 3 state and local officers participating on 4 of 5 approved STTFs. Funding was not available for 2 tribal and 2 local law enforcement officers participating on the fifth approved STTF. Although a critical need in IC was fulfilled by redirecting funding to STTFs, it was done at the expense of the SSTF Initiative. Because of the redirection of funding to STTFs, the

number of participants eligible to receive overtime on existing SSTFs had to be limited and some SSTFs were denied overtime funding reimbursement in 1999. The solution is not to redirect funding from SSTF but to appropriate funding for STTFs to address the unique rural crime problems in IC.

The FBI requests \$634,000 to pay overtime for non-federal law enforcement officers participating full-time on STIFs as it is anticipated that, in 2001, there would be 65 tribal, state and local law enforcement officers working full time on 10 to 12 STIFs and eligible to receive overtime reimbursement. The overtime costs were projected based upon an estimated individual overtime rate of \$9,750 per officer (25 percent of the 2001 pay rate of a GS-10 step 1 employee).

The following table shows Safe Trail Task Forces and accomplishments for 1998 through 2001

Performance indicator Information		Performance Report and Performance Plans

A. Data Validation and Verification:

ISRAA - The FBI's Integrated Statistical Reporting and Analysis Application (ISRAA) is a controlled database through which the FBI tracks statistical accomplishment of cases from interprior to closure, e.g., arrests, locates, informations, indictments, and convictions. Before data are entered into the system they are reviewed and approved by an FBI field manager. They are subsequently verified though the FBI's inspection process. Inspections occur on a 2 to [3] year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to source documents contained in the FBI files. (U)

MAR - The FBI's Monthly Administrative Report (MAR) is a system that tracks the number of cases opened, pending, and closed within any given time period. Data is verified through the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is Inseed back to source documents contained in the FBI files. (U)

FBI - The Safe Streets Task Force of the FBI and the Special Investigations and Initiatives Unit provide this data. This data is verified through the FBI inspection process. Inspections occur on a 2 to 3 year cycle.

B. FV Performance Report:

† In accordance with the Attorney General's Guidance of not projecting targeted levels of performance for certain indicator types.

C. Issues Affecting Selection of FY 2000 and 2001 Plans

t. In accordance with the Attempts Guerral's Guidance of not emiecting facuated levels of performance for certain indicator types

^{*} The caseloads for STTFs are included in the total for all matters in IC. New reporting is being developed to separate the caseloads for the STTF

^{**}Figures include formally approved and formed but not yet approved taskforces.

The formation and use of STTFs in IC provides assistance to and training of the tribal law enforcement entities. It helps build the law enforcement capacity of tribal law enforcement to more adequately and thoroughly aduress the violent crime problems in their communities. As FBI agents work with tribal law enforcement officers in the STTF setting, the tribal law enforcement officers learn how to conduct legally sufficient Federal investigations, develop and present cases to the United States Attorney for prosecution and participate in the prosecution independent of an FBI agent's participation in every stage of the investigation. As a result, more investigative resources should be available to focus more on proactive investigations such as white collar crime, gaming and identifying and dismantling Indian youth gangs and organized groups trafficking drugs to and through IC. In addition, by appropriating funding specifically to pay overtime costs for non-federal law enforcement agencies to participate full time on STTFs, the FBI's capacity to address other national violent crime problems through its SSTF concept will not be diminished.

Item: FS-Indian Country Contract Forensic Exams with State Laboratories, \$1,405,000

An urgent problem exists regarding the examination of forensic evidence collected in IC cases. Before an arrest can be made or an indictment can be obtained in the investigation of a violent crime case (i.e. murder, violent assault and sexual assault of adults and children), biological evidence obtained from the scene of the crime must undergo timely forensic examination(s). In other instances, arrests are made and timely results of forensic examinations are required because of speedy trial act provisions. In federal districts in which prosecutors cannot rely on continuances being granted because forensic exam results have not been received, it is routine for evidence to be sent to either commercial laboratories or state crime laboratories — principally because the FBI Laboratory cannot currently provide tituely turnaround for forensic examination of evidence obtained in IC violent crime cases. The problem became so acute for the Phoenix Field Office that the FBI established a contract with the Arizona Department of Public Safety Laboratory for the examination of forensic evidence collected at IC crime scenes at an annual cost of \$450,000.

The FBI Laboratory is working to increase its capacity and to reduce turnaround time and case backlogs. Both of these depend on increasing laboratory space and the number of qualified examiners. The Laboratory's new facility at Quantico will provide much greater space for forensic examinations, but will not be ready for occupancy before Winter/Spring 2002. While the Laboratory's cadre of qualified examiners is expanding at a continuous pace, it will likely remain insufficient to provide acceptable turnaround time for all IC cases for several more years.

Base resources consist of \$450,000 used for a forensic contract with the Arizona Department of Public Safety Laboratory.

The need for contracts with three more accredited, full-service state crime laboratories to conduct forensic exams on IC evidence gathered in the Minneapolis, Albuquerque and Salt Lake City Field Offices was identified in FY 1999. Between 1994 and 1998, 76%

(5,970) of the 7,832 cases opened by the FBI in IC were opened in the Albuquerque, Minneapolis, Phoenix and Salt Lake City Field Offices. The need is due to a lack of capacity by the FBI. Laboratory to provide timely turnaround on forensic examinations of evidence from IC. The problem is anticipated to continue through at least 2002. The projected annual cost for the three contracts is \$1,405,000. Funding the IC Forensic Exam Initiative will reduce the FBI Laboratory's significant backlog of forensic evidence examinations and provide timely results in support of pending and future criminal cases.

Item: OFP-Virtim and Witness Specialists, 31 positions, 16 workyears, and \$2,600,000

The FBI's Victim Witness Assistance (VWA) Program was established to ensure FBI conformity with the Federal victims rights laws as defined in 42 USC Sections 10606 and 10607. The FBI is mandated by the Crime Control Act of 1990, the Attorney General Guidelines for VWA and its own policy to identify and assist all victims and witnesses, where applicable, of federal crime in which the FBI is the primary investigative agency. The preponderance of cases in IC investigated by the FBI are violent crimes. Because almost all of them are investigated by agents assigned to resident agencies (RAs) + 97% of the 1,830 cases opened in 1998 + the FBI seeks to hire 31 Victim and Witness Specialists (VWSs) to work in its IC RAs to coordinate the needs of victims and witnesses with the needs of individual investigative, social service and medical agencies. Generally speaking, professional support personnel are not assigned in the RAs. As a result, the agents are responsible for conducting the investigations and providing VWA and services, many of which could just as effectively be provided by VWS. The addition of 31 trained VWS would enable the FBI to increase the type and quality of services provided and give the FBI the ability to bridge the gap between the social, legal and investigative issues relevant to Native Americans who are not accustomed to participation in the federal judicial system.

Many families in IC reside away from population centers and do not have reliable means of transportation to travel lengthy distances. Because victims and witnesses of violent crime in IC often live long distances from the offices and courtrooms of the government attorneys, magistrates and judges in which they must appear as participants in the judicial process, it is the agents who provide the transportation. It is not unusual for an agent working in the Minot, ND, RA to travel 600 miles round trip to transport a victim of a crime on the Turtle Mountain Indian Reservation to Fargo to testify at the grand jury. A child sexually abused on the Ft. Peck Reservation in Montana must be transported 350 miles to Billings for a medical examination and evaluation necessitating making arrangements for an overnight stay, lodging and meals - logistics which seem insurmountable to a parent or care giver who does not often leave the reservation. As a result, it is the agent who provides the transportation and makes the lodging arrangements. In each of these circumstances, trained VWSs could provide these services, allowing agents focus on conducting other investigations.

To be effective, the VWSs must be located close enough to the victims and witnesses to be able to provide meaningful assistance and

services. They should be familiar to the Native American communities they serve and their role as helpers perceived as a positive one. In March 1999, two VWSs began a federal law enforcement-based IC Demonstration Project on the Crow and Northern Cheyenne Indian Reservations in Montana and on the Navajo and White Mesa Indian Reservations in southern Utah.

The VWS in the Billings, MT, RA, is a licensed clinical social worker and was a therapist specializing in the area of sexual abuse treatment. She helped to implement an adult and juvenite sex offender treatment program in cooperation with the United States Probation Office on three area Indian reservations. She represents the FBI at Crow and Northern Cheyenne Child Protective Team Meetings. She assists agents in crucial initial interviews of sexual abuse victims. Her early involvement is beneficial because victims are not required to repeatedly give statements to individuals considered strangers. She is an active member of the Crow Sex Offender Registration committee, drafting legislation to allow the tribe to register all sex offenders on the reservation. Because of her work, the Native American community is coming to see the FBI as having not only an investigative function but expressing a genuine concern for the victims.

The VWS in the Monticello, UT, RA, has been extremely successful in reaching out to juvenile victims because of her previous education and job as an elementary and high school counselor. During after-school group activities, children have divulged information to her about sexual abuse. Her ability to listen for information from children and their family members has often overcome a significant challenge frequently encountered by law enforcement -- the reluctance to cooperate because of guilt and confusion. Group activities she organizes help children overcome the trauma of being victims of crime. The activities build the children's self-esteem and confidence which makes them stronger and better witnesses. A study conducted in 1993 suggested that child victims/witnesses who are better prepared and relaxed are more credible, thus enabling the prosecutor to present stronger cases that produce more convictions. Spending time with the children assures them that someone cares and they are more willing to cooperate with law enforcement. During medical examinations, which can be extremely traumatic, particularly for young children, she provides them support. She often transports children for pre-trial meetings and trial. She spends time with children who are needed to testify before trial to ensure they are properly clothed, fed and cared for.

She goes with victims and witnesses to the bank to cash the checks they have received as reimbursement for witness expenses, an experience which can sometimes be traumatic for individuals from reservation communities because they are unfamiliar with banks. Following the successful conviction of subjects, she encourages and assists victims to write letters to the sentencing judge so they are able to express their views. After a case has been adjudicated, she provides follow-up care to the child victim, whose life has been forever altered, and the family to help them rebuild their lives.

These are examples of the types and quality of services that the FBI should be providing to victims and witnesses of crime throughout

IC but is unable to do so because of a lack of qualified and certified VWSs. A great deal of time is spent arranging logistics for interviews, examinations, and court preparations as well as handling the specific needs of each victim and witness. Unfortunately, the agents are not always able to make the numerous personal contacts necessary to ensure that the needs of victims and witnesses are addressed. Time, distance and other factors prohibit such contacts in many, if not most, cases. The VWA Demonstration Project has been so successful in improving the FBI's delivery of services that the FBI wants to replicate it throughout its IC RAs.

Currently, there are four VWSs assigned to work in IC. Of the four, two are funded by the Office for Victims of Crime (OVC) at DOJ. The funds, provided through an inter-agency agreement between OVC and the FBI Victim Witness/Community Outreach Unit, allowed the Salt Lake City Field Office to hire two contract VWSs to address issues on Indian reservations in southern Utah and south-central Montana. For 2001, the FBI is requesting 31 VWSs for assignment to IC RAs.

A VWS can enhance the FBI's ability to communicate and develop rapport with the Native American community. With a trained VWS dedicated and sensitive to the needs of Native American victims and witnesses but who also understands and can work within the framework of the federal criminal justice system, the FBI has the ability to bridge the gap between the social, legal and investigative issues relevant to Native Americans. With 31 VWSs assigned to IC RAs, more Native American victims will have more information about the investigation and the overall legal process. Liaison within reservation communities would be strengthened, cases presented for prosecution would be much stronger and the entire judicial system would perform more effectively as a result of the involvement of trained VWSs. In addition, the 31 VWSs would allow for agent time that is currently being used to provide VWA to be returned to investigative work.

Initiative: Technology/Cyber Crimes

			Amount
Decision Unit	Pos.	WYs	(\$000)
Forensic Services (FS)	100	50	\$11,371
White Collar Crime (WCC)	δ	4	6/2
Technical Field Support & Services (TFS&S)	_0	_0	_7,000
Total	108	54	18.983

In recent years, technological advances have fundamentally changed the way of life in this country. Computers and computer technology provide the avenue through which an enormous amount of data can be stored and for which previously unavailable information, services, and opportunities can be conveniently accessible from any computer. With these advances, an opportunity for criminal activity arises. Technology use by criminals is common to most areas of FBI jurisdiction, including investigations of terrorism, drug trafficking, white-collar crimes, and other crimes with an international nexus. The Technology/Cyber-Crimes Initiative is designed to address these issues as it combines intelligence and criminal investigative strategies into a focused request. Specifically, the Computer Analysis and Response Team request focuses on computer forensic examinations, data exploitation, and searches for all crime areas and computer facilitated crimes, while the Cryptanalysis Program request focuses on data interception and clandestine communications. Finally, the White-Collar Crime request focuses on Intellectual Property Rights violations.

In support of investigative priorities, the FBI will continue to play a key leadership role in the law enforcement community by developing and supplying scientific technical services and approaches to improve the effectiveness of the FBI while linking them directly to the strategic areas of emphasis. This request integrates support resources with technological upgrades which will significantly enhance investigative and counterintelligence effectiveness and efficiency.

Justification for Resources Requested

Item: FS - Computer Analysis and Response Team (CART), 100 positions, 50 FTE, \$11,371,000

The FBI's CART program serves three essential functions that are inter-dependent and involves both field and Headquarters components. CART examiners: (1) extract data from computer and network systems and conduct forensic examinations and on-site field support to all FBI investigations and programs where computers and storage media are required as evidence, (2) provide technical

support and advice to field agents on a daily basis, and (3) assist in the development of technical capabilities that provide timely and accurate forensic information.

The computer forensic process has three distinct phases: acquisition; examination; and presentation. Acquisition involves recognizing and seizing electronic data of an evidentiary value from a computer or network. Examination is the process of documenting the evidence, then locating, identifying, and extracting the pertinent data. Presentation requires the formatting of relevant and technical evidence for investigators and prosecutors. Both the examination and presentation phases may require the examiner to recreate a network system to be used as evidence in the investigation. During the examination phase, the Automated Computer Examination System (ACES), a data exploitation tool developed by the FBI Laboratory, provides a standardized computer evidence tool to scan thousands of files for identification of known format and executable program files.

Documents, records, and other paper files have been seized as evidence, forensically examined, and entered into court to assist in the prosecution of individuals spanning the spectrum of criminal/terrorist activities. Among today's criminals, computers and electronic media, are fast becoming the evidentiary equivalent of yesterday's paper files. The very nature of digital computer technology (i.e. the ability to store vast quantities of data, images, and other information on various storage media) makes these files more expansive. Large storage devices, complex networks and distributed data are now commonplace among business professionals as well as the general populace. The FBI must develop the capacity to address new technologies used by criminals. Due to the rapid change in technology, this capacity necessitates the on-going development of better investigative and forensic tools and techniques for examiners to use or it may find that the examiners have become obsolete in their knowledge base.

Due to growing demand for data forensics support, the FBI is converting existing part-time field CART personnel to full-time CART examiners. As of January 2000, the FBI will have 26 full-time CART personnel at FBI Headquarters and 62 full-time and 54 part-time CART personnel in the field, for a total of 142 trained CART personnel. Despite the conversion of part-time examiners to full-time status, the workload for this program continues to outpace resources available. To remedy this situation, the FBI is requesting an increase of 100 CART positions, including: \$7,113,000 to hire train, and equip 83 field examiners and \$1,458,000 to hire, train, and equip 17 FBI Headquarters examiners. The current backlog for a forensic exam is 10 months; without additional resources in 2001, the backlog is expected to reach a minimum of 11.4 months.

The FBI's CART examiners conducted forensic examinations in support of approximately 2,500 cases during 1998 and approximately

2,000 cases in 1999. With the anticipated increase in high technology crime and the growth of private sector technologies, the FBI expects 50 percent of its caseload to require at least one computer forensic examination. In the future, the CART program managers anticipate between 6,000 and 8,500 cases requiring computer forensic examinations. This workload would increase due to the increases in the sizes of the storage media (hard drives, etc.) utilized to store data that could be vital to FBI investigations.

The digital storage capacity of personal computers has increased substantially over the last few years. Computer industry analysts expect this trend to continue at an even more accelerated rate. During the third and fourth quarters of 1998, the computers available on the market had between 6 gigabytes (Gb) and 8Gb hard drive capacity. 24Gb hard drives are rapidly becoming the standard drive for almost all new computers, only adding to the workload of gigabytes to search and examine per case. In addition, larger commercial off-the-shelf (COTS) hard drives are available to replace and enhance storage capacity. In other words, these COTS hard drives have doubled in capacity every year from 4.3Gb in 1997, to 8.4 Gb in 1998 to the 17Gb hard drives in 1999. 40Gb hard drives are currently available for reasonable prices at most computer superstores and mail order companies. This trend of increasing hard drive capacities is expected to continue. By the end of 2000, it is anticipated that 60Gb or 80Gb hard drives will become commonplace.

in 1998, a sampling of 641 completed searches and examinations yielded 47 cases where total evidence to be examined was 16Gb or greater per case. In two instances, the case involved over 100Gb to be searched and examined. With the increase in storage capacities, the amount of workload experienced by the CART examiners increases proportionately. Although storage capacity is not the only factor influencing workload, it plays an integral part considering the fact that as hard disk capacities increase, the amount of data that can be stored by the user increases. At the present time, not only is there ample storage available on the average computer sold, but the cost per Gb continues to drop on a weekly basis.

The net impact for the FBI CART examiners and agents in the field is an overwhelming increase in the level of effort required to conduct forensic examinations. A 25Gb hard drive submitted for examination may not always contain 25Gb of data; however, the CART examiner must examine every bit of data, and area of the media, in order to completely examine the evidence. The chart below depicts the impact on the backlog combining the overwhelming increase in the number of cases, the size of the storage drives and amount of computer evidence per case.

Additionally, the FBI is requesting an increase of \$2,800,000 for ACES. In 1998, the FBI invested \$1,300,000 of funds appropriated for Counterterrorism and Technology Crime research and development to develop data exploitation tools for use in forensic examinations.

The FBI acquired the services of a contractor to develop ACES. As of March 1999, ACES development was completed and FBI examiners began training with ACES. ACES is being used by CART examiners to support the comprehensive analysis of computer evidence. ACES automatically scans and reviews all personal computer files for their format and type. ACES will verify that certain program, batch, or executable files are for computer operation and do not represent a file in which potential evidentiary material is stored. ACES provides a menu-driven, graphical interface for all tools-and utilities used during an examination an activity record of the examiner and the results of all examination utilities. Results obtained from each examination utility can be easily passed to additional analysis utilities as appropriate to the examination. ACES provides tracking and statistical compilation during each examination. This provides crucial documentation for use during examiner testimony and will strengthen that testimony by providing a blueprint for consistently reproducible test results. Statistics are also important to develop an understanding of the amount and type of evidence processed and to track trends in the use of computers for criminal intent.

Computer operating systems and applications software are continually updated and modified by industry. Similarly, the FBI must be able to update and upgrade ACES to keep pace with these changes, otherwise, ACES will lose its value as a forensic technique. For 2001, the FBI requests \$2,800,000 for the ACES program, including: \$2,000,000 for ongoing ACES development; \$300,000 for annual software license requirements, \$300,000 for hardware; and \$200,000 to support the development of a national forensic software library for commercial off-the-shelf software. The FBI intends to provide ACES to all FBI field offices, as well as other federal, State, and local law enforcement.

A. Data Validation and Verification *Measure of net workyears available accounting for CART personnel training, administrative, and other responsibilities in relation to time committed for computer forensic examinations. **New personnel lapsed at 50%. ***Includes training for new CART employees and re-certification training for on-board examiners. ****Estimate based on average number of exams performed by CART Field Examiners. Note: Productivity and workload cannot be measured as a linear function for forensic computer exams. A unit of work today will be 3.5 times larger in 2001 as a result of increased storage space and media types. This requires an increase in the number of examiners required to perform computer forensic exams. However, additional funding is also required to improve automated processes available for computer forensic exams in order to keep pace with changing technology, including password recovery, encryption recognition, and utility enhancements. Without additional examiners and enhancement of existing automated tools such as ACES, productivity advancements will never be realized and the FBI will no longer be effective in the pursuit of criminals who commit crimes using computer storage media. B. FY 1999 Performance Report: The FBI has identified a requirement for additional personnel and funding to promote the success of the CART program. An acceptable goal for turnaround time is approximately two months. The CART program was not able to meet its goal of two months due to insufficient personnel and non-personnel resources required to examine, report, and testify on litems of evidentiary interest. The perpetual lack of sufficient CART resources will continue to cause significant delays in case processing and will hinder the normal investigative process as all programs experience an increase in forensic evidence to be examined and searched. The current backlog for a forensic exams is 10 months; the backlog for 2000 is expected to reach a minimum of \$6.8 months. C. Issues Affecting Selection of FY 2000 and 2001 Indicators † Includes conversion of 95 part-time CART personnel to 62 full-time per 2000 Congressional language. FY 2000 ad 2001 indicators represent the same performance measures and are based upon the same assumptions.

In the Congressional Budget Office's January 1999 Report to the Senate and House Committees on the Budget titled: <u>The Economic and Budget Outlook: Fiscal Years 2000-2009</u>, net premium outlays for Medicare in 1998 were \$3.5 billion lower than had been predicted by the CBO. One reason given for this dramatic savings was due to "changes in the behavior of health care providers after several well-publicized antifraud initiatives" (page 37). One of the cases cited was the 1997 Columbia Health Care case in which CART played a major role. The Columbia case involved 40 field and FBI Headquarters CART examiners and covered 17 hospitals. The magnitude of the forensic exams thus far involves the imaging of 116 hospital computer systems/networks and raw data on 1,150 disks. This translates into the production of at least 30 CD's comprised of 650 megabytes (Mb) per CD, of pertinent evidence extracted to support the case.

The FBI also used the CART program during a long-term espionage investigation. During that investigation, over 1,000 3.5" floppy

diskettes were duplicated. The examination of the diskettes, by a CART field examiner resulted in the discovery of hidden computer code which contained encrypted clandestine communications. This case has, to date, been one of the largest espionage investigations to utilize CART expertise. It was determined that 95% of the evidence resulting from the investigation was stored electronically. The investigation and subsequent arrest of ten individuals has since yielded additional espionage investigations.

In three recent criminal cases, the CART examiner's expertise enabled the timely arrest of a perpetrator before further harm came to a child. Cases involving a kidnaping and minors abducted via the use of an Internet chat room have required the immediate availability of the examiner's expertise. However, the impact resulting from lack of immediate availability could have been substantial. Recent forensic exams involving extortion, hacking and public corruption cases were able to either build a case sufficient enough to go trial or to initiate an investigation. Evidence retrieved from a computer forensic exam often prevents cases from remaining stagnant. In instances where a CART examiner is not available to conduct a forensic search, case agents sometimes attempt to conduct remedial examinations because of time-sensitivity. Consequently, a case in 1996 resulted in contamination of forensic evidence that prevented it from being admissible in court. The defendant was released because no other admissible evidence was available.

Without an enhancement of CART personnel to conduct computer forensic exams and searches, as well as the technical expertise needed to prepare technical affidavits and testifying in court, not only the computer crime squads, but all FBI programs will have difficulty meeting their mission. Significant delays in ease processing will hinder the normal investigative process as all programs experience an increase in forensic evidence to be examined and searched.

Item: WCC - Intellectual Property Rights (IPR) Center, 8 Positions (2 agents), 4 FTE and \$612,000

As the world moves from the industrial age to the information age, the United States' economy is increasingly dependent on the production and distribution of Intellectual Property. Currently, the United States is the world leader in the development of creative, technical and intellectual property. Intellectual Property Rights (IPR) infringement includes both violations of the Economic lispionage Act (theft of trade secrets) as well as traditional copyright and trademark violations. Copyright violations primarily encompass computer software, recorded music and video piracy, while trademark violations primarily encompass the counterfeiting of certain products and brand name goods. Each of these violations has a significant impact on the United States. As a result of this, IPR was named one of the FBI's WCC priorities.

Without question, the United States is the world leader in the development of creative, technical and intellectual products. These

products have essentially supplanted tangibles such as steel and wheat as our economic lifeblood. Violations of IPR laws affect a broad range of United States industries. Many of these industries have a direct and tangible impact on the economic well being of the United States. Of primary concern is the development and production of trade secret information. The American Society of Industrial Security estimated the potential of losses at \$2 billion per month in 1997. According to the International Intellectual Property Alliance, copyright piracy cost an estimated loss of \$10.8 billion to United States copyright industries during 1997. In addition, the International Anti-Counterfeiting Coalition estimates that the cost due to the trademark infringement in the world to be \$250-350 billion annually. Furthermore, IPR infringements cheat the United States Government of tax revenues and add to the trade deficit. While the economic costs of IPR infringements are staggering, there are other, often more dangerous, ramifications. Many types of profitable products are counterfeited using inferior materials and quality controls. Examples include airplane and automobile parts, infant formula, children's toys, pharmaceuticals, and birth control pills. Many criminal organizations use the proceeds from these activities to fund violent or terrorist activities.

An important component of IPR involves international treaties and their obligations. The most important and persuasive of these treaties is the Trade Related Aspects of Intellectual Property Rights Accord of 1994. The Accord provides for the establishment of standards for protection of a full range of IPR and the enforcement of those standards. With regard to the enforcement requirement, the Accord requires that "enforcement procedures must be such as to permit effective action against any act of infringement of intellectual property rights, and that the remedies available must be expeditious in order to prevent infringements and they must constitute a deterrent to further infringements." Clearly, effective enforcement is a mandate of the Accord. More important than simply being obligated to the bare minimums of the Accord, the United States sets the world example for IPR enforcement.

A growing percentage of all significant IPR violations now have an Internet element. Thousands of web sites are solely designed to distribute pirated material. The potential damage to United States IPR owners from this type of theft is dramatic and is escalating daily. It is imperative that the FBI develop a coordinated and effective response to this problem. There are a number of investigative hurdles that are specific to Internet based IPR crime. The location of the subject is often not fully identified until well into the investigation.

External data demonstrate the rising trend of this crime problem. The United States Customs Service seizure data shows an alarming increase in IPR seizures. Since 1994, there has been a steady increase in both the number and value of IPR seizures. From 1997 to 1998 in particular, the number of seizures rose from 1,943 to 3,409 and the value of those seizures rose from \$54.1 million to \$75.9 million. The data clearly show a tremendous volume of infringed goods being imported and illegally distributed throughout the

country. Also, in most instances, no further criminal investigation is undertaken once a shipment is seized, due to limited investigative resources.

Finally, the lack of credible or consistent enforcement by Federal law enforcement has yielded considerable evidence that criminals perpetrating these types of crimes perceive them as low risk and high reward. In a recent case, a subject who had posted pirated software on the Internet told investigators that "friends had told him the FBI had better things to do than enforce these laws." In another case, an Asian gang in Los Angeles chose to distribute over \$30 million worth counterfeit Microsoft software rather than traditional criminal activities due to the high profit potential and low risk.

The FBI requests an increase of \$612,000 and eight positions (two agent and six investigative support) to participate in the multi-agency IPR Center. The concept of the IPR Center was jointly developed by the FBI, the Department of Justice, and the USCS, and is designed to enhance the overall investigation of IPR violations by United States law enforcement. All other government agencies having responsibility for IPR matters, including the United States Trade Representative, Department of Commerce Patent and Trademark Office, and the Copyright Office, will be invited to participate in the joint center.

The IPR Center is expected to open in 2000 with an initial focus on: (1) working with private industry and assuring the referral of quality cases to the Center; (2) encouraging law enforcement agencies to work in concert on cases which warrant joint investigations; and (3) gaining support of the Assistant United States Attorney's Office to aggressively pursue IPR cases. Through the analysis and review of existing cases which would be handled at the IPR Center, it is anticipated that there would be a sizable number of spinoff cases identified and referred to field offices. The production, distribution and retail sale of infringing illegal products covers many jurisdictions. Often, these links and relationships are not fully explored or investigated. It is anticipated that analysts at the Center would identify links and criminal relationships that have not been identified in the past. This information will then be used to initiate additional cases.

The IPR Center would focus on the intelligence and analytical requirement of IPR cases. It would coordinate the sharing of IPR information among federal agencies and state law enforcement authorities. The IPR Center would assist in providing a coordinated intelligence flow of information for use by the field components. It would also conduct analytical evaluations, assist in determining trends and would provide support to investigative operations. All available sources of Intellectual Property (IP) intelligence would be combined into a consolidated and dedicated IP intelligence base. This information would include Customs seizure data, FBI case information and private industry information. The IPR Center would also seek to integrate the sharing of this information to other

foreign and domestic law enforcement.

DECISION UNIT/PROGRAM: White-Collar Crime / Intellectual Property Rights (IPR)

Department of Justice Core Function: Investigation and Prosecution of Criminal Offenses Strategic Goni: 1.4 Reduce White-Collar Crime including public corruption and fraud.

Annual Performance Goal: Increase in Potential Economic Loss Prevented due to IPR Infringement

A. Data Validation and Verification:

MAR - The FBI's Month'y Administrative Report (MAR) is a system that tracks the number of cases opened, pending, and closed within any given time period. Data is crifted targing the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR is traced back to source documents contained in the FBI file.

ISBAA - The FBI's Integrated Statistical Reporting and Analysis Application (ISRAA) is a centrabred database through which the FBI tracks statistical accomplishment of cases from inception to closure, e.g., arrests, locates, informations, indicaments, and convictions. Before data are entered into the system they are reviewed and approved by an FBI field manager. They are subsequently verified though the HII's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using statistical sampling methods, data in the MAR are traced back to source documents contained in the FBI files.

B. FY 1999 Performance Report: None

C. Issues Affecting Selection of FY 2000 and 2001 Indicators; None

D. Additional Fontactes:

† In accordance with the Attorney General's Guidance of not projecting targeted levels of performance for certain indicator types.

The anticipated benefit of the additional resources will be in the identification, disruption and dismantlement of the organized groups of criminals involved in the large scale production and distribution of counterfeit, pirated and other infringing products. In addition, inasmuch as these IPR crimes are precursors to more serious crimes and funding mechanisms for organized crime groups, another indirect benefit of this enhancement will be the disrupt on of those enterprises. Furthermore, the additional resources will enable the FBI to participate with U.S.C.S. in the establishment of the IPR Intelligence Center. Once established, the IPR Center will provide a stream of case specific Intelligence to the field components of the plan, thereby enhancing its' effectiveness.

Item: TFS&S - Counter-Encryption Technology Equipment, \$7,000,000

On a daily basis, the media announces that many existing data security products are no longer secure (e.g., Netscape mail-password protection broken, Digital Video Disc encryption scheme, and Ground System Mobile cellular phone encryption algorithm), and that stronger encryption is the only means to protect government, business and citizens from unwanted intrusion. In response, today's leading communications products are incorporating advanced cryptographic capabilities to counter a wide array of threats from both domestic backing and organized intelligence efforts. Both Microsoft and Macintosh have already established strong encryption within their newest operating systems software (i.e., Windows 2000 and OS9). IBM has announced it's marketing of "...the world's most secure commercial PC..." These products, and hundreds of others now being sold or poised to enter the market, are thwarting law enforcement's ability to access court authorized communications intercepts or obtain plaintext from seized media.

The widespread use of digitally-based telecommunications technologies, and the unprecedented expansion of computer networks incorporating privacy features/capabilities through the use of cryptography (i.e., encryption), has placed a tremendous burden on the FBf's electronic surveillance technologies. The use of complex and high speed digital communications presents technological challenges that were non-existent only a few years ago. Today, the most basic communications employ layers of protocols, formatting, compression and proprietary encoding applications which have the effect of masking and hiding the content of communications. In addition, the expansion of electronic commerce and concerns for privacy have brought about new concepts and develupments in affordable and robust encryption products for private sector use. These cryptographic systems provide robust security to conventional and cellular telephone conversations, facsimile transmissions, local and wide area networks, communications transmitted over the Internet, personal computers, wireless communications systems, electronically stored information, remote keyless entry systems, advanced messaging systems, and radio frequency communication systems. The potential use of such encryption products by a vast array of criminals and terrorists to conceal their criminal communications and information poses an extremely serious threat to effective law enforcement and ultimately to public safety and national security.

The FBI is already encountering strong encryption in criminal and national security investigations. In 1999, 53 new investigations encountered encryption. The successful analysis of encrypted communications can require an array of highly complex software and hardware systems, as well as efforts of highly skilled scientists, mathematicians, analysts and engineers. The need for a law enforcement cryptanalytic capability is well documented in several studies, including the National Research Council's Committee Report entitled "Cryptography's Role in Securing the Information Society." Specifically, the Committee recommended that high priority be given to the development of technical capabilities, such as signal analysis and decryption, to assist law enforcement in coping with technological challenges. The Attorney General's Five-Year Interagency Counter Terrorism and Technology Crime Plan identified the development of a non-classified decryption capability to facilitate the use of evidence in court as a top requirement. On September 16, 1999, the Administration acknowledged the accelerated pace of encryption developments and its effect upon law enforcement, commerce and the financial markets. As part of the plan to both support and respond to this advancing technology, the Administration announced the relaxation of export restrictions on encryption to allow United States businesses to compete abroad; at the same time the Administration announced sup x x to for the FBI's Technical Support Center, a centralized civilian resource for engineering, processing and decrypting lawfully interacepted digital communications and electronically stored information.

No base funding exists for development of counter-encryption technology and support services associated with a centralized civilian resource. Funding totaling \$7,000,000 is requested to provide encryption technology equipment and services to further develop the Cryptanalysis Laboratory's Initial Operating Capability (IOC). The FBI will utilize the requested funding to acquire hardware and

software tools, technologies and systems, technical experts and support services in order to develop four programs: 1) Analytical Engineering, 2) Signal Analysis Research; 3) Counter-Encryption Deployment Program; and 4) Industry Assisted Technology Transfer. The FBI will work with existing national laboratories and other government agencies to ensure all available resources are utilized in executing all processing functions. The technology implemented will combine commercial off-the-shelf (COTS), government off-the shelf (GOTS) and custom-developed products. This approach will prevent the duplication of effort while providing a cohesive civilian processing capability for use by federal, state and local law enforcement. The following chart displays performance measures for this enhancement.

A. Data Validation and Verification: Preliminary Design Plans - Data for the preliminary designs was part of an A&E done for the Encryption Program in which technical equipment and basic requirements were set forth by the FBI. This data is dependent up the continuing emergence of Encryption Technology.

Electronic Surveillance Strategic Plan - The Electronic Surveillance Strategic Plan is updated every year and includes the EST's Strategic goals and mission. The Plan includes Near Term, Mid Term, and Long Term Success Factors. The driving force is the direction and sophistication of private industry and the modernization of the criminal element.

The FBI's Counter-Encryption program will enhance law enforcement's readiness and effectiveness in addressing domestic terrorism, protection of the national infrastructure, and the challenges posed by emerging domestic and international criminal activities. The requested funding for equipment will provide direct support to field investigations and law enforcement efforts in responding to the new uses and proliferation of encryption and complex electronic communications. Currently, the FBI is experiencing exponential growth in the number of investigations requiring technical support in efforts to obtain plaintext from encrypted evidence. In particular, the FBI has encountered encryption in almost every type of investigation to include most notably: terrorism, foreign counterintelligence, drug, organized crime, and violent crime/child pornography investigations. The Administration's plan for a centralized civilian resource to support federal, state and local law enforcement demands a commitment of resources. Without the requested funding, the Increasing number of technical requests for assistance cannot be addressed.

Initiative: Law Enforcement Services

			Amount
Decision Unit	Pos.	WY	\$000
Forensic Services (FS)	5	2	\$6,699

For 2001, the FBI is requesting a total of 5 direct positions (2 FTE) and \$6,699,000 to provide enhanced law enforcement services to federal, state, and local law enforcement and criminal justice agencies: \$5,335,000 for the Federal Convicted Offender DNA Database (FCODD) and \$1,364,000 for the National Integrated Ballistics Identification Network (NIBIN).

Justification for Resources Requested

Item: FS-Federal Convicted Offender DNA Database Program, 5 positions (2 FTE) and \$5,335,000

The DNA Identification Act, included in the Violent Crime Control and Law Enforcement Act of 1994, authorized the FBI to establish an index containing DNA records from persons convicted of crimes; samples recovered from crime scenes; and samples recovered from unidentified human remains. The FBI's Combined DNA Identification System (CODIS) allows state and local crime laboratories to store and match DNA records. The Anti-Terrorism and Effective Death Penalty Act of 1996 authorized the Director of the FBI to "expand the CODIS to include Federal crimes and crimes committed in the District of Columbia." No other federal agency or crime laboratory is authorized to establish such a capability. No funding has been appropriated to establish a federal DNA offender database.

The 1998 Justice Appropriations Act directed the FBI to provide a plan to Congress to support the implementation of a program that requires a federal prisoner convicted of a criminal offense involving a victim who is a minor or a sexually violent offense to provide a DNA sample for inclusion in a law enforcement DNA database prior to the prisoner's release from incarceration. The plan included draft legislation needed to implement the plan. That report was submitted to Congress in January, 1999. The proposed Federal Convicted Offender DNA Database (FCODD) would be implemented upon receiving legislative authority and funding.

To implement the FCODD, \$335,000 for five positions, including one Program Manager and four Examiners, is requested to manage and type database samples from the population of federally convicted offenders. Also, an increase of \$5,000,000 is requested for the implementation and start-up costs of the FCODD. The FCODD supporting network is composed of two software components. First, the FBI requires a sample tracking system for the FCODD. This system will monitor the sample receipt and disposition; include

information about the sample contributor (e.g., prison ID number, name); include the sample's CODIS number; and when the sample was analyzed. Secondly, a software component is required to perform the actual DNA analysis. The software will be written and supported by Perkin-Elmer, a company that provides instrumentation, software, and materials for DNA analysis. The recurring cost of operating the FCODD is estimated at \$1,300,000.

The requested resources would allow the FBI, with the assistance of other federal agencies, primarily the Federal Bureau of Prisons (BOP), to collect and type approximately 20,000 DNA samples, comprising approximately 15,000 samples from the current federal inmate population, and approximately 5,000 samples from persons convicted of violent crimes in federal courts during 1999 and every year thereafter, once legislation to implement such collection is enacted. The FBI Laboratory's Report to Congress pursuant to P.L. 105-229 includes draft legislation that is required to authorize the collection of DNA samples from federal, military, and District of Columbia convicted offenders for analysis and entry of the DNA data into the national DNA database. Additionally, the FBI will-analyze and enter all DNA profiles generated from federal convicted offenders into the national CODIS database. After the backlog is exhausted, it is estimated that approximately 3,000 federal convicts per year will have committed offenses qualifying for inclusion of their DNA profile into the CODIS database.

The FBI Laboratory will consult and coordinate the collection of DNA samples with all affected agencies. Procedures for the collection of samples specify promulgation of each agency's responsibility in regulations. To ensure standardization of the collection, chain of custody and analysis processes, the FBI will provide the DNA sample collection kits, DNA analysis, and input of DNA data into the CODIS database.

All 50 states have enacted legislation that requires blood samples to be taken from felons convicted of various qualifying offenses. Implementation of the FCODD and placement of DNA profiles from federal offenders into the CODIS system will provide a valuable and currently overlooked population of DNA profiles to the National DNA Index System. DNA profiles from federal convicted offenders will be shared nationwide at the federal, state and local level. The addition of FCO profiles to the CODIS system will undoubtedly lead to the resolution of many violent criminal cases which would otherwise remain unsolved. The purpose of the FCODD program is to ensure that offenders convicted of these violent crimes are not missing from a national DNA database, thereby enhancing the nation's ability to solve violent crimes.

DNA analysis has had a dramatic impact in linking crimes together and then providing compelling evidence when these cases go to trial. On the state level, DNA analysis has demonstrated its ability to instantly identify repeat offenders. Implementation of the FCODD will enable investigators to quickly exclude suspects because their Federal Convicted Offender (FCO) profile did not match the crime scene evidence. Additionally, the FCODD may have a significant impact in solving violent crimes committed in the District

of Columbia and on Native American Reservations. Currently, violent offenders convicted in the District of Columbia and on government reservations do not have DNA samples collected and stored in any DNA database. Individuals with prior qualifying convictions may be quickly identified in these locations that may not otherwise be suspects in the investigation. These individuals will be in the federal and national databases because their blood was drawn as the result of a prior federal conviction. The FCODD match can be immediately followed up through further investigation. Finally, serial cases are easily identified because of such DNA analysis.

Item: National Integrated Ballistics Identification Network (NIBIN) connectivity, \$1,364,000

On December 2, 1999, the FBI and the Bureau of Alcohol Tobacco and Firearms (BATF) entered into a Memorandum of Understanding (MOU) for joint-agency implementation of the NIBIN, a single federal ballistics imaging system. Both agencies will work together to provide a coordinated vision and implementation plan for NIBIN which will employ a single image format. Past attempts to achieve interoperability were stifled by incompatible hardware and software and a lawauit between developers. In addition, the National Institute of Standards (NIST) put three years of effort into developing a workable solution for system interoperability, but with no success. NIBIN is designed to combine the best features of the BATF's Integrated Builet Identification System (IBIS) and the FBI's DRUGFIRE system. The foundation and front-end, user interface, of the system is designed to function like IBIS while the back-end, analysis portion, is designed to function like DRUGFIRE.

Base resources consist of one position and \$4,200,000 in nonpersonnel funds.

The new NIBIN MOU delineates defined roles for each agency. As a result, the FBI is responsible for installation of a nationwide communications network and connections between system sites. The FBI requires \$1,364,000 in 2001 to provide the additional communications infrastructure required to implement the new unified ballistics system.

Under the new NIBIN MOU, the FBI will be responsible for installing and connecting the NIBIN across the country with appropriate high-speed telecommunications lines and hardware for nationwide coverage. The FBI's Criminal Justice Information Services-Wide Area Network (CJIS-WAN) will be the telecommunications vehicle for the new system. The FBI will also assume responsibility for any costs associated with connectivity between the ballistics imaging systems and the network. The FBI will generate and disseminate statistical and/or activity reports relative to the network communications system. Finally, the FBI will be responsible for developing and distributing support databases (e.g. standard ammunition, trigger locks, and firearm and ammunition recall), independent of the unified IBIS, for forensic firearms examiners and others requiring this information.

The BATF will have overall responsibility for Crime Gun and Firearms Manufacturers Operations. Crime Gun and Firearms Manufacturers Operations responsibilities include, but are not be limited to, design of the field architecture necessary to support the crime gun network and development of a plan for the replacement of existing DRUGFIRE systems with the unified IBIS and other systems to store replicated data. This means the BATF will be responsible for hardware and software development and installation, training, security, maintenance, user protocols and support, and quality control. The BATF will also provide image capture, storage, or access to any computerized ballistic images/data stored on acquisition stations, primary servers, or other servers containing replicated data. Additionally, the BATF may design and maintain ancillary databases necessary to support or enhance the Crime Gun or Firearms Manufacturers Operations. Systems will be replaced by priority as determined by the BATF in consultation with the FBI. The redeployments will be completed at BATF expense, subject to availability of funds and execution of the standard MOU.

The BATF's work begins with determining the priority order for replacing DRUGFIRE units. Priority will be determined on crime rates, lab workload, and usage trends. Today, the top 40 DRUGFIRE units produce 80 percent of total volume and have generated 93 percent of the total hits. The hardware and software at each DRUGFIRE site will be upgraded. The BATF plans to replace 10 DRUGFIRE units in 2000, 73 DRUGFIRE units in 2001, and 68 DRUGFIRE units in 2002. This will complete replacement of the 151 existing DRUGFIRE units. In addition, the DRUGFIRE evidentiary database will be reformatted in the IBIS image format. This plan is proposed in order to provide a seamless transition for DRUGFIRE and IBIS users.

The existing NIBIN Board, comprised of officials from both agencies and a state representative, will facilitate the transition process. As the transition proceeds, but prior to NIBIN being turned on, the FBI will maintain responsibility for maintenance or support costs associated with transitioning DRUGFIRE units. As noted above, the transition is expected to take three years, with 2000 representing commencement of the joint agency effort. The FBI requires funding for connectivity activities to ensure a smooth transition to the unified system occurs.

Special Analysis: Health Care Fraud Enforcement (Reimbursable)

			Amount
Decision Unit	Pos.	<u>WYs</u>	<u>(\$000)</u>
White-Collar Crime (Health Care Fraud			
Reimbursable)	48	24	\$12,000

More than \$1 trillion is spent on health care each year in this country, roughly 15 percent of the Gross National Product. This amount is expected to double within the next 10 years. The General Accounting Office, as well as industry experts, have conservatively estimated that 10 percent of all health care costs is attributable to fraud, waste and abuse i.e. \$100 billion per year. Based simply on the enormity of its expenditures, the health care industry is quite susceptible to fraudulent activity which, if not aggressively pursued, can and will have a significant detrimental effect on the finances of the U.S. health care system.

Fraudulent billings submitted to the health care insurers and medically unnecessary services performed simply to generate billings are prevalent in every geographical area in the country. This fraudulent conduct may include doubte billing, receipt and payment of kickbacks, billing for more comprehensive services than provided or upcoding and seeking reimbursements for personal expenses and other non-covered costs. As one successful Health Care Fraud (HCF) investigation after another has been conducted, the FBI has come to realize that previous estimates of the magnitude of the crime problem may have been grossly understated. Each investigation seemingly uncovers a new scheme to defraud the U.S. healthcare system, and patterns emerge that encompass a much wider area than originally expected. The FBI is currently engaged in the investigation of widespread, corporate-driven fraud by Columbia/HCA, the largest white-collar crime investigation in FBI history. This investigation is extremely labor intensive and is creating many unforeseen travel and other non-personnel costs. Other national-scale investigations of National Medical Corporation and Beverly Enterprises are requiring large, long-term commitments of personnel resources by several field divisions which will continue through 2001.

One region that has experienced a particularly high incidence of HCF is Florida. Fraudulent schemes in the Southern District of Florida have drained billions of dollars from federal and state health care plans including, but not limited to, Medicare, Medicaid, Tricare /Champus, Department of Veterans Affairs, and the Office of Personnel Management. It is estimated that the federal government overpaid hospitals, doctors and other health care providers \$2.5 billion in questionable Medicare claims from Florida in 1997, out of the \$26.9 billion in Medicare funds paid nationally in the same period. The FBI, in concert with the Executive Office of United States Attorneys, the Department of Health and Human Services-Office of Inspector General and the United States Attorney's

Office-Southern District of Florida, has committed resources to participate in a two year pilot project to create a centralized storage facility to maximize federal, state, and local investigative coordination and cooperation in combating the high density health care fraud. This facility will serve as a central repository for federal health care fraud investigations. It will provide a secure storage area for documents and evidence, and will aid federal, state, and local prosecutors and investigators in working together to ensure coordination, cooperation, and avoid duplication in the investigation of health care fraud cases.

The health care industry is a highly technical field with unique laws, regulation and operating systems which vary amongst the health care insurers. Those having prior experience and the resultant expertise in the industry would be better positioned to pursue HCF investigations. Additionally, the FBI is also the only federal law enforcement agency responsible for investigating HCF in the private sector, as well as in the public sector. As a result, the FBI utilizes its HCF resources over a wider range than all other law enforcement agencies. HCF investigations are very document intensive and require experts to interpret the various data gathered. Further, the demands of nationwide investigations such as Columbia/HCA are incurring huge unforeseen costs in terms of travel, equipment, and evidence and document handling.

The FBI receives funding for most of its health care fraud enforcement investigations under the provisions of the Health Insurance Portability and Accountability Act of 1996. Prior to the Act, these positions and funding were directly appropriated to the FBI. For 2000, the FBI received \$76,000,000 in funding, which was used to fund 415 agent and 313 support reimbursable positions. For 2001, the FBI will be provided \$88,000,000. This amount is \$12,000,000 above the level for 2000 and will allow the FBI to increase its investigative effort against health care fraud by 48 new positions (30 agents and 18 support). The 18 support positions requested are allocated as follows: 8 investigative, 4 CART examiners, 3 technical, and 3 clerical. Overall, the FBI will use this funding to support a total of 445 agent and 331 support positions. The 2001 funding will also be used for investigative costs associated with HCF investigations. These costs include computer and photocopy equipment needed by field offices to help the field work with evidence gathered during the Columbia/HCA investigation. In addition, the FBI will allocate \$577,000 as part of an interagency pilot project in the Southern District of Florida to create a central repository for storing evidence related to HCF investigations.

DECISION UNIT/PROGRAM: White-Coller Crime/ Health Cure Fraud

Department of Justice Core Function: Investigation and Prosecution of Criminal Offenses Strategic Goal: 1.4 Reduce White-Collar Crime including public corruption and fraud.

Annual Performance Goal: Medicare cost savings for targeted goods and services where egregious fraudulent billing is suspected.

BFA - Budget Formulation Application (BFA). The FBI's Budget Accounting system which accounts for congressionally authorized budget

authority, positions and work-years

MAR - The FBI's Monthly Administrative Report (MAR) is a system that tracks the number of cases opened, pending, and closed within any
given time period. Data is verified through the PBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Using
statistical sampling methods, data in the MAR is traced back to source documents contained in the PBI files.

ISRAA - The FBI's Integrated Statistical Reporting and Analysis Application (ISRAA) is a centralized database through which the FBI tracks statistical accomplishment of cases from inception to closure, e.g., arrests, locates, informations, indictments, and convictions. Selfore data are entered into the system they are reviewed and approved by an FBI field manager. They are subsequently verified though the FBI's inspection process. Inspections occur on a 2 to 3 year cycle, depending on funding. Unling statistical sampling methods, data in the MAR is traced back to source documents contained in the FBI files.

HCFA - The Department's data source for the Health Care Fraud performance goal reflect Health Care Financial Administration (HCFA) fraud targets. The Medicare costs measurements for this performance goal include payments for all clinical lib tests and ambulance services billed to Medicare during the reported period. A new DOJ indicator being measured for FY 2001, Home Health Agencies fraud costs reflect three targeted states. Florida, Texas, and Louisiana. Validation and verification of the data takes place primarily at its collection point, HCFA. The FBI reviews the data received from HCFA for consistency and reliability. Since data from HCFA is provided on a calender year, billings can be received up to one year after services. Therefore, complete FY 1999 data will not be available until CY 2001. Changes in the Medicare payment system affecting an identifiable area due to legislative or regulatory action (e.g., implementation of a prospective payment system) would invalidate any companison to data for previous years.

Federal Bureau of Investigation Salaries and Expenses

Status of Congressionally Requested Studies, Reports and Evaluations

- 1. The Conference Committee report accompanying the Consolidated Appropriations Act (H.Rpt. 106-479) directs the FBI to submit a spending plan for the increase of \$3,399,000 provided for training, equipment, supplies and technology apprades for Computer Analysis Response Team (CART) teams. A specific date was not given, but the report must be received by Congress before funds will be released. The spending plan is being prepared.
- 2. The Conference Committee report accompanying the Consolidated Appropriations Act (H.Rpt. 106-479) directs the FBI to submit an implementation plan for the reallocation of not less than 25 agents to specified reservations to investigate non-Indian sexual predators targeting females on Indian Reservations. The FBI is in the process of completing this report.
- 3. The Conference Committee report accompanying the Consolidated Appropriations Act (H.Rpt. 106-479) directs the FBI to submit a report on the success of the FBI's investigative efforts in Indian Country with regard to sexual assaults on Indian reservations. This report will be submitted by August 1, 2000.
- 4. The Conference Committee accompanying the Consolidated Appropriations Act (H. Rpt. 479) directs the FBI submit a report on the FBI's actions to fully implement the Housing Fraud Initiative. The report was submitted to Congress on January 11, 2000.
- 5. The Senate Appropriations Committee report accompanying the Department of Commerce, Justice, and State the Judiciary, and Related Agencies Appropriations Act, 2000 (S. Rpt. 106-76) instructs the FBI to submit a report on the circumstances of Operation Silver Shovel. The report was submitted to Congress on January 11, 2000.
- 6. The Conference Committee report accompanying the Department of Justice Appropriations Act of 1998 (H. Rpt. 105-405) directs the FBI to submit a threat assessment prior to the FBI opening or expanding a Legat office. The most recent threat assessments were submitted in April 1999.

- 7. The Conference Committee report accompanying the Consolidated Appropriations Act (H.Rpt. 106-479) directs the FBI to submit a complete listing of all information technology projects, stage of development and deployment, 1999/2000 funding levels, and out year cost projections through 2003. The FBI is in the process of completing the report.
- 8. The Conference Committee report accompanying the Consolidated Appropriations Act (H.Rpt. 106-479) instructs the FBI submit to an update to the listing of information technology projects to reflect the President's 2001 budget request. An updated report will be submitted.
- 9. The Conference Committee report accompanying the Consolidated Appropriations Act (H.Rpt. 106-479) directs the FBI to submit quarterly reports which delineate the funded and the actual agent and non-agent staffing level of each decision unit. The FBI is preparing the first quarterly report.
- 10. The Conference Committee report accompanying the Consolidated Appropriations Act (H.Rpt. 106-479) directs the FBI to submit the final blueprint for the creation of the National Domestic Preparedness Office (NDPO). The NDPO blueprint was submitted to Congress on December 30, 1999.
- 11. The Senate Appropriations Committee report accompanying the Department of Commerce, Justice, and State the Judiciary, and Related Agencies Appropriations Act, 2000 (S. Rpt. 106-76) directs the FBI to submit a report on preparations that have been made to protect U.S. athletes at Olympic games. The report was submitted to Congress on December 2, 1999.
- 12. The Conference Committee report accompanying the Consolidated Appropriations Act (H.Rpt. 106-479) directs the NDPO to conduct an assessment of the assistance currently provided to state and local bomb technicians under the OJP state and local bomb technician equipment and other programs, the relationship of this program to other state and local first responders assistance programs, and the extent to which state and local bomb technician equipment needs have been integrated into, and addressed, as part of a state's overall counter terrorism plan. The NDPO is in the process of completing this report.
- 13. The Conference Committee report accompanying the Consolidated Appropriations Act (H.Rpt. 106-479) directs the FBI to submit a report on actions being taken to remedy staffing within the NIPC. The FBI is preparing the requested report.
- 14. The Conference Committee report accompanying the Department of Justice Appropriations Act of 1998 (H. Rpt.105-405) requests that the FBI submit an evaluation of Title Five Exemption Authority (TFXA) the demonstration project. This report is due on March 31, 2000.

- 14. The House and Senate Appropriations Committees reports (H. Rpt. 105-48 and S. Rpt. 105-405) directs the FBI to report quarterly on IAFIS and on NCIC 2000. The FY 1999 second quarter IAFIS report was submitted to Congress on January 11, 2000. The FBI is working on the third quarter IAFIS report. The final NCIC 2000 report was submitted to Congress on January 11, 2000.
- 15. The Conference Committee report (H. Rpt. 105-825) requests the FBI report on criminal background checks for nursing facilities and home health care agencies. The FBI will submit the report by October 21, 2000.
- 16. The Conference Committee report accompanying the Consolidated Appropriations Act (H.Rpt. 106-479) instructs the FBI not to obligate any ISI funding (\$60,000,000 from 1999 and \$20,000,000 from 2000) until approval of a new plan is given by the Committee for the ISI plan. No funds have been obligated. The FBI is in the process of completing a revised ISI plan.
- 17. The Conference Committee report accompanying the Consolidated Appropriations Act (H.Rpt. 106-479) directs the FBI to comply with the Senate instructions [H. Rpt. 106-479] regarding (1) the adequacy of (investigator and) examiner training and (2) the development of a master plan regarding current and planned capabilities to combat computer crimes and intrusion. The FBI is working on complying with the Senate instructions and will develop a master plan.

		Perm <u>Pos.</u>	Work- years	Amount	
Trans	sfers to and from other accounts:				
1.	National Instant Check System (NICS) For 2001, funding for NICS will transfer pending the establishment of a user fee for firearms purchases.			(558)	
Total	, transfers to and from other accounts			(558)	
Incre	äses:				
1.	This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$54,546,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$40,924,500 for pay and \$13,621,500 for benefits totaling \$54,546,000).			54,546	
2.	Annualization of 2000 pay raise This pay annualization represents first quarter amounts (October through December) of the 2000 pay increase of 4.8 percent, which became effective January 2000, and, for three-quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and the			28,123

	approved increase of 4.8 percent. The amount requested, \$28,123,000, represents the total annualization of pay amounts for the fiscal year plus appropriate benefits (\$2',060,000 for compensation and \$7,063,000 for benefits)			
3.	Annualization of Additional Positions Approved in 1999. This provides for the annualization of 332 additional positions requested in the enacted 1999 appropriation for the White-Collar Crime, Other Field Programs, Forensic Services, and Technical Field Support and Services programs. Annualization of new positions has been extended to 3 years in order to provide for entry level funding in the first year with a 2 year progression to the journeyman level. This request includes an increase of \$6,187,000 for full year costs associated with these additional positions. The request includes \$4,489,000 for compensation and \$1,698,000 for benefits.			6,187
4.	Annualization of five additional positions approved in 2000.		3	\$228

5.	Transfer of CSRS employers to FERS retirement system. This request provides for the increase in Federal Employer costs, based on the transfer of Civil Service Retirement Sy FERS, as authorized by the FERS Open Enrollment Act of that ran from July 1, 1998 through December 31, 1998. To number of employees who have transferred to FERS, the gincreased Government costs of FERS benefits. The requestioner fits.	e retirement system (SRS) em f 1997, and the op his increase is ba grade of the employer	em (FERS) iployees to pen season sed on the oyees, and the		•••	15,925
6.	Increased Federal Health Insurance Costs. This request provides for the increase in agency contribution health benefits. In 1999, Federal health insurance premium contributions, increased approximately 10.2 percent. Becar a larger proportion of the total costs, up to 75 percent, the thas increased substantially. This increase is based on the "of Health Insurance. This request includes \$11,786,000 for	ons to Federal entens, including age tuse the Government total cost to the C increased" Gove	nployees ncy ient absorbed Government	*14	***	11,786
7.	General Services Administration (GSA) rent. GSA will continue to charge rental rates that approximate tenants for equivalent space and related services. The required to meet our commitment to GSA. The costs ass	those charged to ested increase of	commercial \$21,662,000			21,662

		Perm. <u>Pos.</u>	Work-	Δπουητ
	derived through the use of the automated system, which uses the latest inventory data and reflecting a 6 percent increase over 2000 levels.			
B.	Lease Expirations. GSA now requires all agencies to pay relocation costs associated with lease expirations. Based on prior experience, the Department anticipates that 20 percent of all lease expirations will result in relocations. This request provides for the cost associated with new office relocations caused by the expiration of leases in 2001. No funding is requested for any build-out costs associated with lease expirations. Funding of \$1,177,000 is requested for the FBI.			1,177
9.	Antenna Fees		•	1,306
10.	Accident Compensation This increase reflects the estimated billing from the Department of Labor for the actual costs in 1998 of employees' accident compensation, which will be billed for in 2000. The 2000 increased cost will be \$924,000.	***		924
11.	General Services Administration (GSA) Blue Pages Previously, GSA has paid for all nationwide Government telephone book listings through the GSA 8 percent FTS overhead rate. As a result of the National Partnership for Reinventing Government (NPR)/GSA Blue Pages Project, the funding for these listings			62

	has been removed from the overhead rate, and agencies are being billed for actual costs incurred. The Department's FY 2001 estimated costs total \$282,000. Funding of \$62,000 is requested for the FBI.	Penn. <u>Pos.</u>	Work- years	Amount
12.	Travel Management Center Fees. In the past, travel management services were provided at no cost, and the Department received rebates based upon ticket sales. However, current practices in the travel industry have ended this process. The new contracts will not provide rebates and will carry fees for each ticket, hotel, car, and other reservation made. The Department's total cost for travel management center fees is estimated at \$2,500,000. Funding of \$909,000 is requested for the FBI.	•••		909
13.	National Archives and Records Administration (NARA). The Office of Management and Budget directed NARA to convert its direct-funded records center program to a fully reimbursable program by 2000. This proposed legislation mandates that NARA is to remain the sole source for agency records center services, through 2002, for agencies currently using its services. In 2001, NARA advises that these charges will be increased by 2.5 percent. The Department's 2001 estimated costs total \$6,599,584, an increase of almost \$300,000, based on current records maintained by NARA. Funding of \$1,000 is requested for the FBI.			l

Federal Bureau of Investigation Construction Justification of Proposed Changes in Appropriations Language

The 2001 budget estimates include proposed changes in the appropriations language listed and explained below. New language is italicized and underlined, and language proposed for deletion is bracketed.

Construction

For necessary expenses to construct or acquire buildings and sites by purchase, or as otherwise authorized by law (including equipment for such buildings); conversion and extension of federally-owned buildings; and preliminary planning and design of projects; [\$1,287,000] \$23,187,000. (Department of Justice Appropriations Act, 2000, as enacted by section 100(a)(1) of the Consolidated Appropriations Act, 2000 (P.L. 106-113).)

Explanation of changes: Proposed funding level of \$3,187,000 reflects recurring base of \$1,287,000 for necessary maintenance and upgrades at the FBI Academy, plus an increase of \$1,900,000 to continue the FBI Academy Firearms Range Modernization Project.

BASE PROGRAM DESCRIPTION

In 1996, the FBI began an initiative to perform necessary maintenance and upgrades to the facilities of the FBI Academy located in Quantico, Virginia. The FBI Academy complex has grown from a new agent training facility to a multi-agency training complex meeting new agent, basic, advanced, and specialized training requirements of the FBI and the Drug Enforcement Administration (DEA). The primary complex of buildings was completed in 1972 and designed to support 700 students and 300 staff. The FBI Academy complex now includes not only the FBI's Training Division, but also the Engineering Research Facility (ERF), Forensic Science Research Training Center (FSRTC) and Critical Incident Response Group (CIRG). The current facility supports approximately 1,200 students and 1,200 staff. With the relocation of the FBI Laboratory in Spring 2001, these numbers will grow to approximately 1,300 students and 2,000 staff.

The existing FBI Academy campus includes classrooms, offices, and dormitory buildings; indoor and outdoor firearms ranges; a practical problems training center; a tactical and emergency vehicle operators course; library; dining hall and warehouse, service, and support facilities. The significant growth and increasing age of the Academy are placing a significant stress on facilities. Among the recurring maintenance and upgrade projects needed are upgrade of the HVAC systems, exterior masonry waterproofing, asphalt repairs, and a number of structural changes necessary for compliance with the Americans with Disabilities Act. These needs are covered by base funding of \$1,287,000.

Item: TRA, FBI Academy Firearms Range Modernization, \$1,900,000

Over the last several years the FBI has been engaged in an effort to modernize its firearms range facilities at the FBI Academy. The existing firearms ranges need modernization to increase capacity, minimize environmental impact, and improve the safety of FBI and DEA firearms training. Additionally, the existing ranges are unable to satisfy requested training needs. The existing outdoor ranges have been used, virtually unchanged, since the early 1950s. The FBI has developed a master plan for modernization of its entire firearms training facility. The master plan, which is based upon the FBI and DEA's basic firearms training requirements, as well as more specialized Critical Incident Response Group (CIRG) requirements, guides the FBI in planning its range resources in a manner which efficiently meets FBI Academy firearms training needs. The total cost of the modernization project was estimated in the master plan at \$62,185,000. Because of the scope of the master plan, the need to ensure the availability of ranges for training during the period of construction, and the incremental availability of funding, the project has been divided into multiple phases.

Phases I and II of the Firearms Range Modernization project are designed to modernize the FBI's outdoor range facilities. As planned, Phase I included three 25-yard all-weather ranges and lead abatement. Phase II, as planned, included one 50-yard all-weather range, a stress obstacle course and combat training facility, and partial lead abatement. The current cost estimate for construction of the first two phases is approximately \$38,850,000. To date, the FBI has received a total of \$26,850,000 for Phases I and II of the project. In 1996, the FBI was appropriated \$16,850,000 for Phase I, and the 1999 budget provided \$10,000,000 from the Department of Justice Working Capital Fund for Phase II.

The FBI has completed an environmental assessment of the project, finalized the range master plan, and completed architectural & engineering design. In October 1999, the FBI awarded a contract for construction of the first two phases. In order to award a contract within available funding, the FBI limited the scope of Phases I and II to three 25-yard all weather ranges, lead abatement, construction management services, and a stress obstacle course. One of the bidders on the project has since challenged the outcome of the bid process and issued a protest to the contract award. Construction of the first two phases will begin immediately after resolution of this issue and is scheduled for completion approximately 18 months after the start of construction.

2001 Requirements

Given the challenge to the construction award for Phases I and II, as well as the time required for completion after construction begins, no funds are being requested in 2004 for the major enhancements in Phase III of the master plan. However, the FBI requests a total of \$1,900,000 to continue to address safety and environmental concerns.

\$1,200,000 is requested to construct an ammunition storage facility to properly and safely store ammunition used for Academy firearms training. Due to the lack of a permanent, consolidated storage facility the FBI currently stores the Academy's ammunition in two makeshift facilities that were initially designed as temporary structures. As a result, current ammunition storage practices at the Academy do not meet Department of Defense safety standards, which is a requirement due to the Academy's location at the U.S. Marine Corps base, Quantico, Virginia. Construction of the requested ammunition storage facility would allow the FBI to consolidate ammunition storage from the current makeshift facilities into a new permanent structure that meets these safety requirements. FY 2001 funding of \$700,000 would continue necessary site lead abatement, which must be completed prior to the start of Phase III.

Firearms proficiency is a core skill that all FBI agents are expected to achieve and maintain while serving the American public. With inadequate firearms training, some agents may be unable to handle dangerous situations involving firearms successfully. The enhancement of \$1,900,000 would support lead remediation costs and allow for the construction of a dedicated ammunition storage facility that would allow the FBI to properly and safely store ammunition used for Academy firearms training.

Drug Enforcement Administration Salaries and Expenses Diversion Control and Construction FY 2001 Congressional Budget Submission

SUMMARY STATEMENT

The Drug Enforcement Administration (DEA) requests a total of \$1,456,809,000; 8,156 positions; and 8,066 FTE for Fiscal Year 2001, which is a modest increase over resources requested last year. However, this request is considered the minimum needed to make progress towards achieving the Office of National Drug Control Policy (ONDCP) and Department of Justice (DOJ) FY 2002 goals set forth in the respective strategic plans. For FY 2001, DEA seeks to increase its workforce by adding 11 new Special Agent positions and 33 support staff. DEA also seeks to enhance its resources to fund the new workforce and infrastructure enhancements, including \$3,134,405 in personnel-related funds and \$61,422,595 in non-personnel funding for a total of \$64,557,000.

Introduction

The mission of the Drug Enforcement Administration (DEA) is to enforce the Controlled Substances laws and regulations of the United States and to bring to the criminal and civil justice system those organizations involved in the growing, manufacturing and/or distribution of controlled substances destined for the United States. The DEA also recommends and supports non-enforcement programs aimed at reducing the availability of illicit controlled substances on both the domestic and international markets. To accomplish this mission, DEA works with international, federal, and state and local law enforcement partners to target and immobilize the organizations of major drug traffickers operating at all levels of the drug trade.

Because DEA is the only single-mission federal agency dedicated to drug law enforcement, the agency has, over the years, developed the ability to direct resources and manpower to identify, target and dismantle drug organizations headquartered overseas and within the United States. DEA's strategy to successfully accomplish these goals is straightforward, requiring that the agency's resources and manpower be focused on all three levels of the drug trade; the international, national/regional and local levels. Each of these categories represents a critical aspect of the drug continuum which affects communities across the nation

The 9,000 dedicated men and women of the DEA are committed to improving the quality of life of the citizens of the United States. The agency directs and supports investigations against the highest levels of the international drug trade, their surrogates operating within the United States, and those traffickers whose violence and criminal activities destabilize towns and cities across the country. These investigations are intelligence-driven and frequently involve the cooperative efforts of numerous other law enforcement organizations.

DEA's strategy to successfully impact drug trafficking at all levels of operation is flexible and reflects the constantly-changing nature of the drug trade. In concert with the Department of Justice and the Office of National Drug Control Policy (ONDCP), DEA has crafted an innovative and effective program to keep pace with developments and shifts in the drug trafficking spectrum and bring both national and international drug traffickers to justice.

Drug Trafficking Threat to the United States

The heads of the most powerful drug trafficking organizations impacting the United States today are based in Mexico and Colombia. Believing they are safe from the U.S. justice system, they tightly control their operations by directing a large

number of surrogates who carry out orders on U.S. soil. These operatives are responsible for the vast majority of the cocaine, heroin, methamphetamine and marijuana trafficking taking place in U.S. communities. Surrogates answering to drug lords based in Mexico also produce methamphetamine both in that nation and in the U.S., particularly in California. These producers and traffickers are responsible for over 75 percent of the methamphetamine that is available in U.S. communities today.

Traffickers based in Mexico pose a significant threat to the United States because of their power, influence and dominant status in the drug trade. Where once traffickers from Colombia controlled the vast majority of cocaine trafficking, traffickers from Mexico today are responsible for transporting cocaine into and throughout U.S. markets. The heads of organizations based in Colombia rely almost entirely on traffickers from Mexico to transport and distribute cocaine while they direct operations from the safety of their headquarters in Call or Bogota. In one recent case entitled Operation Millennium, the director of a powerful Colombian organization wrongly believed that by distancing himself from his organization's U.S. operations, he would make himself Immune from indictment.

The major organizations based in Mexico---the Arellano-Felix organization, the Amezcua Contreras brothers, the Amado Carillo Fuentes group and the Caro Quintero organization---all have a demonstrable negative impact on the United States. The leaders of these groups are routinely indicted in U.S. judicial districts for drug trafficking offenses committed on U.S. soil.

In recent years, these traffickers have become more prominent in the drug trafficking trade within the U.S. They are responsible for manufacturing methamphetamine in Mexico and California and trafficking it to cities such as Des Moines, Boise, Atlanta and Salt Lake City. Major organizations based in Colombia and Mexico also rely on surrogates from Mexico to move multi-ton quantities of cocalne across the United States, including East Coast locations.

While traffickers from Mexico have a direct impact on drug trafficking trends in the United States, it is important to note that many major traffickers are still operating from Colombia where the cocaine and heroin trades are centered. The large-scale production of Colombian heroin has created major U.S. markets for this high quality product. In 1998, the latest year for which we have statistics, South American heroin comprised 62 percent of the heroin seized by federal authorities and analyzed by DEA's Special Testing and Research Laboratory. Cocaine production has also increased dramatically since 1994, and it is possible that Colombian cocaine yield could be as much as three times that of previous estimates.

None of the major drug traffickers headquartered oversees could operate without the assistance of national and regional drug trafficking organizations which are responsible for trafficking huge quantities of drugs into U.S. communities. These organizations are comprised of a network of operatives who transport, store and distribute drugs throughout the United States and whose activities are directed by drug lords based in foreign countries. In many cases, national and regional drug trafficking organizations are comprised of numerous cells whose directors are responsible for specific tasks such as communications, financial matters and/or logistics. These cell heads are sent to the United States, for a period of time, to carry out the business mandates of the top drug lords and are given specific tasks to accomplish. The national and regional drug syndicates have infiltrated many states and communities, bringing with them the crime and violence once limited to major urban areas. A survey of recent DEA investigations revealed that over 400 investigations stemming from Operations Reciprocity and Limelight involved drug traffickers from foreign countries who had set up operations in various cities across the United States.

Local violent drug trafficking organizations also operate across the United States and are responsible for eroding the quality of life in many American communities. Previously centered in major urban areas, violent drug trafficking groups are now part of the landscape in smaller cities and rural areas. Fueled in large part by methamphetamine production and trafficking, violent drug trafficking organizations are now affecting the crime rates in smaller cities such as Spokane, Washington and Cedar Raids, Iowa. While these local, violent groups appear to be unrelated to the large international drug trafficking organizations headquartered overseas, it is important to note that all of the cocaine and heroin that is trafficked by these groups is produced overseas and transported to the United States for eventual distribution on the local level.

Drug Abuse in America - The Changing Demographics

Although drug abuse among young people increased significantly over the past decade, recent statistics indicate that this trend may be stabilizing. Even with this positive trend, there continues to be sobering news brought to our attention daily regarding the state of drug use in smaller cities and rural areas, fueled by the proliferation of methamphetamine production and trafficking, and the increased availability of cheap, high-purity heroin from Colombia.

Although there has been a decrease in violent crime in major cities, due to vigorous law enforcement efforts, similar reductions in the violent crimes rate of smaller cities, and suburban and rural areas have not been realized. In fact, many smaller cities are now confronting the same problems that larger urban areas faced a decade ago. White 1998 violent crime rates decreased (-9.5%) in cities having populations between 250,000 and 999,999, significantly smaller

decreases took place in suburban counties (-5%) and rural areas (-2%). Between 1997 and 1998, violent crime rates actually increased in a number of mid-sized communities.

A recent reported released by the Center on Addiction and Substance Abuse at Columbia University (CASA), indicates that eighth graders fiving in rural America are 79 percent more likely than their urban counterparts to use amphetamines, including methamphetamine. They are also 75 percent more tikely to use crack cocaine, 52 percent more likely to use cocaine and 26 percent more likely to smoke marijuana, than young people in major urban locations.

The report also states that according to recent surveys, it is as easy for young people in rural areas and small cities to obtain drugs as it is for their urban counterparts. Additionally, from 1990 to 1998, smaller cities experienced a great deal more drug violations than larger cities; for instance, cities with populations of 25,000 to 50,000 people had three times as many drug violations as larger cities. In cities with fewer than 10,000 residents, the level of drug violations was six times higher than that found in larger cities.

The media has reported the tragic results of increased drug use in cities like Plano, Texas. Orlando, Florida and Elkton, Maryland. Smaller cities are generally unable to meet the demands for social services and treatment placed on them when a methamphetamine or heroin epidemic hits. Additionally, law enforcement agencies are often unprepared to address the full range of issues associated with methamphetamine lab cleanups and investigations.

In the end, all three facets of the drug trafficking trade ---the international, national/regional and local levels---are interrelated and interdependent. As these different echelons of the drug trade in each of these levels work together, it is essential that our nation's the law enforcement response address all three levels simultaneously.

DEA's Strategy

In order to meet the enormous challenges posed by internationally-based narcotics traffickers and their surrogates within the United States, DEA has developed an effective strategy which makes use of the agency's unique skills and limited resources to achieve the maximum impact against international, national/regional and local drug traffickers through the use of intelligence-driven investigations.

DEA's strategy takes into account the current drug trafficking situation affecting the United States and identifies the characteristics and vulnerabilities of all three levels of the drug trade, targeting each of these levels simultaneously:

International Targets: This category is comprised of trafficking organizations based in foreign countries that are the primary source of supply for their surrogates within the U.S. Through DEA's International Operations program and the efforts of the agency's Special Operations Division (SOD) and numerous field divisions throughout the country, DEA targets these organizations and their members.

National/Regional Targets: These organizations operate domestically throughout the United States and are responsible for distributing drugs from international and domestic sources to U.S. communities. In many cases, these groups report directly to major drug fords overseas. They also operate on a national or regional basis, supplying several markets. The vast majority of DEA's cases fall into this category and investigations against members of these organizations are generated and supported by every DEA office in the United States.

<u>Local Initiatives</u>: Criminal organizations comprising this category generally deal in smaller quantities of drugs and are responsible for providing drugs to users within the United States. DEA generally works with state and local counterparts to identify and immobilize these organizations and to arrest the most violent members of these groups.

Using this strategy, DEA has successfully targeted significant traffickers and organizations in each of these categories. Over the past several years, major cases tied to each of these categories have resulted in the arrest of thousands of major violators.

INTERNATIONAL TARGETS

Operation Millennium - Less than one month after the successful conclusion of Operation Impunity, an operation aimed at the highest level of the drug trade operating within the U.S., an important international law enforcement operation made headlines. Operation Millennium, a one-year operation designed to dismantle a Colombian-based transportation consortium believed to be responsible for supplying between 20 and 30 tons of cocaine per month to the United States and Europe, resulted in the arrest of more than 30 drug traffickers and money launderers, including alleged high-profile trafficker Alejandro Bernal Madrigal, and Fablo Ochoa. The operation also resulted in the seizure of over 13,000 kilograms of cocaine. Critical to the success of the operation was the unprecedented level of cooperation between DEA, the Colombian National Polica, the Fiscal General of the Repúblic of Columbia, the U.S. Attorney's Office in Miami and the Justice Department's Criminal Division.

Operation Juno - Initiated after the seizure of approximately 386 kilograms of liquid cocaine concealed in a shipment of frozen fish destined for the United States, Operation Juno, which began in September 1996 and concluded in August 1999, was unique in that for the first time in drug enforcement history, the U.S. government set up an undercover brokerage firm to aid in intercepting drug dollars destined for the Colombian black market. Operation Juno resulted in over 40 arrests, the seizure of \$10.0 million and warrants against 59 bank accounts at 34 U.S. banks and 282 accounts at 52 foreign banks. Monies in these targeted accounts were believed to total another \$16 million. The Investigation also resulted in the seizure of 3,601 kilograms of cocaine and 106 grams of hashish oil.

Operation Columbus – Concluding in October 1999. Operation Columbus was a multi-national, regional enforcement effort involving Colombia, Venezuela and Panama, and the island nations of the Caribbean. This operation focused on air, tand and maritime interdiction, eradication and clandestine airstrip denial. The final arrest and seizure statistics for Operation Columbus were unprecedented for this region, resulting in more than 1,290 arrests, as well as the seizure of 900 kilograms of cocaine and nine kilograms of heroin. Over 38 weapons, 26 vehicles, 27 vessels, three laboratories and one aircraft were also seized. In addition, 1,097 metric tons of marijuana were eradicated. In the end, Operation Columbus struck a solid blow against the operations of Caribbean—based drug trafficking groups.

NATIONAL/REGIONAL TARGETS

Operation Impunity - This two-year investigation concluded in September, 1999, and resulted in the arrest of 109 individuals, including three major drug trafficking cell heads, linked to the Mexican-based Amado Carillo Fuentes organization. The operation was coordinated by DEA's Special Operations Division (SOD) which operated a combined investigative center involving the DEA, U.S. Customs Service, FBI and IRS. Besides substantially hindering the trafficking organization's ability to move cocalne and other drugs into, and around, the United States, Operation Impunity succeeded in seizing \$19 million in U.S. currency, another \$7.0 million in assets and well over 12,434 kilograms of cocaine and 4,800 pounds of marijuana.

Operation Heartland - Beginning in October 1997, this investigation targeted the Martin Chavez Organization, a multipound methamphetamine and marijuana importation and distribution operation that was responsible for transporting marijuana and methamphetamine from Mexico into the United States via the Juarez/El Paso, Texas corridor to the Oklahoma City , Oklahoma area. Over the next several years, the scope of this investigation spread to include DEA offices in Fresno (California), El Paso (Texas), Dallas (Texas) and Des Moines (Iowa). Information obtained as a result of the investigation resulted in the seizure of 47 pounds of methamphetamine, 525 pounds of precursor chemicals, 1,378 pounds of martjuana, \$47,500 in U.S. currency and the arrest of 22 individuals. Additional indictments are anticipated, including one for Chavez – currently a fugitive.

Mario Ibarra Sanchez Investigation - The Mario Ibarra Sanchez Organization was in charge of transporting and distributing large quantities of methamphetamine, amphetamine, heroin and cocaine for trafficking organizations operating in both Mexico and the United States. On November 11, 1998, DEA conducted an investigation, in conjunction with several state and local law enforcement agencies, that resulted in the issuance of nine federal search warrants and ten federal arrest warrants against members of the Sanchez organization. Those arrested included the cell feader and a significant methamphetamine laboratory operator based in Mexico. The Investigation ultimately resulted in the seizure of 65.5 pounds of methamphetamine, 30.4 pounds of black tar heroin, 106.3 pounds of amphetamine, 154 pounds of cocaine and \$156.600 in U.S. currency.

Omaha, Nebraska RET Deployment - In September 1999, the Des Moines Regional Enforcement Team (RET) deployed to Omaha, Nebraska to assist in a methamphetamine investigation. A court-authorized wire intercept was initiated on two cellular telephones utilized by the targeted organization. As a result of these efforts, the Omaha District Office, along with the Des Moines RET, identified individuals in Juarez, Mexico; El Paso, Texas; and Los Angeles; California, who were directly linked with the transshipment of cocaina, marijuana and methamphetamine to Omaha, Nebraska, for distribution purposes. On October 20, 1999, a Federal Grand Jury in Omaha, Nebraska indicted 19 individuals, 17 of whom were arrested. This indictment included the arrest of the primary targets, along with others, effectively dismantling the targeted organization in Omaha, Nebraska. Additionally, this investigation resulted in the seizure of six kilograms of cocaine; one pound of methamphetamine; 200 pounds of marijuana; and, \$22,000 in U.S. currency. Evidence gathered during the intercept of telephones utilized by the targeted organization continues to be exploited for use in further investigations in California, Texas, Nebraska, and Mexico.

Operation Trinity - In October 1997, DEA, FBI, Customs and DOJ initiated Special Enforcement Operation Trinity, a joint strategy designed to target the primary domestic trafficking organizations that are controlled by criminal leaders in Colombia, Mexico and the Dominican Republic. The primary phase of Operation Trinity concluded on September 25, 1998; no new investigations were accepted after July 1998. At that time 220 cases were still active. Preliminary figures for all Operation Trinity investigations include over 1,260 arrests. Drug seizures total: 12.8 metric tons of occaine, 63,370 lbs. of marijuana, 3,178 lbs. of methamphetamine, 127 lbs. of heroin, 108 lbs. emphetamine and over 137,600 pseudoephedrine tablets. Asset seizures total over \$59.2 million in U.S. currency, \$1.2 million in assets and 132 vehicles.

Operation META - Operation META, which concluded in December 1997, targeted a major U.S. methamphetamina-trafficking organization that was supplied by the Amezcua-Contrera group from Mexico. This investigation combined the efforts of DEA, FBI, other federal agencies and state and local agencies from 17 U.S. cities in nine different states. It resulted in the arrest of 121 members of the trafficking ring and the seizure of 133 pounds of methamphetamine, 1,765 pounds of marijuana and 1,100 kilograms of cocaine. During the META raids, agents discovered and dismantled three methamphetamine labs that were each capable of producing more than 300 pounds of methamphetamine at a time. Operation META seizures were especially important because they alerted the law enforcement community to the growing methamphetamine problem in the United States.

Southern Frontier – In recent years, DEA has undertaken several successful operations in support of the agency's Southern Frontier Initiative. Operation Zorro II, Operation Reciprocity and Operation Limelight, each of which relied extensively on numerous court-ordered wire taps that were coordinated and monitored by area law enforcement, collectively resulted in the arrest of 156 individuals and the seizure of over 22,000 kilograms of illegal drugs and over \$35 million.

LOCAL INITIATIVES

Mobile Enforcement Team Program ~ As a response to the overwhelming problem of drug related violent crime which has plagued communities and neighborhoods across the United States, DEA's Mobile Enforcement Team (MET) program was created in early 1995 as a means of dismantling drug organizations by securing the conviction and incarceration of those individuals dealing drugs and causing violence in these communities. Recent examples of MET program successes include the following:

• Phoenix, Arizona - From July 1998 until March 1999, the Phoenix Field Division MET worked closely with the Northern Arizona Street Crimes Task Force in targeting the Colimas and Costillo drug-trafficking organizations. The Colimas organization was responsible for supplying street-level dealers with multiple-pound quantities of methamphetamine. The Costillo organization, a polydrug trafficking group, had a reputation for extreme violence; some of its members had criminal histories, which included armed robberies, home invasions, assault, sex crimes, and child abuse. Using confidential sources, the MET was able to successfully infiltrate these two organizations and severely disrupt their operations. The nine month deployment, resulted in the seizure of seven operational and three dismanlled methamphetamine labs, 44 grams of heroin, 22 pounds of marijuana, 500 dosage units of LSD, 40

weapons, 18 motor vehicles, and \$16,292 in U.S. currency. In addition, The MET secured 86 arrests, including the arrest of two primary targets: Jose Francisco Colimas and Ricardo "Duke" Castillo.

- Brownwood, Texas At the request of local police, DEA's Dailas Division MET deployed to Brownwood, Texas from
 October 1998 to March 1999 in an effort to combat narcotics-related violence problems within this community. The
 five month deployment resulted in 22 federal indictments and 19 state arrest warrants. The initial sweep resulted in
 38 arrests (20 federal and 18 state). In response to the operation, the Brownwood District Attorney stated, "This DEA
 MET deployment was significant in getting important drug dealers off the street and making a major impact. This is a
 perfect example of what happens when all parties cooperate and collaborate towards a common goal."
- Warren, Ohio At the request of the local police chief, DEA's Detroit Division MET deployed to Warren, Ohio from January to May 1999 in an effort to target a significant increase in crack cocaine trafficking and related violence within this community. The primary deployment targets were members of a violent drug distribution organization operating in Warren. This five month deployment resulted in the arrest of 16 individuals (11 arrested on state charges that include mandatory sentences upon conviction); the execution of six search warrants; and, the seizure of 650 grams of crack cocaine. In addition, \$8,100 in U.S. currency was seized, along with nine weapons including two semi-automatic handguns with laser sights and seven rifles. In addition, the primary targets of this deployment were also arrested.

In order to meet the goals of DEA's Strategic Plan, DEA's FY 2001 budget request is comprised of three primary initiatives. These initiatives are as follows.

Special Operations Division -- \$3,100,000 and 18 positions (including 11 Special Agents)

SOD-coordinated investigations enable DEA and its drug law enforcement counterparts to attack the command and control infrastructure of major drug trafficking organizations at their most vulnerable point, i.e. communications. Extensive coordination and communication are required between all echelons of drug syndicate operations. As DEA addresses emerging drug threats, requests for Title ItIs and intelligence assistance are expected to increase dramatically. Therefore DEA requires additional resources for SOD for the Southwest Border and for Financial Investigations. These enhancements will enable DEA to adequately support investigations by providing field agents with the latest intelligence and will facilitate the coordination of focused, multi-jurisdictional, comprehensive investigations.

intelligence initiative -- \$1,500,000 in non-personnel funding

Intelligence driven investigations represent the best means of quickly and efficiently targeting, investigating and

dismantling major drug trafficking organizations. This initiative focuses exclusively on further providing DEA's intelligence program with the tools necessary to support virtually all facets of DEA's investigative requirements. Further development of DEA's drug intelligence and information sharing capabilities is vital in the effort to maximize federal, state, and local anti-drug assets. The resources requested through this initiative will provide additional support to drug law enforcement intelligence through the continued development of DEA's El Paso Intelligence Center Information System (EIS)

Infrastructure Initiative -- \$ 59,957,000 and 26 positions (including 17 Professional/Administrative staff)

DEA's dynamic enforcement and intelligence missions continue to place great demands on the agency's key operational support programs. As such, critical investments in technology, for projects like FIREBIRD, and in programs such as the agency's Financial Management are essential to the successful performance of drug law enforcement. Without adequate infrastructure, DEA will not be able to support the growing number of Special Agents, Intelligence Specialists and Task Force Officers working actively to identify, target and dismantle drug trafficking organizations.

DEA is firmly committed to administering the programs for which it is responsible in the most efficient and effective manner possible. DEA's Strategic Plan is the key document outlining the goals and objectives that will guide our staff and managers. Its Annual Performance Plan (APP) establishes measurable performance target levels. Both of these plans are responsive to the requirements of the Government Performance and Results Act (GPRA) of 1993 and represent a commitment to achieving the desired outcomes.

DEA's leading role in drug law enforcement requires the agency to pursue organizations and individuals responsible for the production and distribution of illegal drugs worldwide and bring them to justice. DEA's legal mandate and professional responsibilities provide clear, concise, and dynamic leadership in the local, national, and international drug control effort. DEA uses both traditional and innovative drug control approaches to accomplish its primary mission of drug law enforcement. Domestically, DEA cooperates and coordinates with other federal agencies and state and local law enforcement organizations to reduce the availability of illegal drugs. Internationally, DEA provides assistance and liaison with drug law enforcement agencies worldwide to gain support from the host nations for drug control while assisting them in strengthening their enforcement-related efforts and capabilities.

The DEA FY 2001 Congressional budget request of \$1.46 billion and \$1.56 positions represents a \$.7% increase over the FY 2000 enacted budget request of \$1.34 billion. In FY 2001, the DEA seeks to enhance its workforce by adding 44 positions.

DEA's FY 2001 APP identifies attainable goals within the requested level of resources with results that can be demonstrated. The FY 2001 APP provides the direction and means for DEA managers to measure and report their performance, as required by the Government Performance and Results Act (GPRA) of 1993.

Planning Approach

The Strategic Management System (SMS) embodies the overarching strategy for DEA and provides the framework for acticulating its strategic planning process over a multi-year time period. Its scope circompasses the full range of DEA field and headquarters elements and includes relationships with all drug control agencies, foreign and domestic

DEA's FY 1994 SMS provides the blueprint for accomplishing the agency's goals and objectives. The Administrator's Vision is a key component of this system, followed by specific goals and objectives, that guides budget resources to accomplish them, and performance measures to gauge progress. The Administrator's Vision, strategic goals and objectives may change from year to year and therefore are short-term oriented. These components taken together form DEA's system for meeting the mandates of the Chief Financial Officer's (CFO) Act of 1990 and OPRA, which require linking agency performance to resource planning.

FY 2001 ANNUAL PERFORMANCE PLAN

DEA Mission, Strategic Goals, and Their Relationship to the DOJ Strategic Plan and the ONDCP National Drug Control Strategy

DEA's FY 2001 budget request directly supports the overall law enforcement mission priorities, general goals and strategic approaches that are included in the Office of National Drug Control Policy (ONDCP) Strategy and Department of Justice (DOJ) Strategic Plan, FY 1998-2002, as well as DOJ's FY 2001 Summary Performance Plan. Specifically, DEA's FY 2001 budget request supports the following Strategies and Performance Goals reflected in DOJ Strategic Goal I 2, "Reduce the Availability and Abuse of Illegal Drugs Through Traditional and Innovative Enforcement Efforts".

Strategles:

- Disrupt and dismentle major drug organizations, along all points of the production, transportation, and distribution chain
- Increase foreign government support for the successful investigation and prosecution of drug cartel members.
- Gather, analyze, and disseminate intelligence regarding drug trafficking organizations and the availability and abuse of allegal drugs in order to support investigative and prosecutorial efforts.

Performance Goals:

- A Disrupt and Dismantle Major Drug Trafficking Criminal Enterprises
- B. Reduce the Quantity of Illegal Drugs.
- C. Improve Intelligence Gathering Capabilities.

Furthermore, DEA's FY 2001 budget request also supports the following ONDCP Performance Measures of Effectiveness (PME's):

ONDCP Goal 2

Increase the safety of America's citizens by substantially reducing drug-related crime and violence.

ONDCP Goal 2, Objective 1:

Strengthen law enforcement to combat drug related violence, disrupt criminal organizations, and arrest and prosecute the leaders of illegal drug syndicates.

ONDCP Goal 5:

Break foreign and domestic sources of supply.

ONDCP Goal 5. Objective 1:

Produce a net reduction in the production of illegal drugs, especially

methamphetamine.

ONDCP Goal 5, Objective 2:

Disrupt and dismantle major international drug trafficking organizations and arrest, prosecute, and incarcerate their leaders.

ONDCP Goal 5, Objective 3:

Support and complement source country drug control effons and strengthen source country political will and drug control capabilities.

Additionally, DEA's FY 2001 APP continues the effort begun in FY 1999 to incorporate information on performance measurement that should lead to better accountability regarding actual results achieved. With each iteration of the APP, improvements continue to be incorporated, refining the number and focus of measures being collected. Several key performance measures addressed in the ONDCP strategy, not previously reported, continue to be devidoped.

DEA's current Vision, Mission Statement, Strategic Goals, and Strategic Objectives are provided on the next two pages of this Performance Plan.

FY 2001 ANNUAL PERFORMANCE PLAN

DEA VISION

Excerpts from the Acting Administrator's Vision Statement November 1999

The worldwide drug situation demands that DEA be strategically responsive DEA's core competency remains targeting and attacking the leadership of major drug trafficking organizations. We must lead U.S. drug law enforcement by implementing intelligence-driven targeting and investigations through the increased collection and analysis of human and technical intelligence that identify the major drug threats. We must direct our investigative efforts against all of the major international trafficking organizations at every juncture in their operations. And in cooperation and coordination with our foreign, federal, state, and local partners, we will continue to lead a balanced attack against encroachments made by drug traffickers and help meintain peace and the rule of law in our communities.

We will develop a consistent, clearly stated strategy for the next century that embraces commitment to operations - and by extension multiprisdictional operations - that will be reflected in our approach to principle, integrity, training, and technology. The strategy will coherently integrate organization, resource allocation, leadership development, and interagency cooperation to ensure that we can contribute to the attainment of safer communities and neighborhoods throughout this nation.

DEA MISSION STATEMENT

To enforce the controlled substances laws and regulations of the United States (U.S.) and bring to the criminal and civil justice system of the U.S., or any other competent jurisdiction, those organizations and principal members of organizations, involved in the growing, manufacturing, or distribution of controlled substances appearing in or destined for littlet traffic in the U.S.; and to recommend and support non-enforcement programs aimed at reducing the availability of illicit controlled substances on the domestic and international markets. DEA's primary responsibilities include:

- Investigation and preparation for prosecution of major violators of controlled substances laws operating at interstate and national levels;
- Investigation and preparation for prosecution of criminals and drug gangs who perpetrate violence in our communities and terrorize citizens through fear and intimidation;
- Management of a national drug intelligence system in cooperation with federal, state, local, and foreign officials to collect, analyze, and disseminate strategic and operational drug intelligence information:
- Seizure and forfeiture of assets derived from, traceable to, or intended to be used for illfeit drug trafficking;
- Enforcement of the provisions of the Controlled Substances Act as they
 pertain to the manufacture, distribution, and dispensing of legally
 produced controlled substances;
- Coordination and cooperation with federal, state, and local agencies, and with foreign governments, in programs designed to reduce the availability of illicit abuse-type drugs on the United States market through non-enforcement methods such as crop eradication, crop substitution, and training of foreign officials;
- Responsibility, under the policy guidance of the Secretary of State and U.S. Ambassadors, for all programs associated with drug law enforcement counterparts in foreign countries; and
- Liaison with the United Nations, Interpol, and other organizations on matters relating to international drug control programs.

FY 2001 ANNUAL PERFORMANCE PLAN

DEA STRATEGIC GOALS

- in order to safeguard Americans, DEA will disrupt/dismantle the leadership, command, control, and infrastructure of drug syndicates, ganga, and traffickers of illicit drugs that threaten Americans and erods the quality of life in our communities.
- To reduce the impact of crime and violence that is the result of drug trafficking activity, DBA will provide federal investigative resources to assist local communities.
- In order to facilitate drug law enforcement efforts directed against major drug trafficking organizations, DEA will cooperate and coordinate with our federal, state, local, and foreign law enforcement and intelligence counterparts.

DEA STRATEGIC OBJECTIVES

- Attack the command and control of international and domestic drug trafficking organizations through the arrest, prosecution, conviction and incarceration of their criminal leaders and surrogates.
- Concentrate enforcement efforts along the Southern Frontier to discupt, dismantle and immobilize organized criminal groups operating from South America and Mexico.
- Disrupt the communications capabilities of major drug traffickers by conducting applisheated electronic intercept investigations and employing applishicated, state of the art technologies.
- 4 Direct enforcement efforts at the threats posed by methamphetamine, heroln, and occeine trafficking organizations; and a resurgence in marijuana trafficking.

- Assist local law enforcement by deploying MBTs into communities where drug trafficking and related violent crime are rampant and the communities lack the resources to address the threat.
- Prevent the diversion of controlled substances and control the distribution of chemicals used to manufacture illicit drugs.
- Maintain a proactive intelligence posture to facilitate information sharing and develop new methods to structure and define drug trafficking organizations.
- Support Interdiction efforts to target drug transshipments destined for the U.S.
- 9 Seize and forfeit assets and proceeds derived from drug trafficking by reinvigorating money laundering investigations.
- Intensify our demand reduction program to combat the rise in drug abuse by building on partnerships with civic and professional organizations.

Current Strategic Planning Efforts

Beginning August 30, 1999, the DEA Strategic Management Executive Committee (SMEC) met to initiate a strategic planning process for the agency. The Executive Committee is responsible for developing and clarifying the overall strategic direction for DEA, including its operational, operational support, and management support programs for the agency. An expanded strategic planning group met on October 19, 1999, including the original core SMEC and several Special Agent's in Charge of field divisions, and accomplished the following:

Strategic Goals and Measurement

 Approved and validated strategic objectives for the three operational focus areas

- Tentative performance measures have been established for the international and national/regional operational areas
- Established working group to develop official DEA definition for "disrupt" and "dismaration"

Strategic Management

- Agreed to formally establish an executive planning and oversight committee from this group which will:
 - review and approve critical issues throughout the agency, including those strategic enforcement trends and external factors raised in the previous section.
 - prioritize DEA-relevant committees, issues, etc., to ensure participation at appropriate levels
 - actively address operational support issues
- Approved proposed FY-2000 Targeting Process Pilot
- Established working group to develop proposal for reorganization of the Operations Division at Headquarters to effectively implement. strategic plan

Presently, the Special Agents in Charge (SAC's) are required to develop an annual Field Menagement Plan (FMF) that serves as the "Operating Plan" for each of DEA's twenty-one Field Divisions. The current FMP structure does not establish a clear relationship between resources provided and operational performance. DEA envisions including specific performance indicators, to include goals for both resource utilization and operational performance, in each FMP, and therefore each SAC could be evaluated on the Division's ability to achieve the operational goals with the resources provided. The operational performance indicators will be directly linked to the goals and objectives identified through the evolving DEA strategic planning process as FMP's are updated.

The FMP's are utilized as pert of DEA's Inspection process. IN staff will assets each Division's progress and success in meeting the performance targets indicated in the Division's FMP. IN assetsments can assist managers in better understanding how resource allocation and utilization

affect operational performance, and therefore could provide management with information that could be used to justify, adjust, and/or enhance field division resource allocations.

DEA also established a distinct Program Evaluation Unit within IN to assess programs and functions that cross organizational lines. The results of these evaluations will validate managerial action to ensure that agency-wide programs are efficiently and effectively meeting planned goals and objectives. DEA plans to utilize the information derived from these assessments and evaluations to make informed decisions during its Strategic, Budget, and APP planning processes.

Highlights of 1999 Mission Critical Results

Southern Frontier Initiative

Operation Impunity: On September 22, 1999, DEA, in concert with the FBI and the U.S. Customs Service (USCS), concluded a two year international investigation which culminated in the arrest of 109 individuals linked to the Amado Curillo Fuentes drug trafficking organization, headquartered in Mexico. Operation Impunity was a multi-jurisdictional, multi-agency complex investigation which tied drug trafficking activity within the U.S. to the highest levels of the cocaine trade operating today. This investigation was especially significant because it successfully targeted the syndicate's importation, transportation and distribution network; substantially hindering its ability to move cocaine and other drugs into and around this country. During the duration of Operation Impunity, over \$25 million in U.S. currency and assets were seized, as well as over 12,434 kilos of cocaine and 6,177 pounds of marijuans.

The most critical aspect of the investigation was the identification and arrest of three major drug trafficking cell heads—individuals who are on the payroll of major drug lords who direct their operations within U.S. cities, and who worked for the Amado Carillo Fuente organization, based in Juarez, Mexico. This organization moved hundre, a of tons of Colombian

cousine from Mexico to McAlten, Texas and to other cities such as San Diego, Chicago, Atlanta, and New York. From there it was moved to other cities, such as Nashville, Miami, Detroit, Tulsa and Los Angeles, where it was distributed to domestic organizations who guaranteed its sale on the streets of U.S. communities. Traffickers based in Mexico and their U.S affiliates communicated through various sophisticated means, taking full advantage of personal communication systems which the traffickers believed were safe from law enforcement attention. DEA's Special Operations Division (SOD) was integral to coordinating this high impact multi-agency investigation.

San Jose, California Investigation. On June 9, 1999, the DEA San Jose Resident Office, with assistance form the San Mateo County Narcotic Task. Force, seized 16.5 pounds of black for heroin and one vehicle. The DEA. had been conducting an Organized Crime Drug Enforcement Task Force (OCDETF) investigation into this black tar heroin trafficking organization based in Sunnyvale. California. The organization was responsible for transporting heroin from Apatzingan, Michoscan, Mexico to the bay area of San Jose. California by concealing the heroin inside the engines of vehicles. The investigation identified several vehicles associated with this organization. On June 5, 1999, the El Paso Intelligence Center (EPIC) notified DEA that a vehicle registered to the leader of the organization had crossed into the U.S. from Mexico through San Ysidro, California. DEA Special Agents followed the vehicle to a residence in Redwood City. California, and following the issuance of search warrant, seized 16.5 pounds of Mexican black far heroin found hidden within the vehicle. To date this investigation has yielded the seizure of over 200 pounds of heroin from eight vehicles associated with the group.

Heroin

Beginning with a single OCDETF investigation, DEA's Boston Field Division targeted Wilfredo CORTEZ, a distributor of high quality heroin. There had been over 30 deaths from heroin in Lynn during 1998, and many of these deaths have been traced to heroin supplied by CORTEZ. Nine Title

His initiated on the CORTEZ Organization indicated his supplier is in New York City, who also supplies a trafficker in the New Orleans area. The organization's drug proceeds are laundered by purchasing used vehicles in the U.S and shipping them to the Dominican Republic for resale in July, the Federal Grand returned a 19-count indictment charging 24 members of this organization with various violations concerning the distribution of heroin. Additional indictments are anticipated and the investigation continues with the dual focus of identifying and prosecuting the sources of supply for the organization.

Methamphetamine Strategy

Alfredo GOMEZ and Felipe Hernandez-CARILLO Organizations November 1998, the DEA Casper, Wyoming and Glenwood Springs, Colorado offices began separate investigations talgeting the Alfredo Gomez. and Felipe Hernandez-Carillo organizations. Though independent of each other, together they were responsible for supplying the majority of multikilogram quantities of methamphetamine, cocaine, and marijuana to the western slope of Colorado and the Casper area. Title Ill's revealed that both organizations received drug shipments from the Borrayo Brothers organization, a methamphetamine and cocaine trafficking organization based in the Los Angeles area, thus the scope of the investigations was expanded to include DEA offices in Los Angeles as well as Cheyenne. The DEA Casper investigation culminated on February 26 with 13 arrests and seizure of \$55,000 and 13 vehicles. On March 8, the Glenwood Springs investigation culminated with 1 arrest and seizure of 10 lbs. of cocaine. The Los Angeles investigation culminated on March 18 with 5 arrests and the seizure of methamphetamine solution, ephedrine and \$12,060. The combination of investigations yielded seizure of \$279,035, 14 vehicles and 7 weapons. Additionally, I fully operational clandestine methamphetamine laboratory and I fully operational pseudoephedrine laboratory were seized. as well as 33 lbs. of methamphetamine, 51 gallons of methamphetamine solution, 22.5 kgs of cocaine, and 115 lbs, of marijuana. Forty-four individuals were attested, including Felipe Hernandez-Carillo, whose operation was dismantled.

Los Angeles Investigation: On November 31, 1998, an investigation conducted by DEA's Los Angeles Field Division, in conjunction with several state and local law enforcement agencies, resulted in the issuance fine federal search warrants and ten federal arrest warrants. All ten of those arrested were from Apatzingan, Michoscan, Mexico. The drugs this organization distributed were sold in Oregon, Washington, Arizona and Nebraska. Two of those arrested included the cell leader and the methamphetamine laboratory operator based in Mexico. The investigation also resulted in the seizure of 1292 pounds of meth, 68.4 pounds of black tar heroin, 10.4 pounds of amphetamine, 92 pounds of cocaine, \$156,600 in U.S. currency, 16 vehicles, and 18 arrests

Mobile Enforcement Team (MET) Program

In FY 1999, the MET program initiated 53 new deployments based on requests from state and local law enforcement agencies. Of the 48 deployments completed, two specific examples of the MET program's positive impact on local communities are provided below:

Phoenix Division - Coconino County, Arizona

The Phoenix Field Division MET worked closely with the Northern Atizona Street Crimes Task Force in targeting the Colimas and Costillo drug-trafficking organizations. The Colimas organization was responsible for supplying street-level dealers with multiple-pound quantities of methamphetamine. The Costillo organization, a polydrug trafficking group, had a reputation for extreme violence; some of its members had criminal histories, which included armed robberies, home invasions, assault, sex crimes, and child abuse. Using confidential sources, the MET was able to infiltrate these two organizations and severely disrupt operations. The 9-month doployment, resulted in the seizures of seven operational and three dismantled methamphetamine labs, 44 grams of heroin, 22 pounds of marijuana, 500 dosage units of LSD, 40 weapons, 18 motor vehicles, and \$16,292 USC. The MET secured 86 arrests, including the arrests of two primary targets: Jose Francisco Colimas and Ricardo "Duke" Castillo. This

deployment was considered a significant success as members of the Task Force and local police officers indicate that the manufacturing of methamphetamine has diminished substantially since the conclusion of this MET deployment

Dailas Division - Brownwood, Texas

During the course of this five-month deployment, the Dallas Division MET conducted extensive undercover investigations resulting in over 80 purchases of crack cocaine by undercover agents and confidential sources. The operations targeted James B. Slaughter, the primary source of crack cocaine in the Brownwood area, and his associates. The MET arrested 20 suspects on federal charges and 18 suspects on state charges. If convicted, James Slaughter with receive a life sentence based on his career criminal arrests. These significant arrests have virtually eliminated the open air crack markets that once thrived in Brownwood.

Diversion Control Program

The purpose of DEA's Diversion Control Program is to prevent, detect and investigate the diversion of controlled substances. Investigations conducted by Diversion investigators fall into two distinct categories: the diversion of legitimately manufactured controlled substances and the diversion of chemicals used in the illicit manufacture of controlled substances. In FY 1999, the Office of Diversion Control had 711 coses active primarily targeting organizations or individuals trafficking or distributing dangerous drugs.

<u>Drug Diversion</u> In 1997, Dr Luisito A. Evangelista voluntarily surrendered his DEA registration in Nevada after his medical license was revoked. He continued to travel lo Chicago utilizing his DEA registration and medical license there to obtain 549,000 tablets of Hydrocodone, alprazolam, and diazepam to transport back to his Las Vegas office which he called a vitamin store. Dr. Evangelista and a partner emptled 30 tablets into individual bags and sold them to customers. Search warrants resulted

in the serzure of financial and airline information, telephone records, passports, two computers, and \$7.400 in cash. Evidence revealed that approximately 32,000 tablets of Hydrocodone and other controlled substances were sent to Chicago with continuous surveillance to Las Vegas resulting in the doctor's arrest following his baggage pickup in. Las Vegas. On March 10,1999, the doctor was indicated by a Las Vegas Grand Jury and charged with itlegal distribution, conspiracy to illegally distribute controlled substances, money laundering, interstate travel, perjury, and illegal exportation of controlled substances. On May 24, 1999, Dr. Evangelista plead guilty to one count of conspiracy to illegally traffick 500,000 tablets of Hydrocodone and other controlled substances. He also pled guilty to one count of obstruction of justice. He forfeited his residence and \$1,500,000.

Chemical Diversion: On October 6, 1999, US Apothecary President James Lee McDaniel and co-conspirator Thomas Dill were indicted by Federal Grand Jury, Central District of California under 21 U.S.C. 841(d)(2). distribution of a listed chemical with intent to manufacture a controlled substance, and other CSA charges. McDaniel was one of the largest suppliers of pseudoephedrine and ephedrine to Mexican controlled methamphetamine laboratories in Southern California. At the start of this investigation. McDaniel advised Diversion Investigators that his chemicals were exported to Vietnam, Brazli, Argentina, and Mexico. Investigation and analysis revealed that the phone numbers and addresses for the alleged exports were either false or tied to ongoing methamphetamine investigations. From January 1, 1996 to August 18, 1998, McDaniel illegally distributed approximately 30 metric tons of pseudoephedrine. This quantity, when "cooked", would yield approximately 25 tons of methamphetamine. As of October 8, 1999, there have been three arrests and the seizure of 9,500 pounds of pseudoephedrine in this investigation.

International Operations

Verted units are specialized teams of foreign law enforcement officials that can be provided with sensitive information regarding U.S. law enforcement investigations. The 'verting' takes place with a hiring and selection process similar to those used by U.S. federal law enforcement agencies. Verted units are intended to complement the relationships established with host countries and enhance the effectiveness of DEA resources overseas.

Operation Millennium; On October 13, 1999, Colombian law enforcement authorities arrested 30 drug traffickers and money launderers in Bogota, Medellin and Cali, as part of a coordinated U.S./Colombian investigation. One additional person was arrested in Mexico by Mexican authorities. The arrests were the culmination of a one year operation designed to dismantle a Colombian-based transportation consortium believed to be responsible for supplying between 20 and 30 tons of cocaine per month to the U.S. and Europe. Among those errested were Aleiandro Bernal Madrigal, a.k.a. "Juvenal", believed to be one of the most significant international drug traffickers and money launderers presently operating. In addition, authorities arrested Fabio Ochoa, one of the leaders of the Medellin Cartel. and who altegedly continued his drug trofficking activities with Bernal and others since he was released from prison in Colombia in 1996. As part of Operation Millennium, U.S. law enforcement seized more than 13,000 kilograms of cocaine in the last two weeks of August alone. Sixteen individuals were arrested in August in connection with those seizures and are currently being prosecuted in Mexico and Ecuador.

<u>Peter David PEREZ-Miranda</u>: Following an intensified effort to locate PEREZ, this fugitive was captured as he attempted to flee to Bolivia. In May 1999, PEREZ was named in an arrest warrant charging him with trefficking in drugs and money laundering. This investigation established that PEREZ headed an international drug trafficking network exporting cocaine from Peru to the U.S., Europe and Africa. The organization employed sophisticated methods to conduct smuggling activities to include diluting cocaine in wine, shampoo and other testimate products. PEREZ.

also used his contacts in the precious metals industry to facilitate the money derived from the sale of the cocaine. PRREZ and 13 other members of the organization were arrested and charged, including a high ranking official of the Banco Continents and a Colonel in the Peruvian National Police.

Prancesco CORALLO: On June 17, 1999, a joint, four-year, DEA/Peruvian investigation of the Bolivian branch of the Francesco CORALLO/Marino DIODATO Italian Maria organization culminated in the execution of numerous arrest and search warrants in Santa Cruz. The June 17th enforcement operation resulted in the arrest of Marino DIODATO and 15 additional associates. In July, this investigation resulted in four separate criminal procedures against the DIODATO group: The Santa Cruz prosecution of organized crime and cloning cellular phones; the Bolivian military prosecution of DIODATO's illegal involvement in the Bolivian Army; the narcotics prosecution, and the La Paz prosecution for DIODATO's 1997 clendestine casino operation. In August, prosecutors seized the assets of these indicted members, valued at \$5,816,951. Purther sefeures are pending anticipated future indicement efforts.

Mexico/Arizona Smuzzling Tunnel Investigation: In early May 1999. William Billy Dillon and I to finis criminal associates were all indiceed on cideral drug smuggling charges in the District of Arizona. Dillon is a US citizen who managed a sophisticated transponation and distribution organization that has smuggled multi-ton quantities of cocaine from northern Sonora, Mexico to Southwestern Arizona and Los Angeles, California. Dillon's transpontation group has been affiliated with the late Amado Carilto-Fuentes' Organization. Between May 18 and May 24, 1999, U.S. agerts, with the assistance from the Mexico SiU Program, discovered the entry/exit to an underground tunnel located underneath a mobile home in Naco, Arizona that reached to the Mexican border. The arrest of several key members of the Dillon organization in Arizona, as well as the discovery of the Naco tunnel and subsequent scizure of numerous assets owned by the Dillon organization, has resulted in the dismantling of his cocaine smuggling organization.

LI Yun-fu. In December 1998, Li Yun Fu and five other defendants, including Thai fugitive Thanpong See Li, were arrested as they delivered 22.4 kilograms of heroin to undercover Royal Thai Police. The arrests came as a result of an investigation initiated by the Thai Vetted Unit program in November 1998. Li Yun-Fu is the brother of Li Yun-Chung and Li Yun-Hsin, who are both incarrerated in the U.S. for their role in the 1991 selzure of 486 kilograms of heroin in Hayward, California.

FY 2001 Performance Goals and Indicators

Issues in Measuring DEA Enforcement Program Performance

For several years, DEA has measured its success by utilizing measures of output, primarily arrests and drug seizures. However, there is currently no analytical process in place to determine the value of a specific arrest. For example, under the current process, the arrest of a street-level dealer would not be distinguished from that of an organization leader. Furthermore, using drug seizure amounts as an indicator of performance can be misleading because their actual impact cannot be determined, as the universe of available llegal drugs cannot be measured. There is no way to ascertain if the drugs removed from seizure activity have been replaced by lesser, could, or greater quantities.

During FY 1999, the General Accounting Office (GAO) reviewed DEA's annual performance plan and performance measurement, evaluation, and reporting system. GAO found that current performance measurements were inconsistent with DEA's stated goal of disrupting and dismentling major drug trafficking organizations (MDTO'a). As a result of this review and management's concerns that the true results of DEA's enforcement program operations were not being reflected in its APP aubmissions, staff began work on updating DEA's performance measurement, evaluation and reporting system.

DEA staff have determined that, in order to properly measure and report on the results of DEA's enforcement operations, the performance measure

"the number of priority targets disrupted and/or dismaniled" would have to be developed. No process or system exists to capture and report this information to either internal or external sources. DEA envisions that, as an operationally driven agency, this primary performance indicator can be used to track and report progress lowerd the newly stated goal

Progress to Date

DEA staff have met regularly during the past several months to develop a process to capture information and data to report on this indicator. In this regard, staff have focused on both defining the criteria for qualification as a priority target and the criteria to determine whether or not enforcement activities met the threshold of either disruption or dismanilement.

DEA envisions that based on intelligence information, each Special Agent in Charge (SAC) and Country Atlache (CA) will nominate specific organizations within their areas of responsibility to qualify as priority targets. The names and profiles of these nominated organizations will be forwarded to the Headquarters where the Chief of Operations will determine, through both quantitative and qualitative information provided, which organizations will be tracked as priority targets. Lists of targets will be developed for national, and international impact. Headquarters staff will ensure that the approved priority targets are properly tracked and coordinated. SAC's and CA's will have the opportunity to nominate additional organizations for priority status as they are identified.

Whether or not a target has been disrupted or dismantled will also be determined by the Chief of Operations, based on both quantitative and qualitative and assessments provided by the SAC's and CA's. The three major evaluative criteris will be 1) the impact of enforcement activity on the total organizational structure (i.e., arrests of key leaders and members and corresponding impact on organizational cells; seizures of assets); 2) the impact of enforcement activity on the organization's aphere of influence (i.e., trafficking patterns and routes affected); and 3) the impact

of enforcement activity on the drug threat posed by the organization on the United States (i.e., drug seizures; community impact).

DEA envisions reporting the disruptions and/or dismantlements in future Annual Performance Reports at the national, and international levels. Due to the magnitude of this effort, it is anticipated that the system will take between two and three years to be fully operational, although baseline data may be reported as early as FY 2000.

Core Business System 1: Enforcement of Federal Laws and Investigations

Through effective enforcement efforts, DEA will disrupt/dismantle the command & control, and infrastructure of drug syndicates, gangs, and traffickers of licit and illicit drugs that threaten Americans and American interests, including providing enforcement assistance to American communities to fight drug-related crime and violence.

This Core Business relates directly to DOJ Core Punction 1: "Investigation and Prosecution of Criminal Offenses."

Declaion Unit - Domestic Enforcement

The Domestic Enforcement Program includes the investigative operations of DEA's 21 field divisions, the operational coordination functions local of all DEA Headquerters, DEA's Special Enforcement Programs, Special Operations Division functions, and the Domestic Cannabis Eradication/Suppression Program. The Domestic Enforcement Program employs the majority of the Special Agent work force and is responsible for conducting investigations of drug production and trafficking activities within the U.S. Domestic enforcement personnel use a variety of investigative tools including electronic surveillance, informants, and

undercover operations in order to acquire intelligence information that will lead to dismantling, prosecuting, and eliminating drug production and trafficking organizations.

Decision Unit - Foreign Cooperative Investigations

DEA works with foreign governments on investigations of major international trafficking organizations which have a direct impact on the U.S. DEA coordinates drug intelligence collection and drug investigations with foreign law enforcement agencies, and participates in bilateral and multilateral drug suppression programs. In addition, DEA, through advice, assistance, and training, supports foreign governmental efforts to reduce the supply and trafficking of litticit drugs within their countries.

Decision Unit- Drug and Chemical Diversion Control

The DEA is responsible for enforcing the Chemical Diversion and Trafficking Act of 1988, Article 12 of the United Nations Convention Against Illicit Drug Traffic of 1988, the Anabolic Steroid Control Act of 1991, and the Methamphetamine Control Act of 1996. These pieces of legislation mandate commodity control for the chemical substances most often used in the manufacturing of illicit drugs. In addition, the Methamphetamine Control Act of 1996 places controls on precursor chemicals related to methamphetamine production.

Under this mandate, DEA utilizes Diversion Investigators, Special Agents, Chemists, Pharmacologists, Program Analysts, and other experts to monitor the legal and illegal movement of controlled drugs and chemicals across U.S. borders. Activities under the Diversion Control Program include: 1) analyzing past data from diversion control activities to help develop work plans and priority objectives for current operations; 2) oversight of all drug and chemical diversion control activities to ensure they are responsive to, and/or consistent with, the drug and chemical diversion control raistion of DEA; 3) supporting the US's drug enforcement position at national and international forums and diplomatic events which address the control of

legitimate drugs and chemical diversion issues; and 4) formulating legislation and regulations that curtail the diversion of controlled substances and listed chemicals from legitimate channels.

Decision Unit - State and Local Task Porces

The DEA State and Local Task Force extends federal leverage and provides a federal presence in sparsely populated areas where DEA would not otherwise be represented. In addition to their having a greater impact on trafficking within their own jurisdictions, the programs also serve as a mechanism in which state and local agencies' budgets can be augmented with funds distributed from federal asset seizures. Local concerns can be addressed along with federal priorities.

Cooperation by agencies agreeing to work together to address the drug problem, and drug-related aspects such as violence and gangs, in a particular area; e.g., within the geographic area of a given DEA State and Local Task Force; has resulted in the coordinated application of investigative, intelligence, and support resources to disrupt and immobilize the most significant drug trafficking organizations, including gangs.

Federal resources are shared in the form of paid overtime, training by experts and specialists; e.g., chandestine laboratory procedures, asset seizure techniques, and cannabis growth, detection and eradication; technology, equipment, and operating funds. State and Local Resources are shared in the form of localized expertise; e.g., detailed knowledge of a particular area; investigative talent; e.g., state trooper skills used in Operation Pipeline; investigative personnel, leadership; e.g., officers in key task force positions; specialized equipment, and operating funds.

Core Business System 2: Investigative Support

Through its investigative support programs (intelligence, Laboratory Services, Training, RETO, and ADP). DEA will ensure that its investigative workforce needs are met so that its total investigative arsenal is optimized.

This Core Business relates directly to DOJ Core Function 1: "Investigation and Prosecution of Criminal Offenses." The basis for DEA to accomplish its mission rests with investigative leads developed through comprehensive investigative intelligence and other support programs

Decision Unit- Intelligence

DEA's intelligence program is comprised of several components which are responsible for collecting, analyzing, and disseminating drug-related intelligence worldwide. Intelligence information obtained through this program is essential to DEA operations because it facilitates seizures and arrests, strengthens investigations and prosecutions of major drug trafficking organizations, and provides policy makers with drug trend information upon which tactical and strategic decisions are based. DEA's intelligence units are located in all domestic field divisions as well as in most major drug cultivation, production, and transit countries.

The following examples describe the intelligence activities:

Financial and Operational Intelligence: Financial and operational antelligence operations are responsible for gathering, analyzing, and disseminating intelligence information that taigets the financial supects of the drug trade. This information, in turn, supports DEA Investigations of drug organizations operating domestically and abroad.

Strategic Intelligence: Strategic intelligence provides information on drug cultivation, production, emerging trends, and price/purity; assesses

statistical information; addresses interagency drug intelligence issues; and enhances intelligence management, policy, and linison functions. Strategic intelligence also focuses on the development of long range supply reduction plans

El Paro intelligence Center (EPIC): This multi-agency facility serves as a clearinghouse for tactical intelligence and a central point for the collection, analysis, and dissemination of information related to the worldwide movement of drugs. EPIC provides support for drug law enforcement interdiction operations and is accessible 24 hours a day, 7 days a week.

Investigative leads, gathered through intelligence efforts, are acted upon along the entire continuum of trafficker criminal activity. This continuum begins in the source and transit countries from where the drugs find entry into the U.S., continues to the transportation and production in trastructure within the U.S., and then eventually makes its way to the streets and neighborhoods of American communities. While resources may be requested for drug or geographically specific areas, the effectiveness of DEA's investigative efforts depends greatly upon the development of comprehensive cases that often span the globe, involve sophisticated criminal organizations, and seek to include all types and methods of trafficking.

The primary focus of DEA investigations is the leadership of those organized criminal syndicates that operate both within and outside U.S. borders. The dismantling and disruption of these organizations can be accomplished more efficiently and effectively through extensive investigative efforts that have at their foundation intelligence gathering, relation and analysis. Many cases require significant investments in resources and time, but the practice of systematic case development, through the continuous use of intelligence over a long period of time, is at the heart of DEA's success in apprehending and delivering for prosecution significant numbers of high level offenders.

Decision Unit - Laboratory Services

This program provides laboratory services for Enforcement, Intelligence, and Diversion Control activities within DEA. The following provides a synopsis of the supporting efforts provided to each activity:

Enforcement activities are supported through the simely analysis of drug evidence and the presentation of forensic expert testimony in court. This program provides field assistance to Special Agents on clandestine laboratory investigations and conducts crime scene searches for trace drug evidence. Additionally, the Laboratory Services Program performs toolmark and signature analyses on evidence linked to suspected conspiracy cases.

Intelligence activities are supported through laboratory analysis that show the origin of controlled substances and thus highlights foreign drug distribution patterns. Intelligence programs are also supported through signature analyses by the Domestic Monitor Program, which assists in tracking domestic drug distribution patterns and price/purity at the retail level.

Diversion Control activities have provided information on allegal drug distribution through the examination of tablets, capsules, and papers.

In addition to lab services, this program provides forensic drug laboratory support to the interagency Crime and Drug Enforcement Program, the Washington, DC Metropolitan Police Department, and to the Federal Bureau of Investigation, which has concurrent jurisdiction with the DEA in the enforcement of Federal drug laws. This program also provides support to other Federal, State and local law enforcement agencies that either do not have their own forensic drug examination capability, or require the special expertise of DEA forensic scientists.

Decision Unit - Training

The objective of DEA's Training Program is to provide the agency's employees and law enforcement counterparts with the skills and knowledge necessary to attack both international organized crime syndicates and their domestic distribution organizations and violent domestic drug gangs. DEA has developed a comprehensive program that reflects the diversity and sophistication of the agency's complex mission. The following examples describe the specialized training courses offered to DEA employees:

Basic and Field Agent Training Basic training provides instruction to new Special Agents on all facets of drug law enforcement operations. The Field Training Program provides on-the-job training to new Special Agents by pairing them with senior agents for a 16-week period.

In-Service Training. The Office of Training has developed a comprehensive In-Service Training program that is ideally suited to DEA's long-term continuing education and career development needs and a wide array of techniques including courses of study at Quantico, field seminars, directed studies, distance learning and distance learning programs.

Clandestine Laboratory Training Instruction is provided to DEA personnel and state and local law enforcement personnel on techniques for safely seizing and dismantling clandestine laboratories. DEA also offers a comprehensive Train-the-Trainer and Distance Learning Program that provides awareness training to state and local first responders. DEA also offers an advanced Site Safety Officer School to ensure proper maintenance and availability of safety equipment, and follow-up administrative aspects associated with a clandestine laboratory entry, dismantling, and cleanup

International, State, and Lixed Training: Drug law enforcement instruction is provided to foreign counterparts and State and local law enforcement officers from basic drug investigations to management training

In addition to these specialized courses, DEA also provides ongoing training to employees on a variety of topics including in-service training, and supervisory and management training

Ethics DEA provides ethics training throughout its curriculum to ensure that its workforce has a clear and accurate understanding of Federal standards of conduct, and also to aid managers and employees in the identification and resolution of potential conflicts of interest.

Executive Development: DFA is committed to providing the best executive management and leadership training to all DEA supervisors, managers and Sentor Executive staff as part of its Career Development Plan

Decision Unit - Research, Engineering and Technical Operations (RETO)

The Research, Engineering, and Technical Operations Program is responsible for providing new technology and scientific support to the operational elements of DEA. Specifically, this includes enhancing technical equipment, personnel resources, and aircraft operations essential to anti-drug production and trafficking investigations. These support functions enable DEA investigative personnel to maximize enforcement efforts, strengthen personal safety, and effectively dismantle drug trafficking organizations.

Decision Unit - Automated Data Processing (ADP)

The Automated Data Processing (ADP) Program is responsible for providing information technology services and telecommunications support to DEA operations worldwide. This includes the oversight of DEA's Data

Base Management System (DBMS) and systems applications which manage the vital information that supports DEA intelligence and enforcement operations. These systems include, but are not limited to: Narcotics and Dangcrous Drugs Information System (NADDIS); Controlled Substances Act System (CSA); System to Retrieve Information from Drug Evidence (STRIDE); Auromation of Reports and Consolidated Orders Systems (ARCOS I and II), and DEA's financial management system, the Federal Financial System (FFS). Much of the information maintained in these systems requires recure communication system capabilities (secure voice, facsimile, and teletypewriter capabilities) worldwide, and therefore, is managed by the ADF Program.

Implementation of OEA's mission is dependent on gathering and integraling information integral to the pursuit of drug investigations. The integrity of this information is a requirement for both DEA's continued success in drug enforcement, as well as protecting the tives of agents and informants.

The FIREBIRD office automation system consolidates information from a variety of sources and gives Special Agents and Intelligence Analysts the ability to access and analyze critical information quickly, thereby saving thousands of dollars and many research hours. FIREBIRD also serves as the platform for administrative systems including financial, property, and security.

MERLIN is an intelligence work station that operates at the Secret High security level. MERLIN is an essential extension of FIREBIRD which provides DEA intelligence specialists and special agents tools which will reduce the amount of time it takes to locate and analyze information; access and analyze collections of information to reveal patterns and trends, improve the analysis of information to enable decision making; enable analysis which is not possible by manual or basic computer means, and enhance the methods and ability to produce and distribute reports.

Core Business System J: Program Direction

DEA will employ such management practices to ensure that its mission driven programs function with the highest level of integrity, efficiency and effectiveness.

This goal relates directly to DOJ Core Function 7: "Management." DEA's goals and strategies can only be attained through the efforts of its Special Agents, Intelligence Research Specialists, and investigators working in the field and through the efforts of professionals supporting their investigative efforts. Forensic chemists, and professional, administrative, and technical staff are all included as support staff. DEA employees must be supported with state-of-the-art equipment, be trained in the most current investigative techniques, and be able to relocate when appropriate for the good of the agency. The assistance of the Department of Justice and Congress has allowed DEA to make significant progress toward improving the infrastructure that is essential to effective law enforcement. These efforts must also be measured to justify making the continued investment in the goals and strategies of DEA. Additionally, DEA will work to make continued improvements in financial management, to establish customer service standards, and to make effective use of the latest information technology (both enforcement and non-enforcement related)

The Program Direction functions within DEA are responsible for formulating agency-wide policy, providing oversight for all field management functions, monitoring internal controls, and ensuring effective and efficient resource utilization. All programs depicted under "Program Direction" are funded through DEA's Management and Administration Decision Unit. Funding amounts provided do not reflect payroll obligations.

Staff Operations

The Staff Operations Program is responsible for responding to Congressional, media, and public inquities; providing DEA officials with

reports on congressional activities, issuing press releases; preparing speeches, talking points, and congressional demand reduction testimony. Additionally, this program prepares legal briefs, opinions, and presentations; provides technical legal training in regulatory and criminal matters, civil litigation, seizures, forfeiture of assets, personnel, equal employment opportunity, and international matters; and advates management on matters perfaining to planning, policy analysis, and statistical systems

Demand Reduction: DEA will increase its educational outreach to communities, schools, employers, and to the public at large in anti-drug messages, including anti-legalization. This will produce an increase in the points of contact between DEA and the public. The primary outcome will be a public that is better educated about the dangers of drugs.

Chief Counsel: DEA will continue to provide the highest level of legal expertise to support drug law enforcement in the areas of, but not limited to, civil procedure and litigation, administrative law, criminal law, international law, and regulatory law.

Financial Management

Under the direction of the Chief Financial Officer, the financial management offices within DEA are responsible for planning, formulating, and executing DEA's budget; procurement; developing and maintaining resource allocation plans; and managing and maintaining DEA's accounting system. DEA will:

provide timely, useful and reliable budget, eccounting and performance data to support decision making;

integrate planning, reporting and decision-making processes, including those for human resources, budget, financial management, and program performance; and

ensure sound and effective management practices are in place.

The primary outcome will be an overall achievement of an increased efficiency in DEA's management practices.

Inspections

The Inspections Program is responsible for management and oversight of all matters pertaining to integrity and misconduct. DEA's Office of Professional Responsibility (OPR) is responsible for ensuring that allegations of employee misconduct received by the Agency are thoroughly reviewed and that misconduct investigations are conducted in a thorough and timely manner. DEA will focus its audits/inspections on compliance with existing policy and on other evaluative efforts to identify ways in which overall program accountability and performance can be strengthened. Particularly, DEA will perform program, financial, and other audits/inspections on a cyclical or otherwise required basis; conduct evaluations of programs, initiatives, internal controls, and policies as scheduled or otherwise required/directed by executive management; investigate shooting incidents in a timely manner; and other oversight responsibilities. The primary outcome will be independent information that will assist DEA management in taking the appropriate action to improve the efficiency and effectiveness of agency-wide programs and the integrity of its work force.

Security

The Security Program is responsible for worldwide management and oversight of DEA's personnel, physical, and document security. The Personnel Security Section (SPR) reviews the processing of personnel security investigations in support of agency personnel hiring, rehiring,

updating, and acquisition of national security clearances. SPR also implements personnel security standards and procedures to ensure appropriate clearances of DEA personnel. The Physical Security Section (SPP) conducts physical security surveys of DEA headquarters, Beld units worldwide, and residences occupied by DEA personnel assigned to foreign posts. SPP also assures adequate protection for DEA employees, property, evidence, and materials contained in DEA occupied facilities. The Information Security Section (SPI) formulates policies and procedures for the classification, declassification, safeguarding, handling, transmission, and storage of classified national security and other sensitive information and materials.

Personnel Operations and Equal Employment Opportunity (EEO)

The Personnel Operations Program is responsible for agency wide post-lon management; employee relations; employee benefits; recruitment and placement; health and sefety; and implementation of personnel policies and regulations. The EEO Program is responsible for ensuring the equitable treatment of all DEA employees. Specifically, the EEO Program provides advice and guidance to managers and employees on a variety of EEO matters including: workforce diversity, discrimination in the workplace, affirmative action, and special emphasis programs.

General Services

The General Services Program is responsible for oversight of all DEA administrative support functions including: apace acquisition and management; procurement of supplies, equipment, and furniture; and fleet management.

FY 2001 Initiatives

FIREBIRD

DEA requests \$55,000,000 and 2 positions (including \$55,908,663 in recurring, non-personnel funding) to establish sufficient infrastructure base that supports Operations and Maintenance, Technology Renewal, and Deployment requirements of DEA's FIREBIRD Automated Data Processing system. Of the total for FIREBIRD, DEA requests \$5,000,000 and I support position to support the system's operational requirements. Of the total for FIREBIRD, DEA requests \$51,000,000 and one position (costing \$40,853), including \$23,000 for Technology Renewal and \$28,000,000 for continued FIREBIRD deployment.

DEA STRATEGIC GOAL: #1

DEA STRATEGIC OBJECTIVE: #1

DU: ADP

APPLICABLE PERFORMANCE INDICATORS: DOMESTIC ENFORCEMENT DU

18. Percentage of Direct Investigative House.

Phase I of Firebird deployment, the installation of network equipment at DEA Hradquisters and all 21 Field Division offices, was completed in December, 1997. In FY 1998, DEA begain Firebird Phase II deployment to all remaining (2004) DEA district, resident and foreign field offices and laboratories. To date, DEA has completed Phase II deployment to the geographically affiliated offices of the Miami, Houston, Los Angeles, San Diego, Phoenix, El Paso, and Atlanta Divisions; the Justice Training Center, and seven overseas offices. DEA plans to utilize funds provided from this initiative to complete Firebird Phase II deployment by December 31, 2001.

The following chart displays Special Agent available and investigative (direct) work hours in DEA's Domestic Divisions:

Fiscal Year	Available SA Workhours	Investigative SA Workhours	% investigative to Available
1996	6.041,200	4,136,748	68%
1997	6.791,400	4,403,760	65%
1998	7,778,067	5,052.820	65%
1999	8,543,534	5,339,315	62%
	1	ı	I

- t) The source for investigative workhour statistics is the DEA Work Hours Reporting System (WRS).
- The formula for available workhour statistics is available workhours (2200/yr.) times the number of DEA Domestic Special Agents (FR Ceiling and On-Board Reports).

DEA Special Agents rely on information sharing between personnel in different Field Offices, and reducing time lags in such processes as the posting of an investigative report to the agency-wide automated database would improve the efficiency and effectiveness of the investigative process.

DEA plans to demonstrate the fink between Firebird deployment and operational success to justify the funding level provided. For example, DEA plans to identify reductions in the average time from the initiation of an investigative report (Form DEA-6) and the report's posting in DEA's Narcotics and Dangerous Drugs information System (NADDIS). Firebird should significantly improve investigative reporting timeliness as a result of processing time reductions such as those described above.

As a result of the Business Processing Reengineering (BPR) activity driven by Firebird implementation, which is due to be completed by December 31, 2001, the Information Technology infrastructure would be in place to provide DEA with an improved capability to increase the percentage of domestic Special Agent direct investigative workhours to available workhours during FY 2002

However, improvements in Information Technology infrastructure alone will not necessarily guarantee an increase in DEA's direct investigative workhours, as these have been declining even during fiscal years where deployment of Information Technology (e.g., Firebird) has improved DEA's business processes. DEA plans to complete a study by the end of FY 2000 which will thoroughly examine administrative and case support staffing requirements in its Domestic Field Divisions. As a result of this study, DEA will be in a position to better evaluate the efficiency and productivity of all of its administrative and case support processes. DEA reasonably believes that, as its administrative and case support processes become more efficient, there will be a corresponding increase in direct Special Agent investigative workhours.

FINANCIAL MANAGEMENT DIVISION

DEA requests \$3,957,000 and 24 positions (including \$2,814,432 in non-personnel funding) to enhance DEA's financial and resource management oversight functions. These resources are vital to improving internal controls, establishing heightened financial policy capabilities and allowing DEA's Financial Management Division to keep pace with the dynamic growth of the agency.

DOJ STRATEGIC GOAL: #7.3: ACHIEVE EXCELENCE IN MANAGEMENT PRACTICES

DOJ PERFORMANCE GOAL: #7.3.2: DEMONSTRATE
CONTINUED PROGRESS TOWARDS ACHIEVING UNQUALIFIED
AUDIT OPINIONS ON FINANCIAL STATEMENTS REQUIRED BY
THE GOVERNMENT MANAGEMENT REFORM ACT; CONTINUE
TO SUPPORT EFFORTS TO DEVELOP A FINANCIAL
MANAGEMENT SYSTEM THAT PROVIDES ACCURATE,
RELIABLE, AND TIMELY FINANCIAL INFORMATION

DU: MANAGEMENT AND ADMINISTRATION

APPLICABLE PERFORMANCE INDICATORS: MANAGEMENT AND ADMINSTRATION DU

#2. Annual Audited Financial Statement.

Due to the need for improved financial management oversight, between 1990 and 1996 Congress passed five federal accountability acis; the Federal Managers Financial Management Integrity Act (FMFIA), the Chief Financial Officer's (CFO), the Government Performance and Results Act (GPRA), the Government Management Reform Act (GMRA), and the Federal Financial Management Improvement Act (FFMIA). These laws have resulted in an increased emphasis on achieving an "unqualified" annual audited financial statement, but the results of the audits on DEA's financial statements for 1996 and 1997 were "disclaimed" opinions. The results of a 1998 DEA financial management study performed by a consulting firm noted that DEA requires "additional investments in people, systems, and in improving basic processing of information." DEA's goal is to receive an "unqualified" Financial Statement Audit opinion by no later than the end of FY 2001. Full funding of this initiative is expected to ensure that DEA not only secures the "unqualified" audit opinion, but is able to achieve full compliance with all of the mandates of FMFIA, CFO, GPRA, GMRA, and FFMIA.

Data Validation and Verification Issues

DEA's statistical measures include work hours, case initiations, defendant arrests and dispositions, drug removals, asset seizures and forfeitures, and clandestine laboratory seizures. A description of these data systems and a discussion of data quality control procedures follow.

Case Initiation Statistics

The source for case initiations statistics is the DEA Case Status Subsystem (CAST). CAST serves as the DEA central file ledger for all case and general files. Case information is entered by each field office for every case initiated. Mandatory information includes, case number, case status, date opened, file title, and agent name. CAST information is validated through a review process which includes group supervisor review, SAC review, and periodic reviews by the CAST program manager.

Defendant Arrest and Disposition Statistics

Statistics on arrests and dispositions are obtained from the Defendant Statistical System (DSS), which contains information obtained from the Arrest DEA Form 202 and the Report of Disposition DEA Form 210.

Data Input is managed and performed by the DEA file room, which receives and processes arrest and disposition documents for NADDIS input as well as DSS input. Due to the importance of systems that store information about DEA defendants, document quality control and review are paramount. Nonstandard entries are questioned, and documents which need further clarification are returned to the field for correction. In addition, the DSS has built-in edits that help to maintain data quality.

The Statistical Services Section is responsible for the management of DSS, including operation, maintenance, modification, and quality control. As the DSS is updated with current information, comparisons to previous information are made to analyze frends as well as validate the data. The

Statistical Services Section conducts other routine teating of the DSS to ensure that the arrest and disposition statistics are accurate.

Drug Removal Statistica

The two sources of DEA's drug removal statistics are the System to Retrieve Information from Drug Evidence (STRIDE), which is managed by the Office of Forensic Sciences (SF) and the Information Only 7 system, managed by the Statistical Services Section.

STRIDE drug removal statistics reflect the total of all drugs purchased, seized, or otherwise obtained through DEA-controlled and DEA cooperative investigations that are sent to DEA laboratories for analysis. The total amount or a representative sample of the collected drug is submitted to a DEA laboratory for analysis, accompanied by a DEA form-7 completed by the submitting case agent. STRIDE contains information from the DEA Form-7 as well as the results of the laboratory analysis as recorded on the DEA Comeits Worksheet (DEA Form-86). The database contains built-in edit checks on various data fields including GDEP, location, substance identification and DEA office code.

DEA regularly cooperates and participates with state, local and other federal law enforcement agencies in investigations where drug evidence is acquired. In those instances where DEA does not take custody of the drug evidence, an "Information Only" DEA form-7 is submitted to the Statistical Services Section. It should be noted that the identity of the substance and the amount of drug removals contained in the Information Only-7 system are based on fletd determinations not laboratory analyses. For that reason, the combined statistics (Information Only-7 and STRIDE statistics) reflect the gross weight of drugs removed.

The Statistical Services Section is responsible for the statistics produced from STRIDE and the Information Only 7s. As STRIDE/Information Only 7 data are updated, comparisons are made to analyze trends and to validate the data. The Section conducts other routine testing of STRIDE/Information

Only 7 information, including comparisons to the Federal Drug Seizure System information.

Asset Selzure and Porfeiture Statistics

The source for asset soizure and forfelture statistics is the DOJ Computerized Asset Tracking System (CATS). Information is entered into CATS by field personnel using the Standard Seizure Form as source document. DEA reports on two types of assets: Standard seizures and Referred assets. Standard seizures are seizures made by DEA, and referred assets are asset seizures that had DEA participation or assistance. Data entered into CATS are subjected to numerous system edits to ensure accuracy and prevent duplicate records from being entered into the system. DEA's Asset Forfeiture Section conducts periodic quality control reviews of CATS data, as does the CATS program office at DOJ.

Claudestine Laboratory Selzure Statistics

Clandestine laboratory statistics are collected through the National Clandestine Laboratory Database, which is maintained in the El Paso Intelligence Center (EPIC). EPIC obtains these data through a review of teletypes, DEA investigative forms (DEA Form-6), and Clandestine Laboratory Reports filed by DEA chemists subsequent to a laboratory seizura.

Marijuann Eradication Data

The source of the marijuana eradication data is DEA's State and Local Section (DOS). DOS receives monthly statistical reports from each participating state and local law enforcement agency. These reports provide plant count information for all outdoor grows, indoor grows, the number of plots eradicated and indoor grows seized. The monthly reports also supply the number of persons arrested, weapons and assets seized. DEA DCE/SP coordinators also verify large outdoor and indoor grows through on-site inspections.

Resources

DEA's FY 2001 Annual Performance Plan (APP) reflects the relationship between DEA's Decision Units (DU's), which are the budget account structures by which the agency requests and accounts for resources, and its programs. The performance measurement tables illustrate the relationship between DEA's DU's, DEA's three (3) Core Business Systems, and the Core Functions in the DOJ Strategic Plan and the ONDCP Goals.

DEA's budget structure is currently divided into ten DU's: Domestic Enforcement; Foreign Cooperative Investigations; Drug and Chemical Diversion Control; State and Local Task Forces; Intelligence; Laboratory Services; Training; Research, Engineering, and Technical Operations; ADP; and Management and Administration. DEA's FY 2001 Annual Performance Plan automission has been revised to display DEA's performance indicators by DU. The performance indicators fisted for each DU have now been linked to specific DOJ and ONDOP goals.

In order to schieve full compliance with GPRA and OMB Circular A-11, DPA must establish the link between program performance and the full costs of schieving the goals and objectives derived from the strategic planning process. In this regard, DEA's three major program responsibilities are as follows:

- Enforcing the laws against the distribution of illegal drugs (Domestic Law Enforcement);
- Providing assistance to source and host nations (Foreign Cooperative Investigations);
- Enforcing the laws against the illegal manufacture and distribution of legal drugs (Drug and Chemical Diversion Control).

DEA plans to move towards consolidating its DU's from ten (Domestic Enforcement, Foreign Cooperative Investigations, Drug and Cisemical Diversion Control, State and Local Task Forces, Intelligence, Laboratory Services, Training, Research, Engineering, and Technical Operations, Automated Data Processing, and Management and Administration) to four (Domestic Enforcement, Foreign Cooperative Investigations, Drug and Chemical Diversion Control, and Management and Administration). This consolidation will allow DEA to assign its support costs by major program area, and capture its overhead costs in Management and Administration. As a result, DEA would be able to report on the full costs of achieving results in its three major program areas (Domestic Enforcement, Foreign Cooperative Investigations, and Drug and Chemical Diversion Control) and therefore fully comply with the requirements of GPRA and OMB Circular A-11.

DEA envisions that the date and information provided through an enhanced performance measurement, evaluation, and reporting system will ensure that performance based budgeting as prescribed by OMB Circular A-14 will be achieved. In this regard, DEA anticipates being able to link budgetary authority, personnel resources, and CORE series staff work hours to specific operational performance goals and objectives, including, but not necessarily limited to, disruptlon/dismanifements of priority targets. This information will assist management in determining the optimal level of resources required to achieve operational performance goals and objectives.

1) Dollars/Positions:

All of DEA's resources are stigned with DOJ Strategic Goal 1.2: Reduce the availability and abuse of illegal drugs through traditional and many sitve enforces: out efforts.

PY 1999 Planued/ Actual		FY 2000 Plauned		FY 2001 Planned	
BA	Positions	BA	Positions	BA	Positions
\$1,307.8/	9,026/	\$1,445.3	9,112	\$1,557.7	9,156
\$1,277.1	8,748		L.,		

 All data noted above include resources provided by a funding agreement with the Organized Crime Drug Enforcement Task Forces (OCDETF). For FY 2001, this amounts to 1000 positions and \$108 million. Although these resources are provided through a reimbucsable agreement, they are under DEA's control and impact on DEA's performance.

2) Skills:

DEA employees include persons in the CORE positions of Special Agent, Diversion Investigator, Intelligence Analyst, and Forensic Chemist. DEA also employs persons in various Professional and Administrative career positions such as Program, Management, and Budget Analysts, Accountants, etc. The skills required vary by position but the vast majority of DEA positions require analytical, investigative, and writing skills at a professional level.

(3) Information Technology:

FIREBIRD is the primary office automation infrastructure that supports the full spectrum of DEA's global operations. Initiated in FY 1994, this project is a unique synergy of investigative expertise and advanced computer technology designed specifically to support DEA's drug enforcement mission. FIREBIRD is a client server-based network that, once fully deployed, will link all DEA offices and components worldwide. This will silow all DEA components to function interactively with one another through enhanced communication and business process reengineering.

Tools that all modern businesses must have (e.g., E-mall, uniform word processing and other forms of office automation) are combined with DEA specific requirements such as an electronic investigative file room and the Narcotics And Dangerous Druga Information System (NADDIS), to create a low cost, highly effective system model for other Federal law enforcement agencies. Essentially, FIREBIRD acts as a force multiplier, allowing DEA components scattered around the world to act as one cohesive unit through the instantaneous access of critical law enforcement and intelligence information. Perhaps more importantly, FIREBIRD has been designed to "evolve" to suit the needs of DEA personnel, particularly through its support of unique projects like MERLIN and MERCURY, which are critical tools that represent the future of drug law enforcement. DEA is requesting additional resources for FY 2001 in order to accelerate full deployment of Firebird.

MERLIN is an advanced intelligence system designed to support the classified processing needs of Special Agents and Intelligence Research Specialists operating worldwide. Initiated in 1995 using FIREBIRD's communications infrastructure combined with computer security encryption processes, MERLIN provides a classified processing environment designed to link and support DEA components across vast geographical distances. DEA personnel operate within this secure environment to collect, analyze, disseminate, and exchange classified information, which allows DEA components in different locations to operate as a cohesive unit. MERLIN also enables information exchanges at the secret and lower levels between DEA and other Federal agencies, particularly with the FBI. Prior to developing this technology, the classified holdings of DEA were on standalone Islands throughout the agency. There were no means, other than via secure faxes, to distribute classified intelligence information in a timely manner.

In addition to providing a secure and instantaneous means of communication, MERLIN allows access to critical DEA intelligence and investigative data from a single workstation, serving as an advanced analytical tool to easist the user in reviewing and analyzing massive

amounts of data. The system enables rapid analysis by allowing the user to access previously unavailable information and by easisting in detecting links, associations, and patterns that are key to today's major investigations. To compete with increasingly sophisticated international drug syndicates, DEA analytical and investigative personnel must be equipped with the tools necessary to exploit available information on a real-time basis. MERLIN provides all of these capabilities at a classified level, allowing increased, safe, and frequent interactions between DEA and other Federal agencies.

DECISION UNIT: Domestic Enforcement DLA Core Business System 1: Enforcement of Federal Laws and Investigations

Department of Justice Core Function 1: Investigation and Procedution of Criminal Offenses

DOJ Strategic Goat 1.2: Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts.

DEA Annual Performance Goal: Disrupt or dismantis the command & control, and infrastructure of drug syndicates, gangs, and traffickers of like and illicit doses that threaten American and American interests

DECISION UNIT: Foreign Cooperative investigations

DEA Care Business System 1: Enforcement of Federal Laws and Investigations

Department of Justice Care Function 1: Investigation and Prosecution of Criminal Offenses

DOJ Strategic Goal 1.2: Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts.

DEA Annual Performance Goal: Disrupt or dismantle the command & control, and infrastructure of drug syndicates, gangs, and traffickers of

licit and illicit drugs that threaten Americans and American interests.

A. Definitions of Terms or Explanations for Indicators easi wate Sources:

Items 7, 8, 9, & 10. These Outcomes are being developed and will demonstrate the negative impact to major drug trafficking organizations and individuals. DEA staff have formed a Working Group which will determine how DEA will collect and analyze data for these indicators. DEA expects to set performance goals and begin reporting performance data for these indicators during FY 2000 or FY 2001.

Item 10. The Obligation Rate is an efficiency indicator demonstrating timely obligation and execution of available funding to support the DEA milasion requirements.

Data Source: Case Status Subsystem [CAST]; System to Retrieve Information from Drug Evidence [STRIDE]. The verification/validation source is the Executive Policy and Strategic Planning Staff, Statistical Analysis Unit. Funding, Authorized & Assigned Strangth data were provided by the DEA Office of Resource Management (FR).

B. Jasues Affecting FV 1999 Program Performance:

Items 1 & 11. The variation between the FY 1999 enacted and actual funding is due primarily to the required realignment of payroll and rent.

Item 2 & 4. The available SA work hours (Foreign) did not meet the targeted goal in either FY 1998 or FY 1999 due to DEA's inability to deploy the targeted number of SA's to its foreign offices. This inability was due to Permanent Change of Station (PCS) costs and logistical issues associated with transfers of SA's to and from foreign duty stations.

The NA notation indicates that data were not previously required and/or goals were not established. The notation TBD indicates that the outcome will be calculated at the and of the fiscal year. The notation TBP indicates that data were not available at this time, but will be provided at the end of the fiscal year.

A. Definitions of Terms of Explanations for Indicators and Data Sources:

Etem 7. The Obligation Rate is an efficiency indicator demonstrating timely obligation and execution of available funding to support the DEA mission requirements.

Data Sources Office of Resource Management (FRI: Office of Assation Operations (OA)

B. Issues Affecting FY 1999 Program Parlormance:

Items 4 & 3. The number and percentage of missions flown did not meet the targeted goal for FY 1999 due to the age of the ancestic currently in service, which resulted in less visibles flight time due to go increase in service and maintenance time. DEA plans to discontinue reporting on indicators #3, 4, & 5 in future Performance Plans because these indicators are not appropriate to report or in-an agency-wide Performance Plans because these indicators are not appropriate to report or in-an agency-wide Performance Plans because these indicators are not appropriate to report or in-an agency-wide Performance Plans because these indicators are not appropriate.

NAs for FY 1998 indicate that no plan had been developed at that time

C. Issues Affecting Selection of FY 2000 and 2001 Plans

There are three changes from the FY 1999 Performance Plan: Dem 5 above "4" of Missions Flows" is identified as an Intermediate Outcome, Rem 6 recognizes an "End Outcome"; and Item 7 reflects an "Obligation Rate "The End Outcome for each Decision Unit within the DOJ Core Function I be reflected on the Domestic Enforcement Decision Unit Table. The Obligation Tale Piles actual obligations divided by the Enacted Pupiling Plan.

Designates an indicator covering a requested FY 2001 program change

DECISION UNIT: ADP DEA Core Business System 2: Investigative Support

Department of Justice Core Function 1: Investigation and Prosecution of Criminal Offenses

DOJ Strategic Gost 1.3: Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement offorts.

DEA Annual Performance Goal: District and Flicit drues that threaten Americans and American Interests.
