ADJUSTMENT-TO-BASE ITEMS

Transfer of Funding Sources

List and justify each item for your organization separately. OMB has specifically requested more explanation of these items and your explanation should show the reason for the decrease, arithmetic calculations of the change, and the base to which the transfers applies.

lacreases

<u>2001 pay raise</u> . This request provides for the proposed 3.7 percent pay raise to be effective in January of 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$, represents the pay amounts for three-quarters of the fiscal
year plus appropriate benefits (\$
Annualization of 2000 pay raise. This pay annualization represents first quarter amounts (October through December) of the anticipated 2000 pay increase of 4.8 percent effective January 2000, and, for three-quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and the approved increase of 4.8 percent. The amount requested \$, represents the total annualization of pay amounts for the fiscal year plus appropriate benefits (\$ for compensation and \$ for benefits).
Within-grade increases. This request provides for the expected increase in costs of within-grade increases for slow or no growth components for FY 2000. This increase is based on an accurate model of the Department's employee population, which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or apparation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$ for pay and \$ for benefits.

[Note: Bresk out Other Contractual Services as shown and use other object class titles and data as needed. Exclude object classes that have no entries. The 2000 amounts shown in the first data column should be based on amounts shown on the 2000 Financial Analysis exhibit revised to reflect the anticipated 2000 appropriation. The Annualization Required column is based on the first year modular costs minus funding provided in 2000. This display is required in your Congressional submissions.] The FY 1999 and 2000 annualizations are similar narratives. Please repeat the narrative and fill in the appropriate numbers. Administrative Salary Increase. This request provides for the annual pay adjustment of administratively determined salaries for the Assistant U.S. Attorneys occupying ungraded positions in the U.S. Attorneys offices (\$ for pay and \$ for benefits totaling \$). Transfer of CSRS employees to FERS retirement system: This request provides for the increase in Federal Employees retirement System. (FERS) costs, based on the transfer of Civil Service Retirement System (CSRS) employees to FERS, as authorized by the FERS Open Enrollment Act of 1997, and the open season that run from July 1, 1998 through December 31, 1998. This increase is based on the number of employees who have transferred to FERS, the grade of employees, and the increased Government cost of FERS benefits. The request includes \$ for benefits. Increased Federal Health Insurance Costs. This request provides for the increase in agency contributions to Federal employees health benefits. In 1999, Federal health insurance premiums, including agency contributions, increased approximately 10.2 percent. Because the Government absorbed a larger proportion of the total costs, up to 75 percent, the total cost to the Government has increased substantially. This increase is based on the "increased" Government cost of health insurance. This request includes \$ for these COSLS. General Services Administration (GSA) rent. GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested increase of \$ ______ is required to meet our commitment to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates reflecting a 5 percent increase over 2000 levels. [For the FBI use 6 percent]. Lease Expirations: GSA now requires all agencies to pay relocation costs associated with lease expiration. Based on prior experience the Department anticipates that 20 percent of all lease expirations will result in relocations. This request provides for the cost associated with new office relocations caused by the expiration of leases in FY 2001. No funding is requested for any build-out costs associated with lease expirations. Funding of \$ is requested for forganization title). Antenna Feez. GSA will charge the Department antenna fees in FY 2001. The fees includes all current antennae utilized by Justice

commonerate that have antennee aton their buildings. Funding of \$ is requested. I for DEA, FBI, INS, USMS, and JMD/FASS

only).

Accident compensation. This increase reflects the estimated billing from the Department of Labor for the actual costs in 1999 of imployees' accident compensation, which will be billed in 2001. The 2001 increased cost will be \$
nternational Cooperative <u>Administrative Support Services (ICASS)</u> . Under the ICASS, an annual charge will be made by the Departmen of State (DOS) for administrative support based on the overseas staff of each Federal agency. This request is based upon the actual 199 CASS invoice billing for post invoices and other ICASS costs from the DOS. Funding of \$ is requested for (organizational title)
inneral Services Administration (GSA) Blue Pages. Previously, GSA has paid for all nationwide Government telephone book listing brough the GSA 8 percent F1S overhead rate. As a result of the National Partnership for Reinventing Government (NPR)/GSA Blueges Project, the funding for these listings has been removed from the overhead rate, and agencies are being billed for actual cost neutred. The Department's FY 2001 estimated costs total \$282,000.00. Funding of \$ is requested for (organization title).
Aedical Hospital Service costs. The Department of Health and Human Services is projecting an increase in health care costs. The Department is applying a factor of 3.8 percent against medical services. An increase of \$ will be required for 2001.
CONIL Operational Costs. This request provides for the costs related to operation, maintenance, and upgrading of the JCONII systems udding and upgrading existing hardware, software maintenance for functionality and management purposes, and labor costs for help desidentification to support the system are all required components. These upgrades allow the Department's professional staff to perform onsiderably more complex tasks on the computer, which will allow staff to work more effectively as well as keep the Department ompetitive with the private sector. Funding of \$\frac{1}{2}\$ is requested for [General Administration only].
pectrum Frequency Management. Public Law 104-134 authorized the Secretary of Commerce to charge Federal agencies for spectrum sanagement services. The National Telecommunications and Information Administration estimates that the Department of Justice costs or 2001 will increase by \$504,139 above the 2000 estimate of \$1,403,824, based on the annual number of frequency assignments and attitutives that are required by the NTIA. In the past the wireless communication, was handled by the individual law enforcement omponents within the Department of Justice. In 2000, the Department has been directed to consolidate the development, management of resources for wireless communications system into the Wireless Management Office. Funding of \$
ecurity Guard Services. This request applies the OMB pricing guidance to guard service costs and other misceilaneous expense ategories. Funding of \$ is requested for [Federal Prisoner Detention only].

Iranscription and Translation Services. This request provides for the cost increases built into the court interpreter and transcription contracts. The cost per hour for contract interpreters increases 4 percent each year, per contract. The cost per page of the transcription contact increases 6 percent each year, per the contract. Funding of \$______ is requested for [Administrative Review and Appeals only]. Travel Management Center Fees. In the past, travel management services were provided at no cost, and the Department received rebates based upon ticket sales. However, current practices in the travel industry have ended this process. The new contracts will not provide rebates and will carry fees for each ticket, hotel, our and other reservation made. The Department's cost for travel management center fees is estimated at approximately \$2,500,000.00. Funding of \$ is requested for [organization title]. Modernization and Repair. This request applies to the Bureau of Prisons (BOP) which undertakes essential rehabilitation and renovation or replacement projects at existing institutions. This ensures that structures, utility systems, and other facilities are kept in a good state of repair. In FY 2000 the BOP used a 2 percent replacement value method of funding recommended by the Federal Facilities Council Report Number 131, which recommends that maintenance programs are funded at a 2 to 4 percent of their replacement value, at a minimum. This method will allow the BOP to complete more projects in a shorter time period and save repair dollars. Funding of is requested for (BOP only). General pricing level adjustments. This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.

National Archives and Records Administration (NARA). The Office of Management and Budget directed NARA to convert its direct-funded records center program to a fully reimbursable program by FY 2000. This proposed legislation mandates that NARA is to remain the sole source for agency records center services, through FY 2002, for agencies currently using its services.

Other adjustments—that pertain to only one organization do not have standard phraseology. Each organization must develop an appropriate explanation of each requested change. The explanation should show the reason for the increases/decrease, arithmetic calculations of the change and the base to which the increase or decrease applies.

Decrensen:

List and justify each decrease for your organization separately. OMB has specifically requested more explanation of these items and your explanation should show the reason for the decrease, arithmetic calculations of the change, and the base to which the decrease applies.

DEPARTMENT OF JUSTICE 2001 APPROPRIATION LANGUAGE CHANGES

The information provided below describes substantive changes from the Department of Justice Appropriation: Act, 2000. Not-substantive changes such as new funding requests, changes in the number of motor vehicles, or changes in references to fiscal years are not included. Also excluded from this discussion are deletion of separate language provisions that provided one-time rescissions and perminent transfers in 2000, and language provisions that provided funding from the Violent Crime Reduction from Fund, for which authorization express at the end of 2000.

General Administration. Language is proposed deleting the provisions limiting the Department Leadership Program and the operations of the Offices of Legislative and Public Affairs.

Joint Automated Booking System. Language is proposed to clarify that the funding for the Joint Automated Booking System includes an automated capability to transmit fingerprint and image data.

Public Key Infrastructure. Language is proposed to request funding of \$4,376,000, to remain available until expended for the Public Key Infrastructure. Funds are to implement a Public Key Infrastructure, which provide the means to secure the Department's critical infrastructures.

Narrowband Communications | Language is proposed to clarify that the Narrowband Communications funding includes the costs for operation and maintanance of Land Mobile Radio legacy systems

Detention Trustee. Language is proposed to establish a Federal Detention Trustee who shall exercise all power and functions authorized by faw relating to the detention of Federal proposes in non-federal institutions or otherwise in the custody of the U.S. Marshall Service (USMS); and the detention of aliens in the custody of the immigration and Naturalization Service (INS). The Trustee is to be responsible for construction of detention facilities or for housing related to such detention; the management of funds appropriated to the Department for the detention functions; and the direction of the USMS and INS with respect to detention policy setting and operations for the Department.

Salaries and Expenses, General Logal Activities Language is proposed that allows the use of office automation funds by the United States Trustee Program, Expositive Office for Immigration Review and Community Relations Service. These funds may currently be used by General Legal Activities, Antitrust Division, United States Attorneys, and General Administration.

Antitrust Division. Language is proposed providing that fees collected during FY 2001, in excess of the \$104,966,000, cannot be made available in FY 2001 through a reprogramming pursuant to section 605 of the Appropriations Act. This provision, if enacted, would require a supplemental appropriation in order to make additional receipts available for use prior to FY 2002.

Salaries and Expenses, United States Attorneys Language is proposed deleting 1) the provision that expands existing Violent Crime Task Porces in the United States Attorneys Offices into demonstration projects; and 2) the provision that in addition to reimbursable full-time equivalent workyears available to the Office of the United States Attorneys, other positions and full-time equivalent workyears shall be supported from funds for the United States Attorneys. These provisions were required to meet specific incomistances and are no longer needed.

Lederal Prisoner Detention | Language is proposed that will allow the U.S. Marshals Service (USMS) to enter into multi-year contracts with private entities for the confinement of Federal prisoners. Language is also proposed that will allow the USMS to reimburse the Federal Bureau of Prisons for salaries and expenses of providing transportation, goard services, and medical care outside of the Federal penal and correctional institutions to prisoners awaiting trial or sentencing.

Fees and Expenses of Winnesses 1, anguage is proposed which will make available \$5,000,000 for the purchase, installation, and maintenance of secure telecommunications equipment and a secure automated information notwork to store and retrieve the identities and locations of protected witnesses.

United States Trustee Program Language is proposed that excess fees collected during FY 2001 will remain available until expended but will not be available for obligation until October 1, 2001.

Justice Prisoner and Alien Transportation, System Fund. Language is proposed that allows funds to be used for operating equipment lease agreements that do not exceed 10 years. The current language provides the use of funds for tease agreements that do not exceed 5 years.

<u>Exploration of Investigation et IIII. Salaries and Expenses</u>. Language is proposed deleting the restriction on providing bullistics imaging equipment to any State or local authority. The Memorandom of Understanding signed on December 2, 1999, no longer provides ballistic imaging equipment for State and local law enforcement.

Immuration and Naturalization Service (INS), Salaries and Expenses. Language, which limits the operations of the Offices of Legislative Affairs and Public Affairs, is proposed for deletion. Also, language that provides that the number of positions filled through non-career appointment shall not exceed four permanent positions and lour fulfating 1 IE is proposed for deletion. Language is proposed stating that overtime past in excess of \$30,000 per calendar year may not be paid, except in such circumstances when the Commissioner determines that entryleng the overtime provision would harm enforcement or service activities. Lastly, the provision limiting funds for operation of the San Clemente and Lententha checkpoints unless traffic is being checked on a 24-hour basis is proposed for deletion.

Immigration Support, Immigration Services Capital Investment Account. Language is proposed requesting funding of \$34,800,000, to remain available until expended. Funds are for backlop reduction, infrastructure improvements, process improvements, major capital acquisitions, and such other service-related expenses and programs necessary for the administration of the laws relating to immigration, naturalization, and alien registration. This account will provide for the depositing into a separate US Treasury account a portion of the receipts generated from immigration adjustment of status penalties, business-related application premium processing revenues and appropriations.

<u>Shared Support Operations Fund</u> Language is proposed establishing a Shared Support Operations Fund for the Immigration and Naturalization Service (INS), which shall be available without limitation, for expenses and equipment necessary for the operation and maintenance of such administrative services as the Commission, with the approval of the Department and Office of Management and Budget, determines may be performed as central services.

Federal Prison Systems (FPS), Salaries and Expenses. Languages is proposed that reduces the amount of carryover funding for facilities activation from \$90,000,000 to \$50,000,000. This amount should meet activation needs of IPS.

<u>Buildings and Facilities</u> Language is proposed for advance appropriations for planning, acquisition of sites and construction of new facilities, to become available on October 1 of the fiscal year specified and remain available until expended in fiscal year 2002, 5791,000,000; and fiscal year 2003, \$535,000,000.

Office of Justice Programs (OJP), State and Jonal Law Enforcement Assistance | Language is proposed to delete funding for the Local Law Enforcement Block Grants. No funding is requested for this program in 2001.

Language is proposed revising the language display for the State Criminal Alten Assistance Program, as authorized by section 242(j) of the immigration and Nationality Act, as amended, the Prison Grant Program, and the Tribal Courts Instative. All of these programs were funded from this account in FY 2000. The current language proposal is intended to be more easily used.

Language is proposed to provide both formula and discretionary grant funding for the Edward Byrne Memorial State and Local Law Enforcement Assistance program under this appropriation since authorization for the Violent Crime Reduction Trust Fund (VCRTF), from which funding was provided in FY 2000, expires at the end of 2000. Included in this proposal is fanguage that \$5,000,000 for the National Institute of passes for program evaluation. Also included is language providing \$59,500,000 for discretionary grants under the Edward Tyrne Memorial State and Local Law Enforcement Assistance Programs.

Language is proposed to pioxide \$9.000,000 for the Court Appointed. Special Advocate Program, as authorized by section 248 of the 1990 Act, \$2,000,000 for Child Above Training Programs for Judicial Personnel and Practitioners, as authorized by section 224 of the 1990 Act, and \$1,000,000 for televised testimony. Funds for those programs were provided from the NCRTF.

Language is proposed to provide funding for Grants to Combat Violence Against Winten, to States, units of local government, and Indian tribal governments, as authorized by section (BRITA) II) of the 1968 Act. I anguage is also included for Grants to Encourage Arrest Policies, for Rural Domestic Violence and Child Abuse Assistance Crants and for triuming programs to assist probation and parole officers who work with released sex offenders. In 2000, funds for these programs were provided from VCR11.

Language is proposed for Residential Substance Abuse grants and provides that States that have existing in-prison drug treatment programs, in compliance with Federal requirements, may use their residential substance abuse grant funds for treatment and sanctions, both during incarceration and after release under this appropriation since authorization for the VCRTF, from which funding was provided in FY 2000, expires at the end of 2000.

Language is proposed for the new Indian Country Grants Program initiative for demonstration grants on alcohol and crime in Indian Country (\$8,000,000), for establishment of sexual assault nurse examiner units in Indian Country (\$5,000,000), and for a Tribal Youth Mental Health and Behavior Program (\$5,000,000).

Language is proposed for the Missing Alzheimer's Disease Patient Alert Program (\$900,000), the Motor Vehicle Theft Prevention Program (\$1,100,000), the Drug Courts (\$50,000,000), the Law Enforcement Family Support Programs (\$1,500,000) and the Telemarketing Fraud against Seniors (\$2,000,000). The programs were funded from VCRTE in 2000

Language is proposed to provide \$75,000,000 for the new. Zero Tolerance Drug Testing and Intervention Initiative, including \$10,000,000 for Indian Tribes and \$25,000,000 for the Re-entry Initiative.

Language is proposed that funds made available under subpart 1 of part 1 of rate 1 of the 1968 Act may be obligated for programs to assist States in the litigation processing of dealt penalty Federal habeas corpus potitions and for drug testing initiatives

Further, language is proposed that balances for these programs may be transferred from the Violent Crime Reduction Programs, State and Local Law Enforcement Assistance account to this account.

Community Oriented Policing Services 1. anguage is proposed to provide the Attorney General the authority to transfer any 2000 COPS funds, and balances for programs funded under this heading in 2000, to the "State and Local Law Enforcement Assistance" account, and to allow administrative expenses associated with such transferred amounts to be further transferred to the "Justice Assistance" account. This language will provide optimum flexibility in the operation of these programs.

Language is proposed to delete reference to the use of unobligated balances in 2000 language. Language is proposed for funding Public Safety and Community Policing Grants, including programs to combat violence in schools, matching grant program for Law Enforcement Armor vests, for program support for the Court Services and Offender Agency for the District of Columbia, and improve tribal law enforcement, funding for National Police Officer Scholarships, and for Police Corps education, training, and service. Similar language was provided in 2000. The current proposal is intended to make language proposals more easily used.

Language is proposed to fund innovative programs to combat crime, including \$70,000,000 for grants to upgrade criminal records, \$15,000,000 for State and local forcesse labs to reduce construct offender DNA sample backing, \$15,000,000 for State, Tribal and local DNA laboratories, \$10,000,000 for the National Institute of Justice Law Enforcement and Corrections Technology Centers, \$10,000,000 for assistance to use and improve crime-solving, data shacing and crime forceasting technologies, \$6,000,000 to establish regional forcesse computer Libs and \$199,000,000 for discretionary grants. The discretionary grants language, including planning grants, to States, under section 102 of the Crime Identification Technology Act of 1998 (42 U.S.C. 14601), of which up to \$99,000,000 is for grant to law enforcement agencies.

Language is proposed for a Community Prosecution Program, including \$150,000,000 for grants to States and focal government to address gun violence "hot spots."

Language is proposed for funding \$135,000,000 for grants, training, and technical assistance in support of community crime prevention efforts,

OIP Juvenile Justice Programs Language is proposed that would provide \$3,000,000 to the National Institute of Justice for research into the dependency court system's response to child abuse and neglect, \$10,000,000 for prevention and reduction of youth gun violence, and \$10,000,000 for demonstration programs to reduce drigg us among juveniles. Language referring to the re-authorization of Juvenile Justice Programs is proposed for deletion.

Public Safety Officers Benefits. Language is proposed to request \$4,800,000, for the Public Safety Officers Dependents Assistance Program, to remain available until expended

GENERAL PROVISIONS - DEPARTMENT OF JUSTICE

The following sections are proposed for 2001. Sections (0) through (6) are substantively unchanged from the 2000 enacted provisions.

Section 101, which states that a total of not to exceed \$45,000 from funds appropriated to the Department of Justice in this title shall be available to the Attorney General for official reception and representation expenses in accordance with distributions, procedures, and regulations established by the Attorney General, is unchanged from the 2000 provision.

Section 102 continues the authorizations contained in Public Law 96-132. The Department of Justice Appropriation Authorization Act, Fiscal Year 1980" with the termination date of this Act or until the effective date of a Department of Justice Appropriation Authorization Act, whichever is earlier.

Section 103, (section 104 of the 2000 Act) which is unchanged, states that none of the funds appropriated under this title shall be used to require any parson to perform, or facilitate in any way, the performance of an abortion

Section 104 (section 105 of the 2000 Act) states that nothing in section 103 shall remove the obligation of the Director of the Bureau of Prisons to provide accort services necessary for a female inmate to receive such service outside the Federal facility; and that nothing in this section in any way diminishes the effect of section 103 intended to address the philosophical beliefs of individual employees of the Bureau of Prisons.

Section 105 (section 106 of the 2000 Act) states that inconstituting any other provision of law, not to exceed \$10,000,000 of the funds appropriated to the Department of Justice in this Act may be used for publicly-advertised, extraordinary rewards, which are not subject to the limitations found in 18 U.S.C. 3059 and 3072. Any rewards of \$100,000 or more, up to a maximum of \$2,000,000 must be personally approved by the President or the Attorney General.

Section 106 (section 107 of the 2000 Act) states that not to exceed 5 percent of any appropriation made available for the current fiscal year for the Department of Justice in this Act, may be transferred between such appropriations, but no appropriation, except is otherwise specified, shall be increased by more than 10 percent by such transfers. Any transfers pursuant to this section must be treated as a reprogramming of funds under section 603 of this Act. This section remains unchanged, except for the remost of the Violent Crime Reduction Trust Fund language, for which authorization expires at the end of 2000.

Section 102 (section 108 of the 2000 Act) provides the authorization of the Assistant Attorney General for the Office Of Justice Programs to make grasts, enter into cooperative agreements and contracts, and have final authority over all grants, cooperative agreements, and contracts, for the Office of Justice Programs, for fiscal year 2001 and hereafter. The permanent extension of this authority, and the deterion of the transfer of authority to the Assistant Abamey General for the Office of Justice Programs, which was made permanent on August 1, 2000, are the only changes.

Section 108 (section 112 of the 2000 Act) states that Section 3024 of the Emergency Supplemental Appropriation: Act, 1999, shall apply for fiscal year 2001. Section 3024 states that the Director of the Office of Crime Victims of the Office of Justice Programs, may make grants, as provided in the Victims of Crime Act of 1984, as amended to victim service organizations and public agencies, with emergency or on-going assistance to the victims of the bombing of Pan Am flight 103. The extension of this section to 2001 is the only change.

Section 109 amends section 151 of the Loreign Relations Authorization Act, fiscal years 1990 and 1991 (\$40.5.0.5928 note), is amended by inserting "or Federal Bureau of Investigation" after "Drug Enforcement Administration". This provision will provide special "danger pay" allowances for FB1 agents in hazardous duty locations outside the United States, as is provided for the agents of the Drug Enforcement Administration. The Federal Bureau of Investigation is working with the Department of State to handle observious to this provision.

Section 140 provides that for fiscal year 2001 and thereafter, whenever the FBI participates in a cooperative project to improve law enforcement or national accurity operations or services with a friendly integer country on a cost-sharing basis, that country's share of the project may be credited to any current appropriation available to the LBI. His will allow the EBI to enter into cooperative projects with foreign countries in order to improve law enforcement or intelligence operations and services.

Section 111 amends section 286 of the Immigration and Nationality Act of 1952 (8 U.S.C. 1336), as amended. Proposed language would increase the current user fee by \$2.00, to \$8.00, and would also left the cruses hip exemption and institute a \$3.00 cruise ship fee from passengers whose journeys originated in Mexico, Canada, the United States, a territory or possession of the United States, or any adjacent island to the United States. However, it would not apply to immigration inspection at designated ports-of-entry for passengers arriving by Great Lakes international ferties or Great Lakes vessels on the Great Lakes and connecting waterways, when operating on a regular schedule. The user fee was test increased (from \$5.00 to \$6.00) in FY 1994. In 2000, INS anticipates that program costs will exceed new revenues and that prior year carry forward funds will be depleted by FY 2001.

Language is proposed authorizing the Land Border Inspection Fee account (Section 286(q) of the Immigration and Nationality Act) to deposit fees for processing forms 1-94, 1-94W, and 1-01 into this account, rather than in the I Nationalities. Fee account. If enacted, inspections positions supported by these fees would be moved from the I Nationalities (i.e. account to the I and Horder Inspection) I be account for FY 2001.

I anguage is proposed to establish an Immigration Services Capital Investion Account (ISCIA) to fund service infrastructure, system upgrades, and address other immigration benefit backlops. I stablishing the ISCIA would provide a sitechanism for tracking infrastructure spending in immigration services. The proposed request of \$127,100,000 would be expitalized from the Fremium Processing I ce (\$55,000,000), reauthorization of a permanent 245(i) adjustment of status program (\$17,500,000), and direct appropriation (\$14,800,000). A tee for Themium Service would be voluntary for business-related applications and would not impact family based applications. Fremium service would provide businesses with a consistently high level of customer service and improved processing. The improved service would include guaranteed processing within 15 days for business cases, fax capability for resolution of evidentiary issues and access to an ombudatmat to quickly rectify processing errors. Additional services may be provided based upon customer needs. The proposed fee for this service would be \$1,000. This new five would provide businesses with an option besides the regular processing of business cases, which currently requires 60 days to over one year, depending upon the form type and naturalization processing and fraud investigations. The remaining \$55,000,000 would be put into the Immigration Services Capital Investment Account.

Language is proposed to establish a Genealogy Fee for providing genealogy research and information services. This fee shall be deposited into the Examinations Fee account. Fees for research and information services would be set at a level that would ensure recovery of full coats of providing all such services.

Section 112 states that beginning in fiscal year 2001 and thereafter, funds appropriated to the Federal Prison System may be used to place in privately operated prisons only such persons sentenced to incarceration under the D.C. Code as the Director, Bureau of Prisons, may determine to be appropriate. The proposed language would allow the Director, Bureau of Prisons, the authority to grovide for incarceration of D.C. prisoners in privately operated prisons, consistent with other Federally sentenced inmates. The change would ensure that, in discharging its privatization obligations, the Bureau of Prisons will not be obligated to place felons determined to be dangerous in test secure facilities.

Section 113 provides in addition to any amounts otherwise available, one percent of the funds appropriated to the programs of the Office of Justice Programs may be transferred to and merged with the funds for the National Institute of Justice to carry our research and evaluation.

Section 114 provides that amounts in the Crime Victims Fund, established under 42 U.S.C. 40601 in fiscal year 2001 in excess of \$550,000,000 shall not be available for obligation until October 1, 2001. It is anticipated that this will reduce scoring \$513,000,000.

Section 113 amends section \$06(c) of P.L. 103-317 (108 Stat. 1766) to read the amendment made by subsections (a) and (b) shall take offect on. October 1, 1994. This proposed language will permanently extend section 245(i) of the Immigration and Nationality Act, which permits aliens illegally in the United States to adjust their immigration status while remaining in the United States, provided the applicant pays a penelty fee.

Section 116 amends section 245(i)(3)(B) of the Immigration and Nationally Act, BRUSIC, 1255(i)(3)(B) to read, "Any remaining portion of fees remitted shall be allocated in equal shares to the Breached Bond Detention Lund and to the Immigration Services Capital Investment Account." This proposed language reallocates receipts that would result from the permanent reauthorization of section, 245(i) of the Immigration and Nationality Act. This estimates receipts generated from such fillings will total \$355,000,000. Of this amount, half of those receipts would be directed to the Breached Bond/Detention Fund, and half to the Immigration Services. Capital Investment account.

Section 117 amends section 100 of the Department of Justice Appropriations Act, 1994, by stating that the Attorney General may credit up to 6 percent of all amounts collected by the Department of Justice Working Capital 3 and, for personnel, administrative, and litigation expenses of civil debt collection activities. Currently, 3 percent of debt collections may be used for these purposes. The proposed language will provide for "first" paying the costs of processing and tracking of civil debt collections trivities of the Department.

Section #18 amends Section 5545a of title 5. United States Code, to propose the payment of availability pay to a pilot, border patrol agent, or detention-and-deportation officer employed by the Immigration and Naturalization Service. This provision shall take effect on the first day of the applicable pay period that begins on or after 120 days after the date of enactment of this Act. In addition, The Attorney General may establish special salary rates for border patrol agents, grades 5 through 11 of the General Schedule without regard to section 5305 of title 5. United States Code.

Section 149 provides that notwithstanding 42 U.S.C. 13798(b)(3), up to 5 percent of the funds made available by this Act for the Prison Grant Program may be used for the Violent Offender Incarceration Truth in Sentencing program.

The following sections are proposed for deletion and do not appear in the 2001 request. The section anathers are those in the 2008 Appropriations Act. Most of these sections amend the underlying statute or are permanent authorities and, thus, do not need to be continued.

٠,

Section (0) probabiled the use of Department of Justice funds to pay for an abortion. The Administration proposes to delete this provision and will work with Congress to address that issue

Section 109 made the authority of sections 115 and 127 of the Department of Justice Appendiants Act, 1999 permanent. Therefore, this section is no longer required. Section 115 amended the Violent Come Control and Law Entorcentent Act of 1994 by providing additional flexibility to the FBt in using funds for support to investigations in Indian Country. Section 127 provided the Attorney General authority to hire additional assistant United States Attorneys and investigators in the City of Philadelphia, Pennsylvania, for a demonstration project and applies to fiscal year 2000 and thereafter

Section 110 made the authority to pay judgments against the United States and compromise settlements of claims in suits against the United States arising from the Financial Institutions Reform, Recovery and Enforcement Act and its implementation, permanent. In addition the MOU for payment of litigation expenses was made permanent. Therefore, this section is no longer required.

Section 111 permanently amended section 507 of title 28, United States Code, as amended by adding subsection (e) which states, ".____the Assistant Attorney General for Administration shall be the Chief Financial Officer of the Department of Justice." This section makes this authorization permanent.

Section 113 permanently amended section 1930(ax1) of title 28. United States Code, which changes the filling fees for certain bankruptey proceedings, from \$130 to \$155. Therefore, this section is no longer required.

Section 114 permanently amended section 4006 of take (8, United States Code, which prohibits the payment for certain services by the U.S. Marshals Service and the Immigration and Naturalization Service at a rate in excess of amounts charged for such services under the Medicare or Medicaid Programs. Therefore, this section is no longer required.

Section (15, which prohibited funds in the Act from being used to pay premium pay to an individual employed as an attorney by the Department of Justice for any work performed in fiscal year 2000, is proposed for deletion. The Administration is proposing this for deletion without prejudice on the merits of the provision.

Section £16 states that section £13 of the Department of Justice Appropriation Act 1999, as amended by section 3024 of the Emergency Supplemental Appropriations. Act, 1999 (Public Law 106-31), is amended by inserting "for fiscal year 2000 and hereafter." This made permanent a provision to clarify the term "tribal" for the purpose of making grant awards under title 1 of the Act. Therefore, this section is no longer required.

Section 117 permanently amended section 203(b)(2)(B) of the Immigration and Nationality Act (\$ U.S.C. 1153(b)(2)(B). This language provides a precedure to grant national interest waiters to physicians if they have served an aggregate of five years and will continue to serve in areas designated as modically undeserved or at facilities under the jurisdiction of the Secretary of Verena Affairs. This provision essentially restores the situation that existed for alien physicians prior to the Immigration and Naturalization Service decision in New York State Department of Transportation, and those physicians who filed prior to November 1, 1998, shall be

granted a national interest waiver if they agree to serve three years in medically underserved areas or at facilities under the jurisdiction of the Socretary of Viterana Affairs. Therefore, this section is no longer required.

Section 118 permanently amended section 286(q)(1)(A) of the Immigration and Nationality Act of 1993 (8 U.S.C. 1356(q)(1)(A), as amended. This provision permanently authorizes the Land Border Inspection Fee account, therefore, this section is no longer required.

Section 119 amended section 1402(d) of the Victims of Crime Act of 1984 (42 U.S.C. 1060 I(d). This provision extended the authorities included in the flocal year 1998 Act, which authorized funds to be provided for the U.S. Attorneys victim witness coordinator and advocate program from the Crime Victims Fund. This provision is no longer required since a permanent antendment was made.

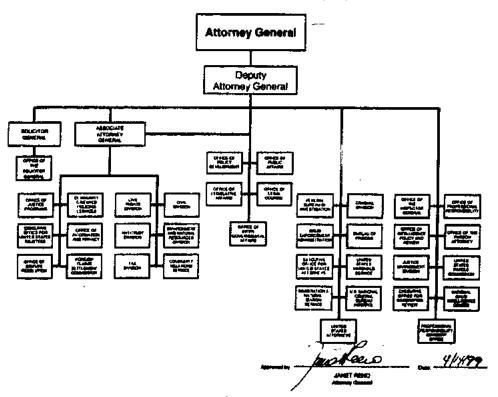

Section 120 amended Public (Law 103-322, the Violent Crame Control and Law Enforcement Act of 1994, subtitle C, section 210304, Index to Facilitate Law Enforcement Exchange of DNA Identification Information (42 U.S.C. 14132), as amended. This provision authorized the collection and analysis of DNA samples voluntarily contributed from the relatives of missing persons. Since the statute was amended, permanently, this provision is no longer needed.

Section (21 amended subsection (b)(1) of section 227 of the Victims of Child Abuse Act of (990 (42 U.S.C. 13012) by inserting "to the Cyber Tip Line at the National Center for Missing and Exploited Children, which shall forward that report," and subsection (b)(2) of that section is amended by inserting "forwarded". This provision changes the entity to which electronic communication service providers report instances of child pornography. Since the statute was amended, this provision is no longer needed.

General Administration Salaries and Expenses Summary Statement Fiscal Year 2001

The General Administration (GA) appropriation is requesting a total of 654 positions, 764 workyears, and \$88,196,000 in FY 2001. This request represents an increase of 18 positions, 12 workyears, and \$0.019,000 from the FY 2001 base.

The primary mission of the GA appropriation is to support the Attorney General and Department of Justice senior policy level officials in managing Department resources and developing policies for legal, law enforcement, immigration, and criminal justice activities. In addition, providing administrative support services to the legal divisions and policy guidance to all Department organization is also part of the primary mission of this appropriation. The major 2001 initiatives and resource requests for these activities are summarized below.

This budget activity includes resources for the Offices that support the following program: Department Leadership, Executive Support, Intelligence Policy and Professional Responsibility, and the Justice Management Division.

The <u>Department Leadership Program</u> consists of the Office of the Attorney General, the Office of the Deputy Attorney General, and the Office of the Associate Attorney General. These Offices are responsible for developing policies regarding the administration of justice in the United States; representing the United States in civil and criminal law matters, and, providing advice and opinions on legal issues to the President, members of Congress, and the heads of Executive departments and agencies. The Department Leadership request includes program increases of 8 positions, 7 workyears, and \$932,000 for the establishment of the Office of Tribal Justice within GA.

The Executive Support Program consists of the Offices of Policy Development (OPD), Public Affairs (PAO), Legislative Affairs (OLA), and Intergovernmental Affairs (IGA). The Executive Support program missions include conducting legal and policy analysis in support of Department initiatives in the many policy areas in which the Justice Department has jurisdiction or responsibilities, informing Department personnel, the media, and the public of Department activities, advising the Attorney General and other Department officials in their dealings with the media and Congress; acting as a flaison with Federal State, local and international governments and law enforcement officials. The Executive Support request includes program increases \$387,000 for increased funding in OLA and PAO. In addition, OLA is requesting \$500,000 for an automated filling system.

The Intelligence Policy and Professional Responsibility Program consists of the Offices of Intelligence Policy and Review (OIPR), Professional Responsibility (OPR), and Professional Responsibility (OPR). These Offices are responsible for assisting the Attorney General and other senior Department and Executive Branch officials in ensuring that the national security-related activities of the United States are consistent with relevant law; and overseeing the investigation of allegations of orfaninal and ethical misconduct by the Department's attivities, criminal investigators, or other law enforcement personnel. OIPR is requesting 10 positions, 5 workyears, and \$1,000,000 to handle the increased number and type of Foreign Intelligence Surveillance Act (FISA) applications and countertamorism work. The OIPR request also includes \$50,900 to expend the current FISA system.

The <u>function Measurement Division</u> provides advice to serior DOJ officials and develops departmental policies in the areas of management and administration; ensures compliance by DOJ components with departmental and other Federal policies and regulations; and provides a full range of management and administrative support services. There are no enhancement requests within JMD.

General Administration

Salaries and Expenses

Proposed Changes in Appropriation Language

The 2001 budget estimates include changes in the appropriation language listed and magnified below. New language is italicized and deleted matter is enclosed in brackets.

Saleries and Expenses

DEPARTMENT OF JUSTICE OMB SUBMISSION ESTIMATES FOR FISCAL YEAR 2001

NARRATIVE FOR ADJUSTMENT-TO-BASE ITEMS

Increases:	<u>Pes</u>	FTE	Amount
Zijij paj raise.	•••	4-#	\$1,486,000

This respect provides for the proposed § 2 percent pay ruise to be effective in lanuary of 2001 and is consistent with Administration policy methoded in the Preliannary Pay Ruise Condance for 7001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay ruise. The amount requested, §1,486,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (§1,170,000 for eye, and §3)6,000 for benefits, totaling. \$1,486,000,

Annualization of 2000 pay raise.

\$ 745,000

This pay annualization represents first quarter amounts (October through December) of the approved 2000 pay increase of 4.8 percent effective January 2000, and, for three-quarters of a year, the difference between the 4.4 percent estimated in the 2000 President's budget and the approved fevel of 4.8 percent. The amount requested \$745,000, represents the pay amounts for three-quarters of the year (\$587,000 for compensation and \$158,000 for benefits).

Within-grade increases.

14

... \$ 722,000

This request provides for the expected increase in costs of within-grade increases for slow or no-growth components for FY 2000. This increase is based on an accurate model of the Department's employee population, which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$568.000 for pay and \$154.000 for benefits.

笁

Transfer of CSRS Employees FERS Retigement System ... S 103,000

This request provides for the increase in Federal Employees Retirement System (FERS) costs, based on the transfer of Civil Service Retirement System (CSRS) employees to FERS, as authorized by the FERS Open Enrollment Act of 1997, and the open season that ran from July 1, 1998 through December 31, 1998. This increase is based on the number of employees who have transferred to FERS, the grade of employees, and the increased Government cost of FFRS benefits. The request includes \$103,000 for benefits.

Increased Federal Health Insurance Costs.

... 5 413,000

This request provides for the increase in agency contributions to Federal employee health benefits. In 1999, Federal health insurance premiums including agency contributions, increased approximately 10/2 percent. Because the Government absorbed a larger proportion of the total costs, up to 75 percent, the total cost to the Government has increased substantially. This increase is based on the "increased" Government cost of Health Insurance. This request includes \$413,000 for these costs.

General Services Administration (GSA) rent.

\$ 949,000

GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested increase of \$949,000 is required to meet our commitment to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates reflecting a 5 percent increase over 2000 levels.

Lease Expirations.

.. ... \$ 54,000

GSA now requires all agencies to pay refocation costs associated with lease expiration. Based on prior experience the Department anticipates that 20 percent of all lease expirations will tesult in relocations. This request provides for the cost associated with new office relocations caused by the expiration of leases in FY 2001. No funding is requested for any build-out costs associated with lease expirations. Funding of \$54,000 is requested for General Administration.

Antenna Fees.

... 5 24,P//0

GSA will charge the Department antenna fecs in FY 2001. The fees include all current antennas utilized by Justice components that have antennas atop their buildings. Funding of \$24,000 is requested for the Facilities and Administrative Services Staff (FASS).

ያ

10,900

	<u>Pos</u>	ETE	Amount
Accident Compensation.	•••	1+7	\$ 24,000

This increase reflects the estimated General Administration (Non-Justice Management Division) billing from the Department of Labor for the actual costs in 1999 of employees' accident compensation, which will be billed in 2001. The 2001 increased cost will be \$24,000.

General Services Administration (GSA) Blue Pages.

Previously, GSA has paid for all nationwide Government telephone book listings through the GSA 8 percent FTS overhead rate. As a result of the National Partnership for Reinventing Government (NPR)/GSA Blue Pages Project, the funding for these listings has been removed from the overhead rate, and agencies are being billed for actual costs incurred. The Department's FY 2001 estimated costs total \$282,000. Funding of \$10,000 is requested for General Administration.

JCON 11 Operational Costs. ... \$1,205,000

Recurring Operation Costs - This request provides for the increased costs related to operation, maintenance, and upgrading of the JCONII systems. Adding and upgrading existing hardware, software maintenance for functionality and management purposes, and labor costs for help desk administration to support the system are all required components. These upgrades allow the Department's professional staff to perform considerably more complex tasks on the computer, which will allow staff to work more effectively as well as keep the Department competitive with the private sector. Funding of \$1,205,000 is requested for General Administration.

Travel Management Center Fees \$ 44,000

In the past, travel management services were provided at no cost, and the Department received rebates based upon ticket sales. However, current practices in the travel industry have ended this process. The new contracts will not provide rebates and will carry fees for each ticket, hotel, car and other reservation made. The Department's cost for travel management center fees is estimated at \$2,500,000. Funding of \$44,000 is requested for General Administration.

General Pricing Level Adjustments. 5 109,000

This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities. Funding of \$109,000 is requested for General Administration.

Sational Archives and Records Administration (NARA).

The Office of Management and Budget directed NARA reconvert its direct-funded records center program to a fully reimbursable program by LY 2000. This proposed legislation mandates that NARA is to remain the sole source for agency records center services, through FY 2002, for agencies currently using its services. The Department's FY 2001 estimated costs total \$6,599,584, based on current records manufacted by NARA. Lumiding of \$2,000 is requested for General Administration.

Decreases

Accident Compensation Decrease.

(\$ 41,000)

2.008

His decrease reflects the estimated Justice Management Division (JMD) billing from the Department of Labor for the actual costs in 1999 of employees' accident compensation, which will be billed in 2001. The 2001 JMD cost will be a decrease of \$41,000 from the actual 1999 billing

To investigate, process, and make recommendations to the President on candidates for judicial and Justice Department Presidential appointments.

To maintain and supervise the Attorney General's Honor Law Graduate and Attorney Employment program.

To prepare and disseminate an Appetal Report to the Congress and the public regarding the programs and accomplishments of the Department of Justice.

Institutionalize the Utilice of Tribal Justice

\$932

Within the 19Tice of the Associate Attorney General (OASG), Repositions, 7 workyears, and \$932,000 is requested to institutionalize the Office of Tribal Justice (()13) as an integral, origining component of the Department. Since 1993, OTJ has had notable success in promoting government-to-government relations and has gained with acceptance and support throughout the government and among Indian tribes. OTI should be a continuing component of the Department because (MI) has very significant and wide-ranging responsibilities to Indian country. DOI's responsibilities include law anforcement, civil rights protection. one promoculal protection, protection of prival rights, trust resources, and tribal self-arrent, provision of financial and technical andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andmocal andm enforcement and pusice to steps, and representation of the Department of the line for and only federal agencies in hittantion involving Indian interests. The Department of Justice has significant responsibilities towards indian country, supporting the development of strong tribal law enforcement, tribal courts, and INSURATION OF SELF-GOVERNMENT. In this (1gh), (1) I I is a valuable component of the Department that ensures that tribul government interests and rights are appropriately connected, and that titled governments are consulted when DUI activities may impact tribal sovereignty or self-government, trust resources, or tribal rights. Now thought and other processor of law, tribal governments and their business partners may provide hiring and employment preferences for tribal members for activities on or relating to lands within the jurisdiction of the tribe.

to ensure the continued success of COD or promoting the government-to-government relations policy and sound Indian affairs policy, the Department requests that (11) be concaled appropriated funding to support as continuing aussian to serve as a tribal liaison and policy coordination office for the Department on Industriesses

BASE PROGRAM DESCRIPTION:

The Executive Support program consists at the Offices of Policy Development (OPD), Public Affairs (PAO), Legislative Affairs (OLA), and Intergovernmental Affairs (IGA). These offices are responsible for versing as the liaison-between the Department and Congress; coordinating Department and Administration policy annualises in the areas of each and common justice, and consisting that the public and the new media are kept informed about the activities and policies of the Department, the Atments recognition on the fields of law enforcement and legal affairs.

The general goals and objectors of the Executive Support Program are:

to imprave the Department's effectiveness in providing substantive and timely input on the Administration's law enforcement initiatives as well as other legislative proposals affecting Department responsibilities.

To improve the process of reviewing and clearing through the Department legislative proposals initiated by other agencies within the Administration.

To maintain un efficient and responsive legislative liaison service operation.

To handle the processing of judicial and other pominations efficiently and responsively.

To provide support in advancing the Administration's overall legislative agenda.

To assure policy consistency and coordination of Departmental initiatives, briefing materials, and policy statements.

To disseminate timely, accurate information about the Department, the Attorney General and the Administration's law exforcement priorities, policies and activities to the news media and the general public.

To enhance and promote the enforcement goals of the Department through distribution of news releases, coordinating press conferences and telephone and video conferences announcing indictments, settlements, and statements on civil rights, environment, criminal, antiques, and other Department enforcement activities.

To ensure that all applicable laws, regulations and protects involving the release of information to the public are followed so that material is not made public that might propertize investigations and prosecutions, violate rights of defendants or potential defendants or compromise national security inferests.

(ii) A is requesting § 130 mm to appear the continued parment of salaries, benefits, and expenses for the ETE level authorized in FY 1999. The mission of OFA is to provide prompt and responses easies to the treeds and requests of the Congress. At the Attorney general's direction, the Office has sought to strengthen and improve its about to be responses. OFA plays a critical role in forging internal consensus among DOJ components with regard to Administration kerstation. The overall's outgressional demands on OFA are massive and increasing. There are major ongoing oversight matters that require huge attention and resources in order to additional occurs adoptately. Congress: [egistative agends has been extremely ambitious and DO is asked to play a role in administration piece of legislation. In addition OFA is required to the its required by maintain.

PAO is requesting \$2.38.000 to satures benefits and expenses to bring the staff up to its authorized F1E level of 20. Currently, PAO has 5 vacancies as a result of recum budget cuts. It is increased tonding is necessary for PAO to properly serve the Attorney General and the Justice Department. Although PAO received funds in 15. 1999 to cover some adjustments to have increases, it has been forced to function every year as if it was not going to get the minimum funds necessary to maintain corrent staffing levels. Let alone bire additional staff. The Office has tried to meet increasing demands with reduced resources by implentioning a number of stop-gap measures, but resources have been stretched to the limit.

BASE PROGRAM DESCRIPTION:

The Intelligence Policy and Professional Responsibility, as well as the Professional Responsibility, as well as the Professional Responsibility Advices Office, which is currently a fully reindurable office. These Offices are responsible for assisting the Attorney General and other sense Department and Executive Branch officials in ensuring that the national accurry-related activities of the United States are consistent with relevant law, and oversexing the investigation of allegations of criminal and ethical misconduct by the Department's attorneys, criminal investigators, or other law enforcement personnel.

The general goals and objectives of the Intelligence Policy and Professional Responsibility Program are:

To provide legal advice concerning intelligence and national security matters to the Attorney General and to other Executive Branch officials.

To party spate in the development of legal aspects of national security and intelligence policy.

To promit 18) and other applications for intelligence searches and surveillance and approve other counterintelligence investigative activities.

To represent intelligence agencies as legal counsel before the United States Foreign Intelligence Surveillance Court,

To participate in pre-trial litigation involving the Foreign intelligence Surveillance Act in criminal prosecutions for expionage and international terrorism.

To maintain liaison with the Senate Select Committee on Intelligence and the House Permanent Select Committee on Intelligence to ensure they are apprized of Departmental views on national security and intelligence policy and are appropriately informed regarding operational intelligence and counterintelligence activities.

To improve and refine the Department-wide reporting system in which allegations of criminal or administrative misconduct against Department employees are reported, investigated and monitored.

To conduct, oversee, and coordinate all internal investigations of serious allegations concerning the conduct of Department personnel that may be incolution of law. Department regulations or orders, or applicable standards of conduct, and which affects the Department's ability to investigate, litigate, or procedure.

** Please note that the objectives of the Office of Professional Responsibility (OPR) are different from the Office of the Inspector General (OIG) in that OPR fectives on investigations concerning allegations of misconduct which affect the ability of the Department to investigate, intgate, or prosecute, while the OIG tocoses its investigations on allegations of waste and abuse, and wher matters which do not implicate the ability of the Department to investigate, linguistic or prosecute.

PROGRAM CHANGES

	Perm. Pos.	FIE	Amount
Increased Staffing for OIPR	10	5	\$1,000

OHRs to requesting 10 positions. Swoks van. in \$1,000,000 to handle the additional number and type of Foreign Intelligence Surveillance Act (FISA) applications and contratterrors work and in expand the current FISA system (estimated to cost \$50,000). OHR maintains the responsibility of reviewing all requests for streellance or scarch under FISA, preparing the applications and representing the cases before Court. In addition, when evidence obtained under FISA is proposed to be used in a criminal proceeding. OHR obtains the necessary authorization from the Attorney General. In coordination with the FBI and the intelligence continuously. OHR's primary operational functions are to prevent acts of terrorsin and esponage from being perpetrated in the U.S. by foreign powers and to facilitate the collection of counterintelligence regarding foreign agents and region powers. FISA applications have interested significantly over the last five years. There were 484 applications under FISA in 1992, by 1998, this number had nearly doubled to 796. Given this growth, OFR's workload in this area has, and will continue to grow as intelligence agencies submit requests under FISA for intelligence personses. In addition, several Congressional committees are developing keyslation that would expand cloots of the Department of Energy, FBI, and other intelligence agencies in counterintelligence (C1) and foreign counterintelligence (C1) matters. The FBI is requesting a significant number of personnel including agents for C1 and FCI matters. This retemphasis on counter expansage and the increase of FBI and other melligence agency personnel will increase requests under FISA and thus the casetoad of OHR attorneys.

JUSTICE MANAGEMENT DIVISION FY 2001 Summary Statement and Performance Plan

The FY 2001 request for the Justice Management Division (JMD) is 453 positions, 460 workyears and \$57,166,000. This represents no increase over the estimated FY 2001 base. JMD plays a key role in Department-wide management functions of planning and resource allocation, personnel recruitment and related services, telecommunications support and information processing, financial policy and oversight, debt collection management, security support, procurement policy, and the maintenance and administration of DOJ facilities. The requested resource level will permit JMD to improve how it performs to responsibilities, and will contribute toward strengthening the overall efficiency and effectiveness of the Department and its component organizations.

Over the past several years JMD has become increasingly involved with issues in response to policy-level expectations and directives and statutory maidates that have attracted significant public interest and political debate. JMD resources have also been used extensively in conflucting or overseeing the completion of cross-organizational management reviews of special interest to Congress and in other strategic planning efforts affecting major DDJ programs. Consistent with its role of providing harson with exteenal organizations, JMD also continues to be DDJ's point of contact for coordinating implementation of the Administration's reinventing government and customer service initiatives.

A. Component Mission and Goals, and Relationship to DOJ Strategic Plan

JMD's mission and program activities most directly support the following three strategic goals from the Management core function of DOJ's strategic plan:

- Achieve excellence in management practices,
- Meet or exceed custors or expectations, and
- Make effective use of information technology.

IMD Mission statement

To provide advice to senior OO) officials and develop departmental policies in the areas of strategic planning, budget formulation and execution, program and financial oversight, procurement policy guidance/implementation, human resources management and other areas of general administration; to ensure compliance by DOJ components with departmental and other Federal policies and regulations; to provide a full range of management and administrative support services; and to assist in the implementation of selected government-wide management initiatives.

B. TY 2001 Performance Goals and Indicators

During EV 2001, JMD will continue to improve the guidance, oversight and services that it provides to DOI component argumentations. These statology based or other high princity core activities to which JMD will give increased attention in the coming year generally full within one or the following broad categories:

- Mrategic planning and program/budget oversight.
- 2. Lujancial policy oversight and resource manegement
- 3. Information management and technology development
- 4. Human resources, attorney recruitment and other specialized functions

JMD's efforts to support overall DOJ management improvements will require continued attention to existing oversight processes, as well as further development of a stronger and more fully-automated infrastructure. The means and strategies to be pursued toward these ends, and the specific performance goals established for EY 2001, are described in the following pages.

Consideration of High Risk Management Issues and Liaison with Other Components. IMD's management oversight responsibility also contributes towards addressing and resolving some of the high-risk management concerns that have been

identified through other processes. The more significant of these issues involve the following: (NOTE: examples listed below based on DOI's 12-97 <u>Management Coolint Rot</u>, and on GAO's 1-98 report entitled <u>Federal Management (source)</u>

- asset forteiture program.
- -- DOI (maneral management
- INS management
- information security

IASD's efforts directly support DOF's commitment to ensure the integrity of DOJ programs and operations. Toward that end, IASD comporates in any appropriate way with related reviews or investigations that may be undertaken by the independent Office of the inspector General, the Office of Professional Responsibility, or internal review units of DOF's component organizations. Lach of the general fine troud areas is discussed separately below.

STRATEGIC PLANNING AND PROGRAMBUDGET OVERSIGHT

Means and strategies. Consistent with the Results Act's requirements and congressional expectations, JMD has been working to more fully integrate long and short range planning into component-level and DOJ's own budget formulation processes. JMD statts collaborate to use available merow processes, e.g., the Spring Call Submission and related analyses, to ensure that component level horized requests are directly linked to DOJ's strategic plan. JMD also participates actively in meeting the congressional consultation requirements of the Results Act. As another part of its oversight function, JMD is routinely tasked with conducting management reviews that are of special interest to DOJ policy officials.

FY 2001 Performance Goals:

- 1. Better presentation and use of component-specific data, planning and evaluation efforts. In FY 2001, JMD will work to ensure that all major component organizations have standalone performance plans that demonstrate full integration of strategic planning and data verification efforts. In addition, JMD will continue to perform evaluations on an as needed basis for the Attorney General's approval.
- 2. Implementation of procurement-related improvements. In FY 2001, JMD will provide guidance and support to the continuing implementation and refinement of procurement training designed to meet government-wide education and training standards. The DOJ acquisition WEBSITE will become the focal point for electronic commerce and procurement information for DOJ procurement activities and the general public.

3. Increased use of program and organizational reviews. As resources permit, JMD staffs will seek more information on how and to what extent clients are satisfied with our products and services and use them.

Performance Induators

- increased congressional satisfaction with/use of DOI and component-specific planning/budgeting documents
- implementation of upgraded procurement career management program to meet 1998 OPM directives

FINANCIAL POLICY OVERSIGHT AND RESOURCE MANAGEMENT

<u>Means and strategies.</u> JAIO, primardy through its Finance Staff, provides guidance that will enable DO) and its component organizations to make the type of improvements or financial management required by the Federal Financial Management Improvement Act of 1996 and related Administration directives. These improvements include the installation of new as counting systems in several major components and overseeing corrective action in response to audited financial statements.

FY 2001 Performance Couls:

1. Progress toward achieving an unqualified audited opinion on the DOJ-wide financial statements. In FY 2001, JMD will demonstrate common progress toward achieving unqualified audit opinions on financial statements required by the Government Management Reform Act. Achieving this objective depends largely on the ability of DOJ components to implement aud/or maintain systems which substantially comply with Federal financial management systems requirements and accounting standards, and with the U.S. Standard General Ledger. The JMD monitors bureau compliance with these criteria, and evaluates and reviews corrective action plans where a component was judged to be non-compliant in the preceding year. This is expected to result in the development of an integrated financial management system within each component which provides accurate, reliable, and timely financial information.

Performance Indicator:

- number of DOI annual financial statements that received an unqualified audit opinion

INFORMATION MANAGEMENT AND TECHNOLOGY DEVELOPMENT

Means and Strategies. The wise use of advanced information systems technology is pivotal to improve mission performance. JMD has already taken steps to improve its planning and monitoring of information technology investments in accord with the Clinger-Cohen Act by establishing an information Technology Investment Board (ITIB). JMD has been actively involved in fostering component involvement in the development and deployment of new technologies across the Department and will lead the Departmentwide effort to accomplish a smooth Year 2000 transition and ensure that contingency plans are in place if problems do arise. The feadership of JMD, in defining a departmental architectural blueprint, will work to ensure the development and operation of secure, integrated information systems and the ITIB will work to carefully oversee all major new and on-going information technology projects to ensure the cost, schedule and performance targets are met.

FY 2001 Performance Goals

- 1. DOJ's Information Technology Architecture. In FY 2001, the Departmentwide Information Technology Architecture is expected to enable components to enhance operational capabilities and lower costs through a controlled migration to a secure, interoperable computer and communications environment.
- 2. Wireless Communications. In FY 2001, JMD will continue to set the strategic direction for the funding and acquisition of narrowband radio equipment and the operation and maintenance of the existing infrastructure across component organizations.
- 3. Digital Signature. In FY 2001, JMD will attempt to establish departmental guidelines for the adoption of public key infrastructure and provide tested digital signature technologies for use by component organizations.
- Capital Planning. In EY 2001, JMD will consider expanding the use of the ITI8 investment criteria to the evaluation of proposed investments in information systems that are not subject to the ITI8 review process.

Performance Indicators

- degree of component compliance with architectural standards on new information technology investments.
- adoption of a departmental strategy for the acquisition of narrowband radio equipment.

- utilization of secure, authenticated exchange of information using digital signature technologies among two or more large components.
- percentage of new and ongoing investment subject to the ITIB evaluation criteria.

HUMAN RESOURCES, ATTORNEY RECRUITMENT AND OTHER SPECIALIZED MANAGEMENT RESPONSIBILITIES

Means and strategies. IMD ensures that personnel management responsibilities throughout DOJ are carried out in accord with applicable laws, regulations and other guidance and that DOJ successfully competes with the private sector to recruit and return a high-calibre alterney workforce. In support of its Equal Employment Opportunity (EEO) program goals, JMD reviews DOJ components' employment program plans, assists in evaluating these plans, and develops and issues policy guidance on diversity/workplace issues. It also identifies and establishes training requirements in direct support of a strong DOJ sexual harassment prevention program. In addition, JMD plays a leadership role to implement workfile programs, which are designed to butter balance the family and personal needs of employees with DOJ program responsibilities.

IMD is also actively engaged in fostering innovation and improvements in departmental operations through special management initiatives. For example, through the justice Performance Review (JPR) Laboratory Program, JMD's Management and Planning Staff establishes, monitors, and assists reinvention lab learns in solving longstanding, multicomponent problems. A JPR award program, JustWorks, recognizes and rewards employee teams for their innovative efforts. The Management and Planning Staff (MPS) provides leadership and facilitation services, and serves as the contracting officer's technical representative for major organizational reengineering projects and process evaluation efforts within DOJ components. Another MPS initiative encourages implementation of customer service standards in DOJ components.

FY 2001 Performance Goals

 Attorney Recruitment. In FY 2001, JMD's Office of Attorney Personnel Management (OAPM) will provide effective leadership and support to the Department in the recruitment of faw students, entry-level attorneys, and experienced attorneys. This will result in an excellent and diverse applicant pool from which DOI components can make niring decisions. OAPM will also effectively review and adjudicate security investigations conducted on attorney applicants.

- 2. Strengthened DOJ EEO Program. In FY 2001, IMD's EEO program will seek to ensure that DOJ's workforce includes a diverse representation at all levels, including managerial and supervisory positions and that additional specialized training and information is provided to eliminate all incidents of sexual harassment in DOI's workforce.
- Increased participation in the JustWorks' Best Practices Program. In FY 2001, JMD with expand employee awareness of this award program which recognizes and rewards employee teams for innovative ideas that improve departmental business and operational processes. DOJ teams, representing more components, will submit nominations. Components will implement ideas published in JustWorks publications.
- 4. Stronger Employee Assistance Program (EAP). In FY 2001, JMD will support making EAP services more widely available throughout DOJ, thereby giving more employees access to actual counseling or referral services. These services are intended to assist employees to regain their productive capability; minimize absenteeism, sick leave, and grievances; reduce the need for disciplinary action; and improve motale. Of specific note, over 40 specialized workshops for OBD and U.S. Attorney employees will be conducted in team building and stress management.

C. Highlights of Results

In each of the above functional array, IMD has taken important implementation steps taken during the past year. Among the more significant among these have been:

Strategic Planning and Program/Budget Oversight Results:

- Convened meetings of DOJ managers to discuss how best to update DOJ's first ever strategic plan.
- Met the Results Act's continuing requirements by submitting DOJ's second DOJ summary-level performance plan, covering FY 2001.
- Completed annual assessments of component budget submissions and oversaw transmittal of formal documents to both OMB and Congress on a timely basis.
- Completed several major program reviews of interest to DOJ leadership or outside overseers since FY 1998, including:

- IDENT and IAFIS Report of the Feasibility of INS Converting to a Ten-Fingerprint System (5-98)"
- National Instant Criminal System Records Retention Review (8-98)
- Review of the Office of Solicitor General 19-98)
- Review of the DOI Public Affairs Office (10-98)
- Analysis of Criminal Debt Collection in DOJ (10-98).
- Review of INS Naturalization (3-99)
- Options for Improving the Use of INS Records in the NICS Check Process (4-99).
- Review of USMS Special Assignments (5-99).
- Review of Feasibility of Establishing a National Sexual Predator Reporting System (6-99)
- Review of Of Ad BLAgeot and US Afformeys Performance Systems (6-99).
- 3-138 Trustee Report Sampling (9-99)
- Review of INS Eargerprint System (9-99)

Lipage of Policy Oversight and Resource Management Results

- In compliance with the Concennent Retorm Act, the Department's FY 1998 consolidated audited financial statements were submitted to the Other of Management and Budget by the March 1999 deadline. The Department did not recover an audit opinion on the consolidated financial statements due to weaknesses in several bureau reporting entities. Individual audit opinions on the balance sheet are as follows: the DEA, FBI, OJP and WCF received uniqualitied opinions, the FPS received a qualified opinion, and the INS, OBDs, USMS, and AFF/SADF received a disclaimer of opinion. The Department components have initiated Corrective Action Plans to resolve all material weaknesses and enable the Department to obtain an unqualified audit opinion on the FY 1999 consolidated financial statements.
- Participated in the development of Government-wide financial policy and standards and, in conjunction with the
 Office of Inspector General and component representatives, worked to resolve DOJ-wide financial statement issues.
- Used a variety of forums (e.g., senior manager council and advisory board meetings, monthly Executive Officer and
 User Group meetings, quarterly Newsletters) to disseminate information to OOI's financial community. Also, strong
 support given to enhancing professional development through training.

Information Management and Technology Development Results

- Developed and published the Provisional Information Technology Architecture which describes the current technical environment across all components in the Department of Justice and is the foundation for the enterprise wide strategy and circulard requirements definition that will define the final information Technology Architecture product.
- Successfully expanded the ITIB review process resulting in improved quality of both the proposals and the technical
 reviews, and expanded the scope of the reviews to include investments in maintaining legacy systems, significant
 rechniques of legacy systems, and cross-component initiatives using new technologies.
- Equipmed and stated a computer security laboratory to perform ongoing testing and evaluation of emerging securitytestimologies before they are placed into over or operational systems.
- Initiated and component like series of seminars to both departmental and component IRM staff on project management
 and system development life cycle approaches, methods, and tools.

Human Resources, Attorney Recruitment and Other Specialized Functions Results

- Oversaw the completion of a consultant supported redesign blueprint of INS' naturalization program.
- Elected positive feedback from Congress regarding efforts to re-design the INS naturalization process.
- Received and reviewed 35 JustWorks nominations submitted by seven DO) components for the 1996 competition and 56 nominations submitted by nine DO) components and five U.S. Attorneys' Offices for the 1999 competition (the greatest annual total since the program began in 1995).
- In February 1999, sponsored the ceremony for the third annual justWorks Program competition at which the Deputy Attorney General gave awards to seven employee teams.
- Obtained approval for three new labs: 1) Environmental Compliance, a multi-component lab to be sponsored by JMD;
 2) Law Enforcement Linguist Clearinghouse, a multi-agency lab to be led by the FBI; and 3) Asset Forfeiture

Professional Development Program to be sponsored by the USMS. The three newly approved labs join six active labs.

- Redesigned, expanded, and applicted the JPR web site to provide information and assistance regarding reinvention
 activities at DOI and links to other reinvention sites throughout the Federal Government.
- The SLNJRI JPR lab achieved finalist status (top 25 of more than 1,400 entries) in the 1998 Ford Foundation Impositions in American Government competition. The construction of new SENTRI lanes is nearing completion at the lab's second site, the world's busiest border port-of-entry, San Ysidro, CA, and SENTRI lanes will be designed to operate at four additional sites within the next two years.
- As of March 31, 1999, the USAIS accreditation Laboratory Team has established proof of compliance for 232 (66 percent) of applicable CALEA (Commission on Accreditation for Law Enforcement Agencies) standards and is eight months about of schedule, USAIS plans to achieve accreditation by November 1999 (rather than July 2000, the original target date).

D. Major FY 2001 Initiatives

The JMD has identified several initiatives that directly support our EY 2001 goals. To achieve our goals and sustain continued support, 2001 bases resources are critical and are detailed in the Justification of Program and Performance.

BASE PROGRAM DESCRIPTION:

The Justice Management Dissisting provides advice to senior DOD officials and develops departmental policies in the areas of management and administration; ensures compliance by DOD components with departmental and other federal policies and regulations; and provides a full range of management and administration supports we need.

The general goals and objectives of the Justice Management Division are:

To effectively establish Department policy, advise the Department leadership, and represent the Department on all matters pertaining to its organization, management, and administration

To acquire quality, cost-effective automated systems and products that meet user needs and to manage and provide support for those systems.

To secure sufficient resources through hidget and procurement processes and to ensure sound fiscal management of those resources.

To recruit, train, and retain a high quality workforce, provide safe, accessible, and environmentally sound work space; and promote worklife policies that contribute to employee effectiveness and satisfaction

To increase the number of women and minority hires in key occupations and ensure the timely adjudication of EEO complaints.

Detention Trustee

Summary Statement and Performance Flan Fiscal Year 2001

1. Detention Trustee

The Department requests \$1,000,000, 6 positions, and 3 FTE for a Detention Trustee and necessary support staff. The Detention Trustee will report to the Deputy Attorney General and be responsible for managing Department detention resource allocations, exercising financial oversight of detention operations, and ensuring the implementation of efficiency and effectiveness improvements in Department detention operations.

In 2001, the President's budget contains requests for \$2.2 billion for detention functions within the United States Marshale Service (DSMS), the Ismigration and Maturalization Service (IMS), and the Bureau of Prisons (808). This represents 9 percent of the Department's total budget request. Detention costs will continue to increase as the detained population rises as a result of effective law enforcement initiatives, enforcement of immigration laws, and other factors. In 1999, serious funding shortfalls in several of the Department's key detention budgets underscores the need for strong management focus on the Department's detention functions.

In recognition of the importance of planning for detention needs and controlling detention costs, the Department conducted a Detention and Incarceration Study in 1998. This study examined the multiple amports of detention in the Department, and offered 32 recommendations for improvement of the system. Of particular note, the study comments about various management lasses, and makes findings and recommendations partining to centralized detention management. The study concluded that the Department's Detention Planning Committee (DPC), which is chaired by the Deputy Attorney General and includes as members the heads of USBA, IMS, and SOP, needs "to develop solutions to insues that 50 beyond their individual component interests" and that "there must be more of a Departmentwide outlook on the part of the DPC."

By appointing a Detention Trustee, the Department will centralize the financial overeight of the detention functions of USMS and IMS. In addition, the Trustee will seek to implement measures that improve overall effectiveness and efficiencies in the department's detention processes.

2. Costs of Illegal Aliena Held Cutside Continental United States

The Department requests \$25,000,000, to remain evaluable until expended, to fund or reinburse other emtities for the costs associated with the care, maintenance, detention, and repatriation of illegal eliens held outside the continental V.S.

In 1999, the U.S. Government intercepted 4,782 aliens, primarily from Chine and Cube, trying to enter the United States illegally. In general, those aliens intercepted at sea are not subject to the Immigration and Mationality Act, and can be returned fairly quirkly to their country of origin. Even in these cases, the U.S. Government often incurs the cost to hold, or to have snother Government hold, the aliens until they are repatriated. In 1999, the costs of dataining illegal aliens outside the U.S. exceeded \$15,800,000. For those sliens who reach the U.S. or its territories, however, the process becomes more complex and the costs are much greater. Nost of these illegal aliens, if not all, apply for political asylum, and are detained pending adjudication of their asylum patitions and subsequent appeals. The U.S. incurs the cost of their care, detention, and, ultimately, repatriation if asylum is not granted. However, no agency is budgeted for these costs, and how these costs will be paid in a continuous issue of major coocurn.

The Department's request for \$25 million will provide a fund from which the costs associated with illegal aliens held outside the continental U.S. can be paid, regardless of which government entity incurs the costs.

<u>Patention Trustee</u> Salarias and Expenses Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is itslicized and underlined, and language proposed for deletion is bracketed.

Salaries and Expenses

for necessary expenses to establish a federal Detention Trustee who shall exercise all power and functions authorised by law relating to the detention of federal prisoners in non-federal institutions or otherwise in the rustody of the United States Marshals Service, and the detention of aliens in the custody of the Ismigration and Maturalization Service. The Trustee shall be responsible for (1) construction of detention facilities or for housing related to such detention; (2) the management of funds appropriated to the Department for the exercise of any detention functions; and (3) the direction of the United States Marshals Service and Ismigration and Maturalization Service with respect to the exercise of detention policy setting and operations for the Department, \$26,000,000; of which not to exceed \$25,000.000 is made available until expended to fund or residures other antities for the costs associated with the care, maintenance, detention, and repatriation of illegal aliens held outside the continental United States.

Explanation of Changes:

1. This language establishes the Detention Trustee account for the Department of Justice.

Department of Justice Joint Automated Booking System Program Management Office

ያ

Joint Automated Booking System Salaries and Expenses Summary Statement Fiscal Year 2001

For FY 2001, the Department requests \$1,800,000 for the continued support of the Joint Automated Booking System (JABS) Program Management Office (PMO), and to fund operations and maintenance of JABS software and central database servers essential for the storage and transmission of offender data. JABS will eliminate repetitive booking of offenders, standardize Federal booking data elements, enable cross-agency sharing of booking information, enhance cooperation between law enforcement agencies, and reduce the threat to law enforcement officials and the public by facilitating the rapid and positive identification of offenders. JABS is intended to be transparent to each agency's mission critical booking capability, and will rely on component supplied interfaces to integrate data from their mission critical booking systems. JABS will be designed to use the existing Depart of Justice (DOJ) IT architecture. DOJ's Justice Consolidated Network and the participating agencies' respective IT infrastructures and information systems. This request represents to increase over the appropriation for FY 2000.

Program Goals:

The JABS program goals are to:

- Automate the collection and transmission of biographical data, fingerprints and photographs of offenders;
- Provide an automated conduit for federal criminal justice agencies to IAFIS;
- Support the automation of federal booking processes;
- Reduce process and data redundancies in arrest bookings through data sharing;
- Reduce the time required for positive identification and processing of offenders;
- Enable law enforcement organizations to track offenders from booking through disposition, and;
- Enable law enforcement organizations to share and exchange booking information.

PROGRAM DESCRIPTION:

JABS has a base program of \$1,800,000 for program management support. The JABS Program Management Office (PMO) functions as the technical system integrator for JABS, providing centralized monitoring and evertight. The PMO provides a centralized budget function to ensure the successful, simultaneous deployment of both the JABS information sharing system and agency automated booking capabilities. The PMO also establishes centralized procurement vehicles to facilitate volume purchases of JABS confinence required by the participating components.

JARS is a major JXD initiative and represents the first information sharing project among DOD's five law enforcement components: Bureau of Prisons (BOP); Drug Enforcement Administration (DEA): Federal Bureau of Investigation (FRI). Intringention & Naturalization Service (INS) and the U.S. Marshals Service (USMS). JABS itself is not an infrastructure project. However, the JARS Program is an initiative that will enable participating agencies to build an automated buoking capability using their respective infrastructures and icashare information by using the DOJ information technology in frastructure and exchitecture.

In regard to the relationship to the DAJ Stratogic Plan. JABS will promote the Department's goals of (1) implementation of a common information technology infrastructure and enterprise, wide architecture and (2) the resulting ability of participating agencies to share information in the conduct of their respective criminal justice missions.

For Fiscal Year (FY) 1999. JABS received \$10 million from the Assets Forfeiture Fund Super Surplus (AFFSS). These funds were used to support the development of the components' automated booking stations (ABS); to identify security and system requirements as explained in the JABS System Boundary Document; to support the South Florida Pilot System; for JABS system engineering design, engineering, hardware and software; and (5) \$1.7 million for JABS Program Management including development of applicable program plans.

For FY 2000, the IABS received \$6 million to continue deployment of IABS and the rollout of automated booking capabilities within law enforcement agencies. This 56 million includes \$1.8 million in appropriated funding and \$4.2 million in additional funding provided via the AFFSS. These funds will be used for program management, maintenance of IABS software, establishing the production and contingency operating sites, and continued support of the components! ABS development and deployment.

Planned Base forteneses

For Fiscal Year 2001, the PMO with use the \$1.8 million for program management support and managemenage of the JABS production system. Additionally, the PMO will continue to explore possible participation by other Federal agencies (i.e., Treasury) that would benefit from the automated booking capabilities and information sharing capabilities of JABS.

Namewhand Communications Salaries and Expenses Summary Statement Fiscal Year 2001

For 2001, the Department seeks a total of \$205,000,000 in no-year funding, 12 positions, and 12 FTE, for the conversion of wireless radio communications to narrowband operations. This represents an increase of \$89,059,000 over the FY 2000 appropriation level to purchase radios and narrowband infrastructure. legacy operations and maintenance, as well as spectrum management services. This request includes \$81,555,000 to continue the implementation of the Justice Wireless Network (JWN), \$7,000,000 for wireless commercial services and \$504,000 for spectrum management services. The Wireless Management Office (WMO) will consolidate wireless communications management functions, including procurement, radio site development, and spectrum management.

This request includes \$92.545,000 which was transferred from various component's bases in FY 2000, as follows: \$50,000,000 from the Federal Bureau of Investigation (FBI), \$20,733,000 from the Drug Enforcement Administration (DEA), \$18,510,000 from the Immigration and Naturalization Service (INS), \$2.762,000 from the United States Marshals Service (USMS), \$500,000 from the Bureau of Prisons (BOP), and \$40,000 from the Office of the Inspector General (OIG).

Federal Government agencies are required by 47 U.S.C. 903(d)(1) to make more efficient use of their radio spectrum. The National Telecommunications and Information Administration (NTIA) is implementing regulations that require all Federal spectrum users to narrow, by one-half, the bandwidth used to transmit radio signals by the year 2005 for Very High Frequency (VHF) allocations and 2008 for Ultra High Frequency (UHF) allocations. The Department's 2001 Budget includes \$92,545,000 in FY 2000 transfers from components to accelerate the necessary equipment upgrades to comply with these deadlines.

BASE PROGRAM DESCRIPTION:

The Department faces a number of serious challenges in providing its agents and officers with operationally effective wireless communications in the next millennium, including: 1) meeting the National Telecommunications and Information Administration (NTIA) mandate that all Federal spectrum users narrow, by one-half, the bandwidth used to transmit radio signals by the year 2005 for Very High Frequency (VHIF) and 2008 for Ultra High Frequency (UHF) allocations, which is based on the Title 47, U.S.C. 903 (d)(1) requirement that all federal government agencies make more efficient use of their radio spectrum; 2) improving interoperability among Federal, state, and local law enforcement personnel, which has become critical as task forces and coordination among different law enforcement agencies have become increasingly important to successful operations; and, 3) taking advantage of new wireless technologies and commercial services to expand features and improve performance. To meet these challenges white minimizing the amount of investment dollars needed to implement new systems, the Department has consolidated and centralized the implementation and management of DOJ narrowband wireless systems for the major DOJ bureaus (Federal Bureau of Investigation, Drug Enforcement Administration, Immigration and Naturalization Service, United States Marshals Service, Federal Bureau of Prisons, and the Office of Inspector General). The establishment of the Narrowband Communications Account is a direct result of this effort and centralizes all funding for Land Mobile Radio (LMR) systems within one account.

Investigative and operational activities of Federal law enforcement rely extensively on the ability to communicate via LMR. Commercial telecommunications services, although improving significantly in terms of coverage and capability, do not meet the reliability, accessibility, and security requirements of Federal law enforcement agencies, particularly for tactical, sensitive communications. In order to provide the ability to communicate, the Department maintains an extensive infrastructure of radio and wireless equipment, vehicular radios, and handheld portable radios to provide reliable, secure and quick communications between

agents and/or field office personnel. Many of the communications systems used by the Department's law enforcement personnel have been operational for an extended period of time and have, or will have, surpassed their life expectancy within the next few years. Further, much of the equipment is out of production and can no longer be supported. These issues coupled with the NTIA narrowband mandate and the need for interoperability among law enforcement agencies requires the Department to make substantial investments in appeading and improving wireless radio systems.

Over the last year, the Department has made major changes in the management and implementation of wireless radio systems. A comprehensive review and evaluation of the Department's approach for implementing the narrowband conversion has resulted in the development of a Justice Wireless Communications Plan. This has brought down the projected systems investment by almost \$1 billion, and both validates the importance of narrowband radio systems and provides a detailed "roadmap" for consolidating the individual component's narrowband efforts into a coordinated and centrally managed program. The cornerstone of the wireless communications plan is the consolidation of component narrowband radio systems into a common wireless "backbone" or Justice Wireless Network (JWN). The development of this system will allow for a phased approach for the consolidation of the components' radio requirements into the JWN. To manage this major consolidation effort, the Department has established the Wireless Management Office (WMO) within the Justice Management Division. The WMO will be responsible for the planning, implementation and operation of the JWN as well as managing all funds within the Narrowband Communications account.

Under the Department plan, FY 2000 will be dedicated to, cutting operations and maintenance costs of legacy systems; developing department-wide standards, policies, and operating procedures; continuing pilot sites in San Diego, Salt Lake City, and Seattle to test operation and system design concepts: completing the planning for the JWN; beginning the implementation of the JWN in the Western part of the United States; and assessing the feasibility of using commercial services to meet DOJ law enforcement wireless communications needs. For FY 2001, the Department is requesting no-year funding to complete implementation of the JWN in the Western part of the United States, to begin implementation in the Central part of the US, and to procure commercial wireless services to minimize the need to invest in LMR infrastructure. All narrowband conversion funds will be managed by the WMO and funds will be reimbursed to components only for use in performing those fiscal year 2001 activities that have been identified in the Department Wireless Communications Plan. The following summarizes the fiscal year 2001 effort.

Additionally, Public Law 1040134 authorized the Secretary of Commerce to charge Federal agencies for spectrum management services. The National Telecommunications and Information Administration estimates that the Department of Justice costs for 2001 will increase by \$504,139 above the 2000 estimate of \$1,403,824, based on the annual number of frequency assignments and initiatives that are required by the NTIA.

PROGRAM CHANGES

Pos. F1E Amount
Narrowband Cummunications \$88,555

Land Mobile Radio

As pair of the total increase of \$88,555,000 the Department is requesting an increase of \$81,555,000 in no-year funding to continue the implementation of the JWN. In FY 2006, the Department will have established technical standards for resource sharing and interoperability, and will have completed engineering assessments of radio requirements in the West Region for all components. In FY 2001, the Department's efforts will focus mainly on implementing the JWN. The Department has developed a regional implementation framework that sequences activities within regions. Beginning with the West Region, which includes the states of Alaska, Hawaii. Washington. Oregon, California. Idabo, Montana. Wyoming, Nevada, Utah, Colorado, Arizona, and New Mexico. The Department will then move to implement the JWN in the Central, East, and Northeast regions. The funds will allow the Department to fully implement the JWN in the West Region in FY 2001, which has over 14,000 agents and officers, and begin implementation in the Central Region (North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Minnesota, Iowa, Missouri, Arkansas, Louisiana, Wisconsin, Illinois, Michigan, and Mississippi).

Specifically, \$31,335,000 will be used for infrastructure investment such as base stations, repeaters, and receivers, and \$16,420,000 will be used to fund system installation, engineering, integration, documentation, and training. The WMO is concentrating the investment in infrastructure as this element is the most difficult, time intensive aspect to implement and is the critical success factor in meeting the NTIA mandate. Additionally, \$33,800,000 will be used to fund the acquisition of subscriber equipment including portable and mobile radios as well as power booster adapters for vehicles. Including base resources, the Department will procure over 14,000 radios in FY 2001. All new radios will meet narrowband specifications and JWN standards.

Commercial Services

The Department is also requesting an increase of \$7,000,000 in no-year funding for wireless commercial services.

Maximizing the use of commercial services is central to the DOI's strategy to minimize land mobile radio (LMR) investment requirements and to provide the right types of functionality in the field to support operations. The types of commercial services included in the request include cellular, personal communications services (PCS), specialized mobile radio (SMR), mobile satellite

services (MSS), and mobile data services. Altogether, they provide a complementary solution to meeting DOI's wireless requirements. By off-hoading non-tactical wireless requirements onto commercial services, DOI can reduce the investment in LMR solutions, both by reducing the number of subscriber devices and LMR traffic. Both of these factors significantly reduce investment requirements. Commercial services, both voice and data services, also provide additional functionality needed to support operations. Voice capabilities provide the ability to communicate directly with "off-net" parties such as the public and United States Attorneys, and provide additional features such as caller II) and voice mail features. Data capabilities provide formatted computer-based data to the agent which may include case history, deconfliction, biometric data, and other information stored and shared in criminal justice and law enforcement data bases.

Of the amount requested, \$5,940,000 will be used to fund cellular, PCS, and SMR services, \$450,000 will be used for MSS services, and \$610,000 will fund the use of mobile data services.

Public Key Infrastructure Salaries and Expenses Summary Statement Fiscal Year 2001

For FY 2001, the Department seeks no-year funding of \$4,376,000 to begin development and implementation of a DOJ Public Key Infrastructure (PKI). Funds will be allocated to the Drug Enforcement Administration (\$2,876,000) to build DEA's certificate authority and directory services, and to the Justice Management Division (\$1,500,000) for the development of the DOJ-wide bridge authority that will ensure the DOJ PKI is fully functional across the Department and is compatible with the infrastructure being developed by the Federal bridge authority.

Current legislation requires the Department of Justice and other Federal Agencies to consider alternative means to accept electronic transmissions from the public. The Paperwork Elimination Act mandates that federal agencies provide electronic forms to the public and a secure method for transmitting completed forms back to the government. The Office of Management and Budget has prepared guidelines to help agencies develop electronic versions of forms to accept "electronic signatures." The Department has focused on the functionality provided by a Departmental PK1 to assist in meeting the requirements of this mandate.

No-year funding of \$4,376,000 will be managed centrally by the Department to ensure all components deploy and implement PKI appropriately.

PROGRAM DESCRIPTION:

The deployment of a full-featured Public Key Infrastructure (PK4) coupled with effective security policies will provide the necessary manns through which to secure the Deportment's critical infrastructures. Public key technology provides a mechanism to strongly subministed users over closed or open networks, ensure tend-users to end-user their integrats of data transmitted over those networks, achieve sechnical non-repudiation for transactions, and allow strong encryption of information for privacy confidentiality or security purposes. The strong authentication of users is a critical element in securing the Department's critical infrastructure. Insurance the integraty of data from end-user to end-user makes it more difficult for data substitution macks. PKI provides the capability for technical non-repudances, which binds a user to a transaction in a fashion that provides important forensic evidence in the event of a later problem, and confidentiality, which protects privace information from being divulged.

Current legislation requires the Department of Justice and other Federal Agencies to consider alternative means to accept electronic transmissions from the public. The Papers ork Elimination Act mandates that federal agencies provide electronic forms to the public and a secture method for transmissing completed forms back to the government. The Office of Management and Budget has prepared guidelines to help agencies develop electronic versions of forms to accept "electronic signatures." The Department has focused on the functionality provided by a Departmental PKI to assist in meeting the requirements of this mandate.

To migrate to a secure, paperless electronic environment within the Department, a secure platform is required. The Department anticipates that many paper transactions could be replaced with much more cost effective electronic transactions with a higher level of authentication and integrity which can be handled bast by the application of digital signatures. Digital signatures, Digital signatures. Digital signatures, Digital signatures, together with a viable PKI, will accelerate the migration to a secure paperless electronic organization. In the future, to foster seamless electronic communications among the compensation and to ensure reliable and cost-effective network operations, components of the Department with meet to improve network security, and strengthen service level management capabilities through a robust PKI capability.

For FY 2001, the Department seeks no-year funding of \$4,076,000 for the PKI development and implementation. The PKI funds will be returnly managed and only used so perform the FY 2001 activities that have been identified in the Departmental PKI Implementation Plan. The following summarizes the FY 2001 component effort that will be accomplished in support of PKI.

Bridge Certificate Authority

The Departmental PKT architecture will be based on a network model to ensure flexibility, scalability, and interoperability among the components of the Department. The technical implementation at this model will use the Bridge Certificate Authority (CA) concept, which was proposed by the Federal PKI secting committee. The Bridge CA Backhains trust between participating component certificate authorities. The proposed architecture incorporates the notion of bill redundancy and disaster recovery for the DDI Bridge CA and for each component CA. The cost to implement a Bridge CA includes, among other items, the following selection and mitectation development of the concept of operations, policy statements, certificate practice statement. Bridge CA secure facility: desire roots subtract the concept of operations, policy statements, certificate practice statement. Bridge CA secure facility:

Component PKI- DLA

Each component INA is expected to metade the following items: development of supporting policy documents, design and integration services; secure facilities and equipment, deployment and installation, archive management, "hot" space disaster recovery site, user certificates; component directory and border directory; digital notary, archive, required user become and them withware and locans and smart cards. In FY 2001, DEA will become the first DOJ component to implement a certificate authority and begin integrating PNI into several of its application areas. DEA has been chosen to go first because they have the most refined plon for the use and implementation of PNI in this DOJ.

Department of Juntice General Administration Telecommunications Carrier Compliance Fund Summary Statement and Performance Plan Fincal Year 2001

The FY 2001 budget request includes an enhancement of \$105,000,000 in direct appropriations for the Telecommunications Carrier Compliance Fund (TCCF). Additionally, the Administration is proposing that \$120,000,000 within the Department of Defense appropriation be made available to the TCCF through a reimbursable agreement between the Department of Justice (DOJ) and the Department of Defense.

2001 Performance Plan and 1999 Accountability Report

A. Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of the Telecommunications Carrier Compliance (TCC) program is to preserve law enforcement's ability to conduct lawfully-authorized electronic surveillance in order to ensure national security and public safety while remaining the public's right to privacy.

The DOJ Strategic Plan (1998-2002) identifies seven "core" functions that establish the framework for the goals and strategies of the plan. The TCC program directly supports two of these core functions: "Investigation and Prosecution of Criminal Offenses" and "Assistance to Tribal, State and Local Governments."

Within the "Investigation and Prosecution of Criminal Offenses" core function, the program supports all five identified goals:

- Goal 1: Reduce violent crime, including organized crime and gang-related violence.
- Goal 2. Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts.
- Goal 3: Reduce espionage and terrorism (sponsored by foreign and domestic groups in the United States and abroad when directed at U.S. citizens or institutions).
- Goal 4: Reduce white-collar crime.

Goal 5: Coordinate and integrate DOJ law enforcement activities wherever possible, and cooperate fully with other federal agencies that are critically linked to improved operation of the Nation's justice system.

Within the "Assistance to State and Local Governments" core function, the TCC program specifically supports the following goal:

Goal 1: Invest in the crime-fighting and criminal juvenile justice system capabilities of state and local governments.

B. Highlights of 1999 Mission Critical Results

The DOJ began reimbursement activity to the telecommunications industry during FY 1999. Using a CALEA software Right to Use (RTU) license agreement approach, the DOJ committed \$101,800,000 of the \$102,580,270 available in the TCCF to reimburse industry for CALEA software solutions on four priority switching platforms. The DOJ pursued software RTU license agreements with manufacturers and their facilitating carrier partners on one or more of their high priority switching platforms. As a result of these negotiations, on September 10, 1999, Ameritech Services, Inc., Nortel Networks, Inc., and the DOJ entered into a software RTU license agreement. The purpose of the agreement is to reimburse Ameritech for its purchase of the CALEA software RTU license for the DMS-100 wireline switching platform and to establish an agreed upon total license fee for four Nortel switching platforms: the DMS-100 and DMS-10 wireline platforms, the DMS-MTX cellular platform, and the DMS-MSC Personal Communications Services (PCS) platform switches. On December 30, 1999, an agreement was signed between Nortel, AirTouch Cellular, and the DOJ for the RTU license on the DMS-MTX switch platform. As a result of this agreement, Nortel Networks will grant a CALEA software RTU license to other carriers at no charge for all switches of the same platform type installed or deployed on or before January 1, 1995. In addition, the DOJ has worked with AG Communications, Lucent Technologies, Motorola, and Siemena, and has reached an informal agreement relative to the nationwide RTU license price with each of these manufacturers; however, these agreements cannot be finalized without additional funding.

The DOJ has also initiated capability-related and capacity-related activities with the telecommunications industry regarding technologies and services other than wireline, cellular and broadband PCS, (e.g., paging, Mobile Satellite Services [MSS]; Specialized Mobile Radio [RSMR]; and Enhanced Specialized Mobile Radio [RSMR]. Those activities included developing consensus law enforcement electronic surveillance requirements for telecommunications technologies required to comply with CALEA pursuant to the assistance capability requirements of Section 103, and identifying, publishing, and ensuring deployment of capacity requirements in accordance with Section 104 of CALEA.

C. FY 2001 Performance Goals and Indicators

The goal of the TCC program is to reimburse the telecommunications industry, in a cost effective manner, for the modifications necessary to deploy CALEA solutions. In 2001, it is anticipated that there will be two telecommunications technologies for which capacity-related activities have been initiated.

D. New FY 2001 Initiatives

An enhancement of \$105,000,000 will continue the acquisition of generic software releases comprising the CALEA solutions for two additional priority wireline and two priority wireless platforms. It is expected that these acquisitions will make CALEA solutions available in many priority geographic regions, including urban areas where significant crime levels exists. Also included for high priority CALEA coverage are the High Intensity Drug Trafficking Areas and the Southwest Border Initiative locations.

E. Data Validation and Verification Issues

Data Collection and Storage: Data on the number of priority switching platforms/intelligent network peripherals undergoing systems deployment will be collected through disbursement of TCCF funds, and data regarding historical electronic surveillance activity will be collected through the DOI's Flexible Deployment Assistance Guide using both automated and manual collection and input methods.

Data Validation and Verification: Data regarding historical electronic surveillance activity on specific switches will be validated with respect to the switching equipment using the Local Exchange Routing Guide. To the extent possible, actual historical electronic surveillance activity will be verified with law enforcement agencies performing lawfully-authorized electronic surveillance within a given geographic region.

<u>Data Limitations</u>: Due to the competitive sensitivities regarding the provision of cost and price data, the DOJ has limited access to substantiate CALEA solution prices.

General Administration Telecommunications Carrier Compliance Fund Justification of Proposed Changes in Appropriations Language

The 2001 Request to the Congress includes proposed changes in the appropriations language listed and explained below. New language is italicized and underlined, while deleted matter is enclosed in brackets.

Telecommunications Carrier Compliance Fund

For payments authorized by section 109 of the Communications Assistance for Law Enforcement Act (47 U.S.C. 1008), [\$15,000,000] \$120,000,000, to remain available until expended. (Department of Justice Appropriations Act, 2000, as enacted by section 1000(a)(1) of the Consolidated Appropriations Act, Public Law 106-113).

Explanation of Change: The 2000 Justice Appropriations Act provided \$15,000,000 for the Telecommunications Carrier Compliance Fund. For 2001, base level funding of \$15,000,000 plus an increase of \$105,000,000 is requested for payments authorized by the Act, for a total of \$120,000,000.

BASE PROGRAM DESCRIPTION:

The Communications Assistance for Law Enforcement Act (CALEA), Public Law 103-414, was enacted in 1994 to preserve the existing capabilities of federal, state, and local law enforcement agencies to lawfully conduct court-authorized electronic aurveillance and to effectively articulate law enforcement's electronic surveillance requirements and deployment priorities to the telecommunications industry. CALEA clarified the responsibility of telecommunications carriers to assist law enforcement agencies with the lawful interception of communications and the collection of call-identifying information in a rapidly changing telecommunications environment. This legislation was necessitated by the erosion of law enforcement interception capabilities as a result of the deployment of advanced telecommunications features and technologies in the public switching telephone network.

To facilitate compliance by telecommunications carriers, CALEA authorized an appropriation of \$500,000,000 to pay for reasonable costs directly associated to modify eligible equipment, facilities, and services to establish the necessary capabilities and capacities identified by law enforcement. The Attorney General delegated management and administrative responsibilities of CALEA to the FBI in February 1995 (28 C.F.R. 0.85 (o)). The FBI is implementing CALEA on behalf of all federal, state and local law enforcement agencies.

The Omnibus Consolidated Appropriations Act of 1997 (Public Law 104-208) established the Department of Justice (DOJ)

Telecommunications Carrier Compliance Fund (TCCF) to make payments to telecommunications carriers, equipment manufacturers, and providers of telecommunications support services pursuant to Section 109 of CALEA. Additionally, Congress authorized any agency of the United States with law enforcement or intelligence responsibilities to deposit into the TCCF any unobligated balances that are available until expended, consistent with congressional notification requirements for reprogramming of funds.

In 2001 base level funding is \$15,000,000. Cumulative total funding in the TCCF would be \$132,580,270 consisting of prior year funding of \$102,580,270, plus the 2000 appropriation of \$15,000,000, plus 2001 base funding of \$15,000,000. These funds will be applied to purchase the unlimited "right to use" generic software upgrades containing the CALEA solution for priority telecommunication switching platforms, required modifications to eligible intelligent network peripherals (INPs), and for solution deployment on the remaining available priority platforms.

Justification for Resources Requested

Item: Reimburgements to Telecommunications Carriers, \$105,000,000

The current state of CALEA implementation reflects a decision by the Federal Communications Commission (FCC) to extend the assistance capability compliance date to June 30, 2000. With this date rapidly approaching, the implementation of CALEA has taken on a new urgency within the telecommunications industry. For example, telecommunications equipment manufacturers are finalizing their development of CALEA solutions for the various switching platforms used throughout the network. Based on the DOJ's discussions with several manufacturers, most are in the advanced stages of CALEA solution development or have already begun making solutions available to their customers. Having reached an agreement with Nortal Networks for a nationwide Right-to-Use (RTU) license, the DOJ is currently in RTU license agreement negotiations with the following manufacturers: AG Communications, Lucent Technologies, Motorola, and Siemens. When considered cumulatively, the switches of these four manufacturers and Nortel Networks account for approximately 90 percent of historic lawfully-authorized electronic surveillance activity.

The activities associated with pursuing nationwide RTU licenses include analyzing the financial merits of a manufacturer's proposed price in relation to the Government's commercial exposure of reimbursing individual carriers on a switch-by-switch basis; detailed contractual negotiations with manufacturers and their associated carrier partners; and tenting and evaluating a manufacturer's proposed solution.

With technical solutions available for carriers to deploy within their networks, the DOJ will conduct analysis of carriers' deployment proposals. The analysis will consider how carriers' proposed deployment of CALEA-compliant solutions meet law enforcement's lawfully-authorized electronic surveillance needs within the financial constraints of the available funding within the TCCF.

Additionally, a central tenet of the DOJ's overall CALEA implementation strategy includes allowing carriers to deploy CALEA-compliant solutions in accordance with their normal business cycles, where such deployment will not delay implementation of CALEA solutions in high priority areas. This strategy is the result of the DOJ's recognition of the issues facing carriers and represents an attempt by the DOJ to minimize the costs and operational impact of CALEA compliance on the industry. To this end, the DOJ has developed a Flexible Deployment Assistance Guide and will analyze carrier-provided Flexible Deployment schedules in coordination with the FCC with respect to carrier petitions for extensions of the June 30, 2000 and September 30, 2001 assistance compliance dates.

Vendors of telecommunications switching equipment and peripherals began to make CALEA solutions available in calendar year 1999. Many of those were incremental solutions. Solutions providing all CALEA capabilities will be available in calendar years 2000 and 2001. Previous TCCF funds have been applied to reimburse the telecommunications industry for CALEA software RTU licenses for limited numbers of priority switching platforms.

Base level funding is \$15,000,000. The \$105,000,000 requested provides significant funding for deployment of CALEA solutions in high priority geographical regions. Additionally, this funding will allow for the acquisition of CALEA RTU licenses on either two priority wireline platforms or two priority wireless platforms.

The telecommunications industry has recognized the time requirements of the original law, as later modified by the FCC, and understands that capability requirements are to be available by June 30, 2000, and the capacity required by law enforcement is mandated to be available by March 12, 2001.

Enhanced funding will provide the opportunity to address major portions of the country currently having difficulty in addressing serious crime problems. An example is the High Intensity Drug Trafficking Areas and Southwest Border areas where significant drug trafficking exists. Earlier deployment of CALEA solutions will provide law enforcement with the ability to conduct electronic surveillance in priority areas of the country, greatly maximizing the effectiveness of law enforcement agencies.

Without the required enhancement, reimbursement to telecommunications carriers for CALEA software and deployment will not be

possible. As a result, many high priority erass of the country will remain without the CALEA capability. Without funding to deploy CALEA solutions, the integrity of law enforcement's surveillance activity will be at risk, and its ability to arrest and successfully prosecute criminals eroded.

Please see Summary Performance Plea, Performance Coals, Targets and Actuals, Section Q for workload and performance measures.

Counterterrories Fund

Sussary Statement and Parformence Plan Fiscal Year 2001

Component Hission: To relaburse Departmental Components for extraordinary costs incurred in support of countering, investigating, or presenting demostic and/or international terrorism, to fission reward payments in connection with such activities, and to restore the operational capacities of offices destroyed or demaged in any demostic or international terrorist acts.

For 2001, the Department seeks \$25,000,000 in no-year funding for the Attorney General's Counterterrories Fund. In 2000, \$10,000,000 in no-year funding was provided by the Congress.

The Counterterrorism Fund has been utilised by the Department of Justice since 1995. With \$22,844,180 in carryover funding and the 2000 appropriation of \$10,000,000, the Fund should have sufficient funds to respond to any terrorist threats/acts in 2000. In 2001, \$25,000,000 would be used to replenish the Fund in the event of emergency situations that could arise.

It is the Attorney General's policy to approve the use of resources from the Counterterrorism Fund for entracrdinary costs only (costs such as base salaries are not considered "entracrdinary" in actual). Since its inception, approximately \$76 million has been distributed from the Fund for extraordinary costs. The Attorney General has approved the use of the Counterterrorism Fund to fund extraordinary costs related to the Ohlahoma City bombing and trial, the Q-7 Bonomic Funmit, the bombing of the Al-Khobar Towers in Saudi Arabia, the 1996 Funmer Olympics in Atlanta, the Conventions, the Freeman Trial, and the investigation of the bombings of the U.S. Embassies in Easys and Tansania.

Counterterrories Fund Salaries and Species Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is Italicised and underlined, and language proposed for deletion is bracketed.

Seleries and Expenses

For necessary expenses, as determined by the Attorney General, [\$10,000,000] \$25.000,000, to remain available until expended, to relaburee any Department of Justice organization for (1) the costs incurred in resultablishing the operational capability of an office or facility which has been damaged or destroyed as a result of any dessetic or international terrorist incident, and (2) the costs of providing support to counter, investigate or prosecute dessetic or international terrorism, including payment of rewards in connection with these activities: Provided, That any Federal agency may be reimbursed for costs of detaining in foreign countries individuals accused of acts of terrorism that violate the laws of the United States: Provided further, That funds provided under this paragraph shall be available only after the Attorney General notifies the Cosmittees on Appropriations of the House of Representatives and the Senate in accordance with section 605 of this Act. (Department of Justice Appropriations Act, FY 2000, P.L. 106-113)

Explanation of Changes:

1. No substantive changes proposed.

Provident's Budget Request:

Funds were requested to cover extraordinary costs incurred in support of countering, investigating, or presecuting domestic and/or international terrorism, to finance reward payments in connection with such activities, and to instore the operational capacities of offices destroyed or elemaged in any domestic or international terrorist acts. (The traditional intesion of the CT Fund). Funds were also requested for the costs of conducting it threat assessment of Federal agencies and their facilities, costs associated with ensuring the continuance of essential government functions during a time of emergency, costs for activities related to the protection of the National Infrastructure, costs of the National Committee Properational Office, and the costs of designing the Federal Intrusion Outside.

Congressional Appropriation Action:

Funds provided were to cover the traditional mission of the CT Fund, with funding for the National Infrastructure Protection Center, the National Domastic Preparadness Office, and the Continuation of Operations (COOP)/Continuity of Government (COG) provided to appropriate agency accounts.

MARK PROGRAM & PROGRAM CNAMORE: The Counterterrorism Fund has been utilized by the Department of Justice since 1995 mainly to reimbures extraordinary costs, above and beyond base levels, of Departmental components. These extraordinary costs were incurred in support of countering, investigating, or prosnouting demostic and/or international terrorism, to finance reward payments in connection with such activities, and to restore the operational capacities of offices destroyed or samaged in any demostic or international terrorism acts.

The personal loss and injury sustained in terrorist episodes warrant a heightened, more timely response to terrorism. Although Departmental components have been funding to address terrorism concerns, these resources have neither the depth nor the flexibility to ensure that unanticipated terrorist episodes are addressed in the most rapid and effective manner possible. It is the Attorney Ceneral's policy to approve the use of resources from the Fund for extraordinary costs only (costs such as base salarism are generally not considered "extraordinary" in nature). Since its inception, approximately \$75 millian has been distributed for funding of extraordinary expenses. The Attorney General, after notification of GND and Congress, has used the Counterterrorism Fund to cover extraordinary costs related to the Ghiahoma City hombing and trial, the 0-7 Boomaid Summit, the humbing of the Al-Scholar Towers in Saudi Arabia, the 1996 Summer Clympics in Atlanta, the Contennial Park hombing in Stianta, and the 1996 Political Conventions. In addition, Counterterrorism Fund resources have also been used for seat things as:

- Proportive econtectorrorism efforts for the 2001 Winter Olympics in Opten, UT
- . The importmention of the granh of THE flight 800
- Combating Middle Sasters terrorism
- . The Present Trial
- · Investigation of the bembings of the U.S. Bebassies in Kenya and Tanzania

hithough it is impossible to predict the timing, frequency, and severity of terrorist threats/nots, the videopreed devectation reculting from terrorism rample that law enforcement be proposed to the highest possible level. Based on the available belones of the Fund and the Level of past requests for reinforcement of extraordinary expenses, the recourse level requested is estable to provide the Fund with the critical depth and floatbillty accessary to respond to future terrorist threats/nots.

EXECUTIVE OFFICE FOR IMMIGRATION REVIEW

G

ጅ

Administrative Review and Appeals

Summary Statement and Performance Plan Fiscal year 2001

The Department's Administrative Review and Appeals function is comprised of the Executive Office for Immigration Review (EOIR) and the Office of the Pardon Attorney (OPA).

The Executive Office for Immigration Review (EOIR) is requesting a total of 1,140 permanent positions, 1,147 workyears, and \$162,822,000 for FY 2001. This request represents a net increase of 42 positions, 24 workyears, and \$15,926,000 over the 2000 anticipated appropriation of 1,098 positions, 1,123 workyears, and \$146,896,000. The request includes a base reduction of 20 positions and 7 workyears.

EOIR's total requested <u>program increases</u> for FY 2001 (62 positions, 31 workyears, and \$4,979,000) support the continued implementation of the Administration's comprehensive immigration reform effort and tie directly to enforcement increases requested by the immigration and Naturalization Service (INS). A detailed explanation of EOIR's FY 2001 program increases is described on pages 8-10, and a corresponding explanation of EOIR's base program is described on pages 21-26.

The Office of the Pardon Attorney is charged with the receipt and review of all petitions for executive elemency, initiates and directs the necessary investigations, and prepares the Department's recommendations to the President in connection with all forms of executive elemency, including pardon, commutation of sentence, remission of fine, and reprieve. The OPA is requesting a total of 15 permanent positions, 15 workyears, and \$1,727,000 for FY 2001. This represents an increase of \$127,000 over the 2000 enacted appropriation of \$1,600,000. Both FY 2001 permanent positions and workyears remain constant at FY 2000 budgeted levels.

L. Summery Performance Plan

A. Component Mission and Goals, and Relationship to DOJ Strategic Plan

EOIR's FY 2001 request/performance plan directly supports many of the immigration and management priorities, general goals and strategic approaches included in the Department of Justice Strategic Plan, FY 1997-2002. In addition, it incorporates information on performance measurement which will continue to allow EOIR to identify and report performance results. The DOJ Strategic Plan, under the Immigration core function, establishes the connection between strategic goals and those shorter-term objectives identified for FY 2001.

EOIR Mission

The Attorney General is charged with the administration and enforcement of the Immigration and Nationality Act, as amended, and has delegated certain authorities to EOIR to administer and interpret the immigration laws. Generally, EOIR's mission is to provide a uniform interpretation and application of immigration law, ensuring fair treatment for all parties involved. As such, EOIR's mission directly supports the Attorney General's Department-wide goal to "administer and enforce immigration laws in a fair, effective manner." The adjudicative components of EOIR are the Office of the Chief Immigration Judge; the Board of Immigration Appeals (BIA); and, the Office of the Chief Administrative Hearing Officer (Administrative Judge).

EOIR Geals and Objectives

The goals and objectives identified below are defined, of necessity, in quantitative terms. However, at their core, all of EOIR's adjudicative efforts rest upon the primary goal of ensuring, maintaining and improving upon the quality of judicial decision-making.

 To expedite all immigration cases for which EOIR is responsible, including cases involving detained aliens, criminal aliens and aliens seeking asylum as a form of relief from removal, while ensuring the standards of due process and fair treatment for all parties involved.

This directly relates to the DOJ Strategic Plan, CORE FUNCTION: IMMIGRATION, Goal 2: Deliver services to the public in a timely, consistent, fair and high quality manner; Goal 5: Maximize deterrance to unlawful migration and enforce immigration laws in the interior through effective and coordinated and of resources to reduce the incentives of unauthorized employment and assistance; remove deportable/madmissible aliens expeditionally; address interior sanggling and benefit and decument frand; and increase intergovernmental cooperation and the integration of activities among law enforcement entities at all levels of government*; and, Goal 6: Expedite the adjudication of immigration cases while ensuring due process and fair treatment for all parties.

2. To achieve the case processing and adjudication goals of asylum reform, rendering immigration Judge decisions in all new expedited asylum cases within 180 days of the date of filing.

DOJ Immigration Goals 2, 5 and 6.

To achieve the case processing and adjudication goals related to the Criminal Alien Institutional Hearing Programs, rendering decisions in those criminal alien cases prior to each alien's release from incorporation.

DOJ immigration Goals 2, 5 and 6.

"While Goal 5 relates largely to the enforcement functions of the INS, EOIR's role as the independent adjudicator of cases brought by enforcement entities is a key part of the Department's overall strategy to interpret and uphold the immigration laws.

4. To increase productivity by streamlining procedures and implementing management improvements.

This directly relate: to several Department goals, including DOJ Strategic Plan, CORE FUNCTION: MANAGEMENT, Goal 2: Most or exceed the expectation of our customers; Goal 3: Achieve excellence in management practices; and Goal 4: Make effective use information technology (IT).

The strategies outlined in the DOJ Strategic Plan under Immigration Goals 2, 5 and 6 include: the maintenance of a fair and timely asylum process; and, the hiring, training and deployment of Immigration Judges in cities and institutions in order to manage effectively the projected caseload resulting from strengthened immigration enforcement. EOIR's languagement case goals and objectives directly support these DOJ goals and strategies.

B. Highlights of 1999 Mission-Critical Results

EOIR has achieved several notable results related to the implementation of the Illegal Reform and Immigrant Responsibility Act of 1996 (IIRIRA) and subsequent legislation, including the Nicaraguan Adjustment and Central American Relief Act (NACARA). These achievements included the preparation of a variety of regulations and the modification of policies, procedures and automated systems required by the new laws. However, the purpose of this section is to highlight EOIR's mission-critical results as measured against performance indicators tied to GPRA. These results are presented below.

1. Adjudication of Criminal Alien Cases

Goal: Immigrátion Judges complete 95% of Institutional Hearing Program (Criminal Alica) cases prior to the alicas' release for incarceration.

1999 Performance: Immigration Judges completed 91% of IHP cases prior to the aliens' release. This compares to 94% in 1998 and 91% in 1997.

2. Adjudication of Detained Cases

Qual: Immigration Judges complete 95% of detained cases, without applications for relief, within 30 days of receipt.

1999 Performance: Judges completed \$4% of these cases within 30 days. This compares to 91% in 1992 and 1997.

3. Adjudication of Asylum Cases

Goal: Immigration Judges complete 95% of expedited asylum cases within the 180-day established timeframe.

1999 Performance: Judges completed \$8% of these cases within 180 days. This compares to 90% in 1998 and 1997.

C. FY 2001 Performance Goals and Indicators

EOIR is proposing an FY 2001 Performance Plan which is attainable within the requested level of resources and with demonstrable results, as shown below. These FY 2001 goals, organized around EOIR's ongoing priorities, will establish a baseline upon which future performance may be tracked and reported, as required by GPRA.

All of EOIR's management, adjudicative and support programs, strategies and initiatives are tied to the central goal of adjudicating immigration cases in a fair and timely manner. As such, the performance plan targets outcomes in terms of both quantity and timeliness. Of course, the quality of both the work environment and work products is a critical consideration.

- EOIR Priority: Adjudiention of Criminal Alien Cases
 - EOIR will target sufficient resources to the adjudication of the immigration status of alien immates incarcurated in federal, state and local institutions as a result of convictions for criminal officeres (the Criminal Alien Institutional Hearing Program).
 - Immigration Judges will complete 95 percent of these cases prior to the aliens' release from incarcuration.

EOIR Priority: Adjudication of Detained Cases

- EOIR will allocate sufficient resorrous at or near INS detention facilities to provide a level of adjudicative effort which will allow for the optimum effective usage of bed spaces. In consideration of the increasing emphasis upon detention, (e.g., the mandatory detention provisions included in the 1996 Act) the processing of detained alien caseload will continue to be a priority.
- Immigration Judges will adjudicate 95 percent of detained cases, without applications for relief, within 30 days of receipt.

EOIR Priority: Adjudication of Asylum Cases

- EOIR will allow for a sufficient number of Immigration Court dockets to be devoted to asylum adjudications.
- Immigration Judges will complete 95 percent of expedited asylum cases within the 180-day established timeframe.

D. New FY 2001 Initiatives

EOIR's requested program increases of 62 positions, 31 workyears, and \$4,979,000 are tied to two INS enforcement initiatives and grouped into EOIR's initiative to coordinate adjudications resources with those of INS enforcement programs.

Initiative	Posit	ions FIE	* Amou	nt_
Coordination with INS Initiatives	62	! 31	\$ 4,979,0	000

Initiative: Coordination with INS Initiatives (62 positions, 31 workyears, and \$4,979,000). INS has developed the following initiatives for FY 2001 which, taken together, will increase Immigration Judge caseload by 10,000 cases and BIA caseload by 1,200 appeals annually: 1) Border Management and Coordination (5,400 cases and 650 appeals); and 2) Interior Enforcement (4,600 cases and 550 appeals). EOIR's portion of these initiatives includes 10 Immigration Judges, 6 BIA staff attorneys, and the required legal and clerical support positions.

The INS initiatives are fully explained in the INS FY 2001 submission. In general, the Service is requesting additional Border Patrol positions, and Detention and Deportation positions and bedspaces in support of a variety of enforcement goals, including the enhanced capability to apprehend, detain and remove increasing numbers of criminal and non-criminal aliens. The INS initiatives will focus upon the border, criminal aliens, increased detention and alien removals, all areas directly involving EOIR operations.

Critical to the success of these initiatives will be the ability of EOIR to process the resulting Immigration Judge and appellate caseload in a timely fashion. INS removal goals are, in large measure, inextricably tied to EOIR's adjudication process. Similarly, the efficient utilization of enhanced detention capacity is dependent upon the expedited processing of the Immigration Judge and appellate caseload, thereby maximizing the number of aliens INS is able to process through detention facilities. This initiative directly relates to the following immigration goals in DOFs Strategic Plan: Goal 2: Deliver services to the public in a timely, consistent, fair and high quality manner; Goal 5: Maximize deterrence to unlawful migration and enforce immigration laws in the interior through effective and coordinated use of resources to reduce the incentives of unauthorized employment and assistance; remove departable/inadmissible aliens expeditiously; address interior samugiting and benefit and decument fixed; and increase intergovernmental cooperation and the integration of activities among law enforcement entities at all levels of government; and, Goal 6: Expedits the adjudication of immigration cases while ensuring due process and fair treatment for all parties.

E. Data Validation and Verification Impac

Data Collection and Storage: EOIR collects its data from a nationwide case-tracking and office automation system which is entirely integrated with routine case processing operations at both the trial and appellate levels (ANSIR - the Automated Nationwide System for immigration Review).

Data Validation and Verification: Data is verified by on-line edits of virtually every data field. Further, headquarters and field office users and managers have manuals and handbooks which list the routine daily, weekly and mosthly reports which check and verify data. In addition, sudits are conducted, using the system's random number generator, comparing automated data with the corresponding hard case files. Finally, all data entered by courts nationwide is instantaneously transmitted and stored at EOIR headquarters. That process allows for the generation of timely and complete statistical and other data. Data validation is also performed on a routine basis through data comparisons between EOIR and INS databases.

Data Limitations: The volume, nature, and geographic concentration of EOIR's caseload is entirely dependent upon external factors, primarily the enforcement, adjudication, and detention policies and actions of the INS and legislative and regulatory changes to immigration laws and procedures.

Administrative Review and Appeals Selectes and Expenses Justification of Proposed Changes in Appropriation Leagues

The 2001 budget estimates include changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and Expenses

For expenses necessary for the administration of perdon and elemency petitions and immigration related activities, [\$98,136,000] \$164,549,000. [In addition, \$50,363,000 for such purposes, to remain available until expended, to be derived from the Violent Crime Reduction Trust Fund] (Dept. of Justice Appropriations Act, 2000, as enacted by section 1000(a)(1) for the Consolidated Appropriations Act, 2000 (PL. 106.113).

Explanation of change

1. Language for VCRTF is deleted. No appropriation from VCRTF is requested in 2001 because authorization for this fund expires in 2000.

A. Data Validation and Vertification:

How the information is collected: EDER collects its data from a nationwide case-tracking and office automation system which is entirely integrated with routine case processing operations as both the trial and appellant levels (ANSIR-the Automated Nationwide System for Immigration Review).

2) How the information is verified: Data is verified by one-line action of virtually every data. Field. Further, headquarters and field office mere and stanagers have manuals and headbooks which list the routine daily, weakly and monthly reports which check and verify data. In addition, audits are conducted, using the system's readons number generator, comparing automated between the property and the corresponding hard case (time. Finally, all data entered by courts automated is humanessecously transmitted and stored or EOTR handquarters. That process players for the generation of timety and complete statistical and other data. Data validation is also performed on a routine basis through data comparisons between EOTR and INS databases.

3) Clate listinations: None.

See INS for end outcome date.

DECESION UNIT/PROGRAM: Executive Office for Insuleration Review

Department of Justice Care Function: Immigration

Strategic Goal: Inunigration Adags Complete All lentifutional Hearing Program (IHP) Cases Prior to the Alien's Release From Incarceration, While Entering Fair

Treatment to All Purties

B. FY 1999 Performance Report:

٠

During 1999, of the total number of IHP cases adjudicated to completion by lumnigration Judges, 91% were completed prior to the allen's release from incarcaration, as compared to the 95% performance target.

The BIP included 76 federal, state and manicipal prison heaving locations, nearly all of which required judges and support staff to travel to remote size across the United States to conduct Immigration Court hearings. As such, the votame of size, coupled with their resolveness, impacted performance. Another factor was the considerable lead time required to plan for IHP detail smalganasis. The details were planned well in advance, both to provide sufficient notice to the parties and to coordinate IHP calenders with the detries for judges in their house courts. The sumber and duration of IHP details were beend upon past caselond treads, then anodified whenever possible as the year progressed. On occasion, it was not always possible from a scheduling standpoint nor practical from a continuous perspective to schedule details on short notice for case filings which were atther anypical to turnes of volume/location or involved alients whose release dates were near in the fitture (the amount of time remaining on an elica's sentence at the time the charging document is filed with the court directly affects EOIR's ability to complete the case prior to release). Other factors affecting performance included the seeking of continuances for conventations, the to Illness, etc.

Notwithstanding the above, the relatively small gap between performance and targets can be closed by continuing to review cancional trends, site-by-site, and affocuting new resources and reallocating base level resources to target IHP caseload. Further, the continued expension of the use of video teleconferencing equipment will enhance ECIR's capability to adjudicate cases in a timely finished.

C. Issues Affecting Selection of FY 2000 and 2001 Plane:

The performance indicators and targets selected for the FY 2000 and 2001 Plans remain unchanged. The indicators continue to reflect EOIR's priority adjudications. The targets, while high, reflect EOIR's commitment to achieve levels of performance which exceed those reported for FY 1999.

A. Date Velidation and Verification:

- How the information is collected: EOIR collects its data from a nationwide case-tracking and office automation system which is entirely integrated with routine case processing operations at both the trial and appellate levels. (ANSIX-die Automated Nationwide System for Immigration Review).
- 2) How the information is varified: Date is verified by on-line edits of virtually every data field. Further, handquarters and field office mere and managers have tomosals and handbooks which the routine daily, weakly sed executely reports which check and varify data. In addition, sadds are conducted, using the system's random assumble generator, comparing assumpted data with the corresponding hard case files. Finally, all data seasoned by courts sectionwide is instantaneously transmitted and stored at EOIR handquarters. That process allows for the generation of timely and complete statistical and other data. Data validation is also performed on a routing basis through data because through EOIR and INS databases.
- 3) Data limitations: None.

S. FY 1999 Performance Report:

During 1999, immigration Judges completed 689% of all existance of case receipts the 180-day target timefrance, as compared to the 95% performance poil. As with all EORs caseleded, the volume, nature and geographic concentration of case receipts in dependent upon external factors, primarily the antereasment and adjudication policies and actions of the INS. With respect to asystem adjudications, EORs mentions receipt rates and superviseing times on a count-by-count basis and attempts to regime count doctors, as a measure. Reviews were conducted during 1999 in light of preliminary date showing a slight dependation of performance during 1999, as opposed to that reported for 1998. This attention increased the force upon shows cases. As a caseaquence, purformance levels increased to 90% during the first quester of PV 2000. BOSR will redouble its state to measure continuing progress in this zero, including increasing the frequency of case receipts/performance reviews und, as required, adjusting court doctors to allow additional time and transcript to a server on the development of the development of the server of the continuing progress in this zero, including increasing the frequency of case receipts/performance reviews und, as required, adjusting court doctors to allow

In addition, sudies are conducted, using the system's rendom number generator, comparing extramated data with the corresponding hard case files. Finally, all data seased by courts nationwide is instructionaryly transmitted and stored at EOIR headquarters. That process allows for the generation of timely and complete statistical and other data. Data validation is also performed on a routine basis through data comparisons between EOIR and INS deathbases.

³⁾ Data Hesitations: Nives. .

^{*} See INS for end outcome data

DECISION UNIT/PROGRAM: Executive Office for Immigration Review

Department of Justice Core Practice: Immigration

Strategic Goal: Asylum Reform: Straumline Asylum Proceeding to Expeditionally Complete All Asylum Cases, While Engaring Pair Treatment to All Parties

B. FY 1999 Parlermente Resert:

Several legislative actions have directly resulted in a decrease in EOIR's overall caseload figures. Specifically, the expedited removal provisions of IDERA have allowed INS to remove alliens who are incligible for any relief from removal. In previous years most of these cases would have come to EOIR in the detained areas and would be expeditionally completed at the first having. The overall detained exceled dropped by 13,000 cases in FY 1999. Virtually all of those cases would have been completed during the first having. The processing times for the recastains detailed caseload ware virtually identical from FY 1995 to FY 1999.

During 1999, Immigration hadges completed 84% of datained cases within 30 days of medips. The performance goal was 95%. A review of the data indicated two key points:
1) while the 84% performance level for all subject cases was below EOR's goal, on average, detained cases were completed in less than 17 days during 1999; 2) of the cases
completed outside the 30-day goal, the great majority were completed within 1 to 10 days of the goal. Case fluctuations and requests for continuance, as always, affected
performance. EOR will continue to review performance and to target new repources and real-locate base level resources upon detained uses edicitations:

C. Issues Affecting Selection of FY 2000 and 2001 Plant:

The performance indicators and targets selected for the FY 2000 and 2001 Plans remain unchanged. The indicators continue to reflect EOIR's priority adjudications. The targets, while high, reflect EOIR's commissioned to achieve levels of performance which exceed those reported for FY1999.

2001 Estimate	1,140	1,147	162,822,000
Increase/Decrease	62	31	4,979,000

Base Program Description: EOIR, headed by the Office of the Director, is responsible for the general supervision of the Board of Immigration Appeals, the Office of the Chief Immigration Judge, and the Office of the Chief Administrative Hearing Officer. The Office of the Director also provides legal and administrative support to the three adjudicative components. Operations include fifty-two field offices located nationwise.

The volume, nature and geographic concentration of Immigration Judge, Administrative Law Judge and appellate caseload is entirely dependent upon external factors, primarily the enforcement, investigation, adjudication and detention policies and actions of the INS.

The following provides more detailed information concerning the responsibilities and activities of EOIR's components:

Board of Immigration Appeals

Under the direction of the Chairman, the Board hears appeals of decisions of Immigration Judges and certain decisions of INS officers in a wide variety of proceedings in which the Government of the United States is one party and the other party is either an alien, a citizen, or a business firm. The Board is directed to exercise its independent judgement in hearing appeals for the Attorney General, and the antionally uniform application of the immigration laws, both in terms of the interpretation of the law and the exercise of the significant discretion vested in the Attorney General. The majority of cases before the Board involve appeals from orders of Immigration Judges entered in immigration proceedings.

Appeals of decisions of INS officers, reviewed by the Board, principally involve appeals from familial visa petition denials and decisions involving administrative fines. The Board also renders decisions on applications by organizations that have requested permission to practice before the Board, the Immigration Judges, and INS, and renders decisions on individual applications by employees of such organizations.

The Board's mission requires that national policies, as reflected in immigration laws, be identified, considered, and integrated into its decision process. The Board plays the major role in interpreting the immigration laws of this country, an area of law the courts have characterized as uniquely complex. Processing an increasing caseload has been a challenging task in a time of almost constant major legislative action in the immigration field. The Board has provided the principal interpretation of the Immigration Reform and Control Act of 1986 (IRCA), the Immigration Amendments of 1988, the Anti-Drug Abuse Act of 1988 the Immigration Act of 1990 (IMMACT 90); the Anti-terrorism and effective Death Penalty Act of 1996 (AEDPA); the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IRIRA); and, the Nicaraguan Adjustment and Central Amendment Relief Act of 1997 (NACARA). These laws have represented the most fundamental restructuring of the Immigration and Nationality Act since its enactment in 1952, and have presented a myriad of new issues of statutory construction. The Board has issued interpretive decisions and has then reinterpreted the Act as the laws have been reducted.

In response to the continuously increasing careload associated with various Administration latitatives and legislative developments, the Board has initiated a variety of management and regulatory improvements designed to increase efficiency and productivity. A key initiative has been the expansion of the Board from five to nicetoes members, allowing the consideration of appeals using multiple panels. Further, Board attorney staff have been restructured into eight discrete sams, each assigned directly to a Board panel. These structural changes have improved easeload management, accountability and communication.

In addition to management initiatives, EOIR has continued to improve programs through the regulatory process. As an example, the Motions and Appeals Regulation streamlined the motions and appeals practice before the Board by requiring that appeals of Immigration Judge decisions and motions to reopen and reconsider decisions by the Board be filed directly with the Board. These provisions have allowed the Board to assume direct control of filings, replacing a number some and decentralized system of filing at INS District Offices. Further, the regulation establishes time and number simutations notions to reopen and on motions to reconsider. More recently, EOIR has published regulations which allow consideration of appeals using two en banc panels. A much broader regulatory proposal, "Regulations Streamlining Appellate Procedures at the Board of Immigration Appeals," has been promulgated and will be implemented thring FY 2000.

The Board continues to experience a dramatic rise in caseload, increasing from the 12,774 appeals received in 1992 to 30,789 in 1999. Receipts for 2000 and 2001 are projected to exceed 32,000 and 33,000 appeals, respectively, representing an increase of nearly 175 percent since 1992.

Office of the Chief Immigration Judge

The Chief Immigration Judge provides overall program direction, articulates policy, and establishes priorities for the immigration Judges located in fifty-two field offices throughout the United States. Generally, Immigration Judges hold removal hearings to determine the immigration status of aliens. Immigration Judges may order aliens removed or grant relief such as cancellation of removal, voluntary departure, suspension of deportation, registry, adjustment of status, political asylum or waiver of deportability. If the Immigration Judges decide that removability has not been established, they may terminate the proceedings. Bond redetermination hearings are held when an alien in custody seeks release on his or her own recognizance, or a reduction in the amount of bond.

With respect to criminal alien adjudications, the Institutional Hearing Program (IHP) provides the framework for hearings which determine the immigration status of aliens convicted of criminal officeses who are incarcerated in prisons across the United States. In concert with the INS, EOIR has concentrated on the Federal program and those in the seven states most affected by lifegal immigration: California, Texas, New York, Florida, Arizona, New Jersey and Illinois. There are also programs in vittality all other states, the District of Cohembia, Puerto Rico, the Vergin Islands, selected monitories and Bureau of Programs in itelations. The seven state programs, known as the Enhanced IHP, account for the vest majority of the state program caseford and that of the total IHP. This program is a control component of a variety of initiatives designed to impedite the removal of criminal aliens and involves close coordination with INS, BOP and state and local corrections authorities. Currently, 91 percent of the cases which begin in the IHP hearing process are completed prior to the aliens' release from incurrently.

Asylum reform has streamlined the procedures involved in processing asylum cases, integrated INS and EOIR processes, and eliminated duplicative adjudications. Claims that are not approved by INS are automatically referred to EOIR's immigration Judges who conduct full enytum adjudications in the context of removal proceedings. The new asylum procedures, which became effective in January, 1995, include provisions limiting the INS approval of employment suthorization to those aliens who have gained asylum, or whose applications are not adjudicated within 180 days of their filing date. As a consequence, the success of asylum reform is largely dependent upon the ability of Immigration Judges to replet decisions within established time frames. Absent that shilly, the benefit of work authorization would accrue to thousands of aliens not otherwise smitted. Currently, Immigration Judges are completing \$8 percent of the expedited asylum adjudications within the 180-day time frame.

EOIR has coordinated the implementation of expanded programs with the INS to ensure the optimal placement of resources based upon the volume and gaographic concentration of detained, saytum and criminal alien workload. This includes the expansion of a majority of field offices and the establishment of several new offices. EOIR's ADP system has been modified to facilitate the implementation of saytum reform by enhancing case tracking capabilities, e.g., the tracking of case processing times, and by allowing all local and regional INS saytum offices access to the system. Among other benefits, these improvements have allowed the introduction of two key case processing initiatives. First, INS personnel are able to access the ANSIR system and schedule cases for lumnigration Judge hearings immediately upon their decision to refer asylum claims to EOIR. Second, INS regional service centers are able to access the ANSIR database to ascertain the status of cases in order to determine the eligibility of allows for employment authorization. This "interactive" scheduling system has been made available, for all case types, to INS nationwide. Further, EOIR has coordinated with INS to anable the "download" of a wide range of case information which will assist several Service programs.

SOIR also has been active in the regulatory area, publishing regulations which include provisions allowing the use of stipulated deportations, thereby enabling the expedited deportation of criminal aliens in applicable cases. Regulations also have been published which codify the practice of immigration Judges conducting telephonic hearings and the authority of Immigration Judges to hold video electronic hearings. Most recently, EOIR worked closely with the Service in publishing regulations implementing the 1996 Act and NACARA.

Finally, in keeping with the customer service goals of the National Performance Review, ECIR has established an electronic phone system (1-800 number) to provide ready access to Immigration Court information such as hearing dates, times and locations, status of anylum cases, Immigration Judge decisions and case appeal dates. The system, provided in English and Spanish, reduces the time required for the public to obtain information and schedules. The system is currently receiving to excess of 100,000 calls per month.

Administration initiatives continue to have a significant impact upon EOIR's Immigration Judge program. In 1999, Immigration Judge workload approached 235,000 case receipts. INS enforcement initiatives planned for FY 2000 and requested for FY 2001 will bring an estimated 15,000 additional cases annually.

Office of the Chief Administrative Bearing Officer

The Chief Administrative Hearing Officer provides overall program direction, articulates policies and procedures, and establishes priorities for the Administrative Law Judges (ALIs) appointed pursuant to 5 U.S.C. 3105 to adjudicate cases arising under Sections 274A, 274B and 274C of the INA. Section 274A provides for sunctions against employers or entities who: (1) hire, recruit or refer for a fee or continue to employ unauthorized aliens; (2) refuse to comply with the employment verification system; or (3) require the execution of an indemnity band to protect themselves from potential liability for unlawful employment practices. Section 274B provides for the imposition of penalties against employers who discriminate against any individual (other than an unauthorized alien) in employment-related situations because of the individual's national origin or citizenship status. Section 274C provides civil penalties for immigration-related document fraud. Such judicial proceedings are initiated by complaints filled with the Office of the

Chief Administrative Hearing Officer and assigned to ALJs. Complaints are filed by: (1) (274A and 274C cases)-the Immigration and Naturalization Service; (2) (274B cases)-the Office of Special Counsel for Immigration Related Unfair Employment Practices (OSC); or (3) (274B cases) if OSC declines a case, an aggrieved party or a representative.

The ALJs hold hearings and related advaintstrative proceedings and render decisions on the complaints assigned to them. They impose sunctions and penelties as prescribed by law in appropriate cases and may, where warranted, award attorney's fees, back pay, and issue cease and dealst orders. The Chief Administrative Hearing Officer may conduct administrative review and takes the final agency action with respect to cases decided by ALJs under Sections 274A and 274C, and certifies ALJs who hear Section 274B cases as having received the requisite training in employment discrimination matters.

INITIATIVES

	P	esitions	Werkyeers		Amenat
Initiative					
Coordination with INS Initiatives		62	31	s	4,979,000

INS has developed the following initiatives for FY 2001 which, taken together, will increase Immigration Judge caseload by 10,000 cases and BIA caseload by 1,200 appeals annually: 1) Border Management and Coordination (5,400 cases and 650 appeals); and 2) Interior Enforcement (4,600 cases and 550 appeals). EOIR's portion of these initiatives includes 10 Immigration Judges, 6 BIA staff attorneys, and the required legal and clerical support positions.

The INS initiatives are fully explained in the INS FY 2001 submission. The Service is requesting 430 additional Border Patrol positions, additional Detention and Deportation positions and 1,038 additional bedspaces in support of a variety of enforcement goals, including the enhanced capability to apprehend and remove increasing numbers of criminal and non-criminal aliens. The INS initiatives will focus upon the border, criminal aliens, detention and alien removals, all areas directly involving EOIR operations.

Critical to the success of these initiatives will be the ability of EOIR to process the resulting Immigration Judge and appellate caselood in a timely fashion. INS removal goals are, in large measure, inextricably tied to EOIR's adjudication process. Similarly, the efficient utilization of enhanced detention capacity is dependent upon the expedited processing of the immigration Judge and appellate ensolved, thereby maximizing the number of aliens INS is able to process through detention facilities.

Base funding levels could not support any of the additional workload generated by the increased INS enforcement effort. Absent resource increases, many of the goals identified by these efforts would be severely jeopardized by EOIR's inability, owing to resource inadequacies, to process the resulting caseload. As in the past, EOIR would apply resources to areas where caseload volume, complexity and processing times are most critical.

EOIR's initiative includes 10 of each of the following positions required to support the judges requested: law elerks, interpreters, legal technicians and clerk typists. The 6 BIA attorney positions requested will require the support of 6 paralegal positions.

This initiative directly relates to the following immigration goals in DOI's Strategic Plan: Goal 2: Deliver services to the public in a timely, consistent, fair and high quality manner; Goal 5: Maximize deterrence to unlawful migration and enforce immigration laws in the interior through effective and coordinated one of resources to reduce the incentives of unantherized employment and assistance; remove deportable/medialeshie aliens expeditiously; address interior savuggling and benefit and document from and; and increase intergovernmental cooperation and the integration of activities among law enforcement entities and levels of government; and, Goal 6: Expedite the adjudication of immigration cases while ensuring due process and fair treatment for all parties.

OFFICE OF THE INSPECTOR GENERAL

INTRODUCTION

By Act of Congress, the Office of the Inspector General (QIG) was established in the Department of Justice (DCJ) on April 14, 1989. The OIG detects and deters waste, firsud, abuse, and misconduct among DCJ employees and DCJ's many programs. In addition, the OIG provides leadership and assists DCJ managers in promoting integrity, economy, efficiency, and effectiveness in its financial effeirs and contractual and grant relationships with others. By statute, the OIG is an independent entity within DCJ and reports to both the Attorney General and Congress on issues that affect the DCJ's personnel or mission. This independence is crucial to the OIG's ability to aggressively pursua misconduct, fraud, waste, and abuse in a Department with a \$21.3 billion budget and a workforce of 120,000 employees.

The OIG carries out its multi-faceted mission with a current workforce of approximately 390 investigators, auditors, inspectors, attorneys, and support staff. The investigators are easigned to one of 17 offices across the country, while the auditors serve in one of 7 field offices. In addition, our inspections Division, Special Investigations and Review Unit (SIRU), Management and Planning Division, Office of the General Counsel, and the Inspector General's immediate office are located in Washington, D.C.

Specifically, the OIG: (1) investigates violations of law and DOJ regulations for appropriate criminal prosecution, civil itigation, and administrative action; (2) conducts, reports, and follows up on financial and performance audits of DOJ programs, contracts, grants, and agreements; and (3) performs timely inspections of DOJ programs that provide an early warning to the Administration and Congress regarding potential or existing problems. Each of these activities is crucial to ensuring that DOJ manages its resources afficiently and effectively.

This FY 2001 budget request is predicated on a flacally conservative assessment of the requirements necessary to enable the OIG to carry out its statutory responsibilities in DOJ. It is the experience of inspectors General that rapid and drawntic resource growth provides an increased opportunity for waste, fraud, and abuse. To illustrate this point, the number of allegations of misconduct reported to the OIG has increased from just under 5,000 in FY 1994 to over 8,000 in FY 1999.

In contrast to DOJ's unprecedented growth, the OIG imposed a hiring freeze in August 1998, which continues as of this submission. As a result of the hiring freeze, the OIG began FY 2000 at a staffing level of 398, down from 453 at the beginning of last year, a loss of more than 12 percent of its work force. One result of this loss is an imbelance in size, expenence, and capabilities among OIG offices and components. Reduction by attrition does not permit a planned and orderly downsizing. The effect of this imbelance will be felt for some time to come, and it is imperative that this request be approved in order to stop these losses. In the meantime, the OIG is taking a number of steps to address this loss and imbalance, which are detailed under Current Budget Authority.

CURRENT BUDGET AUTHORITY

The OIG operates with a direct FY 2000 budget authority of \$40,235,000, 342 full-time permanent positions and 328 workyears. In addition to direct appropriations, the OIG expects to receive \$10,500,00 and 52 workyears in reimbursements. We anticipate receiving \$6,532,979 and 14 FTE for Financial Statement Audit (FSA) work, including \$5,032,979 in "pass through" contract costs and \$1,600,000 and 14 FTE for oversight costs; \$2,500,000 and 23 FTE for INS User Fee account work; \$1,250,000 and 15 FTE from U.S. Trustees for requested audit work; and \$117,021 for other audit related costs.

This level of funding is \$1.3 M less than the O!G received last year. In order to deal with this budget shortfall, the O!G has obtained the authority to offer Voluntary Early Retirements to its workforce. In addition, we are cutting our fleet by one-third, have already cut our discretionary spending by approximately 10 percent from last year's austere levels, and continue to look for additional cuts.

The OIG's request for FY 2001 totals \$42,192,000, 342 permanent positions, and 328 workyears (not including 52 reimbursable workyears), representing no change in positions and workyears and an increase of \$1,957,000 over the FY 2000 level. The principal element for the change is:

 \$1,957,000 for adjustment-to-base increases related to continuing FY 2000 current services, including FY 2001 pay raises.

These additional resources will only allow the OIG to fulfill continuing FY 2000 current services and provide for FY 2001 pay raises.

In addition, we project reimbursements in FY 2001 totaling \$10.5 M and 52 FTE, consisting of \$6.6 M and 14 FTE for FSA work, including \$5.0 M in "pass through" contract costs and \$1.6 M and 14 FTE in oversight costs; \$2.5 M and 23 FTE for oversight work of INS User Fee programs; and \$1.3 M and 15 FTE for U.S. "instees for requested sudit work; and \$0.1 M for other audit related costs."

FY 2001 Component Performance Plan and 1999 Accountability Report

A. Component Mission and Goals, and Relationship to DOJ Strategic Plan.

The OIG has two distinct roles: to promote efficient and effective program management and deter future problems, and to find and report on current problems. Because the OIG strives for continuous improvement in Department management and program operations, its work affects each of the core functions outlined in the DOJ Strategic Plan, FY 1997-2002 (Strategic Plan). This budget request and the OIG's Performance Plan specifically support the mission priorities, general goals, and strategic approaches that are included in the Strategic Plan. In addition, we have incorporated performance indicator information that should lead to better accountability regarding actual results achieved.

OIG MISSION AND GOALS

The OIG promotes efficient and effective management within DOJ and detects and deters wrongdoing in its programs and operations using the coordinated efforts of its investigative, audit, and inspection resources.

To fulfill its mission, the OIG has established the following goals:

- Detect and deter misconduct in programs and operations within or financed by DOJ.
- Promote the efficiency and effectiveness of DOJ programs and operations.
- Build relationships with customers based on a shared commitment to improving program operations and effectiveness.

RELATIONSHIP TO DOJ STRATEGIC PLAN, FY 1997-2002

Relevant excerpts from the Strategic Plan include the following:

CORE FUNCTION Management

GOAL #1. Strengthen oversight and integrity programs, ensure consistent accountability, and emphasize our core mission responsibilities.

B. Highlights of 1999 Mission Critical Results

FY 1999 Goal: Focus an additional 10 percent of the Special Investigations and Review Unit's (SIRU) staff (from a baseline of 60 percent in FY 1998) on undertaking complex special investigations regarding allegations of serious misconduct against DOJ employees.

The OIG exceeded this goal by focusing an additional 15 percent of the SIRU's staff on special investigations. The following are highlights of SIRU's mission-critical successes during FY 1999:

- In September 1997, the Attorney General and the Director of the Federal Bursau of Investigation (FBf) Isamed that classified intelligence information pertaining to the Department's campaign finance investigation may not have been appropriately disseminated within the FBI and the Department. In November 1997, the Attorney General asked the OIG to review how this intelligence information was handled. In all, the OIG reviewed more than 18,000 pages of classified information and conducted more than 120 interviews. Our final report was issued in July 1999, We concluded that none of the problems in disseminating classified information was attributable to intentional melicasions or purposeful obstruction. Rather, the shortcomings in the Department's handling of the intelligence information were attributable to multiple causes including: (1) legitimate policy disputes about disseminating criminal and intelligence information, (2) problems in the use and maintenance of the FBI's computer database systems. (3) poor communication among the various parties involved in the campaign finance investigation, and (4) the assercias of poor judgment on the part of certain personnel. The OIG report included recommendations that we believe will help prevent the reoccurrence of the problems we found.
- Kenneth Trentadus, an immate being held at the Federal Transfer Center in Ottahoma City, Ottahoma, was found dead in his cell in August 1995. The Bureau of Prisona (BOP) concluded that Trentadus committed suicide by hanging. However, allegations that Trentadus was murdered led to an investigation by the FBI and the

Department's Civil Rights Division. The investigation concluded that there was insufficient evidence of a violation of the federal criminal civil rights laws. Following that investigation, and at the Deputy Attorney General's request, the OIG initiated a separate review focusing on whether BOP or FBI employees mishandled evidence or engaged in other misconduct in the events surrounding Trentadue's death. The OIG's review concluded that Trentadue's death was a suicide and that he had not been murdered by BOP correctional officers or inmates. We also did not find that BOP or the FBI participated in any conspiracy to cover up the circumstances of his death. However, we did find that 30P's response to his death was significantly flawed and that the FBI did not devote sufficient attention to the case for several months and mishandled and misplaced important pieces of evidence.

In August 1999, the OIG issued a report concerning its review of BOP's management of inmate telephone privileges. This special review found a significant problem with federal inmates using prison telephones to commit serious crimes while incarcerated – including instances of arranging for murders, drug trafficking, and fraud. Moreover, our review found that BOP has taken only limited and insufficient corrective actions to address this problem. Based on our review, the OIG recommended that 6OP take the following actions to curb prison telephone abuse: (1) increase the percentage of inmate telephone calls it monitors, (2) more consistently discipline telephone abusers, (3) restrict telephone privileges for inmates who have a history of telephone abuse, and (4) emphasize the responsibility of its officers to detect and deter crimes by inmates using BOP telephones.

FY 1999 Goat: Review 30 Immigration (d. Naturalization Service (INS) programs and activities identified as high priority areas in the Strategic Plan or areas materially affected by the Illegal Immigration Reform and Immigrant Responsibility Act (IIRIRA) of 1996.

The OIG reviewed 23 programs and activities identified as high priority in the Strategic Plan or areas materially affected by the IIRIRA. Although these reviews encompass 96 percent of the work we performed in INS, we did not meet our goal of reviewing 30 programs. Due to the need to perform critical work in other areas of the Department and a shrinking number of available staff, we could not begin more assignments in this area. The following are highlights of our work:

We performed a follow-up audit of INS' management of its \$2.8 billion automation programs. We found that INS still does not adequately manage its automation programs despite the fact that it now has spent over \$800 million on these programs. As a result, (1) estimated completion dates for some projects have been delayed without explanations for the delays, (2) costs continue to spiral upward without justification for how the funds are spent.

and (3) projects are nearing completion without assurance that they will meet performance and functional requirements. We recommended a series of improvements to INS' management of the automation initiatives. INS concurred with each of the recommendations and prepared an implementation plan to correct the deficiencies.

- We performed an audit of the nation's asylum program, which allows aliena legally or illegally in this country to apply to INS for asylum. During our audit, we found that while new regulations, implemented to address the increasing backlog of asylum cases and public concerns over abuse of the asylum program, streamlined procedures and promoted efficiency, they did little to build in necessary protections and mechanisms to maintain quality control. Also, INS did not ensure the asylum applicants' identities were firmly established through fingerprinting and FBI record checks. Further, we found that INS was not successful in deporting applicants that were denied asylum. We recommended that INS strengthen the supervisory review of asylum officers' written case assessments, improve data gathering for denied asylum applicants, and establish a tracking system to ensure that rejected or unclassifiable fingerprint charts are resubmitted to the FBI for complete record checks before granting asylum.
- We identified ineffective enforcement and lack of sufficient controls over voluntary departure. The OIG found that adequate criminal history checks identifying aggravated felons are not performed on all lilegal aliens granted voluntary departure. As a result, INS district officers and Executive Office for Immigration Review immigration judges inappropriately granted voluntary departure to some aggravated felons. The OIG also found that INS lacks an effective departure verification system and, therefore, has no way of knowing which aliens granted voluntary departure have left the country and which remain. Finally, the OIG review found that INS enforcement of voluntary departure orders is minimal.
- We examined the potential for fraud and INS' efforts to reduce the riske of the Visa Waiver Pilot Program (VWPP), We found evidence of fraudulent activity related to VWPP using INS' records of Intercepted passengers. The most serious instances involved terrorists, criminals, and atien smugglers who attempted to use the VWPP as a means to enter the United States. The OIG focused its review on stolen blank passeports. Based on a sample of 1,067 VWPP blank passeports reported to INS as stolen, the OIG found that almost 10 percent of these passeports may have been used for itegal entry into the United States. The report also identified specific problems with the way INS' computerized "lookout" database is maintained with respect to entering information about stolen VWPP passports.

FY 1999 Goal: Perform 150 Violent Crime Reduction Trust Fund (VCRTF) grant reviews, including Community Oriented Policing Services (COPS), Violent Offender Incarceration and Truth-In-Sentencing (VQI/TIS). Violence Against Women, and Drug Courts, to determine whether the grantee's use of the funds is in accordance with the grant provisions.

The OIG performed 105 grant reviews of these programs to determine if the grantee's use of the funds was in accordance with the grant provisions. The OIG was unable to meet its target of 150 reviews for several reasons. Starting in January 1999, the Audit Division began a pilot program to issue COPS audit reports in draft. The draft report process requires responses to the report from the state of local government being audited as well as the Office of Justice Programs (OJP) and the COPS office. While this process results in an improved understanding between the auditee and the OIG, the additional time needed to obtain and analyze responses resulted in the division not being able to start more VCRTF audits. In addition, the Audit Division has been involved in an Audit Resolution Committee effort that required the compilation of significant amounts of data related to COPS audits. That said, the following are highlights of our work in the area of VCRTF grant reviews:

- We issued the report Summary of Police Hiring and Redeployment Granta Audits, that consolidated the results of 149 audits performed from October 1996 through September 1998 of grantees receiving funds totaling \$511 million. Although our universe of grantees was not selected randomly and, therefore, our results may not be representative of all grantees, the frequency and magnitude of issues identified in our grant audits indicate that significant numbers of jurisdictions audited were: (1) overestimating selares and benefits or including unaltowable costs in reimbursement requests, (2) using federal funds to supplant local funds, (3) not making a good-faith effort to fill locally-funded sworn officer positions, (4) not submitting, or submitting late, status reports to COPS and OJP, and (5) not establishing systems to track the redeployment of officers into community policing. We also concluded that some jurisdictions may have difficulty retaining COPS-funded officer positions with local funds at the conclusion of the grants.
- In our program sudit Management and Administration of the COPS Grants Program, we reviewed COPS' and OJP's administration of the \$8.8 billion community policing grant program. We evaluated (1) COPS' ability to meet the President's goal to put 100,000 additional potice officers on the street by FY 2000, (2) COPS' and OJP's monitoring of grantees, and (3) the quality of guidance provided to grantees to assist them in implementing essential grant requirements. We found that the COPS grants will not result in 100,000 additional officers on the streets by the end of FY 2000 because: (1) COPS projects that only 59,765 of the 100,000 efficers funded will be

deployed by the end of FY 2000, (2) law enforcement agencies had not accepted approximately \$485 million in grant funds for 7,722 officers for an average of 1 year after the designated acceptance period, (3) COPS counted grants for enother \$96 million and 2,526 officers towards the 100,000 goal, although the formal grant award documents had not been mailed to the grantees, and (5) grantees had terminated at least 500 grants for 1,300 officer positions during the first 4 years of the COPS program, and COPS had not deobligated 127 of those grants totaling about \$15.1 million.

We fulfilled our commitment to the Attorney General by completing all planned site reviews of VOI/TIS grant recipients to ensure that they are achieving program objectives and federal funds are spent in accordance with the VOI/TIS Incentive Grant Program requirements. From May 4, 1997 through March 31, 1999, the OIG reviewed and issued individual reports that evaluated the progress of 25 states in implementing and complying with the requirements of the VOI/TIS grant program. In September 1999, the OIG issued a summary report of findings and recommendations. Overall, the OIG found that the grant recipients generally had adequate administrative controls for monitoring the projects and managing the grant funds. However, for some of the grant recipients, we noted various shortcomings in accounting for the federal grant funds awarded, providing state matching funds, and reporting the status of program implementation.

FY 1999 Goal: The OIG will target resources on allegations that relate to fraud, bribery, rights violations, drug violations, and sexual crimes.

During FY 1999 the OIG did target resources on allegations that relate to the priority investigations below. In the areas of bribery, fraud, and sexual crimes investigations, the OIG exceeded its FY 1999 plan. The OIG met its goal for priority investigations "in an open status" and "closed" in all areas except rights violations and drug violations. In the area of drug violations, our failure to meet our target was due to our July 1998 revision of the offense codes that comprise each priority investigation category. As a result, there has been a shift in how some existing, as well as new, cases are classified and tracked. Many cases that formerly would have been categorized and tracked as a drug case are now reflected in the bribery category. While drug violation cases have decreased, bribery cases for FY 1999 were 18 percent over our target number. Our plans for FY 2000 and FY 2001 take into consideration the revised categories. In the area of rights violations, a June 1999 internal policy change has resulted in our opening a rights violations case only in circumstances where the initial aflegation, on its own merit, appears to be prosecutable. This policy change, instituted primarily due to reduced staffing, has resulted in fewer rights violations cases being opened.

Highlights of these results are reflected in the cases below.

- A supervisory asylum officer and an attorney assigned to the INS Office in Rosedate, New York, were arrested on charges of bribery and conspiracy filed in the Eastern District of New York. This joint OIG New York Field Office and FBI investigation developed evidence that the asylum officer altered hundreds of decisions in INS' computer system, thereby changing the original assessments written by the asylum officers from a court referral to a grant of political asylum. Nine other individuals were arrested for their roles in this scheme; two of whom have pled guilty. As a result of this investigation, INS has revised computer security by instituting procedures specifically designed to deter and detect internal fraud and abuse. The investigation continues.
- A 39-month investigation by the OIG Miami Field Office, Drug Enforcement Administration (DEA), U.S. Customs Service, Internal Revenue Service, and the Florida Department of Law Enforcement resulted in the arrest of an INS special operations inspector and 12 codefendants for multiple violations of federal nanotics and money laundering laws. This investigation established that the INS inspector used his position to facilitate the smuggling of drugs by the Francois-Ketant drug-trefficking organization through the Mismi International Airport and obtain confidential criminal intelligence information in order to warn occonspirators and help them evade justice. To date, five codefendants and the INS special operations inspector were convicted in the Southern District of Florida. Three of the defendants, including the INS employee, were sentenced to life in prison. In addition, an asset forfeiture order was issued against the INS employee for \$2.5 million. In total, this investigation led to the conviction of 13 defendants for their involvement in the drug smuggling scheme.
- in the Southern District of Florida, nine former correctional aides previously assigned to Spectrum Community Corrections Center— a BOP contract halfway house facility—were arrested on charges of conspiracy, briberry, and siding and ebetting. Eight defendants pied guilty and received eentences ranging from home confinement to 30 months' incarceration and 2 years' supervised release; the sinth defendant entered into a pre-trial diversion agreement. A 9-month investigation by the Mismi Field Office uncovered a widespread bribery and corruption scheme in which several correctional aides demanded and received cash bribes from inmates to allow them to serve the halfway house facility after hours and overnight without proper authorization. This investigation also developed evidence that these correctional aides took cash bribes to alter and falsify inmates' urine samples and inmates' sion-in and sign-out records.

A federal grand jury in the Northern District of California returned a 22-count indictment against a former BOP correctional officer, previously assigned to the Federal Correctional Institution in Dublin, California. An investigation by the OIG San Francisco Field Office, FBI, and BOP led to an indictment charging the correctional officer with 17 counts of sexual abuse of a ward and abusive sexual contact involving four different female inmates over a period of several months. In addition, he was charged with five counts of prejury and false statements made to both the FBI and OIG in connection with the investigation of previous sexual misconduct allegations involving two other inmates, as well as in connection with his more recent alleged acts. The correctional officer was arrested following his resignation from BOP. He later pled guilty and was sentenced to 10 months' incarceration and 38 months' supervised release.

FY 1999 CIG Goal: <u>Devote 20 percent of the Computer Security and Information Technology Audit Office (CSITAD)</u> resources to review the Department's myriad and diverse electronic information systems to promote the more efficient, effective, and secure operation of the systems reviewed.

The OIG exceeded its goal by devoting 28 percent of the CSITAO resources to review the Department's electronic information systems. Highlights in this area include:

- We initiated a review to determine the effectiveness of DEA initiatives to address the Year 2000 (YZK) computer problem. At the time of our review, we had concerns regarding the thoroughness of the independent verification and validation review process because of inadequate or missing evidence to support that DEA's mission-critical systems would be operable on January 1, 2000. We examined eight of DEA's mission-critical systems and found issues with six. At the time of our review, we were concerned that the 26 systems we did not review may have issues similar to those discussed in our report. However, subsequent to our review, DEA provided documentation that mitigated our concerns about these 28 systems as well as those we examined.
- We conducted a Y2K sudt of the Justice Data Centers (JDC) because many sepects of the Department's mission depend on computer processing at the JDCs. The audit found that not all JDC maintained softwere and utilities were Y2K compliant; Y2K contingency plans were not developed; and Y2K testing of hardware, operating systems, softwere tools, and software utilities was not performed. As a result of these deficiencies, data processing at the

JDCs was at risk of failure on January 1, 2000, potentially impacting mission-critical litigation, law enforcement, and administrative systems. At the conclusion of our audit, Justice Management Division (JMD) took steps to address the weaknesses identified in our report.

We conducted an audit of the Joint Automated Booking System (JABS) computer security. JABS is designed to test an automated prisoner booking process and is jointly operated by the Department's law enforcement agencies. We found that certain computer security controls for JABS were not in place to protect the system and its sensitive data from unauthorized use, loss, or modification. We recommended that JMD adhere to and monitor compliance with existing policy, and, in some cases, develop and implement new policy to enhance the security of this system.

C. FY 2001 Performance Goals and Indicators.

These FY 2001 goals, organized around several of the OlG's ongoing priorities, will establish a baseline upon which future performance may be tracked and reported, as required by the Government Performance and Results Act. These priorities and goals correspond to the Strategic Plan and to the Attorney General's Goals,

OIG Priority: Allegations of Misconduct Against Department Employees and Officials

OIG Annual Goals:

- In FY 2001, the OIG will target resources on allegations that relate to fraud, bribery, rights violations, drug violations, and sexual crimes.
- In FY 2001, the OIG will undertake complex special investigations (often at the request of Congress and the Attorney General) regarding allegations of serious misconduct involving high-level Department officials and major Department initiatives.

Summary Level Indicators:

Priority investigations in an open status, and closed.

OlG Priority: Efficiency and Effectiveness in Department Programs and Operations

OlG Annual Goals:

- In FY 2001, the OIG will focus 5 percent of inspection resources on follow-up reviews addressing DOJ programs and operations to ensure positive change is resulting from implementation of OIG recommendations.
- In FY 2001, the OIG will effocate up to 5 percent of Audit resources to validating component performance measures and progress made vis-e-vis their strategic plans.

Summary Performance Indicators:

- Percent of workdays devoted to follow-up reviews.
- Percent of resources used to validate component performance measures.

OlG Priority: INS Oversight

OlG Annual Goal:

 In FY 2001, the OIG will review 4 INS programs or activities identified as high priority areas in the DOJ's Strategic Plan or areas materially affected by the Illegal Immigration Reform and Immigrant Responsibility Act (IIRIRA) of 1995.

Summary Performance Indicators:

- Percent of workdays devoted to review of INS programs or activities.
- Percent of INS programs and activities reviewed that address high priority areas in the Strategic Plan or areas materially affected by the IRRRA.

OlG Priority: Violent Crime Reduction Trust Fund (VCRTF)

OIG Annual Goal:

In FY 2001, the OIG will continue to focus resources on performing VCRTF reviews, e.g., COPS, Violence Against
Women, and Substance Abuse Treatment Programs, to determine whether the funds are used in accordance with
the VCRTF provisions.

Summery Performance Indicator.

Number of VCRTF reviews conducted.

OIG Priority: Information Technology

OlG Annual Goal:

 In FY 2001, the OIG will continue to perform security reviews of the Department's myried and diverse electronic information systems to promote a more efficient, effective, and secure operation of the systems reviewed.

Summary Performance Indicator:

Number of components receiving information system audits.

Base Program Description

The OIG achieves its goals by carrying out specific functions within several units: the Investigations Division, Audit Division, the Inspections Division, and SIRU. Supporting these components is an Executive Direction and Control function that establishes and issues policy and program direction for the OIG through the Intradiate office of the Inspector General, General Counsel, and the Management and Planning Division. Specific responsibilities of the Executive Direction and Control function Include policy development, legal counsel, legislative matters, planning, budget, finance, quality assurance and evaluation, personnel, training, procurement, information resource management, and peneral support services.

Specific functions performed in the OIG's base program include:

- Investigate allegations against DOJ employees regarding violations of the laws and regulations pertaining to DOJ and refer, as appropriate, for criminal prosecution, civil litigation, and administrative action;
- Conduct an integrity briefings program to reduce employee misconduct and provide expanded fraud vulnerability briefings to more contracting personnel;
- Conduct, report, and follow-up on financial audits of DOJ organizations, programs, contracts, grants, and other agreements;
- Perform audits and inspections of material weakness areas and the ten most serious management challenges facing the DOJ;
- Monitor DOJ's Information Resource Management processes and capabilities through the CSITAQ;
- Conduct or oversee audits of DOJ financial statements in accordance with the Chief Financial Officers Act of 1990 and the Government Management Reform Act of 1994;
- Perform inspections and program-impact evaluations of DOJ programs and activities; and

Evaluate existing and proposed legislation and regulations affecting the prevention and detection of fraud, waste.

Performance Indicator Charts

ě

The OIG has identified a series of numerical and narrative performance indicators to assess program performance. The development of these performance indicators has evolved over the past several years. We continue to improve our performance indicators and expect to further refine them, based on continued consultations with the Department. Office of Management and Budget (OMB), and Congress. In addition, as recommended by the Department and OMB, we will continue to provide nerrative indicators that will assist the Department, OMB, Congress, and our customers in assessing our program performance (see "Highlights of Mission-Critical Results"). The summary level performance indicators that the OIG has identified to assess program performance for FY 2001 are in bold.

Consistent with previous budget submissions, because a significant part of the OIG's work is funded through reimbursements, the performance indicators cover all of the OIG's programs, whether funded from direct appropriations or reimburtements.

Opportung of Arelice Cost Function. Management
Streets Qod. Streets are supported and stagety programs and conventional accountability and impleases our core mission responsibilities
QOS Convey Special D. Detect and determinentability in programs and operations within a featured by the Department
COS Amuse Open, (1) in 17 2001 the CNO will surget resources on elegations that make to hand, britishy, rights violations, strip violations, and sexual crimes (REDICATORS 2s, 4s)

(2) In FY 2001, the CRC sell undertake complex special investigations (after at the request of Congress and the Altomory General), regarding altegations of serious misconduct involving high-level Department officials and major Department Initiatives. (Indicators for this goal do not appear

 C. harves Affecting betechnic of PY 2000 and PY 2001 Plants:
- In FYs 2000 and 2001, the OKO did not receive any new problems or offer enhancements through the budget process. Accordingly, come special have been discussed due to enhance through through the budget process.

D. New 2001 Initiatives

There are no new initiatives for the OIG.

E. Data Validation and Verification Issues

<u>Data Collection and Storage</u>; The OIG uses several data sources to collect performance indicator information and track progress on the achievement of goals. These data sources include both computer-based and paper-based systems.

- The Investigations Data Management System (IDMS) consists of eight computer-based and four paper-based systems through which the Investigations Division records and monitors the status of allegations and the progress of investigations. OIG agents or investigative assistants collect the information via direct entry of information into IDMS.
- The Investigations Division Monthly Investigative Activity Report provides information that is not tracked in IDMS, such as types and amounts of seizures, integrity briefing activity, etc. The field offices track, enter, and ensure the validity of the data submitted to headquarters.
- The Investigations Division Administrative Database was created specifically to track the distribution and receipt of customer surveys that are sent out to components with each completed investigative report as well as key information contained in the survey responses. Survey responses come directly to investigations headquarters and are manually entered into the system by headquarters persponel.
- The Audit Division Management Information System consists of Information that the regional Audit offices provide to headquarters on the status of assignments and the number of workdays expended monthly. This information is reviewed for accuracy, consolidated, and enalyzed to determine trends and provide senior management with information on the status of the Audit Division's workplan and the use of Audit Division resources.

 The Inspections Division Management Tracking System consolidates biweekly and monthly reports submitted to senior management.

<u>Data Validation and Verification:</u> We ensure the accuracy and reliability of our performance measures through periodic internal staff audits and reviews of our data systems. The responsible divisions conduct at least a semiannual review of the data

<u>Data Limitations</u>: The IDMS consists of eight computer-based and four paper-based systems through which the investigations Division records and monitors the status of allegations and the progress of investigations. The present complex of data systems, tacking central indexing, hampers data collection and analysis because the multiple systems require duplicate data entry and information is not cross-referenced between systems, resulting in inaccurate or incomplete analysis. Although the OIG has proposed a system that would provide a comprehensive data system to monitor the investigation of misconduct allegations made against employees and contractors of the Department, we have been unable to obtain sufficient funding for the proposed system.

responsibilities				{					

Sidiled investigators, auditors, program energies, attorneys, and support staff are required to carry out the mission of the OlG. For OlG staff to be successful, they require training in numerous areas including interviewing and interrogation techniques, research and energial statistical sampling and computer sides. In addition orinities investigators require training in legal and statistory elements of crime, finance, and physical training. OlG staff also require determination regarding their activities and require.

Core Function 7: Management

Strategic Goal 7.1: Strangthen oversight and integrity programs, ensure consistent accountability, and emphasize core mission responsibilities.

7.1.1 Oversight and Integrity

<u>Performance Goel</u>: In FY 2001, through the OIG and the Office of Professional Responsibility, the Department will reinforce employee adherence to the highest ethical standards of conduct and strengthen program accountability and performance. These priorities are department wide, and address the fundamental issues of integrity and accountability.

Office of the Inspector General <u>Selarize and Expenses</u> Justification of Proposed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is italicized and underlined, and language proposed for deletion is bracketed.

Office of Inspector General

For necessary expenses of the Office of Inspector General in carrying out the provisions of the Inspector General Act of 1978, as amended, [\$40,275,000] \$42,192,000; including not to exceed \$10,000 to meet unforeseen emergencies of a confidential character, to be expended under the direction of, and to be accounted for solely under the certificate of, the Altorney General; and for the acquisition, lease, maintenance, and operation of motor vehicles, without regard to the general purchase price limitation for the current fiscal year[: Provided, That not less than \$40,000 shall be transferred to and administered by the Department of Justice Wireless Management Office for the costs of conversion to narrowband communications and for the operations and maintenance of legacy Land Mobile Radio systems]. (Department of Justice Appropriations Act, 2000, as enacted by section 1000(a)(1) of the Consolidated Appropriations Act, 2000 (P.L. 106-113)).

Explanation of Changes:

This change deletes language that transfers funds from the OtG to the Wireless Management account for Land Mobile Radio systems.

Office of the Inspector General Salaries and Expenses Justification of Adustments to Base (Dollars in Thousands)

		P04	WY	Amount
<u>lr</u>	KIBB FEE			
1	2001 Pay Raise. This request provides for the proposed 3.7 percent pay raise to be effective in January 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 2001 Budget Submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$913,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$576,000 for pay and \$237,000 for barref4s lotaling \$913,000).			913
2	Annualization of 2000 Pay Raise. This pay annualization represents first quarter amounts (October through December) of the 4-8 percent pay increase effective in January 2000, and, for three-quarters of a year, the difference between the 4-4 percent estimated in the 2000 President's budget and the approved increase of 4-8 percent. The amount requested \$387,000, represents the total annualization of pay amounts for the fiscal year plus appropriate benefits (\$275,000) for compensation and \$92,000 for benefits.			367
3	Within-proofs (increases). This request provides for the expected increase in costs of within-grade increases for slow or no growth components for FY 2000. This increase is based on an eccurate model of the Department's employee population, that includes numerous factions such as anticipated pay rarses, adjustments to include three-year attrition or expension rates, and career tadder series to reflect promotion policy for each organization. The request includes (\$2,20,000 for pay and \$67,000 for benefits).			347
4	Increased Federal Health Insurance Costs This request provides for the increase in agency contributions to Federal employees health benefits. In 1999, Federal health insurance premiums, including agency contributions, increased approximately 10.2 percent. Because the Government absorbed a larger proportion of the total costs, up to 75 percent, the total cost to the Government has increased substantially. This increase is based on the "increased" Government cost of Health Insurance. This increase \$1.17.000 for these costs.			117

Justification of Adjustments to Base (Continued):

		Pos.	WY_	Amount
5	Label Exercisions GSA now requires all agencies to pay relocation costs executed with lesse expiration. Based on prior experience the Department enterpolate that 20 percent of all lesse expirations will result in relocations. The request provides for the cost essociated with new office relocations caused by the expiration of lesses in FY 2001. No funding is requested for any build-out costs associated with lesse expirations. Funding of \$121,000 is requested for the OIG.			121
8	Accident Compensation This increase reflects the estimated billing from the Department of Labor for the actual costs in 1999 of employees' accident compensation, which will be billed in 2001. The 2001 increased cost will be \$41,000.			41
7	General Services Administration (GSA) Blue Pages. Previously, GSA has paid for all neterowide Government telephone book fetings through the GSA 8 percent. PTS overhead rate. As a result of the National Partnership for Reministing Government (NPR)GSA Blue. Pages Project, the funding for these fatings have been removed from the overhead rate, and agencies are being billed for actual costs incurred. The Department's FY 2001 estimated costs lotal \$282,000, Funding of \$1,000 is requested for the CNG.			1
8	Trivist Management Center Fiees In the past, travel management services were provided at no cost, and the Department received rebales based upon total sales. However, current practices in the travel industry have ended this process. The new contracts will not provide rebales and will carry less for each toket, hoter, car end other reservation made. The Department's cost for travel management center less is estimated at \$2,500,000. Funding of \$8,000 is requested for the OIG.			•
9	General Prices Level Adjustments This request applies OMB pricing guidence to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against those sub-object classes where the prices that the Government pays are established through the market system instead. If by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, priving costs, transportation costs and utilities.			42
	Total Administration to State			1,967

UNITED STATES PAROLE COMMISSION

U.S. Parole Commission Spinores and Expenses Summery Statement and Performance Plan Plens Year 2001

The FY 2001 budget request for the United States Parole Commission (USPC) is \$9,163,000, 87 full-time permanent positions and 86 workyears. The request includes an increase of 6 positions, 3 workyears and \$328,000 for the District of Columbia purole program, and \$328,000 in adjustments-to-base increases. The following table summerises the change in the Commission's budget resources:

	(Dollars in Thousands)			
FY 1999 Apprepriation	Pos. 74		Amount \$7,400	
FY 2000 Appropriation	61	86	6,527	
D.C. Parole Initiative			838 838	
FY 2001 Proposed Budget	87	89	9,183	

The FY 2001 budget proposal provides for an increase for the District of Columbia parole program while maintaining a static Federal parole program. At the steff leval, there is no programmatic demarcation between the two programs; therefore, resources (i.e. staff time) that are released from the Federal program are absorbed by the D.C. program caseload. The request represents the not increase necessary to implement the final phases of the Federal assumption of responsibility for the D.C. parole program. On August 5, 2000, the D.C. Board of Parole will terminate, and its remaining decision-making responsibilities will be transferred to the Commission. The Commission will inherit the purole revocation caseload, and it is expected that there will be a serious backleg of warrant requests and revocation hearings on August 5, 2000. Since assuming responsibility for the D.C. caseload in August 1986, the dimensions of the problems executed with these cases have begun to overwhalm Commission staff at all levels. The resources requested are necessary to prevent the re-emergence of problems that the Pederal takeover of the D.C. parole system was designed to correct.

In the Federal perole program, the Commission will be responsible (as of September 30, 1999) for over 7,793 paroless and about 5,631 immates who are eligible for perole. At the beginning of FY 2001 (October 1, 2000), the Commission projects that there will be a caseload of 9,340, of which 2,905 will be prisoners eligible for paroles, 5,526 will be purpless on active supervision, and 2,706 will be purpless on inactive supervision. (Inactive cases are made up of deportess, purpless serving state eschances, new law Federal prisoners and unapprehended parole violators.) Although the number of Federal purpless and prisoners eligible for perole will continue to decline, many offenders will remain under the Commission's jurisdiction for several years into the new millennium. Much of the remaining caseload is comprised of peroless and innustes who were convicted of serious offenses such as bank robbers, murder, emionare, etc. and are septing sentences from 30 years

to life. The Commission has heard many of these immates, but because of their poor parole prognosis and/or the ceriousness of their crimes, have been dealed purole. Many others have been on parole for varying periods of time, but have violated the conditions of parole, and have been recommitted to custody. All of these cases require regular interim hearings every two years and full reconsideration hearings at specified intervals.

Because of unreliable data, a wide disparity exists in the estimates for the number of D.C. paroless and prisoners that have been provided to the Commission. Initial estimates for the District of Columbia parole responsibility indicated that the Commission would handle about 300 additional hearings per month. That estimate is probably very close to the eventual total. The D.C. Board of Parole has estimated the current parole population, who are under active supervision, as somewhere in a range from 3,400 to 5,000. An earlier estimate of 6,748 may have included functive supervision cases.

A. USPC Mission and Goals; Relationships to DOJ Strategic Plan. The FY 2001 budget request and performance plan directly supports the overall law enforcement priorities and corrections goals that are included in the Department of Justice's Strategic Plan. The overall mission of the USPC is to make decisions on grants and denials of parole, conditions of parole, supervision of peroless and mandatory releases, recommitted in event of violation of conditions of supervision, and termination of supervision as outlined in the Parole Commission and guidelines, the Commission contributes to the Department's priorities by ensuring even-handed decision-making that provides incentives for good behavior while discouraging recidivist cyndust.

While the Commission's role in the overall law enforcement/public safety affort of the Federal government has been substantially reduced since the enactiment of the Comprehensive Orime Control Act of 1984 (Public Law 96-493), over 9,000 purpless and purple-aligible immates, who are entitled to perfold bearings, remain in the corrections system. Furthermore, because of the seriousness of their offenses, it is likely that many will remain in the system over the next two decades. Coupled with the increase in caseload from the DC purples/immate population, the Commission will centime as important component in the corrections system.

B. FY 3001 Performance Plan and Summary Level Performance Indicators: The U.S. Parole Commission is proposing an FY 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown below. These FY 3001 goals will establish a standard upon which future performance may be monitored and reported, as required by the Government Performance and Results Act (GPRA).

ORGANIZATIONAL GOALS: To establish a national paroling policy and promote the consistent exercise of discretion in the paroling process, including the development and application of specific guidelines for decision-making so that the duration of terms of imprisonment throughout the Federal system will be equitable for those prisoners over whom the Commission has jurisdiction.

To make decisions regarding the grant or deniel of perole that both promotes justice and protects the public welfare.

. - -- - . .

To provide adequate supervision for paroless and mandatory releases to enhance semmunity protection and the rehabilitation of the offender.

To promptly modify or revoke the parole or mandatory release of any individual who violates the conditions of release.

C. Major FY 2001 Initiatives. For fiscal year 2001, the USPC proposes a request of 6 positions, 8 workyears and \$220,000 for the District of Columbia purele program. Under Public Law 108-28, Section 11291 of the National Copital Revitalization and Self-Government Improvement Act, the USPC secured the powers, dation and jurisdiction of the District of Columbia Secret of Perces to great or dany purele for fishes incurrented under the D.C. Code on August 5, 1906. The terms of this legislation gives the Conscious responsibility for imming rules governing perces and percelo precedures, conducting parele hearings, making purele decisions, and overseaing the experision of pseudost under the D.C. Court Services and Offender Supervision Agency.

U.S. Parole Commission

Salaries and Expenses

Justification of Proposed Changes in Appropriation Language

The FY 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is understored and deleted matter is acclosed in breckets.

Salaries and Expenses

For necessary expenses of the United States Parels Commission as authorized by law, (\$5,527,000) \$9,123.000.

(18 U.S.C. 4203-04, 4212, 4255, 5005, 5041; P.L. 105-113, Department of Justice and Related Agencies Appropriations Act, 2000; P.L. 105-100, National Capital Revitalization and Salt Government Improvement Act of 1996.)

Emigration of changes

No substantive changes preposed.

BASE PROGRAM DESCRIPTION: The United States Board of Parule was created by Congress in 1930. The Parole Commission and Reorganization Act of 1976 (Public Law 94-283, effective May 14, 1976) renamed the agency as the United States Parole Commission and placed it within the Department of Justice for administrative purposes. Nine Commissioners, appointed by the Precident, with the advice and consent of the Sanate, for terms of six years were authorised in the statute. The Commission is established in the law as an agency with independent, quasi-judicial decision-making powers. The Commission has parole jurisdiction over all eligible Federal prisoners, wherever confined, and continuing jurisdiction over those who are released on parole or as if on parole (mandatory release).

The Comprehensive Crime Control Act of 1984 (Public Law 98-493) abolished perols for Federal prisoners and established a system of determinate sentencing, in which convicted felous must serve at least 85 percent of their sentence. With the establishment of sentencing guidelines, which went into effect on November 1, 1987, the Federal perols system has been gradually declining as the number of prisoners sligible for parols consideration has decreased. Public Law 98-493 provided for the Parols Commission to be phased out by November 1992. However, because of constitutional questions involving grants of perols for thousands of "old law" prisoners who would still be incarcarated at the termination date, the Judicial Improvements Act of 1990 (P.L. 101-560) extended the life of the Commission to November 1, 1997. With substantial numbers of immates and peroless still under the Commission's jurisdiction as the new termination date approached legislation was enacted on October 2, 1996 (P.L. 104-232) that provided for the continued existence of the Commission until November 1, 2002.

Under P.L. 106-33, the National Capital Revitalization and Belf-Government Improvement Act of 1997 (D.C. Revitalization Act), Congress reversed course with respect to the downsizing of the Parole Commission by abblishing the D.C. Board of Parole and transferring D.C. Code prisoners and parolese to the Commission's jurisdiction. Although P.L.104-232 had reduced the number of Commissioners from nine to three, two additional Commissioners were authorized for the D.C. caseload under the P.L.106-33, bringing the total to five Commissioners. The D.C. Revitalization Act mandates a two-stage transfer of functions from the D.C. Board of Parole to the U.S. Parole Commission. The first stage, which provided for the transfer of authority to grant or deny parole to incarcerated felony offenders, was begun on August 5, 1998. The second stage, providing for transfer of supervision and revocation functions will take place on August 5, 2000. Resources to implement this stage of the takeover are included in this request.

The Commission relies on the services of Bureau of Prisons (BOP) employees and U.S. Probation Officers employed by the Probation and Pretrial Services. Division of the U.S. Courts. BOP staff, who are assigned to the correctional institutions throughout the nation, prepare progress reports and other reports concerning perole applicants. Field supervision of released prisoners is provided by Probation Officers of the Probation Service, who, pursuant to statute, function as "prove officers" for Federal prisoners. Reports concerning the adjustment of peroless and mandatory releases are prepared by these officers and submitted to the Commission. Supervision of D.C. peroless is the responsibility of the Court Services and Officers Supervision Agency that was created under the D.C. Revitalization Act.

Case Managers in correctional institutions throughout the nation prepare progress reports and other reports concerning purole applicants in their custody. Heuring Examiners appointed by the Commission conduct in-person perole bearings with prisoners eligible for perole and make recommendations to the Commissioners. These hearings are conducted by examiners at Federal prisoner where perole-eligible prisoners are held. Examiners also conduct procession hearings at Federal and local facilities for purpless who have valent their conditions of perole. Summerless of the hearings are recorded, thus transcribed and sent to the Cautal Office for review and decision of a Consessioner.

The Bureau of Prinons (BOP) has continued to open new correctional facilities to accommodate the growing immate population, and as new facilities have been opened, the Commission and BOP have agreed to concentrate perole-eligible impasts in fewer facilities in order to minimize the number of locations requiring dockets. As of July 31, 1999, there were 130,772 prisoners in BOP facilities. The perole eligible Federal population is projected to be 3,631 on September 30, 1999.

When an individual is released on perole, conditions of release are imposed. The violation of any of these conditions could result in revocation of perole. The Commission has instituted a "zero tolerance policy" of illegal drug use by peroless. Any instance of illegal drug use by any peroles must be reported by the probation officer to the Commission. After the facts surrounding the violation are reviewed, a senction or intervention is prescribed to correct or remedy the problem.

Warrants issued by the Commission to Initiate the revocation of an immate's perole, and the resulting revocation hearings, have remained at relatively constant levels over the past several years. Timely processing of warrants and revocation hearings are essential to the safety of the public and maintaining public confidence in the perole process. Revocation cases make a disproportionate demand on examiner and staff time because of their adversarial nature and because a majority of parolees in these cases are represented by counsel.

Initial hearings are due within 60 days of a newly-sentenced immate's arrival in prison. Statutory interim hearings are due at 18 or 24-month intervals, pursuant to U.S.C. 4208th), depending on the length of the sentence. Institutional revocation hearings are an important determinant of docket schedule. An alleged parole violator who is returned to an institution must be given a revocation hearing within the 90-day statutory deadline. Statutory deadlines effectively impose a bimonthly docket schedule. Local revocation hearings are required to take place within 60 days of arrest at or near the location where the infraction or arrest occurred. Witnesses are present and produce what are the most work intensive hearings.

In 1974, the U.S. Board of Parale (as the Commission was then named) developed and implemented the first guidelines to be used anywhere to structure incarceration and release decision-making. All parole and sentencing guidelines developed in the United States are, for the most part, an outgrowth of Federal parole guidelines. The new Federal sentencing guidelines were modeled after the parole guidelines. The guidelines and the independence of the Federal parole

system were affirmed and strengthened by Congress when it passed the <u>Parole Commission and Representation Act of 1976</u>. The parole guidelines are built around a two-dimensional matrix that considers offense severity on one axis and offender prognosis (risk) on the other. For each combination of offense severity and risk, the guidelines indicate a range of time to be served. The Commission may release outside the guideline range if it determines there is good cause for doing so. Inmates are furnished a written notice stating the reason(s) for the Commission's determination and a summary of the information relied upon. The guidelines have played a significant role over the past two decades in reducing sentencing disparity. The act also enhanced due process, provided the right for impacts to have a representative at their hearing, and required that the reasons for denial be stated in writing.

Prisoners who are dissattisfied with the decision rendered after their heuring may file an appeal with the Commission's National Appeals Board (NAB). The NAB can affirm, modify or reverse the decision under provisions set forth in 28 CFR 2.26. The NAB must complete the action within 60 days of receipt of the appeal.

The Office of the Chairman provides overall management of the Commission's activities and functional supervision of the Hearing Examiners and Analysts. This office also provides quality control of case decisions, coordinates the training program, and is responsible for publication of the Parole Commission's Rules and Procedures manual (28 CFR 2.1 - 2.67).

The Legal office, headed by the General Counsel, advises the Commissioners and staff on interpretation of the agency's enabling statutes and policy, drafts implementing rules and regulations and assists U.S. Attorney's Offices in defending the Commission against lawsuits brought by prisoners and peroless. The office is a resource for staff on problems involving the processing of requests for information under the Privacy Act and oversees responses to requests submitted under the Freedom of Information Act. Additionally, the Office has the responsibility for analyzing applications for exemption from prohibitions imposed by Federal law against persons who have been convicted of certain crimes from occupying labor union, management or pension fund positions, and ensuring that the hearings under the Administrative Procedures Act are properly conducted. The Commission's legal staff also participates in the development of treaties and implementing legislation for the exchange of prisoners with other countries.

An Administrative Office headed by the Executive Officer provides administrative support in the areas of personnel, budget and finance, procurement, and property and space management.

As mentioned above, the Congress enacted P.L. 105-33, the National Capital Revitalization and Self-Covernment Improvement Act of 1997 (the D.C. Revitalization Act) on August 5, 1997, which transferred responsibility for administration of the District of Columbia corrections, offender supervision, parole and other functions to the Federal government. On August 5, 1998, the Commission assumed the jurisdiction and authority of the D.C. Board of Parole relating to parole consideration for parole-eligible felons convicted under the provisions of the D.C. Code. When the D.C. Court Services and Offender Supervision Agency assumes its duties on August 5, 2000, the Parole Commission will assume the remaining powers of the D.C. Board of Parole, including issuance of warrants, conduct of revocation hearings and modification of conditions of parole. At that time, the D.C. Board of Parole will be abolished, and D.C. Code prisoners and paroless will be handled in much the same way as Federal prisoners/paroless, but their parole consideration will be subject to the rules and guidelines established under the D.C. Code. Parole hearings for D.C. Code prisoners are conducted in the same manner as hearings for Federal prisoners. Hearing Examiners appointed by the Commission conduct in-person parole hearings with prisoners eligible for parole and make recommendations to the Commissioners. For field supervision of D.C. Code paroless, the Commission will rely upon parole officers on the staff of the Court Services and Offender Supervision Agency

INITIATIVES

ACTIVITY: DISTRICT OF COLUMBIA PAROLE CASELOAD

Perois Commission Increase 6 3 \$ 328

Proposed Actions: A program increase of 6 positions, 3 workyeers and \$328,000 is requested for the Parole Commission to continue the responsibility of making parole decisions for D.C. Code prisoners, and to assume its new responsibilities for D.C. Code paroless on August 5, 2000. Initial estimates for the District of Columbia parole responsibility indicated that the Commission would handle about 300 additional hearings (i.e. parole revocation hearings) per month. That estimate is probably very close to the eventual total, but a definitive accounting of the D.C. prisoner and inmate population is not currently available, because of the lack of adequate records and systems for monitoring this population. Because of unreliable data, a wide disparity exists in the estimates for the number of D.C. paroless and prisoners that have been provided to the Commission. The D.C. Board of Parole has estimated the current parole population, who are under active supervision, as somewhere in a range from 3,400 to 5,000. Much of the D.C. caseled includes individuals with very serious case histories whose parole supervision must be closely monitored. The Commission will need to rapidly increase its staff in order to assume responsibility for D.C. parole revocation hearings that it will be conducting from August 5, 2000 forward. Because of the deterioration in the capabilities of the D.C. Board of Parole as it approaches its termination date, the Commission expects that there will be a serious backlog of parole revocation hearings when that function is transferred on August 5, 2000.

Since assuming responsibility for the B.C. caseload in August 1998, serious problems with the D.C. prisoner caseload have become evident to Commission staff. First, eithough it was recognized that there would be some problems with the quality of information in the D.C. Board of Parole's files, the extent and severity of this problem was not known. Missing files, files with missing documents, and inadequately prepared documents are much more frequent than was expected. This causes delays in conducting hearings (e.g., hearings that have to be postponed or continued to obtain required information). Extensive efforts are required by the Commission's staff to obtain adequate information, so that decisions are be made that do not jeopardize public safety. Moreover, because there can be no reasonable presumption of regularity regarding the adequacy of the material in a D.C. prisoner's file, each case must be rigorously scrutinized to determine the likelihood that any significant information is missing. For this reason, it takes considerably more time to review adequately the cases of D.C. Code offenders than the cases of Federal offenders where problems with the information available are rare. Second, the Bureau of Prisons, for appropriate reasons, is dispersing the D.C. offenders at the Lorton complex to various Federal and contract institutions at a faster rate than anticipated by the Commission. A consequence for the Commission is that the staff time and expense to conduct statutority required parole hearings has increased substantially because of the travel involved, and thus the average number of cases that can be heard by the examiner staff monthly has declined significantly. As a result, there is no excess staff time than can be diverted to assume the D.C. Board of Parole supervision and revocation functions without the requested additional funds.

The D.C. offender population transferred to the jurisdiction of the U.S. Parola Commission under the National Capital Revitalization and Salf-Government Improvement Act of 1997 contains a large proportion of violent offenders. Similarly, the federal offenders still under the jurisdiction of the Parola Commission are serving long sentences, primarily for violent offenses. Lack of adequate Commission staff can jeopardize the public safety, since errors with respect to parola release decisions by overburdened staff can result in the inappropriate release of dangerous offenders. Delays in hearings can lead to litigation, thereby increasing other costs and the potential for the untimely release of dangerous offenders by the courts for failure of the Commission to meet statutory or constitutional time limits or other procedural requirements. The failure of the Commission to respond promptly to violations by those under supervision, or the failure to meet all statutory and constitutional requirements in conducting revocation hearings, can similarly leopardize public safety.

Consequently, the Commission has experienced a substantial and increasing number of delays in the holding of parole hearings and in the issuance decisions after hearings are completed. Without adequate staffing, these delays will continue to grow, and in turn will add to the increase of workload because of the need to respond to official complaints, complaints of immates and the inscribel litization. With a D.C. paroles population that has a large number of violent offenders, delays in responding to warrant requests or the modification of parole conditions can pose an immediate and errious risk to public safety as these offenders are left free to engage in new criminal activity.

Many of the prisoners coming before the Commission for rehearings ordered by the D.C. Board of Parole have point scores that call for parole, but have prior convictions for such offenses as murder, rape, robbery and other assemblies acts. An illustrative example of the type of felon that the Commission has encountered in the D.C. caseload is the following case. The subject was the "trigger man" in a robbery, which resulted in the murder of a female DC police officer. The crims occurred in 1975 and the subject was convicted of Murder II as well as Conspiracy, Attempted Armed Bobbery, Assembly With a Deadly Weapon and sentenced to 16 years to life on the murder charge and 3 years to life on the other counts. The subject served 18 years before being released on parole supervision in 1992. In spite of repeated arrests, beginning within a year of his release, for DWI and possession of marijuans and occains with intent to distribute, and violations of his conditions of parole, his parole was not revoked until January 1998. He was scheduled by the D.C. Board of Parole for possible repercle in 1999, but after a reparole hearing, the Commission denied parole and determined that he should remain in custody until at least 2005.

The Commission has determined that this request is the minimum necessary to handle a continuing caseload that will exceed 7,600 hearings in FY 2001. USPC will be responsible for promulgating rules governing parols and parols procedures, conducting parols hearings and revocation hearings, making parols and revocation decisions, and overseeing the supervision of paroless under the Offender Services Agency. Parole will be abolished for new D.C. Code offenders three years after enactment, but the prospective operation of this law will keep the parole caseload at current levels for at least three years thereafter before a decline commences.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY GENERAL GOAL

GENERAL GOAL: To make decisions on grante and denials of parole, conditions of parole, supervision of paroless/releasess, recommitted due to relation of conditions of paroles and termination of grant-paint as outlined in the Parole Commission Reorganization Act of 1976 (18 U.S.C. 4301 at seq.).

- A. Data Validation and Verification: The DRAM data entry system automatically verifies that all data items have valid values, and that related data items are internally consistent with each other, and with Commission rules and procedures
- B, FY to Performance Report: USPC secumed full responsibility for all initial and interim hearings for D C Code Impates on August 5, 1986. Because of unvaluable data, a wide disparity exists in the estimates for the number of D.C. pareless and prisoners that have been provided to the Commission. The D.C. Board of Parule has estimated the current percept population under active supervision, as somewhere in a range from 3,400 to 5,000.
- C. Factors Affecting Selection of FY 3000 and PY 3001 Plans: Includes approximately 3 600 D.C. Code cases in FY 1999 and about 4,000 D.C. cases in PY 2000. USPC assumes responsibility for purols revocations and supervision on August 5, 2000. Analyst Workload consists of actions related to prisoners and puroless such as pri-relesse reviews, purols certificates, requests for warrant issuance, modifications of purole conditions, and letters of reprimand.

U.S. Parele Commission Salarian and Emerous Justification of Advantages to Base (Dollars in thousands)

10	treases (Automatic, non-policy):	/_ WY _	Amount
1.	FY 2001 Pay Raise. This request provides for the proposed 5.7 percent pay raise to be affective in January of FY 2001 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for FY 2001 budget submissions. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$180,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$142,000 for pay and \$38,000 for benefits).		. 180
3 .	Annualization of 2000 Per Raise. This pay annualization represents first quarter amounts (October through Becamber) of the anticipated FY 2000 pay increase of 4.6 percent effective in January 2000, and for three-quarters of a year, the difference between the 4.6 percent estimated in the FY 2000 President's budget and the approved increase of 4.8 percent. The amount requested, \$78,000, represents the total annualisation of pay amounts for the fiscal year plus appropriate benefits (\$59,000 for pay and \$19,000 for benefits).		78
8.	Accident compensation. This increase reflects the estimated billing provided by the Department of Labor for the actual costs in 1999 of employee's accident compensation, which will be billed in FY 2001. The FY 2001 increased cost will be \$1,000.		1
4.	Travel Management Centers Contract Foss. In the past, travel management services were provided at no cost, and the Department received relates based upon ticket seles. However current practices in the travel industry have ended this process. The new contracts will not provide relates and will carry fees for each ticket, hotel, car and other reservation made. The Department's cost for travel management center fees is estimated at \$2,500,000. Funding of \$5,000 is requested for USPC.		8
5.	Increased Pederal Health Insurance Costs. This requise provides for the increased in agency contributions to the Federal Employees Health Benefits program. In 1999, Federal health insurance premiums, including agency contributions, increased approximately 10.2 percent. Because the Government absorbed a larger proportion of the total costs, up to 75 percent, the total cost to the Covernment has increased substantially. This request includes \$20,000 for these costs.		20

DEFENDER	(Automatic.	non-policy).	azztinued:

İs	creases (Automatic, non-policy), continued:	<u> </u>	<u>.411</u> 6	
6.	Transfer of CSRS employees to the FERS Settrement System. This request provides for the increase in Federal Employees Settrement System (FERS) costs, base on the transfer of Civil Service Settrement System (CSRS) employees to FERS, as authorized by the FERS Open Sarollment Act of 1997, and the open assesson that ran from July 1, 1998 through December 31, 1998. This increase is based on the number of employees who have transferred to FERS, the grade of the transferred employees and the increased cost of FERS benefits. The request includes \$9,000 for these benefits.		9	
7.	National Archives and Records Administration (NARA). ORB directed NARA to convert its direct-funded records center program to a fully reimbureable program by FY 2001. This proposed legislation mandates that NARA is to remain the sole source for agency records center services through FY 2002 for agencies currently using its services. In FY 2001, NARA advises that these charges will be increased by 2.5 percent. The Department's FY 2001 estimated costs total \$6,599.564, an increase of almost \$800,000 based on current records maintained by NARA. Funding of \$1,000 is requested for the U.S. Parels Commission.	-14	1	
₿.	General Pricing Level Adjustments This request applies OMB pricing guidance to selected expense categories. The increased corts identified result from applying a factor of 2.0 percent against those sub-object classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.		84

Legal Activities Salaries and Expenses, General Legal Activities Summary Statement Fiscal Year 2001

For FY 2001, the General Legal Activities (GLA) appropriation seeks total budget authority of 3,837 positions, 3,834 workyears (excluding 374 reimbursable workyears) and \$552,239,000. This resource level represents an overall increase of 160 positions, 92 positions and \$16,519,000 above the FY 2001 base level. In addition, requested adjustments-to-base increases of \$30,775,000 are requested to annualize positions approved in the Department's FY 2000 appropriations act and to enable the appropriation to keep pace with inflation. The FY 2001 program changes are briefly discussed below. Specific details about individual program are further discussed at the organizational level.

Tax Division

International Tax Compliance (7 positions, 4 FTE, and \$500,000): Additional resources (7 attorneys) are requested to expose and attack the use of illegal offshore schemes that keep tax dollars from the Federal Treasury. The use of the Internet and other electronic technology makes the promotion and use of foreign trusts and other offshore schemes easier to accomplish and more popular, as well as difficult to detect. This enhancement will combat this increasing problem and bring to justice those who illegally abuse and circumvent the Nation's internal revenue laws.

Abusive Trust Initiative (7 positions, 4 FTE, \$500,000): Additional resources (6 attorneys) are requested to combat the use of illegal domestic trusts. In recent years the Internal Revenue Service has noted a substantial increase in the number of taxpayers utilizing illegal trusts in an attempt to illegally avoid or limit their federal tax liabilities. This additional funding will allow the Tax Division to assist the IRS in curtailing this activity, recover lawfully owed federal taxes, and ensure that the American public is protected from this type of unlawful activity.

Litigation Support (no positions and \$1,020,000): Additional resources are sought to support the use of automated litigation tools for trial preparation, electronic filing, and courtroom presentation. Automated litigation support has numerous benefits for the Tax Division. Resources will fund equipment purchases, which will decrease the amount of time necessary to complete document-intensive trials, allow attorneys and paralegals to analyze large volumes of documents quickly and more thoroughly, and prepare the Division for electronic filing in the courts.

Legal Activities Salaries and Expenses, General Legal Activities Summary Statement Fiscal Year 2001

Criminal Division

Strategic Drug Enforcement (5 positions, 3 FTE, and \$389,000): Additional resources (3 attorneys) are sought to enable the Criminal Division to provide enhanced support to the DEA's Special Operations Division (SOD). Specifically, the requested enhancement will enable the Division to support the new money laundering component of the SOD initiative and to address the increasing number of new wiretups relating to narcotics enforcement, specifically from efforts such as SOD.

International Crime (14 positions, 8 FTE, \$1,197,000): Additional resources (7 attorneys) are requested to enable the Criminal Division to bolster its international enforcement programs. Specifically, this request will strengthen the Office of International Affairs' ability to handle an increasing bilateral/multilateral workload, and enhance the Division's international analysis capability to enable the ICITAP program to develop proactive long-term and strategic planning.

Counterterrorism (11 positions, 6 FTE, and \$888,000): Additional resources (6 attorneys) are requested to enable the Criminal Division to maintain its leadership role in the Department's efforts to combat cybercrime/counterterrorism. This request will enable the Division's Computer Crime and Intellectual Property Section, which has become a nexus for federal, state, local and foreign agencies seeking guidance on how to develop responses to the threat of cybercrime/cyberterrorism, to keep pace with the rapid increase in cybercrime and cyberterrorist attacks. In addition, this request will enable the Division to implement, update and track progress towards the goals of the Five-Year Interagency Counterterrorism and Technology Crime Plan. Finally, this request will establish a victim/witness assistance capacity within the Division and enhance its witness accurity program.

Protecting Communities (6 positions, 4 FTE, and \$685,000): Additional resources (4 attorneys) are sought to enable the Criminal Division to combat child pornography; to assist in the growing number of investigations and prosecutions of those who sell, buy, or transport women and children interstate or internationally to engage in sexually explicit conduct; to strengthen enforcement efforts involving international parental kidneping; to provide funding to expand the Short-Term Protection Program; and to support the Presidential initiative to improve law enforcement in Indian Country.

Logal Activities Salaries and Expanses, General Logal Activities Summery Statement Fiscal Year 2001

Environment and Natural Resources Division

Defending Civil Environmental Laws and the Public Fisc (14 positions, \$ FTE, and \$1,153,000): Additional resources (8 attorneys) are requested to support the Division's efforts to defend federal programs and regulations in the district courts and courts of appeal. This enhancement will support ENRD's increased workload associated with: protecting multi-billion dollar Army and Department of Energy programs designed to store, transport, and destruct hexardous materials; defending the largest and most complex Comprehensive Environmental Response, Compensation, and Liability Act matters; handling challenges to the Endangered Species Act; and enhancing the Division's capacity to utilize attenuate dispute resolution in appropriate cases.

Enforcing and Prosecuting Environmental Laws (12 positions, 7 FTE, and \$988,000): Additional renounces (7 attorneys) are requested to enable ENRD to address an expanding civil enforcement caseload, enhance the Division's capacity to combat environmental crimes, and protect Indian land claims. The Nation's environmental protection program depends on a strong and balanced criminal and civil enforcement program to promote voluntary compliance and deter future wrongdoing. Increased funding will provide the Division the capacity to restoud to an increasing caseload, and pursue violators of environmental laws appropriately.

Office of Legal Connect

Review of Presidential Emergency Action Documents (1 position, 1 FTE, and \$93,000): Additional resources (1 attorney) are requested to enable the Office of Legal Counsel to conduct a legal review of 48 Presidential Emergency Action Documents (PEADs). PEADs are pre-coordinated legal documents designed to implement Presidential decisions or transmit Presidential requests when an emergency situation does not allow for routine staffing and distribution. PEADs have applicability during a national amergency when the President requires immediate authority for, or direction of, emergency activities.

Legal Activities Salaries and Expenses, General Legal Activities Summary Statement Fiscal Year 2001

Civil Rights Division

Prosecuting Criminal Civil Rights Actions (8 positions, 4 FTE, and \$482,000). Additional resources (5 attorneys) are requested to endicate egregious criminal activities. This increase will provide resources necessary to enhance the Civil Rights Division's ability to investigate, and where warranted, prosecute civil rights violations in the areas of hate crimes, color of law, and violence directed toward health care providers.

Promoting Compliance with the Americans with Disabilities Act (29 positions, 13 FTE, and \$2,253,000): Additional resources (12 attorneys) are requested to increase the Division's ability to enforce the ADA, including: (1) addressing an increasing number of complaints filed under Title II and Title III of the ADA; (2) addressing increasing litigation caseload anticipated for FY 2001, including employment cases referred to the Department by the EEOC; (3) expanding efforts to certify that state and local building codes meet ADA requirements; (4) providing technical assistance and outerach to assist small business and law enforcement officials in meeting ADA requirements; and (5) ensuring that persons confined in public institutions have adequate mental health services.

Civil Enforcement of "Pattern or Practice" Police Misconduct (5 positions, 3 FTE, and \$656,000): Additional resources (3 attorneys) are requested to combat abusive, discriminatory, and other unconstitutional actions by law enforcement officials.

Combating Abuse and Neglect in Institutions (3 positions, 1 FTE, and \$389,000): Additional resources (2 attorneys) are requested to carry out the Administration's initiative to combat abuse and neglect in institutions, to protect the rights of nursing home residents and youth in juvenile detention and correctional facilities, and to address the mental health needs of individuals in correctional and health care facilities. To this end this request will significantly enhance the Division's capacity to pursue investigations, settlements, and cases and strengthen the Department's monitoring of settlements to ensure compliance.

Enforcement of the Voting Rights Act (6 positions, 6 FTE, and \$1,770,000): Additional resources (5 attorneys) are requested to assist in the review, required by the Voting Rights Act, of numerous redistricting submissions and other voting changes that will follow the

Lend Activities Salaries and Expenses. General Legal Activities Summary Statement Fiscal Year 2001

2000 Census. Specifically, this enhancement will fund positions required for the timely review of Section 5 voting changes and redistricting proposal submitted by covered jurisdictions. In addition, this request will support required technology improvements and the conversion of data into the digital format compatible with the Division's Geographic Information System.

Fundamental Opportunities (19 positions, 11 FTE, and \$2,765,000): Additional resources (13 attorneys) are sought to expand programs that seek to protect basic civil rights. Specifically, resources will fund improvements in the following areas: (1) to combat illegal employment discrimination; (2) to attack in-school segregation, insuring that desegregation has been achieved, promoting diversity, and insuring that non-English speaking students have access to an effective educational experience; (3) to provide training to federal agencies and state and local governments on the legal requirements and investigatory techniques applicable under Title VI of the Civil Rights Act of 1964 and Title IX of the Education Amendments of 1972, as amended; (4) to fund computer software and technical support required to enforce the Nation's fair lending laws; (5) to implement the American Competitiveness and Workforce Improvement Act; (6) to fund the Division's litigation support requirements; and (7) to handle civil rights amorals.

Providing Administrative Support to Civil Rights Enforcement (13 positions, 9 FTE, and \$441,000): Additional resources are requested to maintain adequate levels of administrative support to the Division's litigating sections. Additional funding will provide support in areas such as financial management and planning, litigation support, information resource management and human resources.

Office of Dispute Resolution

Office of Dispute Resolution (no positions and \$350,000): Additional resources are sought to fully fund the operations of the Office of Dispute Resolution. The Office promotes the use of mediation and other forms of dispute resolution for use in appropriate civil cases involving the United States. It advises attorneys on dispute resolution strategies, identifies potential private providers of dispute resolution services, conducts training in negotiations and dispute resolution, and serves as the Department's representative in dealing with other agencies, Congress and the public regarding mediation issues. The Office also represents the Attorney General in monitoring and supervising the activities of the Interagency Working Group on Alternative Dispute Resolution, a Presidentially

Legal Activities Salaries and Expenses. General Legal Activities Summary Statement Fireal Year 2001

established Task Force that promotes the use of dispute resolution throughout the Executive Branch. This enhancement, when combined with the resources provided by Congress in FY 2000, will fully fund the operational responsibilities of the Office.

Isani Activities Salaries & Expenses General Local Activities Justification of Procosed Changes in Appropriation Language

The 2001 budget estimates include proposed changes in the appropriation language listed and explained below. New language is undersoored in hold and deleted matter is [enclosed in brackets].

Salaries and expenses, General Legal Activities

For expenses necessary for the legal activities of the Department of Justice, not otherwise provided for, including not to exceed \$20,000 for expenses of collecting evidence, to be expended under the direction of, and to be accounted for solely under the certificate of, the Attorney General: and rent of private or Government-owned space in the District of Columbia: [#357.016.000] \$552.339.000; of which not to exceed \$10,000,000 for litigation support contracts shall remain available until expended: Provided, That of the funds available in this appropriation, not to exceed [\$36.666,000] \$18.877.080 shall remain available until expended for office automation systems for the legal divisions covered by this appropriation, and for the United States Attorneys, the Antitrust Division, the United States Trustee Program, the Enecutive Office for Immigration Review, the Community Relations Service, and offices funded through "Selevies and Expenses", General Administration: (Provided further, That of the amount appropriated under this heading \$582,000 shall be transferred to, and merged with, funds available to the Presidential Advisory Commission on Holocaust Assets in the United States and shall be made available for the same purposes for which such funds are available;) Provided further. That of the total amount appropriated, not to exceed \$1,000 shall be available to the United States Mational Central Bureau. INTERPOL. for official reception and representation expenses.

[In addition, \$147,929,000, to be derived from the Violent Crime Reduction Trust Fund, to remain available until expended for such purposes.]

In addition, for reimbursement of expenses of the Department of Justice associated with processing cases under the National Childhood Vaccine Act of 1986, as amended, not to exceed \$4.028,000, to be appropriated from the Vaccine Injury Compensation Trust Fund. (Department of Justice Appropriations Act, 2000, as enected by section 1000(a)(1) of the Consolidated Appropriations Act, 2000 (P.L. 106-113).)

Legal Activities Salaries and Expenses, General Legal Activities Justification of Proposed Changes in Appropriation Language

Explanation of Proposed Changes

LAGA Change: The purpose of the proposed language change is to provide funding for the United States Trustee Program, the Executive Office for Immigration Review, and the Community Relations Service, which are JCON organizations, but which have had no dedicated source of information technology funding. By including these organizations in among the eligible LAGA components, the JCON Program can better ensure that the systems in these organizations comply with the standard architecture over time. It also will make it easier to pursue opportunities to consolidate or collaborate on system management.

8	Esteral Health Insurance Premiums; This request provides for the increase in agency contributions to Federal employees' health benefits. In FY Federal health issurance premiums, including agency contributions, increased approximately 10.2 percent the government absorbed a larger proportion of the total costs, up to 75 percent, the solal cost to the govern increased substantially. This increase is based on the "increased" government cost of health insurance.	Because		1,120
7	General Services Administration (GSA) Rent; GSA will continue to charge central rates that approximate those charged to commercial tenants for equivalent apace and related services. The required increase is required to meet our commitment to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates reflecting a 5 percent increase over 2000 tevels.			
	The first state of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of th			2,695
6	Lease Expirations; GSA now requires all agencies to pay refocation costs associated with lease expiration. Based on prior experience, the Department enfolpates that 20 percent of all lease expirations will result in relocations. This requisit provides for the cost associated with new office relocations caused by the expiration of leases in FY 2001. No funding is requested for any build-out costs associated with lease expirations.			213

84	ee Adjustments;	Pos.	FTE	Amount
	by FY 2000. This proposed legislation mandates that NARA is to remain the sole source for agency records center services, throughout FY 2002, for agencies currently using its services. In FY 2001, NARA advises that these changes will be increased by 2.5 percent. The Department's FY 2001 estimated costs total \$6,599,584, based on current records maintained by NARA.			
				37
15	Position and FTE Adjustment: This request includes a 2 position, 2 FTE adjustment for the Office of Dispute Resolution.	2	2	
16	Base Restoration: This request will restore part of the Civil Division's former automated litigation support base which has been croded in recent years. Over the last several years base funds available for ALS has been cut sharply from \$11.4 million in 1995 to \$8.9 million for 1995 to \$8.9 million for 1995 to \$8.9 million for 1995 to \$8.9 million for 2000. This downward aprial his coincided with heightened expenditures for personnel. Most of the dwindling automated #tigation support bette will be needed to pay for existing space and maintain existing data bases and equipment. To the exter that kinds are available to meet case-specific needs, they will be used for a handful of multi-billion dollar subbefore the Court of Federal Cistms, e.g., claims involving the storage of spent nuclear fuel; claims involving Atesta Puty's breach of contract allegations; and claims arising from Congress' engations of teglelation practite propyment of HUD mortgage loans.	t s brought

TAX L. /ISION

SUMMARY PERFORMANCE PLAN of the TAX DIVISION - FY 2001.

Summary Statement:

The Tax Division requests a total of 600 permanent positions, 571 work years, and \$73,011,000 for its Fiscal Year (FY) 2001 Salarios and Expenses Appropriation. This request represents an increase of \$5,811,000 over the 2006 exacted appropriation of \$67,200,000. Also included are 14 positions and 8 FTE for major new FY 2001 initiatives. Descriptions of these initiatives are found on pages 16 to 21 of this plan. The increase supports the continued implementation of the Department's priority to ensure that the federal tax laws are enforced fairly, correctly and in a uniform manner. The Tax Division's mission, goals, program initiatives, objectives, and performance measurements are set forth in this Plan.

A. Mission and Goals, and Relationship to DOJ Strategic Plan

Core Mission of the Tax Division: The primary mission of the Tax Division is to enforce the country's tax laws in federal and state courts and, thereby, ensure the maximum legal collection of revenue by the Federal Government. The most significant result of the Division's efforts is obtained every time the United States Treasury collects a tax that has been correctly and justly imposed and every time the Division successfully defends against an unjustified claim for refund. The Division utilizes both criminal and civil prosecution to ensure that the nation's internal revenue laws are fairly and uniformly applied and that the public complies with the nation's tax laws. In this way, the Tax Division's accomplishments contribute significantly and directly to efforts by the Administration and Congress to protect the federal fise from unjustified claims.

Statutory Responsibility. The Internal Revenue Code is the major authorizing statute governing the Tax Division, whereby the Division: represents the United States in all civil and criminal litigation arising under the internal revenue laws, other than proceedings in the U.S. Tax Court; litigates bankruptcy and Freedom of Information Act actions involving tax matters; and defends <u>Bivens</u> cases involving Internal Revenue Service personnel.

Critical Mission Functions:

(Support DOJ Strategic Plan Core Function 3: Legal Representation, Enforcement of Federal Laws, and Defense of U.S. Interests)

- Promote the fair, correct, and uniform enforcement of the federal tax laws in the nation's trial and appellate courts; fosier the public's
 voluntary compliance with the tax laws through vigorous criminal prosecution of and civil enforcement against individual and
 corporate taxpayers that violate federal tax laws;
- Enhance collection of tax debts by the U.S. Treasury;
- Assist in the development of federal tax policy by (a) analyzing proposed legislation that affects civil litigation, appeals, and criminal
 prosecutions arising under the Internal Revenue Code and (b) maintaining cooperative relationships with the Internal Revenue Service,
 the Department of the Treasury, and components within the Department of Justice, including the United States Attorneys' Offices;
 and
- Manage the Division efficiently and effectively.

B. Highlights of Mission-Critical Results

Major results from the Tax Division's mission-critical programs (Tax Gap Project, Illegal Tax Protest Initiative, International Compliance, and Workforce Restructuring) that directly link to the DOI strategic goals, are highlighted below.

1. INVESTIGATION AND PROSECUTION OF CRIMINAL OFFENSES (DOJ Strategic Plan, Core Function 3)

- Reduce white-collar crime, including public corruption and fraud. (DOJ Strategic Plan, Core Function 3, Goal 4) This purpose is acroed by the successful prosecution of criminal tax cases by the Tax Division. The criminal tax cases involve diverse targets, ranging from large corporations to individuals who attempt to defraud the United States. For example, in United States v. Hogan, Michael Hogan and his brother, Terrence Hogan, operated an airport and air cargo/air charter business, Miami Valley Aviation, Inc. (MVA), in Middletown, Ohio. Michael Hogan had not filed tax returns for over a decade until September 1997. Further, Michael Hogan used nominees and over 50 bank accounts

to conceal income that he diverted from MVA. Terry Hogan, the president of MVA, created false corporate records in an effort to conceal the diversion of income to his brother. Michael Hogan sent over \$750,000 to Guardian Bank and Trust in the Cayman Islands using a shell corporation and repatriated about half this sum to purchase a jet and a house. Michael Hogan pleaded guilty on September 1, 1999, to a Klein conspiracy and tax evasion charges, and stipulated to a tax loss of more than \$550,000. He is now cooperating with the government. Terrence Hogan also pleaded guilty on September 1 to filling a false corporate return. He was recently sentenced to 48 days in jait, 1 year in home detention, 5 years of probation, a \$20,000 fine and \$00 hours of community service.

In United States v. Johnny Chang, the defendant entered a plea of guilty to tax evazion, bank fraud, and compiracy to violate the federal election laws. He was sentenced to five years of probation and 3,000 hours of community service. Chung was the first major target of the Department's Campaign Finance Task Force investigation to plead guilty and he received a reduced sentence for cooperating with the government. Chung visited the White House on 49 occasions and contributed almost \$400,000 to Democratic party causes. He admitted that he attempted to evade his 1995 income taxes by filing a tax return which he knew failed to report all of his taxable income.

Many of the cases handled by CES attorneys are tax gap, or legal source income, cases. In *United States v. Ronald Blackburn*, for example, the defendant pleaded guilty to a five-count information charging him with evading the payment of \$712,000 in federal withholding taxes. Blackburn controlled several companies and failed to pay their tax liabilities. In 1993, as the president of LLA, Inc., a firm that refurbished industrial machinery, the defendant received \$174,000 in salary payments. To prevent the IRS from seizing these funds to satisfy some of the withholding tax liability, he arranged to receive his salary paid in cash. Blackburn was sentenced to serve 37 months in prison.

- Reduce espionage and terrorism (sponsored by foreign or domestic groups in the United States and abrand when directed at U.S. citizans or institutions). (DOJ Strategic Plan, Core Function 3, Goal 4) In United States v. Veral Smith, an Idaho builet-mold manufacturer was convicted by a jury of failing to file income tax returns, presenting fictitious financial instruments, failing to appear at a court-ordered hearing, resisting arrest, and assaulting two officers of the U.S. Marshal's Service. Smith was sentenced to 51 months in prison and five years of supervised release. This case was the first prosecution using a recently enacted statute that was designed to combat anti-government groups that employ fictitious financial instruments to commit economic terrorism against the United States.
- Coordinate and integrate DOJ inv enforcement activities whenever possible, and cooperate fully with other federal, state, and local
 agencies that are critically linked to improved operation of the Nation's Justice system. (DOJ Strategic Plan, Core Function 3) In United
 States v. Gino Garilli, the defendant pleaded guilty to a two-count information charging him with one count of tax evasion and one count of

receiving kickbacks. Garilli was a purchasing agent for Kaman Aerospace, a defense subcontractor. From 1993 through 1995, he received approximately \$220,000 in illicit payoffs and failed to declare the money on his income tax returns. The court fined Garilli \$15,000 and sentenced him to three years of probation. This prosecution resulted from an ongoing joint IRS Criminal Investigation Division/Department of Defense investigation.

The Department's International Tax Compliance accomplishments are due to the cooperative efforts of the Tax Division, working with an interagency delegation jointly led by the State and Justice Departments, with representatives of the Russian government. Continued negotiations for a mutual legal assistance treaty (MLAT) to cover tax offenses resulted in Russia's agreement to provide assistance, including access to bank records, for all United States tax crimes. The United States and Russia have formally amended the MLAT to cover all tax crimes. Other international tax compliance progress includes informal negotiations with France concerning a proposed protocol to the United States-France Extradition Treaty, to establish tax crimes as extraditable offenses, and with the Royal Canadian Mounted Police, to improve mutual cooperation in investigations and prosecutions of tax and money laundering offenses.

- 2. LEGAL REPRESENTATION, ENFORCEMENT OF FEDERAL LAWS, AND DEFENSE OF U.S. INTERESTS (DOJ Strategic Plan, Core Function 3).
- Promote the fair, correct and uniform enforcement of the Federal tax laws and the collection of tax debts. (DOI Strategic Plan, Core Function J. Goal 4) Tax Division attorneys are guided by the principles of fair and uniform treatment for all categories of taxpayers throughout all stages of case review, litigation, and appeals. This applies to the collection of tax debts. Specifically, during FY 1999, the Tax Division successfully defended against more than \$441 million in tax refund claims as: 6 obtained, through settlement or post-judgment collection, more than \$66 million in affirmative recoveries.

As a result of the IRS's focus on abusive trusts, we have already successfully instituted an injunction proceeding against abusive trust promoters in California. That case, United States v. Estate Preservation Services, et. al. was a suit against the major promoter of the achome, his corporation, a lawyer, and a certified public accountant who participated in the abusive promotion. The defendants used a nationwide multi-level marketing network to sell a non-granter trust scheme. In promoting the scheme, trust purchasers were told, among other things, that they could transfer property into the trust, thereby receiving "a new income tax basis" for the property which could then be depreciated. In addition, prospective purchasers were told that these trusts could be used for "income splitting", to generate deductions that would otherwise not be

available, and to reduce or eliminate self-employment taxes. The court, noting the wide-spread nature of the scheme and the type of fraudulent conduct, entered a preliminary injunction against all of the defendants.

In Bell Atlantic Corp. and Subsidiaries v. United States (E.D. Pa.) (app. pending), the Tax Division prevailed in a complex tax refund suit involving the investment tax credit. Although the case itself involved some. \$77 million, the issue is estimated to have a nationwide tax-revenue impact (for all industries) of about \$30 billion. In Lockheed-Martin Corp. v. United States (Fed. Cl.) (app. pending) the Tax Division successfully litigated whether certain expenditures should be eligible for research-and-development tax credits, another case where the issues presented involve several billion dollars of tax revenues with respect to defense industries. And in Florida Progress Corp. v. United States (M.D. Fla.) (app. pending), the district court upheld the Government's position that underground service line costs must be capitalized, a utility-industry issue that is estimated to involve \$250 to \$300 million annually.

In In re Scott Cable Communications, Inc. (Bankr. D. Conn.), the Tax Division succeeded in convincing the bankruptcy court to sustain the Government's objection to a pre-packaged bankruptcy plan which, if widely adopted, had the potential to allow corporate debtors to avoid billions in capital gains taxes from the sale of assets. In re Nelson Bunker Hunt and In re William Herbert Hunt (Bankr. N.D. Tex.) are two separate Chapter 11 bankruptcy proceedings in which the Government has, over a number of years, obtained about \$1.3 million in satisfaction of individual federal tax liabilities. In FY 1998 and 1999, the Government collected over \$6.8 million and \$1.7 million, respectively, from these bankruptcies. The Government has collected 80% of the assets in the Nelson Bunker Hunt case, and 70% in the William Herbert Hunt case. The Tax Division has also been successful in deterring abuse of the bankruptcy system. For example, In re David Pornar (Bankr. W.D. Tex.) (app. pending), the United States worked with the trustee to pierce a trust set up by the debtor to conceal over \$1 million in assets from his creditors.

3. MANAGEMENT (DOJ Strategic Plan, Core Function 3)

-Achieve excellence in management practices; ensure a motivated and diverse workforce that is well-trained and empowered to do its job. (DOI Strategic Plan, Core Function 3, Goal 4). The Tax Division's restructured workforce has resulted in the continued recruitment of skilled litigation assistants and paralegals to promote the litigation team concept with our expert tax attorneys. Enhanced performance work plans governing quality performance, productivity, and output were developed and implemented. In addition, the Division's Litigation Support Service Centers are fully operational. Direct support to our litigation teams has resulted in a shift of much of the administrative and elerical work from the litigation sections to centralized support centers. Lastly, to ensure that our management investment in restructuring continues

to yield returns for the Division, a Employee Utilization Coordinator is responsible for facilitating continued team-building training and coaching, and chairs the Division's Change Management Oversight Committee that recommends management improvements.

4. ALTERNATIVE DISPUTE RESOLUTION (DOJ Strategic Plan, Core Panetion 3)

-Increase caselond resolved through Alternative Dispute Resolution (ADR). (DOI Strategic Plan, Core Function 3, Goal 4) The Tax Division continues to increase participation in Alternative Dispute Resolution programs and expand the use of other settlement techniques, where appropriate, as an alternative to litigation.

Number of Cases Completed Using Alternative Dispute Resolution (ADR)							
FY 1998 Actual	FY 1998 Actual FY 1999 Actual		FY 2001 Planned				
94	120	100	125				

C. Tax Division's FY 2001 Performance Goals and Indicators by Decision Unit

1. Introduction

Members of the Tax Division, the United States Attorneys' Offices, and the Internal Revenue Service work closely to achieve joint goals and objectives. Various cross-cutting initiatives (Tax Gap Project, Illegal Tax Protest Initiative, International Compliance Initiative, Abusive Trust Initiative, and Workforce Restructuring) focus on mutually desired outcomes and results by promoting the deterrence of tax fraud, encouraging voluntary payment of taxes, collecting tax debts, and managing these programs efficiently and effectively. With the recent Internal Revenue Service Restructuring and Reform Act of 1998 ("RRA 98"), radical adjustments have been made to the functions of the IRS, the Tax Division's principal client agency. The full effect of those changes is not yet known, as the IRS has spent much of 1999 continuing to restructure itself internally.

The Tax Division encouraged the Department policy to avoid setting targets for indicaments and convictions, particularly in the area of tax litigation and enforcement. Even though the Tax Division is very proud of its 96.31% conviction rate, it is not the goal of the Division

to set targets in this area; rather, the Tax Division's emphasis is on uniform and fair enforcement of the tax laws and the Division reports its actual results and statistics at the end of each fiscal year.

١.

2. Crosscutting Activities

As the lead component in the Department for Internal Revenue Code matters, the Tax Division has increased cooperation and coordination on tax related issues. The Division's litigation managers (Section Chiefs) have fostered heightened cooperation with the U.S. Attorneys and the Internal Revenue Service. The Section Chiefs regularly meet with representatives from these other offices to develop and coordinate law enforcement initiatives and to discuss other matters of mutual concern. For example, the four chiefs of the Tax Division's Criminal Enforcement Sections participated in a meeting of IRS Criminal Investigation managers to explore workload priorities and trends. A byproduct of this development has been more participation by Tax Division line attorneys in the policy discussions and litigation efforts of cooperative law enforcement efforts, such as the Department of Transportation/Federal Highway Admissistration Joint Federal-State Motor Fuels Compliance Project, the Department of the Treasury's Tax Refund Fraud Task Force, various health care fraud task forces, and the Organized Crime Drug Enforcement Task Forces.

3. Decision Unit Goals and Indicators

A. Federal Appellate

1) Goals:

The core mission of the Tax Division's Federal Appeals program is representing the Government in civil tax appeals. Attorneys in this program litigate all federal civil tax cases appealed to the United States courts of appeals and state appellate courts. The general goals of the federal appellate activity of the Tax Division are reflected in the following performance indicators which measure our success in protecting the federal fisc, in achieving fair results, and in preserving our regulation for just and effective advocacy in the courts.

2) Performance Indicators:

Input: Number of cases received from District Courts, Tax Court, the State Courts, and the Court of Federal Claims.

- Output: Percentage of taxpayer appeals won, at least in part, by the Government. Percentage of Government appeals and cross-appeals in which at least part of the relief sought is awarded.
- Intermediate Outcome: Number of cases in which oral argument is heard. Number of substantive motions and responses and oppositions thereto, and jurisdictional memoranda filed per year.
- Productivity/Efficiency: Number of briefs, reply briefs, petitions for rehearings, etc. filed per line attorney work year. Number
 of appeal recommendations, settlements, certiorari, venue, rehearing, confession of error, mandamus, and unicus participation
 memoranda prepared per attorney work year.

B. Criminal Prosecution

1) Goals:

The centralized review and authorization of all criminal tax prosecutions and the provision of litigation assistance to the U.S. Attorneys'

Offices advance the goal of uniform enforcement. Prompt review of criminal referrals and enhanced public awareness of criminal tax convictions promote the goal of achieving maximum deterrence and foster voluntary compliance.

2) Performance Indicators:

- Input/Output: Client Service: Number of requests received and honored for litigation assistance at trial and appellate levels
 in targeted enforcement areas (excise tax, drug enforcement, health care, illegal tax protest) and legal source income cases.
- Input/Output: Requests for and rate of participation in miscellaneous activities (conduct criminal tax training for Assistant U.S.
 Attorneys, participate in task forces, advise on legislative proposals and amendments, publish Criminal Tax Manuel).
- Productivity/Efficiency: Average number of days to perform initial reviews of administrative and grand jury outgrowth cases.

C. Civil Litigation

1) Gosts:

The Tax Division's Civil Litigation program promotes the protection of tax revenues while striving to assure the fair and consistent treatment of taxpayers nationwide.

2) Performance Indicators:

- Input: Number of civil cases received.
- Output: Number of civil cases closed per year.
- Intermediate Outcome: Number of civil cases pending. Number of cases with decisions. Number of decisions. Percentage
 of wins. Number of settlements. Number of concessions. Number of district court suits instituted on behalf of the United
 States. Number of district court suit requests declined by Division or withdrawn by IRS or other client agency.
- End Outcome: Tax dollars collected and dollars retained in tax refund suits (\$ in millions) by court action and settlements.

D. Major New FY 2001 Initiatives

I. INTERNATIONAL COMPLIANCE INITIATIVE

in FY 2001, the Tax Division requests a total of 7 positions, 4 FTE work years, and \$500,000 to pursue a Departmental and Division goal of International Compliance. This initiative appoints DOJ Strategic Plan Core Function 3.

PROGRAM DESCRIPTION:

The use of tax haven countries as well as other offshore countries to evade United States tax has been a longstanding concern of the Internal Revenue Service. That problem is increasing. Some of the growth stems from the decrease in the attractiveness of more traditional domestic tax shelters occasioned by the tax law changes enacted in 1986. In addition, the use of the Internet and other electronic technology makes the promotion and use of foreign trusts and other offshore schemes essier to accomplish and more popular, as well as more difficult to detect. The common thread in all of these schemes is use of tax haven countries, which impose little or no tax, offer strict bank secrecy laws not covered by treaty provisions, or refuse to extradite fugitives charged with tax crimes.

White abusive offshore achiemes take on many forms, the use of foreign trusts is becoming increasingly popular. A taxpayer first creates a test in a tax haven country. Thereafter, he ostensibly transfers all ownership interests in specified property to the trust and supposedly relinquishes all control over the assets transferred. A number of entities are created and the trust then engages in a series of transactions designed to obbascate (sometimes referred to as a "whirtwind" by the IRS), shifting the trust property around, and generating various "fees" and "expenses." The baric theory is that all trust income is earned in the tax haven country, and since the transferor has not retained any ownership in, or control over, the trust, no United States tax will be incurred. The reality of the situation is that due to side agreements and/or accret documents, the transferor never truly relinquishes control over the trust assets or the income they generate and, thus, is liable for United States tax on the trust income. A variety of methods is used to return the assets and the income they generate and, thus, is liable for United States tax on the trust income. A variety of methods is used to return the assets and the income they generate to the taxpayer, such as wire transfers, the use of debit or credit cards, and alleged loans. The taxpayer typically does not report those transfers and, because all of those methods are difficult to detect, substantial income goes untaxed. The estimated cost to the United States Treasury as a result of this behavior is staggering. The IRS has consulted with expert Jack Blum is its attempt to address these problems and international money laundering schemes. Blum, a former special coursel to the Senste Foreign Relations Subcommittee on Terrorism, Narcotics and International Operations, who has testified before Congress on issues of international banking, has noted that offshore tax evasion is a huge hole in our tax system and

estimates that 500,000 Americans improperly use foreign bank accounts, trusts, and business corporations to escape \$50-75 billion in taxes annually.

The Tax Division initiative includes seven attorneys [one attorney Federal Appeals program; four attorneys Criminal Enforcement program; two attorneys Civil Litigation program] for the conduct of litigation to counter international financial crime.

To further the international enforcement goals of this initiative, the Tax Division needs attorneys experienced in civil and criminal tax fitigation and in obtaining foreign evidence or information, and knowledgeable about international agreements to achieve international tax compliance, such as tax treaties, mutual legal assistance treaties, and extradition treaties. These attorneys would (1) review or handle the internationally affected civil and criminal cases of the Tax Division; (2) assist foreign tax authorities in obtaining information located in the United States, in reaching the assets of foreign taxpayers located in the United States, and in extraditing U.S.-based fugitives charged with foreign tax crimes; and (3) give expert advice to IRS agents and Government attorneys handling internationally affected tax cases, both civil and criminal. These functions are critical to enhancing our international tax enforcement goals and could be accomplished only with significant dedicated resources.

Crosscutting Activities

Tax Division attorneys will coordinate with other international components of the United States Government, such as the Office of International Affairs (Criminal Division, Department of Justice), RS Associate Chief Counsel (International), IRS Assistant Commissioner (International), the Department of Treasury International Tax Counsel, and the State Department.

2. ABUSIVE TRUST INITIATIVE

In FY 2001, the Tax Division requests a total of 7 positions, 4 FTE work years, and \$500,000 for an initiative to curb abusive trusts.

This initiative supports DOJ Strategic Plan Core Function 3.

PROGRAM DESCRIPTION:

In recent years the Internal Revenue Service has noted a substantial increase in the number of taxpayers utilizing trusts in an attempt to avoid, or limit, their federal tax liabilities. While trusts have many legitimate uses, they rarely lead to a legitimate reduction in taxes. The IRS has found that more and more unscrupulous promoters are aggressively marketing abusive trusts, using strained, and in some instances outright false, interpretations of the tax laws. Some promoters offer so called "asset protection trusts", estensibly designed to protect a purchaser's assets from his creditors, but which can, and often are, used to improperly shift income and to hide ownership of assets in order to avoid paying proper tax liabilities. Promoters often target sole proprietorships or professionals, promising that if the taxpayer transfers an operating business into an entity variously called a "business trust," a "common law business trust," on "unincorporated business organization," he can claim deductions for what are essentially personal expenses, shift income, and avoid self-employment tax, while never really losing control over his business or its assets. These schemes clevate form over substance, and sometimes can be "layered" or "tiered" making them more difficult to detect and unravel. When the facts are uncovered, the purchaser is not entitled to any of the advertised tax benefits.

The number of trust return filings with the IRS has increased by 11% since 1993, and is continuing to rise. More importantly, while there were 3,300,000 trust returns filed in 1997, the IRS believes that over 11,500,000 trusts are not filing returns. These phenomens have lead to substantial revenue losses. In order to combat this drain on the treasury, the IRS is increasingly focusing on the abusive trust area, both auditing return at that are filed, and detecting situations where returns should have been filed and taxes paid. In addition, the IRS's Criminal investigation Division identified abusive trusts as an emerging area in 1997, and has steadily devoted increased resources to this problem.

Similarly, from a civil perspective, the Tax Division will be required to enforce an increased number of administrative nummoness as the IRS goes forward with its efforts in the abusive trust area. This will be especially true with respect to promoters of these schemes who, as we know from past experience, will resist every step of the investigation. And, as the IRS focuses more on promoters, there will be an increase in the number of civil injunction suits we will be asked to bring, for as noted above, it is more effective to stop these achieves before

many purchasers become involved, than to audit trust purchasers later, if they can be detected. Indeed, as a result of the IRS's focus on abusive trusts, we have already successfully instituted an injunction proceeding against abusive trust promoters.

Additionally, as a result of the IRS's efforts to curb abusive trust practices, the Division will be called upon to litigate additional cases involving: liability for penalties assessed against promoters of these schemes; liability for income tax and penalties assessed against trust purchasers who have followed the promoters advice; and the collection of tax, peralty and interest from the promoters and the participants.

In sum, abusive trusts pose a significant problem for our tax system. Coordinated efforts between the IRS and the Tax Division are necessary to combat this situation. In that regard, there is now greater coordination between the Division and the IRS with regard to trust issues. In fact, the Division and the IRS have established a Joint Trust Tark Force Working Group to identify in advance, and to propose solutions for, issues which affect criminal and civil actions in this area. While the Task Force will require considerable time by Division attorneys, we believe that it will, in the long run, result in more efficient and effective enforcement in this important area.

As indicated above, abusive trust litigation, be it criminal, civil or appellate, is resource intensive. Some schemes are highly sophisticated; some are relatively simple. All should be stopped. Additional resources will help ensure that they will be.

3. AUTOMATED LITIGATION SUPPORT INITIATIVE

In FY 2001, the Tax Division requests \$1.02 million for the support of information technology advancements to enable the Tax Division to move forward into the 21st century, keeping pace with the technology available and used both within the courts and by opposing counsel. This initiative supports DOI Strategic Plan Core Function 3.

PROGRAM DESCRIPTION:

This initiative represents a program increase in support of information technology in the Tax Division in the Year 2001. It will be used to:

 Create an organizational and technical infrastructure in the Tax Division to support the use of automated litigation support (ALS) tools for trial preparation, electronic filling, and presentation in "typical," as well as large cases.

- Bring ALS tools to the attorney's taptop personal computer for use in the office and while on travel.
- Enhance the presentation of evidence in the courtroom through the use of presentation software and equipment.
- Provide training to all litigation team members (attorney and support personnel) on ALS tools.

Background

Traditionally, the Division has made only limited use of automated litigation support services. While ALS has been used in extremely large cases or by attorneys who are computer-savvy and have developed their own applications, its use in smaller cases has been discouraged. The Division has not included ALS as part of its base, which would have allowed for widespread use of this technology. Instead, funds from a no-year account of unobligated funds administered by the Justice Management Division have been used as needed, but this is not a reliable source of funds.

Internal and external changes in the hitigation environment make it imperative that the Division enhance its ALS program. Internally, restructuring has put the Division in a position to fully automate its workforce. This initiative will complement the establishment of Litigation Support Service Centers throughout the Division, as well as provide the office automation and teleconferencing equipment needed to provide Division personnel with a complete set of automated tools. Automated litigation support equipment will decrease the amount of time necessary to complete document-intensive trials and will facilitate jury comprehension. The addition of these resources will allow attorneys and paralegals to analyze large volumes of documents quickly and more thoroughly. Additionally, Tax Division attorneys are becoming aware of the availability of ALS technology and will have the office automation tools (JCON-II) needed to automat these technologies.

A number of external factors also are at work. For example, the Division must prepare itself for electronic filing, which is being piloted by the United States District and Bankruptcy Courts. Electronic filing projects, in which the Division expects to participate, are underway in several courts. Additionally, the use of presentation technology in the courtroom is quickly becoming the norm and has proven to be of great henefit in the presentation of complex litigation.

The Division will conduct a pilot study in Fiscal Year 2000 with up to four litigation teams to determine the best mix of technology and training for the Division's work force and to provide a basis for benefit/cost analysis. Based on the results of this study, we anticipate redesigning work processes to utilize effectively ALS technology.

To ensure that the Division meets the Department's goal of interoperability and information sharing, the Division will continue its participation in the Litigating Components' ALS working group; software will be integrated into the JCON-II platform; and the courtroom presentation equipment will be interoperable with the equipment purchased by the Executive Office for United States Attorneys and by the Administrative Office for the United States Courts. The Division will also continue to request funding for its office automation infrastructure through the Legal Activities Office Automation account.

Funding is requested for:

- Training for attorneys and non-attorneys, particularly paralegals, approximately \$250,000 in FY 2000; approximately \$100,000 in each subsequent year.
- Imaging and database capabilities approximately \$200,000 each year.
- Presentation equipment approximately \$70,000 for two kits for use in training staff and trial preparation.
- Contractor support \$500,000 per year to provide technical support.

E. Data Validation and Verification Issues

The Tax Division began data validation and verification of performance measures at the onset of the enactment of GPRA legislation. On a quarterly basis, the GPRA statistics are reviewed by the Tax Division's Performance Management Committee's senior attorney chairpersons. This Committee consists of attorneys, litigation support specialists, data management specialists, and budget analysts. The majority of the statistics were contained in the Division's existing Case Management System. As part of the redesign of a new system, "TaxDoc," which was implemented during summer 1999, the few remaining manually-retrieved GPRA statistics will be generated

automatically. It is envisioned that a refined performance measurement system may cause some variations in the way some statistics are calculated.

Data Collection and Storage

The Tax Division has relied on manual methods for recording and retrieving performance data. In conjunction with the development of a new case management system (TaxDoc), the Division has recently revised the complement of indicators that are tracked.

Data Validation and Verification

There will be new procedures to collect and record pertinent data on activities related to specific issues, enabling the Section Chiefs to make projections and set goals based on complete, accurate, and relevant statistics. The Tax Division began data validation and verification of performance measures at the onset of the enactment of GPRA legislation. On a quarterly basis, the GPRA statistics are reviewed by the Tax Division's Performance Management Committee's senior attorney chairpersons. This Committee consists of attorneys, litigation support specialists, data management specialists, and budget analysts. The majority of the statistics were contained in the Division's existing Case Management System. As part of the redesign of a new system, "TaxDoc," which was implemented during summer 1999, the few remaining manually-retrieved performance measurement statistics will be generated automatically.

Data Limitations

The Tax Division currently tacks historical data on some activities. The newly refined information management system may cause some variations in the way some statistics are calculated.

F. Resources

Strategic Goal	[999		2009			2001			
3.4 Promote the fair, correct, and uniform enforcement of the federal tax laux and the collection of tax debts.	Dollars	Pos.	FTE	Dollars	Pos.	FTE	Dollars .	Pos.	FTE
	\$65,633	586	553	\$67,200	586	563	\$73,011	600	571

All budgetary resources requested for the Tax Division, 600 positions, 571 FTE, and \$73,011,000, support Goal 4 of Core Function 3 Of the United States Department of Justice Strategic Plan 1997 - 2002: <u>Promote the fair, correct and uniform enforcement of the Federal tax laws and the collection of tax debts.</u>

In order to achieve the Division's performance goals in FY 2001, it must be able to secure the requested budgetary resources thereby enabling it to: (1) investigate and prosecute criminal tax offenses; (2) prosecute illegal Tax protest activity and other anti-government activities intended to defraud the Internal Revenue Service; (3) coordinate and integrate DOJ law enforcement activities with the Criminal Division and the United States Attorneys' Offices; (4) coordinate international investigations, tax compliance issues and negotiate mutual assistance and extradition treaties that cover tax crimes and money laundering offenses; (5) provide expertise in case review, litigation and appeals; (6) collect tax debts and defend against tax refund claims.

Skills

The Tax Division requires experienced attorneys and support staff who are familiar with the procedures of federal District and Bankruptcy courts and have the substantive and procedural knowledge peculiar to tax cases. The Division also requires that some of its staff have specialized experience. For example, to further international enforcement goals, the Division needs attorneys experienced in civil and criminal tax litigation and in obtaining foreign evidence or information, and knowledgeable about international agreements to achieve international tax compliance, such as tax treaties, mutual legal assistance treaties, and extradition treaties.

Information Technology

In order to achieve the Department's FY 2001 performance goals related to tax enforcement, we are heavily dependent on having a solid infrastructure for the Tax Division. Specifically, this includes: (1) fully implementing the new TaxDoc system; (2) full implementation of the Justice Consolidated Office Network (JCON2) system within the Tax Division; (3) access to adequate litigation support including courtroom presentation technologies; and (4) the organizational and technical infrastructure to support the use of automated tools for trial preparation, electronic filing, and courtroom presentation. Traditionally, the Division has made only limited use of automated litigation support (ALS) services. While some ALS has been used in extremely large cases or by attorneys who are computer-literate and have developed their own applications, its use in smaller cases has been discouraged. The predecessors of TaxDoc and JCON2 (the AS400 based case management system and the EAGLE/PHOENIX office automation system) were not accessible to all users and were not helpful in providing ALS.

G. Summary Performance Plan, Performance Goals, Targets and Actuals

Core Function 3: Legal Representation, Enforcement of Federal Laws, and Defense of U. S. Interests

Strategic Goal 3.4: Promote the fair, correct and uniform enforcement of the Federal tax laws and the collection of tax debts.

NOTE: In accordance with Department guidance, targeted levels of performance are not projected for certain indicator types within this goal

	Key Summary Level Indicators	1998 Actual	1999 Actual	2000 Plansed	2001 Planned

BASE PROGRAM DESCRIPTION:

Tax Division lawyers working in the Appellate Section litigate all Federal civil tax cases appealed to the United States courts of appeals and state appellate courts. They also draft pleadings and briefs filed by the Solicitor General in the United States Supramic Court and make recommendations to the Solicitor General regarding the advisability of filing; (i) appeals in civil tax cases where the Federal Government did not prevail before the district courts, the Court of Federal Claims, the Tax Court, and state courts; and (ii) petitions for certiorari in civil tax cases where the Federal Government did not prevail in an appellate forum. In addition, attorneys in this section handle appeals generated in Freedom of Information Act and Privacy Act cases, civil tort suits that involve IRS officials and employees, and cases involving inter-Governmental immunity. They prepare amicus curiae briefs fited by the United States in private lawauits that present issues affecting the interests of the IRS and in other cases where a court invites the Government to state its views on civil tax-related questions.

Case examples illustrate in substantive and tangible terms the nature of the work, its specific and general deterrent value, and its effects on sevenues. In each of the cases described below, attorneys from the Tax Division's Appellate Section played a critical role by briefing and/or arguing civil tax issues that have a significant impact on the public fise:

- CUNA Mutual Life Insurance. Co. v. United States (Fed. Cir., Feb. 9, 1999) was the third in a series of cases involving the
 computation of the deduction for policy holder dividends paid by mutual life insurance companies to their policy holders. The Federal Circuit
 joined the Seventh and Eighth Circuits, which had previously ruled in favor of the Government on this issue, in deciding that statutory
 provisions did not permit an augmentation sought by the plaintiff. The Internal Revenue Service has advised that, industry-wide, nearly \$6
 billion in revenues are at stake in this on-going litigation.
- ACM Partnership v. Commissioner (3rd Cir., Oct. 13, 1998). This case involved an intricate tax shelter marketed by Merill Lynch Company to Colgate-Palmolive Company and 10 other large corporations. The acheme involved the formation of partnerships between the U.S. corporations and foreign corporations, and attempted to bring large paper losses within the scope of permissible deductions under Treasury Regulations on contingent installment sales (in this case, attempting to allow Colgate a \$98 million capital loss deduction on a transaction that involved an actual loss of less than \$6 million). Although the court allowed a deduction for the actual loss, it concluded that the paper losses on the transaction were not deductible. The case involved approximately \$30 million in taxes, but the IRS advises that the total amount at issue in the eleven cases in which the same scheme was used approaches \$2 bitlion.
- Alumex, Inc. v. Commissioner (11th Cir., Jan. 21, 1999). This case presented the question whether the taxpayer, Ahumax, could be included in the affiliated group for which consolidated returns were filed by a related taxpayer, Amax, Inc. Under the consolidated return regulations governing this case, entitlement to be included in such a group turned on whether the common parent possessed at least 80 percent of the voting power of the affiliated corporation's stock. The court of appeals ruled that Amax could not be considered to hold 80 percent of the voting power of Alumax's stock, and, thus, agreed with the Commissioner that Alumax could not be included in the consolidated returns. Approximately \$400 million in taxes and accrued interest turned on this question.
- Lucky Stores v. Commissioner and Airhorne Freight Corp. v. United States (9th Cir., Aug. 20, 1998); American States v. Commissioner (10th Cir., Mar. 9, 1999). These cases presented the question whether the taxpayers were entitled to deduct, for each of the years in question, contributions made to pension plans for their employees in the following years, based on compensation paid to those employees for services performed after the close of the taxable year. Under the governing statute, certain contributions made after the close.

of the taxable year are properly deductible if made "on account of "the prior year. Relying on various private rulings, taxpayers claimed that they were entitled to the deductions in question notwithstanding the fact that they were paid with respect to services performed in the following year. The Ninth and Tenth Circuits disagreed, holding that the "on account of requirement of the statute was not satisfied, and that taxpayers could not rely on private rulings, even if they were directly on point. A total of \$97 million was at stake on this issue in these cases, and the IRS advises that more than \$1 billion may be at stake industry-wide."

• Shell Petraleum, Inc. v. United States (3rd Cir., June 24, 1999). At issue in this case was the definition of "tar stands" for the purpose of the credit allowed by Section 29 of the Internal Revenue Code for oil produced from tar stands. The court of appeals sustained the definition advanced by the Government, which was based on a Federal Energy Administration ruling which excludes deposits that can be exploited by conventional oil well production methods, and rejected the more liberal definition relied on by Shell, which was based on industry usage to include highly viscous oils, without regard to whether they may be produced using conventional production methods. The case directly involved \$5.3 million, but the IRS estimates that this issue involves \$4 billion on an industry-wide basis.

PROGRAM CHANGES:

A. Data Validation and Verification:

These performance indicators reflect the general goals of the Tax Division's Appellate Section. As our core function is representing the Government in tax appeals, performance indicators #2 and #1 reflect our success on protecting the federal flox, in achieving this results, and in preserving our regulation for just and officially a niversary in the courts.

The Tan Oversion began data validation and verification of performance resources at the owner of the executions of OPICA legislation. On a quarterly basis, the OPICA statistics are reviewed by the Touristics of information in the Committee consists of information support spacialists, data reasonament approximates, and budget analysis of interesting the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the interesting of the

The Tax Division has relied on resmal methods for recording and retreaving parformance data. In conjunction with the development of a new cost framagorous system (TaxDuc), the Division has recently revised the complement of indicators that are tracked.

There will be new procedures to collect and record performed data on activities released to opacific issues, anabling the Section Chiefs to make projections and set goals based on complime, accounts, a relevant statistics. The Tax Division began data validation and verification of performance measures at the onact of the entertaint of OPRA legislation. On a quarterly busin, the OPRA institution are reviewed by the Tax Division's Performance Management Committee's service ottorway chainstraints. This requires of interveys, litigation support specialists, data management apacieties, and budget analysis. The requires of the traditions were contained in the Division's anisting Case Management of the reducings of a new system, "Tax.Doc," which was implemented during surviver 1999, the few retreating manually-retrieved performance management assistics will be generated manametaily.

The Tax Division currently lacks historical data on some activities. The newly refined information recognition recognition many course assess some vertexical in the way some statistics are calculated.

8. FY 1999 Performance Report:

Performance Inducator #1 sets forth the number of cases received by the Appellate Section from the various trial courts for FY 99. The Section received 640 cases during FY 1999. While this feare is down from the previous way, the case being appealed are, in peneral, more complex than was the case previously, which fact is reflected in the number of oral prayments (Performance Inducator F 4), which are heard only in the most difficult and complex cases. The Appellate Section had 226 onal arguments during FY 1999, which is a 21.5% increase over the previous year. Performance indicator #5 lists the number of substantive motions and responses and oppositions therein. surjectional memorands and actilement program position papers filed by Appellate Section attorneys. Performance indicators #2 and #3 report the percentage of incurver and Government appeals in which the Government prevailed at least in part. The lower personnes for Covernment appeals reflects the fact that each appeals are of cases where the Government did not oversall in the lower courts. The Tax Division's Appellate Section obtained some degree of success in 92 percent of its tensorer speeds on FY 1999 and 89 percent of its Government appeals during the reporting period. This latter figure evidences as extraordinary level of micross, as the morned "wist" range for Conservment appeals fluctuates from 55 to 75 percent. Plans for indicators #2 and #3 are consted because they may be viewed as autising numeric nosis, which are not companies with the Tax Division's master and goal of just and fair treatment of texpuyers. Performance Indicator PSA sons forth the number of mescal recommunications, and settlement, certainen, verset, and other memorando prepared per attorney work year. Similarly, Performance Indicator Pdf. (into the number of farieth filled per line attorney work year. While the number of appeal recommendations and other memorands prepared during the reporting period was up (from 6.7 to 7.1 per attention), the number of hose is was down (from 14.5 to 12.8 per attorney). As noted above, this latter decrease probably mirrors the increased complexity (and reduction in overall quantity) of the Section's workland. Restructuring of the Tax Division's support staff during this period may also have affected productivity to some extent. Fectors that affect the workland of the Appelluse Section also include IRS administrative actions, such as fitigation referrals; the type and amount of civil and appelluse litigation brought by tangangers and refers under the Internal Revenue Code; and the anactment of legislation officeing tax levy and the litigation arising under those laws.

.

C. Issuer asserting Selection of PV 2008 and 2001. Hope

The IRS is shifting its emphasis to more complex, large-dollar, corporate cases. Appeals in these larger, more complex cases require more attention to see more of these larger, complex cases in the years should. Their, while the number of briefs per attention is down slightly from prior years, individual cases require more attention to average. We also expect to see a greater percentage of cases argued, as has already laces the case, although the large number of judicial vacuacion may depress that figure. By FY 2000, we anticipate a marked increase in the number of Tax Court appeals as a result of sugmented Tax Court jurisdiction under the IRS. Restructuring and Reform Act of 1998, but this could be affected by budgetary constraints at the IRS, which could limit IRS's collection activities (and thus limit Tax Court challenges to such activities).

The Tax Division is in the process of implementing its new case management system. By the end of FY 1999, it is anticipated that all Enderal Appeals manietics will be automated. A refined measurement system may chase some variation in the way some statistics are calculated.

2001 Base	126	122	15,747
2001 Entimate	<u> 135</u>	127	\$16.381
Increase/Decrease	9	5	\$634

BASE PROGRAM DESCRIPTION:

Attorneys in the Tax Division's four Criminal Enforcement Sections investigate and prosecute individuals and corporations that attempt to commit tax evasion, willfully fail to file tax returns, file false tax returns, and otherwise illegally attempt to circumvent their obligations under the Federal tax laws. They also investigate and prosecute tax violations occurring in the cortext of other criminal conduct such as financial institution fraud, narcotics trafficking, bankruptcy fraud, health care fraud, organized crime, and public corruption. The Division socks to promote a balanced program of criminal tax enforcement by investigating criminal conduct nationwide in a variety of industry and occupational market apgreents, as well as in the international arena in areas such as abusive use of offshore trusts and accounts.

The Criminal Enforcement Sections (CES) receive IRS requests to initiate grand jury investigations and requests to procedule taxpayers identified by the IRS as a result of its own administrative investigations. Tax Division procedules and acress than referrals to ensure that uniform standards of procedution are employed and that all criminal tax violations warranting procedules are, in fact, procedule. This review of criminal tax cases by Criminal Enforcement attorneys contributes to the high overall quality of criminal tax procedules and results in batter than a 95 percent or relation rate, both of which are essential to deterring taxpayer frend. After the Tax Division matherizes tax charges equivat a taxpayer, procedules are hendled either by the U.S. Attorneys on a complex and significant cases (or cases in which the U.S. Attorney requests assistance), by Tax Division Criminal Enforcement attorneys. Tax Division attorneys also provide legal edvice to the U.S. Attorneys Offices on a wide range of issues. In FY 1999, astorneys spent 59 percent of case-related thas on litigation assignments (e.g., propering for or appearing attorneys or trials, engaging in plea negotiations) and 41 percent of their time reviewing cases.

Tax Gap Cases: Legal Source Income Procecutions

Tax Gap cases are cases in which the tax crime involves income from a legal source — such as the consultant who reports only part of his income, the restaurateur who skims from the cash register, or the doctor who keeps two sets of bookkeeping records. This type of white collar crime erodes the tax base and encourages tax cheating. The public's confidence in the fairness and integrity of the income tax system is critical if the Government is to retain its ability to fund its operations through a voluntary tax system.

Briefly, the voluntary income tax system loses billions of dollars annually in uncollected tax revenues, i.e., the "tax gap." To close this gap and increase revenues, in 1995 the IRS and the Justice Department launched an effort to reinvigorate the Government tax enforcement. The imperative to close the gap is self-evident, as the IRS estimates unacceptable levels of non-compliance. IRS studies have concluded that:

- The annual legal income source tax gap has been estimated to exceed \$160 billion.
- In 1994, the IRS estimates that there were 4.5 million individual non-filters and 2.3 million business non-filters.

A major objective of the Tax Gap initiative is to increase the identification, investigation, and prosecution of legal source income tax prosecutions brought each year. These cases constitute the core of the Tax Division's criminal prosecution mission and, because they can involve difficult issues of law and complex enathods of proof such as not worth and bank deposits, demonstrate the special skills that Tax Division prosecutors bring to the Department's goal of reducing white collar crims.

Together, the Tax Division and the IRS established a working group to supervise this initiative costspand of the Tax Division's Deputy Assistant Attorney General (Criminal); the IRS Assistant Commissioner for Criminal Investigation; the Assistant Chief Commol (Criminal Tax); and representatives of the Attorney General's Advisory Contexties of United States Attorneys. The Internal revenue Service's Criminal Investigation Division (CID) has reported that it is commissed to increasing the snown of direct investigative time devoted to legal source income Tax Cup cases. Cheer resulting from Grand Jury investigation referred to the Tax Division involving legal source totaled 402 in FY 1999. The sumpler of defendants referred to the Tax Division in administratively-investigated cases involving legal source of income totaled 432. Over the floor year period from 1995 to 1998, legal source grand jury cases grow by 95 precent and the transfer of defendants in legal-source administratively investigated cases increased by 52 percent. While these Tax Cup cases may not generate

significant national media attention, these procedulous receive front page newspaper coverage in local communities across the country and serve to remind ordinary taxpayers of the price paid by those who choose to chest on their taxes. These are the cases where maximum determines occurs

The majority of the cases handled by Criminal Enforcement Section (CES) attorneys are tax gap—or logal source income—cases. For example, in *United Sasses* is. *George M. Blokep*, a prominent Houston trial attorney was found guilty of evading approximately \$350,000 in personal income taxes for 1991 and 1994, as well as for filling a false 1994 income tax return. The jury found that Bishop willfully omitted gross receipts of \$850,000 and \$214,000, respectively, from his returns for the years in question. The defendant provided misleading and incomplete information to his return preparer and caused false books and records to be maintained for his law practice. Bishop is acheduled to be sentenced in March 2000.

In Value States v. Resuld Blackburn, the defendant entered a guilty plea to a five-count information charging him with evading the payment of \$712,000 in federal withholding taxes. Blackburn controlled several companies and failed to pay their tax hisbilities. As the president of LLA, inc.—a firm that refurbished industrial machinery—the defendant received \$174,000 in salary payments in 1993. To prevent the IRS from seizing these funds to pay some of the delinquent withholding taxes, Blackburn arranged to have his salary paid in cash. The defendant was sentenced to save 37 months in original.

In United Steer v. Edger F. Bradley, Edger F. Bradley, II, and Ray Bradley, the defendants were entercool to prison terms of 60 months, 57 months and 46 months, respectively, and fines and restitution payments totaling over \$1 million. Bradley and his two sons owned and operated an independent insurance agency. These individuals placed their insurance commission income into purported trust accounts, held in the names of nonexistent nominees, to impede the Internal Revenue Service.

In United States is Atlanta Davies, a jury convicted the defendant of failing to file tax returns for 1992 and 1993, and of willfully evading \$353,000 in taxes for 1994. Downs, a medical technician, operated four "clinics" where unnecessary medical tests were performed on patients recruited off the street. The defendant then billed the insurance companies up to \$6,000 per visit, paying patients and recruiters between \$50-\$250 while keeping the remainder for hismail. Downs was sentenced to serve 30 months and three years of separated release.

On April 13, 1999, a grand jury returned as indictment in the case *United States* v. *Robert Perimetter and Allan Jacobowite*. Perimetter is the multi-millionaire owner of a nationwide chein of arts and crafts stores. He and Jacobowitz, the manager of one of Perimetter's New York stores, were charged with a compliancy that spans over a dozen years and during which millions of dollars in cash

receipts from the company were illegally skimmed. Specifically, Perhauster is charged with using the diverted funds to build a mansion in South Florida, and with paying numerous contractors working on his house in cash. To date, over ten subcontractors have pleaded guilty to tax violations. In addition, Jacobowitz entered a guilty plea in July 1999 and has agreed to cooperate and testify in the matter. No trial date has been set.

A number of tax gap cases involve the prosecution of accountants and tax return properers who seek to defined the government by making false returns. For example, in United States v. Abraham McLond, Jr., the defendant pleaded guilty to aiding and assisting in the properation of forty-six false tax returns and four counts of obstructing the due administration of the internal revenue laws. The court found that McLond's conduct cost the United States more than \$7 million in tax losses. He was assistant to serve over 10 years in prison. In United States v. Richard J. Pervis, John A. Gerber, and Gary A. Effit, a jury convicted Parvis on twelve counts of aiding in the properation of materially felse returns and two counts of mail fraud. The charges areae out of the defendants' involvement with a firm that marketed tax planning and setum properation methods, the effect of which was to disquise non-deductible personal expenses as deductible business expenses. In connection with this program, several hundred clients paid the firm amounts ranging from \$2,500 to \$3,700. Parvis had to the clients, saving that the program had been approved by the IRS.

Motor fuel excise tax evasion remains important as well. The IRS estimates that revenue losses are over \$1 billion annually from this type of fraud. The perpetrators often use false exemption forms or rely on forgod invoices and thinly-capitalized shell corporations to create a false imprezsion that motor fuel excise taxes have been paid. These schemes generally generate large tax losses for the government. In one recent case, United States w. Richard Ferrars, the defendant pleaded guilty to a two-count indicates for his involvement in a comparacy to defend the United States of approximately \$402,000 in motor fuel excise taxes. The defendant operated two shams fall companies. He purchased from heating oil tax-free through a series of sham transactions known as a "daisy chain," and then resold it to cantomers as tax-paid decise fuel. The amounts that customers paid to Ferrars for the fuel taxes was pocketed by the defendant. The court contenues for series 21 months in prison and pay \$12,000 in restitution.

In FY 1996, the Tax Division leunched a major initiative against illegal tax protestors. Resources for this initiative were provided in the 1993 General Legal Activities appropriation. The kind of tax evasion schemes falling into this category include claims that the income tax is unconstitutional, the taking of atom "vows of poverty," and the herasument of IRS employees. The creation of two new positions of Special Counsel for Tax Protestors for both civil and criminal states in the Tax Division has provided the Division with the unconstitutions with the tax division with the tax division with the tax division with the provided the Division with the unconstitution with the tax division tax protestor matters. For example, the Special Counsel for Tax Protest Matters (Criminal) has participated in organize gase coordination and oversight as part of the Department of Justice's Domestic Terrorism Working.

Group (chaired by the Chief of the Domestic Terrorism and Violent Crimes Section of the Criminal Division), and has assisted various U.S. Attorneys by providing timely trial assistance and litigation support. Such Tax Division oversight provides local processors with a broader perspective of the protester problem and a more detailed understanding of the role played by certain individuals in these multi-jurisdictional iffeed organizations.

Needless to say, the Tax Division has litigated several cases involving tax protesters. In United States v. Veral States, an Idaho builtermold manufacturer was convicted by a jury of failing to file income tax returns, presenting fieldious financial instruments, failing to appear at a court-ordered hearing, resisting arrest, and assaulting two officers of the U.S. Marshal's Service. Smith was sentenced to 51 mouths in prison and five years of supervised release. This was the first prosecution using a recently eracted status that is designed to combat satisfactory upon that employ fictitious financial instruments to commit economic terrorism against the United States. More particularly, Smith used "Sight Drafts," which purported to be instruments issued by the U.S. Tressury. And the case of United States. Nov. Leavenage Concerned an anosthesiologist and tax protester who cannot over \$1.8 million working at begints and statical service agencies between 1981 and 1996. The jury found that he attempted to evade paying \$394,117 in taxes, and the coart assausand him to serve 36 months in juil and three years of supervised release, and to pay a \$15,000 fine as well as the coats of prosecution. After the IRS attempted to collect taxes due, the defendant formed a corporation and two limited partnerships to concern his income and sentit and opened seven different bank accounts in their names. He also purchased over \$865,000 in cashier's checks to stymic the government's efforts.

Tax Charges Arising from Hegal Source Income

CES attorneys also investigate and prosecute tax violations that occur in the context of other criminal conduct. The Tax Division categorizes these matters as "illegal source income" cases. The Tax Division relies on the leaternal Revenue Code as the basis for prosecuting narcotics traffickers, for example. In some instances, the tax violations related to the narcotics enterprises are the only provable offices; in other cases, the tax charges complement the evidence of the narcotics crimes. CES attorneys as liaisons to the instances to the instances of the United States Attorneys' offices, the Organized Crime Drug Enforcement Task Forces (OCDETF), and other agency participants in the National Drug Control Strategy program.

Marcotics trafficking, however, is not the only illegal source of income that the Tax Division investigates. For example, in United States v. Archar Peckham and George Sengline, the defendants were charged with tax evasion, a Klein complexey, a complexey to commit mail fraud, mail fraud, and money laundering. The defendants, both employees of the Milton Bradley company, received and laundered \$500,000 in vendor kickbacks. On November 30, 1999, Peckham and Senating were convicted of complexey to commit mail fraud and the

Klein compiracy. Peckham was also convicted of evaiting his personal income taxes for 1991 through 1993. Peckham and Serafino were convicted of sixteen and six counts of mail fraud, respectively, and six and four counts of money laundering, respectively. The total tax due and owing for the years 1993 through 1995 was approximately \$175,000. The sentencing date has not yet been set.

International Tax Treaty Negotiations

As part of the Tax Division's focus on international compliance issues, the division participates in many activities to broaden cooperation with foreign nations whose financial institutions are used to concest taxable income carried in the United States. Over the last year, the Tax Division has participated in negotiations, both directly and through the Office of International Affairs, to amend several Matual Legal Assistance Agreements with other nations to include tax offenses within the scope of the treaties. Countries which have agreed on mutual assistance with the United States to investigate tax offenses include Russia, Malaysia, Egypt, Cyprus, and the Bastern Caribbean States. In addition, France has agreed to an amendment of the Extradition Treaty to cover tax offenses. The Tax Division also participated in a G-7 initiative to upgrade the staring of money laundering information for tax enforcement.

PROGRAM CHANGES:

	Perm.		
	Pes.	<u>ete</u>	Amenal
International Compliance Initiative	4	2	\$284

In FY 2001, the Tax Division requests a total of 7 positions, 4 FTE workyears, and \$500,000 to pursue an initiative on International Compliance. Of this amount, 4 positions, 2 FTE workyears and \$284,000 are for support of this initiative within the Criminal Enforcement Program. One position, 1 FTE workyear, and \$75,000 are identified within the Criminal Enforcement Program. Two positions, 1 FTE workyear, and \$141,000 are identified within the Civil Litigation Program.

DEPARTMENT OF JUSTICE GOALS:

- . Reduce traditional and newly emerging forms of white-collar crime, including tax fraud, both in the United States and abroad.
- · Protect the federal fise through affirmative and defensive civil litigation.

TAX DIVISION GOALS:

- Promote compliance with United States tax laws by litigation in the nation's trial and appellate courts, thereby enhancing both specific and general deterrence.
- Increase the collection of lawfully owed taxes.
- Fostering international law enforcement cooperation by assisting other nations in developing tax enforcement techniques and procedures.

The International Compliance Initiative has the following objectives:

- To assist the internal Revenue Service (IRS) in obtaining information regarding the increasing use of foreign bank accounts, trusts, and compositions to improperly evade the payment of United States income taxes.
- 2. To assist the IRS in reaching the foreign assets of U.S. taxpayers to satisfy outstanding tax liabilities, where domestic collection measures fall short of achieving compliance.
- 3. To enjoin promoters of illegal offshore achemics such as those involving foreign trasts.
- To develop the arcars to prosecute successfully those who utilize and promote illegal foreign achemes and to provide training to Assistant United States Attorneys to that end.
- 5. To assist U.S. prosecutors in the extradition of fugitives charged with criminal tax offenses under U.S. taw.
- To foster the negotiation of law enforcement treaties that can further tax compliance in the international aphere, such as income tax treaties, mutual legal assistance treaties, and extradition treaties.

- 7. To improve coordination and cooperation between the IRS and the Tax Division in achieving taxpayer compliance in the international area, including the formation of an interagency team comprised of representatives from IRS Associate Chief Counsel (International), IRS Assistant Commissioner (International), Treasury International Tax Counsel, and the Tax Division.
- 8. To assist in effectuating the Administration's International Crime Control Strategy (ICCS), announced May 12, 1998.

To comply with our treaty obligations and foster the concept of reciprocity (thereby protecting our ability to obtain information abroad and reach foreign assets for our domestic enforcement goals), the International Compliance Initiative also has the following three additional objectives:

- 1 To assist foreign tax authorities in obtaining information regarding the increasing use of facilities located in the United States, including bank accounts, trusts, and corporations, to improperly evade payment of foreign income and other taxes.
- 2 To assist foreign tax authorities in reaching the assets of foreign tax players located in the United States to satisfy outstanding foreign tax liabilities.
- 3. To assist foreign tax authorities in extraditing U.S.-based fugitives charged with criminal tax offenses under their laws.

 The objectives of this initiative are in concert with the Administration's International Crime Control Strategy (ICCS), which the President announced on May 12, 1998. As reported in *The Wall Street Journal*, the President promised new steps to fight the increasing problem of international crime, stating that part of the "battle involves an intensified crackdown on tax related crimes." The ICCS has as two of its eight goals and related objectives:
 - Deny Safe Haves to International Criminals by (a) negotiating new international agreements to create a seamless web for the
 prompt location, arrest, and extradition of international fugitives, ...(c) and promoting increased cooperation with foreign law
 enforcement authorities.
 - Counter International Financial Crime by ... (b) seizing the assets of international criminals, (c) enhancing bilateral and
 multilateral cooperation against all financial crime, and (d) targeting offshore centers of international fraud, counterfeiting,
 electronic access device schemes and other financial crimes.

PROGRAM DESCRIPTION:

The use of tax haven countries as well as other offshore countries to evade United States tax has been a longituding concern of the Internal Revenue Service. That problem is increasing. Some of the growth stems from the decrease in the attractiveness of more traditional domestic tax shelters occasioned by the tax law changes enacted in 1986. In addition, the use of the Internet and other electronic technology makes the promotion and use of foreign trusts and other offshore achemics easier to accomplish and more popular, as well as more difficult to detect. The common thread in all of these schemes is use of tax haven countries, which impose little or no tax, offer strict bank secrecy laws not covered by treaty provisions, or refuse to agree to extradite fugitives charged with tax crimes.

White abusive offshore schemes take on many forms, the use of foreign trusts is becoming increasingly popular. A taxpayer first creates a trust in a tax haven country. Thereafter, he ostensibly transfers all ownership interests in specified property to the trust and supposedly relinquishes all control over the assets transferred. A number of entities are created and the trust then engages in a series of transactions designed to obfuscate (sometimes referred to as a "whirlwind" by the IRS), shifting the trust property around, and generating various "fees" and "expenses." The basic theory in that all trust income is earned in the tax haven country, and since the transferor has not retained any ownership in, or control over, the trust, no United States tax will be incurred. The reality of the situation is that due to side agreements and/or accret documents, the trust feror never truly relinquishes control over the trust assets or the income they generate and, thus, is liable for United States tax on the trust income. A variety of methods is used to return the assets and the income they generate to the taxpayer, such as wire transfers, the use of debit or credit cards, and alleged loans. The taxpayer typically does not report these transfers and, because all of these methods are difficult to detect, substantial income goes untaxed. The estimated cost to the United States Treasury as a result of this behavior is staggering. The IRS has consulted with expert Jack Blum in its attempt to address these problems and international movel laundering schemes. Blum, a former special counted to the Senate Foreign Relations Subcommittee on Terrorism, Narcotics and International Operations, who has testified before Congress on issues of international banking, has noted that offshore tax evasion is a huge hole in our tax system and estimates that 500,000 Americans improperty use foreign bank accounts, trusts, and business corporations to escape \$50-75 billion in taxes annually.

The Tax Division initiative will utilize seven attorneys [one attorney Federal Appeals program; four attorneys Criminal Enforcement program; two attorneys Civil Litigation program] for the conduct of litigation to counter international financial crime.

Litigation to Counter International Financial Crime

The Civit, Criminal and Appellate Sections of the Tax Division all have critical roles to play in an International Compliance Initiative.

Those roles are manifested in a variety of litigative areas. The Civil Sections will be called upon to seek the enforcement of IRS summonaes, to bring repatriation proceedings, to defend IRS jeopardy assessments, and to seek consent directives and injunctions. The IRS will refer criminal cases to our Criminal Sections for review and possible criminal prosecution. Our Appellate Sections would represent the United States in any appeals resulting from these cases.

Summons Enforcement Actions

If, during the course of an investigation, an IRS revenue agent and/or revenue officer cannot voluntarily obtain information from a taxpayer, or from a third party who has information bearing upon a potential liability or source of collection, the agent or officer may issue an IRS summons. If the summoned party refuses to comply, the IRS may request the Tax Division to enforce the summons enforcement proceedings are appropriate, a summons enforcement action would be filed in a United States District Court.

Repatriation Proceedings

When the IRS learns that a taxpayer has assets located in a foreign country or that he may have accounts in offshore locations, the Division may be asked by the IRS to institute repatriation proceedings. In these proceedings, we would seek an order requiring a taxpayer who has outstanding tax liabilities to return to the United States assets he has transferred to a foreign jurisdiction.

Jeopardy Assessment Proceedings

When evidence is gathered identifying violations of law, the Tax Division might also be called upon to defend the IRS's interests in an increased number of jeopardy assessment proceedings. As part of its approach to dealing with abusive offshore transactions, the IRS is beginning to include revenue officers earlier in the investigatory process, well before an assessment is made. This early involvement of collection personnel, who are more attended to and trained to deal with collection is used to prevent dissipation of assets during the time it takes to complete an investigation, propose deficiencies, litigate the proposed deficiencies to judgment in the Tax Court, and then make an assessment. It is believed that by involving the collection personnel earlier, more icopardy assessments will be made, which will

also result in increased litigation responsibility for the Tax Division. Defending jeopardy assessments requires intensive litigation efforts on very short notice.

Consent Directives

As the IRS identifies more and more potential abusers of foreign trusts, accounts, and the like, the Division may be called upon more frequently to institute suits in federal district court to obtain consent directives from domestic taxpayers who transact business of fishore. These directives require a taxpayer to execute documents directing the foreign entity purportedly having control over his documents to send them to the taxpayer, who then must turn them over to the IRS.

Injunction Actions

As the IRS is able to gather information regarding specific promoters of these abusive offshore schemes, the Division believes it will be asked to seek injunctions to prohibit the promotion of such schemes, much as was done with domestic tax shelter promoters in the mid 1980's. While the Tax Division has been quite successful in its previous tax shelter injunction work, these cases proved to be extremely hard-fought and resource intensive, and there is every reason to believe the same will be true regarding attempts to enjoin promoters of offshore schemes.

Criminal Proceedings

The IRS Criminal Investigation Division (CED) is responsible for administratively investigating violations of the criminal provisions of the internal revenue laws that are ultimately referred to the Tax Division for prosecution or further investigation by grand jury. CED agents also assist Tax Division prosecutors or Assistant United States Attorneys in the conduct of tax grand jury investigations. If CED believes one or more tax crimes may have been committed, it will begin a criminal investigation. That investigation ultimately may lead to a referral to one of the Tax Division's Criminal Trial Sections for authorization to institute various actions, including commencing a grand jury proceeding or instituting a criminal prosecution. If a criminal proceeding is authorized, the matter may be handled by attorneys in the appropriate Criminal Enforcement Section. Often, these investigations and prosecutions involve the need to obtain foreign evidence, usually financial information, or to extradite fugitives.

The Tax Division is now devoting significant resources to litigation efforts in the International Compliance area. Based on time reported in its case management system, Civil That Sections devoted approximately four FTE to these efforts in FY 1998, a doubling of efforts from FY 1997. The Criminal Enforcement Section reported spending nine FTE in FY 1999 on cases its attorneys identified as involving International Compliance. This compares to 5 FTE reported in FY 1997. The Division anticipates the need to devote an additional seven attorney FTE for these litigation efforts by FY 2001.

The IRS is also focusing increased resources in the offshore noncompliance area. Special agent resources devoted to criminal investigation of foreign trusts or international fraud increased from 34 in FY 1997 (when these categories began to be measured) to 104 in FY 1999. Sixty-three investigations related to these two types of tax fraud schemes were initiated in FY 1998. As noted in its FY 1998 Annual Report, National Operations, CID developed and implemented an International Strategy in 1994 to address international law enforcement objectives. The strategy calls for the assignment of special agents to strategic foreign posts for the purpose of:

- Facilitating the development and utilization of information obtained in host foreign countries to support investigations over which CID has law enforcement responsibility.
- Providing assistance to foreign governments in establishing or enhancing money laundering, criminal tax, and asset forfeiture statutes.
- Assisting foreign governments in developing and improving exchange of information agreements.
- Conducting tax, money laundering and financial investigative techniques training courses for host governments.
- Establishing tisison contacts with foreign law enforcement officials in the regions where they are assigned.

In its FY 1998 budget, the Internal Revenue Service was appropriated as additional \$1 million for its overseas Criminal Investigation activity. During FY 1998, CID had special agents or attachés assigned to permanent positions in Bogota, Colombia, Mexico City, Mexico, Frankfurt, Germany, Ottawa, Canada, and Hong Kong, China. Special agents assigned to foreign posts routinely handle formal requests for information from district offices. These requests include conducting research, facilitating the seizure to fasticity, conducting interviews, and assisting in the extradition of fugitives. The Tax Division anticipates that as the IRS is able to secure more and more offshore information, there will be increased involvement by IRS's Criminal Investigation Division, and ultimately, a significant number of recommendations for prosecutions of tax crimes will be forwarded to the Tax Division. The Tax Division will be required to process these recommendations and, in many cases, assign attorneys to assist in the prosecutions.

An example of the anticipated volume of high-dollar-potential criminal cases is provided by information received in *Christopher D. Johnson v. United States* (D.N.J.). FBI agents investigating a defendant on cable piracy charges came into possession of computer tapes containing encrypted information regarding Cayman Island bank accounts. John Mathewson, 71, was the head of Guardian Bank and Trust, Cayman Islands. Mathewson promoted offshore bank accounts with features such as debit cards and offshore corporations to assist clients in hiding their money. In response to contacts with federal law enforcement, Mathewson provided information and computer tapes that provided a detailed inside view of offshore banking. Mathewson subsequently pleaded guilty to money laundering and tax evasion in the District of New Jersey. In 1999, because of his extensive cooperation, Mathewson was sentenced to 5 years of probation and a \$30,000 fine. The New Jersey Di 1976 office of the IRS Criminal Investigation Division (CID) has already proceeded with several investigations in newtral, New Jersey, and further grand jury investigations are expected. Another half-dozen cases are being handled by Assistant United States Attorneys in Newark. Approximately fifteen other cases have been referred to the IRS Examination Division for civil action.

In addition to account holders being investigated by CID in New Jersey, several hundred account holders were referred to individual Criminal Investigation districts throughout the country. To date, four indictments have been returned, nine prosecution recommendations have been made, thirty-one formal investigations have been initiated, ninety-two preliminary reviews have started, and thirty-seven cases have been referred to the IRS Examination Division. It is probable that the Tax Division will be called upon to furnish litigation support for a substantial number of the cases that will result from these investigations. Using the New Jersey cases as a benchmark, Tax Division CES attorneys could be asked to assist on 30 to 50 of these matters and will need to devote five to eight FTE to complete the litigation. Once the criminal aspects of these cases are completed, the IRS and the Tax Division will move forward to achieve maximum civil compliance as well. The Tax Division requires additional resources to handle this large pool of potential cases.

In United States v. Hogan, relating to another account holder at this Cayman Island bank, the depositor placed approximately \$700,000 with the bank and repatriated about half this sum to purchase a jet and a house. Over 1,500 attorney hours, plus travel time, were spent on this matter. As a direct result of Tax Division's investment of time and resources, Michael J. Hogan pleaded guilty on September 1, 1999 to conspiracy charges and evading his 1995 personal income taxes. He is now cooperating with the government and has not been sentenced. Michael Hogan's brother, Terrence Hogan, also pleaded guilty on September 1 to filling a false corporate return for Miami Valley Aviation, Inc. (MVA). He was sentenced to 48 days in jail, I year in home detention, 5 years of probation, a \$20,000 fine and 500 hours of community service.

As noted above, the IRS is increasing efforts to combat international noncompliance. This effort includes training more of its agents in detecting and combating this problem. In this regard, the IRS is developing an Audit Techniques Guide to assist its agents in dealing with complex international issues. Its Foreign Trust Training Manual is also being rewritten. It is anticipated these materials will be ready for use this fall to train a pilot group of IRS personnel. Thereafter, additional agents will be trained in this important area. The natural outgrowth of this emphasis and training will be increased enforcement in the international compliance area, and subsequently, an increase in the litigation matters over which the Division has responsibility.

To further the international enforcement goals of this initiative, the Tax Division needs attorneys experienced in civil and criminal tax litigation and in obtaining foreign evidence or information, and knowledgeable about international agreements to achieve international tax compliance, such as tax treaties, mutual legal assistance treaties, and extradition treaties. These attorneys would (1) review or handle the internationally affected civil and criminal cases of the Tax Division; (2) assist foreign tax authorities in obtaining information located in the United States, in reaching the assets of foreign taxpayers located in the United States, and in extraditing U.S.-based fugitives charged with foreign tax crimes; (3) give expert advice to RS agents and Government attorneys handling internationally affected tax cases, both civil and criminal; (4) participate in any negotiations which might lead to an agreement on achieving international enforcement goals; (5) propose legislation that would enhance such goals; and (6) coordinate with other international components of the United States Government, such as the Office of International Affairs (Criminal Division, Department of Justice), IRS Associate Chief Counsel (International), IRS Assistant Commissioner (International), the Department of Treasury International Tax Counsel, and the State Department. These functions are critical to enhancing our international tax enforcement goals and could be accomplished only with significant dedicated resources.

In sum, the cases in the International Compliance Initiative which will involve the Tax Division, while extremely resource internative, will have a significant impact on tax compliance. A modest influsion of resources will enable the Tax Division to respond to this growing need to assist the IRS in developing its cases, and ultimately to enjoin and prosecute those who abuse both the tax laws and a number of other federal laws. To the extent those who engage in these activities can be forced to pay the taxes they owe, and are enjoined or prosecuted, the United States benefits.

	Perst.		
	žes.	FIE	America
Abosive Trust initiative	5	3	\$350

In FY 2001, the Tax Division requests a total of 7 positions, 4 FTE workyears, and \$500,000 for an initiative to curb abusive trusts.

Of this amount 5 positions, 3 FTE workyears and \$350,000 are for support of this initiative within the Criminal Enforcement Program. Two positions, 1 FTE workyear, and \$150,000 are identified within the Civil Litigation program. This initiative would achieve the following Departmental and Division goals.

DEPARTMENT OF JUSTICE GOALS:

- Reduce traditional and newly emerging forms of white-collar crime, including tax fraud, both in the United States and abroad.
- Protect the federal fise through affirmative and defensive civil litigation.

TAX DIVISION GOALS:

- Promote compliance with United States laws by fitigation in the nation's trial and appellate courts, thereby enhancing both specific
 and general deterrence.
- Increase the collection of lawfully owed taxes.

In recent years the Internal Revenue Service has noted a substantial increase in the number of taxpayers utilizing trusts in an attempt to avoid, or limit, their federal tax hisbilities. While trusts have many legitimate uses, they rarely lead to a legitimate reduction in taxes. The IRS has found that more and more unscrupulous promoters are aggressively marketing abusive trusts, using strained, and in some instances outright false, interpretations of the tax laws. Some promoters offer so called "asset protection trusts", osterabily designed to protect a purchaser's assets from his creditors, but which can, and often are, used to improperly shift income and to hide ownership of assets in order to avoid paying proper tax hisbilities. Promoters often target sole proprietorships or professionals, promising that if the taxpayer transfers an operating business into an entity variously called a "business trust," a "common law business trust," or an "unincorporated business organization," he can claim deductions for what are essentially personal expenses, shift income, and avoid self-employment tax, while never

really losing control over his business or its assets. These schemes elevate form over substance, and sometimes can be "tayered" or "tiered" making them more difficult to detect and unravel. When the facts are uncovered, the purchaser is not entitled to any of the advertised tax benefits.

The number of trust return filings with the IRS has increased by 11 percent since 1993, and is continuing to rise. More importantly, while there were 3,300,000 trust returns filed in 1997, the IRS believes that over 11,500,000 trusts are not filing returns. These phenomena have lead to substantial revenue losses. In order to combat this drain on the treasury, the IRS is increasingly focusing on the abusive trust area, both auditing returns that are filed, and detecting situations where returns should have been filed and taxes paid. According to budget projections, the IRS will increase the number of direct staff years directed to trusts by 230% from FY 1998 to FY 2000. In addition, the IRS's Criminal Investigation Division identified abusive trusts as an emerging area in 1997, and has ateadily devoted increased resources to this problem, increasing special agent FTE investigating domestic trusts from 35 in FY 1997 to 64 in FY 1999. Moreover, the IRS has begun focusing on promoters of abusive schemes from both a criminal and civil perspective, considering criminal prosecution, civil injunction and/or civil persisties to combat the problem promoters of abusive schemes pose. To the extent those who promote abusive trusts are stopped, the number of purchasers of such schemes will be reduced, ultimately reducing the burden on the IRS and the taxpaying public.

The increasing emphasis of the IRS on the area of abusive trusts will continue to require significant resource commitment by the Tax Division to support their efforts. Attorney FTE spent reviewing and prosecuting criminal cases has increased from two in FY 1997 to over four projected by the end of FY 1999. (This excludes FTE spent on foreign trusts that are reported in our International Compliance initiative.) The Tax Division anticipates that there will be a substantial increase in the number of prosecutions and recommendations for prosecutions that we will be called upon to litigate and to review.

A recent case illustrates the necessity of the abusive trust initiative. United States v. Ronald Chappell, et. al., was reviewed and authorized for prosecution by the Tax Division and mied by local prosecutors in the Eastern District of California. Ronald Chappell (a former CPA), Lloyd Winburn, Todd Gaskill (an attorney) and Martin Goodrich, sold abusive trust packages to clients and advised them to use the trusts to generate fraudulent tax deductions. More particularly, the defendants concentrated on wealthy clients who were advised to transfer operating businesses, homes and other assets into a series of trusts. The trusts were operated so that the clients maintained control over their businesses and other assets. On the trust tax returns, the clients then claimed normally non-deductible personal expenses, such as lawn care, house cleaning and scholarships for their childrens' education, as deductible trust expenses. They also depreciated the value of their residences and passed paper losses from the trusts to their personal returns. Some clients, who had reported significant taxable income in prior tax years, actually claimed that they qualified for the earned income tax credit, which is ordinarily reserved for the working poor. The

court held that this scheme caused a tax loss to the government in excess of \$2.5 million. In April 1999, Chappel) was sentenced to serve 87 months in prison; Winburn was sentenced to 63 months in prison; Gaskill was sentenced to 58 months in prison; and Goodrich was sentenced to 37 months in prison.

This case has spawned a number of offshoot investigations in other parts of the country. Some of the clients and "sub-promoters" used by the Chappell defendants were targeted in more than one investigation. A number of Tax Division attorneys are involved in on-going grand jury investigations. Due to the growing use of the Internet in marketing these schemes, most cases against large promoters will most likely be multi-jurisdictional. Purchasers in the midwest and the northeast may find a web site which is run from a server in Virginia and is used by a promoter in California. The Tax Division's global view facilitates coordination of these cases, so that inconsistent results are avoided and investigations are not damaged through unknown targeting of the same individuals. Coordination of so many cases, some with their own offshoots, is becoming an increasing problem with the current level of resources. Added resources will allow the Tax Division to hetter coordinate prosecutions, and litigate more of these cases. As the Tax Division becomes better equipped to take the lead in prosecuting more of these cases, uniform prosecution and coordination will be greatly enhanced.

Similarly, from a civil perspective, the Tax Division will be required to enforce an increased number of administrative summons as the IRS goes forward with its efforts in the abusive trust area. This will be expecially true with respect to promoters of these schemes who, as we know from past experience, will resist every step of the investigation. And, as the IRS focuses more on promoters, there will be an increase in the number of civil injunction suits we will be asked to bring, for as noted above, it is more effective to stop these schemes before many purchasers become involved, than to audit trust purchasers later, if they can be detected. Indeed, as a result of the IRS's focus on abusive trusts, we have already successfully instituted an injunction proceeding against abusive trust promoters in California. That case, United States v. Estate Preservation Services, et. al. was a suit against the major promoter of the scheme, his corporation, a lawyer, and a certified public accountant who participated in the abusive promotion. The defendants used a nationwide multi-level marketing network to sell a non-grantor trust scheme. In promoting the scheme, trust purchasers were told, among other things, that they could transfer property into the trust, thereby receiving "a new income tax basis" for the property which could then be depreciated. In addition, prospective purchasers were told that these trusts could be used for "income splitting", to generate deductions that would otherwise not be available, and to reduce or eliminate self-employment taxes. The court, noting the wide-spread nature of the scheme and the type of fraudulent conduct, entered a preliminary injunction against all of the defendants.

PERFOR. ANCE MEASUREMENT TABLE: PRESENTED BY INITIATIVE. ACISION UNIT

INITIATIVE/DECISION UNIT: Criminal Procession

COMPONENT GOAL(S): The Criminal Sections of the Tax Division have three primary responsibilities: (1) conducting centralized review of all referred criminal tax matters; (2) staffing the investigation, trial, and appeal of many of these criminal tax matters; and (3) providing frigation support services to both United States Attorney's Offices and the laternal Revenue Service. These activities advance the Tax Division's goal of uniforms and consistent national enforcement. The prompt review of criminal referrals and the handling of the litigation and fringation support responsibilities also advance the Internal Revenue Service's goals of achieving maximum deterrence and voluntary compliance with the Internal Revenue laws.

DOJ Core Function 3: Legal Representation. Enforcement of Federal Laws, and Defense of U. S. Interests

Strungtic Goal 3.4: Promote the fair, correct and uniform enforcement of the federal fax laws and the collection of tax debts.

A. Pata Validation and Verillandes

The Tax Drymion began data validation and verification of performance measures at the concent of OPRA legislation. On a quarterly basis, the OPRA statistics are reviewed by the Tax Drymion's Performance Management Committee's sensor anomaly chainpersons. This Committee contents of informance Management specialists, data remargement specialists, and budget analysis. The majority of the statistics were contained in the Drymion's existing Case Management System. As part of the redesign of a new system, "Tax Doc," which was impleminated during surveine 1999, the few remaining materially-retrieved GPRA statistics will be guidelined automatically.

The Crimmal Enforcement inchans have relied on minimal methods for recording and retrieving the estaticies used in the proporation of this report. In conjunction with the development of a new case management system (TaxDox), the centre Crimmal Enforcement GPRA report has been revised for the EY 2001 jams. Although the Crimmal Enforcement Sections currently lack historical data on some extrained, there will be new procedures to collect and record pertinent data on activates related to specific issues enabling section managers to make projections and set goals based on controls, accurate, and referent estations. The TaxDox system went colons in July, 1999 with full implementation to be phased in over the next twelve to eighteen mostles. Some of the PY 2001 projections listed at TBO (to be determined) and dependent on the inclination of new data elements in the TexDox system. The reverping of the sections information collecting procedures and controls is expected to result in more accurate reporting. The revisation and expanded Criminal GPPA report will give a more thorough occurring of Criminal Enforcement activity. It is neviational that a refined performance recommensure system may close some variations, in the way some statistics are calculations.

There will be new procedures to collect and record pertinent data on activities related to opecify intent, smaller than Section Charle to make projections and set goods based on consiplest, accumulat, and relevant statistics. By FY 2000, it is unterprised that all Criminal Enforcement statistics will be automated and incorporated into a referred into instrumentor narrangements. Torqués and estimates are multide firms assure professeures indicators because they may be visited an autilité manurée guale which ann set constituen with the Tax Division's adudais. Their gual is just and first restricted for treatment of exceptors. Measuring outcomes is difficult in any context, but particular on in law enforcement. The Tax Division is guided principally by "doing with is just" and that includes not pursuing an unfounded enforcement or baseless claim. The Tax Division is concerned that commended levels of performance (e.g., sargest for conviction rains, indicements and convictions) not become performance targets or otherwise lead to ununtended and possible adverse consequences. As a result, the Tax Division will not set questified targets for indicements and

B. FY 1999 Perforament Report:

FY 1999 is not included in that exhibit

C. James Afra, and Salarston of FY 2000, and 2001 Plant.

EY 2000 is not included in this exhibit

The ability of the Tas Division to meet its projected goals depends, to a large catent, upon the number and types of cases recommended for projecturon, staffing levels, levels of expective, and fluctuaring caseloads in the United States Attorney's Officers and in the Tas Division's Commail Enforcement Sections. IRS policies and initiatives also affect the complexity and volume of prosecution referrals. New areas of non-complisates also intend to the number and complexity of pages handled by the Tas Division.

In April, 1999, the Internal Reverue Service Commal Investigation Division ICID) received the results of a review commission chained by William Webster, former head of CIA and the FBI. The "Webster Report" recommended significant changes in the organization of CID and the selection of stransversagative promities. The IRS accepted those recommendations and has devoted substantial resources to implementing them. Final implementation is projected to occur in June, 2000. Since the Tax Division's commal case workload is directly dependent on CID's investigations, this process, has introduced both the number, and fund of christial cases handled by the Tax Division.

In the area of illegal tax protest, refertals have races significantly from 1995 to 1997. However, because the IRS policy since 1998 has prohibited classifying individuals as illegal tax protestors, matters involving illegal can protestor require actual Tax Division identification and classification after receipt. Tax protest entirity," as used by the Division in both criminal prosecutions and criminal insupation, is defined as calent involving transfer involving transfer powerful accurate that have necessary to the tax in a classification of powerty," and the harasteriest of IRS employees. The Division uses the terminology "illegal" tax protesters to distinguish individuals who declare themselves to be "tax protesters" overside the revenue system and who commit tax crimes from those individuals who are markly exercising their limit Amendment rights to oppose tax policies while otherwise obeying the tax laws. Criminal prosecutions arising out of illegal tax protest entirely are a substant of the legal source according prosecutions.

In late 1998, the Internal Revenue Service amounted its intention to emphasize the investigation and prosecution of abusive trust cases. There cases also to be complex, involving multiple individuals and entitled operating in multiple jurisdictions. The The cases also five focusion in the focus of the focus of the cases and its assigning the Service and U.S. Altorogy in the successful prosecution of many actious offenders in this area. The Tax Division defines abusive trust as entities that while on paper take the form of a valid trust arrangement actually seek to evade taxes because they have no object or purpose other than evading taxes. In the typical abusive trust arrangement, there is, in fact, no change in any eigenspalse economic relationship between a tax payer and the source of income send/or property both prior to and after the formation of the trust in the typical abusive trust senders, a tax payer will manniar in fill control over this sastes even through the date the tax payer has trust events to a trust with an independent invase. In addition to "trust", these arrangements go by many different nemtra, including, but not invented to Pare Trust Organization (PTO), International Business Organization (IBO), Constitutional Trust, international Business Company (IBC), Uniconposed Sunness Organization (IBO), Constitutional Trust, international Business Company (IBC), Uniconposed Sunness Organization (IBO), Constitutional First, there are payer to the sunders of the cases considered as international Business Company (IBC), Uniconposed sunness organization (IBO), Constitutional First, though the support abusiness organization or the first face it year, but excludes cases counted as international and international Business Company (IBC), Uniconposed to them disposed to them during the face) year, but excludes cases counted as international Business Company (IBC) and the first provided to them during the face) year, but excludes cases counted as international Business.

The Tax Division currently defines legal source recome cases as those where the source of the proposed criminal tax charges is recome that in legally produced as distinguished from income earned as a result of illegal conduct. As a vast majority of the taxpeying public carrie its income from legal sources, legal source income prosecutions have a upministrate determined effect on the general public.

An "International Compliance initialitye" is another joint Cristinal and Civil goal that the Tax Division has included in its strategies to promote compliance with federal tax laws by Higgsing, tax cases with international cases on the assent's real and appellate contri. This activity enhances both specific and general deterrence and promotes voluntary compliance. Performance indicator #2, International cases handled, shows the number of international cases with interreptional to them digring the fishal yets.

A. Outs ...doitou and Verification:

The Tax Division began data validation and verification of parformance management is the unuse of the enactment of GPRA legislation. On a quarterly basis, the GPRA statistics are reviewed by the Tax Division's Performance Management Controller's service appearance precisions, but management appearance appearance and budget analysis. The responsy of the statistics were consumed in the Division's exercising Case Management System. As part of the redesign of a new system, "TaxDas," which was interested during summer 1999, the few remaining management distances will be appeared out of the statistics will be appeared out of the statistics will be appeared out of the statistics.

The Criminal Enforcement sections have celled on manual methods for recording and retrieving the statistics used in the preparation of this report. In conjunction with the development of a new case management system (TaxDox), the order. Commal Enforcement GPRA report has been evised for the FY 2001 pinn. Although the Criminal Enforcement Sections currently look historical clear, on some extremely, the new procedures for collect and factored performent dates on actions related as specific insense subshiping action managers to make projections and set goals based on complete, accurate, and relevant statistics. The TaxDox system went online in July, 1999 with full implementation to be phased in over the past twolve to nighteen manufus. The reverseding of the sections information Collecting procedures and controls is expected to result in more accorate repairing. The revised and expended Criminal CPRA report will give a more thorough in accounting of Criminal Enforcement artists are calculated by performancement system may cause some variations at the way some statistics are calculated.

There will be new procedures to collect and record pertnered data on activities related to specific tensor, enabling the Section Chiefs to make projections and set goals bened on complete, accurate, and retrieve statistics. By FY 2000, it is amongsted that will Commiss Enforcement assumes will be automated and accomparated woo a reflect of formation remains the group of the commission and set goals bened to provide the commission and set goals bened to provide the commission and set goals bened to provide the commission and set goals bened to provide the commission and set goals bened to provide the commission and set goals benedicted by a set goals benedicted and reflect the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted to provide the commission and set goals benedicted

Targets and estimates are emitted from come performance indicators became they may be viewed as setting semantic guals which are not consistent with the Tax Division's selection. The goal is just and far treatment of taxonyers. Measuring enterment is difficult in any context, but particularly on in law enforcement. The Tax Division is guided principally by "doing what is just" and that includes not pursuing an unfounded indictment or baseless claim. The Tax Division is concerned that estimated levels of performance (e.g., targets for conviction rates, undertwents and convictions) not become performance targets or otherwise lead to unintereded and possible adverse consequences. As a result, the Tax Division will not set quantified largets for indictments and convictions.

B. FY 1999 Performance Report:

As of September 30, 1999, the Crimmal Enforcement Sections have honored 300% or 166 requests for lengation assessment at trial and appellate levels in legal source income cause (reference Performance Indicators #8 and #7). We honored 83% of requests for Intigation assistance at trial and appellate levels in targeted enforcement areas, (reference Performance Indicators #8 and #8). Our rise of performance indicators #8 and #8). The figure of the end of the reporting period (reference Performance Indicators #8 and #9). The figure for requests received for Intigation and revestigation advocant as protest matters (Parformance Indicators #8 and #9). The figure for requests received for Intigation and revestigation advocant as protest matters (Parformance Indicators #8 and #9). The figure for requests received for Intigation and revestigation advocant as protest matters (Parformance Indicators #8 and #9). The figure for requests received for Intigation and revestigation advocant as protest matters (Parformance Indicators #8 and #9). The figure for requests received for Intigation and revestigation advocant as protest matters (Parformance Indicators #8 and #9). The figure for requests received for Intigation and revestigation advocant as protest matters (Parformance Indicators #8 and #9). The figure for requests received for Intigation and revestigation advocant as protest matters (Parformance Indicators #8 and #9). The figure for requests received for Intigation and revestigation advocant as protest matters.

Performance Indicators #11 and #12 have been discontinued in the currow plan. By publicating the prosecution of tax violators, the Tax Division no doubt enhances the public entering the following the prosecution of tax violators, the Tax Division no doubt enhances the public entering the frequency of the first highest of the result of the publication of the purposes of the major to individual to the public entering the property of the rate of compliance, the Division concludes that these are not meaningful indicators for the purposes of this report. The Service has been tasked these fits of the purposes of this report. The Service has been tasked these fits of the purposes of this report. The Service has been tasked these fits of the purposes of this report. The Service has been tasked these fits of the purposes of this report. The Service has been tasked these fits of the purposes of this report. The Service has been tasked these fits of the purposes of this report.

Though the determent effect cannot be measured with the resources available to the Division, the prosecution of criminal tax law violators has a positive impact on recommendation and an important aspect of the criminal prosecution of fax violators is the impact on the general public. Tax payers are that violators are not able to "beaut the system" and that all issuappear are imported to pay their fair share. The Tax Division is litigation and enforcement efforts achieve our joint goal with the IRS for criticins of this mition to voluntumly comply with tax lower which in turn, advances the federal fiscal system.

C. Server & Harrison Calversion of FV 2000 and 2001 Plan.

(FY 2001 Plans are arranged to the new Corrient Enforcement calculat.)

The ability to viver goals depends to a large extent upon the number and types of coam recommended for pronounces; suffing levels, fevel of expertine, and fluctuating candidate in the United States Attentive Offices and in the Tax Division's Crement Sections; IRS policies and intrintives affecting the complexity and volume of pronounce of particular groups of tax payables with the linearist Reviews Code; the volume of requests for comments and participation in miscallumous activities, and the level of funding provided to the Devision for personnel and other resources.

In April, 1999, the Internal Revenue Service Continual Invategation Division (CTD) received the results of a review contrained by William Websiter, furmer head of CTA and the FBI.

The "Websiter Report" recommended again from thoughts in the againstance of CTD and the relations of its investigative priorities. The IRS accepted those recommendations and has devoted automatical ensures to implementing them. Final implementation is projected to occur in June, 2000. Since the Tax Division's criminal cause workload is directly dependent on CTD's investigations, the crocers has impacted both the number and titled or criminal cause handled by the Tax Division.

Although cases sevolving illegal car protest activity increased agentificantly from 1995 to 1997, the Tax Devision's records reflect a ductive on these case during facal year 1998. This decline, considered a fisher low, in attributed to the IRS Restrictiving Act mandate forbidding IRS from designating and violation as illegal star protesters. This restriction has served to standard the representativity of the Tax Devision with served and college face of the protester in the served and the served for standard the representative of the tax protester in the served and the served for standard that all crossess of the served for the protester in the served for the protester in the served for the protester in the served for the protester in the served for the protester in the served for the protester in the served for the protester in the served for the protester in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served in the served

In face 1998, the Internal Revenue Service announced its intent to emphasize the investigation and prosenation of abusing treat cases. These cases tend as by complex, streetying multiples individuals and contact operating in more find one periadence. They bequisedly mythe transactions that could be state. BASE PROGRAM DESCRIPTION:

The Tax Division's Civil Litigation program represents its most comprehensive litigating function. The attorneys in the Division's seven Civil Trial Sections litigate suits filed by and against taxpayers in the district courts, the bankruptcy courts, the Court of Federal Claims, and the state courts. All of these suits relate to the enforcement of the tax laws. The bankruptcy courts, the Court of Federal Claims, and the state courts. All of these suits relate to the enforcement of the tax laws. The bankruptcy litigation handled by the Division's Civil Trial attorneys includes tax refund auits challenging the IRS' determination of a taxpayer's federal income, employment, excise, and estate tax liabilities; bankruptcy litigation missing issues of the validity and priority of Federal tax claims and the feasibility of reorganization plans; actions to enforce IRS administrative summonses that seek information essential to determine and collect taxpayers' liabilities; suits to collect taxes and other monies often hidden by fraudulent conveyances, sham entities, and alter egos; suits against IRS and other Government officials for torts altegedly committed in connection with tax collection activities; suits against the IRS brought pursuant to the Freedom of Information and Privacy Acts; and State and local inter-Governmental tax immunity suits. Although its primary function is handling litigation directly, Division Civil Trial attorneys frequently provide advice, training and other assistance to the many (Special) Assistant U.S. Attorneys handling the more routine civil tax cases.

Cases handled by Civil Trial attorneys often govern thousands of cases pending administratively at the IRS and generate significant revenue for the Federal treasury. Just as with its appellate and criminal prosecution functions, the Division's Civil Litigation program has both a direct impact on the taxpayer who is a party to the litigation and an indirect impact in promoting compliance with the tax laws, thereby enhancing both specific and general deterrence.

The great majority of civil higation (generally over 85%) handled by the Division is defensive in nature, i.e., cases brought by taxpayers or other persons against the United States. The Division's representation of the Government in this litigation saves the Treasury millions of dollars annually. Tax refund suits are one important component of the Division's defensive hitigation. The Division estimates that, in the most recently calculated three-year period, it saved the Government \$37 for every \$1 spent litigating refund suits. In addition to this direct dollar impact, these cases frequently have an indirect dollar impact, on other taxpayers and other tax years of the same taxpayer. For instance, in Bell Atlantic Corp. and Subsidiaries v. United States (E.D. Pa.) (app. pending), the Tax Division prevailed in a complex tax refund suit involving the investment tax credit. Although the case itself involved only \$77 million, the issue is estimated to have a nationwide tax-revenue impact (for all industries) of about \$30 billion. In Lackheed-Martin Corp. v. United States (Fed. Cl.) (app. pending) the Tax Division successfully litigated whether certain expenditures should be eligible for research-and-development tax credits, another case where the issues presented involve several billion dollars of tax revenues with respect to defense industries. And in Florida Progress Corp. v. United States (M.D. Fla.) (app. pending), the district court upheld the Government's position that underground service line costs must be capitalized, a utility-industry issue that is estimated to involve \$250 to \$300 million annually.

Defending federal tax claims in bankruptcy proceedings represents another major portion of the Division's defensive litigation. The bankruptcy docket that the Tax Division handles tends to involve the more complex tax-related bankruptcy matters, many of which have significant collection potential. In In re Scott Cable Communications, Inc. (Bankr. D. Conn.), the Tax Division succeeded in convincing the bankruptcy court to sustain the Government's objection to a pre-packaged bankruptcy plan which, if widely adopted, had the potential to allow corporate debtors to avoid billions in capital gains taxes from the sale of assets. In re Nelson Banker Hunt and In re William Herbert Hunt (Bankr. N.D. Tex.) are two separate Chapter [1] bankruptcy proceedings in which the Government has, over a number of years, obtained about \$133 million in satisfaction of individual federal tax tiabilities. In FY 1998 and 1999, the Government collected over \$6.8 million and \$1.7 million, respectively, from these bankruptcies. The Government has collected 80% of the assets in the Nelson Bunker Hunt case, and 70% in the William Herbert Hunt case. The Tax Division has also been successful in deterring abuse of the bankruptcy system. For example, in In re Pavid Perras (Bankr. W.D. Tex.) (app. pending), the United States worked with the trustee to pierce a trust set up by the debtor to conceal over \$1 million in assets from his creditors. Moreover, during the past year, Civil Trial attorneys have also secured a number of major victories in the U.S. Bankruptcy Courts by preventing the discharge of taxes owed by debtors who have willfully avoided payment or collection.

The Division defends the constitutionality of tax statutes, as in American Society of Association Executives v. United States (D.D.C.), where, based on arguments advanced by Tax Division attorneys, the district court dismissed a constitutional challenge to the proxy tax provisions in the 1993 Omnibus Budget Reconciliation Act. This district court decision in favor of the United States was recently affirmed on appeal.

The Division also defends the validity of Treasury regulations. For example, in Fransen v. United States (E.D. La.), the district court upheld the validity of a challenge to the validity of a regulation defining "passive activity." This decision was recently affirmed on appeal. And, in Steckler v. United States (E.D. La.), the district court upheld the Government's use of social security numbers, against a challenge hased on the Religious Freedom Restoration Act.

Another important area of defensive civil Intigation conducted by the Tax Division is the representation of IRS officers against complaints made by taxpayers who allege misconduct by government officials for activities related to tax collection. These lawsuits can cripple morate if employees who have not done anything improper believe that they can be held personally liable for simply doing their jobs. The IRS workforce relies upon the Tax Division for a vigorous defense against spurious lawsuits.

The Tax Division's affirmative civil litigation program is an area that directly generates substantial revenues for the Treasury. In FY 1999, through its affirmative civil litigation, the Division recovered over \$66 million for the Treasury by court action and in actilements. The Tax Division received total judgments and settlements in excess of \$50 million. In the first quarter of FY 2000, the Division already has received total judgments and settlements in excess of \$50 million. In the Division estimates that, in the most recently calculated three-year period, it obtained a return for the Government of \$27 for every \$10 spent litigating debt collection cases. Much of the affirmative litigation is very complex and time consuming. Litigation activities include seeking judgments to enforce IRS assessments against taxpayers, dealing with fraudulent transfers made by delinquent taxpayers attempting to place their assets out of the reach of the IRS, and the enforcement/foreclosure of federal tax liens. For example, in *United States v. Mary Christine Harris* (E.D. Mo.), the Tax Division succeeded in repatriating over \$350,000 in proceeds of the sale of a wine collection auctioned by Sotheby's of London which the Government alleges was shipped overseas by a convicted tax fugitive. In *United States v. Bell* (E.D. Cal.), Tax Division attorneys succeeded in setting aside a taxpayer's allegedly fraudulent trust, which included a 30-acre ranch, to collect \$2.6 million in tax liabilities.

The Service and the Tax Division have also begun to initiate more affirmative litigation against persons who employ increasingly sophisticated means to unlawfully shield their assets from collection, as well as actions to prevent the commercial dissemination of abusive tax schemes. In particular, beginning in FY 1998, the Division has been working closely with the Service to devise a plan to address the growing problem of abusive international and domestic trusts. One fruit of this effort was the recent litigation and decision in United States v. Estate Preservation Services (E.D. Cal.), in which the district court enjoined a promoter of various abusive tax shelter schemes in which, among other things, the promoter urged an abusive scheme involving charitable contributions. Another success was the decision in United States v. Robert R. Raymond and Robert G. Bernhoft, (E.D. Wis Xapp. pending), in which the district court permanently enjoined the defendants from organizing or selling the "De-Taxing America Program." in abusive tax shelter.

While many of the cases handled by the Division's Civil Trial attorneys have a deterrent effect, the growing number of cases in which taxpayers advance frivolous (ax protest arguments (which currently make up about 10 percent of the Civil Trial docket) form a particularly important part of the Division's civil deterrence efforts. These resource-intensive cases are essential to keep illegal tax protest activities from increasing further. Honest taxpayers who perceive that individuals engaging in illegal tax protest activities have "gotten away with it" will themselves be discouraged from voluntarily paying their taxes.

The Special Counsel for Fax Protest Matters (Civit) (who was first appointed in May, 1996) continues to serve as an information clearinghouse, enabling attorneys in the Tax Division, as well as Assistant United States Attorneys around the country, to obtain ready access to pleadings and other information pertaining to frivolous tax protest issues. The Special Counsel has better enabled the Tax Division to identify and address problems arising in frivolous civil tax protest cases. In FY 1999, the Special Counsel developed a resource available to all attorneys on the Division's intranet which discusses all recurring tax protest issues and provides relevant case authority. In addition, the Division has proposed legislation that would modify the automatic stay provides for serial bankruptcy filers, many of whom make frivolous tax protest arguments and who attempt to manipulate the Bankruptcy Code in order to avoid paying tax debts. All of these efforts are designed to address the illegal and groundless activities which undermine our tax system regionally and nationally.

The Division's Civil Trial attorneys are concerned with more than generating revenue, however. Although the Division attempts to collect all taxes that are legally owed, it is also committed to ensuring that taxpayers and other litigants are treated fairly, and that any legitimate claims against the Government are resolved properly. As part of their representation of the Service in the courts, Civil Trial attorneys conduct, in each case, an independent review of the Service's administrative determinations. This review process each year results in the Tax Division declining to bring certain affirmative litigation, and in defensive cases results in some complete concessions, where Civil

Trial attorneys determine that the Service's administrative position cannot be legally and/or factually supported. This vital function promotes the integrity of the Federal tax system by insuring that tax payers and others involved in trial-level httgation are treated fairly and consistently nationwide.

The Division also plays an important role in monitoring cases handled by the Internal Revenue Service and the U.S. Attorney's offices. Approximately 20% of the Division's civil data management function is devoted to identifying and processing mail received on cases handled by the Service and the U.S. Attorney's Offices. The mail is then reviewed by attorney managers, to ensure that the interests of the United States are appropriately represented.

A. Data 1 illes and Verification:

The Tax Division began data validation and verification of performance measures at the onset of the enactment of GPRA legislation. On a quarterly basis, the GPRA statistics are received by the Tax Division's Performance Management Committee's senior attained, the Committee of the Committee consists of attorneys, httpstoon support specialists, data management apecialists, and budget analysis. The majority of the statistics were continuous transfer arising Case Management System. As part of the redesign of a new system. "Tax Doc." which was implemented during summer 1999, the few remaining managhy-retrieved GPRA statistics will be generated automatically. It is envisioned that a refined performance measurement system may cause some variations in the way some statistics are calculated.

The Tax Division has relied on manual methods for recording and retrieving performance data. In conjunction with the development of a new case management system [Tax Div.], the Division has recently revised the complement of indicators that are tracked.

There will be new procedures to collect and record personent data on activities related to apocific issues, evabling the Section Chiefs to make projections and not goals based on complete, acceptate, and relevant statistics. The Tax Division began data validation and verification of performance measures at the onset of the enacciment of GPRA legislation. On a quarterly bases, the OPRA statistics are reviewed by the Tax Division's Performance Management Continues a nationary challengements. This is committee copiests of attorneys, bitgation support specialists, data management specialists, and budget analysts. The majority of the statistics were consumed in the Division's estimage Case Management System. As part of the redesign of a new system, "TaxDoc," which was implemented during summer 1999, the few necessaring manually-refrieved performance measurement statistics will be generated automatically.

The Tax Division currently lacks historical data on some activities. The newly refined information rimbagement system may cause some variations in the way nome statistics are calculated.

The certifitingstion program promotes the protection of tax revenues white striving to assure the fair and consistent measurent of taxpayers nationwide. Performance Indicators #14 and #15 reflect the direct impact of civil higation on the U.S. Treasury mustar as the Division carrently measures it. Performance Indicator #14 shows substantial list. revenues collected as a direct result of civil hitzeston. Performance indicator #15 measures the amount of tax dollars saved in tax refund suits, as expressed in terms of the amounts of tax and interest adaptit by the complaint. The savings shown does not enclude the additional statutory interest for which the United States would have been hable. had it test. Annual fluctuations in Performance indicators \$4 and \$5 may be anniousable, in part, to outside factors over which the Division has no control, such as the number, types, significance, and complexity of the Division's case receipts, which in turn are dependent on such matters as the changing tax favor and the level of funding provided to the IRS for personnel and trapager compliance initiatives, the responsiveness of the Division's client agencies, the strategies of opposing counted, the procedures and hurdens on the court, and the collect/histry of taxpavers' debta. The Division does not measure the revenue impact of the tax habilities determined or spheld in bankreptcy cases where payments would be made directly to the IRS. While the Division does not measure the indirect influence of its civil latigation on the collection of revenues by the IRS, the impact is considerable, as exemplyfied by Bell Atlantic, described in the civil base program described. Reporting decisions on cases in Bankropicy Court, District Court, Court of Federal Claims. State and Local Courts (Performance Indicators #7 and #9) provides a detailed basis for indignit whether the positions taken to interation by the Division are consistently reasonable. The fair and uniform treatment of taxonivers is also reflected in the numbers of concessions and sententents of taxonivers. and cases (Performance Indicators #8 and #10) and in matters where the Division declines to bring part because it determines hitigation is not warranted (Performance Indicator a (2) Depond the need to be responsive to client agencies (which is meets red in part by Performance Indicator #11), the Division values efficiency in its civil litigation because it recognizes that the correct and fair result has more value if it can be achieved efficiently and expeditionally. A comparison of Performance Indicators #7 and #9 to Performance indicators #8 and #10 gives some rough some of the many masses that are resolved voluntarily, without judicial intervention, although there are, in addition, many hank runters which the Division resolves by stranlation. Performance indicators \$7, \$9 and \$16 attenuat to convey the complexity of many crys) court, (one case, often meludes makinde record and makinde parties.) The number of historian activities (Performance Inducator #16) is an inducator of attorney productivity. However, because it does not measure the complexity of the individual activity reported, this indicates is indicate to some Plantamon depending upon the type of case that the Division is called upon to handle (for example, a tax protestor case that reses only well-artiful Constitutional source may resume multiple planelings to be presented before it to distinsted, whereas a case that raises an important same of substantive tax few may require a great deal of time and effort, but the preparation of fewer, aftert more substantial, pleadings before it is resolved). Performance Indicators #1, #5, #6, and #16 provide a base against which to examine the Division's productivity, and its part in achieving efficient, expeditions justice. Performance Indicators #1b. #2, #3, #5b, #6b, and #13 describe responses elements of the civil program's tax protest stituates. Performance Indicator #4 describes responses elements of the coval program's international compliance mitrative

B. FY 1999 Performance Report:

In July, 1998, the Internal Revenue Service Restructuring and Reform Act of 1998 ("RRA98") was enacted. RRA98 radically abreed the way the Tax Division's principal client agency, the Internal Revenue Service, functions. RRA98 also granted new rights to Expayers both at the Internal Revenue Service page Service grant page 18 to the page 18 to the Internal Revenue Service specific much of 1999 implementing the new Regulations and consoning to restructure itself internally. The Division itself has been expending significant resources to interpret the Europeans new provisions of RRA98, work with the Internal Revenue. Service to across stems, fair printions, and train civil bigation program staff to handle litigation involving these provisions. Additional work remains to be done in all of these news, as new issues continue to arise.

The Internal Revenue Service's much-publicized shift in resources away from audit and collection to implementing the new legislation and improving customer service appears to have affected case receipts. Overall, the reported outcomes continue to reflect positively on the civil hitigation program's productivity, debt collection, and other resource-changement efforts.

C. Issues Affecting Selection of FY 2000 and 2001 Plans.

It is imprised to distinct on the projection about the impact of RR ARS and the changes in Internal Revenue Service operations, on its performance indicators. Therefore, the Division is changing its FY 2000 and 2001 Plans to reflect essentially straight line figures from its FY 1999 actual figures. Information available from the Service and the media suggest varying and sometimes contradictory results, which make predicting the Division's litigation load impossible. Additional Internal Revenue Service administrative proceedings may sans factionly resolve to many issues that hippation would be reduced. On the other hand, if tax payers choose to apprais the IRS' administrative decisions. Yangsaon could increase. Because many administrative proceedings are good, the Division cannot accumately predict the volume of enturing lingation. For example, for the nine and-one-half month persod ended blovember 30, 1999, the IRS Appeals Office had received approximately 6800 requests for collection due process hearings. Only about 500 were screed upon as of that date. At least 1700 of the balance have the processing lingation of the distinct-court intigation.

BASE PROGRAM DESCRIPTION:

The Assistant Attorney General, the Executive Office staff, and the Legislation, Policy & Management Analysis Unit of the Tax Division provide leadership, policy guidance and direction, and administrative support to all components of the Tax Division. The Division's executive leadership establishes appropriate and uniform policies involving appeals and civil and criminal tax enforcement, and promotes and maintains communications with the IRS, the Treasury Department, the Office of Management and Budget, the United States Attorneys' Offices, other components of the Department of Justice, and the public. The personnel in the Legislative, Policy & Management Analysis Unit review and analyze legislative proposals that directly affect the litigating mission of the Tax Division, prepare all legislative reports required by the Congress, the Office of Management and Budget, and the Department of Justice, and coordinate the Division's activities pursuant to the Government Performance and Results Act (GPRA). Timely responses also are prepared to satisfy the requirements of the Freedom of Information and Privacy Acts.

The Office of Administration provides services relating to general administration, fiscal/budgetary controls, automated information systems technology support, personnel, and other administrative matters as required. It consists of three components: (i) the Executive Office, which provides overall control and policy guidance; (ii) the Administrative Services Staff, which is responsible for accounting and financial services, budget planning and evaluation, personnel services (including providing administrative support for the recruitment and hiring of Division personnel), case records and file management, procurement, and facilities management; and (iii) the Information Management Staff,

which is responsible for managing and maintaining the Phoenix office automation network and for providing all other information systems technology support required by Tax Division employees, litigation support services, a personal computer resource center, and a post-litigation operation that tracks and monitors the Division's debt collection operations.

The Tax Division's senior management remains committed to maintaining and enhancing the standards of excellence that have been the hallmark of the Division since its inception. This commitment has resulted in improved internal management controls, better budget development and execution, increased office automation, and successful programs to improve employee training.

As part of pursuing the Tax Division's primary mission — promoting the uniform and equitable enforcement of the nation's tax laws—the Division's litigation managers (Section Chiefs) have fostered heightened cooperation with the United States Attorneys and the Internal Revenue Service. The Section Chiefs regularly meet with representatives from these other offices to develop and coordinate law enforcement initiatives and to discuss other matters of mutual concern. For example, the four chiefs of the Criminal Enforcement Sections participated in a meeting of IRS Criminal Investigation managers to explore workload priorities and trends. A byproduct of this development has been more participation by Tax Division line attorneys in the policy discussions and litigation efforts of cooperative law enforcement efforts, such as joint IRS/FBI investigations of motor fuel excise tax evasion, the Department of Transportation/Federal Highway Administration Joint Federal/State Motor Fuels Compliance Project, the Treasury Department's Tax Refund Fraud Task Force, various health care fraud task forces, and the Organized Crime Drug Enforcement Task Forces (OCDETF).

The Tax Division's executive, legislative, and policy personnel have participated in drafting the Division's position of a variety of issues related to the Department's and Division's operations. Thus, for example, the Assistant Attorney General has established a Performance Management Committee composed of staff, line attorneys, and managers to develop and implement the Division's response to the obligations imposed by GPRA. She also regularly meets with a Line Attorneys' Committee, composed of one elected representative from each of the legal sections in the Division, and with another committee of non-legal staff. Among the issues that have been addressed by these committees and in writings and policy discussions have been: the appropriate ratio between attorneys and support staff, the increased use of paraprofessionals; and the taxation of travel expense reimbursements received by Department attorneys on long-term job-related assignments.

On the legal side, the Assistant Attorney General has sought broad input on many issues including proposed asset forfeiture legislation and guidelines for searching and seizing computers. The Tax Division also has been exploring the potential applicability of Alternative Dispute Resolution mechanisms to litigation matters. During the past year, the Division's Office of Training continued to offer educational opportunities to managers, attorneys, other professionals, and support personnel. The Training Office offers classes and videotaped sessions

to enhance legal and technical skills. It also coordinates training mandated by the Department on such complex issues as sexual harassment sensitivity and AIDS awareness. The Office of Training provides the ethics and computer security training required by the Division of all its employees and continues to offer its successful individualized word processing training program.

One of three planned litigation support service centers opened in the fall of 1998, the remaining two opened in early 1999. These centers provide timely and efficient document and data processing for the Tax Division and reliable litigation and trial preparation support to our attorney work force. They are open on an extended-day basis and are available when the attorneys need to respond to court-ordered deadlines. The Office of Management and Administration has also implemented a new case management system, TaxDoc, which will provide comprehensive statistical outputs to our managers and allow them to use GPRA performance measurements to the lep manage their sections. The new system will incorporate case tracking, time reporting, records management tracking and all the elements of a modern case management system. It will be made available to the users as well as to the technical staff of the organization. This system will be compatible with the other legal divisions in the Department of Justice.

In the fall of 1999, the Tax Division also implemented a new office automation system, JCON2. This upgrade included a new e-mail system, updated versions of software packages, new desktop and imploy computers for all employees, new servers, and upgraded computer networks. The speed and computing capacity of the new system has allowed the Tax Division to catch up with recent technology innovations and is fully expected to increase employee productivity.

Clinger-Coken Act of 1996:

Section 4307 of the Clinger-Cohen Act of 1996 (Public Law 104-106), requires agencies to develop workforce policies for procurement education and training. It also directs agencies to "set forth separately the funding levels requested for education and training of the acquisition workforce" in documents that support the President's budget. Furthermore, the Act states that funds appropriated for education and training under this section may not be obligated for any other purpose.

The Tax Division utilizes several contracts entered into by the Department of Justice. The Department has delegated a limited amount of procurement authority to the Tax Division to obtain goods and services under these contracts. Delegated functions include producing necessary procurement documents, record keeping, and coordination with Department officials who have primary authority and responsibility for contracting activity. Assistant Contracting Officer Technical Representatives (ACOTR) within the Tax Division are responsible for monitoring contract performance. These officials are required to complete certain training courses before they can accept the delegations.

The Tax Division procures the great majority of needed goods and services through exercise of small purchases suthority. This is also a delegated responsibility requiring completion of training courses. Under the Division's Restructuring Project, office managers within the litigation sections have assumed responsibility for acquiring office supplies. This responsibility will eventually be expanded to include procurement of office equipment. This will necessitate partial re-delegation of procurement authority now centralized within the Office of Management and Administration. The Tax Division estimates annual expenditures of approximately \$5,000 will be necessary to ensure ACOTRS receive mandatory training and that office managers receive the training necessary to qualify them to handle delegated duties.

PROGRAM CHANGES:

	Perm.		
	ž 25.	PTE	Amount
Automated Litigation Support Initiative	***		\$1,020

In FY 2001, the Tax Division requests \$1.02 million for the support of information technology advancements to enable the Tax Division to move forward into the 21st century, keeping pace with the technology available and used both within the courts and by opposing counsel.

DEPARTMENT OF JUSTICE GOALS:

Ensure that sufficient infrastructure exists to support law enforcement needs.

TAX DIVISION GOALS:

- . To promote the fair, correct, and uniform enforcement of the Federal tax laws in the nation's trial and appellate courts; and
- To manage the Division efficiently and effectively.

PROGRAM DESCRIPTION:

This initiative represents a program increase of \$1.02 million in support of information technology in the Tax Division in the Year 2001. It will be used to:

- Create an organizational and technical infrastructure in the Tax Division to support the use of automated litigation support
 (ALS) tools for trial preparation, electronic filing, and presentation in "typical," as well as large cases.
- Bring ALS tools to the attorney's laptop personal computer for use in the office and while on travel.
- Enhance the presentation of evidence in the courtroom through the use of presentation software and equipment.
- Provide training to all litigation team members (attorney and support personnel) on ALS tools.

Background

Traditionally, the Division has made only limited use of automated litigation support services. While ALS has been used in extremely large cases or by attorneys who are computer-savvy and have developed their own applications, its use in smaller cases has been discouraged. The Division has not included ALS as part of its base, which would have allowed for widespread use of this technology. Instead, funds from a no-year account of unobligated funds administered by the Justice Management Division have been used as needed, but this is not a reliable source of funds.

Internal and external changes in the litigation environment make it imperative that the Division enhance its ALS program. Internally, restructuring has put the Division in a position to fully automate its workforce. This initiative will complement the establishment of Litigation Support Service Centers throughout the Division, as well as provide the office automation and teleconferencing equipment needed to provide Division personnel with a complete set of automated tools. Automated litigation support equipment will decrease the amount of time necessary to complete document-intensive trials and will facilitate jury comprehension. The addition of these resources will allow atterneys and paralegals to analyze large volumes of documents quickly hid interestionagely. Additionally, Tax Division attention are becoming, aware of the availability of ALS technology and will have the office automation tools (JCON-II) needed to support these technologies.

A number of external factors also are at work. For example, the Division must prepare itself for electronic filing, which is being piloted by the United States District and Bankruptcy Courts. Electronic filing projects, in which the Division expects to participate, are underway in Bankruptcy Courts in the Southern District of New York, Arizona, Southern District of California, Northern District of Georgia, and Eastern District of Virginia, and in the District Courts for civil litigation in the Western District of Missouri, Eastern District of New York, Northern District of Ohio, and Oregon. At least four other districts (New Mexico, Idaho, Kansas, and Southern District of Texas) are operating independent projects. Additionally, the use of presentation technology in the courtroom is quickly becoming the norm and has proven to be of great benefit in the presentation of complex litigation. ²

This initiative is consistent with the Department and Tax Division's goals of promoting the fair, correct, and uniform enforcement of the Federal tax law in the nation's trial and appellate courts; enhancing collection by the U.S. Treasury of tax debts; and managing the Department and Division efficiently and effectively.

The Division will conduct a pilot study in Fiscal Year 2000 with up to four litigation teams to determine the best mix of technology and training for the Division's workforce and to provide a basis for benefit/cost analysis. Based on the results of this study, we satisfipate redesigning work processes to utilize effectively ALS technology.

To ensure that the Division meets the Department's goal of interoperability and information sharing, the Division will continue its participation in the Litigating Components' ALS working group; software will be integrated into the JCON-II platform; and the courtroom presentation equipment will be interoperable with the equipment purchased by the Executive Office for United States Attorneys and by the Administrative Office for the United States Courts. The Division will also continue to request funding for its office automation infrastructure through the Legal Activities Office Automation account.

²A study recently completed for the Executive Office for United States Attorneys (Automated Litigation Support: Needs Assessment and Cost Benefit Analysis, DynCosp, January 31, 1999) supports these assumptions.

Components of the Initiative

Funding is requested for:

- Training for attorneys and non-attorneys, particularly paralegals, approximately \$250,000 in FY 2001; approximately \$100,000 in each subsequent year.
- Imaging and database capabilities approximately \$200,000 each year.
- Presentation equipment approximately \$70,000 for two kits for use in training staff and trial preparation.
- Contractor support \$500,000 per year to provide technical support.

Iraining for attorneys and non-attorneys

Training will be provided by contract personnel on all aspects of the litigation support function to ensure that the equipment being procured is used effectively. Attorneys and paralegals will learn the most current and modern techniques. An initial course will familiarize non-technical attorneys and paralegals with the use of computer technology both in the investigative phase and the litigation phase of both civil and criminal matters. The course will demonstrate available technology which can assist in the preparation and trial of any case and the type of technology already being used by either investigative targets or opposing litigation parties.\frac{1}{2} Additional courses will provide training on the use of imaging and database capabilities, full-text retrieval software, and courtroom presentation equipment.

For planning purposes, the following courses have been identified in order to ensure that the software and hardware to be purchased is utilized effectively. This requirement will be refined based upon the pilot project in FY 2000.

³The EOUSA's OLE offers a comparable course, which lasts four days. We would anticipate a similar requirement and would tailor the EOUSA curriculum to meet Tax Division-specific requirements.

Course	Estimated Cost Per Person	Total Employees to be Trained	Estimated Cost
Information and Technology in Tax Litigation - an introduction for non- technical personnel (attorneys and paralegals) - 4 days	\$400	340	\$136,000
Trial Preparation for Paralegals - 5 days. To include use of database software (including database design), scanning software and equipment, and presentation software.	\$1,500	40	\$60,000
Using Technology in the Courtroom for Paralegals - 3 days, To include the setup and operation of the courtroom presentation equipment.	\$1,000	40	\$40,000
Trial Preparation for Litigation Assistants - 3 days. To include the use of database software, scanning software and equipment, and presentation software.	\$400	35	\$14,000
Totals			\$250,000

Training is a key element of this initiative because without it the equipment and software to be purchased will not be fully utilized.

Attorneys and support personnel must know how to best apply databases, document management, graphics design, and technology-based presentations to the overall hitigation function. This will be an on-going effort because of changes in technology and staff turnover.

2. Equipment and Software

Imaging and database capabilities

The Division receives voluminous files from the IRS in both civil and criminal litigation. To the extent possible, the IRS will be encouraged to provide information in an electronic format. Nevertheless, we would anticipate continuing to receive administrative files with mixed documents, which currently are copied upon receipt and in preparation for discovery. Electronic filings will substantially increase the need for scanned documents because they will need to be included with the filings.

Commercially available scanners will be used along with off-the-abelf imaging and database software. The exact configuration will be determined during the pilot studies to be conducted in FY 2000. Experience in the private sector indicates substantial savings from electronic imaging of documents in copying costs, space savings, as well as in the preparation of doposition kits during discovery. There are also a number of intangible benefits, including improved management of originals, concurrent and remote access to the documents and better disaster recovery.

In addition to acanning requirements, there are requirements for database applications. For example, the Division is currently developing an application that will track information concerning checks and other financial transactions associated with a bank account for a specific case. It has been estimated that the Division requires approximately a dozen standard databases to meet most of the attorneys' needs.

The following is an estimate of the software and equipment to be purchased in FY 2001. Equipment will be located in each of the trial sections in both Washington, D.C., and Dallas, Texas.

Item	Quantity	Estimated Cost
Database/viewing software (At a minimum, we will evaluate the following software packages before making a purchase decision: ATTView, Jury Link, Summation, Trial Director.)	400	\$80,000
Scanners (large) - one for each section	11	\$55,000
Scanners (desktop) - for use at trials and by attorneys on travel	10	\$4,000
CD Burners	2	\$1,000
Server to store images	1	\$60,000
Total		\$200,000

Experience suggests that in future years, additional funding will be needed in order to refresh technology and to meet expanded requirements.

Presentation equipment

As the EOUSA ALS study indicated, automated ittigation support equipment for trial presentation will decrease the amount of time increasery to complete a document intensive trial and will facilitate comprehension by the jury of the evidence presented at trial. Studies have above that perception, interpretation, and retention are substantially enhanced when the visual sense is addressed in conjunction with the

auditory sense. This equipment is available in an increasing number of courts and the expectation of the judges is that it will be used. Tax Division attorneys must be prepared to do so.

The Tax Division will need a minimum of two systems for training and for trial preparation purposes so that the attorneys are prepared to utilize the equipment in court. Each system, which must be easily transported, will include the following components at an approximate cost of \$35,000:

liem	Description
VCR	A VCR which allows any video to be played and displayed on system. The VCR has a loggle remote that allows users to go frame by frame. Speed control allows for variable playback
Video Printer with supplies	Prints directly from the monitor display for later reference by the attorney
Multiple synch Marker	Aflows users to draw, point and type on any image on the system. Drawing can be done on any monitor in the courtroom via lightpen. Color changes can also be made to differentiate between markings.
Visual Presenter with autofocus	This is a mounted video camera which allows display of documents or 3- dimensional evidence

⁴At its June 1998 meeting, the Judicial Contenues Committee on Automation and Technology requested that the AOUBC develop and propose a plan for long-term implementation of court-room technologies and approved an interior funding policy that will permit a limited around of countroom technologies to be initialled, particularly in countrooms undergoing construction or major removation. A 1996 survey of Pederal judges conducted by the ACRIEC on southness technology indicated that almost two-thirds of the responding judges used the technology or was interested in using H

Item	Description
Touch Panel	This device is programmed to turn the system on/off and to communicate with most of the components in the system. It is a touch panel that allows the user to switch between input devices and control output displays, e.g., the user can control the image being displayed and the output displays to monitors placed throughout the courtroom (controlling who gets to view what at any given time).
Speaker System	Allows audio output from the system.
Scan Doubler with freeze frame	This device enhances composite, video, or S-Video signals by doubling the number of video lines.
6-in, 1-out stereo audio switcher	This device works with the switcher. When the input is changed, so is the audio. This is essential for seamless court presentations.
3500 Series VGA switcher	This device is a high performance, high quality snalog switcher, designed to accept high resolution video signals from multiple sources and switch them to a single display device.
Distribution amplifier	This device allows the defense and prosecution the ability to use the monitor in front of them for local computer view or court view with the switch of a button.
Video switcher	This is a high resolution video switcher, designed to provide the various court participants in a trial video images of the courtroom presentation. Each monitor can be turned on and of on demand.
Monitors	Monitors will be purchased for use in conducting dress rehearsals prior to trial and for training. We anticipate leasing monitors for use outside of the Washington, D.C. area because they do not ship well.

ltem	- Description
Barcode Reader	This device, when combined with the use of a bar code for each page of evidence, allows the user to select any page of evidence at random without having to access the evidence file first, in order to enhance the courtroom presentation process.
Video distribution amplifier	This device is used to distribute video signals to up to 6 additional monitors, when needed. The devices connected to this unit are not separately controllable
Shippable cases	Cases are needed for each set of equipment in order to allow them to be shipped to the Daltas office for training and trial preparation.
Cables and connectors	Various connectors and cables are required to attach the different components/devices. Different lengths and types of cables are used in order to meet varied courtroom requirements.

The configuration described above is the Courtroom Presentation System developed by the United States Attorneys. For planning purposes, it was selected because we believe that it will meet the Tax Division's needs based on the experience the United States Attorneys have had in presenting white colfar crime and complex fraud cases to juries and because it is less expensive then systems provided by companies such as DOAR Communications, Inc., which cost up to \$60,000 each. It is our intention to refine this configuration as part of the pilot project during FY 2000.

3. Contractor Support

The Tax Division's Office of Management and Administration has streamlined its positions as a result of restructuring. It will assist Division personnel in identifying the appropriate utilization of computer technology, selecting the appropriate devices for communicating the information and its analysis to a jury, and performing inherently governmental functions such as developing statements of work for contractors, supervising contractors, and acting as the agent of the Federal government in accepting and/or rejecting contractor work products. The \$500,000 requested will allow the Division to utilize a small corps (3-5) of contract litigation support specialists and computer

programmers to assist Division personnel on an on-going basis, as well as for large cases. They will customize COTS applications for use in Tax Division cases, assist in scanning documents, in setting up and keying databases, preparing courtroom graphics, and in running courtroom equipment, when needed, for a large number of smaller cases. At the same time, we expect to receive requests for litigation support in 5 or more large cases (ALS cost of \$50 - 200,000 each) per year. Because of the cyclical and varied nature of this work, we believe the use of contract personnel will provide the appropriate level of flexibility.

Criminal Division Salaries and Expenses, General Legal Activities Fiscal Year 2001

The Criminal Division is requesting a total of \$18 permanent positions, \$23 workyears, and \$113,959,000 in its Salaries and Expenses appropriation for fiscal year 2001. This request represents an increase of \$9,482,000 (includes adjustment to base and annualizations) over the appropriated amount of \$104,477,000 for FY 2000. The Division's total requested program increases for FY 2001 (36 positions, 21 workyears, and \$3,159,000) would expand resources in certain areas to meet emerging priorities identified by the Administration and the Attorney General.

SUMMARY STATEMENT AND PERFORMANCE PLAN

The Criminal Division FY 2001 Budget Request and Performance Plan directly support the Division's mission and the priorities, goals and strategic approaches that are included in the Department of Justice's (DOJ) Strategic Plan, FY 1997-2002. The Performance Plan and the corresponding Government Performance and Results Act (GPRA) workload exhibits are included as an instrument for measuring program performance against established goals. The Criminal Division continues to define and identify outcome-related performance results as a means of being more accountable and continuing to improve upon the Division's overall effective use of requested resources.

A. Criminal Division Mission and Goals and Relationship to DOJ Strategic Plan

The Criminal Division's mission is to develop, enforce, and exercise general oversight for federal criminal laws, except those that are specifically assigned to other Divisions. The Division oversees criminal matters under more than 900 statutes; supervises certain civil litigation; advises the Attorney General on matters concerning criminal law; monitors sensitive criminal law areas requiring coordination, such as attorney subpoenas, attorney fee forfeitures, and international law enforcement; establishes and facilitates implementation of criminal law enforcement policy; provides leadership for coordinating federal-state-local law enforcement relationships; and coordinates law enforcement issues relating to national security.

The first concise mission statement for the Division appears in a message from the President of the United States transmitting a manuscript entitled, "Origin and Development of the Office of the Attorney General" to the House of Representatives in 1929. In the manuscript, President Coolidge writes:

"An Assistant Attorney General has charge of a Division which operates in connection with the enforcement of criminal laws of the country by giving direction, where necessary, to the prosecution of cases involving crimes against the United States and to all the other matters involving criminal practice and procedure, such as questions pertaining to indictments, grand juries, search warrants, passports, alien enemies, extraditions, etc. Under the Division also come questions arising in connection with crimes committed on the high seas, crimes arising under the national banking law, and under naturalization laws, and from which is given, when necessary, advice and instruction to United States Attorneys in various districts respecting the conduct of criminal cases."

There have been any number of expansions of the Division's responsibilities since 1929. While the basic mission remains unchanged, the scope has broadened to encompass national security law enforcement issues that have taken us into the arena of international affairs.

The resources being requested by the Criminal Division for FY 2001 will be used to achieve its goals which are in conformance with DOI's Strategic Plan 1997-2002. Criminal Division's goals directly support the Department's Core Functions and Strategic Plan Goals as shown below.

DOJ Core Function 1: Investigation and Prosecution of Criminal Offenses.

- DOJ Strategic Plan Goal 1.1: Reduce violent crime, including organized crime and gang-related violence.
- DOJ Strategic Plan Goal 1.2: Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts.
- DOJ Strategic Plan Goal 1.3: Reduce espionage and terrorism (sponsored by foreign or domestic groups in the United States and abroad when directed at U.S. citizens or institutions).
- DOJ Strategic Plan Goal 1.4: Reduce white-collar crime, including public corruption.
- DOJ Strategie Plan Goal 1.5: Coordinate and integrate DOJ law enforcement activities wherever possible, and cooperate fully with other federal, state and local agencies that are critically linked to improve operation of the Nation's justice system.

B. FY 2001 Annual Performance Plan.

The Criminal Division is proposing an FY 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown below. These FY 2001 goals, organized around the Department of Justice's Strategic Plan 1997-2002, will establish a baseline from which future performance may be tracked and reported, as required by the Government Performance and Results Act (GPRA).

	CORE FUNCTION 1: Investigation and Procession of Crimina	Officuous
DOJ Strategic Plan Goal	CRM's Performance Goals	CRM's Performance Indicators
Gont I.1: Reduce vision trime, including organized crime and drug and gang-related violence	Fully utilize asset forfeiture and money-isundering statutes in investigations and prosecutions of organized crime to disrupt and dismantle these organizations by attacking their financial underpinnings and denying them the profits of their crimes	Number of cases (sole/shared) litigated.
i	Increase efforts against those who commit sexual exploitation offenses against children, including those who traffic in child pornography.	 Number of agents and prosecutors trained to conduct investigations.
	Investigate and prosecute known LCN members engaged in racketeering activity through aggressive use of wiretaps and enoperating witnesses. Continue to disrupt operations of LCN crime families through investigation and prosecution of LCN leadership	Number of cases and matters related to the reduction in LCN membership.
	Devise national investigative and prosecution strategies targeting the most significant non-traditional organized crime groups operating in the United States, including Asian and Russlan criminal groups. Coordinate investigations and prosecutions of major non-traditional organized crime group figures.	Number of non- LCN Strike Force cases opened.
	Provide assistance to USAOs nationwide in vigorously prosecuting violent crime cases	Number of violent crime prosecutions and investigations.
	Train federal prosecutors and agents about the use of various federal affenses particularly suited to combating violent crime	Number of training sentiners and topics thought.

	CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses

abuse of illegal drugs through traditional and innevertive enforcement efforts. and prosecutions of drug-trafficking organizations to d these organizations by attacking their financial underpotent of their crimes. Identify, disrupt and dismanife drug trafficking organizational, multi-jurisdictional, or have an identified international, multi-jurisdictional, or have an identified international multi-jurisdictional and foreign strate interfagence information from all sources (including the agencies, intelligence community, and financial databates).	Fully utilize asset forfeiture and money-laundering statutes in investigations and prosecutions of drug-trafficking organizations to disrupt and dismande these organizations by attacking their financial underpinnings and denying them the profits of their crimes	Number of cases (sole/shared) httigsted.						
	Identify, disrupt and dismanife drug trafficking organizations which are international, multi-jurisdictional, or have an identified local impact.	Number of nationally coordinated investigations that tend to the disruption and diamantling of drug trafficking organizations. Indictments obtained in OCDETF-level cases. Convictions obtained in OCDETF-level cases.						
	Incorporate and coordinate domestic and foreign strategic investigative and into linearing information from all sources (including the law enforcement agencies, intelligence community, and financial databases)	Number of drug trufficking organizations identified by SOO						
	Provide training and technical assistance to foreign counterparts.	 Number of foreign governments assisted with drafting appropriate counterdrug legislation, and extent to which they are assisted. Number of foreign counterdrug investigations, prosecutors, judges and legislators trained. 						
	Support cohesive, multilateral pressure against governments that fail to take sufficient action to combat international drug trafficking.	 Participation in the GAS/CICAD and U.S. inter-agency effort to develop multilateral counterdrug monitoring and evaluation program for the Hemisphere. 						

DOJ Strategic Plan Goal	CRM's Performance Goals	CRM's Performance Indicators
Goal 1.3: Reduce explorage and increasing (spennered by foreign or downstic groups in the U.S. and should when directed at U.S. citizens	Fully willive asset forfeiture and money-laundering statistics to investigations and prosecutions of explorage and servorts activities to disrupt and dismantle these groups by attacking their financial underpinnings and danying them the profits of their crimes.	Number of cases (sole/shared) llugated
or lastitutions).	Continue the high rate of success in the suvestigation and prosecution of explorage cannot	- Conviction rate of esplonage cases
	Continue efforts to enhance coordination and communication is stational security cases between the Division and the melligence community, to include the agencies and offices directly engaged in counterintelligence activities and investigations	Number of cases in which the Classified Information Procedures Act was successfully employed.
	Continue to participate in training semisures for squarts and processors on caltional security investigations and prosecutions	Number of training sessions conducted,
	Coordinate rutions ide federal criminal investigations and prosecutions of terrorist financing activities.	Number of acrosts: fundations investigations coordinated/ participated in
	Work with the FBI and US Attorneys Offices to identify and stweet individuals and groups engaged in domestic serrorist activity, thereby determing amoviem, enhance statutory tools to combat serrorism, and zein prosecutors in serrorism response.	Number of exercises and training sessions participated in.
	Aggresarvely investigate and prosecute terrories acts directed against American nationals and interests or home and overness, and also papport and assist investigations and prosecutions by foreign law enforcement authorities for such acts committed against Americans estimatementally	Number of foreign terrorss act investigations and prosecutions conducted. Number of dosnestic terrorist act investigations and prosecutions conducted and supported.
	Further the capabilities to coordinate and respond to cyber and physical threats to the Nation's critical infrastructure, including interagency cooperation with the Dept of Deferree and other responsible fibernal agencies. Continue to identify and eliminate key infrastructure unlessabilities and improve investigations and protection through transing and disseminating information and tools.	Number of cases/thatters bandled.

	CORE FUNCTION 1: Investigation and Prosecution of Criminal	Offenses
DGJ Strategic Plan Goal	CRM's Performance Goals	CRM's Perfors anco Indicators
Goal 1.4: Reduce white-cellar crime, including public corruption and fraud.	Fully utilize great forficinate and money-inundering statutes in investigations and prosecutions of write-collar crimes to discupt and demander these criminal enterprises by stacking their financial underpinnings and denying them the profits of their crimes	Number of cases (sole/shired) litigated.
	Continue to increase the capability of the FBI to acquire, examine and present computer evidence in online pornography cased and enhance the capability of the United States Attorney Offices to investigate and prosecute these cases.	 Number of agents and prosecutors trained to conduct investigations relating to online pomography.
	Continue efforts to further develop capacity to respond to cyber-attacks, consumer thefts and antinuous affecting consumers, businesses and government in order to keep sees when and successfully investigate and prosecute the new loved of high-lech criminals.	Number of agents and prosecutors trained to conduct advanced computer fissed investigations relating to both federal connect and national security.
	Work with other federal agencies to continue to identify and target fritud schemes, such as fluencial regination, health care, and internet flued by successfully prosocuting and obtaining judgments and sottlements.	Number of indicoments and convictions in white collar crime
	Concrute to place the utmost emphasis on the investigation and prosecution of illegal exports, re-exports and diversions of U.S. controlled weapons and strategic dual ass goods and scalesology: a, and on the enforcement of the various embargoes imposed simple the international Emergency Economic Powers Act and its predecessor, the Trading with the Enumy Act.	Conviction rule in export cases
·	Where necessary and appropriate, work with the relevant investigative and export loceraing agencies in the development of export enforcement policy, and continue to participate in training seminary and conferences designed to obtusine federal agretta and processions about the conduct of export investigations and processions.	Number of training sessions conducted
	Select appropriate cases involving federal, state, or local government corruption for investigation and, if warranted, prosecution.	Appropriate handling of corruption investigations and prosecutions as reflected in the number of shatters and cases
	Encourage recognition of public corruption of a Department priority, and encourage Department-wide notice of availability of headquarters assistance on corruption cases	Participation in shared corruption cases jointly handled with USAOs when requested by USA
	Encourage and participate in training events for federal prosecutors and investigators addressing corruption statutes, investigative techniques, and situation issues	Number of tectures to federal, state, or local prosecutors and law enforcement agents

	CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses							
DOJ Strategic Plac Coal	CRM's Performance Goals	CRM's Performance Indicators						
Gual 1.5: Courdinate and integrate DOJ law enforcement activities wherever possible, and cooperate fally with other federal, state and local agencies that are	Foster cooperatum with federal, state, and local law enforcement agencies to maximize the use of asset forfeiture and anti-money laundaring activities as a meant to disrupt and dismantle criminal enterprises.	Number of state and local lew enforcement agencies provided technical advice on seed forfeiture Number of state and local law enforcement agencies that participate in the Equitable Sharing Program. Number of equitable sharing cages reviewed.						
critically linked to Improved operation of the Nation's justice	Ensure that the montes and properties, recovered from criminals engaged in 'criminal activities, belonging to innocent victims are returned to the victims	Number of victims' putitions for remissions processed						
system	Work bitaterally and multitaterally with foreign governments to actively encourage foreign countries to ratify treaties, implement laws, and international conpensive agreements to deny safe havens to criminals, as well as the presented of their crimes.	Number of foreign countries receiving drafting assistance with asset forfeitner and maney laundering legislations and regulations. Number of foreign countries that have transferred forfeited assets to the U S.						
	Provide asset forferture and anti-money laundering training and training to devises and foreign prosecutors, investigators, regulators, legislators, and adges to cultivate the expense heeded to successfully investigate and prosecute money laundering and asset forferthar statutes.	Number of domestic and foreign productions, investigators, legislatory and judges trained on asset forfetters and money laundering issues. Number of money faundering and asset forfeiture publications dieter buted.						
	Continue to work with the Internet Crimes Against Children Task Forces staffed by State and Jocal law enforcement to investigate these crimes Continue to work with other agencies and international law enforcement to combat crimes against children on an international level.	Coordinations and participation in international meetings related to combeting crimes against children.						
	Continue to participate in the policy and legislative development process, both domestically and internationally, to enhance investigative and prosecutorial responses in child exploitation and trafficking cases	Participation in drafting process of international agreements us a protocols related to matriciting of women and children						
	Revise current and negotiate new bilateral and multilateral agrocateds with countries where crucial to furthering U.S. interests in extradition and mutual legal assistance.	Number of new extradition treates with other countries entering into force, with a view soward the extradition of netionals. Number of new mutual legal assistance treaties with other countries entering into force						
	Assist federal, state and local efforts to develop and implement programs, and activities to evoluce drug-related triene and violence.	Number of training presontations (federal, state and local).						
	Vigorously work to denaturalize and remove (deport) participants in World War II was connect crimes against humanity	Number of prosecutions and investigations. Number of cases filed. Number of persons who lost citizenship. Number of persons removed.						

	Work to ensure the exclusion of people who have been involved in the resperation of World War It War Crimes/Crimes against. Humanity flors immigration into the United States	 Number of people encluded from immigration to the US that have been involved in War Crimes.
	Work with the State Department, Office of Government Ethica, and other federal agencies and DOJ components on corruption insues of concern at the international level	 Participation in international conferences, proceedings, and related meetings and negotiations addressing public corruption issues.
	Work with the President's Council on Integrity and Efficiency and its basignity Committee on the handling of allegations of wrongdoing by I/Os and their senior staff	 Appropriate resolution of allegations as reflected in the number of matter and cases
	Lecture to visiting foreign officials at the request of the State Department or other federal agencies or DOJ components on U.S. taves addressing, public corruption	 Number of addresses to foreign officials on U.S. laws addressing public corruption.
	Lecture to state and local election officials on the federal laws addressing election crimes and the election process	Number of addresses to state and local election officials
<u> </u>	Review and make recommendation to authorizing official at to legality and appropriateness of requests from USAOs and federal law enforcement agencies to use court-authorized electronic surveillance.	Electronic Surveillance Originals reviewed. Electronic Surveillance Extensions reviewed.
	Review applications involving floteral (and occusionally state) investigations for wineses to enter the Federal Wintess Security Program (WSF). Coordinate all government apencies: involvement in WSF. Coordinate the Drivision's overall victim-writess efforts, with other Department components	Witness accurity applications Witnesses & Earnily members placed in WSP Witnesses authorized into WSP
	Serve as liaison among all government agencies — often including both foreign and state government agencies — with an interest in specific prisoner transfers	Prisoner transfer requests reviewed. Prisoner transfers authoritied. Prisoners transferred.
	Register entities as required by the Gambling Devices Act of 1962.	- Gambling registrations processed.
	Coordinate the Division's responses to requests for disclosure under the Freedom of Information and Privacy Acts.	FOLA stations paneling, received, and closed
	Process S-Vias requests and coordinate with other law enforcement agencies in securing S-Vias legal resident status for cooperating witnesses.	> 3-Visus requests processed
-	Coordinate with other DOI components in obtaining last disclosures, countrovan closures, and press subpoenae.	 Respects for Tax Disclosures, Continuous Closures, and Press Subpoenes Reviewed
	Coordinate with USAOs and other DOJ components in obtaining immunicias for witnesses for trial and grand jury proceedings.	- Withour farmunities (paped).

1999 Performance Report

Overall, the Division met or exceeded its projected performance outcomes for FY 1999. Listed below is a sampling of some of the Division's major accomplishments. In FY 1999, the Division:

- Continued to combat computer crime and protect the National Information Infrastructure through efforts such as the new Cybercitizen Partnership, the Intellectual Property Rights Initiative, and enforcement of the Economic Espionage Act.
- Served as the central point of contact for Federal, state and local law enforcement, government entities, and industry for support and expert technical advice on issues relating to computer crime.
- Continued to work with Federal, state and local law enforcement to identify, deter, and respond aggressively to domestic and
 international terrorist activity. The Division played a leading role in the development of the Administration's Five-Year
 Interagency Counterterrorism and Technology Crime Plan and played a leading role in the U.S. efforts to disrupt terrorist financing.
- Worked to reduce white collar crime, including: coordinating several multi-district health care provider cases throughout the
 country, investigating and obtaining indictments related to bribery allegations in connection with Salt Lake City's bid for the
 Winter Olympics, and handling cases to combat corruption throughout all levels of government.
- Worked to decrease the amount of trafficking in online pornography on the Internet and other online services by providing training
 for law enforcement, working with Internet Service Providers to facilitate cooperation, and increasing training and coordination
 with international partners to stem the flow of exploitation materials.
- Continued to work to reduce the availability of illegal drugs by prosecuting cases and providing legal support to field components, supporting the Southwest Border Initiative by prosecuting cases along the Southwest Border, and working to improve international narcotics enforcement efforts, including those in Colombia.
- Continued to attack major organized crime groups including La Cosa Nostra and Russian and Asian organized crime syndicates.
- Worked with the State Department on bring new extradition and mutual legal assistance treaties into force and to negotiate several new multi-lateral initiatives.
- Continued efforts to identify, prosecute, and denaturalize/deport alleged war criminals residing in the United States. The Division
 also served as DOJ's representative to the Nazi War Crimes Disclosure Act Interagency Working Group that is working to identify,

locate, and make public all classified records pertaining to suspected Nazi war criminals and persecutors or to the misappropriated assets of victims of Nazi persecution.

- Presented numerous successful cases to the courts of appeals and drafted many successful merit briefs in the Supreme Court.
- Provided support to many litigation efforts where asset forfeiture and money laundering laws were successfully used. Led the
 Department's efforts in the development of the first National Money Laundering Strategy. Continued efforts to pursue the
 forfeiture of assets abroad, providing training in asset forfeiture and money laundering to law enforcement personnel, and
 administered the Equitable Sharing Program.
- Performed the Division's Title III review function, administered the S-Visa program, administered the prisoner transfer program
 and provided a myriad of legal support functions for Federal, state and local law enforcement entities.

Additional accomplishments and more details regarding the following achievements are included in the Accomplishments Section for each Section/Office later in the budget submission.

Of the over 100 measures the Division presented in its budget submission, only an insignificant number of targets were not met. For those areas that did not meet their targets, none represent a departure from the Division's law enforcement goals or plans. For example, the Division projected that 10 State Computer Telecommunications Coordinators (CTCs) would be in place in FY 1999. The actual number of State CTCs in place in FY 1999 was only 2. While the Division did not meets its target for this program, the Department continues to promote this program; in fact the Attorney General recently called for the establishment of a 50-State CTC network, and the Department expects more State CTCs to be established in FY 2000.

For the estimates not met, most are a result of extenuating factors or the fact that actual results did not meet the exact numerical target, but are consistent with the target number set. The Division is not making radical changes to programs where targets were not met, but continues to refine its ability to accurately define and measure performance outcomes for the future. For example, the Division projected that by the end of FY 1999, a cumulative total of 16,709 witnesses and family members would be placed in the Witness Security Program. By the end of FY 1999, the actual number of witnesses and family members placed into the program was 15,976. While the actual figure is not exactly as high as the estimate, it is very consistent with the general estimate. It is difficult to predict the number of requests for program services as the Division is reactive to the needs of the law enforcement community. Based on the fact that this figure is consistent with the estimate provided, the Division does not see this as a problem and does not plan to revise future year estimates. In addition, some indicators presented in 1999 are no longer tracked by the Criminal Division as they are being reported on by other DOJ components.

Data Validation and Verification Issues

The Criminal Division recognizes the importance of valid data for the purposes of complying with the requirements in the Government Performance and Results Act (GPRA). At present, the Division employs both electronic case tracking systems and manual systems to report workload statistics. To ensure more complete and accurate data, this process will be automated with the completion of the Division's case tracking system. Currently, GPRA statistics are reviewed three times a year for accuracy by the Division's Section/Office management. Enhancements in these areas are supported by national strategies and by rising workload in the Division Sections involved in the initiatives. As in the FY 2000 submission, this request recognizes and strengthens interconnectivity among the Sections of the Division. This approach was also extended to other components of the Department.

C. Major New FY 2001 Initiatives

The Criminal Division's total requested program increases (36 positions, 21 FTE and \$3,159,000) support four of the Attorney General's FY 2001 cross-cutting initiatives that were identified and developed within the Department this spring. Presented below in order of priority is a brief overview of these initiatives. A more detailed explanation and justification follows in section VI: Program Changes and Justifications.

<u>Initiative</u>	P.esitlona	Attener	Workyeara	Amount
Strategic Drug Enforcement	5	3	3	\$389,000
International Crime	14	7	8	\$1,197,000
Counterterrorism	11	6	6	\$888,000
Protecting Communities	6	4	4	\$685,000
Total	36	20	21	\$3,159,000

Strategic Drug Enforcement: In order to maintain our focus on the war on drugs, the Division is requesting 5 positions, 3 FTE, and \$389,000. These additional resources will enable the Division to maintain a comprehensive approach to support the Department's strategic drug enforcement priorities, especially the expansion of the Special Operations Division (SOD) effort. These positions are critical for the Division to keep pace with the expansion of drug trafficking in this nation and abroad.

This request directly relates to the DOJ Strategic Plan, CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses: Strategic Goal 1.2: Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts and Strategic Plan Goal 1.5: Coordinate and integrate DOJ law enforcement activities wherever possible, and cooperate fully with other federal, state and local agencies that are critically linked to improve operation of the Nation's justice system.

International Crime: The Division's FY 2001 international crime initiative consists of a request for 14 positions, 8 workyears, and \$1,197,000. These resources will be directed toward coordinating an effective, long-term attack on international crime. With these additional resources, the Division will bolster its international analysis and training and provide the capacity to

deliver the training funded by the State Department efficiently and effectively.

This directly relates to the DOJ Strategic Plan, CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses: Strategic Plan Goal 1.1: Reduce violent crime, including organized crime and gang-related violence; Strategic Plan Goal 1.2: Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts; Strategic Plan Goal 1.3: Reduce espionage and terrorism (sponsored by foreign or domestic groups in the United States and abroad when directed at U.S. citizens or institutions); Strategic Plan Goal 1.4: Reduce white-collar crime, including public corruption.; and Strategic Plan Goal 1.5: Coordinate and integrate law enforcement activities wherever possible, and cooperate fully with other federal, state and local agencies that are critically linked to improve operation of the Nation's justice system.

Counterterrorism: This request, 11 positions, 6 FTE, and \$888,000, is to be used to bolster the Division's abilities to combat espionage and terrorism, including cyberterrorism. As a result of emerging computer technology over recent years, significant attention has been, and continues to be, focused on the vulnerability of the critical infrastructure as a result of cybercrime and cyberterrorist attacks. The Division has become a nexus for federal, state, local and foreign agencies seeking guidance on how to develop responses to the threat of cybercrime/cyberterrorism. The additional resources would enable the Division to meet its mission priorities and maintain its leadership role in these efforts.

This directly relates to the DOJ Strategic Plan, CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses: Strategic Goal 1.3: Reduce espionage and terrorism (sponsored by foreign or domestic groups in the US and abroad when directed at US citizens or institutions); Strategic Plan Goal 1.4: Reduce white-collar crime, including public corruption; Strategic Plan Goal 1.5: Coordinate and integrate DOJ law enforcement activities wherever possible, and cooperate fully with other federal, state and local agencies that are critically linked to improve operation of the Nation's justice system.

Protecting Communities: Two areas related to protecting communities, Indian Country and crimes against children, are addressed in this initiative. The request is for 6 positions, 4 FTE and \$685,000. The additional resources would enable the Department to have an effective voice in law enforcement and policy matters in Indian Country. In addition, the Division plays a major role in protecting the children of our Nation. Additional resources are being requested to focus on enforcement efforts against child pornography, trafficking of women and children, and international parental kidnapping. These additional resources also will be focused on enhancing the Short-Term Protection Program.

This directly relates to the DOJ Strategic Plan, CORE FUNCTION 1: Investigation and Prosecution of Criminal Offenses: Strategic Goal 1: Reduce violent crime, including organized crime and drug and gang-related violence.

The reprogramming reflects \$22,000 for guard service.

Transfers Between Accounts:

The Division had the following additional funding available for FY 1999:

\$200,000 for Year 2000 conversion offorts;

\$6,016,000 for international training and assistance of which \$5,103,000 is two-year money

transferred in the last quarter of FY 99 and available through FY 00.

Unobligated Balance Brought Forward:

The Division brought forward \$4,330,000 in FY 1999 for the following:

\$769,000 to fund additional positions to address cybercrime;

\$2,000 for FARA.

\$593,000 for Indian country programs;

\$2,799,000 for international training and assisstance;

\$108,000 for automated litigation support and \$3,000 for ADP equipment;

\$56,000 from drug "X" account.

2009 President's Request

The Division requested (a) 13 positions (9 attorneys), 9 workyears and \$1,760,000 to augment the Division's cybercrime/cyberterrorism programs and (b) 13 positions (9 attorneys), 5 workyears, and \$1,130,000 to supports its narcotics programs. The President's Budget also included a proposed transfer of 18 positions and \$2,404,000 consistent with the Department's proposal to transfer resources from the centralized Organized Crime Drug Enforcement Task Forces (OCDETF) account to participating Departmental components.

Congressional Appropriation Action on PY 1909 Request

Congress denied program increases (a) and (b) above. Congress denied the Department's request to transfer OCDETF resources to components. Congress reduced the Division's base funding by \$4,972,000 for FY 2000.

Reprogrammings

There are no reprogrammings pending for the Division.

Program Changes and Justification

"We must continue to do all that we can to protect our families and children from dangerous criminals"

Attorney General Janet Reno Remarks at the National Law Enforcement Officers Memorial Candlelight Vigit May 13, 1999

Protection of families and children is a common theme for the Criminal Division's FY 2001 budget request. The initiatives included are closely aligned with priorities articulated in recently released national strategies such as the International Crime Control Strategy published in 1998, the Office of National Drug Control Policy's 1999 National Drug Control Strategy, the Department's Strategie Plan and Drug Strategy as well as the Department's Counterterrorism Strategy. Significant segments of this request were developed as a result of the Attorney General's Law Enforcement Review which fostered a systemic approach in formulating the Department's budget to ensure that the Division's request complements the requests of other related Departmental components. Portions of the initiatives presented below are also referenced in the cross cutting budget initiatives.

The request comprises four initiatives: Strategic Drug Enforcement, International Crime, Counterterrorism, and Protecting Communities. Enhancements in these areas are supported by national strategies and by the rising workload in the Division's Sections/Offices involved in the initiatives. As in the FY 2000 submission, this request recognizes and strengthens interconnectivity among the Sections/Offices of the Division. This approach was also extended to other components of the Department. For example, a portion of the resources sought for the Office of International Affairs and the Child Exploitation and Obscenity Section in the Protecting Communities initiative were included as apart of a collaborative effort with the U.S. Attorneys. The Division's Child Exploitation and Obscenity Section and various U.S. Attorney offices work together to assist in countering child pornography rings with significant segments operating outside the United States or where the victims are located outside the United States.

As criminal organizations become increasingly complex and sophisticated, coordination at all levels of law enforcement has never been more important. As simple tools such as computers provide an individual the capacity to disrupt or damage critical elements of our nation's infrastructure, the requirements for preparedness and preemptive capabilities have never been greater. As criminal activity weaves its way around the world via cyberspace, traditional tools for identifying, apprehending and prosecuting criminals have never appeared so irradoquate. This has fostered the approach used in this request.

Many Offices or Sections of the Division are represented in each of the initiatives. This recognizes the complimentary but interdependent roles played in rising to the emerging challenges of criminal law enforcement. Enhancements requested include not only attorneys in the Section of primary focus but also for those Sections and Offices which support the activity. Enhancements also would provide the analytical capabilities necessary to keep pace with the ever increasing sophistication of criminal activity. The total request is for 36 positions, 21 FTE, and \$3,159,000. This annualizes to 36 positions, 36 FTE and \$4,858,000 in fiscal year 2002.

Initiative	Positions.	Attaces	Werkyese	Ambust
Strategic Drug Enforcement	5	3	3	\$389,000
International Crime	14	7	8	\$1,197,000
Counterterrorism	11	. 6	6	\$888,000
Protecting Communities	6	4	4	\$685,000
Total	36	20	21	\$3,159,000

FY 2001 Strategic Drug Enforcement Initiative

The Strategic Drug Enforcement Initiative was developed as a result of the Attorney General's directive to the Department to develop a coordinated FY 2001 budget request which focuses on long-range planning and budget needs across all Department components. During the spring of 1999, the Criminal Division met with other Department components involved in the war on drugs to identify and coordinate resources required in FY 2001 to bolster the Department's drug enforcement activities. This approach afforded Department components the opportunity to analyze existing resource allocations and determine the most effective means of utilizing current and requested funding based on input from across the Department. As a result of this cross-cutting process, funding requests for FY 2001 to an unprecedented extent should complement other federal efforts and state and local assistance programs in the on-going effort to reduce illegal drug trafficking and increase our demand reduction efforts.

Program	Positions	Attorneys	Workyears	Antogut
Asset Forfeiture & Money Laundering Section (APMLS)	3	2	2	\$254,000
Enforcement Operations (OEO)	2	1	1	\$135,000
Total	5	3	3	\$389,000

For FY 2001, the Division is requesting 5 positions, 3 FTE, and \$389,000 to bolster its strategic drug enforcement programs. This request includes the following positions: 3 attorneys, 1 paralegal, and 1 clerical position. All costs were derived from the fiscal year 2001 cost modules. The request annualizes to 5 positions, 5 FTE, and \$611,000 for FY 2002.

The Criminal Division recognizes the integral roles that its Sections/Offices play in the Department's counter drug mission. The Division's FY 2001 Strategic Drug Enforcement Initiative request has been developed to strengthen the linkages both within the Division and between the Division and other Department and other government agencies in order to increase overall enforcement capabilities. The initiative has received the support of the Department's FY 2001 Strategic Drug Enforcement Cross-Cutting Budget Initiative and the OCDETF's FY 2001 planning process.

Narcotics enforcement continues to be a growing priority for the Criminal Division and the entire Department of Justice. As evidenced by the Attorney General's February 9, 1999 speech before the National Association of Alcoholism and Drug Abuse Counselors, the war on drugs is a strong priority of the Attorney General that requires additional attention and additional resources:

"...illegal drugs are estimated to cost our society more than \$67 billion dollars annually.. if you make this investment now, you can save this much down the line."

Attorney General Janet Reno February 9, 1999

Due to emerging priorities involving narcotics matters, the Division's Asset Forfeiture and Money Laundering Section (AFMLS) and Office of Enforcement Operations (OEO) continue to experience an increase in their workloads. In response to this reality, for FY 2001 the Division has developed an integrated funding request for AFMLS and OEO, in order to maximize the Division's ability to coordinate and facilitate national narcotic law enforcement efforts currently underway, such as the activities ongoing at the Special Operations Division (SOD).

SOD is a multi-agency national law enforcement coordinating entity comprising agents, analysts, and prosecutors from DEA, FBI, USCS, and the Criminal Division. SOD's mission is to coordinate and support regional and national level criminal investigations and prosecutions against the major criminal drug trafficking organizations operating along either side of the U.S.-Mexico land border, as well as major Colombian drug trafficking organizations, As a result of the successes achieved in the pest year or so, such as Operation Meta, and the disruption of the Carrillo-Fuentes organization in Organized Crime Drug Enforcement Task Force (OCDETF) investigations Operation(s) Limelight and Reciprocity, SOD has been successful in identifying and targeting the emerging trafficking threats using the Southwest border as the gateway into the U.S. This mission is routinely performed seamlessly across both investigative agency and district jurisdictional boundaries. Within SOD, no distinction is made among the participating investigative agencies—coordination and cooperation are essential ingredients for its success. Where appropriate, state and local investigative and prosecutive authorities are fully integrated into SOD-coordinated drug enforcement operations.

The Department is expanding the mandate of the SOD, by adding a money laundering unit to this initiative. This new "financial side" of the SOD will focus on cartel-related money laundering and financial crimes originating in Mexico and Colombia. This new unit will work in concert with the existing drug trafficking operations side of SOD and will receive, analyze and disseminate information pertaining to the financial underpinnings of criminal organizations.

The profits realized by drug trafficking organizations fuel and expand their operations, and involve laundering such monies through the financial systems and into legitimate businesses worldwide. It has been estimated that illegal drug sales in the United States alone generate an estimated \$45.6 billion annually in profits. To counter this as mentioned above, the Department has developed drug control strategies and initiatives to disrupt and dismantle these international drug trafficking organizations. Countermoney laundering and asset forfeiture activities are integral to this effort. These activities strive to deny safe havens for drug traffickers and to deny them the profits of their crimes and the monies needed to finance their operations.

It is essential that the United States concentrate on attacking the economic foundations of drug trafficking operations through expanded international laws, treaties, agreements, and other methods necessary to remove the impediments to pursuing criminals who commit crimes in one country and use other countries to move or hide their illicit profits or proceeds. AFMLS, which is responsible for handling money laundering and asset forfeiture efforts and initiatives, provides centralized policy and program oversight, and maximizes the law enforcement potential of laws designed to distriantle and destroy criminal enterprises by denying use of ill-gotten financial gains. Its many responsibilities include encouraging countries to adopt money laundering and asset forfeiture laws, providing assistance in drafting legislation, providing technical assistance and training to facilitate the implementation of laws, coordinating financial sector enforcement targeting efforts, providing litigation support for asset forfeiture and money laundering cases, negotiating international cooperation and sharing agreements, sponsoring forums to promote international cooperation, and developing national and international material assistance and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and international and

AFMLS' involvement has produced extraordinary results; for example, in one case more than \$180 million was repatriated and forfeited, and approximately \$89 million was shared with the cooperating foreign government. AFMLS has worked closely with foreign countries, including Colombia and Mexico, on vital money laundering and asset forfeiture legislation. AFMLS is now assisting the Colombian and Mexican governments to implement their forfeiture laws, including providing technical assistance and training to its prosecutors. These laws have been used most often in drug trafficking and financial crimes, serving as both deterrent and punishment.

As discussed above, the recently approved "financial side" for SOD will generate additional workload demands for AFMLS. The financial unit in SOD will work with the existing SOD infrastructure to attack the financial underpinnings of the criminal organizations involved in drug trafficking AFMLS currently does not have adequate staff to handle the workload responsibilities related to this expansion. If the Department's expansion of the SOD to focus on financial issues is to be successful, an investment in AFMLS is critical.

In addition to the SOD, AFMLS' responsibilities continue to expand. For example, the Financial Action Task Force (FATF), originally established in 1989 by the G-7 nations to promote international cooperation in fighting money laundering, is expanding its membership to include countries from Latin America, Africa, and Asia. Further, implementing the international aspects of the Department's Drug Control Strategy requires a substantial amount of AFMLS resources. Attacking the financial resources of criminal organizations involved in the drug trade. Given the increased workload projected for AFMLS associated with the SOD expansion and AFMLS's expanding role related to international drug enforcement, additional resources for AFMLS are critical for the Department's drug enforcement activities to succeed.

By law, all applications for court-authorized electronic surveillance must first be approved by an appropriate Department of Justice official. It is the job of the Criminal Division's Office of Enforcement Operations (OEO) to review each of these requests and make a recommendation to the authorizing official as to the legality and appropriateness of the request. OEO attorneys, who are experts on electronic surveillance, work closely with federal law enforcement officials in the drafting and review of these requests. OEO attorneys also work closely with the federal law enforcement officials on the myriad of legal issues that arise during the course of investigations utilizing electronic surveillance and on legislative and policy matters involving electronic surveillance.

Because of efforts such as SOD, the amount of new wiretaps related to narcotic enforcement is growing. The increased activity in the area of narcotic invest gations is reflected in the workload of OEO. In FY 1998, OEO processed the largest number of wiretaps in its history, an increase of 13% over 1997. During the first half of FY 1999, the number of requests increased by 26% compared to the number within the same time period in FY 1998. The complex investigations conducted by SOD are highly intelligence driven and often require expedited treatment for Title III wiretaps which places even greater pressure on OEO's capabilities in this area.

As part of the FY 2001 Strategic Drug Enforcement cross-cutting budget initiative, DEA requested additional funding to support the use of Title III electronic surveillance in SOD investigations. If this increase in funding is ultimately approved by Congress, it can be expected to substantially increase the number of DEA-generated Title III requests that must be reviewed and approved by the Criminal Division before a court order may be sought. Accordingly, the Division is requesting additional resources for OEO to support its burgeoning narcotics-related Title III workload.

The Division plays an active role in the achievement of goals identified in the President's anti-drug abuse policies, the Office of National Drug Control Policy (ONDCP) and the Department of Justice's recently completed Drug Control Strategic Plan (DCSP). The goals the Division specifically focuses on are:

- ONDCP/DCSP Goal 2 Increase the Safety of America's Citizens by Substantially Reducing Drug-Related Crime and Violence.
- ONDCP/DCSP Goal 5 Break Foreign and Domestic Sources and Supply, and
- The Department's Strategic Plan 1997-2002, Goal 2: Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts.

In FY 2001; the Division intends to enhance its efforts to meet the above goals and objectives. With additional resources, the Division will be able to increase the use of asset forfeiture in investigations and prosecutions of drug trafficking organizations to disrupt and dismantle criminal organizations by attacking their financial underpinnings and denying the profits of their crimes. In addition, the Division will be able to more fully utilize the money-laundering statutes in investigations and prosecutions of drug-trafficking organizations to disrupt and dismantle the financial operations which are often used to finance their crimes. Requested resources for FY 2001 will enable the Division to focus on the identification, disruption and dismantlement of drug trafficking organizations which are international, multi-jurisdictional, or which have an identified local impact. With additional resources, the Division will be able to more fully incorporate and coordinate domestic and foreign strategic investigative and intelligence information from all sources (including the law enforcement agencies, intelligence community, and financial databases).

Over the past year, with the resources provided, the Division has achieved several significant accomplishments in the war on drugs, as highlighted below.

In May 1998, the Secretary of the Treasury and the Attorney General of the United States announced the culmination of
"Operation Casablanca," the largest, most comprehensive and significant drug money laundering case in the history of U.S. law
enforcement. This operation targeted professional money launderers for the Cali and Juarez cartels and numerous Mexican and

Venezuelan bankers who assisted in laundering more than \$50 million in drug proceeds. In March 1999, two of the three Mexican banks included in the indictment, pled guilty to money laundering and agreed to civilly forfeit a total of \$13.6 million. In addition to assisting the Southern District of California, APMLS filed the civil forfeiture complaint against approximately \$23.1 million that was sent from the undercover account to bank accounts in 16 countries.

- Much of the work of OEO is directed at the priority area of dealing with the narcotics problem facing this nation. This is done in part, through the review of electronic surveillance requests. In 1998, OEO reviewed 1,526 requests for electronic surveillance approvals, the highest number ever received in any one year since the wiretap statute was enacted 30 years ago. In the first six months of 1999, the number of wiretap requests continued to come in at a record pace, and reflected a 23-percent increase over the same period in FY 1998. There continues to be a heavy emphasis on wiretap targeting narcotics dealers, often on the level of importers and distributors for the large Colombian and Mexican drug organizations. Many of these requests have been part of the high-priority Southwest Border Initiative, which has targeted importers and distributors operating in that area of the country. There were a number of arrests and seizures resulting from those wiretaps in areas such as California, Texas, and New York, and the scizures included millions of dollars and tons of cocaine.
- Recently, as a result of a nine-month wiretap investigation in the Central District of California, there were seizures of three and one-half tons of cocaine and more than \$15 million in cash. In a series of wiretaps presently ongoing in multiple districts, law enforcement has, to date, seizzd almost \$20 million in drug proceeds and more than 10,000 kilograms of cocaine. Recent drug-related wiretaps included the case (resulting in a hung jury) in which a jury forcmen allegedly took a bribe to arrange an acquittal in a high-profile drug case in Miami, Florida, and an 11-month wiretap investigation in which 30 members of the Mexican Mafia in California were indicted on RICO charges involving murder and extortion that included "hith" on rival gang members. Most of these cases resulted in arrests and ongoing prosecutions in which the wiretap evidence is paramount.
- During FY 1998, no wiretap application submitted to a court for approval after review in OEO was rejected, and there were no
 instances of reversal of any OEO-reviewed wiretap for lack of probable cause in suppression motions or on appeal.

In summary, in order to maintain the war on drugs, the Division is requesting 5 positions for AFMLS and OEO for FY 2001. These positions together represent a comprehensive approach to ensuring the Division is able to support the Department's strategic drug enforcement priorities, especially the expansion of the SOD effort. These positions are critical for the Division to keep pace with the expansion of drug trafficking in this nation and abroad. With these resources, the Division will be better equipped to attack the criminal organizations that manage and operate this criminal activity. Denying the Division's program increases would significantly hamper its ability to expand its current operational capability and response to emerging drug enforcement challenges and would seriously impose the Criminal Division's ability to fully implement and support many of the Administration's and the Attorney General's highest priorities in the areas of strategic drug enforcement.

To address the increasing workload associated with achieving the goals necessary to win the war on drugs, the Criminal Division is requesting 5 positions (3 attorneys), 3 FTE and \$389,000 for the fiscal year 2001. This request will annualize to 5 positions (3 attorneys), 5 FTE, and \$611,000 in fiscal year 2002.

- For AFMLS, the Division requests two attorney positions at the GS-15 level and one professional position at the GS-13 level to handle the increase in cases generated from this initiative. The total request is for 3 positions (2 attorneys), 2 FTE, and \$254,000 for FY 2001. The request will annualize to 3 positions (2 attorneys), 3 FTE, and \$408,000 for FY 2002.
- For OEO, the Division requests one attorney position at the GS-15 level and one clerical position at the GS-7 level to handle the anticipated increase in wiretap applications. The total request is for 2 positions (1 attorney), 1 FTE, and \$135,000 in FY 2001. The request will annualize to 2 positions (1 attorney), 2 FTE, and \$203,000 for FY 2002.

FY 2001 International Crime Initiative

"Only through concerted efforts at home and with our international partners will we ensure the protection of America's Interests today and in the future "

> President Bill Clinton International Crime Strategy May 1998

International criminal activity has increased in scale and extent in the wake of globalization, becoming a complex worldwide threat. International criminals today engage in a wide range of illegal activities, including drug trafficking, terrorism, alien smuggling, fraud, extortion, money laundering, bribery, economic espionage, on-time pornography, intellectual property theft, and counterfeiting. Many also resort to extreme violence to advance their criminal enterprise. Increasingly, international criminals are banding their activities in scope and range with no regard for national borders. International crime is more than a law enforcement problem. It is a formidable threat to America's wourly and it demands a concerted response.

In FY 1998, the President signed the first International Crime Control Strategy. This strategy is the output of a combined effort of the Departments of Justice, State and Treasury as well as many other U.S. stakeholder agencies to develop and implement a comprehensive national strategy to fight international crime and reduce its impact on Americans. In order to implement the goals and objectives of the strategy, the Division requires additional resources in FY 2001.

The Division's FY 2001 International Crime Initiative consists of a request for 14 positions, 7 attorneys, 8 workyears, and \$1,197,000. These resources are broken down among the following Sections/Offices of the Division:

Program	Positions	Attorneys	Workveans	Amount
Office of International Affairs	9	7	5	\$758,000
Office of Policy and Legislation	1	e	i	\$70,000
International Criminal Investigative Training Assistance Program	4	đ	2	\$369,000
Total	14	7	8	\$1,197,000

Bilateral and Multijateral Issues

In developing its budget request for FY 2001, the Division has recognized the need to bolster its international programs in order to increase its response to the growing needs in this area. The Sections/Offices of the Division are seeing a consistently increasing level of workload related to crime that has impacts within and beyond our borders. The Division's Office of International Affairs (OIA), which supports many aspects of the international federal law enforcement effort, continues to see a dramatic increase in workload. Incoming foreign extradition requests numbered 329 in FY 1998, and 415 in FY 1999 and are expected to climb to 480 by FY 2001. Foreign Mutual Assistance Requests numbered 794 in FY 1998, and 883 for FY 1999 and will likely reach 925 by FY 2001.

Last October, the Senate gave its advice and consent to ratification of 38 new extradition and legal assistance treaties. Each of these will require the labor-intensive process of establishing law enforcement relationships with the United States' foreign counterparts, so that each of these treaties is brought into force and implemented efficiently and thoroughly. In addition, OlA's caseload of bilateral extradition and mutual legal assistance treaties and matters continues to increase. Matters received in 1998 numbered 7,150, in FY 1999 those figures are expected reached 8,000, and by FY 2001 they are projected to exceed 10,000. OlA's responsibilities for staffing multilateral efforts such as the G8 meetings, the negotiation of the U.N. Organized Crime Convention, and cross-cutting assignments such as "mapping the world" and aiding in reassessing our to "safe havens" strategy have escalated and will require additional resources to properly staff. For example, there will clearly be additional extradition and legal assistance work for the Division in support of the international criminal tribunals and in high profile cases such as Pinochet. Further, OlA requires

additional resources to increase outreach to state and local prosecutors to improve their awareness of, and to better coordinate, on international criminal matters. To undertake this increase, the Criminal Division is requesting seven positions for OIA.

International Analysis

International crime places additional burdens on the Division that it is currently not equipped to handle. The Division is seeking resources to bolster its support for international programs by developing an international analysis function. In order to handle increased responsibilities, the Division is requesting resources for FY 2001 to support its role to implement, coordinate, and support the Department's international crime programs. The Division is currently, and will be tasked, to a greater extent, to lead and staff Departmental, governmental, and global initiatives. These initiatives are aimed at stimulating cooperation, coordination, and program development across component, agency, government, and international boundaries. The Division will continue to be tasked to lead and implement initiatives and asked to represent the Department and the U.S. in the international arena. In order to effectively carry out these responsibilities, the Division requires additional resources. Further, because so much of the Division's work is international in nature, many more Division employees are operating in the international arena, either directly in overseas locations of from the United States. Given the increasing prevalence of international crime, the Criminal Division is requesting two positions for OIA for the creation of an international analysis and training working group.

The Division also seeks to strengthen the analytical capabilities of the Office of Policy and Legislation (OPL) to better support its international programs. As the Justice Management Division noted in its analysis of the Division's FY 2000 spring planning request, the analytical work of OPL is widely acknowledged to be critical to the development of Criminal Justice Policies within the Department. The Attorney General, the Deputy Attorney General and Senior Division managers routinely call upon OPL to analyze and interpret criminal justice information, statistics, and to conduct research for numerous projects. Examples include interagency projects addressing racial disparity in federal sentencing; crime data analyses for the Special Cities project, Police Hiring Supplement, and Community Oriented Policing Services Program; as well as analyses of U.S. Sentencing Commission data for crack and powder occaine defendants, white collar criminals, and juveniles. As the demand for the Division's presence in the international arena continues to expand, it is clear that analytical support must follow suit. The mapping the world project currently underway has illustrated the need to enhance the Division's analytical capabilities to relieve the burden on attorneys to undertake largely analytical tasks that keep them from legal work. To address this need, the Division is seeking one analyst for OPL to work with the International Training Strategies Working Group allowing OPL to expand its role into the international arena to better allocate analytical work within the Division.

International Training

This request would provide the Criminal Division the capacity to deliver the training programs funded by the State Department

efficiently and effectively. To do so, the Division is seeking appropriated funding for the core management levels for the International Criminal Investigative Training Assistance Program (ICITAP) which trains investigators overseas and which is also involved in institution building worldwide.

In response to recent management issues, the Division has taken several steps to better manage the delivery of international training programs. In November 1998, the Division filled the SES level position of Chief, International Training Development Programs (ITDP). Organizationally, the Assistant Attorney General elevated the reporting relationships for international training and development such that the Chief reports directly to the Assistant Attorney General's office and does not report through a Deputy. The Division is also in the process of reiterating the requirement that all requests for Criminal Division training conducted overseas be coordinated by ... of Chief, ITDP, including requests for ICITAP training.

ICITAP was established as a component of the Department in 1986. Since that time, all of its funding has come from programspecific transfers from State or USAID; it enjoys no Department of Justice (DOJ) funding except for modest support of four positions starting in FY 1998 and all operating expenses, including salaries for all other headquarters core management and staff, must be charged as "overbead" against State and USAID program funds. The Division's next critical measure in the international law enforcement training arena is to expand ICITAP's DOJ funded core management staff to further address management issues and to better establish a stable base within ICITAP from which overseas training programs may be launched.

During the past several years, every manager of ICITAP and a series of government and contract reviews of ICITAP management issues have urged that ICITAP have an appropriated operating budget for core headquarters activities. In 1998, to respond to these recommendations as well as persistent requests from State, the Division agreed to fund three management level positions directly rather than charge these to overhead against State and USAID funded programs. In 1999, the Division devoted another position to headquarters management activities focused on Kosovo due to the increasing demand for law enforcement support for that area of the world. This brings the present number of ICITAP core headquarters management positions funded by the Division to four.

ICITAP has twelve years of extensive experience working with foreign police institutions, particularly in Latin America, and is well acquainted with the complex interagency setting in which policies and programs are set for the United States' administration of justice agenda. ICITAP has developed long-term and strategic approaches to criminal justice sector development that are important to the Nation's objectives overseas. Drawing from this experience, ICITAP has been tapped to help restore order in Kösovo. Resitzing' the potential benefits for planning and managing these types of training and assistance programs is difficult as long as ICITAP must devote virtually all its resources to fixed programs funded by other agencies. Those fixed programs leave little latitude to fund important general international training management activities that are broader than the individual programs for which the funds are obtained. As a result, ICITAP's ability to plan and manage training programs for which it will seek funding from State and USAID is

diminished due to limited staff resources and expertise. Attempts to secure overhead funds from State and USAID to finance these headquarters management and planning activities has prompted State and USAID to complain that doing so makes ICITAP too expensive and makes overhead charges too high. This lack of funding for "overhead" core management activities, in turn, inhibits ICITAP's ability to secure training and development assistance program funds from State and USAID for the law enforcement and criminal justice area. As has been acknowledged by State, ICITAP's overhead — now about 12% — has in fact been reduced over the years, in part as a result of the direct funding of the 4 positions referenced above. However, without an expanded base budget to draw upon. ICITAP must pass back virtually all its operating costs to its funders in the form of overhead charges against program funds. State has acknowledged that its displeasure with ICITAP's "high overhead" is derived largely from the lack of an appropriated base budget to fund headquarters management and planning activities.

We have consulted with senior staff of the State Department's Latin Bureau for Western Hemisphere Affairs (WHA) and International Narcotics and Law Enforcement Affairs (INL) about this issue. Both organizations fund significant ICITAP programs. Both Jonathan Winer at INL and Roberta Jacobson, Director of Policy and Planning at ARA, have confirmed that their organizations strongly support a proposal for DOJ to secure a core operating budget for headquarters management and planning activities in ICITAP.

Under a solely reimbursable model, management is inhibited in effecting a coherent, adequate headquarters staffing plan because it has no lone, reliable funding to support its headquarters staff through potential ebbs and flows of foreign assistance funding and the shifting priorities of its outside funders. Due to dependence on reimbursable, program specific funding, planning is extremely difficult. Because of its funding structure, ICITAP is constrained to be largely reactive and limited in scope. In most instances, it is difficult to justify the use of funds dedicated to existing programs for much needed long-term and strategic planning. Internal initiatives include such things as a specialized computer system to accommodate ICITAP's extremely complex financial and reporting requirements; establishment of policies and procedures for office management and course and program development; preparation of state and local experts for overseas criminal justice assignments; training and professional development of staff; and regular conferences to Iring field managers together; retaining independent contractors to deal with sudit requirements and the year-long process of recompeting the offices' elaborate contracts. To de this would require conversion of select headquarters management, administrative and forensic staff and related operating expenses from a reimbursable to an appropriated basis. This would involve 4 positions, 2 workyears and \$369,000.

- In summary, to support its international crime programs, the Division properts the following resources for FY 2001:

OIA requests 5 attorneys at the GS-15 level for bilateral/multilateral issues and 2 GS-15 attorneys to work on the international Training Strategies Working Group. Further, OIA requests 1 GS-11 paralegal and 1 GS-7 clerical position to support its bilateral and multilateral workload. The total request is for 9 positions (7 attorneys), 5 FTE, and \$758,000 in FY 2001. The request will annualize to 9 positions (7 attorneys), 9 FTE, and \$1,209,000 for FY 2002.

- OPL requests 1 GS-13 analyst to bolster the Division's international analysis functions. The total request is for 1 position (0 attorneys), 1 FTE, and \$70,000 for FY 2001. The request will annualize to 1 position (0 attorneys), 1 FTE, and \$108,000 for FY 2002.
- 1ClTAP requests 4 GS-15 professionals to formalize its international training programs. The total request is for 4 positions (0 attorneys), 2 FTE, and \$369,000 in FY 2001. The request will be 4 positions (0 attorneys), 4 FTE, and \$599,000 for FY 2002.

FY 2001 Counterterrorism Initiative

"I think it is important that when we talk about terrorism we talk about all forms of it. We've seen the horror of conventional terrorism in Oklahoma City. We can conjure the horrors of weapons of mass destruction, chemical and biological weapons, and then there is a new weapon that we're just beginning to understand, the threat of cyber tools. If a person can sit in a kitchen in St. Petersburg, Russia and steal from a bank in New York, if a 17-year-old hacker can hack into military establishments, we have got to make sure that we are prepared to fight back in terms of the cyber terrorism."

Attorney General Janet Reno
Addressing the National Governors' Association,
Center for Best Practices and National Emergency Management
February 2, 1999

This Counterterrorism Initiative was developed as a result of the Attorney General's directive to the Department to develop a coordinated FY 2001 budget request which focuses on long-range planning and budget needs across all Department components. During the spring of 1999, representatives from the Criminal Division met with representatives from other Department components involved in the Department's counterterrorism efforts to identify and coordinate resources required in FY 2001 to bolster the Department's counterterrorism activities. This approach afforded the Department components the opportunity to analyze their existing resource allocations and determine the most effective means of utilizing current and requested funding based on input from across the Department. As a result of this cross-cutting process, funding requests for FY 2001 should complement, to an unprecedented extent, other federal efforts and state and local assistance programs in the on-going effort to prepare the nation to prevent and counter terrorist activities.

This request attempts to address counterterrorism in all its forms. The increase sought for the Computer Crime and Intellectual

Property Section is included to address the threat to the nation's infrastructure. Resources requested for the Terrorism and Violent Crime Section would bolster its capacity to update and refine the Interagency 5-Year Counterterrorism Strategy. Resources for the Office of Enforcement Operations would establish the capacity to deal with witnesses and victims of terrorist acts.

The Division's FY 2001 Counterterrorism Initiative consists of a request for 11 positions, 6 FTE, and \$888,000. These resources are broken down among the following Sections/Offices of the Division:

Program in the	Patrick	Aborn	Workvern	Attend
Computer Crime/Intellectual Projects Section (CCIPS)	7	\$	4	\$586,000
Terrorism/Violent Crime Section (TVCS)	ı	l	ı	\$92,000
Office of Enforcement Operations (OEO)	3	0	1	\$210,000
Tetal	11	4	6	\$888,000

This request includes the following positions: 6 attorneys, 3 professional, 1 paralegal, and 1 clerical. All costs were derived from the fiscal year 2001 cost modules. This request will annualize to 11 positions, 11 FTE, and \$1,360,000 for FY 2002.

Cybererime/Cyberterrorism.

In past submissions the Division has noted that the incidence and complexity of computer crime continue to increase rapidly as greater numbers of people develop proficiency in manipulating electronic data and navigating computer networks, and as worldwide access to the Internet continues to skyrocket. It appears the intrusion rate per host site on the internet is fairly constant, but internet growth will increase the number of hosts, and therefore, even at a constant intrusion rate per host, the number of intrusions cases will increase commensurately to the growth of hosts. Earlier in 1999, government agencies experienced first hand the vulnerability of the critical infrustructure as a result of cybercrime and cyberterrorist attacks as hackers broke into many government. Web sites and either changed content or caused the sites to be taken down. In 1990, the National Research Council, an arm of the National Academy of Sciences, recognized that "Tomorrow's terrorist may be able to do more damage with a keyboard than with a bomb," (Report by the National Research Council as quoted in The Washington Times, December 24, 1990). Consequently, with the Computer Crime and Intellectual Property Section's (CCIPS) demonstrated expertise in high technology crime and its responsibility for the Department's. Computer Crime Initiatives, the Section has become a nexus for federal, state, local and foreign agencies seeking guidance on how to develop responses to the threat of cybercrime/cyberterrorism, and how to address potential and suspected abuses and infiltrations.

For FY 2001, the Division is requesting 7 positions (5 attorneys) to maintain its leadership role in the Department's efforts to combat cybercrime including cyberterrorism. As a result of emerging computer technology over recent years, significant attention has been, and continues to be, focused on the vulnerability of the critical infrastructure as a result of cybercrime and cyberterrorist attacks. Dramatic increases in the number and variety of issues on which CCIPS is consulted, as well as continued expansions in its client base, have combined to create enormous workload demands that cannot be met without additional resources. Moreover, as the Department takes the lead in addressing the growing threat to the nation's information infrastructure (including criminal attacks, cyberterrorism, electronic espionage, and information warfare), CCIPS has been directed to breaden its responsibilities in several areas. Resources sought for CCIPS within this initiative would allow it to meet its mission priorities and maintain its leadership role in the Department's effort to combat computer crime/cyberterrorism. The following accomplishments are illustrative of the important work that is done in the area of prevention of cyberterrorism:

- CCIPS provided expert legal and technical instruction and advice for exercises and seminars to senior personnel on information warfare, infrastructure protection, and other topics for the Department of Defense, the National Security Agency, the Central Intelligence Agency, and others. At the personal request of the DOD General Counsel, CCIPS answered several pages of difficult legal questions regarding the roles, responsibilities, and powers of the many different actors within DOD who protect and defend DOD networks. Further, the Naval War College invited CCIPS to give a featured presentation at a high-level, invitation-only conference on cyberwarfare and international law.
- CCIPS led the Department's efforts to counter cyberterrorism through work on PDD-63, the Five-Year Counterterrorism
 Strategy, support to the National Infrastructure Protection Center, and extensive international work (including chairmanship of
 the G-8 Subgroup on High-tech Crime, a leadership role in the Council of Europe Experts' Committee on Cybercrime, and a
 new cybercrime project at the Organization of American States).
- As law enforcement matures into the Information Age, CCIPS is a central point of contact for investigators and prosecutors who confront investigative problems with emerging technologies. This year, CCIPS assisted with wiretaps over computer networks, as well as traps and traces that require agents to segregate Internet headers from the content of the packet. CCIPS has also completed a final draft of the Online Investigative Principles, guidance for agents and prosecutors on the many problems of law, jurisdiction, and policy that arise in this new environment. These Principles are the product of an interagency group led by CCIPS, and all the participating federal agencies intend to adopt them when final.
- The Attorney General Isanched the Cybercitizen Partnership, created by CCIPS in cooperation with high-tech industries, to accomplish three large missions: to teach responsible computing so that children will learn not only how to use computers, but how NOT to use them, to create a program that will support and foster personnel exchanges between law enforcement and industry to improve expertise and awareness on both sides, and to create a directory of expertise in industry which law.

enforcement may use to find the precise skills they need in an investigation.

In countless sensitive meetings with industry representatives and other members of the administration on the issue of encryption, CCIPS continues to search for balanced solutions to the conflict between individual privacy and public safety. The Section plays a leading role in law enforcement's efforts to ensure our continued ability to decrypt data or otherwise obtain plaintext.

"We are now building tremendous databases. What would happen if the bad guy, instead of having guns or instead of inowing how to launder money electronically, decides he is going to fuss with the information systems we develop. I don't think we have begun to consider how we protect those systems to insure accuracy....if a 17-year-old hacker can break into sophisticated military networks, think of what he can do to some of our exposed information networks. We must continue to address this and keep one step ahead of the bad guys."

Attorney General Janet Reno Addressing the Search International Consortium on Strategies and Statistics February 9, 1999

Five-Year Interagency Counterterrorism and Technology Crime Plan

To support the efforts of the Division's Terrorism and Violent Crime Section (TVCS), the Division is requesting one senior-level attorney position to support the Division's work related to the Five-Year Interagency Counter-terrorism and Technology Crime Plan. This position is necessary to provide coordination and planning among DOJ and government-wide components. Annual updating, refinement, and course corrections of the Five-Year Plan require continued liaison both within DOJ and government-wide. Based on the DOJ Implementation Plan, TVCS will monitor progress of specific components (FBI, NIPC, NDPO, INS, OIPR, CCIPS, OIA, JMD, OLA, EOUSA, OJP, and Tax Division) on assigned actions and accomplishment of milestones. Similarly, TVCS will monitor government-wide progress on assigned actions and accomplishment of milestones by the two dozen agencies which participated in the development of the Five-Year Plan. To date, work in this important area has been accomplished by detailing a senior Deputy Section Chief to speathend the effort. This short-term response has inherent limitations and it is necessary for the Division to secure additional resources to properly staff this effort and maintain staffing devoted to other priority areas. The Attorney General has rejected a proposal to meet this demand via contract employee for this purpose given its sensitive nature and national security policy importance.

Additional resources for TVCS to support its needs related to implementation of the Five-Year Interagency Counterterrorism and Technology Crime Plan will allow TVCS to continue accomplishments in the counterterrorism area; for example:

- TVCS has played a leading role in the U.S. effort to disrupt terrorist financing. Efforts in the international arena included engaging member-nations of the European Union in debate on the issue of terrorist financing at their October 1998 Vienna meeting, and assisting the State Department in guiding the Organization of American States (OAS) through its Second Inter-American Specialized Conference on Terrorism in Argentina. The OAS conference culminated in the Commitment of Mar del Plata, which created a new Inter-American Committee for Combating Terrorism within the OAS and endorsed numerous TVCS-drafted measures designed to impede the financing of terrorist organizations. TVCS continues to play a pivotal role in drafting and advocating a G-8 Terrorist Financing Convention initiative introduced in the United Nations in 1999. TVCS has joined with the State Department, the FBI and others to create and staff an international terrorist financing training curriculum that is scheduled to be ready for presentation to prosecutors and investigators who will be asked to assist us in bringing to justice terrorist financiers.
- TVCS has continued the pretrial preparations in United States v. Mohammed Rashed, CR. No. 87-0308, (D.D.C), a major
 international terrorism case pending in the District of Columbia. This case stems from the August 11, 1982 bombing of Pan
 Am Flight 830, flying from Tokyo, Japan, to Honolulu, Hawaii, which resulted in the death of a Japanese teenager on board
 and injured a number of passengers.
- TVCS provided critical support to the Southern District of New York's (SDNY) prosecutions growing out of its investigation of terrurist Usama Bin Laden and his role in the August 1998 bombings of the U.S. embassies in Nairobi and Dar es Salsam. These efforts involved the review and approval of the proposed indictments, as well as obtaining the necessary certifications as required by 18 U.S.C.§2332, that the offense was intended to coerce, intimidate, or retaliate against a government or a civilian population. Considerable effort was also expended by TVCS, on SDNY's behalf, in order to avoid possible prejudice to the criminal prosecution by the parallel investigation being conducted by the Department of State's Accountability Review Board.
- Following a nine-week trial, a verdict of guilty was obtained on all counts against Chevie Kehoe and Daniel Lewis Lee in a domestic terrorism RICO prosecution. Defendant Lee received the death penalty. This prosecution resulted from the activities of the Aryan People's Republic, a white supremacist gang created by Chevie Kehoe, that committed murders and armored car robberies in furtherance of their plan to initiate a racial civil war in the United States.
- TVCS has made significant efforts to improve federal laws relating to weapons of mass destruction and has recently developed legislation to strengthen criminal statutes in the area of biological agents and toxins to maximize the ability of law enforcement to intervene early in the chain of events that could lead to the use of such weapons.
- TVCS has participated in designing and executing a number of exercises to test the effectiveness of federal procedures for

preventing and responding to terrorist incidents, particularly those involving weapons of mass destruction.

TVCS played a leading role in developing the Administration's Five-Year Interagency Counterterrorism and Technology
Crime Plan, coordinating input from 24 federal agencies as well as state and local law enforcement and academia.

Victim/Witness Assistance

"It was four years ago and it will be for years to come, for in this day and age terrorism is a reality that we must live with.
While we cannot and will not let terrorism infringe on our freedom, it is vitally important to be prepared and organized in
every instance of a terrorist attack both at home and abroad. We must be ready to respond swiftly, sensitively, and to have a
plan in place to handle both the short-term and long-term needs of the victims."

Attornoy General Janet Reno Addressing the National Symposium on Victims of Crime February 15, 1999

The 1999 supplemental appropriations bill related to Kosovo included an emergency provision to allow the Office of Victims of Crimes' terrorism funds to be used to assist the families of American victims of the PAN AM 103 bombing throughout the trial process. The Office of Victims of Crime has turned to the Criminal Division to coordinate the delivery of assistance to the families of victims of this terrorist act. After the Oklahoma City bombing, the United States Attorney's Office (USAO) relied on its victim/witness coordinators to work closely with the prosecution team, to provide counseling and comfort to the families of victims and to surviving victims and coordinate with the various agencies involved to ensure that victim/witness assistance was delivered in an expeditious fashion. When a terrorist event occurs outside of the country, there is no counterpart to the domestic USAO victim/witness assistance. At the suggestion of the Office of Victims of Crims, the Criminal Division is seeking to establish this victim/witness assistance capability in the event that U.S. citizens are victimized by terrorist activities outside of the United States.

In doing so, the Division would co-locate this function with the Short-Term Protection Program within the Division's Office of Enforcement Operations (OEO). OEO presently has a need for an additional security analyst to cope with the growth in demand for Short-Term Protection services, especially those related to the activity within the District of Columbia and related to the investigative use of federal prisoners. OEO has also experienced a growth in demand for other victim/witness services. The demand has been net on an ad hoc basis by the unit chief and, given other important responsibilities, there is a growing risk that the Division will not be able to provide the necessary response. This request is for one victim/witness coordinator to focus on the victim/witness coordination demands of terrorist acts which occur outside of the United States and which affect U.S. citizens.

OEO is responsible for authorizing or deaying the entry of all applicants into the federal Witness Security Program (WSP),

coordinating and administering matters relating to all aspects of the WSP among all program components, and approving or denying requests by federal agencies to utilize federal prisoners for investigative purposes. Since the inception of the program in 1970, nearly 7,000 witnesses and 8,000 family members have been processed by the OEO. The ongoing needs of these 15,000 program participants, as well as the new witnesses and their families that enter the program end-week, have placed a severe burden on the OEO's analysts. Serious delays in processing program applications have occurred, and correspondence and other document processing continues to take anywhere from a month to a year to be handled. Some functions, deemed important but not urgent, are simply not performed because of staffing limitations. At this rate, the ability of the OEO to provide program services will continue to decline, and the program will become less dependable, possibly resulting in federal prosecutors having to look to alternative means to handle their witness protection needs. Quite possibly, the shortfull in the OEO's staffing will result in the security of witnesses and their family members being jeopardized. In order to staff at an appropriate level and address its inability to handle its current workload, the Criminal Division is requesting two security snalyst positions for FY 2001. Related automated support needs for the Witness Security Program are presented in the technology section below.

In order to strengthen the Division's counterterrorism program, the Criminal Division is requesting 11 positions (6 attorneys), 6 FTE and \$888,000 for FY 2001. These positions will annualize to 11 positions, 11 FTE, and \$1,360,000 for FY 2002.

- For CCIPS, the Criminal Division requests 5 attorney positions at the GS-15 level, 1 paralegal position at the GS-11 level, and
 1 elerical position at the GS-7 level to maintain the Section's leadership role in cyberterime/cyberterrorism. The total request is
 for 7 positions (5 attorneys), 4 FTE, and for \$586,000 FY 2003. The request will annualize to 7 positions, 7 FTE, and
 \$886,000 for FY 2002.
- For TVCS, the Criminal Division requests 1 GS-15 attorney position. The total request is for 1 position, 1 FTE, and \$92,000 for FY 2001. The request will annualize to 1 position, 1 FTE, and \$150,000 for FY 2002.
- For OEO, the Criminal Division requests 1 GS-13 analyst to provide support in matters related victim/witness assistance and 2 analyst positions at the GS-13 level to assist in servicing witnesses. The total request is for 3 positions, 1 FTE, and \$210,000 for FY 2001. The request will annualize to 3 positions, 3 FTE, and \$324,000 for FY 2002.

FY 2001 Protecting Communities Initiative

"We have got to continue to do and work together to achieve further results, because I'm convinced, and you have proven this to me in your communities, that if we work together, if we keep the pressure on with respect to guns....If we give our children a strong and positive future, we can have a tremendous lasting impact on the culture of violence in this country."

Attorney General Janet Reno Address to the United States Conference of Mayors January 29, 1999

It is the belief of the Attorney General that law enforcement (at local and federal levels) works best when it works together. This sentiment is reflected in the Criminal Division's FY 2001 Protecting Communities Initiative. In the Spring of 1999, at the directive of the Attorney General, the Criminal Division participated in a process with other Departmental components to identify, develop, and coordinate initiatives linking criminal justice on a local and federal level in order to promote community safety. As a result of this process, FY 2001 funding requests should be better coordinated than ever before and reflect the Department's unified effort to assist communities in managing crime and improving community safety and quality of life for its citizens.

The Division's FY 2001 Protecting Communities Initiative consists of a request for 6 positions, 4 FTE, and \$685,000. These resources are broken down among the following Sections/Offices of the Division:

Progress	Zanklene	Allecents	Wackroom	America
Office of Policy and Legislation (OPL)	I	0	1	\$70,000
Child Exploitation and Observably Section (CEOS)	2	2	1	\$246,000
Office of International Affairs (OIA)	2	2	l	\$314,000
Short Term Protection (OSO)	ı	•	ļ	\$55,000
Total	6	4	4	3695,000

This request includes the following positions: 4 attorneys and 2 analysts. All costs were derived from the fiscal year 2001 modular costs.

Indian Country Initiative

The Division's Office of Policy and Legislation (OPL) began its efforts to improve federal-tribal law enforcement coordination and public safety in Indian Country in 1995 with the Indian Country Justice Initiative. Based on this work, OPL raised early concerns about overall public safety services in Indian Country. Ultimately in recognition of the public safety crisis in Indian Country, President Clinton issued a directive in 1997 to analyze law enforcement problems on Indian lands and to provide options for improving the criminal justice system on Indian lands. OPL helped prepare a response to this Presidential directive that documented the Indian Country law enforcement problems and outlined possible action to address these problems. In response to this directive, the Criminal Division formed the Executive Committee for Indian Country Law Enforcement Improvements, as part of the government's trust responsibility for public safety in Indian Country. This accords with the Administration's commitment to the government-to-government relationship with Indian Tribes. The Executive Committee consisted of senior agency officials from DOJ components, the Department of Interior and six tribal leaders.

The Committee produced a final report for the Attorney General and Secretary of Interior in October 1997 documenting the nature and magnitude of the problem and outlining options for the President to improve public safety in Indian Country. Working in partnership with tribal, federal, state and local governments, OPL is helping to coordinate an effort to consolidate Bureau of Indian Affairs (BIA) law enforcement programs and to provide Indian Tribes with police officers, criminal investigators, training, equipment, tribal count assistance, juvenile programs, and correctional grants with funds from the President's 1999 budget. Upgrading public safety to acceptable standards in Indian Country is projected to take about four years.

The Circle Project derives from the Attorney General's desire to accelerate the efforts outlined above by establishing three demonstration sites. This will improve law enforcement services and the quality of life in Indian Country. The Criminal Division's Office of Policy and Legislation plays a key role in this multi-agency effort. By agreement between the Secretary of the Interior, the Attorney General and OMB, the Indian Country Presidential Initiative and its derivatives are a coordinated, collaborative effort between the two departments. For example, OJP's Correction's Office will build jails in locations mutually agreed upon by DOI, BIA, and the Tribes. Staffing theses jails, however, will be the responsibility of BIA. The COPS Office will fund officers hired by the Tribes and trained at the BIA Police Academy. Among the major players are: the Criminal Division; OJJDP, the Corrections Office; OTI; COPS; NII; BOP; FBI; the USA's Native American Issues Subcommittee; JMD; OJP's American Indian and Alaskan Native Desk; BIA's training academy; BIA's Office of Law Enforcement Services; and DOI's Office of the Assistant Socretary for Indian Affairs.

The Criminal Division has played a major role in the development of the Presidential Initiative to Improve Law Enforcement in Indian Country. To assist in continuing this role, the Criminal Division is requesting one analyst position for GPL. This person would be responsible for planning and conducting analyses of data related to criminal justice programs, policies, activities, and crime trends in Indian Country. This person would work with USAOs, OJP and the Office of Tribal Justice ensuring that the Department would have an effective voice in law enforcement and policy matters in Indian Country. This request has been presented and discussed as a component of the Department's FY 2001 Communities cross-cutting budget initiative.

Crimes Against Children

The Criminal Division plays a major role in protecting the children of our Nation. In the past year, the Division coordinated investigations and prosecution of numerous violators of federal laws in order to protect the welfare of children. This component of the Division's initiative to protect communities focuses on enforcement efforts against child permography, trafficking of women and children, and international parental kidnapping, and reflects the Division's important role in the fight against abuse toward children

The Division's Child Exploitation and Obscenity Section (CEOS) is responsible for overseeing the federal response to child sexual abuse and exploitation. CEOS has directed a substantial amount of its resources to the prosecution of child pornography. With the emergence of the Internet, child pornographers who previously were restricted to books, magazines, and mailings, now have the technology to reach a far wider audience. The Criminal Division is working diligently to decrease the use of computers, computer bulletin board systems, and computer online services that traffic in child pornography. However, additional resources are necessary for the Division to develop a capability to stay abreast of technological changes and developments and be able to target those who use these media for illicit pornographic purposes.

The U.S. Attorneys are pursuing an initiative aimed at addressing these concerns. In order to support the U.S. Attorneys' efforts, additional resources are necessary. The Division requires additional resources in order to dedicate people to keeping pace with advances in technology, form partnerships with Internet Service Providers (ISI's) to assist in identifying illicit activities, to develop legal tools to combat the use of emerging technology employed for illicit purposes, and to ensure that leading edge techniques for detecting and prosecuting those engaged in this illicit activity via the Internet is disseminated to the field on a timely basis. Technology is advancing at such a swift rate, as is the suphistication of the criminals who are using this technology for pornographic reasons that additional resources are necessary for the Division to keep pace.

Also, as a part of its mission, CFOS prosecutes viotators of the federal criminal statutes relating to prostitution, sexual exploitation of minors, and obsecutity. Under these statutes, the Division specifically prosecutes those who sell, buy or transport women and children interstate or internationally to engage in sexually explicit conduct. In recent years, this activity has increased as has investigations and litigation of these crimes

International parental abduction poses difficult challenges and obstacles for the law enforcement community at local, state, and federal levels. Findings indicate that in recent years many children in the United States have been abducted by family members who are foreign nationals and living in foreign countries. The number of children taken to or retained in a foreign country by a parent has grown over the last twenty years as the number of bi-national couples increases and our world shrinks due to sophisticated communications and transportation.

The Office of Children's Issues (OCI) at the Department of State is responsible for the administration of the Hague Convention on the Civil Aspects of International Child Abduction—an international treaty that facilitates through civil processes the return of abducted or wrongfully retained children—now in force between the United States and 48 countries. OCI reports that as of May 25, 1999, it has as many as 430 open cases of children taken to Hague Convention countries and 635 cases of children taken to countries in which no formal structures facilitate the return of the child. The overall rate of return for Hague Convention matters taken to completion is about 61%. The overall rate of return for children taken to non-Hague countries is understandably lower, about 39%.

Although progress has been made in aiding the return of abducted children, there is a need to reach agreements regarding child abduction with countries that are not parties to the Convention on the Civil Aspects of International Child Abduction. The Office of International Affairs, in cooperation with the above-mentioned entities, is working to resolve those cases in which children in the United States are abducted by family members who are foreign nationals and taken to foreign countries. For FY 2001, the Division is requesting resources to strengthen its ability to participate in the developing enforcement efforts in this area. Our request for resources is consistent with planning currently underway between the State Department and the Department of Justice to develop and implement a plan of action to address this problem.

The Short-Term Protection Program

Over the past decade, the Department of Justice, largely through the United States Attorneys' offices, has become increasingly involved in the prosecution of violent, often drug-and gang-related, crime that historically had been the province of the states. One of the results of this trend is that witness security has become a more serious problem. Witnessey to violent crime, particularly gang-related violent crime, are often the targets of intimidation, threats, and assaults. Fear of gangs can be pervasive in a neighborhood, intimidating witnesses without any explicit threat needing to be made. Effective law enforcement requires that prosecutors and law enforcement agencies be able to respond to the needs of threatened and intimidated witnesses.

The Short-Term Protection Program (the "STPP") was established as a pilot project in the District of Columbia in 1991. The STPP provides specialized services for threatened witnesses in criminal prosecutions for whom the Witness Security Program and the Emergency Witness Assistance Program are mappropriate. In order to expand the STPP, Criminal Division is requesting one position for the Office of Enforcement Operations.

Prior to 1990, the Witness Security Program was the only formal witness security program in existence. In the late 1980s, concerned by the increase in gang- and drag-related violent crime, the United States Attorney for the District of Columbia urged the Department to do more to assist threatened and infinitiated witnesses. In response, in June 1990, the Management and Planning Staff of the Justice Management Division (JMD) circulated a pidicy options memorandum entitled "Short-Ferm Witness Security". JMD recommended the creation of a three-tier system. The first tier was the existing Witness Security Program. The second tier would provide short-term witness security, including temporary relocation and 24-hour protection while in the danger area. The third tier of services would include temporary relocation to a relative's home or to a hotel and subsistence if necessary, but no protection of the witness. JMD recommended that a pilot program providing Tier 2 and Tier 3 services be established in the District of Columbia with the view of establishing a national program in the following fiscal year.

As indicated above, STPP was established in 1991 as a pilot project to provide Tier 2 witness security services.\(^1\) The STPP operates under the same legal authority (18 U.S.C. \(^1\) 3521 et seq.\(^1\)) as the long-term WSP, provides a limited range of services.\(^2\) An Assistant United States Attorney must sponsor the witness into the program. An application to admit the witness is submitted to OEO\(^1\) While the application is pending, the Metropolitan Police Department is responsible for providing housing and other assistance to the witness. Once admitted to the program, participants (and lamily members, if necessary) are relocated out of fown for a period of time, usually six months to a year. While they are out of town, the Marshals Service provides subsistence to participants. While not formally part of the program, the Marshals Service provides other services such as employment services and access to drug treatment to witnesses amenable to receiving such services. The Marshals Service provides security for participants when they return to the jurisdiction for court appearances. Participants are terminated from the program minety days after the case in which they were a witness ends by plea or verdict or otherwise and are given an additional one month's subsistence. Participants are free, if they wish, to return to the jurisdiction after their termination from the program, but they are provided no services or protection if they choose to do so. The STPP is available only if all other options (e.g., the Emergency Witness Assistance Program, HUD relocation) have been explored and found wanting.

Since the inception of the program in 1991, approximately 189 witnesses have been admitted into the STPP. In addition, services have been provided to family members of a number of the witnesses. According to figures provided by JMD, the total direct costs of the STPP for fiscal years 1992 through 1997 were approximately \$4 million, or about \$27,000 per witness. Direct costs are the costs of providing services to the witnesses and their families and do not include the personnel costs of the Marshals Service and OFO. Three categories of costs—housing, subsistence, and relocation—constituted upwards of 90 percent of the total direct costs.

As in discussed more fully below, the Department created the Emergency Witness Assistance Program in 1997 to provide Tier 3 services.

The description that follows is of how the STPP corrently functions

OEO is responsible for the WSP as well as the STPP, and the procedures governing both programs are similar.

In order to strengthen the Division's programs that support the Nation's communities, the Criminal Division is requesting 6 positions (4 attorneys), 4 FTE and \$685,000 for FY 2001. These positions will annualize to 6 positions. 6 FTE, and \$971,000 for FY 2002.

- For OPL, the Criminal Division requests 1 analyst position at the GS-13 level to administer the increasing workload associated with the Attorney General's Indian Country initiative. The total request is for 1 position, 1 FTE, and \$70,000 for FY 2001.
 The request will annualize to 1 position, 1 FTE, and \$108,000 for FY 2002.
- For CEOS, the Criminal Division requests two attorney positions at the GS-15 level to keep pace with the increase in illicit activities involving child pornography. The Division also requests \$50,000 in funding to meet increased litigation support requirements and to support travel and training requirements related trafficking of women and children. The total request is for 2 positions, 1 FTE, and \$246,000 for FY 2001. The request will annualize to 2 positions, 2 FTE, and \$353,000 for FY 2002.
- For OIA, the Criminal Division requests two attorney positions at the GS-15 level to support Division efforts to better address child pernography and international parental kidnaping programs. In addition, the Division requests funding for travel and training to support the Division's international parental kidnapping programs. The total request is for 2 positions, 1 FTE, and \$314,000 for FY 2001. The request will annualize to 2 positions, 2 FTE, and \$432,000 for FY 2002.
- For OEO to support the enhanced efforts of the Short-Term Protection Program, the Criminal Division is requesting one GS-L1 analyst position for the fiscal year 2001. The total request is for 1 position, 1 FTE, and \$55,000 for FY 2001. This request will annualize to 1 position, 1 FTE, and \$78,000 for FY 2002.

The Child Exploitation and Obscenity Section

	Perni.		
Program Changes	<u>Pos.</u>	_ FTE	Amount
	2	1	\$246

Base Program Description. The Child Exploitation and Obscenity Section (CEOS) prosecutes those who, under the federal criminal statutes, possess, manufacture, or distribute child pornography; those who sell, buy or transport women and children interstate or internationally to engage in sexually explicit conduct; those who travel interstate or internationally to sexually abuse children; those who abuse children on federal and Indian lands; those who do not pay certain court ordered child support payments; those who transport obscene material in interstate or forcign commerce either via the mails, common carrier, cable television lines, telephone lines or satellite transmission; and those involved in international parental abduction. CEOS attorneys also assist United States

Attorneys Offices (USAOs) in investigations, trials, and appeals related to these statutes. Additionally, CEOS attorneys provide advice on victim-witness issues, and develop and refine proposals for prosecution policies, legislation, governmental practices and agency regulations in the areas of sexual exploitation of minors, child support and obscenity for USAOs, United States Customs Service. United States Postal Service, and the FBI CEOS also conducts and participates in training of federal, state, local and international prosecutors, investigators and judges in the areas of child exploitation and trafficking of women and children.

FY 1999 Accomplishments: CEOS worked to decrease the amount of trafficking in online pornography on the Internet and other online services. This was accomplished by the training of law enforcement to improve investigations and prosecutions and to increase the number of cases, working with the Internet Service Provider (ISP) industry to facilitate cooperation in investigations, as well as educating them about reporting requirements and to continue working on self-regulation; and increasing training and networking with international law enforcement and prosecutors to stem the worldwide flow of child exploitation materials. Working closely with the Executive Office of the United States Attorneys (EOUSA), CEOS facilitated training of the Child Exploitation Coordinators in the United States Attorney Offices (USAOs), and finalized the "tookkit" project to provide the Coordinators with a laptop computer and software to assist them with their investigations and prosecutions of child exploitation crimes.

CEOS worked to increase the number of investigations and prosecutions of sexual exploitation offenses against children through training of law enforcement to improve investigations and prosecutions in child pornography and trafficking of women and children for sexual purposes, increased participation in international meetings, and developed a network of international resources to assist in working these cases. In addition, the Section worked on a major legislative package to create new offenses, amendments, and other miscellaneous provisions related to child exploitation crimes.

CEOS worked closely with the Office of Javenile Justice and Delinquency Prevention (OJJDP) on the establishment of the Internet Crimes Against Children (ICAC)Task Forces to ensure that state and local law enforcement can acquire the necessary knowledge, equipment and personnel resources to prevent, interdict and investigate ICAC offenses. The Section provides legal technical assistance to the task forces as well as training for the law enforcement personnel.

CEOS worked to facilitate cooperation between domestic and international law enforcement agencies to enhance capabilities in conducting international investigations through participation in international meetings and development of a network of investigative resources. Specifically, CEOS worked with the United States Customs Service, the USAOs and international law enforcement agencies on the Cheshire Cat project, an international investigation into online child pernography.

CEOS worked within the Child Support Task Force to develop a webpage on the Internet to provide information on child support and post the "most wanted" list of parents delinquent in payment of child support obligations. The Section also worked closely with the Office of Child Support Enforcement in the Department of Health and Human Services on the establishment of

regional task forces to address child support enforcement and developed a brief bank of child support cases on Westlaw for the United States Attorney Offices.

The Computer Crime and Intellectual Property Section

	Perm.		
Program Changes	<u>Pos</u> .	PTG.	Amount
•	7	4	\$586

Base Program Description The Computer Crime and Intellectual Property Section (CCIPS) is responsible for implementing the Department's Computer Crime Initiative, a comprehensive program designed to address the growing global computer crime problem, including eyberattacks on critical information systems. CCIPS' employees work with other government officials, the private sector, academic institutions, and foreign representatives to prevent, investigate, and prosecute computer crimes. At the same time, Section attorneys are working in many ways to improve the domestic and international infrastructure—legal, technological, and operational—to pursue network criminals most effectively. In pursuing these goals, CCIPS lawyers regularly resolve unique legal and investigative issues raised by emerging computer and telecommunications technologies; litigate cases; provide hitigation support to other prosecutors; train federal, state, and local law enforcement personnel; comment on and propose legislation, and initiate and participate in international efforts to combat computer crime. The Section's responsibilities in the area of crimes against intellectual property rights are similarly multi-faceled. With the exponential increase in the number and importance of information systems in modern society, it has become increasingly clear that intellectual property (IP) has fast become one of the principal economic engines of the era. As a world leader in intellectual products, the United States has become a—or even the—target of choice for thieves of material protected by copyright, trademark, or trade-secret designation (under the new Economic Espionage Act in the U.S.). In this area, CCIPS is also prosecuting, supporting prosecutions by other AUSAs, training, reviewing legislation, and working internationally to improve the effectiveness of our legal sanctions.

1999 Accomplishments CCIPS provided expert legal and technical instruction and advice for exercises and seminars to senior personnel on information warfare, infrastructure protection, and other topics for the Department of Defense, the National Security Agency, the Central Intelligence Agency, and others. At the personal request of the DOD General Counsel, CCIPS answered remerous difficult legal questions regarding the roles, responsibilities, and powers of the many different actors within DOD who protect and defend DOD networks. Further, the Naval War College invited CCIPS to give a featured presentation at a high-level, in #thion-only conference on evberyvarfare and international law.

CCIPS led the Expartment's effort, to counter cyberterrorism through our work on PDD-63, the Five-Year Counterterrorism Strategy, pur support to the National Infrastructure Protection Center, and our extensive international work (including chairmanship of

the G-8 Subgroup on High-tech Crime, a leadership role in the Council of Europe Experts' Committee on Cybercrime, and a new cybercrime project at the Organization of American States).

As law enforcement matures into the Information Age, CCIPS is a central point of contact for investigators and prosecutors who confront investigative problems with emerging technologies. This year, CCIPS assisted with wiretaps over computer networks, as well as traps and traces that require agents to segregate Internet headers from the content of the packet. CCIPS has also coordinated an interagency working group consisting of all the federal law enforcement agencies, which developed the "Online Investigative Principles for Federal Law Enforcement Agencies." That document gives guidance to agents and prosecutors on the many problems of law, purisdiction, and policy that arise in the online environment.

The Attorney General launched the Cybercitizen Partnership, created by CCIPS in cooperation with high-tech industries, to accomplish three large missions to teach responsible computing so that children will learn not only how to use computers, but how NOT to use them; to create a program that will support and foster personnel exchanges between law enforcement and industry to improve expertise and awareness on both sides, and to create a directory of expertise in industry which law enforcement may use to find the precise skills they need in an investigation.

In countless sensitive meetings with industry representatives and other members of the administration on the issue of encryption, CCIPS continues to search for balanced solutions to the conflict between individual privacy and public safety. The Section plays a leading role in law enforcement's efforts to ensure our continued ability to decrypt data or otherwise obtain plaintext.

CCIPS has also developed the "Intellectual Property Rights Initiative," a comprehensive plan to better enforce the criminal laws protecting copyrights, trademarks, and trade secrets both domestically and internationally. The Initiative is expected to be the centerpiece of an elevated effort to combat this type of crime, and coordinate our approach with other agencies and within the United States Government and with other countries.

CCIPS is also a key component in enforcing the "Economic Espionage Act," enacted in 1996 to deter and punish the theft of valuable trade secrets. CCIPS coordinates approval for all the charges under the theft of trade secret provision of this Act, and CCIPS attorneys successfully trad the first jury case ever under the Act, culminating in guilty verdicts against a company, its Chief Executive Officer, and another employee

The Public Integrity Section

Base Program Description Public Integrity (PI) oversees the federal effort to combat abuses of the public trust by government officials. The Section investigates, and, when warranted, prosecutes, corruption offenses involving public officials at all

levels of government. The Section has primary jurisdiction over allegations of criminal misconduct involving federal judges and also oversees the investigation and prosecution of election crimes and spearheads the federal effort to address conflict of interest crimes. In addition to prosecuting selected cases against federal, state, and local officials, Section attorneys handle corruption cases in which a United States Attorney's Office is recused. Section attorneys also participate in public corruption training events for federal prosecutors and investigators, provide advice and assistance on the handling of corruption cases, and participate in international conferences addressing public corruption. From 1978 through June 1999, the Section also handled the administration of the Independent Counsel Act. In July 1999, the Act expired and was replaced by Attorney General regulations, the administration of which will be overseen by the Section.

FY 1999 Accomplishments. A scheme to attack the integrity of the federal court system by leveling false allegations against a federal judge to disqualify the judge from presiding over a pending criminal case resulted in the conviction of all parties and a prison term of ten years for the lead defendant. A paralegal and two investigators were convicted of obstruction of justice and related charges arising from their false accusation that the judge had engaged in improper contacts with a prosecutor on a pending case in Fort Meyers, Florida.

A successful eight-year light to defeat defense allegations of prosecutorial misconduct concluded with the convictions of three former South Carolina legislators originally convicted in connection with a public corruption investigation called Operation Lost Trust. The Lost Trust cases were prosecuted by the U.S. Attorney's Office for the District of South Carolina in the early 1990s. In 1994, following reversals of five convictions obtained by the USAO and upon allegations of misconduct against the USAO, the Lost Trust cases were reassigned to the Public Integrity Section. After five years of litigation, including several appeals to the Fourth Circuit, convictions have now been obtained against all surviving defendants in the Lost Trust cases.

A senior official of the Federal Highway Administration (FHWA) in charge of contracts involving millions of dollars in FHWA funds was convicted, along with a subordinate FHWA employee, and a FHWA contractor, for concocting a scheme to steal over \$200,000 from the FHWA through the use of unlawful gratuities and bogus invoices. The defendants pled guilty to multiple charges arising from the scheme, including conspiracy to defraud the U.S., bribery, and money-laundering.

After a three-month trial, a former Houston City Councilman and a lobbyist were convicted on all charges relating to a bribery and kirkback scheme involving the Houston City Council. The Councilman was convicted of bribery relating to the receipt of federal funds, conspiracy, and mail fraud and was sentenced to 108 months in prison. The lobbyist was convicted of bribery relating to receipt of federal funds and conspiracy and was sentenced to 51 months in prison.

An Ohio State Senator was convicted by a jury of extortion and was sentenced to prison for 15 months for demanding personal loans and campaign contributions from Cleveland-area grocery store owners in exchange for helping the store owners obtain various

state and county contracts and permits

The Fraud Section

Base Program Description. The Fraud Section conducts on-site investigations and prosecutions of national significance. This litigating section handles complex investigations throughout the country and coordinates the federal effort against fraud and white-collar crime. Fraud Section investigations often involve business crimes such as financial institution fraud; laternet fraud; fraud in the insurance industry; international criminal activities in violation of the Foreign Corrupt Practices Act; and multi-district schemes that victimize consumers, such as telemarketing scams and fraudulent bankruptcy mills. The Section's prosecutions also focus on fraud involving government programs and procurement, including health care. HUD, and government regulatory activity in the securities and commodities markets. In addition, the Fraud Section develops white-collar crime policy for the Department through the staffing of the Attorney General's Council on White-Collar Crime. It also chairs a variety of interragency working groups to better coordinate these activities, provides training to agents and prosecutors in this country and abroad, and represents the United States in intermational organizations.

FY 1999 Accomplishments. As of September 30, 1999, the Fraud Section opened 112 investigations, indicted 26 new cases and obtained consections of 50 defendants. Court indexed fines, restitution, etc. to date were more than \$243 million.

In the health care fraud area, the Fraud Section continues to coordinate several multi-district health care provider cases throughout the country. The Section coordinated the Department's global criminal plea agreement which was part of an overall \$61 million criminal and civil settlement agreement with Olsten Corporation and it's subsidiary. Kimberly Bome Health Care, Inc. In a significant kickback and false claims ease, the Section participated in a closely watched trial against a health care provider that resulted in the conviction of physician/mirsing home owners who had obtained kickbacks from hospitals for referrals of patients.

The Section began the investigation of bribery allegations in connection with Salt Lake City's bid for the Winter Olympics with a team of four Section attorneys and an FBI squad. In this continuing investigation, one conviction was obtained in July 1999, and the son of a member of the International Olympic Committee was indicted in September 1999.

An attorne) from the Section was part of the "Freemen" trial team, which obtained 22 convictions in three jury trials over the past two years. In the procurement area, the Section concluded its coordination of a successful two-year undercover operation that focused on airctaft parts vendors in four states. The operation resulted in 21 convictions by U.S. Attorneys from several districts and more than \$2.5 million in monetary recoveries.

The Section has worked closely with OSHA to investigate and prosecute cases involving violations of OSHA standards that

have resulted in deaths or serious injuries. A construction company and its officials were convicted in Illinois in connection with a workplace accidental death.

The Section assisted in obtaining the conviction after a jury trial of a British citizen who was a former executive of a Dutch company and of two American subsidiaries of charges of violating the Foreign Corrupt Practices Act and the Travel Act. Guilty pleas were entered by the two Americans on related changes.

Section attorneys obtained the conviction of two organizers of a new international investment scheme that used fictitious "prime bank" offerings to defraud domestic and foreign investors of more than \$5 million. The Section is seeking the extradition of a co-defendant, a British critizen residing in the United Kingdom.

The New England Regional Bank Fraud Task Force is winding down its operation at the end of FY 1999 after successfully completing its mission. It opened in May 1991 and obtained 141 convictions in major bank frauds

PERFORMANCE INDICATOR TABLES

The activities of the White Collar Crime Decision Unit directly support the following goals from the Department of Justice's Strategic Plan FY 1997-2002.

Department of Justice Core Function 1. Investigation and Prosecution of Criminal Offenses.

Strategic Goal | | Reduce violent crime, including organized crime and drug and gang-related violence.

Strategic Goal | 4 | Reduce white-collar Crime

Strategic Goal 1.5. Coordinate and integrate DOJ law enforcement activities wherever possible, and cooperate fully with other federal agencies that are critically linked to improved operation of the Nation's justice system

Narcotics and Dangerous Drug Section

Bure Program Description. Since its to mation in April 1968, the Narcotics and Daugerous Brug Section (NDDS) has exercised supervisory jurisdiction of those statutes pertaining to controlled substances. The Section's current responsibilities include the development and implementation of domestic and international parcotics law enforcement programs and policies, and the provision of direct higation support to the Organized Crime Drug Enforcement Task Force (OCDETF) and High Intensity Drug Trafficking Area (HIDTA) programs, to the Southern Frontier and other multi-agency initiatives, and to U.S. Attorneys nationally in recusal matters or in cases where the Section's expertise is requested. NDDS attorneys represent the Department in developing and administering other cooperative drug enforcement strategies, initiatives, and projects conducted by the law enforcement and intelligence communities, including the National and International Drug Control, Crack Cocaine, Methamphetamine, Heroin, Marquana and Hemispheric Anti-Drug Strategies. The Section Chief and the Section's supervisory attorneys serve as the Department's designated representatives on several senior-level committees of the intelligence and law enforcement communities that plan and coordinate joint international counter-narcones initiatives and other sensitive law enforcement activities. Additionally, the Chief acts as the designated representative of the U.S. Government in the implementation of the joint U.S.-Republic of Colombia evidence sharing initiative, intended to facilitate the successful investigation and prosecution of major parcotics traffickers in Colombia 14DDS plays a central coordinating role in a number of multi-district, multi-agency initiatives and prosecutions, including the Southwest Border Initiative (SWBI), the Department's priority narcotics enforcement program targeting major Mexican trafficking organizations.

FY 1999 Accomplishments—NDDS attorneys continue to support the Southwest Border initiative by successfully prosecuting major drug trafficking cases along the Southwest Border. In an ongoing OCDETF case in the Southern District of California, 16 defendants were charged with conspiracy to import and distribute more than 1000 kilograms of marijuana and multiple kilograms of cocaine. The lead defendant is a helicopter pilot and former Mexican police official. The property subject to forfeiture includes a 1965 Bell helicopter, a 38-foot yacht, and residential property valued in excess of \$400,000.

In another OCDF IT case in the Central District of California, two defendants were charged with various offenses related to the manufacture and distribution of methamphetazune. This case is the result of a year-long wiretap investigation that led to the seizure of several large methamphetazune and precursor chemical manufacturing labs in the Santa Ana, CA area.

In an OCDL IF capital-eligible case in the District of Puerto Rico, an NDDS trial attorney successfully prosecuted two defendants pursuant to a 17-count indictment in a case involving conspiracy to distribute cocaine, cocaine base, heroin, money laundering, eight murders, several attempted murders, weapons offenses, and obstruction of justice. The two defendants were the last of the 52 defendants in the "RIDS" cases who were prosecuted for various crimes in a series of five trials. Both defendants await sentencing, which is scheduled for August 1999.

In an ongoing OCD: IF case in the District of Columbia, 11 defendants are charged with conspiracy to distribute multi-kilogram quantities of heroin imported from Nepal, via Bangkok and New York, to Washington, D.C.

The United States and Colombia are developing improved procedures for transfer of evidence in mantime interdiction cases, which will improve prosecution of maintime drug smuggling suspects where United States forces have participated in their apprehension. Meetings were held in Bogota and the U.S. with Section attorneys, representatives of the United States Coast Guard, and IIA EF Eost and their Fiscalia and Colombian Savy counterparts. The purpose of the meetings was to present the Coast Guard's evidence gathering and prosecution support guidelines that were revised to include the evidence requirements cited by their Colombia counterparts.

NDDS, coordinating closely with other components in the Criminal Division, DEA and Colombian law enforcement have begun an unprecedented Bilateral Case Initiative to investigate and prosecute the most significant narcotics traffickers in Colombia, including extraditing such individuals to the United States

Organized Crime and Racketeering Section

Base Program Description. The Organized Crime and Racketeering Section (OCRS) coordinates the Department's program to combat organized crime and labor racketeering. The principal enforcement efforts are currently directed against traditional groups such as I a Cosa Nostra (LCN) families. Assan Organized Crime Groups (AOC) such as Chinese Triads, ethnic Asian gangs, Russian Organized Crime (ROC), and Italian Organized Crime (IOC) groups, including the Sicilian Maffa. The Section supervises the investigation and prosecution of these cases by Strike Force Units within United States Attorney's Offices in 21 federal districts having a significant organized crime presence. These cases involve a broad spectrum of criminal offenses, including RICO, extortion, morder, bribery, robbery, kidnaping, credit card and other fraud, counterfeiting, narcotics, and labor racketeering. The Section is involved in setting national priorities for the organized crime program by coordinating with investigative agencies such as the Federal

Bureau of Investigation (FBI), Drug Enforcement Administration, and others, and by working with the Attorney General's Organized Crime Council, which is ultimately responsible for the federal government's policy in this area. In addition to its close supervision of all federal organized crime cases the Section maintains close control over all government uses of the Racketeer Influenced and Corrupt Organizations (RICO) statute, which must be approved by OCRS, and provides extensive advice to prosecutors about the use of this powerful tool for cases involving patterns of scrious criminal conduct.

FY 1999 Accomplishments La Cosa Nostia Eleven individuals, including the acting boss of the Luchese LCN, pled guilty to Hobbs Act extortion charges relating to extortion in the garment industry. John A. Gotti pled guilty to RICO charges involving gambling, extortion, loansharking, bribery, fraud, and tax offenses. Twenty of Gotti's indicted co-conspirators have pled RICO charges and tax violations. Sixteen defendants have been convicted in a prosecution targeting the LCN's involvement in the securities industry. The charges included RICO, securities fraud, extortion, and wire fraud

The acting boxs of the Colombo family, an associate, and others pled guilty to RICO extortion relating to the earling industry and in a separate prosecution also pled guilty to witness tampering obstruction of justice charges. The plea includes \$7 million in forfeiture. The acting boss of the Persico faction of the Colombo LCN family was convicted on § 1959 murder charges and two Colombo capos were convicted on RICO murder, loansbarking, and gambling charges.

The self-described boys of the Youngstown faction of the Pittsburgh LCN family and a number of members and associates pled guilty to various charges, including RICO murder, extortion, gambling, and bribery charges. Three additional defendants were convicted after a lengthy trial. To date, this investigation into organized crime in the Youngstown area has resulted in the conviction of 49 people, including law enforcement personnel, attorneys, and a Congressional aide.

Russian Organized Crime: A leader of the organized crime group, Nizhny-Novgorad, based in Russia's third largest city was convicted after trial on charges including RICO, visa fraud, narcotics offenses, extortion, and money laundering. This group is considered by law enforcement to be a very significant Russian Organized Crime group

Asian Organized Crime: The Los Angeles and San Francisco Organized Crime Strike Force Units have brought 12 indictments charging over 120 defendants with offenses arising from the robberies of over 100 computer chip companies resulting in the loss of over \$40 million. Over 70 defendants have been convicted, and charges against other defendants are pending. In a related computer chip robbery indictment brought in Scattle, Washington, six of eight defendants have been convicted.

In January 1999, the Department of Justice extended its agreement with Laborers' International Union of North America (LIUNA) to conduct a program of internal reform directed at the removal of La Cosa Nostra (LCN) from within LHUNA. OCRS continues to closely monitor the program. During the three-year period since the original agreement was entered into in January 1995,

1.IUNA has achieved numerous reforms, including removal of over 100 persons from LIUNA for barred conduct, the adoption of an ethical practice code for union officers, and the establishment of a permanent internal union disciplinary structure. Thus far, 13 members and 29 associates of the LCN have been removed from LIUNA.

<u>Pension Abuse</u> OCRS also continues to oversee the activities of the Attorney General's Initiative Against Fraud Abuse. In the Northern District of Illinois the final two individual defendants pleaded guilty to false statement and obstruction charges in connection with a racketeering prosecution involving pension abuse. Employers were charged with defrauding employees of \$10 million in wages and benefits owed under collective bargaining agreements over a 20-year period and the submission of \$6.5 million in fraudulent bills to state, feed and federal governments for Chicago area road construction projects.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

The activities of the Organized Crime and Narcours Decision Unit directly support the following goals from the Department of Justice's Strategic Plan FY 1997-2002 - Department of Justice Core Function 1. Investigation and Prosecution of Criminal Offenses

Strategic Goal I. i. Reduce violent crime, including organized crime and gang-related violence.

Strategic Goal 1.2. Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts

Strategic Goal 4.5. Coundinate and integrate IRES law enforcement activities wherever possible, and cooperate fully with other federal, State and foral agencies that are critically linked to improved operation of the Nation's instice system.

Lients 21 they 25: As of December 1998 this is no longer a Climbel Division activity.

B. Factors Affecting bY 1998 and FY 1999 Program Performance and Factors Influencing the Selection of FY 2006 and FY 2001 Targety.

Measuring outcomes is difficult in any context, but particularly so in law enforcement. The Criminal Division is guided principally by "doing what is just" and in some cases this means not pursuing an unfolunded inducintent or haveless clauta. "Success" for us is when justice it served fairly and impartially, it is not reducible to simple numerical counts of arrests or convictions. "Success" for us is also when come or writing-during is determent brough effective. Ease content is a continuous content of the height is of this determent is a complex challenge. In addition, it is extremely difficult to isolate the particular effects of the Criminal Division's efforts from other factors that effect outcomes and over which the Division ht is hade control, including the surright and vitality of our social, economic and political institutions; the effectiveness and capacity of our law enforcement partners both domestically and internationally, the effects of cultural entities and practices, changing statiture responsibilities; developments oversess, and changing technologies.

In a number of areas we do not establish numerical targets. The Criminal Division is deeply concerned that estimated levels of performance (e.g., targets for conviction rates, indictments and convictions) not become brinting-hunting targets or otherwise lead to unintended and possibly adverse consequences. Recent revelations of abuses within the Internal Resence Nervice underscore this concern. As a richal abbugh we will report after the fact, we write things the targets for convictions, during surgices and the like. In some goal areas, problems in estimating levels of performance reflect the paucity of available baseline information. Without such a baseline, it is impossible to predict with any conditioned the marginals changes that are likely to recorr. For example, there are no generally accepted data on, or means of measuring, the amount of illegal drugs entering the United States or the availability of second orders.

The Terrorism and Violent Crime Section

		Perm	
Program Changes	<u>Pos</u>	FIE	<u>Amount</u>
	1	1	\$92

Base Program Description—The mission of the Terrorism and Violent Crime Section (TVCS) is to design, implement, and support law enforcement efforts, legislative imitatives, policies and strategies relating to international terrorism, domestic terrorism and domestic violent crime in coordination with other federal, state, and local law enforcement agencies, as well as appropriate foreign counterparts—This includes direct participation in the investigation and prosecution of virtually all international terrorism cases, participating terrorism cases, as well as in selected domestic violent crime cases.

In the international arena, TVCS, working in partnership with the U.S. Attorney's Office for the District of Columbia and with other U.S. Attorneys' Offices as appropriate, investigates and prosecuties extraterritorial acts of terrorism, occurring anywhere in the world, that impact significant U.S. interests. TVCS plays a critical role in the investigation and prosecution of material support of designated terrorist organizations, coordinating its efforts with the Civil Division, the Departments of State and the Treasury, the CIA and the FBI TVCS is also involved in immigration enforcement efforts relating to alien terrorists.

TVCS develops, coordinates, and implements the federal enforcement program to address domestic terrorism. Components of this program include oversight of FBI full field investigations pursuant to the Attorney General's guidelines, systematic collection and analysis of data related to the investigation and prosecution of domestic terrorism; prosecution of major cases; and chairing the Domestic Terrorism Working Group, comprised of representatives from the Criminal, Civil Rights, Environment, and Tax Divisions, EOUSA, the AGAC, and the FBI, which addresses cross-cutting issues related to domestic terrorism. TVCS, in conjunction with the FBI, continues to enhance efforts to anticipate and prevent terrorist acts within the U.S. by upgrading procedures, consistent with constitutional standards, for early detection, investigation, and prosecution of terrorist conspiracies.

TVCS is involved in the development, implementation, and administration of nationwide programs, consistent with the Anti-Violent Crime Initiative, designed to upgrade violent crime enforcement efforts generally and to address evolving violent crime problems. It undertakes the investigation and prosecution of selected domestic violent crime cases where appropriate due to the importance of the particular case, its multidistrict nature, or the inability of the pertinent U.S. Attorney's Office to handle the case because of a lack of expertise or recusal. Additionally, TVCS supports the efforts of field prosecutors through the provision of a broad range of legal and policy advice and assistance.

Pursuant to the Department of Justice Crisis Response Plan, TVCS serves as a central coordinator for the receipt and dissemination of information pertinent to ongoing critical law enforcement incidents. In this capacity, the Section is involved directly in responding to such crises and in coordinating the involvement of other appropriate investigative and prosecutorial components. Additionally, TVCS develops and coordinates crisis response preparation and training, concerning, for example, weapons of mass destruction, in coordination with other federal agencies.

FY 1999 Accomplishments—Terrorism and Violent Crime Section (TVCS) attorneys have continued to courdinate the Anti-Violent Crime Initiative, the Department's primary strategy for reducing violent crime in the U.S. With its focus on gang violence, gun violence, and juvenile prime, the Section has provided guidance and training to AUSAs and helped to forge new initiatives and legislation. Since the inception of the AVCI in 1994, violent crimes have declined as follows: 3% in 1995; 6% in 1996; 3% in 1997, and 7% in 1998 (preliminary).

Following a request for assistance from the Central District of California, a TVCS attorney joined the prosecution of a major. Los Angeles gang involved in drug distribution in a number of U.S. cities. Fifty-two defendants were indicted on CCE charges. All defendants but one either pled guilty or were convicted after trial; the lead defendant received a life sentence.

TVCS has played a leading role in the U.S. effort to disrupt terrorist financing. Efforts in the international arena included engaging member-nations of the European Union in debate on the issue of terrorist financing at their October 1998 Vienna meeting; and assisting the State Department in guiding the Organization of American States (OAS) through its <u>Second Inter-American Specialized Conference on Terrorism</u> in Argentina. The OAS conference culminated in the Commitment of Mar del Plata, which treated a new Inter-American Committee for Combating Terrorism within the OAS and endorsed numerous TVCS-drafted measures designed to impede the financing of terrorist organizations. TVCS continues to play a pivotal role in drafting and advocating a G-8 Terrorist Financing Convention initiative introduced in the United Nations in FY 1999. TVCS has joined with the State Department, the FBI and others to create and staff an international terrorist financing training curriculum that is scheduled to be ready for presentation to prosecutors and investigators who will be asked to assist in bringing to justice terrorist financiers.

TVCS has continued the pretrial preparations in <u>Upited States v. Mohammed Rashed</u>, CR. No. 87-0308, (D.D.C.), a major

international terrorism case pending in the District of Columbia. This case stems from the August 11, 1982, bombing of Pan Am Flight 830, flying from Tokyo, Japan, to Honolulu, Hawaii, which resulted in the death of a Japanese teenager on board and injured a number of passengers.

IVCS provided critical support to the Southern District of New York's (SDNY) prosecutions growing out of its investigation of terrorist Usama Bin Laden and his role in the August 1998 bumbings of the U.S. embassies in Nairobi and Dar es Salaam. These efforts involved the review and approval of the proposed indictments, as well as obtaining the necessary certifications as required by 18 U.S.C §2332, that the offense was intended to coerce, intimidate, or retaliate against a government or a civilian population. Considerable effort was also expended by TVCS, on SDNY's behalf, in order to avoid possible prejudice to the criminal prosecution by the parallel investigation being conducted by the Department of State's Accountability Review Board.

Following a nine-week trial, a verdict of guilty was obtained on all counts against Chevie Kehoe and Daniel Lewis Lee in a domestic terrorism RICO prosecution. Defendant Lee received the death penalty. This prosecution resulted from the activities of the Aryan People's Republic, a white supremacist gang created by Chevic Kehoe, that committed murders and armored ear robbenes in furtherance of their plan to initiate a racial civil war in the United States.

FVCS has made significant efforts to improve federal laws relating to weapons of mass destruction and has recently developed legislation to strengthen criminal statutes in the area of biological agents and toxins to maximize the ability of law enforcement to intervene early in the chain of events that could lead to the use of such weapons.

TVCS played a leading role in developing the Administration's Five-Year Interagency Counterterrorism and Technology Crime Plan, coordinating input from 24 federal agencies as well as state and local law enforcement and academia.

TVCS worked closely in 1999 with the newly formed National Aliance of Gang Investigators Associations, a group representing 12,600 investigators across the country which is dedicated to the promotion and coordination of anti-gang strategies. TVCS played a key role in improving relationships among law enforcement agents at all levels who are addressing the gang problem. A National Gang Threat Assessment will be produced this year as a result of these efforts.

The Office of International Affairs

		Peπn.	
Program Changes	<u>Pos.</u>	FTE	<u>Amount</u>
	11		\$1.072

Base Program Description—The Office of International Affairs (OIA) supports the Department, including U.S. Attorney's offices, and state and local prosecutors, by coordinating international legal matters and policy and by acting as the U.S. central authority for making all requests for international extradition and mutual legal assistance, both to and from the U.S. OIA also serves as the Department's liaison to foreign law enforcement and prosecutorial entities including foreign munistries of justice, police offices and embassics.

In concert with the Department of State, the Office is responsible for the negotiation of bilateral extradition and mutual legal assistance treaties, and the formulation of country specific and regional law enforcement strategies. OlA also participates in international organizations, such as the United Nations and the G8 Group, and provides assistance to the development of multilateral treaties, studies, and similar efforts regarding international law enforcement issues. The Office maintains a permanent office in Rome, Mexico City, and Brussels, has detailed attorneys to London and Paris; and has received approval to establish an office in Latin America.

FY 1999 Accomplishments OIA, in cooperation with the State Department, is working to bring into force 38 extradition treaties and multial legal assistance treaties, which were approved by the Senate in late 1998 and signed by the President in early 1999. OIA is also participating in the negotiation of several multilateral agreements, such as the UN Organized Crime Convention, and the G-8 Cybercrime initiative.

OIA is involved in several prominent mutual legal assistance matters, including those relating to Augusto Pinochet.

An OIA appellate attorney argued in the U.S. Court of Appeals for the 5th Circuit and prevailed against a constitutional challenge to the ability of the U.S. to surrender a person to the Rwanda was crimes tribunal. This is the first case in which U.S. courts (district and circuit) have ordered the surrender of a fagitive to one of the war crimes tribunals.

OIA worked closely with the Government of Mexico in securing the extradition of Jose Luis Del Toro, Jr., charged in the State of Florida with murdering the mother of five children, including infant quadruplets

The International Criminal Investigative Training Assistance Program

		rem.	
Program Changes	<u>Pos.</u>	FIE	<u>Amount</u>
	4	2	\$369

Base Program Description The International Criminal Investigative Training Assistance Program (ICITAP) was created by Congress in 1986 to provide training in conducting criminal investigations to police forces in Latin America. Since then ICITAP has grown into a global, law enforcement development program that works in more than 20 countries providing \$35 million worth of training. Today ICITAP provides police technical assistance and training for "failed states" within international peace operations and for established law enforcement agencies in emerging democracies. ICITAP's mission is to support US foreign policy by providing law enforcement development assistance that is consistent with internationally recognized principles of human rights, the rule of law and modem police practices. ICITAP is located in the Criminal Division of the Department of Justice, but receives all of its funding on a project specific basis from the Department of State and USAID. ICITAP programs are harmonized with those of the Justice Department's Overseas Prosecutorial Development, Assistance and Training Program to insure comprehensive development of the entire justice system in recipient countries.

FY 1999 Accomplishments. Countries receiving ICVTAP training reached an all time high of 58; funding grew to \$34,982,364.

In the Balkans, ICITAP worked with the Organization for Security and Cooperation in Europe to establish a police academy and begin training 3,000 members of a new Kosovo Police Service. In Bosnia, ICITAP expanded its successful community policing program. In Albania, ICITAP began training 1,000 National Police in Civil Disorder Management

Under the Wye River Peace Accords, ICITAP provided technical assistance to the Palestinian Authority Civil Police in the West Bank and Gaza in the collection of illegal weapons. In Indonesia, ICITAP trained senior police officials in Civil Disorder Management and Community Relations prior to the country's peaceful national elections.

Under the State Department, ICITAP delivered 42 police training courses in 25 countries and a police academy development program and forensic training in five former Soviet republics.

ICTTAP provided a Civil Disorder Management program and other types of police training, fulfilling the President's commitment to provide a police assistance program for Ghana.

ICITAP implemented a technical assistance and training program that significantly reduced street crime in El Salvador, trained criminal investigators in Guatemala and developed a comprehensive curriculum to unify all three law enforcement academies in Columbia. ICITAP continued its successful program of developing the Hajtian National Police.

Internal Security Section

Base Program Description: Internal Security Section (ISS) supervises the investigation and prosecution of cases affecting national security, foreign relations, and the export of military and strategic commodities and technology. The Section has exclusive responsibility for authorizing the prosecution of cases under criminal statutes relating to espionage, sabotage, neutrality, and atomic energy. It provides legal advice to U.S. Attorney's Offices and investigative agencies on all matters within its area of responsibility, which includes 88 federal statutes affecting national security. It also coordinates criminal cases involving the application of the Classified Information Procedures Act. The Section also administers and enforces the Foreign Agents Registration Act of 1938 and related disclosure statutes.

FY 1999 Accomplishments: On January 22, 1999, a former Defense department employee and a labor union official were scatenced to 262 months and 210 months, respectively, for espionage and related offenses. The defendants were convicted in October following an eight-day jury trial. A co-defendant earlier pleaded guilty to conspiring to commit espionage on behalf of East Germany, the Soviet Union, Russia, and South Africa, from 1972 to 1997 and was sentenced to 151 months.

On February 12, 1999 a former clerk typist was sentenced to 25 years in prison for committing espionage in violation of 18 U S C. § 794(a). The defendant who was recruited to participate in espionage on behalf of Hungary and Czechoslovakia by convicted spy Clyde Conrad in early 1987, pled guilty in November 1998, following exhaustive plea negotiations. This guilty plea signaled the end of the investigation and prosecution surrounding the espionage activities of Clyde Conrad. As a result of this investigation, four individuals have pled guilty to espionage in the United States.

A former U.S. Army sergeant was sentenced to 292 months imprisonment following his plea of guilty to conspiring to commit espionage on behalf of the Soviet Union and the Russian Federation in violation of 18 U.S.C. § 794(c).

A New Jersey aircraft parts broker pled guilty to ten felony counts charging: a) conspiracy to sell Phoenix Air-to-Air Missile parts to Iran through Singapore; b) completed shipments of F-5, F-14, and Hawk Surface-to-Air Missile parts to Iran; and c) false statements to U.S. Customs. Pursuant to a plea agreement with the government, the defendant stipulated to a guideline offense level of 25 (57-71 months) and agreed to pay in excess of \$2.6 million in fines and forfeitures. Sentencing was set for December 13, 1999.

The Office of Special Investigations

Base Program Description: The Office of Special Investigations! (OSI) primary mission is to detect and identify persons who participated in the persecution sponsored by the Nazis or their allies during World War II. OSI is solely responsible for originating, investigating and prosecuting all denaturalization and deportation cases against such persons. In the denaturalization

cases, U.S. Attorneys customarily assign AUSAs to serve as local counsel, but they rely on OSI to handle all of the investigative work and virtually all of the litigative work. OSI is also responsible for the investigation of would-be immigrants or naturalization applicants suspected of involvement with the Nazis or their allies.

Although the Office's workload has been expected to decrease with the aging of its targeted criminal population, a number of factors have combined to expand workload over what was previously anticipated. These factors include. 1) the fall of Communism in Europe, which has generated scores of new investigations and numerous new prosecutions by permitting direct investigative access for the first time to archives that collectively house the largest group of captured Nazi war documents extant; 2) OSI development of the expertise to investigate persons who participated in Japanese persecution during World War II; and 3) OSI assumption of responsibility in major Administration and Congressional initiatives, such as the massive inter-agency investigation into assets looted from victims of Nazi persecution, in which OSI took principal investigative responsibility (and lead DOI responsibility) and Executive branch compliance with the Nazi War Crimes Disclosure Act, to which OSI has provided major logistical, historical and financial support as well as DOI representation. The Division anticipates that each of these factors, as well as the fact that OSI is virtually certain to continue to be drawn into every significant WWII-related matter that arises within the Executive Branch, will continue to expand the Office's workload.

FY 1999 Accomplishments—OSI was undefeated in Intigation during the FY 1999, winning court decisions and other victories in a total of twelve cases and lesing none. During the past year, OSI won four denaturalization cases in Getral district courts and three deportation cases in U.S. immigration courts. OSI also won its subpoena enforcement cases in New York and Florida and prevailed in an important declaratory judgment action in Pennsylvania. In addition, OSI won both appellate matters that went to decision. Moreover, OSI succeeded in actually removing four Nazi criminals from the United States during this period.

During the review period, OSI also commenced four new prosecutions. This reflects OSI's continued success on the investigative front, particularly as it exploits its recently obtained access to archives in the former Warsaw Pact nations.

OSI's director is serving as the Department's representative to the Nazi War Crimes Disclosure Act Interagency Working Group that must oversee and report to Congress on the Federal Government's compliance with the Act, which requires the Government to identify, locate, and make public all classified records pertaining to suspected Nazi war criminals and persecutors or to the misappropriated assets of victims of Nazi persecution. To assist agencies in identifying relevant records, OSI has compiled a database containing the names and birth dates of individuals who may meet the definition of suspected Nazi war criminal under the Nazi War Crimes Disclosure Act. That database currently contains approximately 57,000 records and is estimated to be 70% to 80% complete. In addition, although its own records are exempt from the requirements of the Act, OSI is coordinating the efforts of the Department's offices, boards and divisions to identify and review records that may be relevant under the Act. OSI has also provided funds to the Interagency Working 'Froup to cover the three public members of the Group and to finance contractor support to the Group in tracking compliance v. 'b the Act by individual agencies and compiling the results of the agencies' actions.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

The activities of the International Decision Unit directly support the following goals from the Department of Justice's Strategic Plan FY 1997-2002

Department of Justice Core Function 1. Investigation and Prosecution of Criminal Offenses.

Strategic Goal 1.1 Reduce violent ortime, including organized crime and gang-related violence.

Strategic Goal 1.3: Reduce esplonage and terrorism (sponsored by foreign or domestic groups to the United States and abroad when directed at U.S. citizens or institutions).

Strategic Goal 1.4. Reduce white-collar crime, including public corruption and fraud.

Strategic Goal 1.5: Coordinate and integrate DOJ law enforcement activities wherever possible, and cooperate fully with other federal agencies that are critically linked to improve operation of the nation's justice system

Name of Decision Unit: INTERNATIONAL. This Decision Unit includes four Sections: the Office of International Affairs (OIA), the Terrorism and Violent Crime Section (TVCS), the Internal Security Section (ISS), and the Office of Special Investigations (OSI) Performance Indicator Information Perfermence Report and Perfermance Plans Performance Report 40.0 Performanta Plans PY 1966 FY 1999 PV toon PY 2001 Type of Indicator Sebree. The Appellate Section

Base Program Description The Appellate Section (APP) prepares draft briefs and certiorari petitions for the Solicitor General for filling in the U.S. Supreme Court; makes recommendations to the Solicitor General as to whether further review is warranted on adverse decisions in the district courts and courts of appeals; prepares briefs and argues cases in the courts of appeals; and briefs and argues motions in district courts in cases of national importance. Section attorneys assist U.S. Attorneys in preparing briefs for the courts of appeals and provide advice on the Antiterrorism and Effective Death Penalty Act, the Commerce Clause, the recent adverse Supreme Court decisions in Bailey, Gaudin, and Staples, and a variety of other legal issues. In addition, the Appellate Section acts as counsel to the Division's Assistant Attorney General and Deputy Assistant Attorneys General, providing legal advice on a wide range of issues and cases.

FY 1999 Accomplishments. The Appellate Section garnered many wins in the courts of appeals this year, including the following:

- <u>United States v. Hsia</u>, 1999 WI. 306862 (D.C. Cir. 1999) (reversing, in this campaign finance prosecution, the dismissal of an indictment charging false statement violations);
- United States v. Derrick, et al., 163 F.3d 799 (4* Cir. 1998) (reversing order dismissing indicunent for prosecutorial misconduct);
- United States v. Nichols, 169 F.3d 1255 (10th Cir. 1999) (affirming the convictions of one of the two men responsible for the Oklahoma City bombing);
- United States v. McVeigh, 153 F.3d 1166 (10th Cir. 1998) (affirming the conviction and capital sentence of the man who set off the truck bomb in front of the federal building in Oklahoma City, killing 168 people);
- United States v. Torres, 162 F.3d 6 (1st Cir. 1998) (affirming the RICO convictions of two gang members who conducted drive by shootings of an innocent non-gang member);
- United States v. McLaughlin, 170 F.3d 889 (9th Cir. 1999) (reversing the suppression of evidence seized from an automobile

- incident to a lawful arrest):
- United States v. Scrivner, 1999 WL 311392 (9th Cir. 1999) (on panel rehearing, the panel unanimously reversed course and
 overturned its prior decision, in which it had vacated the defendant's firearm convictions on collateral attack for a violation of
 the Fifth Amendment).
- United States v. Singleton, 165 F.3d 1297 (10th Cir. 1999) (on bane) (upholding prosecution practice of offering teniency to cooperating witnesses);
- Ross v. U.S. Marshal, 168 F.3d [190 (10th 1999);
- United States v. Owens. 167 F.3d 739 (1" Cir. 1999) (upholding RICO, murder, drug, firearms, and money laundering convictions of defendant who from 1988 to 1995 ran a large scale drug enterprise in Massachusetts);
- United States v. Cardales., 168 F.3d 548 (1" cir. 1999) affirming convictions of three defendants for possessing marijuana with intent to distribute it on board a vessel subject to the jurisdiction of the United States).

The Appellate Section drafted many successful merits briefs in the Supreme Court this term. Those efforts included:

- Holloway v. United States, 119 S. Ct. 966 (1999) (cariacking statute does not require proof of an unconditional intent to kill):
- Minnesola v. Carter, 119 S. Ct. 469 (1998) (an invited who was present in an apartment to bag cocaine did not have a legitimate expectation of privacy in the premises and therefore could not challenge the search of the premises);
- City of West Covina v. Hopkins, 119 S. Ct. 678 (1999) (when the police seize evidence pursuant to a search warrant, they need
 not advise the owner of the procedure for seeking the return of the property);
- Wyoming v. Houghton, 119 S. Ct. 1297 (1999) police officers with probable cause to search an automobile may search
 passenger's belongings found in the car that are capable of concealing the object of the search);
- United States v. Rodriguez-Moreno, 119 S. Ct. 1239 (1999) (venue in a prosecution under 18 U.S.C. 924(c) for using or carrying a firearm during and in relation to any crime of violence is proper in any district where the defendant committed the crime of violence, even if the firearm was used or carried only in a single district);
- Pegugro v. United States, 119 S. Ct. 961 (1999) (a defendant who was aware of his right to appeal his sentence and elected not
 to appeal may not have his sentence set aside under 28 U.S.C. 2255 because the sentencing court failed to advise him of his
 appellate rights as required by Federal Rule of Criminal Procedure 32).

The Asset Forfeiture and Money Laundering Section

	Perm.		
Program Changes	<u>Pos.</u>	FIE	Amount
	3	2	\$254

Base Program Description: in late 1995 the Asset Forfeiture Office and the Money Laundering Section (AFMLS) of the Criminal Division were merged to provide centralized policy and program oversight, and to maximize the law enforcement potential of laws designed to dismantle and destroy criminal enterprises; to prosecute and incarcerate the leadership of such organizations; to restore forfeit the profits, proceeds and instrumentalities of crime; to destroy the economic foundation of criminal organizations; to restore forfeited property to owners or to those victimized by crime; to use forfeited property to enhance law enforcement priorities; and to share with cooperating state and local enforcement agencies. While these laws have been used most often in drug trafficking and financial crimes, they are applicable to many federal crimes, serving as both deterrent and punishment. Through program and policy oversight, litigation and liaison assistance (domestic and international), AFMLS serves as the primary Department component to initiate, coordinate and review litigation, legislation, policies, and procedures in association with other agencies and governments in money laundering and forfeiture law enforcement.

Those responsibilities include (1) prosecuting and coordinating complex, sensitive and multi-district money laundering and asset forfeiture investigations and cases; (2) ensuring uniform application of the laws, regulations, and policy directives through litigation assistance and advice on laws and policy to other government attorneys; (3) developing legislative, regulatory, and policy initiatives to maintain the highest standards of integrity and to sustain an effective and equitable program; (4) providing publications and training; (5) adjudicating petitions for remission or mitigation of forfeited assets; and (6) distributing forfeited funds and properties to appropriate domestic and foreign law enforcement agencies and to community groups within the United States.

FY 1999 Accomplishments: Litigation - In May 1998, the Secretary of the Treasury and the Attorney General of the United States announced the culmination of "Operation Casablanca," the largest, most comprehensive and significant drug money laundering case in the history of U.S. law enforcement. In March and April of 1999, three indicted Mexican banks entered into criminal pieas and/or civil settlements resulting in: \$1 million in criminal fines; \$25.7 million in civil forfeitures; and the implementation of anti-money laundering programs and controls at each bank. Overall, the government initiated civil forfeiture proceedings against approximately \$66.7 million of drug proceeds wired into U.S. bank accounts. In addition to assisting the Central District of California in every stage of the civil and criminal cases, AFMLS filed two civil forfeiture complaints against approximately \$24.1 million that was sent from undercover accounts to bank accounts in 16 countries.

In May 1999, William S. Pegg, Vice President of Chaparral Boats, Incorporated, a subsidiary of RPC Energy Services,

Incorporated, Atlanta, Georgia, was sentenced to forfeit his interest in \$46,463,460.20, that he previously surrendered to the Internal Revenue Service, and whatever proceeds are derived from the sale of certain real property located in the State of Florida. Mr. Pegg pleaded guilty in July 1997, in the Middle District of Georgia (MDGA), to an information charging conspiracy to commit various offenses, a money laundering conspiracy, and a forfeiture count. The plea was entered pursuant to a plea agreement with the United States Attorney's Office, MDGA, but AFMLS assumed responsibility for the case at the direction of the Office of the Deputy Attorney General soon after Mr. Pegg pleaded guilty.

In March 1997, former Drug Enforcement Administration (DEA) employee David S. Bowman was indicted on numerous counts of mail fraud, theft of government funds and money laundering for embezzling over \$6 million from the DFA. Because of Bowman's failing health, the United States likely will never be able to bring him to trial. Without a conviction, criminal forfeiture of property purchased with stolen funds is not possible; accordingly, the United States fited a civil forfeiture case against property still in the hands of Bowman and other family members, which was litigated by AFMLS. In December 1998, the United States obtained summary judgment in that action and forfeited all of the property sought, which is valued at approximately \$650,000. The IRS is currently in the process of auctioning the real estate and other property forfeited. AFMLS also assisted the Civil Division, Commercial Litigation Branch, in prosecuting a Fa.se Claims Act and unjust enrichment case against the Bowman family. In May 1999, the United States obtained an \$18 million judgment against family members in that action, and is pursuing Bowman's government pension, life insurance policy and a family trust to satisfy the judgment.

Money Laundering Strategy - On September 23, 1999, the Departments of Justice and Treasury publicly released the first National Money Laundering Strategy. This Strategy marks the first time that the federal government has developed a blueprint for a coordinated attack on money laundering and related financial crime. It establishes a Steering Committee, led by the Deputy Attorney General and the Deputy Secretary of the Treasury, to oversee implementation. The Criminal Division will be leading the Department's efforts to implement the new Money Laundering Strategy.

In December 1998, Claude Duboe, a major drug trafficker, received a life imprisonment sentence, \$5 million fine, and a preliminary forfeiture judgment was entered in the amount of \$100 million, as a result of his conviction on marijuana importation and money laundering conspiracy charges. A final order of forfeiture was entered on September 23, 1999. To date, the government has realized approximately \$49 million in forfeitures and anticipates additional forfeitures of real property and foreign bank accounts in order to satisfy the \$100 million dollar judgment. AFMLS will continue to pursue actions against foreign based assets to satisfy the uncollected portion of the judgment. The case was prosecuted by the United States Attorney's Office in the Northern District of Florida with AFMLS handling the international forfeiture aspects of the case.

International Forfeiture - December 18, 1998, the Attorney General and the Swiss Ambassador to the United States signed a Memorandum of Understanding authorizing the transfer of approximately \$89 million in forfeited drug proceeds to the Government of

Switzerland. The funds represent 50 percent of the approximate \$178 million forfeited in connection with the 1995 prosecution of Sheila Arana de Nasser in the Southern District of Florida. In 1994, at the request of the United States and as a result of its own investigation, Switzerland froze funds and other property belonging to Sheila Arana de Nasser and her former husband, the notorious Colombian drug trafficker Julio Nasser-David. The funds were forfeited in the United States and the U.S. share was repatriated by Swiss officials. Working with OfA, AFMLS negotiated the terms for the repatriation of the funds with the Government of Switzerland. This marks the largest single forfeited assets amount shared with a foreign country.

In addition to the above transfer, the DOJ has shared approximately \$11 million with 6 foreign governments during the past year. One of these cases involved the sharing of more than \$5 inillion with the Government of Colombia, stemming from the forfeiture of assets belonging to Jose Gonzalo Rodriguez Gacha. Protracted negotiations took place between U.S. and Colombian officials regarding the law enforcement purposes for which those fund should be used.

A bilateral committee developed a list of projects which was approved by the Colombian Vice Minister of Justice and Deputy Assistant Attorney General Mary Lee Warren on September 29, 1999. AFMLS has made further progress in its efforts to have more international asset sharing and/or forfeiture cooperation agreements in place. Negotiations are currently underway in the U.K., Jamaica, Mexico, Singapore and Italy.

<u>Training</u> - AFMLS organized 17 asset forfeiture, money laundering and financial investigations training conferences for federal agents and prosecutors, including a May 1999, "Forfeiting the Proceeds of Crime" seminar for the G-8 nations in Rome, Italy. More than 760 federal prosecutors, 540 federal agents, 110 forfeiture legal support staff and 60 prosecutors from the G-8 Nations attended the seminar and conferences.

The AFMLS State and Local Unit has trained over 1600 participants in 28 seminars and workshops. In addition, the Basic Asset Forfeiture Curriculum has been revised, the new Asset Forfeiture Financial Investigations Curriculum has been test piloted, and 2 sets of training videotapes have been completed.

Equitable Sharing - AFMLS provides policy and operational oversight for the Department's Equitable Sharing Program. This program encourages federal, state and local law enforcement cooperation by sharing the proceeds of a forfeiture with the state or local law enforcement agency that participated in the investigation that resulted in the forfeiture. The Department shared \$228.9 million with 2,367 state and local law enforcement agencies during FY 1999. Pursuant to memoranda of understanding with the U.S. Postal Inspection Service and the U.S. Department of Treasury investigative agencies, the Department transferred approximately \$6.3 million to the Treasury Forfeiture Fund and approximately \$5.0 million to the Postal Forfeiture Fund. AFMLS reviews all sharing involving forfeitures valued at \$1 million or more. In FY 1999 AFMLS processed 26 such cases involving approximately \$29.4 million.

The Office of Enforcement Operations

	Perm.		
Program Changes	<u>Pos.</u>	FIE	<u>Amount</u>
	6	7	\$400

Base Program Description: The Office of Enforcement Operations (OEO) provides prosecutorial support, legal advice, and statutorily required review/approval in almost 40 distinct subject areas. OEO oversees the use of the most sophisticated investigative tools at the Federal Government's disposal, including electronic surveillance and the Federal Witness Security Program (WSP). Among the investigative and prosecutorial support services that OEO provides to the United States Attorneys' Offices and the various Criminal Division components are: (1) reviewing all federal requests to intercept wire, oral, and most types of electronic communications; (2) authorizing or denying the entry of all applicants into the WSP, including the short-term witness security program; (3) reviewing and authorizing requests to apply for court orders permitting the use of video surveillance; (4) coordinating and administering among all components matters relating to all aspects of the WSP; (5) reviewing and deciding applications for transfer made through the International Prisoner Transfer Program and serving as haison between all government agencies with an interest in international prisoner transfer; (6) supervising the mechanism by which federal law enforcement officers or agents employed by the Inspectors General may become Special Deputy U.S. Marshals; (7) coordinating requests involving the use of prisoners in certain investigative activities, (8) coordinating requests to immunize witnesses, subpoena atterneys or the media, or search the offices of attorneys who are suspects or targets of an investigation, (9) reviewing requests to engage in federal prosecutions following state action; (10) serving as Victim-Witness Assistance Coordinator for the Criminal Division; (11) facilitating the imposition of special administrative measures on immate confinement conditions to prevent the immates from continuing to engage in particularly violent or terrorism-related crimes; (12) overseeing the operation of the FBI Laboratory Oversight Task Force; and (13) processing all requests for registration under the Gambling Devices Act of 1962, as well as assisting federal, state, local, and tribal agencies on the implementation of the Act. In addition, OEO provides legal advice, including lecturers, to federal, state, and local law enforcement agencies on the above programs and investigative techniques, and assists in developing Department policy on emerging technologies and telecommunications issues and in handling criminal aliens in the United States. Other areas include: reviewing all applications for S Visa immigrant status; reviewing proposed legislation and Administration proposals to expand police powers of federal agencies. providing legal advice concerning the exercise of federal jurisdiction in Indian country, on the high seas, and at U.S. military bases in foreign countries, and with respect to crimes affecting government operations; and providing legal advice concerning the instality defense. OEO also responds to requests made to the Criminal Division for disclosure of information under the Freedom of Information Act and Privacy Act, and assists, upon request, in the drafting of reply briefs involving any of OEO's myriad functions, especially those briefs addressing novel electronic surveillance issues.

FY 1999 Accomplishments: In support of law enforcement investigative efforts, OEO processes requests from the Offices of

the Inspectors General for agent deputations and "S-Visa" requests from United States Attorneys and law enforcement agencies to adjust the immigration status of cooperating alien witnesses. Recently, OEO briefed congressional staff on the S-Visa program, and set forth the Criminal Division's support of legislation that would prevent the program's imminent demise by repealing the legislative "sunset" provision soon to take effect.

OEO has assisted many United States Attorneys by processing requests for permission to move for courtroom closures to protect the identities of cooperating witnesses, requests to obtain tax information, and requests for permission to issue subpoenas to the media. These included a novel request for a press subpoena by a foreign government, two relating to a major international terrorist on the FBI's most wanted list, and one involving the interplay of the press subpoena regulations with the Department's policies on immunity and the use of close family relations as witnesses.

OEO has been actively engaged in projects of federal and local law enforcement and industry to combat cargo and auto theft, such as Operation Sudden Stop, and one of its attorneys has lectured industry organizations on those subjects.

OEO, together with The Consular Corps of Washington, D.C., sponsored a seminar for consular officials on the International Prisoner Transfer Program, including the operation of the various bilateral treaties and multinational agreements that govern the transfer of prisoners between the U.S. and other countries. The seminar was conceived as a means of explaining the mechanics of the prisoner transfer program to foreign countries that already participate in the program, to expand awareness of the program to countries not presently involved in a treaty relationship with the United States for prisoner transfer purposes, to relay information about the guidelines used by DOJ in evaluating transfer applicants, and to provide specific suggestions regarding ways that consular officials could assist nationals from their own country who might be interested in requesting a prisoner transfer.

Recently, the Department of Justice joined the Department of State and others to discuss establishing a prisoner transfer relationship with the Government of Japan. The Government of Japan, which has never conducted international prisoner transfers, asked for technical discussions with OEO and others involved in the prisoner transfer process; the Department of State has a keen interest in establishing a prisoner transfer relationship with Japan because of the number of Americans who are incarcerated in Japan who might benefit from such a transfer arrangement

During FY 1999, OEO has performed its Title-III review function and provided other assistance to the United States Attorneys' Offices and federal law enforcement agencies in their investigation of well over 700 major criminal organizations. In one investigation, involving a criminal organization that was continuing its crimes even while within prison walls, the government was able to solve one murder and prevent several others. In the second matter involving the investigation of a multi-district drug trafficking organization, the government has, to date, been able to seize thousands of pounds of cocaine, as well as millions of dollars in U.S. currency.

The Office of Policy and Legislation

	Perm.		
Program Changes	<u>Pos.</u>	FTE	Amoun
	2	2	\$140

Base Program Description: The Office of Policy and Legislation (OPL) analyzes policy and management issues relating to the cuminal justice system; identifies problems and emerging trends; develops options and recommendations; and provides research, technical, and management support to senior managers in the Division and the Department. The Office develops legislative proposals, legal memoranda, and Congressional testimony; and prepares comments on pending and proposed legislation affecting the federal criminal justice system. The Office is involved in projects that require contact with U.S. Attorneys' Offices, the Office of Justice Programs, and federal investigators, as well as other law enforcement officials. It works closely with the U.S. Sentencing Commission and provides legal support to the Advisory Committee on Criminal Rules and Evidence of the Judicial Conference regarding the Federal Rules of Criminal Procedure and the Federal Rules of Evidence.

FY 1999 Accomplishments: OPL conducted a variety of analyses to help to inform Department policies and develop the most effective federal role in violence reduction. On an ongoing basis, OPL collected and analyzed criminal justice-related data from a wide variety of sources, in particular, monitored data on federal offenders, federal and local violent crime and prosecution trends, and emerging developments in crime, arrest, and sentencing patterns. The office conducted a special analysis of violent crime and homicide trends that identified cities with aberrant patterns and also prepared an analysis of various aspects of Project Exile, an antigun initiative in the U.S. Attorney's office in Richmond, Virginia. In addition, the office completed an examination of federal gun prosecution trends and their relationship to state and local prosecution efforts that has become the core of the Administration's explanation of its gun prosecution practices.

OPI, provided analytic support to inform a variety of policy and legislative decisions and played a significant role in the Department's efforts to refine its Drug Control Strategic Plan and to develop appropriate performance measures. In addition, the office monitored federal prosecution trends for drug offenders, as well as a wide variety of data un drug abuse trends (particularly, the recent growth of methamphetamine use) and supported efforts to assess recent trends in the use of asset forfeiture against drug trafficking organizations, as well as other types of offenders.

OPL participated in the design and implementation of the Strategic Approaches to Community Safety Initiative (SACSI), an interagency demonstration project that builds on Boston's success in addressing its juvenile homicide problem. This initiative is focused on increasing the capacity of U.S. Attorneys — working in partnership with federal, state and local agencies and a research entity — to collaborate on data collection and analysis and to design targeted strategies and interventions to prevent and reduce

crime. Five cities have been participating in the SACSI process, and we are working to expand it to additional sites.

In the past, federal law enforcement efforts in Puerto Rico have been fragmented and ineffective. OPL provided staff support and guidance to a new inter-agency, inter-departmental Puerto Rico Executive Working Group, established to coordinate limited enforcement resources and to help increase the stability of the federal workforce there. There is now full federal participation in the all-source Information and Coordination Center (which was established in 1997 to coordinate the federal and Commonwealth of Puerto Rico intelligence and investigative activities).

OPL actively participated in the Department's expanding efforts to combat transnational crime. The office continued to work with other Department components and outside agencies to implement the Post-Soviet Bloc Organized Crime Strategy and also broadened its participation in the Department's international training and development assistance programs.

In partnership with tribal, federal, state and local governments, OPL is helping to coordinate an effort to consolidate BIA law enforcement programs and to provide Indian Tribes with police officers, criminal investigators, training, equipment, tribal court assistance, juvenile programs, and correctional grants. Upgrading public safety to acceptable standards in Indian Country is projected to take about four years.

OPL played a major role in developing the Administration's omnibus crime legislative package. The package addresses, among other things, federal prosecution of juvenile crime, gang violence, drug crime, and firearms regulation. OPL conceived of, reviewed, researched, and drafted many provisions of the package, and had the lead role in developing the Criminal Division's contribution to the proposed legislation.

OPL participated in numerous other Department legislative and crime policy initiatives and provided conceptual, drafting, and research assistance to these initiatives. For example, OPL played a significant role in a Department working group focusing on the use, availability, and law enforcement response to emerging encryption technology. This initiative resulted in a significant legislative proposal that OPL had a major hand in drafting. In addition, OPL participated in Department initiatives addressing children exposed to violence, crime policy for the 21st century, campaign finance, and race and the criminal justice system.

OPI, responded to numerous inquiries from Assistant United States Attorneys and Department prosecutors regarding the application of the federal sentencing guidelines and provided training on the use of the sentencing guidelines within various components of the Department and at the National Advocacy Center in Columbia, South Carolina.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

The activities of the Litigation Support Decision Unit directly support the following goals from the Department of Justice's Strategic Plan FY 1997 -- 2002.

The Department of Justice Core Function 1: Investigation and Prosecution of Criminal Offenses.

Strategic Goal 1.1: Reduce violent crime, including organized crime and drug and gang-related violence.

Strategic Goal 1.2: Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts.

Strategic Goal 1.3: Reduce explorage and terrorism (appearance by foreign or domestic groups in the U.S. and abroad when directed at U.S. citizens or institutions

Sizategic Goal 1.4: Reduce white-collar crime.

Strategic Goal 1.5: Coordinate and integrate DOJ law enforcement activities wherever possible, and cooperate fully with other federal agencies that are critically linked to improved operation of the Nation's justice system.

The Department of Justice Core Function 6: Protection of the Federal Judiciary and Improvement of the Justice System.

Strategic Goal 6.2: Promote participation of victims and witnesses throughout each stage of criminal and juvenile justice proceedings at the federal, state and local levels and in Indian country.

A. Definition of Terms or Explanations for Indicators: General Note: "NA" denotes that data is not available or that targets have not been established.

Item 1: This tiem refers to cases pending at the beginning of the fiscal year, and cases received over the course of the fiscal year

Herne 21 thru 23: These items refer to worklined of the Appellare Staff which, supports many of the goals and strategies in the DOJ Strategic Plan.

Hems 29 thru 32. Witnesses authorized for placement & witnesses placed into the Witness Security Program (WSP). Items 29 & 30 provide totals that are comulative since 1970, not including the short-term program.

A. Deficition of Terms or Explanations for Indicators: Coferni Note: TAT denotes therefore by a explicit for the unjust hips got from untail the first serious to the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract

Item 34 Pertains to equitable sharing matters in excess of \$1,000,000. Numbers expected to decline substantially in future years

B. Factors Affecting FY 1998 and FY 1999 Program Performance and Partors Influencing the Scheeting of FY 2000 and FY 2001 Inspets.

Measuring outcomes is difficult in any context, but particularly so in the enforcement. The Critical Division is guided principally by "doing what is but" and it some cases this means not sprinting an uniformation in the chiefs of this board of arrests or convictions. "Success" for us is also when crime or wrong-doing is deserved through effective like influencing type quantitative measurement of the benefits of the benefits of the trends of the complex challenge. In addition, h is extremely difficult to isolate the particular effects of the Criminal Division is efforts from other factors that affect outcomes into a visit of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the control and point of the co

In a number of seess we do not establish numerical targets. The Criminal Division is deeply concerned that estimated levels of performance (e.g., targets for conviction rates, indictments and convictions) not become bounty-hunting targets or otherwise lead to uninterded and postably adverse consequences. Recent revelations of abuses within the laternal Revenue Service anderscore this concern. As a result, although we will report after the fact, we will not set quantified targets for convictions, drug seitures and the little, in home generally acceptance in estimating levels of performance reflect the puncity of available baseline informance. Without such a baseline, is impossible to preside with any confidence the marginal changes that are likely to occur. For example, there are no generally accepted data on, or means of measuring, the amount of illegal drugs entering the United States or the availability of meetife forces.

Office of Administration

Base Program Description. The Office of Administration (ADMIN) is responsible for providing overall support to the Criminal Division's Sections/Offices in the following areas: management support services and the execution of management requests in all areas of personnel management: facilities and security program which includes classified information, physical security, emergency procedures, personnel security, computer security, security awareness, contractor security, watch officers, and operational security; telecommunications, budget planning and preparation and the Government Performance Results Act implementation; budget execution and fiscal and procurement services; automated litigation and records management; geographic information systems which provide ongoing mapping support to the Division, the Department, and other Federal, state and local law enforcement entities; and the management information system which provides support to the Criminal Division's litigative efforts in field offices demestically and abroad; correspondence management; and training which focuses on automated attorney training in an innovative Internet laboratory.

FY 1999 Accomplishments: ADMIN continues to enhance communications Division-wide through the development of the Intranet. ADMIN developed a Division home page in addition to developing pages for the Criminal Division's Sections and Offices.

To increase the Division's awareness and understanding of the Internet, ADMIN has initiated a training curriculum which offices hands-on experience and learning of the Internet. This course enables Division employees to learn the basics and expand on previous knowledge of the fractnet and assists in staying on the forefront of technology.

ADMIN developed a Regional Crime Analysis Geographic Information System (RCAGIS) application and distributed it amongst several police departments in the Washington, DC area. RCAGIS is a crime analysis application that is designed to meet the crime analysis, mapping, and reporting needs of police officers, crime analysis, and police managers. RCAGIS uses regional crime incident, arrest, and release data to dentify potential but spots of crime, identify potential suspects, improve resource allocation, and identify and utilize indicators of crime.

CIVIL DIVISION

Approved by: Janet Reno Date: 2/3/92 Janet Reno Attorney General

Civil Division Summary Statement and Performance Plan 2001

Mission

The Civil Division represents the United States in any civil or criminal matter within its scope of responsibility — protecting the public fisc, ensuring that the federal government speaks with one voice in its view of the taw, preserving the intent of Congress and advancing the credibility of the government before the courts.

Most Civil Division cases involve monetary claims. Plaintiffs advancing contract claims, allegations of negligence, claims of patent infringement and the like seek to assign liability to the government in lawsuits where huge sums are at risk. It is our job to ensure that only those claims with ment under the law are paid. In successfully fulfilling this mission, the Civil Division has saved the public fise billions of dollars — \$7 billion in unwarranted claims were defeated in 1999 alone. As huge as these savings are, the Civil Division's impact is understated because that figure does not reflect the consequences of the Division's successful defense of limiting provisions in entitlement programs. Court challenges to such limitations involve billions of dollars of public funds annually.

The Civil Division also recoups money owed to the government. Hundreds of milltons of dollars are recovered each year as a result of the Civil Division's successes in prosecuting fraud and representing the government's interest in suits involving bankruptcy, loan defaults and other commercial transactions. In 1999, judgments and settlements totaled \$529 million. While some awards call for long-term payment plans, colfections in 1999 yielded more than \$458 million. Affirmative litigation comprised just 16 percent of the Civil Division's cases, yet yielded awards equal to nearly four times the Civil Division's direct appropriation. Few entities can cite such a remarkable rate of neturn.

In addition to being one of the government's top fiscal bulwarks and top money-makers, the Civil Division serves an equally vital role in litigation where the targets are the laws, programs and policies of the United States. New statutes, typically enacted only after a very painstaking legislative process, are often attacked in court. Our docket includes challenges to anti-terrorism and immigration statutes, telecommunications laws, and regulations governing the administration of the health care system. Beyond litigation, we serve in an advisory role to other government organizations on potential litigation. For example, in this capacity, we advise the Department of State, Central Intelligence Agency, Criminal Division of the Justice Department and others on matters arising under the Mid-East Terrorism Order and the Antiterrorism and Effective Death Penalty Act.

While trial and appellate litigation constitute a major share of the workload, the enactment of two compensation programs — the National Childhood Vaccine Injury Compensation Act and the Radiation Exposure Compensation Act — expanded the scope of the Civil Division's responsibilities. The Vaccine Program offers plaintiffs a streamlined, expeditious mechanism for reviewing actions alleging vaccine-related injuries. The Radiation Program provides for administrative review of claims arising from atmospheric testing of nuclear weapons and underground uranium mining.

Lone-Range Goals and Strategies

The Civil Division's primary goal is to represent the United States in all civil matters in support of the Legal Representation Core Function set forth in the Department's Strategic Plan. The strategies employed by the Civil Division to achieve its long-range goal are summarized below.

Represent the United States in all civil matters.

- Protect the U.S. Treasury against unwarranted monetary claims; assure that the government pays meritorious claims; and assert
 the federal government's commercial interest in defensive litigation.
- Recover money owed to the United States as the result of fraud, loan and contract defaults, injury and damages to federal
 property and unsatisfied judgments; combat health care fraud through the vigorous implementation of the False Claims Act and
 the Health Insurance Portability and Accountability Act.
- Defend against challenges to federal statutes, programs and policy initiatives; enforce remedies for violations of statutory-based federal program requirements.
- Protect consumers against dangerous products, adulterated or mislabeled food and drugs, and unfair or fraudulent practices; defend federal regulations restricting the sale and distribution of tobacco products to protect children and adolescents.

 Continue to concentrate consumer litigation resources on those cases involving the greatest potential impact on public health and safety.
- Resolve disputes where appropriate by using negotiations and Alternate Dispute Resolution (ADR) and by administering compensation programs enacted by Congress which offer non-litigation solutions to specific classes of claims. Actively explore the use of ADR in conjunction with the private sector for major air disaster claims.

- Organize resources to meet priorities ensuring wherever feasible that cases involving the highest stakes, greatest potential impacts and most important precedents have sufficient staffing.
- Recruit and retain a high-caliber legal staff with the expertise that will best promote successful litigation. Upgrade and
 structure support staff to take full advantage of the new technologies to promote efficiency and productivity.
- Invest in new technologies and support services to keep apace of court mandates and to ensure parity with opposing counsel.
- Handle those trial and appellate cases requiring the specialized expertise possessed by Civil Division attorneys.
- Improve information dissemination between the Civil Division and the U.S. Attorneys to promote and maintain uniform litigation positions.
- Collaborate with client agencies in training, legislation, policy development and programmatic operations.
- Enhance cooperation with foreign governments to identify and prosecute international white-collar criminals and to seek the
 forfeiture and repatriation of proceeds of their resources.
- Enforce the nation's immigration laws and policies by successfully defending statutes, administrative decisions and INS programs and policies.
- Fight terrorism through aggressive efforts to extradite or remove international terrorists; represent the government before the Alien Terrorist Removal Court; handle appeals and litigation that may result from the designation of terrorist organizations.
- Support federal, state and local law enforcement initiatives by providing specialized expertise and a national perspective.
- Provide information to the public and to stakeholders in an open, timely and complete manner, as appropriate.

Highlights of Mission-Critical Results

In conjunction with the Department's Summary Performance Plan, the Civil Division tracks six key performance indicators for Legal Representation. We coordinated with the Executive Office of U.S. Attorneys to develop these indicators. The collaborative effort resulted in indicators with outcomes common across both components, for which the data was readily available. Moreover, the outcome indicators reflect jointly established enteria. For instance, favorable resolutions were defined to include court judgments in favor of the government and all settlements.

The table which follows displays results and projections for cases personally handled by the Civil Division.

Summary Performance Indicators: Legal Representation	1998 Actuals	1999 Actuals	2000 Proj.	2001 Proj.
Percent of favorable resolutions in civil cases.	94%	92%	90%	90%
2. Percent of favorable resolutions in defensive monetary cases.	94%	93%	90%	90%
3. Percent of favorable resolutions in immigration cases.	94%	90%	90%	90%
4. Percent of favorable resolutions in health care fraud cases.	100%	100%	90%	90%
5. Dollar amount collected from affirmative civil cases. $^{\mathcal{B}}$	\$579 mil.	\$458 mil	NA	NA
6. Alternative Dispute Resolution cases — completed. * Alternative Dispute Resolution cases — ongoing. *	94 56	116 206	285 98	170 104

^{1.} Results for 1998 and 1999 were all settlements

The Department of Justice has established a policy not to identify future estimates that may be construed as establishing "targets" for investigative, istigative or other law enforcement activities.

Surge in 1999 and 2000 reflects the increase in arbitrations arising from the Department of Agriculture's settlement with black farmers

In addition to the common performance indicators for Legal Representation, the Civil Division tracks summary performance indicators that are directly linked to the goals in its Performance Plan. The first two indicators incorporate the fact that most of our litigation involves monetary claims. Specifically, we measure progress toward our primary goal to protect the public fise through affirmative and defensive litigation as follows:

- At least 85 percent of monetary claims sought will likely be recovered in 60 percent or more of affirmative cases closed.
- An estimated 85 percent of monetary claims sought will likely be defeated in 80 percent or more of defensive cases closed.

Hundreds of cases handled by the Civit Division involve challenges to the laws, policies and programs of the federal government. With respect to these cases, our roals are as follows:

- Achieve favorable resolution in 80 percent of non-monetary trial cases.
- Achieve (avorable resolution in 85 percent of non-monetary appellate cases.

The following table displays actual results for 1998 and 1999. Anticipated performance for 2000 and 2001 is based on historical trends over the past five years.

Sammary Performance Indicators: Civil Division	1998 Actuals	1999 Actuals	2000 Proj.	2001 Proj.
Percent of affirmative cases closed in which 85 percent or more of the claim is recovered.	7196	68%	60%	60%
Percent of defensive cases closed in which 85 percent or more of the claim is defeated."	81%	78%	80%	80%
3. Percent of favorable resolutions in non-monetary trial cases.**	B8%	82%	80%	80%
Percent of favorable resolutions in non-monetary appellate cases.	93%	89%	85%	85%

¹ A handful of claims with highly exaggerated amounts sought are adjusted downward to reflect the lead attorney's assessment of the government's exposure

A rey Work Product

¹ Favorable resolutions include all court judgments in favor of the government. Settlements are excluded.

Highlights of major achievements are given below.

In the Winstar litigation, seven trials have been completed to date: Glendale (\$909 million awarded out of \$2.1 billion sought), Calfed (\$23 million awarded out of \$1.5 billion sought), LaSalle (\$5 million awarded out of \$1.2 billion sought); damages have not yet been determined in Suess, Landmark, Bluebonnet or Bank United. Our defeat of claims for alleged tost profits in Glendale, Calfed and LaSalle sets an important precedent, as a substantial portion of the darrages sought by other plaintiffs stem from lost profit claims. Glendale is not appealing the lost profits ruling. Also defeated were claims of restitution in Calfed and LaSalle. The Calfed appeal may resolve the outstanding liability issue of whether regulatory documents alone, without an admitted contract containing an integration clause, form a contract. While similar restitution and reliance claims were awarded in Glendale, those rulings are vulnerable to the government's appeal. The appellate decisions may promote the resolution of liability, lost profits, restitution and reliance issues for the remaining Winstar cases.

Six favorable settlements have been reached in the Winstar litigation, due in good part to the government's painstaking preparation and ability to press its damage theories. These efforts were exemplified by the favorable settlement obtained in Statesman during the fifth week of a six-week trial. The combined awards in the original Winstar case, Statesman, Dollar, Union Federal, Maco and Vermon: Federal were held to \$104 million, a fraction of the \$1.5 billion in damages claimed. Significantly, plaintiff abandoned claims for lost profits.

The Civil Division secured a momentous victory in the A-12 stealth fighter case when the Federal Circuit overturned a \$1.2 billion judgment and remainded the case to trial. The lawsuit arose from the termination of a contract between the Navy and McDonnell Douglas and General Dynamics to build the A-12 stealth fighter. After the contractors failed to build the aircraft and insisted that the contract be restructured, then-Secretary of Defens. Richard Chency terminated the program and the contracting officer terminated the contract for default. The contractors brought suit in 1991, seeking \$1.7 billion, in addition to the \$2.7 billion already paid on the contract. The government countered with a demand for the return of approximately half of the progress payments made.

A unanimous three-judge panel ruled that the trial judge had erroneously converted the termination for default to a "termination for convenience" of the government — an action which potentially entitled the contractors to all of their costs plus a reasonable profit. The appellate court also rejected plaintiffs' contention that the A-12 contract did not permit a termination for default if the contractors failed to make progress. The trial court will conduct a complete trial of all outstanding issues.

- Columbia/HCA is the largest health care fraud case ever undertaken by the government. Federal investigations cover the nationwide operations of the country's largest for profit hospital chain. In the first countroom test, two Columbia executives were found guilty of six criminal counts of defrauding Medicare and other federally-funded health insurance programs; each has received a substantial prison sentence and was ordered to pay criminal fines and restitution. As further indication of the government's progress, Columbia obtained letters of credit totaling \$1 billion in the event of the company's inability to satisfy a settlement or judgment in the government's favor.
- The privacy of driver's license information was successfully defended in Condon. Congress passed the Drivers Privacy Protection Act after finding that many states were selling personal information about drivers contained in motor vehicle department records to marketers and others. Subject to specified exceptions, the Act prohibits states from disclosing personal information such as drivers' names, addresses, social security numbers and medical information, without the drivers' consent. The Supreme Court held that the Act is a proper exercise of Congress' authority.
- In the first court of appeals decision to consider the validity of the assault weapons ban, the District of Columbia Circuit upheld the statute in all respects, including its restriction on simple possession, and held that Congress could regulate possession of firearms even when there is no evidence that the guns have traveled in interstate commerce. The Court concluded that the statutory ban was not a form of historically recognized punishment; rather, it serves a legitimate, nonpunitive purpose.
- In the largest health care fraud recovery in history, Freschius Medical Care North America agreed to pay \$486 million to
 resolve a sweeping, five-year investigation. Freschius, the world's largest provider of kidney dialysis products and services,
 agreed to pay a landmark \$385 million civil settlement, including \$66 million for whistleblowers and nearly \$8 million for
 Medicaid programs in all 50 states, the District of Columbia and Puerto Rico. Freschius also agreed to pay a record-setting
 \$101 million in criminal fines.
 - The settlement resolves allegations of kickbacks and fraudulent claims against Medicare and other federal health care programs by National Medical Care, which was acquired by Fresenius in 1996. The recovery demonstrates the effectiveness of vigorous federal enforcement and close coordination of multiple Department of Justice components; the Departments of Health and Human Services, Defense and Labor, and the Office of Personnel Management.
- Abbott Laboratories, a drug and medical device manufacturer, will pay \$100 million to resolve allegations that the company's methods and facilities for manufacturing in vitro diagnostic devices are not in compliance with FDA requirements. These devices are used to diagnose diseases and other conditions, including pregnancy, heart conditions and drug overdoses. Abbott will be required to cease manufacturing and distributing almost 300 devices at two of its facilities and cannot resume marketing until FDA is satisfied that Abbott is in compliance with the regulations. Medically necessary devices, including tests for cancer, AIDS and hepatitis will remain on the market.

The Civil Division has established a pilot web site that includes case summaries of immigration cases, with links to case law and immigration regulations, as well as the Office of Immigration Litigation's monthly bulletins. The site, which provides users with quick and easy access to numerous documents, became available to other government agencies at the end of 1999.

2001 Performance Plan

The Civil Division projects the attainment of results within the requested level of resources. These projections will establish a baseline upon which future performance may be tracked and reported, as required by the Government Performance and Results Act (GPRA). The 2001 indicators support the long-range goal of "Representing the United States in all civil matters" which appears in the Department of Justice Strategic Plan.

- Protect the public fire through defensive and affirmative litigation. For all Civil Division cases involving monetary claims, at least 85 percent of monetary claims sought will likely be recovered in 60 percent or more of affirmative cases closed. An estimated 85 percent of monetary claims sought will likely be defeated in 80 percent or more of defensive cases closed. (Summary-Level)
- For all Civil Division cases involving challenges to federal programs, policy initiatives and congressional enactments (for
 example, immigration, Consumer or Federal Programs litigation), achieve favorable resolution in at least 80 percent of nonmonetary trial cases and at least 85 percent of non-monetary appellate cases. (Summary-Level)
- Progress successfully in the Winstar litigation, avoiding excessive damage awards. In 2001, the Civit Division expects to complete discovery in approximately 30 Winstar cases and obtain decisions in or otherwise resolve up to 20 cases, provided that prompt appellate decisions in Glendale, CalFed and LaSalle are furthcoming.
- Progress successfully in tobacco litigation. Establish an imaging system for the tobacco litigation team to include the Bliley and Minnesota Select collections. Locate and load into the database all available transcripts and depositions from tobacco litigation spanning the prior 30 years. Establish effective and coordinated tobacco litigation teams at all affected federal agencies.
- Initiate investigations and prosecutions involving consumer fraud on the Internet, especially the illegal sale of prescription drugs, unapproved medical devices and illegal fireworks.
- Continue to combat terrorism, seek to remove criminal aliens and enforce the nation's immigration laws by defending
 administrative decisions and INS programs and policies.

- Expand efforts to combat health care fraud, including heightened emphasis on extraordinarily large cases.
- Increase participation in Alternative Dispute Resolution programs.
- Continue to resolve cases favorably at various levels of judicial review.
- Implement changes to the Vaccine Program without developing backlogs. Maintain a 25 percent termination rate.
- Work with federal, state and local law enforcement to combat civil fraud by sponsoring or otherwise participating in training conferences.
- Represent federal law enforcement programs in foreign courts to recover money lost to perpetrators of telemarketing and laternet fraud.
- Assist state law enforcement agencies with respect to prosecuting odometer fraud cases.

External Factors

To a large extent, the Civil Division's ability to achieve its performance targets will depend on several key factors:

- The Civil Division has limited control over the composition and size of its caseload because, on average, over 80 percent of its cases are defensive.
- In affirmative litigation, the defendant's ability to pay can have a profound impact on success. Although the government's loss
 can be proved and quantified, the recovery is limited by the monies available, which can fall considerably short of the amount
 sought.
- The court determines the pace of the litigation when it sets trial dates and discovery schedules. Absent the Civil Division's
 timely and effective response, the government may face sanctions and default judgments. Alternatively, bottlenecks in the
 court may result in protracted litigation, higher costs and delayed resolution of disputes.
- The majority of cases the Civil Division retains cases filed in national courts (Court of Federal Claims, Court of Appeals for
 the Federal Circuit, Court of International Trade), cases filed in foreign courts and claims filed in connection with the
 Radiation Exposure Compensation Act or the National Childhood Vaccine Injury Act fall within its exclusive jurisdiction.

Data Validation and Verification

The primary source of data for measurement of the Civil Division's GPRA goals is the automated case management system (CASES) CASES was implemented in 1987, enhanced extensively over the years and fully upgraded to year-2000 compliance. Because the Civil Division relies so heavily on CASES for its management and planning, data accuracy is an important goal of the system. To achieve data base integrity, the following steps have been taken:

- All data input screens have been programmed with numerous safeguards to preclude the entry of incorrect data.
- Contractor staff regularly review case listings and interview attorneys concerning the status of each case.
- Exception reports, listing data that is questionable or inconsistent, are generated and reviewed. In addition, attorney managers review numerous monthly reports for data completeness and accuracy.
- The contractor executes a comprehensive quality control plan in which representative samples of data are verified. Another
 independent contractor is used to verify various aspects of the work of the case management contractor.

Despite these measures, some data limitations do exist. Most significantly, incomplete data on case terminations and attorney time can cause the system to under-report case closures and attorney time. Missing data is most often retrieved as a result of the contractor interviews and the review of monthly reports. To minimize the extent of missing data, the Civil Division has made adherence to the reporting requirements of CASES a performance element in all attorney work plans.

Base Program Description

The Appellate Staff represents the interests of the United States at the highest levels of judicial review. The Staff's broad and varied litigation includes constitutional issues of individual liberties, issues of societal and collective rights exercised by the government and issues affecting national accurity and executive authority. The Staff handles appeals on behalf of all Civil Division components and the U.S. Attorneys Offices, as well as a cases appealed directly from administrative agencies; however, the responsibility may be delegated to other litigating components. The Staff also is a key part of the government's litigating team in the Supreme Court under the supervision of the Solicitor General. This arrangement provides centralized jurisdiction over appellate litigation and ensures uniform treatment of issues affecting the government. The Staff helps shape the Department of Justice's litigating positions by participating in working groups with the Offices of the Deputy Attorney General, Associate Attorney General and Solicitor General.

The Staff protects the financial interests of the United States by defending against unwarranted claims involving large financial stakes—most notably, the successful appeal of the \$1.2 billion judgment in the A-12 stealth fighter case — and by preserving judgments in favor of the government. Cases involving new laws, major initiatives or controversial issues are often appealed. Consequently, the Staff handles appealate challenges to executive decisions and administrative policies that direct government programs. For example, the Staff is currently handling an appeal brought by domestic utility companies challenging annual assessments levied by the Energy Policy Act of 1992. The value of such future assessments is approximately \$1.1 billion. Suits also include constitutional challenges to major legislation such as the Telecommunications Act, the Prison Litigation Reform Act and the Violence Against Women Act.

In 1999, 57 percent of the caseload was affirmative, involving government appeals of adverse judgments at the trial court or administrative level. In defensive cases, the Staff represents the government in appeals initiated by opponents who were unsuccessful in lower courts. Attorneys routinely draft memoranda to the Solicitor General on appeals of adverse judgments, prepare briefs on the moranda and present oral arguments in the various federal courts of appeals. In addition, attorneys draft documents for the Supreme Court such as certiorari politions, briefs in opposition to certiorari and merits briefs. In 1999, Supreme Court cases and certiorari politions comprised 42 percent of the workload.

In addition to its role as the government's expert in court of appeals litigation, the Staff also devotes significant time to advising and assisting Civil Division litigating branches, the U.S. Attorneys Offices and client agency counsel in drafting appellate briefs and preparing oral arguments. The Staff participates in special projects like the bi-annual redesignation of Foreign Terrorist Organizations under section 219 of the Immigration and Nationality Act.

In 1999, the Appellate Staff handled 2,110 cases. Attorneys spent about 76 percent of their time litigating cases. Case receipts grew nine percent from 1998 to 1999, led by defensive Supreme Court cases and petitions. Significant litigation is expected as a result of anti-terrorism legislation, the Food and Drug Administration's tobacco regulations and the government's continuing efforts to administer the health care system more successfully.

Program Performance and Accomplishments

The Appellate Staff measures its performance by tracking its success at the various levels of judicial review. The chart which follows shows historical performance data, as well as projections based on past trends. In 2001, the Staff plans to increase participation in Atternative Dispute Resolution programs with the aim of resolving more cases outside of litigation. In the 1999 Performance Plan, the Staff set the following goal: "Working as a friend-of-the-court, support states' statutes ("Megan's Lawa") which require registration and public notifications of released sets offenders living in the committy." The Staff successfully defended the constitutionality of Megan's Law as a friend-of-the-court in eight appeals: two in the Federal Court of Appeals for the Second Circuit (Connecticut and New York laws), three in the Third Circuit (various aspects of the New Jersey law), one in the Ninth Circuit (Washington State law) and one each in the highest state courts of New Jersey and Massachusetts. Other notable accompliatments include:

The Staff played a key role in accuring a major victory in the A-12 stealth fighter case. The Federal Circuit overturned a \$1.2 billion judgment against the government and remanded the case to brial. The lawsuit arose from the termination of a contract between the Navy and McDecneil Douglas (now part of Boeing) and General Dynamics to build the aircraft. A unanimous three-judge panel ruled that the trial judge had erroneously found that the contract was "terminated for convenience" by the government — a finding which potentially entitled the contractors to all of their costs plus a reasonable profit or the appellate court also rejected plaintiff's contention that the contract did not permit a termination for default if the contractors failed to make sufficient progress.

In addition to obtaining the favorable decision upholding the assault weapons ben, the Staff also defeated a constitutional challenge to federal laws prohibiting felone from possessing firearms. In a related issue, the D.C., Seventh and Eleventh Circuits have upheld the constitutionality of the Lautenburg Amendment to the Ourt Control Act of 1986 which bers persons convicted of a demestic violence misdemessor from possessing a firearm that has traveled in interstate commerce.

The Telecommunications Act of 1996, which opened local telecommunications markets to competition, was successfully defended in two appeals. State public utilities commissions challenged the jurisdiction of the federal courts to review interconnection agreements between previously existing and new carriers. The Sixth Circuit in Michigan Bell and the Seventh Circuit in MCI upheld the judicial review provision. Similar cases are pending in several other circuit counts.

The ability of federal, state and local law enforcement agencies to detect, prevent and prosecute criminal activity was successfully defended in a Federal Communications Commission (FCC) rulemaking proceeding. The FCC granted the Department of Justice's petition to adopt new technical standards requiring telecommunications carriers to assist in authorized electronic surveitlance. The Staff is defending this favorable decision in the Court of Appeals.

The power of local government to regulate the location of tobacco advertising was preserved in Faderation of Advertising Industry Representatives v. City of Chicago. Chicago, like many cities, adopted an ordinance which severely restricts outdoor advertising of tobacco products. Advertisers have challenged these city ordinances, claiming that they are prescripted by federal law and are prohibited by the First Amendment. The Second and Seventh Circuits have accepted the Staff's argument that even though the federal Cigarette Labeling Act precripts state and local restrictions on the content of tobacco product advertising, it does not stop these entires from regulating the location of such advertising. Similar cases are pending involving restrictions imposed by Massachusetts and other localities.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Department of Justice — Civil Division — Appellate Staff

STRATEGIC GOALS:

· Represent the Catted States in all civil matters.

3001 PERFORMANCE PLAN:

- · Continue to resolve cases favorably at various levels of judicial review.
- . Continue and increase participation in Alternative Dispute Resolution programs with the nim of resolving more cases outside of litigation.

Increase/Decrease			

Base Program Description

Large-scale claims alleging government neglect or wrongful conduct are handled by the Torts Branch. Often, the government's involvement in the event triggering the suit is clusive. These suits frequently involve hundreds of plaintiffs, massive discovery requirements, protracted trial schedules, arcane subject matter and substantial monetary damages. In 1999, over \$8 billion was at stake in a workload of 3,043 cases (exclusive of RECA claims). Traditionally, the Branch's affirmative litigation has been limited to ship foreclosures and suits against those who damage government property. The recently-filed suit to recover the federal health care costs arising, from tobacco-related illness builds upon the Branch's affirmative mission. Attorneys spend the majority of their time, 83 percent, litigating cases. Most of the remaining time is spent advising client agencies and the U.S. Attorneys Offices.

Where traditional litigation has proven ineffective, Congress has required the Division to participate in novel specialized programs to resolve complex suits. The enactment of the National Childhood Vaccine Injury Act and the Radiation Exposure Compensation Act (RECA) are prime examples. The former law created a program which established an Office of Special Masters within the Court of Federal Claims to determine entitlement decisions. The latter law created a system more akin to an administrative claim program than to litigation. (For details, see the RECA Trust Fund budget.)

The Torts Branch is comprised of five sections: Aviation and Admiralty, Federal Tort Claims Act, Environmental Torts, Constitutional and Specialized Torts and the Tobacco Litigation Team.

The <u>Aviation and Admiralty Section</u> handles maritime and aviation accident cases, as well as various maritime tort and contract claims. National security interests are protected in cases related to military signaft crashes, such as the "friendly fire accident" involving an ernant Navy missile which damaged the Turkish vessel MAUVENET. Other cases involve challenges by vessel owners and crews to the boarding of vessels on the high seas during national security and drug interdiction activities. The Section also handled high-dollar litigation involving the Federal Aviation Administration's certification of aircraft conversions and its air traffic control when aircraft accidents occur. An important part of the Section's caseload involves affirmative actions which seek compensation for the loss of government cargo, damages to locks, dams and natural resources, and the costs associated with maritime pollution cleanups.

Receipts, which increased significantly in 1998 and 1999, are expected to peak in 2001. Filings associated with the Korean Airlines/Guam aircraft accident and a Department of Agriculture decision to pursue foreign aid cargo claims have sourced the increase.

Aviation/Admiralty Section: 1996 - 2001

	1998	1999	2900	2001
	Actuals	Actuals	Rat.	Est.
Receipts	309	319	300	324

The <u>Federal Tert Claims Act (FTCA) Section</u> litigates a wide array of cases alteging government liability arising under the FTCA. The docket includes litigation involving federal law enforcement, the spread of AIDS and national security issues. Other FTCA cases involve alteged negligence in connection with agency regulatory programs and medical treatment at government medical facilities, Indian Self Determination Act facilities and community health centers. The spike in 1998 receipts resulted from filtings related to the Food and Drug Administration's regulation of bone screw devices.

FTCA Section: 1998 - 2001

	1998	1999	2000	2001
	Actuals	Actuals	Est.	Zat.
Receipts	249	- 44	_66	76

The Environmental Torta Section defends the government against claims for monetary damages resulting from death, personal injury or property damage caused by environmental or occupational exposure to toxic substances. Many cases arise from government contractor or military activities, some dating back to the World War II era, and from environmental regulatory activity. The cases often involve hundreds of plaintiffs alleging injuries caused by air, surface water or groundwater contamination or by direct contact with hazardous substances. The spike in case receipts in 1998 was the result of an increase in asbestos-related lawsuits which, thus far, have not resulted in any significant litigation against the United States. Groundwater contamination cases arising from the operations of military installations and contractor-operated facilities, such as the Jet Propulsion Laboratory in California and the Longhorn Army Ammunition Plant in Texas, are expected to comprise the bulk of the Section's workload. The Section anticipates a possible increase in cases alleging exposure to beryllium and other contaminates from nuclear-related activities of the federal government and its contractors.

Environmental Torta Section: 1995 - 206)

	1998	1999	2000	2001
	Actuals	Actuals	Est.	Ret.
Receipts	281	159	198	203

The <u>Constitutional and Specialized Terts Section</u> defends civil actions filed under the National Childhood Vaccine Injury Act, adjudicates claims filed under the Radiation Exposure Compensation Act (see separate RECA budget), handles Bivers suits and handles vessel accident claims transferred from the Panama Canal Commission.

The National Childhood Vaccine Injury Act created the Vaccine Injury Compensation Program to ensure the continued supply of vaccines and provide an atternative to the tost system for those claiming injury from immunizations. When a petition for vaccine compensation is filed, a Special Master makes the initial determination on entitlement. Appeals are heard in the Court of Federal Claims and the Court of Appeals for the Federal Circuit. Program staff collaborated with the Department of Health and Human Services on the "Vaccine Injury Compensation Program Amendments of 1999" transmitted to Congress in June. The draft bill proposes modifications to the program to streamline the process and better serve the interests of children and families. Vaccine receipts more than tripled in 1999 as a result of the addition of four vaccines to the Vaccine Injury Table: Hepatitis B, Varicella, Hemosphilus influenza Type B and Rotovirus Gastroenteritis. The recent addition of Streptococcus Pneumonize vaccines and the proposed addition of the Hepatitis A vaccine could expand the program even further.

Bivens suits involve the defense of government employees who are sued as a result of their official duties. These cases are a demanding component of the Section's work and represent a critical line of litigation for the entire government. They can be extremely controversial, complex and time-consuming. The suits generally arise when plaintiffs claim that government employees have violated their constitutional rights. Because individual federal officials are defendants. Bivens litigation goes to the heart of the ability of public servants to carry our their mission. These cases involve a wide array of government employees including law enforcement officers and Cabinet members, as well as a great variety of subjects including personnel issues and matters of national security.

On December 31, 1999, the Section assumed responsibility for pending ship collision cases from the Panama Canal Commission when the Canal was returned to the Republic of Panama. By assuming this responsibility, Section attorneys will enable the United States to fulfill its commitment to Panama that the Canal be returned free and clear of liens. An initial group of Panama Canal cases has been transferred; a smaller number of additional fillings are expected in 2001.

Program Performance and Accomplishments

A key Torts Branch performance measure tracks the value of claims defeated. During 1999, the Branch defeated over \$909 million in defeative cases disposed. Examples of recent accomplishments follow:

Five years of litigation, collectively involving the defeat of over \$1 billion in claims, ended with a \$7 million final settlement in Cincinnati Radiation Litigation. Claimants in the suit alleged that terminally ill cancer patients were subject to radiation experiments.

The recent defeat of a \$500 million aviation suit was secured through the dismissal of GATX. Plaintiffs alleged negligence in the issuance and later withdrawal of FAA approval for expensive aircraft modifications.

More than \$57 million in claims alleging exposure to toxic chemicals were defeated in *Redland Socret* and O' Neel. In litigation aparating nine years, 171 plaintiffs accept to recover medical expenses they incurred from the alleged exposure on the site of a former Army depot. In an expressedanted decision, the trial and appellate courts have agreed that state courts lack jurisdiction to adjudicate environmental regulatory cases against the United States.

The defeat of over \$55 million in claims in the grounding of the QE2 off the coast of Cape Cod was upheld on appeal. In Management Activities, a wake turbulence case, the favorable conclusion of over \$30 million in claims was assured with the dismissal of plaintiffs' appeal.

Approximately \$50 million in omnibus vaccine litigation was defeated when the Branch prevailed at the Court of Appeals for the Federal Circuit in *Hanlon*. Plaintiffs claimed that their immunizations aggravated their Tuberous Sclerosis, a genetic condition. However, based on cutting edge medical research, the Court rejected all claims and adopted the standard of proving medical causation ursed by the government. This decision resulted in the favorable resolution of six similar cases.

The plaintiff in International Advocate claimed to represent over 100 Victnamese survivors, heirs and successors of the victims of the 1968 My Lai Massacra and sought compensatory and punitive damages as a result of the United States' involvement. The Court agreed with the Branch and dismissed the case for lack of jurisdiction.

Nearly \$32 million was recovered through the favorable resolution of a group of worldwide admirally cases known as Big Z. These actions involved the foreclosure of tuna boat and fish processing plant mortgages, the recovery of fishermen wages, personal injury actions and claims for fuel and supplies.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Department of Justice — Civil Division — Toris Breach

STRATEGIC GOAL:

· Represent the United States is all civil matters.

2001 PERFORMANCE PLAN:

* Courtisms to resolve cases favorably at various levels of judicial review.

Implement changes to the Vaccine Program without developing backings. Maintain a 25 percent termination rate.

• Program recountily in inhouse Bilgaton. Establish an imaging system for the tebacco Hitgation team to include the Silbey and Minnesota Salect collections. Locate and hand had they the detabase all evaluable transcripts and depositions from tebacco Hitgation openning the prior 36 years.

A. Definitions of Torms or Explanations for Indicators:

- Indicators 1-8, \$1 and \$2: The data source for these indicators is CASES, the Civil Division Indigeneral and Settlement Accounts, a database which tracks impactory events and collections.
- Indicator 9: The data sources for this indicator are monthly status reports provided by the Department of Health and Human Services from their independent database which tracks workload data for both "pre-Act" and "post-Act" vaccine claims.
- All Indicators: The numbers in the "1998 Emeted Plan" column are as reported to the 1999 Congressional budget submission.
- All Indicators: The sumbers in the "1999 Executed Plan" column are as reported in the 2000 Congressional budget submission.
- Indicates: 1, 2 and 3: Case counts for those indicators were developed in a manner consistent with prior budget submissions and refer to personally and jointly handled cases.
 Indicates: 1 in and 12: DOI juministic include only personally handled cases to avoid double counting cases jointly handled with the USAD's Settlements are counted as favorable resolutions.

8. Letter Affecting FY 1999 Program Parformance:

- Judicator 3 and 8: Terminations are less than the "Esacted Plan" due to the slower pace at which vaccine and asbestos docinious were rendered. The vaccine spraination rate was also affected by measurem cases with incomplete medical records and by a survey of receipts or the final quarter.
- Indicators 5 and 7. These indicators are driven by the monetary claims asserted by plausiffs, which one very significantly. For example, as average of \$3.2 million was sought to defensive cases closed in 1996; in 1999, the case average tests only \$3.6 million. Another factor was the lower manufactor of necessant as 1999.
- Indicator 6: Size and tissing of recoveries is very errors and ammerous factors affect the level of recoveries in any given year and, so such, historic results are not a predictor of recoveries in future years. 1999 results included a \$31.7 million recovery in the Big Z linguism.

C. Issues Affecting Selection of FY 2000 and 2001 Estimates:

- Indicates 2: A spike in receipt in 1995 retailed from program singligence suits targeting the Food and Drug Administration's regulation of bone acrew devices and appears
 trigation arising from marising shippers; receipts remained elevated in 1999 due to uncreased value cases and affermative cargo damage suits. 2000 and 2001 receipts include:
 trigation the Breach seasoned when the Panette Canal reverted to Panette on Documber 31, 1999.
- Indicator 3: 2001 terminations include increases related to the bone screw bugation.
- 9 Indicator 4: Percentage is based on historical trends.
- Inadicators S, 6 and T. The Department of Justice has established a policy not to identify estamates for 2000 or 2001 for a histoid number of indicators that may be construed as establishing "targets" for investigative, highstwe or other law exforcement activities. However, such indicators provide an important record of prior-year accomplishments and will be included in program performance reports.

Base Program Description

The Commercial Litigation Branch represents the United States in litigation arising from the government's buying, selling, lending and other financial transactions. In 1999, 558 billion was at issue in the Branch's caseload. The majority of the cases — 87 percent in 1999 — were defensive. Affirmative actions recoup for the U.S. Treasury billions of dollars lost through fraud, bankrupticies and loan defaults. Attorneys spend about 90 percent of their time litigating a workload composed of especially labor-intensive cases.

Five sections comprise the Commercial Litigation Branch: Court of Federal Claims/Court of Appeals for the Federal Circuit/Court of International Trade, Fraud, Corporate/Financial, Intellectual Property and Foreign Litigation.

The Chains Section is the targest section and handles some of the federal government's most resource-intensive, high-stakes cases brought in the Court of Federal Claims, as well as appeals to the Federal Circuit and claims brought in the Court of International Trade. For the better part of a decade, the Section has experienced notable growth in extraordinarily large Court of Federal Claims cases. Well-financed companies are willing to pursue their contract claims aggressively, since the potential awards far exceed even sizable higation expenses. Examples of extraordinarily large contract dispute cases include:

- A-12. The Navy's termination of a contract with McDonnell Douglas (now part of Boeing) and General Dynamics for the A-12 stealth fighter has spawned nine years of highly classified litigation. Approximately \$4 billion is at issue for an airplane that was never manufactured. In 1995, the trial court ruled in plaintiff's favor regarding liability. Following extensive litigation on damages, in 1998 the trial court awarded plaintiff's \$1.2 billion, in addition to the \$2.7 billion already received. On July 1, 1999, the Court of Appeals reversed the trial court's liability ruling, vacated the damages award and remanded the case to the trial court for a trial on all issues.
- <u>Winster</u>. The Winster litigation is unprecedented in terms of size, complexity and potential stakes. Plaintiffs' claims are in the vicinity of \$30 billion, although we estimate the government's liability to be only a fraction of this amount. These 100-plus cases involve more than 400 financial institutions throughout the United States and potentially over one billion pages of government documents. The Winster litigation is funded by the Department of Justice and the FSLIC Resolution Fund.

To date, seven trials have been completed and three trials are in progress. Up to 10 cases are expected to go to trial in 2000. Additionally, favorable actilements have been reached in six cases. To continue this momentum, we have pursued formal Alternative Dispute Resolution (ADR) in six cases, as well as informal settlement discussions in over 40 cases. Civil Division attorneys are working diligently to identify additional cases in which settlements would be appropriate and are developing an overall settlement strategy.

The Winster team has made substantial progress in discovery and pretrial activities. Despite months of delays caused by the plaintiffs' requests for extensions and the chief judge's insistence upon personally deciding contract formation and breach issues, fact discovery has been completed for all 12 priority cause and the first 30 cases. After identifying over 293 million pages of potentially relevant materials from 122 government and plaintiff sites, we acannot more than 20 million pages. Almost 17 million pages were converted from scannod images to scarchable text [OCRed] and coded into categories.

Expert discovery has been concluded in the 12 priority cases and is continuing in the first 30 cases. To assist with these cases, the Division has retained approximately 65 experts from 10 firms to provide consulting and testimonial services. These carefully selected experts have proven to be invaluable in convincing the court of the validity of our defenses and in discrediting the plantiffs' claims.

A second group of 30 cases began fact discovery in August 1999. Under the existing court schedule, discovery proceedings will commence for a third group of 30 cases in August 2000 and for the remaining 14 cases in August 2001. Consequently, the number of cases in various phases of litigation may reach up to 95 in 2000 and nearly 100 in 2001. Substantial resources will be needed through 2001 to support the increasing workload.

Morigage Propayment. In the wake of Winster, a multitude of breach-of-contract allegations have been made involving "War on Poverty" low-income bousing projects developed with loans insured by the Department of Housing and Urban Development (HUD). Pursuant to the loan notes executed between the owners and their private leaders, owners were permitted to prepay their loans after 20 years — in effect, freeing the projects of low-income use restrictions and allowing market-based rents. HUD was not a party to the notes. In 1988, in an effort to forestall a possible low-income rental housing shortage occasioned by massive prepayments, Congress passed legislation that placed restrictions upon prepayments.

Presently, there are 25 HUD mortgage propayment suits involving more than 800 plaintiffs and claims that exceed \$600 million. In Cienega Gardens, after the Court of Appeals for the Federal Circuit rejected plaintiffs arguments of a contract breach, the plaintiffs are alleging that the legislation constituted a Fifth Amendment taking of their bousing projects for public use. An appealate decision in Graenbrier Apartments will limit this strategy: the court of appeals held that the prepayment legislation do not, by itself, amount to a taking of any property rights. The court further held that the owners' takings claims were not rips for adjudication because the owners had admittedly failed to seek, as required by the legislation, a final decision from HUD as to whether they could pressay their notes. In addition to the HUD cases, there is a family of similar loan

prepayment cases that stem from the programs of the Farmers Home Administration (FmHA). These FmHA cases involve more than 270 plaintiffs and claims of about \$150 million.

- Spent Nuclear Fuel. Yankee Atomic Electric and other commercial nuclear utilities have attempted to apply Winstar-like claims to nuclear wate storage policy. Plaintiff argue that the government has broken its promise to begin acceptance of commercial spent nuclear fuel by January 1998. The utilities contend that they have been forced to store their own spent nuclear fuel while still contributing to the Nuclear Waste Fund set up to fund the federal storage effort. Eleven cases have been filed seeking several billion dollars in damages; up to 40 additional cases may be filed, raising total damages claims to an estimated \$50 billion. If the government is unsuccessful in pending appeals involving jurisdictional issues, the first trials could begin in 2000. If 50 cases are filed, this litigation could extend for years. The government's exposure could be staggering without expert analysis from the disciplines of nuclear facilities engineering and construction, accounting and utility rate-making, as well as substantial ALS.
- Alaska Pulp. Alaska Pulp Corporation (APC) claims that the government breached its contract when Congress enacted, and the Forest Service implemented, the Tongas Timber Reform Act of 1990, and when the government terminated for breach APCs contract in 1994. Damage claims total \$1.6 billion plus interest. The government has produced over 2.8 million pages of documents and APC has made available an estimated four million pages. Fact discovery is continuing and expert discovery is expected to begin in early spring. Trial is expected to commence in late 2000.
- Northrop Gramman "TSSAM". Claims of approximately \$1 billion are at stake over the Air Force's termination of a highly classified program to develop a stealth missile. The parties have engaged in discovery involving more than 15 million pages of documents; the parties will soon present the court with hundreds of proposed stipulations of fact which may serve as the basis for adjudicating a significant issue in the case. If the court concludes it cannot proceed by stipulation, a discovery phase of at least two years is likely to commence in March 2000.

In addition to the burgeoning contract dispute cases, this section handles a myriad of bid protests, fraud counterclaims and suits under the takings clause of the Constitution. The number of new bid protest cases, which are very time-intensive, has nearly quadrupled since the 1996 elimination of the General Services Board of Contract Appeals. Cases in the Court of Appeals for the Federal Circuit include appeals from district courts; appeals of decisions rendered by the Merit Systems Protection Board, the Court of Veterans Appeals and agency contract appeals boards; as well as appeals from the Court of Federal Claims and the Court of International Trade.

Attorneys in this Section also represent the United States in the Court of International Trade. The international trade caselond grew significantly from 1995 through 1998 — a result of filings protesting an increased harbor maintenance tax collected by the Customs Service. Filings declined significantly in 1999 and will cease after the first quarter of 2000 when the statute of limitations expires. Other international trade litigation involves dumping penalties, trade agreements, tariff classifications and a variety of other actions related to U.S. customs laws.

Court of Federal Claims/Court of Appeals for the Federal Circuit/Court of International Trade: 1998 - 2001

The <u>Frand Spriles</u> handles litigation to recover losses from those who defraud the government. Cases are filed in district courts and fraud counterclaims are pursued in the Court of Federal Claims.

Health care fraud litigation is expending rapidly, in both size and yield to the U.S. Treasury. Cases involve health care providers, carriers and fiscal intermediaries that defraud Medicare, Medicaid and other federal health care programs. The Branch has recovered nearly \$2.8 billion in health care fraud cases since 1986; in 1999, judgments and actilements in health care fraud cases exceeded \$237 million.

New health care freed cases in 1999 increased 71 percent over the number received in 1996 — the year the Health Insurance Portability and Accountability Act was enacted. Another 30 percent growth in new cases is expected by 2001. Columbia/HCA, the largest for-profit hospital chain in the country, is currently the subject of one of the most significant health care fraud investigations ever tausnched by the government. Fraud Section strormeys are collaborating with the FBI and multiple Department of Justice components, as well as the Department of Health and Human Services, state investigative organizations and other law enforcement agencies in this nationwide effort.

Another fast-growing portion of the workload consists of cases filed on behalf of the federal government by private citizens known as "relators" under the 1986 quit tern introducents to the False Claims Act. In return for exposing fraud against the government, relators share in recoveries resulting from the cases. Quit tern cases now comprise 63 percent of the caseload. Quit tern receipts are expected to increase by 14 percent from 1999 to 2001. Procurement fraud cases continue to comprise a significant share of the Section's workload and accounted for recoveries topping \$188 million in 1999.

Fraud Section: 1998 - 2801

	1990	1999	3899	2003
	Actuals	Actuals	Est.	Est.
Receipts	291	344	382	406

The <u>Comparate/Phanical Section</u> handles a wide spectrum of Iswanits involving claims for money and property. Attorneys represent the government's financial and regulatory interests in large and complex Chapter 11 bankruptcies, including those involving defense contractors, commorcial airlines, health care providers, rural electric cooperatives and other major corporations.

The Section is working with various U.S. Attorneys' Offices to protect licenses valued at \$10 billion issued by the Federal Communications Commission (FCC) for wireless telecommunications services. Several licensess, who were officed finverable payment terms as required by law, have filed for bankraptcy claiming that they incurred financial difficulties because of the dramatic depreciation of their licenses during the several mosths between the section and the date on which the licenses were awarded. Although two licensess obtained favorable ratings which significantly reduced their deb' to the government, one judgment was recently reversed on appeal and the other is pending an appellate decision. At risk is not only the substantial value of the licenses and \$1 billion in down payments, but the integrity of the Congressionally-mandated section process the FCC uses to allocate most of its horsess.

The Department of Housing and Urban Development (HUD) is a frequent client in bankruptcy cases initiated by owners of housing projects holding HUD-insered mortgages, at well as in district court proceedings to enforce HUD's interests strising from mortgages and regulatory agreements. Other cases include suits challenging the enforceability of student loans brought against the Department of Education, schools, banks and state guarantee agreeces. The Soction also represents the Rural Utilities Service and other similar associety in all of the large-dollar, large-document cases in which they are parties.

Corporate/Fluxucial Section: 1998 - 2001

		_		
	1998	1999	2000	2001
	Actuals	Actuals	Est.	Est.
Receipts	88	104	123	135

Receipts are expected to increase due to a rise in bankruptcy filings of health care providers and electric cooperatives. Increased receipts also are anticipated from HUD's enhanced enforcement initiatives and in Medicare Secondary Payer Intigation, where monies are recovered from third-party payers who have primary responsibility for paying health care benefits that have been paid by Medicare.

The <u>Intellectual Property Section</u> handles a wide variety of litigation involving patents, trademarks, copyrights, trade secrets and other related matters. These cases are extremely complex, requiring extensive technical and legal analysis of each asserted patent and each accused system or device purchased by the government. The most significant suits are brought by major corporations seeking substitutal recoveries for the government's use of patented inventions. Attorneys defend the government in the Court of Federal Claims and in subsequent appeals to the Federal Circuit, as well as in challenges to actions by the Register of Copyrights brought in the various district courts.

Affirmative litigation enforces government-owned patents, deposit requirements of the Copyright Law and patent indemnity agreements. Other affirmative cases secure government patents for inventions arising from government-sponsored research and cancel patents issued as a result of fraud. The intellectual property workload also includes a variety of administrative proceedings before the Patent and Trademark Office. In addition, the Section provides considerable advice almost daily to various agencies.

Intellectual Property Section: 1998 - 2001

	1998	1999	2000	2001
i	Actuals	Actuals	Est.	Est.
Receipts	21	24	33	4(

The Office of Foreign Litigation represents the interests of the United States in foreign courts — a statutory responsibility that has been delegated exclusively to the Civil Division. Foreign courset, under the Office's supervision, represent the United States in over 1,200 lawsuits in as many as 100 nations at my given time. Supervision of European litigation is conducted from an office in London. As the sole authority to represent the United Lettes in foreign courts, the Office must respond to all new overseas litigation in which the government is named as a defendant. In 1999, more than 80 percent of the Section's receipts were defensive and included numerous continercial and lost cases.

The international telemarketing fraud careload is growing as the Office represents the interests of the Federal Trade Commission (FTC) and various U.S. Attorney's Offices (USAOs) in recovering illegal profits for return to definated consumers in the United States. The recent Canadian crackdown on domestic telemarketing fraud has resulted in the targeting of American consumers. Scams involving sweepstake prizes, foreign lotteries, credit repair and gernstones cost American victims billions of dollars amountly.

Other affirmative litigation involves health care fraud, bid-rigging, student and medical school loan defaults, environmental pollution violations, landlord-tenant matters and admiralty and shipping suits. Much of the affirmative litigation has a debt collection component. These activities include asset searches in which the Office seeks to identify, track and recover foreign assets in order to satisfy United States civil and criminal judgments.

Office of Foreign Litigation: 1998 - 2001

	1998	1999	1006	2001
	Attuals	Actuals	Est.	Est.
Receipts	249	177	186	194

The spike in 1998 receipts resulted from actions to recover delinquent disaster loans issued by the Small Business Administration. We expect that the increased enforcement efforts of the FTC and the USAOs will generate a steady flow of international telemarketing fraud cases through 2001.

Program Performance and Accomplishments

The Commercial Litigation Branch measures its performance by tracking its success in protecting the public fise through defensive and affirmative litigation. In 1999, the Branch defeated nearly \$6 billion in unmeritorious claims. In affirmative cases, the Branch secured \$432 million. The chart on page D-37 shows historical data on the Commercial Litigation Branch's workload and outcomes, as well as projections which are based largely on historical trends. Strategic initiatives in 2001 include: protecting the public fise, progressing successfully in the Winster litigation and combating health care fraud.

The Commercial Litigation Branch protected the U.S. Treasury against unwarranted claims and recovered money owed to the United States in a variety of recent cases:

- The Branch obtained a diamissal of Roedler, a \$250 million spent nuclear fuel case. Customers of a nuclear utility brought a class action against the Department of Energy (DOE) for its inability to begin disposal of the utility's waste. The court found that the utility customers had no contractual relationship with the United States and that they were not third party beneficiaries of the utility's contract with DOE.
- Winater-like claims were rejected in a significant mortgage propayment case. In Franconia Associates, the Court of Federal
 Claims dismissed the claims of 23 plaintiffs and the partial claims of five plaintiffs who asserted Winater-type theories
 regarding the propayment of mortgages obtained from the FmHA.

- The Branch obtained a \$51 million civil settlement and over \$10 million in criminal fines from Olsten Corporation and a subsidiary; Kimberty Home Health Care. These actions resolved allegations in connection with sales of home health agencies to Columbia/HCA and subsequent management arrangements. As part of the settlement, Olsten has agreed to cooperate fully in the government's continuing investigation.
- The U.S. Treasury is expected to receive approximately \$20 million from State Farm Mutual Automobile Insurance Company
 in a Medicare Secondary Payer case. The settlement provides reimbursement for payments made by Medicare when State
 Farm refused to make primary payment on a class of plaintiffs' medical expenses incurred from automobile accidents.
- In an FCC wireless license case, In re Packet Communications, the Bankruptcy Court agreed with the government's objection and rejected a proposed settlement. The settlement would have risked a \$143 million down payment from Pocket, the secondlargest winner of the licenses.
- The Branch defeated several significant patent infringement claims. In Pfund, a suit seeking over \$100 million for the government's use of laser satellite communications systems, the Court of Appeals for the Federal Circuit dismissed all claims. Over \$25 million in claims were dismissed in Wicker. Plaintiffs sought royalties for the Treasury's use of a new method of preventing the counterfeiting of \$20, \$50 and \$100 bills.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Department of Justice — Civil Division — Commercial Litigation Branch

STRATEGIC GOALS:

. Represent the United States in all civil matters.

1001 PERFORMANCE PLAN:

- * Continue to resolve cases favorably at various levels of judicial review.
- 4 In affirmative cases, continue to secure approximately \$5 percent of the delians sought in about 68 percent of the cases.
- 4 In defendive cases, continue to defeat approximately 75 percent of the clobal in about 76 percent of the cases.
- * In the Minuter Highthen, obtain decisions in or otherwise resolve up to 20 cross and complete fact and expert discovery in an additional 30 cases.
- Represent federal law enforcement programs in foreign courts to recover money lost to perpetrators of intenserteding and interest fraud.

A. Definitions of Yerms or Explanations for Indicators:

- All Indicators: The data source for all indicators in CASES, the Civil Division's fully autocrated case engagement system. CDISA refers to the Civil Division Indigunal and Scitlement Accounts. a database which tracks monetary sweets and collections.
- · All Indicators: The numbers in the "1996 Enerted Plas" column are as reported in the 1999 Congressional budget submission.
- A# Indicators: The numbers in the "1999 Engeled Plan" column are as reported in the 2000 Congressional budget submission.
- Indicators 1, 2 and 3: Case counts for those indicators were developed to a manner consistent with prior budget submanions and refer to personally and jointly handled cases.
- Indicator 6: "Dumarca/decresions" includes authorizate and wall decretions
- Indicators 11 and 12: DOJ summary indicators include only personally handled cases to avoid double counting cases jointly handled with the USAC's Settlements are counted as favorable resolutions.

5. Jacob Affecting FY 1999 Program Performance:

- Indicators 1 and 2: A large m/lux of cases protesting an increased harbor mustivenence tax began in 1995. Because these cases were stoyed pending the outcome of the load case, the producing counts have increased applicantly. The 1996 "Emicrob Plan" did not antercipte a nurge of fillings following the Supresse Court's decision that the tax was unconstitutional. While the increase was supported to continue through 1999, (fillings decision signaficantly after the first quarter.
- Indicator 3: Terminations are lower than the "Esacted Plan." at resolution of a significant number of harbor cases is not expected until 2001.
- Indicator 6: In 1991, we obtained settlements in Wissier, Statesman, Dollar and Union Federal. In 1999, trial damages/decisions were obtained in Glondale, CalFed and LoSalle, and settlements were reached in Maco and Fermont Federal.
- Indicator 7: The "Enocind Plan" neutrosted that all 30 cases activated in 1999 would complete discovery proceedings. However, actual results are lower because plansinffs' requests for extensions caused severe scheduling delays.
- 4 Sudicator 8: Size and totains of recoveries is very erratic and numerous factors affect the level of recoveries in any gives year and, as such, historic results are not a predictor of recoveries in future years. 1999 recoveries did not replacate results in 1998
- ◆ Indicator 9: This indicator is driven by the monetary claims steered by plaint(Ts, which can vary significantly, 1999 results include \$1.5 billion defeated in CalFed, \$1.2 billion in A-12 and \$981 million in Festala.

C Issues Affecting Selection of FY 2000 and 2001 Estimates:

- Indicator 3: Terminations of the barbor cases are expected to increase significantly in 2001.
- Indicators 4 and 5: Percentages are based on historical trends
- Indicator 6: The estimated exercise in 2001 is based on the assumption that prompt appellate decisions in Glendale, CalFed and LaSalle will prompte resolution of additional cases.
- Indicators 6 and 7: Projections are set according to current court mandates governing trial and discovery achedules and may change if the parties decide to appeal trial-level decisions.
- Laddesters 8 and 9: The Department of Justice has established a policy not to identify estimates for 2000 and 2001 for a limited asserber of indicators that may be constrained as establishing "largets" for invasibilities, bitigative or other law enforcement activities. However, such indicators provide as important record of prior-year accomplishments and will be uncluded in program performance reports.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Department of Justice — Civil Division — Commercial Littertion Breach — Health Care Proof.

PERATEGIC GOAL:

· Marriaget the United States in all civil posture.

2001 PERFORMANCE PLAN:

- · Vigorously partor the increasing sumber of extraordinarily large houlth care front case.
- * Work with federal and state low sufercommel to combet cive frond by spectaring or presenting at training supferences.

PERFORMANCE INDICATOR INFORMATION PERFORMANCE REPORT AND PERFORM			PORMANO	E PLANS

Base Progress Description

The Federal Programs Branch defends the officers and agencies of the United States in a wide variety of saits challenging the constitutionality and legality of federal statutes, programs and initiatives. The Branch protects the public fac by defending government policies and programs involving the distribution of monetary resources or benefits, while preserving the intent of congressional enactments and administration policies.

High-visibility cases that present important constitutional, statutory and regulatory issues typify the Branch's cases. Recent litigation has involved some of the most probing issues of our time — guri control, welfare reform, separation of church and state, line item veto, prison litigation reform and sexual harassness in the workplace. Currently, the Branch is defunding the civil rights section of the Violence Against Woman Act (VAWA) and various provisions of the Telecommunications Act of 1996. Additionally, the Branch is defending against a constitutional challenge to the Child Online Protection Act, which restricts the dissemination of harmful normographic materials to children over the Internet.

Statutes such as the Freedom of Information Act, the Privacy Act, Title VII of the Civil Rights Act, the Rehabilitation Act, the Social Security Act, the Equal Pay Act and the Federal Advisory Committee Act are the subject of suits handled by the Branch. The defense of challenges arising under the Constitution, the Administrative Procedures Act and other statutes of general applicability comprise a significant portion of the caseload.

While most of its cases are defensive, the Branch also initiates affirmative litigation to enforce federal laws and regulations. It represents agencies in civil actions to enforce the Ethics in Government Act against present and former federal officials, seeks judicial enforcement of Exspector General subpocess and litigates civil penalty actions under a variety of federal statutes, including the National Highway Traffic Safety Act.

The Branch is using Alternative Disputs Resolution (ADR) to resolve approximately 138 cases resulting from a Department of Agriculture settlement of a nationwide class action brought by black farmers in *Pigford* and *Brewington*. A similar class action was filled in November 1999 on behalf of thousands of Native American farmers who allege they were wrongfully decided forms losses and benefits and seek \$19 billion.

Federal Programs' litigation is comprised of cases involving novel questions where few precedents exist and appeals are insvitable. In 1999, over 89 percent of the Branch's 891 cases were defensive. Attorneys spend the majority of their time, over 89 percent, litigating cases. Most of the remainder of the attorneys' time is spent advising client agencies and the U.S. Attorneys Offices.

Program Performance and Accomplishments

The Branch measures its performance by tracking favorable resolutions of its cases involving challenges to federal programs, policy initiatives and congressional enactments. The chart which follows shows historical performance data, as well as projections based on past trends. Examples of recent accomplishments follow:

Concerned about the rapid rise in the cost of home health care to Medicare, Congress altered the method for calculating payments made to home health care agencies. Congress projected that those changes will save the Medicare trust fund hillions of dollars. The Branch secured disminsul of two consolidated cases in Texas when the court declared the statutory and regulatory achieves valid.

The states of California, West Virginia and Maine unaccessfully challenged the Department of Health and Hamm Services' efforts to recoup over \$280 million for contributions to state programs that fund pensions for state employees working in joint federal-state programs. The Branch obtained summary judgments in each case.

The Lautenberg Amendment to the Our Control Act of 1916 makes it illegal for persons convicted of certain domestic violence crimes to ship, possess, receive or transport finearms. The Branch has successfully defended the constitutionality of the Amendment in multiple challenges brought by lew antiorcement officers who have been terminated due to the statute's restrictions. The D.C. Circuit, the Seventh Circuit and the Eleventh Circuit have affirmed district court decisions.

An important objective of the Telecommunications Act of 1996 is to bring competition to the local telecommunications marketplace. To date, the Branch has secured over 30 favorable district court rulings upholding the constitutionality of federal district court review of local competition orders inseed by state public service communications, as provided in the Act.

Regulations requiring bases to be made fully accessible to individuals with disabilities, including those who use who are whocheirs, were upheld in American But Association. The court also upheld a provision requiring companies that fail to comply with the regulations to compensate passengers who are desired service.

Consumer Litigation					
2000 Appropriation Enacted	35	39	\$5,067		
2001 Base	35	39	\$5,175		
2001 Estimate	35	39	\$3,175		
Increase/Decrease					

Base Program Description

Litigation enforcing federal consumer protection laws, such as the Food, Drug and Cosmetic Act, the Consumer Product Safety Act, the Federal Trade Commission Act and the Motor Vehicle Information and Cost Savings Act in the responsibility of the Office of Consumer Litigation. The Office also defends policies and programs of client agencies including the Food and Drug Administration (FDA), the Federal Trade Commission (FTC) and the Consumer Product Safety Commission. Success in these cases safeguards consument who are unable to protect themselves from dangerous or worthless products and from unfair trade practices.

Affirmative cases brought on behalf of client agencies often involve freud perpetrated by manufacturers and distributors of misbranded, adulterated or defective consumer products. Others involve freud that exploits billions of dollars from unasupecting consumers through illegal conduct, including unfair credit practices and deceptive advertisements and sales. A key Office initiative involves the prosecution and prevention of consumer fraud violations perpetrated on the Internet. The filegal sale of prescription drugs, anapproved medical devices, illicit fireworks and other dangerous consumer products will be the focus of such cybercrime efforts.

Although most of the Office's litigation is affirmative, substantial time is spent on defensive litigation. Today's defensive cases send to be broader in scope and much more labor-intensive. Well-financed opponents protest PDA's actions through the highest levels of judicial review because their potential losses for outweigh even extensive legal costs.

The Office is the only Civil Division component that litigates criminal matters. Longer sentences and increased sent forfeitures are the aim of many of today's proceedings, resulting in even greater resistance by the defense and thus more protracted proceedings. The Office also provides guidance on consumer protection laws to state and federal agencies. For example, the Office furnishes state motor vehicle agencies and investigative bodies with training and computer software to streamline large-scale odometer tempering investigations.

in 1999, the Consumer Litigation caseload totaled 440 cases, including 130 new cases. Attorneys spent the majority of their time, about 75 percent, litigating cases. Most of the remaining time was spent advising state and federal agencies and the U.S. Attorneys Offices.

A similar level of receipts is likely through 2001. The workload is expected to be more complex, labor-intensive and long-term as a result of lengther criminal proceedings, as well as the FDA's change in enforcement approach and challenges to its regulations.

Accomplishments

Over \$55 million in criminal fines and civil possition were obtained in 1999. The Office measures its performance by tracking the percentage of cases favorably resolved. For affirmative cases, favorable resolutions include cases in which injunctive or monetary relief is obtained. For defensive cases, success is measured by the number of cases in which an agency's policies or programs are effectively defended. In 1999, 95 percent of the cases closed were resolved favorably. Examples of recent victories follow:

The largest monetary sanction ever imposed against a pharmaceutical firm was levied against Generatech for promoting a synthetic growth hormone for uses that had not been approved by the FDA. The company pled guilty to a felony violation of the Food and Drug. Act and was ordered to pay a criminal fine of \$30 million plus \$20 million in civil penalties.

The Office continues to coordinate investigations of numerous individuals who distribute general hydroxy butyrate (GHB), an unapproved and dangerous drug that can put meers in a come. Most recently, a guilty verdict was obtained against a defeadant in southern California who distributed GHB to teanagers at a "reve" perty, resulting in the death of a 15 year-old from GHB intextication and hypothermia.

Also were were freedulently promoted over the Internet by a Virginia doctor and others as a treatment for cancer, AIDS, herpes and other disorders — in violation of the Food and Drog Act and the mail fraud statute. Working with the U.S. Attorney in Maryland, the Office obtained the indictment of all of the perties involved in this scam.

Several new cases resulted from engoing investigations into the manufacture and sale of flash powder devices and illegal fireworks that caseed the death of one individual in 1998 and critically injured others. Thirteen search warrants have been executed and government agents have seized more than 16,000 pounds of devices and illegal fireworks. The Office obtained five convictions in, 1999, and thus far has built cases against nine other individuals in four Midwestern states.

Increase/Decrease			

Base Program Description

The Office of Immigration Litigation (OIL) is the last line of defense along an immigration enforcement continuum that involves the immigration and Naturalization Service (INS), the immigration courts, the Board of Immigration Appeals and the federal courts. By defending the government's immigration laws and policies and administrative judgments regarding alien removal, the Office of Immigration Litigation upholds the intent of Congress and accures the combined efforts of our immigration agencies.

Immigration litigation involves both individual challenges to enforcement actions and class action suits directed against the INS, the Department of State and other immigration-interested agencies. The Office also handles cases challenging the denial of visas and passports, the imposition of employer sanctions and the government's response to applications for naturalization, political asylum and other benefits.

Antiterrorism hitigation, including cases in which suspected alien terrorists challenge orders for their removal from the United States, comprises a growing aspect of the Office's mission. The 1996 Antiterrorism and Effective Death Penalty Act (AEDPA) and the Illegal Immigration Reform and Immigrant Responsibility Act (IIRRA) have expanded OiL's role in the fight against international terrorism. The Office represents the government before the alien terrorist removal court, a tool created to combat suspected alien terrorists and foreign terrorist organizations. OiL also assists the State Department and other agencies in designating foreign terrorist organizations and defending those designations in multiple lawsuits. The Office continues to collaborate with other Department of Justice components in drafting and scalaring terrorism-related legislation.

In 1999, the Office handled 5,150 cases before the United States District Courts and Circuit Courts of Appeals — a 38 percent increase over 1998 and more than double the number of cases handled in 1996. Fueling this increase was a record number of receipts— more than 3,000 in 1999. Congressional enactments, such as the Violent Crime Control and Law Enforcement Act of 1994 and the 1996 immigration reforms, have spurred the rise in receipts. Additional enforcement resources for initiatives on criminal aliens and asylum claims have increased the number of aliens facing expulsion from the United States. As the INS has brought more removal cases

before the immigration courts, and the immigration judges and Board of Immigration Appeals have increased the number of determinations rendered, more aliens have sought judicial review before the federal courts, also increasing OIL's case receipts. While most of OIL's cases involve challenges to orders of exclusion, detention and exputation in which individual attens contest the determinations made by immigration officials and the Board of Immigration Appeals, there was also an increase in the number of citizenship cases in 1999. This rise is attributable to an influx of cases seeking to denaturalize those who wrongfully secured United States citizenship. The Department of Justice's heightened emphasis on immigration enforcement portends a rise in the Office's caseload through 2001.

OIL attorneys spend the majority of their time, about 77 percent, litigating cases before the courts. Their remaining time is spent fulfilling the Office's mandate to provide nationwide coordination of immigration litigation. The Office has: (1) conducted training programs in Washington and Seattle for attorneys involved in litigation arising under the 1996 and 1997 reforms; (2) counseled its client agencies regarding promulgation of regulations necessary to implement these statutes; (3) published a monthly litigation newsletter to all U.S. Attorneys Offices' Civil Chiefs and INS District Counsel; and (4) conducted weekly working groups on defensive matters arising under the amended immigration and Nationality Act (INA).

Program Performance and Accomplishments

The Office of Immigration Litigation measures its success by tracking the percentage of cases in which favorable resolutions are reached. In particular, the Office has secured the prompt removal of criminal aliens by defeating almost all of the habeas corpus petitions and other suits challenging their detention and expulsion. In the 1999 Performance Plan, the Office set the following goal: "Establish an electronic library with the most up-to-date information on statutes, regulations and case law." A pilot web site — including immigration case summaries, links to case law and immigration regulations, as well as the Office of immigration Litigation's monthly bulletins — became available to other government agencies at the end of 1999.

The Office has achieved significant success in obtaining favorable immigration-related decisions:

The Supreme Court unanimously sustained the Attorney General's denial of asylum to a violent criminal in Aguirre-Aguirre. The Board of Immigration Appeals found that prior to arriving in the United States, respondent committed a "serious nonpolitical crime" as defined by the INA, and was therefore ineligible for withholding of deportation.

In American-Arab Anti-Discrimination Committee, the Supreme Court upheld the Attorney General's rejection of a selective prosecution defense raised by alien supporters of a foreign terrorist organization. The Supreme Court ruled that the INA restricts judicial review of the Attorney General's decision to commence deportation proceedings of aliens.

The Attorney General's authority to detain criminal aliens pending their removal from the United States was sustained in Zadvydax, as was her authority to denaturalize criminals who wrongfully guined citizenship in Gorbach. A key provision of the INA which requires that all challenges to removal be heard only in the courts of appeals was upheld in Richardson and LaGuerre.

Passport restrictions on "deadbest" parents were upheld in Eunique. The Child Support Enforcement Statute prohibits issuing a passport to enjoure who twee more than \$5,000 in overdue child support payments. When the State Department refused to issue her a passport, plaintiff, who owed more than \$25,000, claimed that her Fifth Amendment right to international travel had been violated. The court held that international travel is not a fundamental right and that such restrictions on nonpaying parents could prevent them from excepting jurisdiction and from spending trong on travel rather than on child support.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT; Department of Justice — Civil Division — Office of Immigration Litigation

ETRATEGIC GOALS:

. Represent the United States in all civil matters.

2001 PERFORMANCE PLAN:

Continue to combat terrorism, seek to remove criminal aliens and enforce the nation's immigration laws by defeading administrative decisions and INS
programs and policies. An estimated 90 percent of insulgration cases closed will be reached favorably.

A. Defigitions of Tornes or Explanations for Indicators

- Indienters 1, 2, 3, 5 and 6: The data source for these indicators is CASES, the Civil Division's fully automated case management system.
- All legislatures: The numbers in the "1998 Enacted Plan" column are as reported in the 1999 Congressional budget submission.
- All Indicators: The numbers in the *1999 Enacted Plan* column are as reported in the 2000 Congressional budget submission.
- Sudistant 1, 2 and 3: Case counts for these indicators were developed in a manner consistent with prior budget submissions and refer to personally and jointly handled cases.

 County include cases resulting from the Violent Crime Reduction Trust Fund resources.

B. Istatt Affecting FY 1999 Program Performance:

• Indicator 2: Increased receipts, when compared to 1998 and the "Enacted Plan" column are stributable to litigation spawmed by alter challenges to orders of exchasion, departing and expulsion. Also contributing to the increase are citizen denaturalization and Mariel cases, in which long-term Cubra detainees are filling suits seeking their release from custody.

C. Lioues Affecting Selection of FY 2000 and 2001 Estimates:

- Indicator 2: Through 2001, receipts will continue to rise as more suits challenging alien exclusion, detention and expulsion, and citizen denaturalization are filed. However, a portion of the increase involves habeas coupes petitions, which are not expected to be expectedly resource-intensive.
- Indicator 5: Percentage is haved on historical trends.

Incresse/Dervesse			

Base Program Description

The workload of the Civil Division is as broad and diverse as the activities of the 200-plus federal agencies we represent. In addition to our role in defending and promoting the laws, policies and programs of the United States, we protect the public fise. Every year, the Civil Division returns monies to the U.S. Treastery for exceeding its appropriation. In 1999, \$529 million was recovered in fraud, bankruptcies, loan defaults and other judgments and settlements. While some awards call for long-term payment plans, collections in 1999 yielded over \$458 million. Over \$7 billion in unwarranted claims were defeated in 1999, across a wide spectrum of cases including contract claims, tort actions and patent challenges. For every \$1 of its 1999 direct appropriation of \$142.7 million, the Civil Division secured nearly \$4 in awards and \$3 in collections, while defeating over \$48 in claims by the government's opponents.

Part and parcel of such success is responsive management capable of providing executive leadership and promoting performance and fiscal responsibility. The Management and Administration decision unit — comprised of the Office of the Assistant Attorney General and the Office of Management Programs (OMP) — serves this purpose.

The most direct way OMP fosters performance and efficiency is through its Automated Litigation Support (ALS) program. ALS provides a practical means of making millions of pages of evidentiary documents available to attorneys quickly and efficiently. It consists of document screening, imaging, computerization and trial preparation services that are essential to the successful handling of the Civil Division's largest, highest-stakes cases. As the majority of services are provided by contractor staff, ALS provides a flexible vehicle for responding to urgent litigation needs. ALS has provided indispensable support to the biggest defensive cases such as Winstar and A-12, as well as major affirmative efforts such as Columbia and the Tobacco Litigation Team.

Successful management of the Civil Division's burgeoning caseload is essential to ensuring efficiency in all stages of litigation.

CASES, the Civil Division's automated case management system, maintains the basic data needed for management of over 470,000

open and closed cases. Attorneys can access essential case-related information directly from their individual workstations, saving them countless hours of searching through voluminous physical case files. With only a few keystrokes, managers can search and update case files, monitor caseload activity and time expenditures, trace litigation histories, analyze caseload trends and evaluate future resource requirements. In 1999, CASES' operating hardware and software were fully upgraded with a state-of-the-art, year 2000-compliant system.

Office automation is a key feature of the technical support provided by OMP. The Civil Division's transition to a new server environment called "J C O N II" has begun and is expected to be completed by the third quarter of 2000. Older Pentium PCs will be upgraded with more current technology and printers that have reached the end of their useful life will be replaced. The Civil Division's legal research program links attorneys to WESTLAW and LEXIV. These specialized data bases provide up-to-the-minute information on federal and state law, court decisions and the legislative activity of Congress. The centralized records management program assists attorneys by directly maintaining and updating more than 1.650,000 of the Civil Division's case file sections.

The provision of responsive administrative support services is just as enacial as the provision of technological support. These services include: recruitment, hiring, employee assistance and training, personnel tracking, labor relations, procurement, facilities management and provision of office equipment and furniture. OMP has made major improvements in the timeliness and agaility of personnel and procurement services and significantly reduced costs over the last several years by assuming increased delegation of authority from the Justice Management Division. Through careful design of office space and support systems, OMP has also kept the Division's rent costs under control, while at the same time creating a productive, modern law office environment.

Sound fiscal management is another crucial OMP function. Each year, thousands of financial transactions are processed against a growing number of accounts under the Civil Division's purview. Ten years ago, funding sources were limited to the Geogral Legal Activities appropriation and a handful of reimbursement agreements. Today, OMP plans, executes and controls a proliferation of reimbursement agreements, special accounts to administer the Radiation Exposure Compension Act, a Violent Crime Reduction Trust Fund appropriation, an allotment from the Health Care Fraud and Abuse Control Account and two Fees and Expenses of Expert Witnesses allotments. As the number of accounts has grown, so have the responsibilities which encompass fiscal management.

OMP provides a service to the general public, coordinating responses to over 1,600 congressional and public inquiries each year. In accordance with the Attorney General's commitment to make the Department of Justice "more open, responsive and accountable" to the American people, OMP is committed to providing timely, accurate responses to all inquiries. The Civil Division receives and transmits congressional and high-priority mail inquiries using electronic imaging technology. This advancement unites all Department components under a central management system allowing for more efficient routing of incoming inquiries and for more timely responses.

Program Performance and Accomplishments

Management accomplishments achieved over the past year include the following:

- OMP completely redeveloped its case management system using LawPack, a state-of-the-art, year 2000-compliant software package. New server hardware was purchased. The systems and converted data were tested, user documentation and training were completed and the new system was successfully implemented in December 1999.
- The Division's delegated procurement authority has been increased to \$500,000 (Federal Supply Schedules and Department of
 Justice contracts) and to \$100,000 (open market orders) as a result of a very positive sudit. Together with the existing
 delegation for expert witnesses, this new authority should speed up the acquisition of consultants, experts and other support
 services for the Division's high-stakes litigation.
- The process of assuming full authority from the Justice Management Division for non-SES personnel management was
 completed. This transition has resulted in a reduction in the annual cost of providing Division personnel services and a 50
 percent reduction in processing time.
- In the A-12 appeal, an ALS team was instrumental in preparing government attorneys to win their appeal of a \$1.2 billion judgment. The Federal Circuit's remand to trial on all issues will allow the use of ALS' 20 million pages of fully computerized discovery documents, over 1,000 depositions, hundreds of key e-mails, videotapes and demonstrative exhibits.
- For the Winster Itigation in 1999, ALS provided discovery services for an active caseload which increased from 42 to 72.
 ALS staff also supported six trials, including the precedent-setting defeat of plaintiff's "lost profits" claim in Culfed.
 Courtroom presentation systems were provided for every trial, enhancing the introduction and discussion of evidence and shortening the length of several trials.
- The trial of two Columbia/HCA executives received extensive trial support, including complete courtroom presentation services. A jury found the executives guilty of six counts of defrauding Medicare of \$3 million. ALS was also provided to a closely-related qui tam case, Olsten Corporation, which resulted in a \$51 million civil settlement and \$10 million in criminal lines.
- The initiative to make "Summation" available to Civil Division attorneys and paralegals has been an unqualified success. This
 "do-it-yourself" litigation support tool for smaller cases now has 270 users who have created 234 databases. Summation has
 also provided "real time" court reporting services, particularly at depositions.

ENVIRONMENT AND NATURAL RESOURCES DIVISION

3/10/49 3/41/490 Ameri David

Summary Statement and Performance Plan Fiscal Year 2061

The Environment and Natural Resources Division (ENRD) is requesting a total of 478 permanent positions, 494 FTE workyears, and \$70,844,000 for 2001. This is an increase of 26 positions, 15 FTE workyears and \$5,635,000, including \$3,494,000 for adjustments to base and a program increase of \$2,141,000. Program increases are requested for two significant initiatives:

	Pos	Amount
Defending Civil Environmental Laws & the Public Fisc	14	\$1,153
Enforcing and Prosecuting Environmental Laws	12	988
Total	26	\$2,141

A. Component Mission and Goals, and Relationship to DOJ Strategic Plan

The mission of the Environment and Natural Resources Division is to enforce civil and criminal environmental laws to protect the health and environment of United States citizens. The Division defends environmental challenges to Government programs and activities and represents the United States in all matters concerning the protection, use and development of the Nation's natural resources and public lands, wildlife protection, Indian rights and claims, and the acquisition of Federal property.

In conformance with the DOI Strategic Plan and the Attorney General's statement of Department-wide goals, the ENRD works to

- Protect the federal fisc
- Champion greater protection of the environment and the Nation's natural resources
- Reduce white collar crime.

The Division also seeks to foster comprehensive, community approaches to environmental law enforcement and to ensure that victims of environmental crimes can meaningfully participate in the judicial process.

The work of the Division centers on eight core objectives:

(1) Protect the natural environment and our citizens;

55

- (2) Enforce the law fairly and effectively;
- (3) Maintain and promote a high level of statutory environmental protections;
- (4) Defend government pollution shatement programs;
- (5) Protect the public fiscal trust;
- (6) Acquire land in a fair and efficient manner.
- (7) Further the United States' trust responsibilities for Indian tribes; and
- (8) Make the Division work better with available resources.

B. Highlights of Mission Critical Results

To evaluate the achievement of mission critical results, ENRO has established a number of summary level performance indicators which are outlined below and illustrated in quantitative form on the table which follows (p. 6):

- Secure a substantial percentage of convictions in environmental and criminal wildlife cases
- Achieve favorable results in the bulk of affirmative and civil defensive cases brought.
- Limit payouts in defensive and land condemnation suits brought against the government to appropriate or fair market values.
- Achieve favorable results in water rights cases and other matters brought on behalf of Indian tribes and individuals.
- Respond quickly to public queries for information.

	77				*,	

Note. DCJ has embidded a policy wherein specific targets will not be identified for either FY 2000 or FY 2001 for a number of performance industries that may be misconstrued as establishing a "target" level of investigative, intigative or other law enforcement activity.

^{*} The arrest 1996 number for ECS Supplemental Environmental Projects is \$15,000. SEP amounts very greatly from your to year due to the nature of the precise.

^{*} in 1998, Indian Resources changed he counting symme. Provincely, water rights decreal wave counted assurding to cour; now duty are wached individually FY 99 N/A (Not Available) will be reported in the next holes synte.

C. FY 2001 Performance Goals and Indicators

To meet its objectives, the Division is proposing an FY 2001 Performance Plan attainable within the requested level of resources and with demonstrable results, as shown below. This FY 2001 Plan will establish a baseline upon which future performance may be tracked and reported, as required by the Government Performance and Results Act (GPRA).

GOAL: Restore and Maintain Federally Managed Lands, Waters and Renewable Resources

- Ensure clean, safe water by restoring and protecting America's waterways. In particular, ENRD will focus on the Mississippi River
- In conjunction with the Departments of Agriculture and the Interior, bring suit to reclaim abandoned mine sites.
- Work closely with client agencies on "ecosystem management," an approach to enhance protection of wetlands, forests, public lands, and waterways by considering ecological systems on a broad scale.
- Acquire environmentally-sensitive land for the government at the best price possible, including in and around Everglades National Park.
- Work with clients toward successful implementation of the Transportation Equity Act for the 21st Century ("T21"), especially as it pertains to National Environmental Policy Act (NEPA) considerations.
- Ensure that the Federal Government receives appropriate royalties and income due from leasing and mining activities on Federally managed lands and waters.

GOAL: Defend and Enforce Vital Government Pollution Abatement Laws and Programs.

- Protect human health and safeguard the natural environment air, water, and land upon which life depends.
- Defend the operating programs, permitting decisions and regulations of the federal agencies that protect the
 environment and natural resources.

- Working with EPA and the Department's Office of Justice Programs, expand the "Brownfields" initiative to
 promote the safe and sustainable reuse of properties that are idle or under-used due to toxic contamination
- Keep illegal pollution ranging from raw sewage to industrial waste out of the Mississippi River and restore the River and its surrounding communities
- Work with communities, HUD and the USAOs to enforce a new law designed to protect children from the hazards of lead paint ("Residential Lead-Based Paint Hazard Reduction Act")
- Use ADR and other litigation streamlisting techniques to achieve faster and more comprehensive resolution of complex cases

GOAL Improve Detection and Prosecution of Environmental and Wildlife Crimes.

- Identify and aggressively prosecute environmental crime that threatens human health (e.g., illegal ashestos
 removal, methyl-parathion, CFCs), the environment (e.g., transportation of hazardous materials, vessel
 pollution) and species diversity (e.g., Operation Chameleon).
- Improve training of, and coordination with, other agencies that enforce environmental laws, including the Fish and Wildlife Service; National Marine and Fisheries Service; U.S. Customs Service; Internal Revenue Service; the Department of Transportation; and our international counterparts.

GOAL. Safeguard Tribal Trusts.

- Litigate on behalf of tribes and individual Indians to: protect tribal regulatory, adjudicatory, and tax
 jurisdiction; secure tribal resources including water rights and land; establish and protect treaty-based hunting
 and fishing rights; and deter and remediate pollution problems on Indian lands.
- Participate as amicus or intervene on behalf of tribes and individual Indians in appropriate cases (e.g., land claims cases in New York State)

D. New FY 1001 Initiatives

Defending Civil Environmental Laws and the Public Fisc, 14 positions & \$1,152,746.

This is a broad initiative encompassing the full gamut of our non-discretionary civil defensive caseload and seeking additional litigation resources to handle the workload associated with.

- Defending EPA's National Ambient Air Quality Standards (NAAQS). Although the direct challenges to the
 new NAAQSs for ozone and particulate matter were briefed and argued previously, a recent adverse decision
 threatens to upend the program. Minimally, the new standards will generate extensive litigation and EPA is
 already promulgating the next generation of auto emission standards which are expected to cover sport utility
 vehicles and impose controversial new limitations on gasoline.
- Protecting multi-billion dollar Army and Department of Energy programs designed to store, transport and
 destruct hazardous materials, both chemical and nuclear, from complicated legal challenges in multiple
 emergency proceedings.
- Defending the largest and most complex CERCLA defensive matters (e.g., Dupont, Lockheed). At present, the
 Environmental Defense Section does not have sufficient resources to both adequately defend these resourceintensive cases and handle the rest of its diverse and growing caseload. Since FY 1998, the Section saved the
 public treasury over \$270 million.
- Increasing our participation in court-mandated Alternate Dispute Resolution (ADR), which will require more
 time than traditional Appellate litigation.
- Handling challenges to the Endangered Species Act (e.g., salmon); increased demand for land appraisals, and Indian trust issues

2. Enforcing and Prosecuting Environmental Laws, 12 positions & \$988,068

This, too, is a broad initiative which encompasses both criminal and civil litigation activities and includes several of the Department's Crosscutting Budget Initiatives for FY 2001.

The Division's environmental protection efforts depend on a strong and credible criminal program to prosecute and deter future wrongdoing. The Division has a 90+ percent conviction rate in criminal cases to date, making real the threat that those who commit environmental and wildlife crimes will be prosecuted and punished for their deeds. However, to maintain that success rate in the face of an increasingly sophisticated defense bar and to build on this past decade's efforts to curtail

environmental and wildlife crime will require a commitment of additional resources.

Our environmental and wildlife crime programs have enjoyed tremendous success over the past two years, e.g., we secured a \$27 million fine against Royat Caribbean Cruise Lines after exposing a fleet-wide conspiracy of dumping oil into the ocean and lying to cover it up and we successfully prosecuted an international endangered reptile smuggling operation. However, additional resources are needed to address the significant number of new environmental criminal matters, both national and international, as a result of these successful prosecutions. We need more resources to extend training outreach and devise new initiatives and operations.

In civil lingation, the Division urgently needs additional resources for our environmental enforcement cases, where the backlog of referred but unfiled cases is the highest ever. Environmental non-compliance problems need to be attacked on a "whole sector" basis, such as they were recently in the diesel engine sector. We also need resources to work in partnership with general counsels at various federal agencies to assert claims for response costs and natural resource damages, as we have done in <u>Bunker Hill</u> and <u>Montrose</u>. This initiative will also enable the Division to respond to the increased litigation associated with the multi-agency implementation of the Administration's Clean Water Action Plan, e.g., by reclaiming abandoned mine sites, regulating Concentrated Animal Feeding Operations (CAFOs), enforcing new Underground Storage Tank (UST) requirements, and restoring the Mississippi River. Other community-oriented enforcement actions will focus on children (lead paint) and Indians (land claims)

E. Data Validation and Verification Issues

Much of ENRD's performance data is generated from our LawPack Case Management System (CMS), implemented in March 1998. CMS provides a level of quality and accuracy not previously achievable with the twenty-year-old Lands Docket Tracking System (LDTS) that it replaced. We continue to work closely with our section case managers to identify and correct inaccuracies. Further, the Division's formal data quality assurance program ensures a quarterly review of its docket. As a result, we believe the quality of our case management and performance data is better and more reliable than ever before

The remaining performance measurement data is generated from the Department's Financial Management and Information System (FMIS). Although we have little control over this data, ENRD feels confident that it is as accurate as possible. Any inaccuracies in the FMIS system most likely stem from minor delays in the filling of paperwork (e.g., delays in deobligating funds for scheduled travel which was canceled).

Attorney personnel numbers (reported as Full-Time Equivalents (FTE)) are calculated based on attorney timekeeping system data. Non-attorney personnel numbers are calculated from reports generated by the Division's personnel system. We consider both of these sources to be reliable.

- Skills The breadth of ENRD's legal practice is vast, requiring a workforce with a wide range of skills. Not only do our lawyers practice civil, criminal, administrative and appellate law but some must argue before various state tribunals in water rights cases and others are versed in the nuances of Tribal law. We handle many cutting-edge legal issues, variously involving complex sciences, billions of dollars in cleanup and remediation costs, international trade agreements, acquisition and valuation of vast tracts of land, public health and biological diversity. We work with numerous client agencies, many of which have competing interests Much of the law we practice is still evolving, with precedents being set then reshaped. To cope with this ever-hanging landscape, our litigators must not only know the law, but competently master other skills as well, such as drafting or reviewing legislation, counseling client agencies, negotiating multi-party settlements, devising alternative resolutions to disputes, strategizing with investigators to detect and prosecute crimes, spearheading multi-agency workgroups, and training our counterparts at the state, local and even international levels.
- Resources We have a recurring need for additional personnel. As discussed separately in the initiative portion of this document, the ENRD is seeking a program increase of 26 positions to address the full range of litigation activities in which the Division is involved.

G. DOJ meany Performance Plan, Performance Gogle, Targets: Actuals

Performance Gottl #5.3: Enforcement of Environment and Natural Resource Laws

In FY 2001, through the Environment and Numeral Resources Division (ENRD), USAGe and PBI, DGI will protect the environment and natural resources, vigorously parsue violators of the Nationa's servinosmental laws and programs. In addition ENRD and the USAGE will government pollution absterness laws and programs. In addition ENRD and the USAGE will work to propose trible lovereigns, lands, and natural resources.

BASE PROGRAM DESCRIPTION This decision unit includes two discrete sections the Appellate Section and the Policy, Legislation and Special Litigation Section.

The <u>Appellate Section</u> of the Environment and Natural Resources Division is lead counsel in 95 percent of Division appellate cases, and works closely with the U.S. Attorneys and Division attorneys handling the remainder. Most work involves preparing briefs and oral arguments. This requires independent research as well as coordinating the legal and factual positions of client agency staff and trial section attorneys, analyzing the bases for appeal, and seeking permission from the Solicitor General's Office to appeal adverse decisions. The unit also prepares draft briefs for the Solicitor General

In the Environment and Natural Resources Division, cases on appeal usually involve specialized statutes and frequently involve challenges to discretionary decisions by high officials -- particularly in the Environmental Protection Agency and the Department of the Interior Most of our work involves complex civil litigation which cannot be handled on a routine basis. Because of the especially great need for coordination with the headquarters offices of our client agencies, the Appellate Section handles the vast majority of its work out of Washington. Typically, a case is briefed (and argued) by a staff attorney, with review provided by a more experienced attorney and by the Section Chief or an Assistant Chief. Except for petitions for review of EPA rules (which are handled by the Environmental Defense Section), the Appellate Section is responsible for all appellate sour metters in the Division.

Accomplishments Four seminal appellate rulings this past year underscore both the variety of cases and the skill of the litigators in this section. The first two examples are defensive cases which illustrate how the section works to protect the federal fisc and national interests.

United States v. Beggerly arose from the Beggerlys' attempt to set aside a consent judgment entered in 1982 which had quieted title in the federal government to lands on Horn Island, Mississippi. The Beggerlys claimed that their subsequent discovery of a document in the National Archives demonstrated the superiority of their title over the lands and sought "just compensation" of \$14-30 million for an alleged taking of their property. The district court dismissed the case for lack of jurisdiction. The court of appeals reversed, finding subject matter jurisdiction over the claim under the Quiet Title Act (QTA), and further holding that the QTA's statute of limitations was equitably tolled until the Beggerlys' discovery of the document in the Archives. We petitioned for certiorari because of the significance of this case for other potential claimants against the government. The Supreme Court reversed. The Court's holding that equitable tolling is not available in a QTA suit represents a major success for the Division, reversing contrary holdings by both the Ninth and Fifth Circuits. The ruling is important because it will prevent other disgrantled plaintiffs from initiating stale quiet title suits against the government, thereby potentially saving the government many millions of dollars.

In Kasza v, Browner and Frost v, Pegry, we defended strategic government operations, resulting in a significant victory for the Defense Department. The plaintiffs alleged that the Air Force had committed violations of the statute on hazardous waste management, the Resource Conservation and Recovery Act (RCRA) at a United States Air Force operating location near Groom Lake, Nevada. Plaintiffs also alleged that EPA had failed to conduct a RCRA inspection of the operating location and to require the Air Force to prepare and submit a RCRA inventory of hazardous wastes. The Secretary of the Air Force invoked the military and state secrets privilege as to virtually all information concerning the operating location. After EPA conducted a RCRA inspection on the operating location and the Air Force submitted a RCRA inventory, the documents were classified and withheld by order of the President. The district court ruled that the action against EPA was moot and that the suit against the Air Force must be dismissed. On January 8, 1998, the Ninth Circuit held that the Secretary had properly invoked the military and state secrets privilege and that the district court had correctly concluded that the action against the Air Force could not proceed due to the Secretary's invocation of the privilege. The court of appeals also held that the suit against EPA was moot because the RCRA inspection and inventory had been performed and because the President had property exempted the classified inspection and inventory reports from RCRA's public disclosure requirements, but remanded the case to the district court on two minor issues. The plaintiff filed a petition for Supreme Court review, which the Court denied on November 2, 1998.

In <u>United States v. Bestfoods</u>, a unanimous Supreme Court held that a parent corporation which actively participates in, and exercises control over, the operations of a polluting facility owned by its subsidiary, may be held directly liable in its own right as an "operator" of the facility. The Court endorsed the federal government's position that state laws on piercing "the

corporate veil" were irrelevant to the issue of direct liability under the federal statute. The Court also concluded that the Sixth Circuit Court of Appeals had erred in limiting direct liability to a parent's sole or joint venture operations. This case is important because it is the first time that the nation's highest court has reviewed the expansive liability provisions of Superfund.

State of Minnesota v. Mille Lacs Band of Chippewa Indians, decided by the Supreme Court on March 23, 1999, is a major victory for Native American rights. The Court affirmed an Eighth Circuit decision holding that the Mille Lacs and other Chippewa bands retain treaty rights to hunt, fish and gather free of State regulation on certain lands in Minnesota. The United States entered a treaty with several bands of Chippewa Indians in 1837, in which the bands ceded timberlands in Minnesota and Wisconsin to the United States, but were guaranteed the right to continue hunting, fishing and gathering wild rice on the ceded lands, during the pleasure of the President. The State of Minnesota asserted the right to regulate the bands' hunting and fishing on grounds that in 1850, President Zachary Taylor had issued an executive order requiring that the bands remove from their ceded lands and revoking their rights. It further argued that even if the executive order did not resolad the rights, the rights were terminated by a subsequent treaty in which Chippewa bands ceded all of their right title and interest in and to lands in Minnesota, and/or by the Minnesota Statehood Act, admitting Minnesota on an equal footing with all other states. The Court rejected all of these theories that the rights were revoked in a far reaching opinion on the rights of Native Americans.

The <u>Policy</u>, <u>Legislation and Special Litigation Section</u> (PLSL) advises and assists the Assistant Attorney General on policy issues With the Office of Legislative Affairs, it coordinates and directs the Division's legislative program, including representing the Department on interagency groups that develop the Administration's position on legislation and at meetings with congressional staff. Other duties include drafting speeches; monitoring and participating in citizen suits, responding to citizen mail, congressional and FOIA requests, and serving as the Division's ethics officers PLSL attorneys also coordinate the Division's activities regarding international environmental matters and environmental justice matters and serves as the Division's Alternative Dispute Resolution coordinator, an important function given the priority attached to ADR within the Department PLSL also litigates amicus cases and undertakes other specially assigned litigation projects at the trial and appellate levels

Accomplishments In addition to the Congressional, FOIA and citizen suit duties cited above, the PLSL and the Environmental Enforcement Section joined hands this past year to coordinate an interagency lead paint enforcement effort with HUD, EPA and US Attorneys Offices to protect children from lead poisoning in three pilot areas. District of Columbia, Chicago and Los Angeles. The outcome of these first-ever enforcement efforts includes making lead-safe more than 200 buildings containing in excess of 5,000 residential units in the District alone. After extensive investigations and analysis, the first settlements of these cases in were announced this Spring (1999). In addition, PLSL spearheaded the Division's efforts to promote appropriate use of ADR techniques in civil litigation, including working with attorneys to identify cases that are appropriate for ADR, identifying and selecting neutrals, publicizing "success stories" that illustrate how ENRD attorneys can

8

take advantage of ADR processes, and providing extensive ADR training to all attorneys whose practice is primarily civil. On a different front, PLSL's involvement in the negotiation and the implementation of trade and investment agreements has increased dramatically this past year. Their work in the investment areas has been in two different fora, the ongoing negotiations of an Investment Chapter in the Free Trade Area of the Americas and the operational review of the Investment Chapter of the North American Free Trade Area of the America. In the trade context, PLSL has played significant roles in the World Trade Organization High Level meeting in March of 1999 and in the run-up to the 1999 WTO Ministerial to be held in Seattle in November of 1999 and the new round of negotiations in the WTO.

2001 Estimate	228	230	\$36,811
Increase/Decrease	16	9	\$1,317

BASE PROGRAM DESCRIPTION: The Environmental Protection unit is comprised of the Environmental Crimes, Environmental Defense, and Environmental Enforcement Sections. While each is distinct, increasingly their work intersects.

The Environmental Crimes Section serves two primary purposes: First, its attorneys investigate and prosecute criminal violators of federal environmental statutes. Prosecution is part of an increasingly integrated approach to ensure broad-based environmental compliance by maintaining a strong, credible deterrence against knowing violations of the law by individuals and corporations. Second, as a result of that litigation experience, the Section serves as a unique resource to support the work of USAOs and investigative agencies such as the EPA and FBI by providing highly trained and experienced prosecutors to assist in resource-demanding trials and prosecutions; by providing advice and litigation assistance to AUSAs and agents in those cases that do not justify direct Section involvement; and by providing training and policy development to help expand and improve the federal environmental criminal enforcement program. In addition, the Section works with state and local enforcement agencies through participation in joint task forces, training for state and local prosecutors, and the publication of the Environmental Crimes Bulletin.

Accomplishments. Two of the most noteworthy ECS cases this part year were a RCRA case, United States v. Allan Elias

(D Idaho) and the prosecution, for the second time, of a major cruise line

On May 7, 1999, following a three and one-half week trial and four hours of deliberations, a federal jury found Allan Elias guilty of knowingly endangering the health and safety of his employees during illegal hazardous waste storage and disposal activities that left a 20 year-old employee with permanent brain damage from cyanide poisoning. In addition to the knowing endangerment charges, Elias was convicted of the remaining three counts of the indictment, which charged him with illegally disposing of hazardous waste on two separate occasions at his fertilizer manufacturing facility in Soda Springs, Idaho, and making faise statements to OSHA inspectors in an effort to conceal the knowing endangerment of his employees

During August 1996, Elias had ordered his employees to clean out a 25,000 gallon tank that contained cyanide waste from a mining facility that Elias previously operated in Pocatello, Idaho. Elias did not conduct any tests to determine whether the atmosphere inside the tank or the waste materials stored inside the tank were hazardous, and failed to provide adequate safety equipment to his employees, despite years of warnings from OSHA about the dangers involved in similar tank entries. After one of his employees was critically injured, Elias denied that he had ever stored cyanide in the tank and prepared a false, backdated safety permit claiming that his workers had been provided the required personal protective equipment for the tank entry. In October 1996, he ordered another employee to bury the remaining waste stored in the tank.

On July 21, 1999, the Attorney General announced a plea agreement with Royat Caribbean Cruises Ltd., whereby the company agreed to pay an \$18 million criminal fine and agreed to plead guilty to 21 felony counts for dumping waste oil and hazardous chemicals and lying to the U.S. Coast Guard. The plea agreement was filled in U.S. District Court in six cities: Mismi, New York City, Los Angeles; Anchorage; St. Thomas, U.S. Virgin Islands; and Sun Juan, Puerto Rico. In it, Royal Canbbean admitted that it routinely dumped waste oil from its fleet of cruise ships, such as in the environmentally sensitive Inside Passage of Alaska (Oil Pollution Act violations)

Royal Caribbean will also plead guilty to charges that it deliberately dumped into U.S. harbors and coastal areas many other types of pollutants, including hazardous chemicals from photo processing equipment, dry-cleaning shops and printing presses (Clean Water Act violations). Additionally, the company will plead guilty to presenting materially false statements about its oil discharges in its Oil Rocord Books to the U.S. Coast Guard. Royal Caribbean will also plead guilty to deliberately storing waste from its ships at a Port of Miami pier without a permit, in violation of RCRA.

The 21 new charges follow a guilty plea by Royal Caribbean in June 1998 for similar environmental crimes in Miami and San Juan. The 1998 pleas -- which resulted in a \$9 million criminal fine -- involved charges that the company engaged in a fleet-wide conspiracy to dump oil into U.S. coastal waters and lied to the U.S. Coast Guard to cover up the crime

The <u>Environmental Defense Section</u> defends rule-making, regulatory and permit actions and decisions by federal departments and agencies, notably the Environmental Protection Agency, the Department of the Interior, the Army Corps of Engineers, and the Coast Guard. It also represents federal agencies sued for violations of environmental laws. The Section's cases include petitions for review of agency regulations in the appellate courts, district court cases involving permit decisions and other agency actions, and federal facility lawsuits. In addition, the Section has responsibility for affirmative litigation to enforce the wetlands laws.

Accomplishments: The majority of EDS's litigation docket involves defending millions of dollars and critical government programs. Among their achievements, this year were

In Aleminum Corporation of America v. United States (W.D.Pa.), EDS negotiated a favorable partial settlement in one of the Section's multiple-site "mega CERCLA" cases. Alcoa's contribution claim sought to recover the cost of cleaning up six highly contaminated mining and manufacturing facilities located in various states around the country. The principal theory of liability is that the United States operated Alcoa's facilities by virtue of the government's intensive regulation of the aluminum industry during World War II. The lawsuit has been bifurcated and the partial settlement covers three of the six sites. Initial estimates of the government's liability at the three "phase one" sites ranged as high as \$95 million. Under the settlement, however, the federal defendants will pay only \$14 million to resolve this portion of the lawsuit

EDS also successfully resolved a pair of challenging contribution claims brought by companies that provided nuclear finel for the Department of Energy and the Nuclear Navy. The companies alleged that the federal agencies were liable as "operators" and "arrangers" under CERCLA for the costs associated with decommissioning the former processing facilities. In BWX Technologies, Inc. v. Department of Energy, two contractors sought to recover the estimated \$101 million cost to clean up a nuclear fuel fabricating facility in Parks Township, Pennsylvania. The vast majority of the fuels produced at the site were supplied to the federal government, which also retained title to the nuclear material used in the processing. The Section negotiated a settlement under which the government will pay approximately \$40 million toward the cleanup, reducing the original demand by more than \$60 million. Texas Instruments v. Department of Energy involved a similar claim. There, the Section negotiated a settlement in which the government will pay \$8.2 million, after reducing the plantiff's \$27 million claim by some \$19 million.

EDS has also successfully defended, and is continuing to defend, several pieces of litigation brought by New Mexico and environmental groups to halt shipments of waste to DOE's Waste Isolation Pilot Plant ("WIPP") -- a low-level radioactive waste disposal facility near Carlsbad, New Mexico. The radioactive waste destined for WIPP is left over from federal weapons production and includes clothing, tools, rags, and other contaminated material. EDS successfully defeated multiple efforts to halt the first planned shipments from Los Alamos National Laboratory, and the first shipment arrived at WIPP on March 26, 1999, making WIPP the first permanent repository for radioactive wastes in U.S. history.

In a suit pending in district court since 1991, New Mexico and several citizen groups argued that WIPP does not have RCs, interim status or a permit, and sought to enjoin shipment of any wastes to the facility on that basis. On March 22, 1999, District Judge John Garrett Penn denied the plaintiffs' requested injunction, holding that the plaintiffs had demonstrated neither irreparable injury nor likelihood of success on the merits. Most significant is Judge Penn's conclusion that WIPP qualifies for "interim status" under state and federal hazardous waste laws, allowing disposal of radioactive waste mixed with hazardous waste prior to final action by New Mexico on DOE's permit application, which was submitted in 1991. While Judge Penn's decision involves only the first shipments from Los Alamos, this ruling should open the way for shipments of waste to WIPP from other DOE facilities nationwide. The day after his decision, the citizen groups filed a notice of appeal and emergency motions for stay pending appeal. Both Judge Penn and the D.C. Circuit denied the motions for stay pending appeal.

The <u>Environmental Enforcement Section</u> conducts affirmative civil litigation to control and abate pollution. This Section is responsible for judicial enforcement of most of the Environmental Protection Agency statutes and rules which regulate discharges into the Nation's air and water, and which govern pesticide operations, solid waste storage, and nuclear waste. Finally, the Section brings natural resource damage actions on behalf of the federal mustoes (Departments of Commerce, Interior and Agriculture), claims for contribution against private parties for contamination of public lands, and the recoupment of money spent to clean up certain oil spills on behalf of the Coast Guard.

Accomplishments: Results of EES hitigation in FY 98 demonstrate a significant return for the dollars invested in Section activities. Over \$310 million was recovered from defendants in CERCLA cost recovery litigation. Defendant companies and corporations spent over \$684 million to come into compliance with the regulatory stanties and \$229 million to clean up hazardous waste sites. Nearly \$53 million in supplemental environmental projects (SEPs) designed to improve the quality of the environment in designated localities were implemented and paid for by defendants who would not have otherwise been requested to do so as a result of civil judicial litigation. Over \$71 million in penalties was assessed in civil enforcement litigation, the second highest figure in history. Excluding non-Superfund injunctive relief and SEPS, the total recoveries in EES litigation amount to approximately a \$16 return for every dollar invested in the Section.

FY 1998 saw the largest penalties ever agreed to in a civil environmental case (the seven consent decrees with heavy-duty diesel engine manufacturers (D D.C.)), the largest adjudicated Superfund judgment in any given case (\$103 million in United States v. Vertec Chemical Corp. (E.D. Ark.)), the largest civil penalty ever agreed to under the Resource Conservation and Recovery Act (\$11.8 million in United States v. FMC Corp. (D Idaho)), and precedent-setting sentiments in the massive Clark Fork Superfund Itigation in southwestern Montana (\$101 million in response costs and \$143 million in natural resource damages in United States v. Atlantic Righfield Co. (D Mont.)). This collection of cases is indicative of the work of the Section in protecting our environment and recovering federal funds spent to abate environmental contamination.

BASE PROGRAM DESCRIPTION This program includes four sections. General Litigation, Indian Resources, Land Acquisition, and Wildlife and Marine Resources.

The <u>General Litigation Section</u> is the largest of the four sections in this decision unit, its cases span over 70 statutory areas administered by several dozen client agencies. Traditional General Litigation cases involve inverse condemnation, in which government actions are alleged to have taken private property, Indian claims for monetary relief from government inaction or mismanagement, defense of federal programs challenged for faulty environmental impact analysis, and mineral leasing and mining cases on land and in the Outer Continental Shelf

The spectrum of program initiatives exposed to statutory and constitutional challenge is as broad as the federal portfolio on environmental and public land issues — and growing. It includes such programs and projects as biotechnology research, missile and submanne defense, highways, dams, and nuclear weste transportation and treatment, challenges to agency actions under the National Environmental Policy Act, decisions regarding Indians and Indian tribes; agency action under the Alaska Native Claims Settlement Act, water rights litigation affecting federal interests including defense of the United States' interest in general stream adjudications, and the federal surface mining program. It also reaches to litigation affecting mineral resources and seeks to obtain federal royalties. Finally, it extends to include those interests related to adjacent seas and seabeds and the determination of the location of the coastline and other maritime boundaries of the United States.

Accomplishments The breadth of General Litigation's caseload is best underscored by citing a handful of cases handled this past year. The first involves, what has been described as the most complex negotiated public land transaction this century <u>Pacific Lumber v. United States</u>, (Court of Federal Claims)

On March 1, 1999, the United States, the State of California, and Pacific Lumber ("PL") and its parent company, MAXXA¹1, Inc., settled. Completion of the transaction also resulted in the dismissal with prejudice of a landmark claim for a taking (claimed to amount to as much as \$1 billion) resulting from application of the Endangered Species Act (ESA).

This transaction, the culmination of the efforts of several Congress' and several Administrations, resulted in the permanent protection (through public ownership) of the world's largest remaining old growth redwood trees. The federal-state purchase of the roughly 7500 acres (known as "Headwaters") in Northern California assures the preservation of the unique ecological habitat offered by this old growth ecosystem for, among other protected species, the marbled murrelet. The transaction, however, did much more. Through its terms and the provisions of the ESA and the California endangered species statutes, agreement also provides demanding environmental harvest protections for PL's remaining 210,000 acre mixed age redwood forest. Those protections will extend for 50 years and protected all ESA listed species.

Secretary Babbitt has likewed the results of this \$380,000,000 transaction and the protection of Headwaters to the addition of another Yosemite National Park to public ownership.

In Pechanga Band of Luisene Mission Indianas: San Manuel Band of Serrano Indians v. United States of Agrerica and Bruce Babbitt, Civil No. 1:98CV01020(D.D.C.); Tweaty-Nine Actions filed in Culifornia, two California Tribes sought to bar the Secretary of the Interior from considering and taking final action regarding the approval or disapproval of a compacts negotiated and executed between eleven tribes and the State of California. The action was part of a strategy to forestall enforcement actions against illegal gaming operations located on more than thirty California Indian reservations. The plaintiffs requests for emergency relief was desired despite the substantial equitable arguments the Tribes marshaled and the action was dismissed upon motion by the United States. Requests for emergency relief to preemptively stop the initiation of the enforcement actions were deciled in three other actions filed in California. This action permitted the United States to file 29 enforcement actions in three judicial districts in California. The imminent threat of enforcement actions led all the tribes in the Southern District to come into compliance with the law. The actions also were successful in securing an injunction against the unregulated casino operations of nine Tribes in the Central District. Write the orderty strutower of thegal operations have been difficult and delayed a California voter initiativa, the enforcement actions have been instrumental in bringing illegal operation of thirteen Tribes into compliance with the law. It has also set the groundwork for bringing all the California tribes into compliance with the Indian Gaming regulatory Act, while preserving the benefits of regulated gaming to all tribes who seek to game lawfully.

With the dismissal of Friends of The Wild Swan, Inc. v. United States Forest Service. (D. Ore.) last June, GLS successfully concluded the district court phase of our defense of interagency efforts to conserve wild salmon and trout while managing Forest Service and BLM lands in the Columbia River Basin of Washington, Oregon, Idaho, Montana and parts of adjacent states. The defense of interim standards for the protection of salmon and trout has avoided judicial restrictions against forest health projects and grazing permits on BLM and Forest Service land (over half of the 144 million acre watershed). In this case, and in their pending appeal, Plaintiffs challenge the adequacy of these interim standards to protect native bull trout on Forest Service land (22 National Forests encompassing 24 percent of the National Forest System) in light of delays in completion of the long-term standards of the Interior Columbia Basin Ecosystem Management Project (ICBEMP)

The United States has established trust relationships with various Indians and Indian tribes through a myriad of treaties, statutes and Executive Orders. Under these authorities, the government is obliged to perform a number of functions on behalf of these tribes, including litigation to establish and defend their rights. The <u>Indian Resources Section</u> handles these cases, including critical litigation involving water rights. Many Indian reservations lie in arid portions of the country where competition for water is fierce, and tribal rights to water must be established before reservation lands can be developed. Over 50 million acres of reservation lands and the rights to major water systems in dry western states are at stake. Other cases in which the government represents the interests of Indians involve the establishment and protection of hunting and fishing rights and suits to answer questions about tribal rights to self-determination.

Accomplishments An action in trespass [United States v, City of Tacoma (W.D. Wash)] was lodged against the City of Tacoma for building and maintaining electrical transmission lines across 5 Indian allotments that were unlawfully condemned in state court without naming the United States as a defendant.] On November 20, Judge Burgess granted our motion for summary judgment on liability and denied the City's cross-motion for summary judgment. We now begin the damages phase of the case.

San Carles Anache Tribe v. Superior Court. (1999) On January 7, 1999, the Arizona Supreme Court issued its opinion in this special action proceeding. Sustaining in major part the determinations of the water court judge, the Arizona Supreme Court declared unconstitutional and struck down numerous provisions of two recent Arizona legislative enactments concerning water rights and water rights adjudications. The court found that the contested provisions failed due process scrutiny because they purported to effect retroactive changes in the substantive law regarding the perfection and abandonment of water rights. The court ruled that substantive rights, such as water rights, cannot be determined by statutes subsequently enacted, especially where, as here, those rights are being determined in an on-going judicial proceeding. The legislative changes, if upheld, would have worked to the disadvantage of the federal and Indian water rights in the current Arizona general water rights adjudications. The Arizona Supreme Court also invalidated, on due process and separation of powers grounds, certain provisions regarding the summary adjudication of de minimus water rights which also would have worked to the disadvantage of the federal and Indian water rights water rights and General Litigation.

sections)

Arizona v. California, No. 8, Original (US Supreme Court) Successfully settled the United States' reserved water rights claim for the Fort Mojave Indian Reservation in the 45-year old dispute over waters of the Colorado River in Arizona v California, No. 8, Original (United States' Supreme Court). The parties are awaiting review of the settlement by the Special Master in Arizona v. California, and approval by the United States Supreme Court.

The <u>Land Assusistion Section</u> is responsible for filing and prosecuting condemnation actions to acquire properties needed for Congressionally authorized purposes which acquiring agencies are unable to acquire by direct purchase. In these condemnation proceedings, just compensation, the amount of which is usually a highly contested issue, is determined and paid to property owners. Acquisition by condemnation is a means of last resort, agencies are required by law, to the greatest extent practicable, to make every reasonable effort to acquire property by negotiation and direct purchase before requesting condemnation. A top Division priority is to move these high-exposure cases expeditiously.

Accomplishments: The Land Acquisition Section was instrumental to the success of the Headwaters (Pacific Lumber Co v U.S. (CFC) transaction, the purchase by the federal and state governments would not have occurred for approximately \$380,000,000 without the input of the Appraisal Unit. The work involved advising government attorneys and their client agencies on the complex appraisal issues confronting the United States in this regulatory takings case, drafting appraisal instructions, and the review of twenty-two appraisals with values which added up to over \$5,000,000,000. In addition to the appraisal work already mentioned, the Title Unit provided extensive technical assistance and advice on title problems and the structure of the transaction as well as on conveyancing issues.

Indeed, the section's Title Unit, which checks the title opinions issued by agencies to whom the Attorney General has delegated authority, is worthy of special mention. It completed 24 preliminary opinions and 136 final opinions; it drafted 8 easement deeds and was involved in two airport conveyances; and it checked 1,086 delegated title opinions. The success stories for the Title Unit during the past fiscal year are particularly reflected in its special projects. The CEQ has touted the government's purchase of the New World Mine properties, just north of Yellow Stone National Park, as an excellent example of the government and industry working together to save and protect national treasures. The Title Unit was very much involved in that transaction. It reviewed and issued title opinions on the 101 separate abstracts of title that were involved, in addition, it was instrumental in the drafting of the various transactional documents, which ranged from escrow agreements and deeds to ceremonial documents

Another success story during the last fiscal year was Section's role in Utah v. United States. (D. UT). This litigation,

brought pursuant to Public Law 103-93, the Utah Schools and Lands Improvement Act of 1993, involved the valuation of thousands of acres of State-owned lands within national parks, monuments, and forests, and Indian reservations. The Land Acquisition section led the trial team, which also involved attorneys from the General Litigation and PLSL Section. Having received appraisal reviews, the team was actively seeking to hire new valuation experts and to bring the matter into mediation. During the course of these efforts, Secretary Babbitt and Governor Leavitt reached a settlement agreement which has just been approved by Congress in H.R. 3830, the Utah Schools and Land Exchange Act of 1998. As the President in his signing statement points out, this results in an exchange of over 425,000 acres of land and interests therein between the United States and the State of Utah and is the largest such land exchange in history. Furthermore, the agreement will be worth, per Governor Leavitt's estimate, at least \$1 billion to the State's school endowment over the next 30 years, and it ends more than six decades of controversy surrounding state school lands.

Finally, the Land Acquisition Section committed significant resources to assist the Department of the Interior and the Department of Agriculture in the acquisition of a proposed gold mine known as the New World Mine in Montana. Representatives of the Section participated in numerous task force meetings providing counsel on valuation and real estate issues. The Title Unit conducted the review of title, a process that took months. The attorneys in the Title Unit also assisted in the preparation of documents and the closing. This proposed gold mine in the historic New World Mining District of Montana at the nort-east corner of Yellowstone National Park, posed an environmental threat to the park. The agreed upon solution was the acquisition by the United States of an interest in the site sufficient to prevent the development of the mine. The closing took place on August 7, 1998.

The Wildlife and Marine Resources Section has responsibility for both civil and criminal cases arising under the federal fish and wildlife conservation statutes. Litigation under these statutes can play out in any of three different contexts: civil defensive litigation, in which the Section defends federal agencies whose programs are challenged as inconsistent with the requirements of federal conservation statutes, civil enforcement actions, principally in which we seek to enjoin persons (which can include private, state, or local entities) from violating federal conservation statutes (these typically are to stop a developer from destroying habitat that is essential to the conservation of protected wildlife), and criminal protections. The principal client agencies of the Wildlife Section are the Interior Department's Fish and Wildlife Service (FWS) and the Commerce Department's National Marine Fisheries Service (NMFS), a branch of the National Oceanic and Atmospheric Administration (NOAA)

Accomplishments: The current Section resources for the civil case docket have been devoted largely to defending government actions taken under the Endangered Species Act and NEPA. One of the more novel civil cases this past year was Metcalf v. Daler (W.D. Wash.) The Makah Indian Tribe of Western Washington is the only Native American tribe with a reserved treaty right to take whates, a right guaranteed by the Treaty of Neah Bay in 1855. After not exercising this right for

about seventy-five years, the Tribe approached the United States in 1995 in an effort to reinstate a limited subsistence and ceremonial whale hunt for California gray whales, which had been delisted under the Endangered Species Act in 1994

To assist the Tribe in exercising its treaty right, the United States agreed to seek an aboriginal subsistence quota from the International Whating Commission (IWC), the international body charged with setting whating quotas under the International Convention for the Regulation of Whating. After conducting an Environmental Assessment under the National Environmental Policy Act (NEPA), the Department of Commerce determined that the decision to seek a quota would not have a significant impact on the human environment.

In October 1997, the IWC established a five-year subsistence quota of California gray whales based on a joint application of the Russian Federation on behalf of the Chukotka people and the United States on behalf of the Makah. The United States subsequently determined that the Makah may take an average of four whales a year from this quota, with up to five whales taken in any given year, over the next five years.

Plaintiffs challenged the United States' actions in seeking a subsistence quota from the IWC, alleging violations of NEPA, the Whaling Convention Act, and several other federal statutes. On September 21, 1998, Judge Franklin D. Burgess dismissed all of the plaintiffs' claims and granted the government's motion for summary judgment

Continuing the effort to pursue international live reptile smuggling rings, which supply the U.S. and other world markets with a \$6 billion dollar yearly black market is live animals and animal products, WMR criminal attorneys indicted Anson Wong (United States v. Keng Liang "Asson" Wong et al. (N.D. Cal.) Wong and two of his confederates were arrested September 14, 1998. In the United States, authorities apprehended James Michael Burroughs of San Francisco, California, and Beau Lee Lewis of Buckeye, Arizona. Wong himself was lured to Mexico City and arrested there. Wong, from Penang, Malaysia, is alleged to be a notorious reptile amuggler. The three men are named as defendants in a 55-count federal indictment which alleges violations of conspiracy, smuggling, money intudering, false statement and wildlife laws. A fourth defendant, Yuk Wah "Oscar" Shiu of Hong Kong, China, remains at large. We have formally requested Wong's extradition from Mexico. The Mexican courts have granted our request and Wong has appealed.

The indictment alleges that between January 1996, and August 15, 1998, the defendants illegally smuggled more than 300 animals, worth nearly half a million dollars, into the United States using human couriers, Federal Express shipments with false invoices and shipping documents, and the concealment of illegal animals within larger shipments of legal animals. The internationally protected reptiles were smuggled from Malaysia, Hong Kong, Indonesia, and the Philippines to the United States.

BASE PROGRAM DESCRIPTION The Management and Administration decision unit includes the Office of the Assistant Attorney General and the Executive Office. This program provides overall direction and management to the Environment and Natural Resources Division, and supervises and administers operations necessary to support the Division's litigation mission. Responsibilities of the latter unit include budget preparation and execution; financial management, development, operation and maintenance of management and automated support systems, coordination of automated litigation support services, workload and resource requirements analysis, recruitment, processing of personnel actions; management of space and facilities, provision of office equipment and supplies, processing mail, and the provision of messenger, copying and printing services

Accomplishments: The Executive Office spearheaded a number of successful projects this past year to enhance the effectiveness and cost-efficiency of Division operations. Specifically, the Division built on the infrastructure established in FY. 197 with the implementation of the Justice Consolidated Office Network (JCON), by adding a fully integrated desktop case management and attorney timekeeping system (CMS). The new system replaced one developed in 1978, fully four computer generations ago, which had become unwieldy, antiquated and very expensive. Attorneys in the Division will be able to work more efficiently now that they have direct access to all their case information. Implementation of the system will save \$600,000 per year as it now resides on local servers ruther than the costly Justice Data Center mainframe.

In conjunction with the replacement of the old case management system, the Executive Office also replaced the Division's

records management system. The new records management system is a module on the case management system and allows attorneys and other staff to review and request, from their desktops, case files maintained in records management units throughout the Division, as well as at the Federal Records Center. This system reduces records management costs by streamlining the request process, requiring less space, and significantly reducing the number of file copies needed

Also added to the deskrops were new software applications, which feature reusable modules rather than more costly one-time applications. A standardized Access database and training program is underway for use by the entire Division to further enhance the database capabilities in each litigating section and eliminate some of the need for costly contractor support

The Executive Office created new ways to increase Division productivity by improving the mix of attorneys and support staff through a new project. "Support 2001" recognizes the changing roles of attorneys and support staff resulting from advanced technology. This initiative aims to improve support service delivery, enhance technological tools for key litigation functions, and more fully involve support staff in litigation activities. Secretaries are currently being retrained with a greater focus on technical and legal skills and are then reassigned as Litigation Support Assistants (LSAs). State-of-the-art service centers have been installed to ensure that attorneys and support staff do not spend their valuable time copying, faxing and filing. Feedback on the services has been quite positive, and saves the Division \$250,000 annually.

Budget planning, hiring, performance reporting and expert witness coordination have all been improved for more costefficient use of fiscal and staff resources. Improvements included an open budget formulation process involving section
management earlier, a quarterly hiring process providing flexibility while still meeting staffing needs, and a new performance
appraisal system which enables managers to conduct simpler employee evaluations against less cumbersome performance
work plans

GENERAL GOAL/DECISION UNIT: Appellate & Policy

PROGRAM CHANGES BY INITIATIVE

Initiative I: Defending Civil Environmental Laws and the Public Fisc

Program	Positions.	Workyears	Amount
Appellate Section	2	ι	\$165
Environmental Defense Section	5	3	412
General Litigation Section	2	4	<u>576</u>
	14	8	\$1,153

This request includes 8 attorneys, 3 paralegals and 3 legislative support analysts (ESAs) Funding was derived from the Year 2001 modular costs

Principal Client Agency Stakeholders:

Departments of Agriculture (Forest Service), Commerce (National Oceanic and Atmospheric Administration), Defense, Energy, and Interior (Fish and Wildlife Service, Bureau of Indian Affairs, and Bureau of Land Management).

Problem:

Significant areas of the Division's non-discretionary practice, which focuses on protection of the public fisc and defense of critical government programs, are expanding and changing in scope, most notably:

- Storage, transport and disposal of toxic substances (chemical and nuclear)
- Clean Air Act implementation
- Defense of federal agency liability under Superfund
- Defending other vital federal programs
- Court-ordered Alternative Dispute Resolution

- FERC appellate cases
- Defending ecosystem and forest plans
- Everglades restoration
- Indian land trust issues
- Protecting federal water rights
- Challenges to the Endangered Species Act
- Growing demand for land appraisals

General Background

Environment Division attorneys are often charged with defending client agency programs, actions and regulations in the district courts and courts of appeals. At any given time, 20% of the Division's pending caseload is comprised of non-discretionary cases. We simply have no choice but to participate in these cases in which opposing parties are usually represented by high-powered law firms, frequently several at a time working together. Many of our defensive cases involve millions of dollars in claims against the public fisc. These claims place on our attorneys the responsibility of protecting the public treasury from unwarranted expenses or uncollected revenues (e.g., mineral royalties owed to the United States). Because these demanding, resource-intensive cases are both non-discretionary and pressing, they must be handled. Although the Division has been highly successful to date in defending the Treasury from hundreds of millions of dollars of claims (e.g., more than 90% of the amounts claimed in takings cases), the Government's financial exposure is increasing and additional resources are required to continue properly defending the public fisc

Defense of Agency Storage, Transport and Destruction of Bazardous Chemical Materials

The Environmental Defense Section is responsible for defending the Army's \$15 billion Chemical Demilitarization Program from complicated legal challenges in multiple emergency proceedings. Working closely with the Army, EDS has fended off numerous attempts to shut down the Army's first operational chemical weapons incinerator, located at the Tooele Army Depot in Tooele County, Utah, and has ensured that this important national program will proceed in a safe manner, protective of both the citizency and the environment

Congress directed the Army to destroy the United States' stockpile of lethal chemical agents and aging munitions by 1994, a deadline later extended to 2004. The U.S. stopped manufacturing chemical weapons in 1968, which means that the stockpile is more than three decades old. The age of the stockpile increases the urgency of the chemical weapons destruction program, since much of the agent is stored in tanks with corroding valves or deteriorating explosive devices becoming more and more unstable.

To ensure that the incineration of chemical agent stockpiles within the continental United States is as safe and effective as possible,

the Army first constructed a prototype full-scale incineration facility at Johnston Atolf, in the middle of the Pacific Ocean. After extensive planning, testing and operations at Johnston Atolf, as well as considerable review by independent peer groups and state and federal regulators, the Army constructed the Topele Chemical Agent Disposal Facility (TOCDF) in Utah, a \$450 million complex of five incinerators where approximately 40 percent of the Nation's chemical agent stockpile is located.

Opposition to the disposal facility has been fierce and well financed. However, the Section has continued its success in defending the Army's program from legal challenges in multiple proceedings.

Since July 1996 EDS has been required to defend no fewer than six separate proceedings for injunctive relief in state and federal court in connection with Topele

Another major stockpite is located at the Umatilla Chemical Depot in nonheastern Oregon, where approximately 3,700 tons of chemical warfare agents are stored. The Section is currently defending a challenge to the Depot's operating permits in Oregon state court, and additional litigation is expected as the construction proceeds

In addition, with the recent approval of a destruction plan for a stockpile of mustard gas at Aberdeen Proving Ground in Maryland, still more litigation is expected. Aberdeen contains a stockpile of 1,625 tons of deadly mustard gas. The Army recently received federal and state permits to construct a \$306 million facility to neutralize the agent. Destruction of the mustard gas is scheduled to begin in March 2003. Despite extensive public involvement in the planning stages, the project is likely to be the subject of at least one court challenge in the coming year. Finally, in addition to these three sites, five other domestic stockpiles of chemical weapons must be destroyed. Each of these additional sites will likely be the subject of intense Intigation.

Defense of Agency Storage, Transport and Destruction of Hazardous Nuclear Materials

The U.S. must also dispose of decades' worth of nuclear waste at the nation's 17 principal and 100 secondary nuclear weapons factories, a legacy of the Cold War. More than a million tons of radioactive and toxic waste has been dumped or stored at the Department of Energy's weapon-making facilities. To clean it up, the government will have to embark upon the largest public works project in U.S. history, on effort estimated to cost \$200 billion over the next 30 years.

EDS has successfully defended and is continuing to defend several pieces of litigation brought by New Mexico and environmental groups to halt shipments of waste to DOE's Waste isolation Pilot Plant ("WIPP"), a low-level radioactive waste disposal facility near Carlsbad, New Mexico. The radioactive waste destined for WIPP is left over from federal weapons production and includes clothing, tools, rags and other contaminated material. EDS successfully defeated multiple efforts to halt the first planned shipments from Los

Alamos National Laboratory The first shipment arrived at WIPP on March 26, 1999, making WIPP the first permanent repository for radioactive wastes in U.S. history

Other sections are involved in this defensive work as well. The General Litigation Section anticipates a continuation of the litigation brought by anti-nuclear and environmental groups regarding the treatment of nuclear materials by the Department of Energy. We expect that challenges will be brought involving Environmental Impact Statements and Records of Decisions scheduled to be completed in 1999 or 2000 at Yucca Mountain, Argonne National Laboratory-West, Los Alamos National Laboratory and Lawrence Livermore National Laboratory, among others.

Defense of New Legislation

In 1990, the Clean Air Act was amended, completely revamping the regulation of hazardous air pollutants. The Clean Air Act, because it affects nearly all Americans and all businesses, is the most sweeping of the nation's environmental laws. The original twenty-year-old scheme for regulating air toxics failed. EPA spent years revising it and promulgating new standards for soot and urban smog. Nevertheless, last year the American Trucking Association, a wide consortium of other business groups and three states opposed the new EPA standards. And in a decision that had a dramatic impact on the Clean Air Program, this May a three-judge panel struck down EPA's new air-quality standards as unconstitutional. The case is likely to go to the Supreme Court. The stakes are very high if the decision is upheld, it could establish a precedent and upend a wide variety of federal regulatory programs, including many at EPA.

The Environmental Defense Section (EDS) has already devoted significant resources (over 6,500 attorney and paralegal hours) to the vigorous defense of the new National Ambient Air Quality Standards (NAAQS), one of EPA's most significant public health initiatives in recent years. The revised ozone and particulate matter standards provide health protection for millions nationwide (particularly children) and are a major component of EPA's Clean Air Act program. The new standards prompted 26 challenges to the ozone standards and 39 petitions for review of the particulate standards, filed by various industry groups and several states. The cases raised complex legal, constitutional and scientific issues requiring briefing and analysis at the highest level of sophistication.

The Section also devoted significant resources to defending against petitions for review of EPA's ozone control requirements. EPA's implementing regulations impose detailed requirements for states to adopt State Implementation Plans ("SIPs") to control emissions of ozone precursors. In a number of cases, states or local industry groups have argued either that EPA has misclassified the severity of their in-state ozone problem or failed to require stricter ozone controls in other states, resulting in more stringent in-state controls.

We have successfully defended EPA's approach in dealing with the thorny issues of interstate ozone transport, but we expect that EPA will continue to publish new regulations under the 1990 Clean Air Act Amendments, and that these new regulations will generate substantial numbers of petitions for review. EPA is currently promulgating the next generation of automobile emission

86

standards, which are expected to cover sport utility vehicles and impose sulfur-content limitations on gasoline. The new regulations will be controversus and are certain to be challenged by many interested parties. Because the science underlying EPA's air quality protection rules is rechnically complex, these cases tend to be far more time-consuming than other petitions for review, requiring many hundreds of attorney hours for adequate briefing.

The good news is that EDS's overall rate of success in defending federal regulations and programs is consistently over 80%, and has improved in each of the past three years

PETITION FOR REVIEW RESULTS

	FY 1996		EY.	FY 1997		1998
			•	•	•	•
Total Outcomes	95	100%	101	100%	120	1004
Partially favorable judgments	10	11.8%	θ	7,98	9	7.54
Unfavorable judgments	6	7,0%	7	6.98	5	4.25
Favorable judgments	23	27.14	25	24.8%	54	45.4
Settlements and Voluntary dismissals	46	54.14	61	60.44	52	43,3\$
Total favorable	69	81.21	86	85.21	106	88.34

To put these figures into context, the Section's petition for review practice is strictly defensive. EDS does not choose its cases, and it is not unusual for the Section to defend a client agency's regulatory action for policy or programmatic reasons even where a case presents substantial litigation risk.

All told, we expect that EPA's regulatory activity under the Clean Air Act alone will generate at least 100 pctitions for review in FY 2000 and 2001

Defease of Federal Agency Linbility under Superfund

Many of our defensive cases involve millions of dollars in claims against the public fisc. These claims place on our attorneys the responsibility of protecting the public treasury from unwarranted expenses or uncollected revenues (e.g., mineral royalties owed to the United States). Because these demanding, resource-intensive cases are both non-discretionary and pressing, they must be handled

The Environmental Defense Section defends many counter-claims filed under the Comprehensive Environmental Response,

Compensation, and Liability Act (CERCLA, or Superfund). These cases, which comprise almost one-fourth of the EDS practice, autypically multi-party, document-intensive suits which demand significant attorney, paralegal, secretarial and outside litigation support resources. The payoffs are high, however, and have resulted in large savings for the Treasury. In this expanding area of the docket, the Section provides important services to aid in the resolution of federal agency compliance and ensure that federal liability is fairly resolved, thereby protecting the federal first against excessive claims.

The following table shows our impressive case results from FY 1998 and the first part of FY 1999 alone

CERCLA CONTRIBUTION CASES AGAINST FEDERAL AGENCIES INVOLVING PRIVATELY-OWNED SITES, RESOLVED IN FY 1998-99

Case Name	Basis for Liability	Plaintiff's Demand	Owed by the U.S.	Amount Saved
U.S. v. Iron Mountain Mines	Owner/ Operator	\$100,000,000	\$0	\$100,000,000

	TOTAL	\$362,592,984	\$90,998,230	\$271,404,754

Defending Other Vital Federal Programs

From timber harvesting and grazing on federal lands to defending natural resource damage assessments and endangered species listings, federal programs are challenged constantly by those who claim violations of environmental and natural resource laws. Challenges arise from many quarters, including industry, permittees, environmental organizations, and neighborhood interest groups. The Division represents over 70 agencies in challenges against myriad federal programs. Our objective is to assure that such challenges are properly defended so that these necessary and important programs can continue.

In recent years, the work of our various sections has become more and more intertwined. The best recent example of this phenomenon was the Division's work this past year on the Headwaters litigation, where we avoided a corporate forest company's claim for \$1 billion under the Endangered Species Act (ESA). The company contended that application of the ESA precluded economic harvesting of a pristine and ecologically significant old growth redwoods forest. Working cooperatively, three different

sections (Wildlife and Marine Resources, Land Acquisition and General Entigation) laid the groundwork for the fitigation to be stayed while the parties worked out a \$380 million purchase by federal and state agencies of 7,500 acres of old growth redwood forest for permanent protection. This trend of multi-section involvement in litigation is expected to continue given the recent emphasis on ecosystem management and habitat conservation. Such litigation requires close coordination, not only among the affected sections, but also with clients having widely divergent interests. It also necessitates considerable investment in time spent on pre-litigation counseling.

Rising to the Defense of Natural Resources

The General Litigation Section (GLS) addresses a whole host of natural resource conservation issues. The Section has defended numerous multi-agency federal land and ecosystem management inquiries requiring close coordination in recent years and, as now outlined, expects many more. Following on its success in defending the first ecosystem-wide plan, the Northwest Forest Plan, the section has continued to defend federal land management decisions in the Pacific Northwest from lawsuits on all sides. One of these challenges, before the judge who approved the Northwest Forest Plan, challenges the plan's continuing adequacy in light of changed circumstances, such as the listing of salmon runs under the ESA and the effects of the Emergency Salvage Timber Sale appropriations rider, which temporarily exempted timber sales from environmental laws, and continues to generate additional challenges to activities in the Pacific Northwest.

Protecting Ecosystems

GLS is called upon to address broad-reaching efforts to fashion a new approach to salmon and native trout conservation in the Columbia River basin of Washington, Oregon, Idaho and Montana. More than half of the 144 million acre basin is federal land with a wide range of ecosystems and ecosystem health problems. Building on an extensive scientific assessment and public comment period on draft land management plans, the FWS and BLM's new approach to basin-wide land management problems will be analyzed in a supplemental Environmental Impact Statement this year, with litigation highly likely in 2001. Afready, four suits have been filed, by both environmental groups and natural resources industries, challenging the federal land management in the interim before completion of a basin-wide plan.

In the meantime, federal land managers are relying on interim strategies for the conservation of specific species. The PACFISH Initiative, the INFISH Initiative, the California spotted Owl Initiative, and the Mexican Spotted Owl Initiative have all caused intense litigation. Accordingly, the GLS continues to litigate the adequacy of these interim plans to protect salmon and native trout.

Protecting the Everglades "River of Grass"

In addition to being among the most biologically significant subtropical wetlands in the world, the Florida Everglades is the key to water supply and flood control for a growing population of over 6 million people. The Everglades restoration has been termed "the most ambitious environmental restoration project ever attempted," it is expected to cost \$7.8 billion over the next 20 years in addition to the \$1.2 billion already spent by the federal government. The General Litigation Section's commitment to the federal/state Everglades restoration effort requires significant investments in client counseling and representation.

This year, we successfully defended <u>City of Belle Glade</u>, <u>Florida v. Babbit</u>, a lawsuit challenging the Talisman purchase, the largest public purchase of Everglades agricultural land for restoration purposes. Interior Secretary Babbitt characterized the Talisman purchase as "a conservation legacy to future generations." We also completed two weeks of evidentiary hearings on the consent decree in <u>United States v. South Florida Water Management District</u>, the historic federal lawsuit to end agricultural pollution of the Everglades

We expect new complex and nationally significant NEPA litigation on multiple aspects of the restoration, including Homestead, the Restudy, and one of the first major new projects comprising the restoration - the Modified Water Deliveries Project. Additional NEPA litigation is anticipated concerning the Cape Sable Seaside Sparrow, which will also raise difficult issues at the intersection of the Fifth Amendment and the ESA. In addition to this new litigation, we expect escalations in continuing proceedings involving the consent decree and the Miccosukee Tribe of Indians of Florida which will, among other things, involve issues raised by the anticipated State promulgation of a new water quality standard for phosphonis in the Everglades

Protecting the National Forests

Challenges to land management programs, in general, are becoming more intensive. For instance, we have experienced a new significant increase in the number and complexity of forest management cases. In 1998, 80 new cases were filed against Forest Service decisions in the management of the 191 million acre National Forest System. That is nearly twice as many as were filed in 1997 and consistent with a long-term increase in the number of suits against federal land management. These cases are also increasingly complex, both factually (involving issues of biology, hydrology, and economics) and legally However, recent Supreme court rulings have tended to break down the distinction between large challenges to plans and challenges to individual projects (such as timber sales), a rationale previously used for assigning smaller cases to USAOs. As a result, many challenges now present larger issues requiring GLS involvement. Current staffing is insufficient to address this increased workload.

Both GLS and WMRS frequently experience parallel workload increases because many of the environmental and industry groups challenging the WMRS on ESA grounds also challenge the GLS on NEPA grounds. Similarly, together with the

WMRS, the GLS is also preparing for litigation in other arenas, e.g., proposed ESA listing of the Canada Lynx, the Tongass National Forest Land and Resource Management Plan, (finalized in May 1997), litigation relating to the management of Yellowstone National Park, and working with the Park Service, the Forest Service, the Animal and Plant Health Inspection Service and the State of Montana on a joint federal-state grazing range management plan for the Yellowstone Bison Herd

Protecting the Basis of Life - Water

GLS litigation over water rights involves three major types of litigation. First, "general stream adjudications" are lawsuits in which the courts decide who "owns" the water of a watershed. These adjudications often involve thousands of parties and tens of thousands of claims. Such large adjudications are underway in virtually all of the far western states. The second major type of water litigation involves the operation of federal irrigation projects. The Bureau of Reclamation is often faced with linesuits challenging its actions as it attempts to balance its contractual obligations to supply water to farmers with other obligations imposed by the NEPA, the ESA, and other preservation statutes. The third and last major type of water rights litigation concerns original actions brought before the U.S. Supreme Court involving the allocation of water in interstate watercourses. In Kansas v. Nebraska, the Supreme Court accepted jurisdiction and the case will move into a more active phase beginning this year. Although we successfully negotiated settlements on a number of issues in Nebraska v. Wyoming, the case is still proceeding to trial on certain claims made by Nebraska.

We anticipate that our water rights workload will increase in FY 2001. In Idaho, appeals being lodged on numerous issues will lead to increased trial work in FY 2000 and 2001. In Arizona, trial work will intensify in the Little Colorado and Gila River Adjudications; these adjudications had been delayed while the state supreme court considered various procedural issues. In Oregon, our workload in the Klamath Basin Adjudication will increase, beginning in FY 2000, when the proceedings there move into active litigation. In Nevada we expect similar increases. Just this year, judicial proceedings began in one adjudication (the first in decades to be filled with a state court) and the State Engineer has scheduled several more state court filings over the next few years. Meanwhile, our workload in all other western states, including California, Colorado, Montana, New Mexico and Washington, shows no signs of diminishing.

We remain understaffed to meet our existing adjudication needs. To date, we have managed to handle our cases by having agency counsel act as full-time Special Assistants on adjudications (two in Idaho and one in Montana). Continued agency funding of these positions is doubtful and, even if this arrangement does continue, our projected increase in workload over the next two years will require additional staffing

Protecting the Fisc in Indian Trust Cases

In breach of trust fitigation, Native Americans challenge government actions affecting the gamut of Native assets - money, timber, water, minerals, oil and gas. The defense of these suits can be especially time consuming and resource intensive due to the number of Native Americans affected and the broad span of years often at issue. These cases require the balancing of the government's dual obligation to defend agency action while at the same time ensuring that the United States' trust responsibilities to Native Americans are fulfilled.

This type of litigation is best exemplified by the Cobell v. Babbitt litigation, a class-action lawsuit brought on behalf of Individual Indian Moneys (IIM) account holders. On June 10, 1999, the first of two trials in Cobell began. We are defending the Interior in Jatiment and BIA which are responsible for fulfilling the United States' trust responsibilities to tribes and individual Indians, including managing about \$3 billion in Indian trust funds and administering about \$4 million acres of Indian tribal land - tribal accounts that date back to 1887. In addition, we are defending the Treasury Department, which is responsible for making disbursements from the fund and investing funds prudently. Interior and BIA oversee the management of the tribal lands, including leasing the lands to generate revenue, collecting the proceeds from the leases, depositing the proceeds in the IIM accounts, serving as trustee of those accounts, and disbursing the proceeds to the beneficiaries. There are currently approximately 300,000 holders of such accounts, and approximately \$250 million flows through the accounts on a yearly basis. Plaintiffs' claims have been bifurcated into claims seeking "retrospective" relief - to correct alleged errors in past account balances - and "prospective" relief - to correct current alleged deficiencies in the administration of the IIM trust system. In their claims against Secretary Rubin, plaintiffs allege that Treasury also violated its duty as custodian of moneys in the IIM accounts, failed to maintain certain records relating to the IIM trust system, and did not satisfy its investment responsibilities. In their prospective claims, plaintiffs allege that DOI's reform efforts are inadequate and that DOI cannot be trusted to carry out reforms. They seek the appointment of a receiver to assume BIA's functions.

This is a massive case, requiring the diversion of considerable Division resources for the foreseeable future (to FY 2001 and beyond) – resources that might otherwise be deployed to defend water rights, takings and Indian defensive cases, all of which themselves are inadequately staffed and require additional resources

Protecting the Fise in Natural Resource Programs

Just as the Division's breadth of natural resources cases has expanded, so too has that of the Tucker Act docket which now includes an increasing number of multi-plaintiff regulatory taking cases, natural resource based contract cases and Native American breach-of-trust disputes. This docket includes the mammoth <u>Headwaters</u> case mentioned earlier. These complex monetary damages claims increasingly raise first impression constitutional and statutory interpretation questions and involve almost all federal agencies. Over the years we have had an enviable track record, protecting the Treasury from more than 90%

of the amounts claimed in these takings cases. At the same time, we have sought to sustain the confidence of government agencies and the public in the balanced and equitable disposition of claims and in the availability of a fair process

Protecting the Fisc in Wetlands, Surface Mining and Natural Resource Takings

Physical and regulatory takings claims dominate our takings docket and we continue to work with the Court of Federal Claims and the private bar to fashion innovative and cost-effective resolution techniques. In physical claims, property owners contend that the government has physically occupied their property and displaced their ownership interest. The landowners then seek just compensation (market value) for property interest taken. Regulatory takings claims seek the same end (a conclusion that government action has taken a title interest in private property for which just compensation is due) but there landowners contend that the regulatory restrictions imposed (e.g., by the Clean Water Act's Section 404 requirement for a permit before dredging or filling in privately owned wetlands) diminish the economic value of the property. These cases tend to focus on Section 404, surface mining control and reclamation restrictions, and land use management restrictions on the private use of public lands.

This past year, we also saw a significant increase in takings cases stemming from the "Rails-to-Trails" Act. This program effectively allows the creation of interim "trail corridors" by using railroad rights of way which railroads would otherwise abandon. The rights of way are "rail banked" until some future point in time when they might be needed by the country's transportation system. In takings suits under this program, landowners contend that, under state law, the conversion of a railroad right of way to "trail use" does not fall within the "railroad use" resident on originally conveyed to the railroads. Thus, they allege that the trail use creates an additional burden causing a taking. Rails-to-trails cases now host two nationwide class claims. Because takings disputes turn on the factual nuances of a particular property (for example, its use or date of acquisition), multi-plaintiff suits create intense case-management challenges.

Protecting Approaches to Effective Resolution

Takings disputes are fact intensive and consume significant resources. Often it is best to "head them off at the pass." The Navy, for example, has requested that GLS employ "transactional" tools to settle a spate of cases they anticipate as a result of a base closure and realignment this year. In that instance, a large number of new jet fighters will be relocated to NAS-Oceana, adjacent to Virginia Beach, Virginia. The aircraft are noisy and will expose nearby urban developments to a drastic change in environment; an estimated 14,000 and 45,000 residents in two areas will be effected. We hope to intercept these potential claims before they reach litigation

An increasing proportion of the Division's appellate caseload is subject to alternative dispute resolution (ADR), typically mediation, either at the instigation of the appellate courts' mediation programs or at the suggestion of one or more of the parties. Circuit courts around the country have ADR programs with court-provided mediators for resolution of appellate cases, either before or after briefing and oral argument. ADR is not discretionary. Currently, all but one of the 13 circuits have established ADR programs. ADR is desirable because a settlement is often in the best interests of the United States. For example, the government may need to move forward to implement an important agency program or project, making litigation delays costly, ADR may resolve all aspects of an underlying dispute, while litigation may only address a portion of the real dispute, ADR may strengthen ongoing relationships for future interactions, and ADR may foster the exploration of creative solutions affording mutual gain and a high rate of compliance.

However, while ADR may lead to a better result than an appellate decision, it does not conserve appellate resources. For appellate attorneys, ADR is labor intensive and often contemporaneous with briefing. Environmental and natural resource cases are considered textbook examples of disputes ripe for mediation. If the initial mediation conference comes early in the appellate process, lawyers must delive into the record, learn the case facts quickly, and work with agency counsel and trial counsel to develop a negotiating position. Sometimes, a case is put into mediation after briefing and argument.

One example of ADR this past year illustrates the intensity of the work and the creative benefits of ADR. Pueblo of Sandia v. Babbitt (D.C. Cir.) This is one of the most resource intensive appellate cases to date and concerns the Pueblo's claim to10,000 acres of the Sandia Mountain Wilderness on the basis of an ancient Spanish land grant. The land is currently administered by the Forest Service as part of the National Wilderness System. The federal government and other defendants contend that the Pueblo's claim is time-barred. The district court ruled for the Pueblo and defendants appealed. Since the case was put in mediation seven months ago, one appellate attorney has charged over 860 hours. The effort is labor intensive for the Division because, among other things, the parties decided to select a private mediator, the federal mediation team includes members from three federal agencies and bureaus within those agencies. On the positive side, the mediation is attempting to resolve issues critical to a lasting resolution which would not be addressed through litigation.

By fiscal year 2001, we estimate that 25 percent of new appeals will involve at least one ADR session and most will have multiple mediation sessions. For this growing practice area, we will require additional staff, based on the following

We anticipate that by 2001, all 13 circuits will have well established ADR programs with fully staffed mediation offices, which will evaluate all appellate cases for ADR

ADR is additive and usually does not replace briefing in appellate cases. In the first half of 1999, six cases in mediation were unsuccessful and briefing commenced.

Ů,

ADR work will continue to be labor intensive. In 1998, three of Appellate's top 25 cases by hours recorded involved ADR. For the first six months of 1999, six of the top 25 cases by hours billed are in ADR.

The following chart illustrates the actual and projected workload for ADR

APPELLATE ADR. WORKLOAD

	<u>Actual</u> 1998	<u>Est.</u> 1999	Est. 2000	<u>£31.</u> 2001
Civil Cases received in Appellate	278	280	305	315
Cases with at least one ADR Session	47 (17%)	54 (19%)	63 (21%)	79(25%)
Cases with Multiple ADR Sessions	28 (10%)	32 (11%)	52 (17%)	69 (22%)

For all cases evaluated for ADR, we estimate that an average of three days of work is required at the outset, to prepare for and attend an initial mediation session. Comparing fiscal year 2001 to fiscal year 1999, we estimate an increase of 25 cases with one ADR session. That incremental work represents an additional 600 attorney hours in fiscal year 2001.

When a case remains in a mediation program for the purpose of negotiating a settlement, our best estimate, based on current data, is that this work is likely to require at least an additional 95 hours of intensive work. Comparing fiscal year 2001 to fiscal year 1999, we estimate an increase of 37 cases in extended mediation in fiscal year 2001. That incremental work represents an additional 3,515 attorney hours in fiscal year 2001.

License Renewals Under the Federal Power Act

Litigation over hydroelectric licenses issued by the Federal Energy Regulatory Commission (FERC) is by direct appeal to the courts of appeals. Therefore, this is an area of practice unique to the Appellate Section. As the result of a large number of licenses up for renewal and new licenses, as well as an increasing interest in the conditions that may be put on these licenses by federal resource protection agencies such as the Forest Service, NOAA, the Fish and Wildlife Service, and the Bureau of Indian Affairs, we anticipate the need to gear up litigation over FERC licenses.

In FERC cases, the Section represents federal natural resource agencies after the conclusion of administrative proceedings before FERC. The administrative stage consumes approximately three to seven years or more, after which FERC issues a decision. A request for reconsideration by FERC is a prerequisite to judicial review. In the courts of appeals, these cases are of two types—cases in which we file a petition for review on behalf of the resource protection agencies, contending that FERC

has not imposed sufficiently protective provisions in licenses, and cases in which we intervene on behalf of federal natural resource protection agencies to defend conditions developed by them for the protection of reserved lands (including national forests, Indian reservations, and military lands) that are included within hydroelectric projects

FERC had pending 134 applications for original licenses and license renewals as of April 8, 1999 FERC predicts that there would be pending 130 at the end of fiscal year 1999 and 110 at the end of fiscal year 2000 FERC issued 28 licenses and renewals in fiscal year 1998. Our client agencies have imposed conditions on almost all of these licenses. We anticipate that some of those conditions may be the subject of litigation.

Anticipated increases in FERC licensing actions did not materialize in fisual year 1998. The delay in licensing decisions appears to be due to an unexpected, time-consuming effort by FERC on a few cases in particular, which has delayed consideration of many others. Thus, the increase in FERC cases will likely materialize later than we projected last year.

The Department of Agriculture, our major client in this area, is gearing up for a major initiative on litigation of FERC licenses. Other federal agencies, including the Department of the Interior, will also be requesting our assistance regarding conditions on FERC licenses. Interior reports that it will be taking an increasingly active role in asserting the authority of the Secretary under the Federal Power Act to impose conditions on FERC licenses for the protection of fish and wildlife and Indian resources.

Data show that the number of petitions resulting from licensing decisions increased from eight percent in fiscal year 1997, to 18 percent for fiscal year 1998, to an estimated 20 percent for this fiscal year. While FERC is experimenting with collaborative administrative processes, the effect of these processes on the rate of appeal is uncertain. At this time, we estimate that 30 percent of FERC decisions will be appealed for fiscal years 2000 and 2001. The following chart illustrates the projected increases in FERC decisions, which typically reach the Appellate Section the year after the licensing decision.

ACTUAL AND PROJECTED CASES ON FERC. LICENSING DECISIONS.

	ACTUAL FY 97	ACTUAL FY 98	Est FY 1999	Est FY 2000	Est FY 2001
No of FERC Decisions on Licenses/Renewals	49	28	50	50	50
% of FERC Decisions Appealed	8%	18%	20%	30%	30%
New Cases on Appeal	2	4	. 5	10	15
Pending Cases on Appeal	1	_ 4	9	15	25

Existing data show that complex FERC licensing cases consume approximately 200 attorney hours per case a year over a two-year period, for a total of 400 hours per case. Assuming 10 new cases in fiscal year 2000 (representing 20 percent of FERC decisions) and 15 new cases in fiscal year 2001 (representing 30 percent of FERC decisions), these cases will consume 5,000 attorney hours, or slightly over two attorney FTEs, in the year 2001

Other Troubling Developments

We are witnessing an alarming trend among littgants in environmental and natural resources cases to seek emergency relief to delay or halt implementation of governmental activities. Litigants are also expending huge sums to exhaust every possible avenue of relief, such as filing petitions for rehearing when an appellate court issues an unfavorable ruling. As a result, there has been a dramatic increase in the number of emergency motions for stays and injunctions pending appeal and requests for filing or responding to petitions for rehearing and similar substantive pleadings that the Appellate Section must handle. Based on avaitable data (through March 1999), the Appellate Section will file 120 such pleadings in fiscal year 1999, representing a 33 percent increase over the number filed in fiscal year 1998, and a 64 percent increase over the number filed in fiscal year 1997. All of these submissions must be prepared on short notice and are very disruptive of ongoing casework.

An adverse Tenth Circuit decision (December 1998) in Forest Guardians v. Babbitt will result in substantially more appellate work for the Division. At issue in Forest Guardians was whether a district court was required to compel the Fish and Wildlife Service to designate critical habitat for the Rio Grande Silvery Minnow even though Congress had not appropriated sufficient funds for the Service to complete all of its mandatory listing and critical habitat obligations within the time frames imposed by the Act. The Tenth Circuit held that the district court must issue an injunction mandating immediate compliance with the statutory deadline. According to the Tenth Circuit, neither the program agency nor the district court had the right to prioritize the manner in which limited funds.

would be applied to mandatory obligations. The agency's reasons for failure to meet a deadline - including a lack of funds to meet au mandatory obligations in a statute - can be considered in the context of a contempt proceeding for failure to meet a court deadline.

Because this decision was based on an interpretation of the Administrative Procedure Act, it has far-reaching implications for all federal agencies operating under mandatory deadlines imposed by Congress. This decision will likely result in additional litigation against all agencies facing mandatory deadlines, with each interest group rushing to the courthouse to compel agencies to take action on their favorite projects. The government filed a petition for rehearing en bane but was denied.

Initiative II: Enforcing and Prosecuting Environmental Laws

Program	Positions	Workyears	Amount
Environmental Crimes Section	3	2	\$247
Environmental Enforcement Section		4	659
Wildlife and Marine Resources Section	1	1	<u>82</u>
Totals	12	7	5988

This request includes 7 attorneys, 2 paralegals and 3 legislative support analysts (LSAs). Funding was derived from the Year 2001 modular costs.

Principal Client Arency Stakeholders: F5f, EPA, Coast Guard, Fish and Wildlife Service, Defense, Customs, FAA, DOT, Commerce (NOAA)

Problem:

The Division's environmental and wildlife crime programs are at a critical crossroads — an infusion of resources is desperately needed to capitalize on the critical momentum they have created in recent years as a result of successful prosecutions, training outreach and innovative initiatives or undercover operations. Similarly, we must commit additional resources to civil enforcement where the caseload pipeline is clogged, stymied by a record number of unfilled cases and insufficient attorney resources

The rationale for this request in presented sequentially, in four discrete parts

- National Environmental Prosecutions
- International Environmental and Wildlife Prosecutions
- Environmental Enforcement
- Protecting Indian Rights

National Environmental Prosecutions:

The Environmental Crimes Section affects people's lives in unexpected ways and the breadth of its work can be difficult to capture While it is well known that the work of the Section has resulted in cleaner air, water and lands, fess well known are matters such as these in which the success of the Section has a profound impact

- Prosecuting individuals who sprayed the homes of poor people with a dangerous crop pesticide, claiming it was safe for home use
- Convicting individuals who were preying on homeless people, abusing their desire to work by exposing them to the dangers of an illegal asbestos removal operation
- Spurring some of the largest corporations in America toward better compliance measures, such as improving
 the operation of the longest oil pipeline in the U.S., and the complete overhaul of the environmental practices
 of one of the world's largest cruise ship companies
- Training the District of Columbia's first-ever police environmental crimes unit, a unit which is already having
 an impact in communities throughout the city
- Spearheading a CFC enforcement initiative to help protect the earth's ozone layer which affects the entire planet's well-being
- Devising new ways to protect communities from the dangers posed by clandestine synthetic drug labs

In the past three years, the number of ECS prosecutions, as well as hours per attorney devoted to cases, has increased steadily, so too

has the amount of time and resources dedicated to policy and legislation, and to training prosecutors and investigators from around the country and the world. The section's pending case load and equally important training and policy responsibilities have increased accordingly, and the Division has obtained great results. The number of convictions has increased in FY 1996, ECS obtained 40 convictions, that number grew to 57 in 1997 and again to 76 in FY 1998. Only half-way through FY 1999, the

This past year, ECS achieved a 99 percent conviction rate.

section has already won 65 convictions. From FY 1996 to the present, ECS has secured prison sentences amounting to over 76 years; home detention of over 5 years; probation of over 181 years, and supervised release of over 54 years, in addition to fines and restitution totaling over \$150 million.

Looking forward to 2001, ECS has set forth an ambitious environmental agenda and is poised to spearhead a nationwide effort to combat environmental crime — but it needs additional resources to capitalize on the critical momentum created in recent years. The momentum is attributable to three distinct developments: the section's cooperative involvement in highly visible criminal litigation, its identification and development of new initiatives, and its demonstrated commitment to training a new generation of prosecutors and investigators—be they federal, state, local or international. This three-pronged approach is discussed in more detail below.

Cooperative Involvement in Highly Visible Criminal Litigation

Sound lawyering, hands-on knowledge and experience are the backbone of the Environmental Crimes program. It is critical to the program's performance and credibility. We continue to receive ever more requests for assistance from U.S. Attorney offices and expect a significant increase in such requests by 2001. Some ask that ECS simply assign an attorney to assist in a major investigation while others seek attorneys to spearhead a multi-district task force. Such requests come both from offices with established environmental crimes programs and from districts that lack the resources to prosecute such resource intensive cases without support from ECS. ECS views its responsibilities to support United States Attorney's offices as central to its mission. Participation in task forces and environmental crimes sub-committees of Law Enforcement Coordinating Committees (LECCs) has been an ECS priority since the section began.

New Initiatives

Over the past few years, ECS has transformed criminal environmental enforcement efforts through its emphasis on initiatives to prosecute areas of environmental crime that previously have received inadequate enforcement. Our game plan is to get an initiative up and running, train and provide back-up assistance to AUSAs so that they can handle the prosecutions by themselves, and then redirect ECS attorney resources to launch other new initiatives.

Two recent initiatives demonstrate the degree to which this approach contributes to the success of the environmental crimes program. Over the last four years, ECS has led a national enforcement initiative to curtail the illegal importation of CFCs into the United States. Before the initiative began, a major black market had developed in this country, undermining EPA's efforts to prevent ozone depletion. Similarly, the Vessel Pollution Initiative demonstrated the strong leadership that ECS can provide to help energize and direct enforcement efforts in a critical but neglected area of environmental regulation. Before the initiative began, little if any enforcement of vessel pollution had occurred. Through FY 1998, the ECS-led initiative on vessel pollution had resulted in dozens of convictions and millions of dollars in criminal fines, including a record \$75 million in one case. By FY 2000 and 2001, US Attorneys will handle the majority of cases in these areas.

The following additional initiatives are being developed by ECS attorneys in coordination with United States Attorney's Offices and investigating agencies. National Underground Storage Tank Initiative; Laboratory Frand Work Group;

HAZMAT Initiative; Pretreatment Initiative; Mississippa River Initiative and a Claudestine Synthetic Drug Lab Initiative

While plans for other initiatives exist, there are currently insufficient resources to undertake the work needed to faunch these efforts. Additional attorneys are sorely needed to commence new initiatives, sustain communication with federal and state agencies and U.S. Attorneys offices, prosecute cases generated by the initiative, and analyze legal issues that arise in the course of the investigations and prosecutions.

Training

The need for training of federal, state and local investigators and prosecutors has grown substantially in the past several years and this trend is expected to continue into 2001. A review of recent activities provides ample evidence of the Section's commitment to this important component of its criminal enforcement program. ECS attorneys regularly

- Organize and teach environmental crimes courses for Assistant U.S. Attorneys, EPA attorneys, and FBI and U.S. Coast Guard agents.
- Provide in-service training around the country to law enforcement personnel from such agencies
 as the FBI. Defense Criminal Investigative Service. Coast Guard and NASA.
- Lead quarterly meetings of working groups for existing initiatives such as CFC Enforcement, involving investigators from EPA. Customs, IRS, FBI, and Canadian law enforcement.
- Lead quarterly meetings of working groups on potential initiatives such as Underground Storage Tank Criminal Enforcement, involving investigators from EPA, FBI, the U.S. Postal Service, and the Department of Defense, and,
- Provide a wide variety of basic and specialized criminal enforcement training to state and local law enforcement officials throughout the U.S., as well as neighboring Canada and Mexico

In addition, ECS

 Serves as a clearinghouse for expertise and information on environmental crimes prosecution by answering numerous inquiries from U.S. Attorney's Offices, state and local law enforcement agencies.

- Regularly updates its two-volume <u>Environmental Crimes Manual</u>, a comprehensive, practical
 reference guide for the investigation and prosecution of environmental crimes, which is
 distributed to U.S. Attorney Offices and other federal and state law enforcement agencies, and
- Distributes The Environmental Crimes Bulletin, a quarterly bulletin summarizing current case, policy and investigative developments, to over 1,000 law enforcement personnel

International Environmental and Wildlife Prosecutions

The ENRD is seeking increases in 2001 for both of the Sections that handle its international criminal work (Environmental Crimes and Wildlife & Marine Resources). The additional resources will enhance our ability to combat international crime and allow the Division to affirmatively pursue international outreach efforts, e.g., conduct training overseas, participate in international conferences, and pursue new initiatives such as transnational shipment of hazardous waste and expanded vessel pollution detection.

Both sections are strongly committed to pursuing international prosecutions because.

- Absent ENRD involvement, international environmental and wildlife crimes all too often go undetected and unpunished.
- While the offenses truly threaten our global environment, they also often threaten our domestic environment.
- More enforcement effort on the part of the U.S. will encourage our foreign counterparts to adopt stricter domestic measures
 themselves, and,
- The U.S., as a party to a host of multilateral and bilateral treaties, has an obligation to lead by example

Additional staff and funding are necessary because:

International prosecutions are often expensive, requiring additional resources to address international coordination, the obtaining of witnesses and evidence, and the extradition of defendants. In addition, prosecution of crimes in this area often involves coordination among multiple United States agencies, as well as complex white collar criminal investigative techniques including undercover work, intensive covert investigation, and intelligence analysis. This in-depth approach is typically only possible through the use of special multi-district groups of attorneys and agents committed to a particular area of investigation for a relatively long period of time. But such prosecutions do not come cheap. They require time and travel and a dedicated commitment of both funding and personnel.

- The ENRD is committed to aggressively increasing and improving our educational outreach. Frequently both our foreign counterparts and their investigative agencies have invited us to share our knowledge with them. We can and should provide such training. One such effort now underway is an outgrowth of a recent series of prosecutions for smuggling endangered and protected reptiles from Madagascar. That experience prompted a request for interduciplinary training in Madagascar in cooperation with the U.S. Fish and Wildlife Service and U.S. AID. As a result of exchanges with Malagascy personnet, this training included presentations by wildlife officials from the Netherlands, France and Madagascar as well as from the United States. This kind of follow-up and cooperative effort needs to be increased as policing our own borders only addresses one end of the problem. We must assist developing nations in learning how to preserve and protect their own wildlife resources in situ. In wildlife smuggling cases for example, once the animals reach the United States they can no longer be returned to their native habitat as they will have been exposed to pathogens that pose a serious risk for wild populations if the animals were reintroduced.
- Likewise, we need to increase attendance at various international conferences and gatherings. They provide
 opportunities for cross-fertilization of ideas and strategies and foster better relations in international
 enforcement. Examples of conferences we've failed to attend for lack of money this past year include. CITES
 COP10 in Zimbabwe, G7 in England, InTERPOL in Lyons, France, and the North America Wildlife
 Enforcement Working Group (an offshoot of NAFTA) in Vancouver.

Over the past couple of years, the ECS has conducted a variety of activities with representatives of many nations including

Ministers from Russia and the Group of Seven leading economies agreed today to step up their cooperation against environmental crime, a market estimated at \$20 billion a year. "We want to declare war on the smugglers who trade illegally in banned products such as endangered species, the oxone-depleting substances and hazardous wastes." — The New Yest Times.

- Provided training to the Italian National Police's (Carabinieri) Environmental Crime Unit regarding the development of environmental criminal enforcement programs;
- Conducted a program sponsored by U.S. AID for 15 high-level Russian federal environment ministers, elected officials and regional environment ministers.
- Participated in the American Bar Association Central and East European Law Initiative (ABA/CEELI) in environmental prosecution workshops in Moldova and Ukraine;
- Spoke to USIA Young African Leaders about Environmental Protection in a Developing

- Economy with attendees from 15 African nations present,
- Met with representatives of Environment Canada and Canada's Department of Justice to discuss possible joint
 environmental criminal enforcement initiatives

The Wildlife and Marine Resources Section is likewise increasingly involved in international enforcement activities, most recently involving the international reptile trade. Operation Chameleon (the family of criminal cases investigated by the Fish and Wildlife Service's Branch of Special Operations) is now winding down, having resulted in the successful prosecution of more than two dozen smugglers and reptile dealers in three countries. It provides a model for future successful long-term covert investigations. The Section works with its overseas counterparts to obtain or exchange evidence and sometimes to extradite fugitives to the U.S. or at least expel them from a country from which they cannot be extradited. These activities are accomplished in concert with the State Department and the Office of International Affairs in the Criminal Division. Over the past couple of years, the Section has collected evidence or sought search warrants under the terms of mutual legal assistance treaties (MLATs) or letters regatory in the Netherlands, Indonesia, Belize, Madagascar, Germany, South Africa and Canada. In each instance, whether we are initiating or responding to requests formal documents must be prepared in both languages spelling out precisely what is being sought or agreed to

A new wrinkle in the international environmental crime scene emerged this past year at the biannual Convention on Trade in Endangered Species (CITES) meeting. An entire order (Acipensiformes) of sturgeon and paddlefish was listed on the CITES appendices, thus significantly limiting trade in these species. The new trade restrictions, which became effective in the Spring of 1998, affect commercially valuable sturgeon from the Caspian Sea region. These sturgeon are generally regarded as producing the highest quality caviar, accounting for about 90% of the world's caviar trade. The new restrictions will not only encourage smuggling of caviar into the U.S., but, based on recent intelligence, encourage illegal exploitation of U.S. sturgeon and paddlefish, where the eggs are used as surrogates for, or mixed with, the more popular and expensive European and Asian caviars. The FWS is already drafting an ambitious enforcement plan. Russian organized crime rings are expected to become involved in illegal importation and distribution of both Caspian sea caviar and U.S. "look-alikes."

The Division also engages in other international activities in support of its core functions. Some of these activities involve supporting the efforts of agencies engaged in the negotiation of international agreements. In some instances this support involves reviewing draft agreements to ensure that they do not interfere with the enforcement of existing law or otherwise reduce the protection provided by existing law. Draft agreements are also reviewed to ensure that, where appropriate, they create enforceable obligations on the parties to the agreement so that the U.S. has the ability to seek redress where it is complying with its obligations while other countries are not complying with theirs. In addition, the Division seeks to ensure that such agreements will result in a meaningful improvement in environmental protection.

Other efforts have focused on the domestic implementation of the environmental protection agreements entered into by the U.S. ENRD has worked very closely with other agencies and with the governments of Mexico and Canada to develop and support

cooperative efforts to enhance compliance with, and the enforcement of, domestic environmental laws. These efforts have included looking for mechanisms to improve the cross-border sharing of information about violations, the return of illegally imported wildlife to its native country, and helping law enforcement officials working on either side of the U.S. borders work better together

Environmental Enforcement

Not all our enforcement activity involves criminal prosecutions. Our Environmental Enforcement Section (EES) is responsible for handling most affirmative civil itigation brought on behalf of the Environmental Protection Agency (EPA), claims for damages to our natural resources on behalf of the Departments of Interior, Commerce and Agriculture, claims for contribution against private parties for contamination of public land, and the recoupment of money spent to clean up certain oil spills on behalf of the Coast Guard. The Section's goals are to support the regulatory programs of its client agencies through litigation to: obtain compliance with environmental statutes, obtain appropriate redress of past violations that have harmed the environment, establish a credible deterrent against violation of those stanutes, obtain monetary civil penalties for past violations, recoup federal funds spent to abate environmental contamination and obtain money to restore or replace natural resources damaged through oil spills or the release of hazardous substances into the environment

FY 1998 was a banner year in terms of achieving these goals. Record filings and recoveries were achieved while specific geographic areas in the nation can look forward to a cleaner and healthier environment as a result of civil environmental enforcement. Total judicial referrals from all client agencies in FY 1998 totaled 374, the second largest number of referrals in its years. In addition, requests for approval of EPA administrative actions were the highest in history. The total number of matters received from client agencies for EES action in 1998 was 18% greater than 1996 and 40% greater than 1993. Based on the number of referrals received so far this year and on client agency (especially EPA) projections, we expect these high numbers to continue for the next several years.

As has been true for a number of years, the results of EES litigation in 1998 demonstrate a significant return for the dollars invested in Section activities, including the largest penalties ever agreed to in a civil environmental case (the seven consent decrees with heavy-duty diesel engine manufacturers (D.D.C.)), the largest adjudicated Superfund judgment in any given case (\$103 million in United States v. Vertac Chemical Corp. (E.D.Ark.)), and the largest civil penalty ever agreed to under the Resource Conservation and Recovery Act (\$11.8 million in United States v. FMC Corp. (D.Idaho))

EPA Sector Enforcement

The majority of the over 1,000 active cases/matters currently being handled by EES are referred to DOJ by EPA, the agency with primary responsibility for administering the Nation's environmental regulatory laws. In 1998, EES received the largest number of total EPA referrals for any given year.

EES works in partnership with EPA's Office of Enforcement and Compliance Assurance (OECA) in the development of strategic enforcement actions specifically targeted to achieve widespread deterrence and to encourage future compliance across whole industry sectors. Over the past several years, in the wake of serious resource limitations, both EES and OECA sought to utilize civil judicial enforcement tools in the most efficient and appropriate ways. Therefore, EES and OECA judiciously spent each enforcement dollar on those actions that promised the "highest rate of return" community-to-community, either in dollars recovered or in deterrent effect. The results have been striking. EES, working cooperatively with EPA, has achieved record successes in the areas of air, water and hazardous waste enforcement, obtaining significant penalties under those statutes along with injunctive relief that protects both public health and the environment.

EPA has also found that often the most effective way to address environmental non-compliance problems is on a sector basis. An extraordinary recent example of the effectiveness of this "whole sector approach" occurred in this past year when the EES and EPA reached an enforcement settlement with the seven heavy-duty diesel engine manufacturers which culminated the largest Clean Air Act (CAA) enforcement action in history. The settlement resolved charges that the companies violated the CAA by installing software that allowed engines to meet EPA emission standards during testing but disabled the emission control system during normal highway driving. When such engines are running on the highway, up to three times the limit of nitrous oxide (NOx) emissions result. The settlement is expected to prevent 75 million tons of NOx air pollution over the next 27 years and reduce total NOx emissions from diesel engines by one-third by the year 2003. We estimate that the seven companies will spend collectively more than \$850 million to introduce cleaner new engines, rebuild older engines to cleaner levels, recall trucks that have defeat devices installed, and conduct new emissions testing. The initiative also resulted in a \$83.4 million penalty payment to the United States and an agreement to spend \$110 million on other projects to reduce emissions.

Based on the success in the heavy-duty diesel engine enforcement action, EPA has identified several additional sectors for priority attention over the next several years based on such factors as compliance patterns and the importance of the sector to achieving environmental goals. These national sectors include. Petroleum Refining Facilities, Industrial Organic Chemical Manufacturers, Primary Nonferrous Metal Smelters, Coal-fired Power Plants. Automotive Repair Shops and, in accordance with last year's Clean Water Action Plan, EPA will also focus on Wet Weather Discharges from Municipalities (including combined sewer overflows, sanitary sewer overflows, and storm water) as well as Concentrated Animal Feeding Operations (CAFOs are a known significant source of water quality degradation which can threaten drinking water supplies, posing a direct threat to public health.)

Protecting Children from the Hazards of Lead Paint

The Real Estate Notification and Disclosure Rule (promulgated under the "Residential Lead-Based Paint Hazard Reduction Act of 1992"), requires realtors, sellers, and lessors of pre-1978 housing to disclose the presence of any known lead-based paint or—lead-based paint hazards to prospective buyers and renters. This is the primary federal tool to address the approximately 960,000 children with elevated blood lead levels. Violators of that Rule and a companion Training, Certification/Accreditation and Work

Practices Rule, are subject to civil penalties, injunctive relief and criminal sunctions. Two litigating sections of the ENRD are serving on an inter-departmental (HUD, EPA and DOJ) Task Force to jointly enforce the federal lead-based paint disclosure rule and provide assistance to local and state governments in enforcement of their hazard control regulations.

Investigations indicate there is widespread non-compliance with the Lead Hazard Reduction Act. To combat the situation, the Task Force is currently executing three large pilot enforcement projects in Washington, D.C., Los Angeles and Chicago. The success of this effort in the District demonstrates the effectiveness of these enforcement actions and the value of expanding to other cities. HUD has proposed increasing their enforcement resources with 20 new FTEs (ten actorneys and ten investigators) to develop and prosecute cases. The Environmental Crimes Section has already commenced two criminal investigations.

With additional resources the ENRD and the U.S Attorneys will be able to conduct an aggressive and effective environmental enforcement program that deters illegal conduct and protects communities and their most vulnerable members – children

Mississippi River Initiative

EES is also seeking additional resources for the continuing Mississippi River Initiative. On September 9, 1998, the Attorney General announced that 54 criminal defendants, \$10 million in criminal penalties and restitution, 18 civil judicial actions, \$18 million in civil penalties and 93 administrative cases were obtained as a result of a continuing comprehensive, coordinated federal effort known as the Mississippi River Initiative. The cases addressed violations which included illegal dumping from barges, illegal filling of wetlands, spills of oil and other hazardous materials, and discharges of chemicals such as cyanide, heavy metal and hydrofluoric acid into the Mississippi.

EES is one of three litigating sections of the ENRD (working with others) to focus enforcement efforts on improving the environmental quality of the Mississippi River and its tributaries in 2001. Additional resources will enable EES managers to continue its participation in multi-agency planning sessions, and contribution of resources to an effort to generate additional enforcement actions in this multi-media, multi-facility litigation in FY 2001.

Other Client Agency Litigation

EES also works in partnership with non-EPA clients including the General Counsels' Offices at the Departments of Agriculture, Commerce, Defense, and Transportation, the U.S. Army Corps of Engineers and the Solicitor's Office at the Department of Interior, among others, to develop strategic enforcement actions 1n. facilities under the ownership or management of these agencies. These actions involve the collection of response costs incurred by these agencies in cleaning up CERCLA sites on lands under their administrative authority as well as recovering natural resource damages for injured resources under the trusteeship of these agencies.

Recognizing the threat that hard rock mines pose to water supplies and aquifers, the Departments of Interior, Agriculture and Commerce, for example, have embraced their role as natural resource trustees and are pursuing Natural Resource Damages claims against mining concerns. These cases are among the most resource intensive cases to litigate in the section. In fact, three of the largest cases currently being handled in EES in terms of both the total number of professional hours spent and the litigation expenses/support needs, are cases involving damages to natural resources—Bunker Hill, Montrose Chemicals, and ARCO/ClarkFork. In FY 1998, EES attorneys and paralegals put in 34,156 hours for over 16 attorney/paralegal years) on these three cases.

Figure / Colonial Pipeline
Case: Photo depicts
pipeline ruptures at the
Rio Ville Subdivision
Rouston, Texas. The flood
related rupture of three
pipelines spilled
reformulated gasoline,
diesel fuel and crude oil
into the San Jacinto
River, which required
cleanup.

The <u>Bunker Hill</u> case is illustrative of the huge stakes involved and the resources necessary to litigate these kinds of cases. In 1996, the Section sued eight companies under CERCLA and the Clean Water Act for damages to natural resources under the trusteeship of the United States which occurred as a result of extensive releases of various hazardous substances, primarily heavy metals, from 100 years of mining operations at the <u>Bunker Hill</u> facility in the Coeur d'Alene River Basin in Northern Idaho. The cost of restoring the Coeur d'Alene River and surrounding area (including Lake Coeur d'Alene), which stretches over 1500 square miles, is estimated in the hundreds of millions of dollars. DOI and USDA, along with the Coeur d'Alene Indian Tribe and the State of Idaho, are natural resource trustees for the resources injured in the Coeur d'Alene Basin.

The Distict Court recently issued a C see Management Order that sets a heavy schedule of depositions, expert witness preparation, pretrial motions practice and other litigation-related activities, leading to a trial of certain "Phase 1" issues (including liability for releases, causation and damages) in November 2000. A second trial of the selected remedy, amount of natural resource damages and contribution will be scheduled after the first trial. Under the Case Management Order, fact depositions begin at once. Defendants have been allowed up to 320 fact depositions and we expect that defendants will likely schedule 100-150 fact depositions before the deposition cutoff date in December 1999. We will likely conduct at least 80 fact depositions. Expert reports are due in June 1999, and we expect to have to prepare at least 30 or more expert reports. Given that each of the defendants and our po-trustee, the Coeur of Alene Tribe, will also identify experts, we expect to have to take or defend the depositions of 75-100 expert witnesses.

Thus, deposition practice will extend through the rest of 1999 and heavy deposition practice will continue well into 2000. We will then work on motions for summary judgment and other pretrial motions into 2001. The first trial, which is scheduled to begin on November 6, 2000, will probably last 6-10 weeks, or into January 2001. We expect that a large number of attorneys and the 30+ experts for the United States will thus be working hard at the trial in the first half of 2001. Scheduling of the second phase trial will take place at the end of the first trial and similar preparation activities will commence at that time

We have gone into some detail regarding the <u>Sunker Hill</u> case to show the extraordinary resources required to litigate these kinds of

210

cases. Similar work will likely be required in other NRD cases such as <u>Montmar</u> and <u>Fox River</u>. The point to be underscored here is that litigation of Natural Resource Damage Cases can severely tax the resources of the Section. But properly staffed, we can expect to remove the threat, reclaim the land and recover millions, even hundreds of millions, of dollars.

Office of Legal Counsel Salaries and Expenses Program Performance Information

MISSION:

To assist the Attorney General in her role as legal adviser to the Executive Branch, and to provide timely, thorough and reliable legal advice in response to requests from the President, the White House staff through the Counsel to the President, the Attorney General, Justice Department components and Executive Branch agencies.

ORGANIZATIONAL GOALS:

To provide general legal advice to the President and Executive Branch agencies.

To resolve intra-Executive Branch disputes over legal questions.

To advise other components of the Department of Justice where litigation or proposed legislation raises constitutional issues or other issues of general concern to the Executive Branch.

To testify and prepare testimony in connection with pending legislation of interest to the Department and the Administration, and to assist in the drafting of legislation.

To approve the form and legality of Executive Orders and Orders of the Attorney General.

BASE PROGRAM DESCRIPTION:

The authority for the Office of Legal Counsel (OLC) is provided in 28 C.F.R. 0.25. The principal duty of OLC is to assist the Attorney General in the role as legal adviser to the President and Executive Branch agencies and as arbiter of legal disputes within the Executive Branch. OLC also provides general legal assistance to other components of the Department, especially where litigation or proposed legislation raises constitutional issues or general issues of executive authority. It reviews for form and legality all Executive Orders and Proclamations proposed by the President, as well as all proposed Orders of the Attorney General and all regulations requiring Attorney General approval. In addition, OLC is also involved in coordinating the work of the Department regarding treaties, executive agreements and international organizations, and performs a variety of special assignments referred to the Office by the Attorney General, the Deputy Attorney General or the Associate Attorney General. The Office also has responsibility for advising the Office of Government Ethics on matters of law in the area of conflict of interest.

At the direction of the Attorney General and the Deputy Attorney General, OLC has convened meetings of General Counsels' consisting of the general counsels of the principal Executive Branch components and chaired by OLC. This group has been and will be utilized to improve coordination and consistency in handling important legal issues of concern through the Executive Branch, particularly legal matters bearing upon the President's constitutional responsibilities and authority.

Currently, it is a rare occasion that requests are considered appropriate for formal Attorney General opinions, which are drafted in OLC and reviewed, revised and approved by

the Attorney General. Instead, requests result in the preparation of legal opinions signed by the Assistant Attorney General or one of the Deputies based upon the research of one or more of the Office's staff attorneys. Other requests result in the provision of oral advice to the client agency. Since 1977, at the direction of the Attorney General, this Office has published selected formal opinions. Volumes covering the years 1977 through 1989 have been issued in hardback. Softbound volumes covering the years 1990 through 1992 have been issued as preliminary prints. Production of hardbound editions for these years is in progress. OLC has released in looseleaf form the opinions of the Office from 1993 through Pebruary 1996 as an interim measure preliminary to publication in hardbound volumes.

OLC's role in the Department's legislative program has increased dramatically in recent years, and includes drafting legislative opinions, testimony, and preparation of Presidential signing statements. OLC has taken a major role in either testifying or preparing testimony in connection with pending legislation of interest to the Department and the Administration, and has assisted in the drafting of legislation.

In addition, because of its expertise in certain areas, OLC has assumed an on-going advisory role to other Department components, including to the Solicitor General and the litigating divisions on issues relating to separation of powers, executive privilege, national security matters, federalism, and immigration matters.

OLC generally does not initiate any programs nor does it have control over the volume of its work. The work results from requests for opinions and legal advice from the President, the White Kouse staff through the Counsel to the President, the Attorney General, members of the Cabinet and heads of Executive Branch agencies and other Department of Justice officials.

Program Changes:

Perm.
Pos. WY Amount

At the direction of the Attorney General, and over the next two years, the Office of Legal Counsel will be responsible for conducting a legal review of a series of 40 presidential emergency action documents that were prepared by OLC over a decade ago. The review will involve original legal research, review of other agencies' legal work, and a substantial amount of legal writing. The Offices estimates that this review will entail hundreds of hours of legal work involving attorneys at all levels within the office. Part of longer term plan for these documents is an ongoing legal review to ensure that the documents always reflect current law and that they have been prepared. This ongoing review will require the commitment of one full time attorney or one additional workyear. Accordingly, the Office will need an additional attorney position in order to properly perform this newly added responsibility.

Civil Rights Division Summary Statement and Performance Plan Fiscal Year 2001

The Civil Rights Division (CRT) is requesting a total of 754 positions, 710 workyears and \$97,922,000 in its Salaries and Expenses Appropriation. This request represents an increase of 83 positions, 47 workyears, and \$8,756,000 over the FY 2001 Base level of 671 positions, 681 workyears and \$89,166,000.

CRT's total requested program increases for FY 2001 would support an effective civil rights enforcement program and provides additional resources required to support enforcement efforts throughout the Division. Detailed explanations of CRT's FY 2001 program increases are contained in the Program Performance portion of the budget justification.

A. Component Missions and Gouls, and Relationship to DOJ Strategic Plan

CORE MISSION: The primary mission of the Civil Rights Division is to enforce in a fair and uniform manner the country's civil rights laws. The Division's civil rights enforcement mission has two significant prongs: (1) to fulfill the promise of federal laws entitling all persons to basic civil rights protections as they engage in everyday conduct throughout the United States; and (2) to deter illegal conduct through the successful judicial enforcement of these federal laws. The Civil Rights Division considers its most significant results to occur each time a statute has been enforced by remedying discriminatory conduct and providing a victim a remedy for any harm suffered and when our education and outreach programs prevent unlawful conduct through voluntary change. By allocating its resources among civil and criminal enforcement activities, and adjusting as necessary for newly emerging and unique patterns of unlawful conduct, the civil rights enforcement litigation conducted by Division attorneys ensures that the nation's civil rights laws are fairly and uniformly enforced. In addition, through the media and other outreach, informational and training efforts the Civil Rights Division informs the public and covered entities of their obligations under federal civil rights laws.

B. Highlights of Mission-Critical Results

Following are some examples of Section FY 1999 activities in meeting our mission and addressing Core Function responsibilities:

Appellate Section--filed 117 papers of substance in the Supreme Court and in the courts of appeals. Seventy-three percent of all merits decisions for FY 1999 have been in full or partial accord with the Division's contentions. The Supreme Court reached the merits in 12 cases, nine of which were favorable to the Division, and consistent with the position taken by the United States as amicus curise.

Criminal Section -- 72 new investigations were presented to the grand jury and 66 cases were filed charging 102 defendants. Trials were conducted in 31 cases resulting in the conviction of 26 defendants and the acquittal of 23. In addition, guilty pleas were entered from 72 defendants.

During FY 1999, 31 racial violence cases were filed charging 46 defendants in connection with hate crimes such as cross-burnings, arson, vandalism, shootings, and assault and six cases involving arsons at houses of worship were filed.

Since the enactment of the Freedom of Access to Clinic Entrances Act in May 1994, the Section has received numerous complaints of possible violations of the Act, all of which have required investigation, review and response. To date, the Section has opened 377 reproductive health care violence and obstruction investigations. 34 of which have become prosecutions.

Special Litigation Section--Under the Civil Rights of Institutionalized Persons Act, the Section opened investigations of six facilities in FY 1999 and continued its investigations of an additional 58 facilities. In addition, during FY 1999 the Section obtained settlement agreements which addressed violations at six mental retardation facilities, six correctional facilities; one facility for the visually handicapped; one mental health facility in Virginia, and, local jails in two states. In addition, the Section successfully negotiated settlements of issues involving sexual misconduct by officials of six Arizona and Michigan women prisons. The Section monitored jurisdictions' compliance with settlement agreements in 116 facilities.

In FY 1999, pursuant to the pattern or practice authority under the Violent Crime Control and Law Enforcement Act of 1994, five additional police misconduct investigations were launched; the Section began or continued preliminary inquiries into approximately 25 law enforcement agencies, and Section staff reviewed or fielded several hundred allegations of police misconduct. The Section is continuing investigations of racial profiling in traffic stops and post-stop searches in five states.

Voting Section -- the Section helped to resolve challenges to Congressional districts in Louisiana and to the senate districts in Florida and reviewed 3,800 Section 5 submissions containing 12,900 changes of voting practices and procedures.

Employment Litigation Section--the Section has handled nine new lawsuits that raise <u>Adarand</u> issues. In post-<u>Adarand</u> litigation, we have responded to applications for temporary restraining orders, motions for preliminary injunction and conducted evidentiary hearings.

The Section also represents the Department of Labor in challenges to its authority to enforce effectively Executive Order 11246, Section 503 of the Rehabilitation Act of 1973, and the Vietnam Era Veterans Readjustment Assistance Act of 1974. Two challenges to Executive Order 11246 have been filed in fiscal year 1999.

Rousing and Civil Enforcement Section in 10 court settlements filed in FY 1999, we obtained \$1,000,000 in monetary relief to compensate victims of discrimination and provide for increased housing accessibility through, among other things, retrofitting of existing units and construction of new units. In a lawsuit combined with private litigation alleging egregious racial harassment of tenants by the Boston Housing Authority, we obtained important injunctive relief as well as \$1.5 million in monetary relief. The Section filed 19 pattern or practice cases in FY 1999.

Educational Opportunities Section—the Section intervened in CNE and United States v. Danver Public Schools, and negotiated a consent decree providing for services to 14,000 non and limited English speaking students. The relief includes an enhanced curriculum, additional materials and resources, and monitoring to ensure compliance. The Section also settled the longstanding St. Louis school desegregation case, <u>Liddell and United States v. Board of Education of the City of St. Louis</u>. The settlement agreement reached in that case provided for desegregation transfer opportunities for approximately 9000 city students new facilities in the city in excess of \$200 million, and funds to continue and expand remedial programs, including preschool, full day kindergarten, and desirable class sizes, at a cost of approximately \$60 million per year for ten years.

pisability Rights Section--participated in over 100 lawsuits, over 1,500 investigations, and 345 referrals for mediation. A total of 11 states had submissions of building codes for certification with the Americans with Disabilities Act (ADA) standards, and Federal agencies submitted more than 40 policy review requests. Our extensive ADA educational afforts through technical assistance delivered over 5,000 small business inquiries, over 105,000 information line responses, almost six million website "hits" (primarily downloading information) and over eight million documents for distribution.

The Section's efforts result in hundreds of formal and informal resolutions of individual complaints a year. We have over the past year filed suit and obtained favorable rulings on such diverse subjects as failure to design, construct, and operate stadium style movie theaters (wheelchair seating only in front rows), and modification of day care "no meda" policy to accommodate children with asthma who use inhalers. We have also entered formal settlement agreements resolving a title I complaint alleging a hospital discriminated against a nurse with HIV by suspending him because of his disability; providing for the upgrade of 9-1-1 equipment after failing to respond to a 9-1-1 TDD call; providing access to a city council chamber and related offices; providing a sign language interpreter for a driver training course; and providing assistive listening devices in a theater. In one settlement over \$560,000 in damages was paid by a respondent that refused to lease office space to a nonprofit organization that serves people with disabilities.

C. FY 2001 Performence Goals and Indicators

--Reduce illegal use of force by state and local law enforcement officials under color of law--this purpose is served by the successful prosecution of law enforcement misconduct cases.

--Reduce hate crimes and modern day slavery/involuntary servitude as activities that occur within the United States--this purpose is served by the successful prosecution of hate crimes involving race, church arson, abortion clinics, and worker exploitation.

--Promote and advocate the fair and full enforcement of federal civil rights laws--all Civil Rights Division attorneys pursue proven violations of civil rights laws to ensure four end results: an end to the discriminatory practice; relief for victims; access to information to assess compliance during a period of oversight; and, a mechanism to enforce compliance.

--To maximize use of resources, the Civil Rights Division is committed to apply its broad pattern or practice authority to vindicate the public interest in ensuring compliance with federal civil rights laws-this purpose is served when we file pattern or practice cases to end systemic violations of federal laws in housing, lending, employment, education, and the rights of institutionalized persons.

--Encourage the voluntary compliance with civil rights laws through both vigorous criminal and civil prosecutions of alleged violations and through programmatic outreach and education efforts;

--Coordinate and integrate DOJ law enforcement activities whenever possible and cooperate fully with other Federal, State and local agencies that are critically linked to improved operation of the Nation's justice system-this purpose is served by our participation in task forces involving church aroons, abortion clinic violence, and worker exploitation.

--Improve development and effectiveness of, as well as compliance with, the Nation's civil rights laws through participation in appellate litigation addressing issues with broad impact or first impression-this purpose is served by our participation in appellate litigation where desired results are achieved which impact broadly on the civil rights of all Americans.

--Defend against challenges to laws and programs that promote opportunity for traditionally excluded individuals.

--Assist in the development of federal civil rights policy by (a) analyzing proposed legislation that affects civil litigation, appeals and criminal prosecutions arising under federal civil rights statutes and (b) maintaining cooperative relationships with all federal agencies with civil rights enforcement responsibility, and components within the Department of Justice, including the United States Attorneys Offices.

-- Use Alternative Dispute Resolution, where appropriate, to resolve cases and other matters:

--Achieve excellence in management practices by seeking to standardize case and matter reporting, implement time reporting requirements for staff and improve public access to information about the enforcement and outreach program of the Civil Rights Division--this purpose is served by the design and implementation of management systems that are integral to doing our job better.

D. Major PY 2001 Initiatives

CRT's program increase request will support the following program initiatives:

Fighting Crime--\$482,000 and eight positions to eradicate agregious criminal activities. This increase will provide resources necessary to enhance the Division's ability to investigate and, where warranted, prosecuts civil rights violations in the areas of hate crimes, color of law, and abortion clinic violence. (Civil Rights Prosecution/Criminal Section)

Americans With Disabilities Act (ADA) -- \$2,253,000 and 29 positions to fulfill the promise of the ADA. The year 2000 marks the tenth anniversary of the enactment of the Americans with Disabilities Act. Congress charged the Civil Rights Division with the responsibility, to open the mainstream of American life to over 50 million Americans with disabilities and their families. The first decade of ADA implementation has opened opportunities for millions of Americans. To fulfill the promise of this historic legislation, the Civil Rights Division's PY 2001 budget request seeks program enhancements for a comprehensive initiative to meet the remaining unmet needs of people with disabilities throughout the nation. (Disability Rights and Special Litigation Sections)

Folice Misconduct, Civil Enforcement--\$656,000 and five positions to combat abusive, discriminatory, and other unconstitutional actions by law enforcement officials and strengthen the capabilities to conduct investigations of complaints of police misconduct. Through "pattern or practice" investigations, lawsuits, and settlements, the Division is implementing remedies for specific law enforcement accencies engaged in illegal conduct. (Special Litigation Section)

Abuse and Maglact in Institutions -- \$389,000 and three positions to carry out the Administration's initiative to combat abuse and neglect in institutions, to protect the rights of nursing home residents and youth in juvenile detention and correctional facilities, and to address the mental health needs of individuals in correctional and health care facilities. To this end, the Division will enhance significantly our law enforcement efforts by increasing the number of investigations, settlements, and cases and by strengthening our monitoring of settlements to ensure compliance. (Special Litigation Section)

Section 5 Post-Census 2001 reviews and litigation -- \$1,770,000, six full-time positions and five temporary positions to assist in the review, required by the Voting Rights Act, of numerous

redistrictings and other voting changes that will follow the 2000 Census. Specifically, \$690,000 will provide the funding necessary for the positions that are required for the timely review of Section 5 voting changes and redistricting proposals submitted by covered jurisdictions. The remaining \$1.080,000 will be used for technology improvements and funding to acquire technical expertise for the conversion of data into the digital format compatible with the Division's GIS system. (Voting Section)

Fighting for Fundamental Opportunities -- \$2,765,000 and 19 positions to expand programs fighting for basic civil rights in priority areas. This funding would provide resources necessary for improvements in the following areas:

Appellate--\$141,000 and two positions. Since the work of this program is closely related to the activity of the litigative programs within the Division, we enticipate over the next few years that more litigation in these areas will result in a greater number of appeals.

Reployment Litigation -- \$189,000 and three positions. As a result of streamlining operations at the Equal Employment Opportunity Commission, the number of individual charges of discrimination referred to the Section is expected to increase dramatically. These resources will provide the Section with adequate personnel to address this increased demand.

Educational Opportunities -- \$189,000 and three positions to attack in school segregation, insuring that desegregation has been achieved, promoting diversity, and insuring that non-English speaking students have access to an effective educational experience.

Coordination and Review--\$189,000 and three positions to provide training to federal agencies and state and local governments on the legal requirements and investigatory techniques applicable under Title VI of the Civil Rights Act of 1964 and Title IX of the Education Amendments of 1972.

Housing and Civil Enforcement -- \$250,000 for computer software and technical support to assist the Section in the review of records of lending institutions.

Reach out to under-served immigrant communities -- \$530,000 and eight positions to fight immigration fraud and inform the immigration communities of their rights under the law and address new legislative requirements under ACWIA. (Office of Special Counsel)

Division-wide technology and mediation requirements -- Additional resources are sought to meet litigation support requirements (\$1,275,000). This will provide a flexible vehicle to respond to urgent litigation needs and support a diverse array of services throughout the Division.

Administrative Management Section -- \$441,000 and 13 positions are required to maintain adequate levels of support to the Division's litigative components and meet new and increased reporting requirements as a result of legislation.

E. Data Validation and Varification

Civil Rights Division (CRT) performance data is captured from Section records, consisting of case management and correspondence tracking systems, docket records and files. Information is supplied by each Section and verified and validated by Section managers. The present system has data limitations. Most significantly the Sections do not uniformly report information to the case management system, instead relying on internal auxiliary reporting systems.

CRT is in the process of completing the design phase of a new Interactive Case Management (ICM) system which will be operational in all CRT sections by July 2000. This new ICM has been introduced into our Housing and Civil Enforcement, with pilot testing to follow later this fall. When fully operational the new ICM will have three components: case and matter information, correspondence tracking and time reporting. Prom a functional standpoint, ICM will:

-- provide consistent, timely and accurate information to Division managers;

--have internal controls for quality assurance, including: procedures for the routine review of the timeliness of case data and listings; generation of exception reports, listing data which is questionable or inconsistent; and, monthly reviews of reports by attornay managers for data completeness and accuracy;

--be a primary source of information for meeting the reporting requirements of the Government Performance Results Act through time reporting by case or matter activity for all attorneys and professional staff within the Division.

7. Crosscut of positions, FTE and Dollars

Core Function 1: Legal Representation, Enforcement of Federal Laws, and Defense of U.S. Interests Civil Rights Division

	Positions	FTE	15000)
PY 1999	581	589	\$74,821
FY 2000	671	639	82,150
FY 2001	754	730	97,922

All budgetary resources requested for the Civil Rights Division, 754 positions, 730 FTS and \$97,922,000, support Goal 1 of Core Function 3 of the United States Department of Justice Strategic Plan 1997 - 2002:

Protect the Civil Rights of All Americans.

In order to achieve the Division's performance goals in FY 2001, it must be able to secure the requested budgetary resources thereby enabling it to: (1) address the massive influx of workload it will be confronted with in reviewing redistricting submissions, as mandated by Voting Rights Act (as a result of the 2000 Census); (2) step up the fight against hate crimes, police misconduct and other priority criminal civil lights matters; (3) continue to expand Americans with Disabilities Act initiatives; (4) enhance efforts in the battle against housing and lending discrimination; and (5) protect fundamental civil rights opportunities in the areas of education, employment fraud, and the treatment of individuals in nursing home and other institutions.

In FY 2001 the Division will continue to dedicate increased resources on broad pattern or practice litigation. This type of litigation not only has a broad impact, but often results in systemic changes to defendants practices and serves as a signal to others to voluntarily review their practices to determine compliance with civil rights laws.

To carry out these responsibilities, the Division will be heavily dependent on having a solid infrastructure. Specifically, this includes having: (1) an automated Geographical Information System fully implemented; (2) adequate litigation support resources to foster maximum performance and efficiency thereby providing a flexible vehicle to respond to urgent litigation requirements; (3) full implementation of an upgraded office automation system, thus providing the Division's attorneys and support staff with the required desktop automation tools; (4) a fully implemented Interactive Case Management system to track and monitor case-related activity; and (5) prior year Section 5 microfiche submissions converted to an imaging system, thereby enabling the Division to perform compulsory tasks of researching and analyzing historical redistricting documents.

Further, CRT will require trained staff on-board with the legal and analytical skills necessary to address the increasingly complex litigation the Division is expected to be confronted with in FY 2001. Specifically in the Voting Section, in order to meet the mandated responsibilities associated with Section 5 of the Voting Rights Act, the Division will need additional staff, hirsd and trained to analyze the overwhelming flood of redistrictings submitted to the Attorney General.

G. Summary-level Performance Indicators

2001 Estimate	<u> د ـ</u>	.22	3.999
Increase/Decrease	2	1	143

BASE PROGRAM DESCRIPTION: This program has primary responsibility for handling the Division's work before the United States Supreme Court and the courts of appeals, for giving legal advice to federal agencies and other organizations within the Department and the Division, and for resolving appeals of decisions rendered by the Division's Office of Redress Administration. Most of our work consists of preparing briefs and presenting oral arguments in the courts of appeals and preparing briefs for filing in the Supreme Court in civil rights cases in which the United States participates as a party or as amicus curiae. These tasks require a thorough and independent examination of the entire record and the relevant legal authorities in each case.

The Appellate Section has continued, over the past few years, to maintain a significant caseload and a very high rate of productivity. From October 1, 1998 through September 30, 1999, the Appellate Section filed 117 papers of substance in the Supreme Court and in the courts of appeals. This is comparable to our output over the last three fiscal years, and represents an increase over 83 such filings in PY 1994 and similar numbers in prior years. Seventy-three percent of all merits decisions for FY 1999 were in full or partial accord with the Division's contentions. The Supreme Court reached the merits in 12 cases, nine of which were favorable to the Division, and consistent with the position taken by the United States as amicus curies.

The courts of appeals rendered 68 merits decisions, 49 of which were in full or partial accord with the Division's contentions. We have had particular success during this period in cases in which we intervened to defend Congress's abrogation of the States' lith Amendment immunity in various civil rights statutes. We have also had success in the courts of appeals in cases construing the Americans with Disabilities Act.

A program increase of two attorney positions, one FTE and \$143,000 is requested.

The Appellate Section's caseload and productivity has increased steadily over the past few years due to an increase in the number of criminal prosecutions we continue to defend, as well a rise in litigation under Freedom of Access to Clinic Entrances, the National Voter Registration Act, and the American with Disabilities Act. In addition, the Division continues to intervene in cases to defend the constitutionality of various abrogations of civil rights statutes as valid Section 5 legislation. Since the work of this program is closely related to the activity of litigative programs, we anticipate over the next few years that more litigation in these areas will result in a greater number of appeals and a significant increase in this Section's attorney workload as well. Without these additional attorney positions, it will be increasingly difficult for the Appellate Section to maintain its caseload, and might make it necessary to reduce the number of cases in which we participate as amicus curiae.

2001 Retimate	28	85	10.414
Increase/Decrease	9	4	715

BASE PROGRAM DESCRIPTION: This Section is responsible for the investigation and prosecution of violations of federal criminal civil rights statutes which were designed to protect personal liberties, including:

Two statutes, pass: 6 ing Reconstruction and amended in 1988, that prohibit persons from moting under color of law, or in communicacy with others, to interfere with an individual's federally protected rights;

Criminal provisions of the Civil Rights Act of 1968, which prohibit using force or threats of force to injure or intimidate any person involved in the exercise of certain federal rights and activities:

A law which proscribes interference with persons in the exercise of their religious beliefs and the destruction of religious property. On July 3, 1996, the President signed the Church Arson Prevention Act of 1996, which amended 18 U.S.C. \$247 strengthening the criminal law squings church burning and

desecration by lessening the interstate commerce requirement, adding a racial motive element, and eliminating the \$10,000 damage requirement;

Criminal provisions of the Preedom of Access to Clinic Entrances Act ("FACE"), which prohibit conduct intended to injure, intimidate or interfere with persons seeking to obtain or to provide reproductive health services; and.

Other statutes that prohibit the holding of individuals in peonage or involuntary servitude.

During FY 1999, the Section received more than 12,000 complaints alleging criminal interference with civil rights, approximately 3,600 have required investigation by the Federal Bureau of Investigation. A substantial majority of the complaints involved allegations of official misconduct, especially allegations of physical abuse by law enforcement officers. This year, 72 new investigations were presented to the grand jury and 89 cases were filed charging 138 defendants. Trials were conducted in 33 cases resulting in the conviction of 26 defendants and the acquittal of 23. In addition, guilty pleas were entered by 72 defendants.

Allegations of police shuse and other official misconduct, which comprise the majority of complaints reviewed by the Criminal Section, continue to be a high priority. Many officials, including police officers, deputy sheriffs and state and federal prison correctional officials have been charged with having used their positions to deprive individuals of constitutional rights, such as the right to be free from unwarranted assaults and illegal arrests and searches. For example, sax police officers with the Honolulu-Police Department were charged for allegedly striking, kicking and assaulting the victim inside a cell at the receiving station as well as compiring to cover up the beating by filing false reports and holding meetings to discuss the continuing cover up. In addition, one of the officers was also charged with obstruction of justice by using threats to gain the victim's silence about the beating. Two of the officers pled guilty to beating the victim at the receiving station while the four remaining defendants are awaiting trial.

Incidents of racial/religious violence (also known as hate crimes) remain another priority area for prosecution, especially when hate groups are involved. During FY 1999, 31 racial violence cases were filed charging 46 defendants in connection with crimes such as cross-burnings, arson, vandalism, shootings and asseault. Thirty-eight defendants, including some defendants charged in past fiscal years, have been successfully prosecuted either by conviction or guilty plea. For example, four defendants, two of whom identified themselves as white supremacists, were charged in connection with two separate incidents of criminal interference with the housing rights of an Rispanic family living in Lake Havasu City, Arizons. Three of the four defendants entered guilty pleas while the fourth defendant was convicted at trial. Similarly, in Kansas, two defendants pled guilty and a third was convicted at trial for constructing and igniting a wooden cross in the driveway of the home of an African American man and his family in an effort

to threaten and intimidate them. Recently, defendant Buford O'Neal Furrow, Jr., an avoved racist and anti-Semite, was charged with federal criminal civil rights charges following his August 10, 1999, premeditated, hate-motivated plan to murder Jews, people of color, and nonwhite government workers in order to send a message of intolerance across the United States. As a result of his actions, five members of a Jewish Community Center were shot and injured and Joseph Ileto, a Filipino-American postal worker was fatally shot.

in June of 1996, at the direction of the President and the Attorney General, the National Church Arson Task Porce (NCATP) was established to address the recent rash of fires across the nation, many at predominately black churches. On October 1, 1998, the National Church Arson Task Force's (NCATP) prosecution responsibilities were absorbed formally and entirely by the Criminal Section. During FY 1999, six cases involving arsons at houses of worship have been filed.

The Section is also tasked with enforcing the criminal provisions of the Freedom of Access to Clinic Entrances Act (FACE), whereas the Special Litigation Section within the Division enforces the civil provisions. Beginning in April, 1996, with the conclusion of the FACE Task Porce staffed by attorneys from both the Criminal and Civil Rights Divisions, all pending criminal FACE investigations were integrated into the work of the Section. All criminal investigations relating to FACE are handled and/or monitored solely by the Section. However, in response to a recent wave of violence directed at abortion providers, including the fatal shooting of Dr. Barnett A. Slepian, threats of anthrax exposure at several clinics in Indians, Tennessee and Kentucky, isobutyric acid attacks at approximately 20 health care clinics in Plorida. Louisiana and Texas, and arounced the establishment of the National Task Force on Violence Against Health Care Providers to coordinate the investigation and prosecution of those responsible for these attacks. Since the enactment of the FACE statute in May 1994, the Section has received numerous complaints of possible violations of the Act, all of which have required investigation, review and response. To date, the Section has opened 17? reproductive health care violence and obstruction investigations, 34 of which have become prosecutions.

The Criminal Section continues in its efforts to deter the victimization of migrant workers and other minorities in violation of the involuntary servitude and peonage statutes. In April of 1998 the Attorney General approved the creation of an Inter-Agency Task Porce to Combat Worker Exploitation to be co-chaired by the Acting Assistant Attorney General for Civil Rights and the Solicitor for the Department of Labor. This task force which is spearheaded by Iswyers from the section is designed to aggressively combat worker exploitation in a systematic, proactive fashion and to enhance the investigation, prosecution and prevention of worker exploitation cases throughout the United States.

In this area, seven defendants in Florida were sentenced to terms of incarceration ranging from 30 to 180 months in prison for their guilty pleas to federal violations including involuntary servitude, harboring sliens for prostitution and alien smuggling in connection with a scheme to smuggle juveniles and adults from

Mexico to south Florida with the promise of work as seasonal agricultural laborers, in domestic services, or in restaurants. Once in the United States, however, the victims were forced to work as prostitutes to pay off their smuggling fees. In another case, after an extensive investigation by Criminal Section lawyers, three defendants recently pled guilty to federal charges for involuntary servitude and related offenses against ten Chinese-Korean women who were brought to the Commonwealth of the Northern Mariana islands under the false pretense of being employed as waitresses and forced into prostitution and debt servitude by the defendants.

Lawyers from the Criminal Section continue to participate in many training and outreach programs relating to criminal civil rights enforcement. For example, we participate in training of border patrol agents along the southwest border, PBI In-Service Training of local law enforcement supervisors from scross the country at the FBI in Quantico, prison officials in a program sponsored by the Texas prison system, and in the Mate Crimes Working Group as well as a newly formed Excessive Force working group. We also participated in two separate International programs in Sudapest and Russia.

PROGRAM CHANGES:

	Pos.	PTE	Amount (\$000)
Civil Rights Prosecution	8	4	\$715
Hate Crimes	5	3	293
Official (Police) Misconduct	3	1	189
Multi-ActivityLitigation Support			233

The Section is seeking eight positions, four FTE workyears and \$482,000: Hate Crimes, five positions (three attorneys, one paralegal and one clerical), three FTE workyears and \$293,000: Official (Police) Misconduct, (two attorneys and one paralegal), one FTE workyear and \$189,000.

Hate Crimes

The effect of increased attention devoted to the incidence of hate crimes under reporting provisions of the Hate Crimes Statistics Act, has resulted in a continued increase in complaints received by the program.

Legislation is still pending to broaden federal jurisdiction by amending the civil rights statute that makes it a crime to violently interfere with certain federally protected activities. The new proposal would add sexual orientation, gender and disability status to the categories of bias motivation that could form the basis for federal prosecution, as well as ramove the federally protected activities provision that limits the reach of the statute now. Cooperation by state district attorneys and attorney generals following the approval of a memorandum of understanding involving those parties and the Section has resulted in increased.

coordination efforts in this area. The Section's ability to investigate and prosecute hate crimes in compliance with the newly enacted statute in addition to investigating and prosecuting incidence of police brutality, violations of the Freedom of Access to Clinic Entrances Act and violations of involuntary servitude and slavery laws in a timely and effective manner will be seriously impeded without the additional requested resources.

Additionally, the effects of the expansion of the Civil Rights Division's hate crime responsibilities relating to church arson in the wake of the enactment of the Church Arson Protection Ack has increased the number of investigations and prosecutions brought under those statutes. On October 1, 1998, the National Church Arson Task Force's (MCATE) prosecution responsibilities were absorbed formally and entirely by the Criminal Section. Two section attorneys have been devoting their full time attention to prosecuting one defendant in several judicial districts in connection with the religiously motivated arsons at a total of nineteen churches across the country. The investigation is ongoing to determine how many other church arsons may be attributed to this man.

The Civil Rights Division was given additional resources during FY 2000, translating into approximately 13 new attorney positions for the Criminal Section. This increase marks the first increase in approximately five years. Given the 40 percent increase in complaints received from the FBI during that period, the increase merely allows us to keep pace with the greater number of matters for which the Section is responsible. In fact, our current staff has been operating under a maximum workload, making it difficult for lawyers to focus as quickly as needed on prosecutable matters. Most Criminal Section lawyers are coordinating and developing an investigative docket of well over 100 matters. Even with the increase, lawyers will only see a slight drop in their docket responsibilities. These responsibilities are combined with extensive prosecution duties as well as training and outreach efforts.

An increase of two paralegal positions would ensure the availability of paralegal assistance in connection with complex grand jury investigations and prosecutions without impairing the ability of the Section to review and respond to citizen complaints in a prompt, thorough manner. The additional secretarial positions are needed to accommodate existing clerical shortages as well as to accommodate the strains which will be presented by the increase of staff members.

Official (Police) Misconduct

The number of grand jury investigations initizted during FY 1998 was the highest number of grand jury investigations ever initiated in one year and nearly half of those investigations related to incidents involving official misconduct. During that name year, a record number of law enforcement officers were charged with criminal civil rights violations. During FY 1999, the Section filed a total of 10 more cases than were filed in FY 1998. Nevertheless, fewer total law enforcement defendants were charged, demonstrating the need for additional resources to investigate and prosecute incidence of official

misconduct. The simultaneous demands of presenting new matters to grand juries for indictment, and of conducting those prosecutions once indictments are returned reduces the time available to review and to develop other incoming incidents that warrant prosecution. To be successfully prosecuted, complex and thorough grand jury investigations must be conducted. The victims of most official misconduct cases tend to be unsympathetic while the defendants are often well respected members of the community. As a result, virtually all of these cases require extensive and time consuming investigative efforts on the part of both lawyers and investigators. The Attorney General continues to express interest and concern in incidences of police misconduct occurring across the country. As a result, we anticipate even more law enforcement cases to develop and more law enforcement officers to be charged.

Additionally, the defense bar has become increasingly aware and aggressive on the <u>Garrity</u> issue in connection with prosecutions of law enforcement officers. In 1963 the Supreme Court in the <u>Garrity</u> case addressed the Fifth Amendment rights of public employees, holding that if employees are compelled to make statements as part of an administrative investigation, those statements cannot be used against them in a criminal prosecution. The Supreme Court again addressed the issue in the appeal stemming from the Rodney King case, resulting in a higher profile of this defense-oriented theory. Consequently, we have had to spend considerable lawyer resources on many complex official misconduct cases to meet these challenges. The Criminal Section often must now designate a <u>Garrity</u> team of lawyers to review <u>Garrity</u> documents and issues which arise and to represent the government during court hearings. In some complex prosecutions, the <u>Garrity</u> issue requires a parallel team of lawyers and paralegals, essentially doubling the staffing costs.

Participation in training and outreach programs relating to criminal civil rights enforcement issues as becoming more and more demanding for Criminal Section attorneys. For example, two attorneys participate in monthly training of border patrol agents along the southwest border. Several senior trial attorneys also participate in FBI In-Service Training of local law enforcement supervisors from across the country at the FBI in Quantico. These training sessions include multiple sessions held on a quarterly basis covering various criminal civil rights issues. We also participate in the training of prison officials in a program sponsored by the Texas prison system, and two attorneys participate in the Mate Crimes Morking Group as well as a newly formed Excessive Force working group. As our training and outreach obligations increase, additional attorneys resources must be allocated to allow the Section to continue aggressively pursuing prosecutions and investigations while at the same time providing appropriate and much needed training and participation in community outreach programs.

MULTI-ACTIVITY PROGRAM CHANGE

The Section is also seeking \$233,000 for Litigation Support activities. Narrative information is contained in the Multi-Activity justification.

,	Perm.		Amount	
,	Pos.	775	(\$000)	
Special Litigation				
2000 Appropriation Enacted	60	50	\$5,978	
2001 Base	60	57	6,918	
2001 Estimate	71	62.	8.269	
Increase/Decrease	11	5	1,351	

PASE PROGRAM DESCRIPTION: The Special Litigation Section enforces a variety of federal statutes to secure and protect significant constitutional and statutory rights of the nation's citizens. Section staff safeguard the health and safety of individuals confined in state and local institutions across the nation; enable unimpaired access to reproductive health facilities and places of religious worship; protect citizens against a pattern or practice of police misconduct; and prohibit discrimination in public facilities on the besis of race, religion, national origin, and disability.

The specific statutes the Section enforces include:

Civil Rights of Institutionalized Persons Act (CRIPA): This Act authorizes the Attorney General to investigate conditions of confinement at certain state and local residential institutions (jails, prisons, juvenile facilities, and facilities for the mentally ill, developmentally disabled, and chronically ill) and to initiate civil suits to ensure the protection and full enjoyment of constitutional and federal statutory rights where reasonable cause exists to believe there is a pattern or practice of denying persons confined to such facilities of their rights.

Freedom of Access to Clinic Entrances Act of 1994 (FACE): This Act authorizes the Attorney General to investigate and initiate civil litigation to obtain temporary, preliminary, and permanent injunctive relief, civil penalties, and damages in cases where force or threats of force, physical obstruction, or property damage interfere with persons seeking or providing reproductive health services or where such activities interfere with the exercise of religion at places of worship.

Section 210401 of the Violent Crime Control 1 4 New Enforcement Act of 1994: This Act authorizes the Attorney General to initiate civil litigation in remedy a pattern or practice of violations of constitutional and statutory rights by law enforcement officials.

Omnibus Crime Control and Safe Streets Act of 1968, as amended: This Act authorizes the Attorney General to initiate civil litigation to remedy a pattern and practice of discrimination based on race, color, national origin, gender or religion involving services by law enforcement agencies receiving federal financial essistance.

Title III of the Civil Rights Act of 1964: This Act prohibits discrimination in public facilities on the basis of race, religion, or national origin.

Under CRIPA, the Section protects the civil rights of persons institutionslised in state or local psychiatric hospitals, nursing homes, mental retardation facilities, prisons, jails, and juvenile correctional facilities. As required by CRIPA, the Section's focus is on widespread "egregious and flagrant" conditions that pose life-threatening risks to the residents of these facilities. Recent media exposés have examined the Section's work in a variety of institutions across the country and have lauded its work in curbing abuse, neglect, and other dire conditions. CRIPA investigations and cases are extremely labor-intensive. The Section conducts preliminary inquiries, investigations, sits visits, statutorily required pre-filing negotiations, as well as all law enforcement activities including post-judgment monitoring, compliance reviews and compliance actions.

The Section opened CRIPA investigations of six facilities in FY 1999 and continued its investigations of an additional 58 facilities. In addition, during FY 1999 the Section obtained settlement agreements which addressed violations at six mental retardation facilities in Puerto Ricc; six correctional facilities in the Commonwealth of the Northern Mariana Islands; one facility for the visually handicapped in New Mexico; and one mental health facility in Virginia; as well as local jails in Arizona and Georgia. In addition, the Section successfully negotiated settlements of issues involving sexual misconduct by officials of six Arizona and Michigan women prisons. The Section monitored jurisdictions' compliance with settlement agreements in 116 facilities. During the fiscal year, the Section sought and obtained contempt findings in two cases involving persons with mental retardation in Tennessee and the District of Columbia. The Section continues to participate in a number of pre-CRIPA cases including Myath v. Sanyer (M.D. Ala.) in which the United States is litigating amicus curiag regarding all the public psychiatric and mental retardation institutions in Alabama, and Battle and the United States v. Saffle [E.D. Okla.] regarding Oklahoma's prison system.

The Pr'on Litigation Reform Act (PLRA), enacted into law in 1996, continued to increase the Section's workload under CRIPA. The Act changes the standards for entering prospective relief in cases involving conditions in correctional facilities. The Section is currently investigating, litigating, or enforcing consent decrease in more than 80 prisons, jails, and juvanile correction facilities affected by the Act. Defendants have filed PLRA motions in cases affecting a large number of these facilities. These motions have increased the Section's workload. They raise issues about the constitutionality of the Act as well as substantive aspects of consent decrees and court orders. Attorneys and paralegal specialists often must tour the affected facilities to gather current information. We anticipate that the PLRA will continue to increase the Section's work at least through Fy 2001.

The Section has implemented a number of measures to maximize its CRIPA efforts and ensure that resources are being used in an efficient manner. First, the Section has focused on securing statewide relief. For example, in FY 1999 the Section entered into a consent decree involving six public mental retardation

facilities in the Commonwealth of Puerto Rico. The Section also obtained a settlement agreement in FY 1999 concerning the provision of services to inmates of six correctional facilities in the Morthern Marians Islands. Second, the Section has developed and utilized a variety of enforcement devices to expand the effectiveness of its monitoring activities and facilitate compliance with outstanding decrees. In particular, the Section has utilized advisory panels, expert advisors, monitors, and special masters to assist with monitoring, provide technical assistance, and resolve disputes between the parties. Third, the Section has continued to use alternative dispute resolution techniques, including negotiation and mediation, to resolve CRIPA matters. For example, the Section participated in mediated settlement discussions before the Eleventh Circuit and the federal district court in <u>Myatt</u> v. <u>Sawyer</u> (M.D. Als.). Despite the Section's initiatives to maximize its efforts, requests to initiate new CRIPA investigations continue to far outweigh current staff resources.

In addition to its CRIPA enforcement responsibilities, Section staff handles the civil enforcement of FACE. The Section has devoted substantial resources to the development and litigation of civil FACE cases throughout the country. Thus far, 17 civil FACE cases have been filed. In FY 1999, section staff evaluated approximately 30 complaints of threats and interferences with access to facilities offering reproductive health services. The Section has been extremely successful in each of its civil cases, with the courts upholding FACE's constitutionality each time it has been challenged. Civil PACE actions have resulted in permanent injunctions which prohibit further unlawful activity and protect patients, doctors, and staff.

The Section has obtained injunctions prohibiting defendants from blocking clinic driveways and entrances and ordering defendants to stay a certain distance from doctors, their spouses and children. Restrictions have been obtained on the use of bull horns. In all, the Section has obtained nine preliminary injunctions, twelve permanent injunctions, and six orders of contempt.

The Section remains firmly committed to investigating and prosecuting to the full extent of the law all acts of violence against those who provide and seek reproductive health services. In view of the sensitivity of this issue and the potential for violence which exists at certain clinics, this workload will continue to require immediate response by Section staff.

The House Judiciary Committee Report on the parent legislation to the Violent Crime Control and Law Enforcement Act of 1994 underscores the dramatic need for federal intervention in dealing with the issue of police misconduct. That report cities testimony from police chiefs of ten major American cities that 'the problem of excessive force in American policing is real." Further testimony to that Committee asserted that 'police use of excessive force is a significant problem in this country, particularly in our inner cities." Because the Department of Justice lacked pattern or practice authority to address such police misconduct, Congress granted suthority in 1994 to remedy pattern or practice of police misconduct through civil actions for injunctive relief. Under Section 210401, Section staff review complaints of misconduct by law enforcement officials and determine whether s pattern or practice of such activity exists. This statute covers a variety of concerns about police misconduct including excessive force, failure of departments to

investigate officers and discipline misconduct, discriminatory herasament, stops, search, seizure and arrests, coercive sexual conduct and retaliation for the exercise of rights. The Section is also using this statute as an adjunct to its CRIPA cases in juvenile detention facilities where there is a pattern or practice of abuse by juvenile detention officers.

The Special Litigation Section has developed a plan for enforcement, specifying that it will investigate both large and small law enforcement agencies based on a broad array of allegations of police misconduct. In 1997, the Section filed its first complaints and consent decrees addressing a pattern or practice of police misconduct by the Pittsburgh, Pennsylvania Bureau of Police and the City of Steubenville, Obio. The agreements specify a variety of remedies which will improve supervision of officers, community complaint procedures and internal investigations of misconduct by defendants. In FY 1999, five additional investigations were launched: the Section began or continued preliminary inquiries into approximately 25 law enforcement agencies, and Section staff reviewed or fielded several hundred allegations of misconduct. The Section is continuing investigations of racial profiling in traffic stops and post-stop searches in five states. In FY 2000, the Section filed a complaint and settlement agreement in United States v. State of New Jersey (D. N.J.) regarding racially discriminatory traffic enforcement by State troopers. The decree in this case requires the appointment of an independent monitor to review and analyze implementation of the agreed upon relief. Also in FY 2000, the Section filed a complaint in United States v. City of Columbus (S.D. Ohio) regarding excessive force and related allegations of police misconduct. The Section is also participating in the Department-wide review of the policies followed by Department components in addressing the use of race or national origin in conducting law enforcement activities and in the Department-wide Police Misconduct Task Force. National media attention and outreach by Section leadership to citizen groups has led to an increased volume of complaints which is expected through FY 2003.

PROGRAM CHANGES:

	Pos.	PTE	(4000)

Police Misconduct	\$	3	656
Civil Rights of Institutionalized			
Persons Act (CRIPA))	1	389
ADA Initiative (CRIPA facilities)		1	200
Multi-ActivityLitigation Support			106

The Section requests a program increase of eleven positions, five PTE workyears and \$1,245,000 to carry out three Administration priorities: (1) protecting citizens against a pattern or practice of law enforcement misconduct; (2) ensuring institutionalized persons are receiving adequate sental beauth services; and, (3) continuing and expanding the initiative under the Americans with Disabilities Act to secure for

Amount

institutionalized persons access to full enjoyment of community services. The elevan positions include seven attorneys, one paralegal specialist, one investigator, and two program specialists. In addition, we request a budget of \$500,000 to hire pre-litigative technical advisers to support our activities.

POLICE MISCONDUCT

- . Three attorneys for law enforcement:
- . Two program specialists for a new prevention unit; and,
- \$300,000 for pre-litigative technical advisers to support our police misconduct work.

In 1994, the Special Litigation Section was given new civil enforcement responsibilities to investigate and remedy patterns and practices of police misconduct. Section 210401 the Violent Crime Control and Law Enforcement Act of 1994 authorizes the Attorney General to seek equitable and declaratory relief to redress patterns and practices of illegal conduct by law enforcement agencies as well as agencies responsible for the administration of juvenile justice. At the same time, the Section also was delegated responsibility for enforcing 'pattern or practice' authority contained in the Ownibus Crime Control and Safe Streets Act of 1968, which authorizes the Attorney General to initiate civil litigation to remedy a pattern or practice of discrimination based on race, color, national origin, gender or religion by law enforcement agencies receiving federal financial assistance.

The demand for "pattern or practice" investigations of major police departments is growing. A small number of police departments are contacting the Department to request an investigation of their operations. Also, a series of violent events in other jurisdictions have necessitated investigations. Additionally, the Section is increasingly being called upon to identify and disamminate law enforcement "best practices" to sesist law enforcement agencies in preventing patterns or practices of misconduct from developing. This includes the development of policies and training concerning permissible and impermissible use of race in police work, the development of "use of force" policies and monitoring techniques, and the development of so-called "early warning" systems to assist management in identifying at-risk officers, units, and situations.

The Section is requesting an increase in FY 2001 of five positions (three attorneys, and two program specialists) to ensure a reasonable response to the demands of citizens throughout the nation for the Department to expand its efforts to investigate, remedy, and prevent police misconduct. Three attorneys and one program specialist would be assigned to conduct new "pattern or practice" investigations, bring lawsuits, and monitor consent decrees. The Section would use the other resources (one program specialist) to establish a "best practices" unit that would help to coordinate the development of model policies and practices described above and would disseminate those policies and practices by engaging in outreach, training, and consultation to assist law enforcement agencies in preventing misconduct from occurring. The Section estimates that it will require \$100,000 during FY 2001 to hire pre-litigative technical advisers to assist in this work.

With the five additional positions added to the Section, the Section anticipates opening 12 new police misconduct investigations during FY 2001 and fifteen new police misconduct investigations during FY 2002. These investigations would cover state and local police departments where the Section has received allegations of widespread, egregious violations of constitutional and federal statutory rights. The Section will focus on jurisdictions with the most serious allegations of unlawful activity and will concentrate on investigations that pose an opportunity for a significant precedential impact. In addition, the Section will utilize some of the resources to develop investigations of alleged racial or ethnic profiling by law enforcement. With the additional FY 2001 positions, the Section anticipates filing lawsuits or settlement agreements to resolve unlawful practices in three police departments during PY 2001 and seven settlement agreements in FY 2002.

The additional positions for outreach, training, and consultation will enable the Section to establish a comprehensive program for assisting law enforcement agencies and local communities in promoting police integrity and preventing misconduct.

Civil Rights of Institutionalized Persons Act

- Two attorneys and one investigator to enforce CRIPA (focusing on mental health issues in all institutions subject to CRIPA);
- One attorney to enforce CRIPA and ADA (focusing on community access issues);
- . One attorney and a paralegal to staff a new CRIPA prevention unit; and,
- \$200,000 for pre-litigative echnical advisers to support the Section's institutional work.

The Special Litigation Section has responsibility under the Civil Rights of Institutionalized Persons Act (CRIPA) for investigating conditions in public residential facilities and filing civil suits to ensure that residents are protected from harm and receive adequate care and treatment. The Section's work in this area cuts across four major initiatives of the Administration and the Department: nursing homes; juvenile facilities; protecting institutionalized persons from abuse and neglect; and, ensuring trut institutionalized persons received adequate mental health services.

The Section will use two of the additional attorney positions and one investigator position to help carry out the Administration's initiative to address the mental health needs of individuals in correctional and health care facilities. One of the additional attorney positions will help enforce the ADA's community access requirements for persons in mental retardation or mental health facilities, or nursing homes who are determined by professionals to be able to receive appropriate services in community settings. In addition, we will create a new CRIPA prevention unit for outreach, training, and consultation and to cooxdinate the multiple and varied federal efforts to protect the rights of institutionalized persons.

Currently, the Section is investigating, monitoring, and litigating conditions in more than 300 institutions nationwide. Secause CRIPA matters involve systemic deficiencies in multiple areas, both voluntary and

coerced remedial efforts often take many years to accomplish. The Department's increased emphasis on community placement has created an obligation to ensure that when institutionalized persons are transferred to the community, they receive safe and adequate services. As a result, the Section is now responsible for monitoring hundreds of community group homes. In the District of Columbia alone, we are responsible for monitoring 200 community homes for persons with mental retardation.

CRIPA/ADA Initiative

This initiative will focus enforcement efforts on lowering barriers that remain to basic community services for people with disabilities. Although most Americans rely daily on basic government services, persons contined to institutions are unable to access these services. Denial of access to these services is a violation of the Americans with Disabilities Act, 42 U.S.C. 1211. Persons with mental illness or mental retardation who reside in public facilities are frequently denied access to healthcare, vocational services, and community residential services which would permit them to live more meaningful lives. The Section will concentrate the efforts of one new attorney to develop issues of community access.

In addition, the Section will launch an initiative to assert the rights of persons confined in public institutions to adequate mental health services. Two attorneys and one investigator will seek to obtain relief on behalf of institutionalized persons who are being denied needed mental health treatment. The initiative will review services provided in civil and correctional settings under CRIPA investigation or enforcement. We anticipate that two new institutional cases and eix new investigations will be initiated to vindicate the rights of institutionalized persons to adequate mental health care and community participation.

We propose hiring an attorney and a paralegal to staff a new CRIPA prevention unit. This unit will be responsible for outreach, training, and consultation. It will coordinate with other federal agencies and fulfill CRIPA's requirement of apprizing jurisdictions of federal technical assistance that may be available to remedy unlawful conditions. The unit also is in keeping with the Attorney General's amphasis on prevention and collaboration to address problems in institutions nationwide.

In addition, resources are needed for the retention of expert, pre-litigative technical advisers to assist with CRIPA investigations and in particular with investigations of mental health services. Such advisers are necessary to assist the Section in effectively identifying violations and in developing appropriate remedial measures to be shared with states and other jurisdictions.

There are no alternative ways to meet the Section's need for additional personnel for its CRIPA law enforcement activities. The Section has used U.S. Attorneys offices to the greatest extent possible, and will continue to do so. However, given the specialty nature of this area and its high visibility, there are limitations to using the U.S. Attorneys offices.

With the increased resources, the Section enticipates opening eight new CRIPA investigations and filing four new cases in FY 2001 and ten new investigations, two settlements, and three new cases in FY 2002. The new staff will ecreen complaints, review thousands of documents, conduct tours of institutions with expert prelitigative technical advisers, interview staff, prepare findings letters to describe the violations identified, if any, propose minimum remedial measures to address the identified deficiencies, negotiate settlements, and litigate against jurisdictions that do not correct deficiencies.

MULTI-ACTIVITY PROGRAM CHANGE

The Section is also seeking \$106,000 for Litigation Support activities. Narrative information is contained in the Multi-Activity justification.

	Perm.		Amount	
	Pos.	FTE	150001	
Voting				
2000 Appropriation Enacted	94	92	\$10,297	
2001 Sase	94	98	10,022	
2001 Estimate	100	194	12.926	
Increase/Decrease	6	6	2,104	

BASE PROGRAM DESCRIPTION: Section staff enforce laws designed to safeguard the right to vote of racial and language minorities and members of other specially affected groups, and designed to remove barriers to voter registration.

Enforcement responsibilities include:

- Righte Act of 1965 (VRA), which mafeguards the right to vote of racial and language minorities and, in particular.
 - · Prohibits practices that have a discriminatory result,
 - Requires federal preclearance of changes from specially covered jurisdictions to prevent discrimination, and
 - Requires the use of minority languages in the electoral process in certain areas;
- National Voter Registration Act (NVRA), which facilitates voter registration for federal elections by allowing voters to register by mail, when they obtain driver's licenses, or when they obtain services from various government agencies, and requires voter purges to be conducted under very controlled conditions: and

 Uniformed and Overseas Citizens Absentee Act, which provides a remady for the late mailing of absentes ballots to members of the Armed Forces and to other citizens who are abroad.

The Section brings levelite to assure that minority voters are not excluded from the electoral process but have a fair opportunity to elect candidates of their choics. In May 1999, for example, we obtained a settlement order requiring Day County, South Dakota, to create a new sanitary district to replace the district with boundaries drawn to exclude Indians from participation. As part of this effort, the Section participates in redistricting challenges brought under the standards enunciated by the Supreme Court in Shaw v. Reng and related cases to assure that minorities' rights are protected and that race is properly considered in the redistricting process. For example, during FY 1999 we helped to resolve challenges to Congressional districts in Louisians and to senate districts in Plorida.

The Section reviews thousands of changes required to be submitted to the Attorney General each year under Section 5 of the VRA, defends Section 5 litigation in court, and brings lawsuits to enjoin the enforcement of changes that have not received the required Section 5 preclavance. During 1999 we reviewed 3,800 submissions containing 12,900 changes of practices and procedures, with each change receiving individual attention, to make sure that discriminatory practices are not implemented. The Attorney General objected in February 1999, for example, to a change in the method of election for members of community school boards in New York City that would have made it more difficult for minority voters to elect candidates of their choice. And in response to the Attorney General's objection under Section 5 of the Rights Act to the State of Mississippi's exclusion of NVRA voters from participation in non-federal elections, a federal district court in October 1998 ordered the state to permit all persons registered under the NVRA to participate in all state and local elections.

In continuing our implementation of the congressional mandate to assure that minority language citizens are able to participate in the election process on an equal basis with native English speakers, we obtained settlement orders during 1999 requiring Passaic County, New Jersey, and Lawrence, Massachusetts, to create Spanish-language election information programs designed to make effective for Spanish-speaking citizens at every stage of the electoral process.

Where possible, we achieve compliance with the requirements of federal law without filing lawsuits. Por example, during 1999 we parsuaded the State of New Mexico and San Francisco County, California, to improve their bilingual election programs, for Native American and Chinese American voters, respectively; we convinced a Georgia county to discontinue reliance on an all-white club for staffing a racially-mixed polling place, a Mississippi county not to move a polling place to a location less accessible for the precinct's predominantly black electorate, and a Texas county to restore an early location in a majority Rispanic neighborhood.

During 2001 the Section will give priority to the following enforcement areas:

· Enforcement of prohibition of Section 2 of the VRA against practices with a discriminatory result,

Uncovering and remedying redistricting plans and methods of election, anywhere in the nation, that prevent blacks, Hispanics, and other minorities from having a fair opportunity to elect candidates of their choics.

- Defense of racially fair redistricting plans. Ensuring that redistricting plans properly designed to
 provide winority voters fair opportunities to elect candidates of their choice under constitutional
 standards are upheld.
- Enforcement of Section 5 of the VRA. Reviewing thousands of changes submitted under Section 5 and
 objecting to those found to be discriminatory, bringing lawsuits against jurisdictions using illegal
 practices or procedures, and defending Section 5 Jectaratory Judgment actions.
- Enforcement of the minority language requirements of the VRA. Assuring that United States citizens who rely on Spanish, Chinese and other Asian languages, and American Indian and Native Alaskan languages have the same opportunity to participate in -related activities as English-speaking voters.
- Prevention of election day discrimination, vote fraud, and voter intimidation and harassment.
 Assuring that minority voters are protected from discrimination at the polls, denial of needed assistance in , fraud, intimidation, and harassment.

In addition, the Section will continue its vigorous enforcement of the NVRA to assure that voters are able to register to vote and to remain registered without interference or interruption and the Uniform and Overseas Cicizens Absents: Act to remedy the late bailing of ballots to military and overseas voters and will continue to monitor the need for litigation under the Assistance for the Biderly and Handicapped Act to remedy the exclusion of disabled voters from polling places that do not satisfy accessibility standards.

In short, the Section has a crucial role in our society in securing that the cornerstone of our democracythe right to vote--is made available to all citizens, regardless of race, color, language, literacy, or other irrelevant factors; it must have the resources that will enable it to continue to carry out its responsibilities with vigor.

In order to provide the Section with the personnal and technology resources necessary to meet responsibilities associated with census 2000 redistrictings, program enhancements totaling \$1,770,000, 11 positions (six full-time personnet and five term), and six FTE workyears are requested. The areas requiring additional resources are: Section 5 and litigation personnel related expenses, imaging technology, and microfiche conversion. The program enhancement narrative addresses the specific requirements of each of these categories.

PROGRAM CHANGES:

	Pos.	FTE 6	Amount (\$000) 52,104
Section 5 and Litigation	6	6	690
Section 5 'Geographical Information System			
Contractor Support)			850
Section 5 (Technology Upgrade)			230
Multi-Activity Program Changes:			
Litigation Support			334

A program increase of \$690,000, six full-time permanent and five other-than-permanent positions (five attorneys, four paralegals, one program analyst, and one clerical) and six FTE workyears is being sought to provide the Section with sufficient resources to address litigation and Section 5 workload demands resulting from the 2000 Census. In addition to the personnel resources, \$850,000 is requested to obtain personnel support necessary for converting data into the Geographical Information System (GIS); and, \$210,000 for GIS technology upgrades.

SECTION 5 AND LITIGATION

7

With the addition of five attorneys and four paralegals, the Section will be able to respond to a greater than ten-fold increase expected in redistricting submissions under Section 5 of the Rights Act, including 48 statewids redistrictings; reduce average Section 5 response time by at least twenty days when expedited review is appropriate and by at least ten days in standard situations; and handle a redistricting litigation docket that will more than double.

With new population data available from the 2000 consus, states, counties, cities, and school districts throughout the nation will be undertaking redistrictings to comply with the one person, one vote requirement. The primary mission of the Section during 2001 and the following few years is to enforce the VRA in a way that will facilitate the redistricting process — to enable jurisdictions to complete the redistricting process in a timely manner while assuring that minorities will have a fair opportunity to elect candidates of their choice under the newly adopted plans.

We expect in 2001 a dramatic increase in the number of redistrictings that are submitted for Section 5 review. While we received only 60 redistrictings in FY 1993 and expect to receive only about 50 in FY 2000, we expect to receive more than 1,000 redistricting plans per year to review under Section 5 in FY 2001, we expect to receive more than 1,000 redistricting plans per year to review under Section 5 in FY 2001, we expect to receive more than 1,000 redistricting plans per year to review under Section 5 in FY 2001, we expect to receive more than 1,000 redistricting plans activity. Falls to very low levels. But once 2000 census data are released in April 2001, jurisdictions will rush to prepare, adopt, and obtain VRA preclearance for new plans, so that elections in 2001 and 2002 can be held on schedule under new plans that satisfy the one person, one vote requirement of the Equal Protection Clause of the 18th amendment.

Our lawyers will be faced with new and far more difficult demands following the 2000 census than has been true-of any preceding post-census period. The decisions of the Supreme Court of the United States in Shaw v. Benn and Siller v. Johnson have created a complex and challenging legal, political, and policy setting for the redistricting plans. The restriction that the Supreme Court has imposed on the extent to which jurisdictions can rely on racial considerations in drawing redistricting plans has not been well defined by the courts and is poorly understood by jurisdictions.

Vollowing the 1990 cansus, the Section's litigation staff was heavily involved in the administrative raview under Section 5 of redistricting plans, and as a result the Section's litigation capacity was diminished for several years. Following the 2000 census, we will need to have attorneys even more heavily involved in the Section 5 administrative review of redistricting plans, because of the difficulty and sensitivity of the legal and factual issues involved and the likelihood that the Section 5 review process will be followed by litigation. During FY 2001 we will have as many as 48 statewide redistricting plans to review. The more complicated and sensitive of these plans will require teams of lawyers and civil rights analyses, with significant involvement from Section and Division management. The five new attorneys will enable the Section to handle the increased number of redistricting plans.

Not only will the volume of redistricting and related submissions be at an unprecedented level, but election schedules and the exigencies of the legislative process will require the Section to handle a large proportion of these submissions on an expedited basis. While under the VRA, the Attorney General is given 50 days in which to make a determination (and that period can be extanded if the jurisdiction does not provide sufficient information to permit a decision on the merits), we need to be in a position in which we can allow the election process to proceed on schedule by making more rapid decisions.

The receipt of submitted redistricting plans on electronic media and the use of a Geographic Information System (GIS) will speed our analysis of submitted plans, and our GIS capacity will enhance our analysis of submitted and elternative plans. But our experience has been that these technological advances do not by themselves reduce staff or time requirements, but rather they enable us to keep abreast with the technical applistication of jurisdictions adopting plans and of other interested parties, which has resulted in a greatly increased complexity in the plans that are submitted for review. The Section 5 review of a redistricting plan requires a comparison of the submitted redistricting plan with the prior plan; a determination of the legal benchmark to be used in this comparison; an examination of why district lines were drawn the way they were, of the consequences with respect to minority voters of the use of the plan, of siternative plans that were or might have been prepared, of voter registration data, and of election returns. To obtain the information required and to perform the necessary analysis interviews are needed with those responsible for the drawing and adoption of the plan, with minority group leaders, and with representatives of interested organizations. In addition, comments from interested persons and organizations must be read, and the information they provide must be weighed. After the factual analysis has been completed, then a legal analysis of the facts must be undertaken, and a decision must be reached. A compressed time schedule adds to the difficulty of the review and limits staff scheduling flexibility. However, we already have begun preparing for this task, and with the additional resources requested here,

our goal would be to tall jurisdictions that we respond within 50 days to the submission of redistricting plans in standard situations and within 40 days where special circumstances warrant expedited review.

The salience of the redistricting process also will result in increased scrutiny by the media, by organizations, and by Congress. As a result, we must be prepared not only to give expedited consideration to submissions but also to respond promptly to requests for information with respect to submissions. One of the four new paralecals will enable the Section to respond to such requests.

Beyond the substantial needs of the Section 5 review process, we will need increased staff so our lawyers can handle a much larger redistricting litigation docket as well. Three types of litigation are anticipated in FY 2001 through 2004, relating to redistrictings: (1) Shaw actions in which we participate as defendant-intervenor to protect minority rights from unjustified challenge, (2) Section 5 declaratory judgment actions filed by jurisdictions following a Section 5 objection to a new redistricting plan, and (3) Section 2 enforcement actions to challenge plans that do not afford minorities an equal opportunity to elect candidates of their choice. Sach statewide litigation lawsuit requires two or three lawyers and two paralegals. The demands of county and city redistricting litigation are proportionally smaller but still substantial. Three of the four new paralegals will be assigned to assist with this caseload.

If the opportunity of minorities to elect candidates of their choice is to be preserved, we must participate in redistricting litigation where minority rights are at stake. Indeed, our experience suggests that the courts will frequently demand our participation in redistricting litigation filed by private parties. We expect the post-2000 census litigation to reach its maximum level during FY 2001 and remain at that level through FY 2004. Thus redistricting Section 5 reviews and litigation will continue to be the highest priority of the Section through FY 2004.

SECTION 5 SUPPORT STAFF

The Section maintains copies of all the submissions of changes received pursuant to Section 5. These records are used, among other things, by Section staff for purposes of research and investigation, as well as by members of the public, including civil rights organizations and groups. In November 1996, we implemented an Imaging System for atoring and making available submission materials. Currently, we have several work stations for scanning and indexing the thousands of pages of submission materials that we receive each year, and expect to add two additional stations during FY 2000 in anticipation of the increase in our workload that will follow the release of decennial census data and redistricting efforts by Section 5 jurisdictions. Since its implementation, the technical aspects of the system administration function for the Imaging System, by and large, have been performed by the Division's GIS staff.

There are a number of administrative functions, however, that the Section should perform to ansure that all aspects of the Imaging System function smoothly. To that end, we are requesting funding for a permanent position for a Coordinator for the Imaging System. The Coordinator's functions would include, for example, reviewing scanned and indexed images for quality control; monitoring indexing and quality control queues for

problems in the Imaging System and correcting stored files, as needed; monitoring disk usage on the UNIX server; uploading documents to the jukebox; changing tapes and insuring back-ups are completed correctly; notifying appropriate persons (the System Administrator or vendor) about the functioning of the system and possible needs for assistance or repairs; developing new indexing schemes for system expansions; profiling users on the imaging system, including new employees; coordinating system development, software upgrades and the selection of new components with the System Administrator; coordinating training for Section 5 records/imaging staff regarding system expansions and upgrades; training new Section employees (attorneys, analysts and paralegals) regarding the use of the Imaging System for researching and reviewing Section 5 submission records; and, in response to requests from the public, coordinating public access to Section 5 submission records maintained in the Imaging system.

The large volume of Section 5 submissions that will follow the 2000 census (not only redistricting submissions but also related precinct and polling place submissions) will substantially increase the workload of the Section's clerical staff. Not only will the number of letters that have to be prepared increase by more than a third (we expect the number of submissions to increase from 3,800 in 1999 to 5,100 in 2001), but the proportion of these letters that are complicated will increase greatly. As a result, we will need to increase the number of secretaries assigned to Section 5 work from three to four. Because of the increase in redistricting litigation that will result from the census, we will not be able to reallocate secretarial resources within the Section. We are therefore requesting one clerical position for a three-year term.

In PY 2004 we expect to be able to begin to reduce the staffing devoted to redistricting litigation. The paralegals and secretary are requested as term positions.

SECTION 5 -- G19 Contractor Support

An increase of \$850,000 is requested for additional contractor support for the Geographic Information System (GIS). This additional support will be used to assist the Section staff in developing alternative redistricting plans and to convert plans received on paper maps into a digital format. This contract support will be phased in during FY 2001 with three contractors in the first quarter, two additional contractors in the second quarter, and the final two coming on board in the third quarter for a total of seven. The seven contractors are expected to continue throughout FY 2002 and FY 2003 at a cost of \$1.1 million is FY 2002 and \$1.2 million in FY 2003. At that time, the number of contractors will be reduced as the number of redistricting submissions slows. Without this support, the drawing of alternative plans will be curtailed, negatively impacting the Section's ability to complete their analysis of redistricting plans. Conversion of paper maps to the GIS is a critical activity. Without this support, it will be impossible to provide timely GIS support to the Section.

SECTION 5 -- Technology Upgrade

An increase of \$230,000 is requested for \$5 Intel-based dual processor Workstations with 21 inch monitors for the Section and support staff to handle the analytical processing requirements resulting from the redistricting workload from the 2000 Census. These machines will necessarily be the current workstation-

level PC available in the merketplace in 2001. This level of performance is required because of the extremely high computations! and graphics capabilities needed to run Geographic Information System software that will quickly compute and display the massive amounts of data needed for state-wide redistricting plans. Standard office automation PCe will not be capable of running this software and handling the data requirements of the software. In addition, these Morkstations will be used to facilitate delivery of the Section imaging system to all of the desktops in the Section. Currently, imaging users must go to dedicated workstations to access information from the imaging system which slows down the processing of Section 5 submissions. Pailure to provide this level of computing power for the analysis of redistricting plans will cause delays in the processing of submissions due to performance problems and endanger the Section's ability to respond within the statutory 60-day deadline.

The ramifications of our not receiving the increased funding are severe. We would have to seriously curtail our other rights enforcement litigation and severely limit our election coverage program under the VRA.

This request would help further the goals of the Attorney General's Strategic Plan, under which increasing compliance with civil rights laws in the area of is a priority.

MULTI-ACTIVITY PROGRAM CHANGE

The Section is also seeking \$334,000 for Litigation Support activities. Marrative information is contained in the Multi-Activity justification.

	Parm.	Perm.		unt	
	Pos.	P.T.S	<u>(\$000)</u>		
Employment Litigation					
2000 Appropriation Enacted	62	61	\$6,524		
2001 Base	62	61	6,844		
2001 Estimate	<u>65</u>	63	7.210		
Increase/Decrease	3	2	366		

BASE PROGRAM DESCRIPTION: The Employment Litigation Section enforces against state and local government employers the provisions of:

Title VII of the Civil Rights Act of 1964, as smended by the Equal Employment Opportunity Act of 1972; the Pregnancy Discrimination Act of 1978; the Civil Rights Act of 1991; and, other federal laws, orders and regulations prohibiting employment practices that discriminate on grounds of race, sex, religion, and national origin.

The Section also represents other federal agencies that are sued in relation to their enforcement of federal affirmative action programs and equal employment opportunity laws and regulations.

In FY 1995, the Section filed eight Title VII complaints, settled ? Title VII cases, obtained 24 out-ofcourt settlements of Title VII charges and recordkeeping violations, and handled eight new cases implicating the constitutionality or lawfulness of federal statutes or programs. The Section's pattern or practice litigation often results in systemic changes to defendants' employment practices and serves as a signal to other employers to review voluntarily their practices to determine compliance with Title VII. Importantly, this litigation provides substantial make-whole relief, in the form of back pay, jobs, pensions and seniority, to large numbers of victime of discrimination. Under this authority, the Section has challenged, for example:

- the hiring and/or testing practices of state and local police and fire departments as being not jobrelated and consistent with business necessity and discriminatory against minorities and/or females;
- the hiring and assignment practices of state and county penal institutions that discriminate against female applicants for correction officer positions and female incumbent employees in assignment and promotion practices;
- the ineffective and inadequate handling of sexual and racial harassment complaints by state and local employers;
- gender segregation and discrimination in pay against women in non-traditional public service jobs;
 and,
- discrimination in pay and benefits against ethnic minorities.

Secsuse pattern or practice cases frequently affect the rights of hundreds of victims, a great deal of attention is given to identifying and providing make-whole relief to victims of discrimination in proceedings commonly referred to as "Stage II". The Section frequently obtains jobs with retroactive seniority for victims of hiring and promotion discrimination. For example, during F7 1999 the Section filed its report on individual Stage II relief in <u>United States v. Rest Baton Rouge. Louisians. Parish School Board</u>. In that case, the School Board denied female employees access to higher paying jobs as janitors, just because they were women. In resolution of our suit, a \$95,000 back pay fund was disbursed to 56 claimants, and ten women were offered higher paying positions. In <u>United States v. the State of Arkanses</u> <u>Department of Corrections</u>, more than \$7.6 million in back pay was distributed to 910 females who were denied employment opportunities because of their sex. During the year, an additional \$350,000 in back pay was distributed to claimants in <u>United States v. Orlans Parish Sheriff</u>. The decree in that case, which was entegred ig January 1997, provides for the payment of \$2,000,000 over a five-year period to 343 olaimants.

As directed by the Fourth Circuit, in September 1999 the district court entered a consent decree, that had originally been agreed to in 1995, in <u>United States v. North Carolina Department of Correction at al.</u> The decree provides for payment by the State of \$5.5 million in back pay to a yet to be determined number of women who had unlawfully been denied correctional officer positions or promotions; priority hiring of up to

464 female correctional officers; priority promotion of 35 female correctional officers; retroactive seniority; and pension relief.

The Section continues to work cooperatively with a number of state and local governments to implement police officer, fire fighter and other employment examinations that have been demonstrated to be job-related and which minimize, to the extent possible, adverse impact on women and minorities. Section staff have made substantial outreach efforts during the fiscal year to educate law enforcement and fire fighter organizations of the availability of new selection criteria. This effort has particular applicability to law enforcement organizations in light of their need to select police officers who possess the appropriate personality traits. It is our belief that job-related selection criteria can acreen out police officer candidates who are likely to use undue force or engage in other inappropriate behavior. In <u>United States v. Believills</u>, we worked with the City to develop a new selection procedure for entry-level police officers that included many of the selection criteria we have been advocating. During the past year we have also worked with Jefferson County, Alabams, the State of New Jersey, Suffolk County, New York, Buffalo, New York and Milwaukee, Misconsin to develop new selection procedures for protective service positions.

The Section also enforces Title VII by filing suits based upon individual charges of discrimination referred to the Department of Justice by the Equal Employment Opportunity Commission. Charges are filed with the EEOC by individuals who believe that they were unlawfully deniad employment opportunity or otherwise discriminated against by a state or local government employer. If, after investigation, the EEOC determines that a charge has merit and efforts to obtain voluntary compliance are unsuccessful, the EEOC refers it to the Department of Justice for litigation consideration. In FY 1999 the Section received 573 such referrals and commenced thirty investigation of charges with litigation potential. Only the Department of Justice has authority to initiate litigation against state and local government employers under Title VII.

While small in scope when compared to pattern or practice suits, these are cases that might not be pursued without the Section's participation and they often address types of discrimination that may not be remediable through pattern or practice suits. For example, suits initiated under this suthority have involved allegations of harassment, retaliation, failure to promote, discrimination on the basis of pregnancy, religious discrimination and unlawful discharge. During Fiscal 1999, we obtained a consent decree in United States v. Willis. Texas. There, a black employee of the city's police department had been subjected to racial harassment and his white supervisor retaliated against for assisting the employee. The City agreed to pay the employee \$25,000, and the supervisor \$35,000. In United States v. Hampshire County. Meat Virginia, we obtained a settlement agreement providing \$35,000 in relief to a female applicant who was not hired for position as a jailer for which she was very well qualified. In United States v. Sheriff of McClennan County. Texas, the consent decree approved by the court requires the Sheriff's Department to provide compensatory Field Deputy training to eligible female employees who had unlawfully been depied such training.

We also seek to resolve allegations of discrimination "rough elternative means, without involving the courts. Such resolutions are appropriate where it is determined that neither injunctive relief nor court supervision is needed to remedy violations of the law and to provide full relief to the victims. In FY 1999, for example, we entered into a settlement agreement with a Georgia county, resolving two discrimination charges. One charge alleged that the county's Department of Public Works had discriminated against an employee on the basis of her sex by failing to promote her. The second charge alleged that the county retaliated against the employee by failing to hire her for several subsequent promotional opportunities. Under the out of court agreement resolving both charges, the county agreed to promote the charging party immediately and to provide monetary relief. In another out of court settlement, the charging party alleged that an Ohio County Juvenile Court denied him a reasonable accommodation of his religious beliefs and practices as a Jehovah's Witness and as a result, he was forced to resign. The settlement provided the charging party with a monetary settlement, as he was not interested in reinstatement.

During FY 1999, the Section also had 25 suits authorized against state and local government seeking compliance with reporting requirements under § 709 of Title VII. Section 709 and its implementing regulations require jurisdictions subject to Title VII to file reports with maintain and file with the EBOC records so that compliance with the statute may be evaluated. As a result of our involvement, each of the 25 delinquent jurisdictions has come into compliance.

Another important aspect of unforcing Title VII and addressing ongoing employment discrimination is the Section's commitment to monitoring compliance with almost 100 extent pattern or practice decrees; seeking supplemental relief or orders to enforce; where necessary, defending third party challenges to their efficacy and lawfulness; and seeking dissolution of decrees when their purposes have been accomplished. The Section devotes substantial resources to this effort. Recently, for example, after discovery and an evidentiary hearing, we obtained an order prohibiting the City of Belleville, Illinois from violating the terms of a consent decree. We also obtained \$121,419 in supplemental backpay for a claimant in <u>US v.</u>

Commonwealth of Massachusatts. The backpay amount reflects the claimant's backpay and interest losses from May, 1992, when she should have been hired as a correctional officer, to March, 1998, when she was finally offered the position.

The Section issues notices of right-to-sue to individuals who have filed charges of employment discrimination with the EBOC under Title VII and Title I of the Americans with Disabilities Act against state or local government employers. In FY 1999, 4,328 notices of right-to-sue were issued.

The Section is responsible for representing federal agencies in litigation that challenges the lawfulness of their affirmative action programs. The Supreme Court's decision in <u>Adarand Constructors</u>, Inc. v. Pafe, 515 U.S. 200 (1995), clarified the standard by which the lawfulness of congressionally suthorized programs that provide a racial preference are to be evaluated. In Piscal 1995, the Section handled nine new lawsuits and one matter that rejeed Adarand issues. In post-Adarand litigation, we have responded to applications for

temporary restraining orders, motions for preliminary injunction, filed and responded to motions for summary indoment, and conducted evidentiary hearings.

PROGRAM CHANGES:

	Pos.	FTE	Amount (\$000)
Employment Litigation	3	2	\$366
Enforcement 4 Prevention	3	2	189
Multi-ActivityLitigation Support			177

The Employment Litigation Section requests an increase of three positions (two attorneys and one clerical), two FTE workyears and \$189,000 in order to maintain vigorous and effective enforcement of Title VII. This increase is required because of the demands placed on attorney resources by: (1) an increase in the number of referrals of charges from the Equal Employment Opportunity Commission (EEOC) with recommendations that litigation be iniviated, and (2) the large number of complex defensive cases the Section is called upon to handle. In particular, the demands placed upon the Section by defensive litigation have resulted in personnel being diverted from investigating and litigating affirmative Title VII cases. As a result, the enforcement of Title VII has suffered and has been less effective than it should be. This is a particularly important time to maintain a viable and effective Title VII program, especially with regard to pattern or practice investigations involving public safety agencies. The Section's pattern or practices program is designed to encourage law enforcement organizations to self-analyze their employment practices so that individuals with the requisite qualifications, skills and temperament are hired to be police officers. The Section believes that many problems recently experienced by law enforcement agencies, such as the undue use of force, can be prevented by using more job-related selection instruments.

The SEOC has streemlined its processing of individual charges of discrimination. The net effect of these changes is that during FY 1999 the EEOC referred more than 500 charges to us, up from just 233 referrals in FY 1998. While not all referrals are accompanied by a recommendation for litigation, many are, and because of the lack of attorney availability we unable to investigate a number of potential referrals. These referrals often involve unique issues of lew that go unremedied without the participation of the United States. Since July 1995, the Section has seen its defensive caseload increase drawatically, from less than one or two defensive cases a year to an average of ten or more cares annually. The single most important factor for this increase was the Supreme Court's decision in Adarand Constructors Inc., v. Pafis, 515 U.S. 200 (1995). These post-Adarand cases raise complex and important issues of constitutional law, and staffing them requires an intensive commitment of attorney resources. Moreover, we anticipate an increase in post-Adarand cases because federal agencies recently have promulgated new regulations designed to "narrowly" teilor their statutory affirmative action programs. In our experience, substantive changes to regulations lead to new and complex challenges. Indeed, we have already had two such challenges. Another important

factor that has resulted in an increase in defensive litigation are challenges to the authority of the Office of Federal Contract Compliance Programs of the Department of Labor to enforce Executive Order 11246 and Section 503 of the Rehabilitation Act. In the past, such challenges were rare. Now the Section routinely receives three or four challenges a year.

The Section believes that an increase of two attorney positions will permit it to enhance its Title VII enforcement if its defensive litigation caseload remains stable, as anticipated. An increase in one clerical position is necessary to support the additional attorney positions.

MULTI-ACTIVITY PROGRAM CHANGE

The Section is also seeking \$177,000 for Litigation Support activities. Marrative information is contained in the Multi-Activity justification.

Ingresse/Decresse	3	2	189	

BASE PROGRAM DESCRIPTION: The Section enforces Executive Order 12250, which directs the Attorney General to coordinate the enforcement of the various civil rights statutes that prohibit discrimination in federally assisted programs. Twenty-eight agencies administer hundreds of programs that provide funds, technical essistance, training, and other assistance to State and local governments and private organizations. These recipients, in turn, operate programs that deliver services and benefits to individuals in broad and diverse areas that impact the lives of all Americans, such as education; health care, social services and welfare; transportation and infrastructure; natural resources and the environment; parks and recreation; egriculture and nutrition; housing and community development, employment and job training; and, law enforcement and the administration of justice. Each federal sgancy is responsible for assuring that its recipients do not discriminate in their use of federal funds. The Section provides policy guidence, coordination, technical assistance, and training, in order to assure the effective and consistent enforcement of these grant-related statutes and to eliminate overlap and duplication where it may occur.

The Section coordinates the enforcement of two major statutes: Title VI of the Civil Rights Act of 1964, which prohibits discrimination on the basis of race, color, or national origin in federally assisted programs, and Title IX of the Education Amendments of 1972, which prohibits discrimination on the basis of sex in federally assisted education programs. The Section also coordinates the enforcement of the mondiscrimination provisions of more than 60 program-specific statutes, which prohibit discrimination on the basis of race, color, national origin, sex, or religion.

The Section also undertakes administrative enforcement activities to strengthen the Department of Justice's [DOJ] enforcement of these statutes in its own federally assisted programs. Under agreements with the Office of Justice Programs (OJP) and the Criminal Division, the Section conducts compliance reviews and investigates complaints of discrimination in services on the basis of race, color, national origin, sax, religion, or age against DOJ recipients. Most of these complaints involve allegations of discrimination and misconduct by police departments. The Section continues to participate in the DOJ police misconduct initiative and assists in setting policy and establishing investigative approaches in this top priority area of DOJ enforcement.

The Section continues to implement President Clinton's announced plans to reinvigorate the enforcement of Title IX. In 1999, the Section coordinated the publication of a joint proposed Title IX regulation by the 24 agencies that do not have Title IX regulations. The Section will coordinate the issuance of a final regulation late in 2000 after completion of the review and comment period. The Section also will coordinate the negotiation of a delegation agreement it developed between the Departments of Education (ED), Realth and Human Services (EHS), and Veterams Affairs (VA), and other granting agencies, concerning the referral of Title IX and Title VI complaints against recipients funded by more than one federal agency to ED, EHS, or VA, following the complation of the regulatory process late in 2000.

In 1999, the Section widely made available its new, comprehensive Title VI legal and investigation procedures manuals, including on the Division's Internet web sits. The legal manual addresses the legal principles and issues, from a federal agency perspective, regarding the enforcement of Title VI and received approval to distribute them to agencies in draft form. The investigation procedures manual, which can be used as a model for federal agencies with Title VI enforcement responsibilities, includes sample investigatory products such as letters of findings and settlement agreements. The documents also are used in the Section's intensive program of Title VI training and technical assistance, which was insugurated in 1998. This program uses hands-on small group workshops and is customized with examples relevant to the participating agencies. This well-received training program is fully subscribed through 2000, and the federal agencies' need for training continues to exceed the Section's resources available to provide it.

The Section continues to publish the <u>Civil Rights Forms</u>, a quarterly newsletter covering policies, practices, and legal and programmatic developments, that is distributed to more than 6,000 federal civil rights personnel, civil rights and community organizations, and the public. The Section also continues to exhibit at national conventions of civil rights, community and beneficiary groups, providing material and information about the Division's enforcement activities.

In 1999, the Division issued a major Policy Guidence Document entitled "The Enforcement of Title VI of the Civil Hights Act and Related Statutes in Block-grant Type Programs." It is anticipated that in 2000 the Division will issue several other Policy Guidance Documents developed by the Section.

In 2000, the Section will review Title VI and Title IX enforcement plans from the federal funding agencies.

as required by the Executive Order. These plans include agency enforcement goals and priorities, planned activities, progress reports, and workload and performance data.

In 1999, the Section undertook an intensive review of Title VI enforcement program of the Department of Transportation's Federal Highway Administration, which will be completed in 2000. In 1999, the Section also provided technical assistance to the General Services Administration to implement the recommendations continued in a Technical Assistance Review of that agency that was completed earlier. The Section will undertake two to three additional Technical Assistance Reviews of a federal agency's enforcement programs in 2001.

The Section undertook activities to strengthen the enforcement of Title VI and related statutes in DOJ's own federally assisted programs. The addition of two attorneys in 2000 to focus on the investigation of complex police misconduct cases is anticipated to result in an increase in case closures, from 155 in 1999, to an estimated 213 in 2000, and an estimated 250 in 2001, despite a continuing increase in new complaints files, up from 150 in 1999 to an estimated 200 in 2000, and 250 in 2001. In 1999, the Section also developed and distributed over 15,000 brochures describing the various criminal and civil statutes that address police misconduct. The Section further anticipates that several additional memorandums of understanding will be negotiated in 2000 and 2001 with other DOJ funding components (e.g., the FBI and the Marshale Service) thus increasing the Section's investigation and compliance review workload. The Section also may begin investigation and compliance review workload. The Section also may begin

PROGRAM CHANGES:

- Marie Paris	Pos.		Amount (\$000)
Coordination and Review	3	2	\$109

The Coordination and Review Section requests a program increase of three positions (two attorneys and one program specialist), two workyears and \$189,000 to: (a) provide training to federal agencies, and state and local governments, on the legal requirements and investigatory techniques applicable under Title IX of the Education Amendments of 1972, which prohibits discrimination on the basis of sex in federally assisted education programs; and (b) to perform two to three additional intensive Technical Assistance Reviews of Federal agency civil rights enforcement programs and to increase coordination afforts of recipients that are funded by more than one Federal agency.

In 1998, the Section undertook a highly successful and well-received ongoing program of legal and investigatory training for federal agencies on the requirements of Title VI. Based on this experience, the Section wants to be able to respond to these agencies in a similar fashion as they look to the Department of Justice to provide training on the legal principles and requirements of Title IX, and on the investigatory processes and procedures needed to conduct an effective Title IX compliance program.

with the anticipated issuance in late 2000 of final joint Title IX regulations by the 24 federal agencies that do not have implementing regulations, these agencies will begin in earnest to devalop a comprehensive Title IX compliance program. They will need to train their civil rights staffs and program personnel on Title IX's legal requirements, and on their specific compliance and enforcement responsibilities. This increase will provide for the development of such training, and for the training of trainers to maximize the number of course offerings available to federal agencies and their recipients.

This increase will allow the Section to perform two to three additional intensive Tachnical Assistance Reviews of Federal agency civil rights enforcement programs. These reviews are designed to identify policies and practices that agencies are using which are successful, and to uncover problems. COR provides assistance to rectify discovered problems in civil rights enforcement programs, and shares recommendations and successful policies and practices, as appropriate. In addition, the increase will allow COR to coordinate more cases when complaints are filed against recipients that receive funds from more than one Federal agency. Agencies often ask COR for assistance in coordinating multifunded recipient cases as agencies may disagree on approaches, remedies, etc. COR will be able to respond to more of these requests with the increase.*

If the Section does not receive these resources in 2001, its exercise of the government-wide coordination responsibilities under Executive Order 12250 will be substantially hampered. Specifically, the Section would be unable to develop and offer initial Title IX training to those federal funding agencies who need training and technical assistance as they set up their own Title IX enforcement programs. Further, the Section would be unable to expand its Technical Assistance reviews of agencies and coordination of multifunded complaints.

2001 Estimate	107	102	13.658
Increase/Decrease			291

BASE PROGRAM DESCRIPTION: This Section enforces federal statutes prohibiting discrimination in housing, consumer credit, and public accommodations. Enforcement responsibility in this area includes:

-- The Pair Housing Act of 1968, as amended by the Pair Housing Amendments Act of 1988. The 1968 Act prohibits discrimination in housing on the basis of race, color, religion and national origin. In 1974, this was amended to add sex as a protected class, and the Fair Housing Amendments Act of 1988 added disability and familial status as protected classes. The 1988 Amendments Act also substantially expanded the Section's enforcement authority to combat housing discrimination by enabling it for the first time: (1) to initiate cases, after referral from the Department of Housing and Urban Development

(MUD), on behalf on individuals who have been discriminated against; and (2) to seek both actual and punitive damages for aggriaved individuals in both the MUD-referred cases as well as in the pattern or practice cases the Section has had authority to bring since 1968, as well as civil penalties in pattern or practice cases.

-- The Equal Credit Opportunity Act, which prohibits disc-imination on the basis of race, color, religion, national origin, sax, marital status, age, or on the basis that an applicant's income is from public assistance, in all credit transactions; and

-- Title II of the Civil Rights Act of 1964, which prohibits discrimination on the basis of race, color, religion or national origin in certain public accommodations, such as restaurants, hotels and motels, and places of entertainment.

After the 1988 amendments to the Feir Housing Act, which became effective in 1989, enforcement activity of the Section increased dramatically, with case filings increasing as much as ten-fold from pre-1989. A major portion of the increased enforcement activity since 1989 was the result of referrals required by the 1988 Amendments of cases involving individual cases of discrimination from the Department of Housing and Urban Development (HUD) which require case filings by the Section -- known as election cases because the Act permits parties to such HUD proceedings to elect to have HUD findings of reasonable cause litigated in federal court.

The Section has discretionary authority to bring broader, higher-impact cases when the Attorney General determines there is reasonable cause to believe that persons have engaged in a pattern or practice of illegal discrimination or have denied a group of persons rights guaranteed under the Act and such denial raises an issue of general public importance. In addition, the amended Act requires HUD to refer to the Attorney General pattern or practice cases, as well as any cases involving alleged discrimination in soning and land use decisions; the Section has discretion as to whether or not the referral warrants the filing of a lawsit. Secause of their broader impact and the independent authority conferred on the Attorney General, the discretionary pattern or practice case filings are the highest priority of the Section and the most important that it brings.

In recent years, many cases in this discretionary category have been developed as the result of the following important initiatives: (1) the fair housing testing initiative, established in 1992 to increase the ability of the Section to combet discrimination in all parts of the country, especially race and national origin discrimination; (2) the fair lending program, designed to combet discrimination in lending, especially mortgage lending (since initiating this program, the Section has received an increase in referrals of matters from bank regulatory agencies which also have responsibility for enforcing the fair lending laws); (1) cases attacking property insurance discrimination; and, (4) cases to enforce the disability accessibility provisions of the Fair Housing Act.

In its testing program, the Section employs fair housing testing coordinators who plan such investigations and have trained many persons in the Department who have volunteered to be testers. Testers are individuals

who, without the intent to rent or buy a dwelling, pose as renters or purchasers for the purpose of collecting evidence concerning whether or not unlawful housing discrimination is occurring. Since the passage of the Pair Housing Act in 1968, fair housing testing has been a major tool for gathering evidence of housing discrimination. Since its creation in 1992 through PY 1999, the Department's testing program has resulted in the filing of 59 pettern or practice cases, ten of which were filed in PY 1999. It has proved to be a very cost effective enforcement mechanism. As of the end of PY 1999, 55 of the 59 cases had been resolved and the total monetary relief obtained in these cases is over \$8.4 million. In the view of a 1997 report by a bipartisan private organization established to monitor civil rights enforcement, this testing program has been 'a remerkable success story' which has enabled the Department to better fulfill its mission of enforcing the Pair Housing Act from coast to coast.

The fair lending and property insurance initiatives involve some of the most complex investigation and litigation in the Civil Rights Division, and have required very significant resources. Cases in both areas have had a significant impact on improving both lending opportunities for minorities and the availability of property insurance in predominantly minority communities. For example, a Wall Street Journal article published in early 1996 made note of this progress, emphasizing more vigorous enforcement of fair lending laws by both the Justice Department and the bank regulatory agencies. The Housing Section's enforcement program has been in the forefront of this federal effort. Since 1992, 15 cases have been initiated attacking discrimination by financial institutions in the underwriting, marketing and pricing of losms, including one in FY 1999 and one in FY 1999. All but one of these cases have been resolved by consent decrees in which over \$16 million in monetary relief has been obtained.

In the last two years, the Section has increased efforts to enforce the accessibility provisions of the Act. During FY 1998 and FY 1999, we filed 18 pattern or practice cases alleging violations of these provisions. Four of these cases, and several cases filed the provious year, were settled by consent decrees in FY 1998. In addition, out-of-court settlements were reached in a number of other matters. The consent orders and other settlements have contained important remedial principles and standards for cases such as these. In 10 court settlements filed in FY 1999, we obtained over \$1,000,000 in monetary relief to compensate victims of discrimination and provide for increased housing accessibility through, among other things, retrofitting of existing units and construction of new units. Included in the out-of-court settlements was one with one of the mation's largest homebuilders -- the Pulte Corporation.

The Section's enforcement program has also achieved several other significant accompliahments. The Section filed 19 pattern or practice cases in FY 1999. Consent decrees obtained in FY 1999 in pattern or practice cases have been especially significant. In a lawsuit combined with private litigation alleging egregious racial harassment of tenants by the Boston Housing Authority, we obtained important injunctive relief as well as \$1.5 million in monetary relief. In a Nevada case alleging race and familial status discrimination in the rental of apartment units, we obtained \$397,500 in damages for victims of discrimination and civil penalties. In a case referred to the Department by a federal financial regulatory agency, we obtained \$800,000 in civil penalties for that agency for ECOA and other level violations. In New Orleans, we

obtained important injunctive relief and \$180,000 in damages and civil panalties against an apartment locator service that we alleged engaged in racial discrimination. In a race discrimination case against a Richmond, Virginia landlord, we obtained \$475,000 in damages for discrimination victims and civil panalties. In Idaho, in a lawsuit against a large landlord, we obtained a settlement providing for injunctive relief and \$105.000 in momentary relief for victims of alleged familial status discrimination.

In 2000 and 2001, the Section will continue to place emphasis on initiating broad pattern or practice cases, primarily in the four high-priority programs discussed above. Most of the non-discretionary cases referred from MUD will continue to be handled by local U.S. Attorneys' offices pursuant to the Attorney General's 1991 directive designed to involve these offices in the responsibility for litigating fair housing cases. This program has been very successful. A smooth and efficient working relationship is now in place between the Section and the various U.S. Attorney offices, and we expect increased participation of these offices in fair housing anforcement in the future.

The program's activity is consistent with priorities for fair housing, fair lending, the emphasis of pattern or practice cases to pursue effective remedies within existing laws, and the active participation of U.S. Attorneys in enforcement actions, as set forth in the DOJ Strategic Plan.

PROGRAM CHAMMES:

		Mark Service Co.	
	Pos.	233	(8000)
Housing and Civil Enforcement			\$291
Pair Lending			250
Multi-ActivityLitigation Support			41

The Housing and Civil Enforcement Section requests \$250,000 in funding enhancement for computer softwars and contracts to assist in analysis of files of financial institutions. We have found that fair lending investigations require probably the most intensive document review process and statistical analysis in the Division. The enhancement seeks additional resources to assist in examining records of lending institutions, including (i) the purchase of computer software which will greatly increase the staff's ability to examine bank records more quickly and efficiently, and (2) the contracting with outside experts who specialize in the examination and analysis of such records. We have had some experience with such resources in the past and have found that they are both of significant essistance to staff analysis of records, as well as providing a resource which is more efficient than doing the required review and analysis with full-time staff.

Pair lending enforcement is a high priority in the Division's enforcement program. The Section has had significant impact on attacking discrimination in the fair lending area. In order to continue to meet this important Division priority and to increase the deterrent effect on discrimination in this area, it is crucial that the Section receive the requested enhancement. Without such enhancement, achievement of increased enforcement in the high priority area of fair lending will be impeded.

MULTI-ACTIVITY PROGRAM CHANGE

The Section is also seeking \$41,000 for Litigation Support activities. Narrative information is contained - in the Multi-Activity justification.

	Perm.		Amount	
	Pos.	FTB	<u> [\$000]</u>	
Educational Opportunities				
2000 Appropriation Enacted	36	34	\$3,589	
2001 Base	36	37	4,048	
2001 Estimate	39	39	4.237	
Increase/Decrease	3	2	189	

BASE PROGRAM DESCRIPTION: The Educational Opportunities Litigation Section enforces Federal statutes which prohibit discrimination in public elementary and secondary schools and public colleges and universities. Section enforcement responsibilities include:

Title IV of the Civil Rights Act of 1964, which provides that the Attorney General may initiate lagal proceedings to further orderly desegregation (i) upon receiving a complaint from a parent that his or her minor children are denied equal protection of the law by public school officials; and, (ii) with respect to public institutions of higher learning, upon receiving a meritorious written complaint alleging that a student has been denied admission to or the opportunity to continue in attendance at a public college or university on account of the student's race, sex, national origin, color, religion;

Equal Educational Opportunities Act of 1974, which prohibits school officials from denying students equal educational opportunities on account of race, color, national origin, and sex, this includes the failure to provide non and limited English speaking students appropriate service to enable them to participate in the educational program:

Title VI of the Civil Righte Act of 1964, which prohibits school districts and institutions of higher education that receive federal funds from discriminating on the basis of race or national origin in a program or activity, upon receiving a proper referral from the U.S. Department of Education, Office for Civil Rights (OCR); and,

Title IX of the Education Amendments of 1972, which prohibits school districts and institutions of higher education that receive federal funds from discriminating on the basis of gender, upon receiving a proper referral from OCR;

Section 504 of the Rehabilitation Act of 1973, Individuals with Disabilities Education Act (IDEA), and Title II of the Americans with Disabilities Act (ADA), which require that public school officials

provide handicapped and disabled students appropriate aducational opportunities, upon receiving a proper referral from OCR, and Title III of the ADA with prohibits similar discrimination in private schools.

As reflected in previous submissions, the Section continues to maintain a large non-discretionary workload and, therefore, is limited in the use of its resources. FY 1999 was a typical year for the Section. Efforts were focused on monitoring the more than 500 school districts covered by desegregation orders in over 212 desegregation cases in which the United States is a party, and responding to motions, citizen complaints, and court orders. To ensure that districts comply with their obligations, the Section investigates complaints regarding student assignments, faculty hiring and assignment, the availability of equitable facilities and programs, and the allocation of district resources. The Section responded to 200 citizen inquiries and 30 Congressional inquiries or referrals regarding complaints of discrimination. The Section also responded to numerous motions and requests by school districts to modify existing court orders. The Section also responded to several requests by school districts for a declaration of unitary status and shall be dismissed.

As a result of its activities in FY 1999, the Section obtained significant results in several cases. For example, the Section intervened in CHE and United States v. Denver Public Schools, and negotiated a consent decree providing for services to 14,000 non and limited English speaking students. The relief includes an enhanced curriculum, additional materials and resources, and monitoring to ensure compliance. The Section also settled the longstanding St. Louis school desegregation case. Liddell and United States v. Board of Education of the City of St. Louis. The settlement agreement reached in that case provided for desegregation transfer opportunities for approximately 9000 city students, new facilities in the city in excess of \$200 million, and funds to continue and expand remedial programs, including pre-school, full day kindergatten, a desirable class sizes at a cost of approximately \$60 million per year for ten years. In addition, the Section was able to enter into a consent order with the East Beton Rouge Parish, Louisians Parish school district which ensures that Parish's virtually all-black schools obtain technological enhancements in a timely fashion. The Section also has undertaken reviews of 16 school districts in Alabama, in which over 117,000 students attend school, and in which we sent issues letters setting out areas that need to be addressed. We also litigated several case, including Madison, Mississippi, where we are awaiting a decision, and in Virginia Military Institute and Midland, Texas, where we persuaded the court to retain jurisdiction of the cases.

This Section has a large non-discretionary workload because we are responsible for monitoring and enforcement in approximately 500 elementary and secondary school districts and four statewide systems of higher education which operate pursuant to court orders in cases in which the United States is a perty. Accordingly, we commit approximately 80% of the attorney staff resources to activities such as responding to

motions from school districts for unitary status, motions from parties seeking to intervene, or motions for modifications of the extant desegragation plans to accommodate new school construction, overcrowding, underutilization, magnet schools or other issues. The remaining resources are devoted to other Division priority issues such as gender equity, disability rights, equal access to educational opportunities, and issues affecting non and limited English speaking students. We also expend resources coordinating our enforcement efforts with those of allied federal agencies and/or other sections in the Civil Rights Division to ensure that there is no overlap of efforts causing undue burdens on the school districts.

We anticipate an increase in the number of motions for unitary status. In addition to school districts seeking such status on their own, the courts are requiring that we review and determine whether school districts have achieved unitary status and, if not, put the district on track to achieve that and. Currently, we are reviewing more than 25 districts, as well as ten trade schools and junior colleges regarding unitary status. These activities are not insubstantial and compete with planned new initiatives. We anticipate a continuing stream of future directives from the courts as well as direct requests from school districts seeking unitary status. The timing of these requests during the year cannot be predicted. Review of these cases, which are usually multi-party cases, is labor intensive involving issues of student and faculty assignment, employment, facilities, transportation, extra curricular activities as well as quality of education issues. The cases usually require extensive negotiations and in some instances, a trial.

PROGRAM CHANGES:

	-	Pos.	FTE	Amount (\$000)
Educational Opportunities		3	2	\$189

The Section seeks an additional three positions, three workyears. Specifically, we are requesting an increase of two attorney positions and one paralegal specialist positions. This request is consistent with the Department of Justice Strategic Plan to improve educational opportunities by expanding programs that promote compliance with the country's civil rights laws in priority areas such as education, and obtaining effective remedies within existing laws. Such efforts include combating: discriminatory student assignment, including within school assignments to special education, gifted and talented programs and higher-level academic programs; sexual and racial harassment; and the misuse of tests. The efforts also include ensuring non-discrimination in emerging areas such as appropriate test use and pursuing statewide initiatives by working cooperatively with other federal agencies, state departments of education and state attorneys general, as well as coordinating enforcement activities with other sections within the Division.

The additional persons requested will assist the Section in meeting the Division's objectives, by meeting our non discretionary responsibilities while taking a pro-active approach in reviewing our existing docket

of cases and also addressing the emerging civil rights issues with respect to testing requirements for graduation, approaching, on a statewide basis, the disproportionate assignment of minorities to special education and under representation of minorities in gifted and talented programs, pursuing anticipated referrals from the Department of Education regarding the Individuals with Disabilities Education Act (IDEA), involving the rights of the handicapped.

The issue of the discriminatory use of tests and resource comparability are also on the horizon as more and more states institute graduation and promotion standards that include testing. We attend conferences where the adverse impact of these tests are discussed and it is anticipated that litigation will arise challenging the use of tests. Such challenges may include attacks based on the inadequate preparation provided by racially segregated elementary and secondary schools and lack of resources provided to those schools. A related issue is whether there is equitable access to higher level academic programs either between schools within a district or within the same schools which would better prepare students for these tests as well as for post-secondary education. Currently, we do not have the necessary resources to address this issue. In addition, we are currently developing a statewide approach to dealing with issues regarding disproportionate assignment of minority students to certain special advection tracks and under representation of minority students to gifted and talented programs. Increased personnel will permit us to expand our efforts in this area. We anticipate developing a statewide approach in an additional two states regarding special advection issues, and participating in a resources equity case during PY 2001.

The amended Individuals with Disabilities Act (IDEA) now provides for referrals from the Department of Education to the Division to prosecute any found violations of IDEA. This is new and should expand greatly our workload. We are currently working with the Department of Education to coordinate these activities and providing DOE advice on the type of information we would need for a referral. We anticipate that referrals will be forthcoming. Since the referrals may involve statewide practices, a substantial investment in attorney time will be necessary. We anticipate participating in one review in FY 2001.

The Section has approximately 150 cases that are not currently assigned to attorneys. In many of these cases, the school district is not required to report to the Court regarding its compliance with the court order. The purpose of the case review project is to conduct a comprehensive review of those districts in a systemic way to ensure that the districts are complying with their extant desegregation orders, obtain any additional relief, if it is warranted, and to update and complete our files. The Section has also established several working issue groups which focus the issues of affirmative action, Native-American and language minority rights, disabilities, funding and resource comparability, Title IX and harassment, and within school segregation. The purpose of the groups is to monitor current developments in these areas including court cases, and to develop, consistent with Division priorities, new cases. In addition, the Section has also embarked on a major outresch project to ensure that interested persons and organizations are aware of our authority to investigate and resolve civil rights violations. Efforts in this area should

result in our receiving complaints and our bringing new cases. The requested personnel will enable us to intensify our efforts in these areas. We anticipate reviewing 40 inactive cases during FY 2001, should we receive the requested enhancement.

The requested additional personnel will also better enable the Section to continue its efforts with regard to ensuring that diversity may be maintained at both the elementary and secondary level and in institutions of higher education. We anticipate continuing our participation in this area and anticipate participating in at least one such case during the fiscal year.

The ramifications of not receiving any increased funding to address these new initiatives and maintain and expand existing projects are significant. However, if fully funded we anticipate the results described above, while maintaining our non-discretionary activities. Once the programs are up and running fully, in PY 2002 we anticipate ongoing results. These programs are intended to be ongoing.

The described activities and initiatives will also place a considerable demand on our limited support staff. Much of the work will be fact intensive. The requested paralegal will relieve the anticipated workload on our support staff and enable us to pursue these new initiatives.

We cannot overemphasize the importance of these program initiatives to the mission and orderly operation of the Section and the Division. Moreover, they are consistent with the Attorney General's commitment to improve educational opportunities for students at the elementary and secondary level, thus, facilitating broader access of minority students to post secondary education. Finally, the allocation of the requested resources for these endeavors will clearly demonstrate the Department's recognition of the President's directive that education is the number one priority of the administration.

BASE PROGRAM DESCRIPTION: The Americans with Disabilities Act (ADA) extends to people with disabilities the promise of equal access to everyday life. Through its multi-faceted approach toward achieving compliance with the ADA, this Section works to make this promise a reality. The Section's enforcement, certification, regulatory, coordination, and technical assistance activities, required by the ADA, combined with an innovative mediation program and a technical assistance grant program, provide a cost-effective and dynamic approach for carrying out the ADA's mandates. The Section also carries out responsibilities under Section 504 of the Rehabilitation Act, the Small Business Regulatory Enforcement Fairness Act, and Executive Order

12250. Section activities affect six million businesses and non-profit agencies, 80,000 units of state and local government, over 50 million people with disabilities, and over 100 other Federal agencies and commissions in the Executive Branch.

Enforcement responsibilities cover a broad spectrum of potential actions to encourage individuals and entities to comply with the requirements of the ADA. The Section seeks access under Titles I. II. and III of the ADA. Under Title I, the Section is the only government entity with authority to initiate litigation against state and local government employers. Consequently we have intervened in cases where States are arguing that it is unconstitutional for Congress to permit ADA lewsuits directly against State governments; and, under Titles I and II, have entered into litigation and complaint investigations that have resulted in numerous formal and informal settlement agreements throughout the country against local governments whose policies violated employment and access regulations. The Section also coordinates Title II administrative enforcement by seven other agencies' and for the Department's own complaint investigation and compliance review functions. The Section's efforts here result in hundreds of formal and informal resolutions of individual complaints a year. Under Title III, the Section initiates litigation where there is a pattern or practice of discrimination or discrimination involving an issue of general public importance involving public accommodations and commercial facilities. The resolution of these complaints has resulted in the removal of physical barriers, the provision of auxiliary aids, and the elimination of discriminatory policies in a wide variety of settings, including hotels, restaurants, retail atores, stadiums, town halls, courts, and prisons. Recent accomplishments include Supreme Court decisions in Olmstead v. 1.C. and Cleveland v. Policy Management Systems. Inc. and settlement agreements with the City of Toledo. Ohio: Greyhound; Holiday Inna; Avis Rent-A-Car; TrizecHahn Corporation; and the MCM Grand Hotel.

FY 2001 activities promise a continued mix of litigation (although litigation is resource intensive, it is an essential tool for cradible and efficient enforcement), amicus briefs, formal settlements and mediated resolutions. PY 2001 priorities will focus on four areas, as detailed below under Program Changes. This initiative meeks to improve community access, access to leisure and cultural activities, provide specific law enforcement training, and continue the Section's effective distribution of ADA compliance information.

Additionally, as it has since FY 1994, the Section will emphasize Alternative Dispute Resolution (ADR). The Section continues to operate a project to provide mediation services to resolve ADA complaints filed with the Section. This has provided such an efficient means of resolving complaints that in FY 1999 we switched from a grant to contract mediation services, allowing us to greatly expand the program.

Under Section 308 of the ADA, staff continues to respond to requests from state and local jurisdictions

^{&#}x27; Departments of Agriculture, Education. Realth and Human Services, Housing and Urban Development, Interior, Labor, and Transportation.

seeking certification that their building codes meet or exceed ADA accessibility requirements. Program enhancements in FY 2000 has allowed the Section to expand its activities in certification.

Executive Order 12750 requires the coordination of Federal enforcement of Section 504 of the Rehabilitation Act and other Federal statutes that prohibit discrimination on the basis of disability in programs that receive Federal financial assistance. In addition, the Section represents the Attorney General in her statutory role as a member of the U.S. Architectural and Transportation Barriers Compliance Board (Access Board).

The Technical Assistance Program, mandated under Section 506 of the ADA, provides enswers to questions and free publications to businesses, state and local governments, people with disabilities, and the general public. The Section's toll-free ADA Information Line receives up to 160,000 calls a year. The Section develops and disseminates free ADA publications; provides training at meetings nationwide, and reaches out to audiences affected by the ADA including mayors, local Chambers of Commerce, local disability organizations, and more than six million businesses. The Section's technical assistance publications include detailed technical assistance manuals addressing all aspects of Titles II and III of ADA, basic Question-and-Answer booklets, and illustrated guides addressing specific topics. Publications can be obtained 24 hours a day through a toll-free fax-on-demand service or electronically through the ADA Web Site. This web site receives up to 130,000 hits a week. In FY 1999, the Section republished its guide for small businesses in Spanish and eight other languages, and published a fact sheet on providing assistance at self-service gas stations.

Through its grant program, the Section works with trade associations and other groups to educate small business owners, hotel and restaurant owners, builders, mayors or other government officials, law enforcement officers, people with disabilities, and others. In FY 1999, the Section awarded a new grant to educate court personnel on the ADA and ensuring access to the courts. Through grants awarded in previous years, the Section completed training materials for building contractors, a self-training guide for members of historic preservation boards and commissions, as well as training materials for people with mental retardation.

The Section also chairs an ADA Technical Assistance Coordinating Committee and reviews materials developed by other agencies to ensure legal accuracy. In FY 1999, the Section initiated a project with the Small Business Administration (SSA) to disseminate ADA publications through local SBA Small Business Development Councils, Momen's Business Centers, District Offices, and other SBA forums, and disseminated information about its ADA tax incentive packet to more that 5 million businesses through an IRS newsletter.

In FY 2001, the Section will build on its basic technical assistance services and, with a program enhancement, will expand its efforts to educate people about the ADA in minority communities and in rural areas.

Enforcement - Fulfilling The Promise of the Americans With Disabilities Act

Overall, one priority of the Department's Strategic Plan is to "increase compliance with civil rights laws in the sreas of.....personc with disabilities." This request correlates closely with the Plan's first goal of quaranteeing "the civil rights of all Americans" by promoting compliance with our civil rights laws through coordinating enforcement actions, working with other Federal agencies, pursuing pattern and practice cases, and continuing cooperation with U.S. Attorney offices.

The Section requeste an increate of \$1,308,000, which includes 22 positions (eight attorneys, eight investigators, three paralegals, one legal technician, and two secretaries), and 10 workyears in order to target enforcement efforts both in areas in which the requirements of the Americans with Disabilities Act (ADA) will take effect for the first time in FY 2001, as well as those in which we know that enforcement has been inadequate -- specifically in transportation, employment, and access to cultural institutions. We term this initiative Community and Cultural Access -- This effort will focus outreach and activities on removing barriers that remain to basic community services for people with disabilities. Most Americans take for granted the ability to use basic government services -- to call 911, to ride public transportation, to vote, to seek and obtain public employment if qualified, or to fight a traffic ticket in court. Yet millions of people with disabilities are not able to successfully participate in the life of their communities because building architecture, communication systems, public mass transit systems, and bissed policies and practites continue to exclude them. Simultaneously, this effort focuses on ensuring that people with disabilities are no longer denied access to transportation, American cultural institutions, historic sites, and tourist attractions.

For example, people with disabilities have fought hard for decades for access to <u>private intercity transportation</u> and <u>public mass translit</u>, which is often the only type of affordable transportation between cities; to vacation travel provided by cherter companies; and for transportation to and from sirports and other locations as provided by shuttle services. The existing Department of Transportation (DOT) rule, in effect since 1992, covers only limited aspects of their operations. By statute, the provisions requiring wheelchair accessible "over-the-road" buses, those used by the types of entities mentioned above, do not become effective until October 2000 or October 2001, depending on the size of the entity. The Department of Justice, as the sole agency charged with enforcing the implementing regulations issued by DOT in September

1998, will need increased resources in order to devote appropriate attention to this new requirement. We expect to receive approximately 300 complaints about noncompliance with the new rule within the first year after its effective date.

The Section also requires additional resources in order to increase enforcement of the ADA provisions (title I) benning <u>discrimination in employment</u>. The Section is the only Federal government entity that can initiate litigation against a state or local government charged with employment discrimination based on disability. The Section relies on referrals from the Equal Employment Opportunity Commission (EEOC) for cases against state and local government employers. Over time this has resulted in almost 600 referrals, of which 314 are currently open and sweiting a decision to issue a right to sue letter or to undertake litigation. The number of referrals from the EEOC has increased eignificantly in the last few years and will continue to grow exponentially. For example, from FY 1992-1995, we received 108 EEOC referrals. This number has substantially and steadily increased since EEOC "streamlined" its investigations process: in FY 1996 alone we received 56; in FY 1997, 120; and in FY 1998, 170.

Code Curtification

A program enhancement of two positions (two attorneys), one workyears and \$143,000 is requested.

One of the Division's major goals is to schieve compliance with the ADA's mandate to ensure that new or altered public accommodations and commercial facilities are accessible to people with disabilities. The ADA established two methods of achieving compliance with the ADA's design requirements — litigation and certification. Certification, which emphasises voluntary compliance, is far less costly than litigation. Under the code certification process, a State or local government may sak the Attorney General to certify that its accessibility code meets or exceeds the requirements established by the Department's regulations. Code certification is a totally voluntary process that preserves the traditional role of State and local officials in the implementation of building-related regulations, while at the same time furthering the Pederal objective of ensuring uniform levels of accessibility for citizens with disabilities throughout the United States. In a jurisdiction that has a certified code, compliance with that code may be offered as evidence of compliance with the ADA in judicial enforcement proceedings.

Secsuse accessibility code certification can play a major role in promoting voluntary compliance in new construction, the Attorney General directed the Disability Rights Section to conduct an extensive outreach program to encourage State and local governments to review the accessibility requirements in their building codes and to seek certification. This initiative is intended to advance the Department's goals of protecting the civil rights of people with disabilities while at the same time reducing reliance on costly litigation as an enforcement tool.

The Section's goal is to achieve certification of all state accessibility codes - but to date, achieving

the goal has been beyond the Section's reach. To date, four State codes (Washington, Texas, Maine, and Florida) have been certified. Nine states (New Mexico, Maryland, Minnesota, New Jersey, California, Indiana and North Carolina) are being reviewed. Some of these requests have been pending for years. Because of the consistently high demands for resources in the other areas of the Section's responsibilities, the Section's ability to allocate staff to the certification function has been severely limited.

FY 2001 will be a significant year for code development activicies. Both the Department's revised ADA Accessibility Standards and the private sector's International Code Council's model code will have been published. As a result of these new standards, State and local codes will be subject to extensive revisions. If the goals of the ADA are to be met, the Department should be able to encourage States to adopt codes that are ADA-equivalent and to seek certification. If the Department is unable to respond in a timely fashion, the effort will fail and our relationship with both the State and local governments and the national organizations that are laboring to promote accessible design will be severely damaged. The requested resources should enable us to meet our obligations to the entities that are promoting accessibility by seeking code cettification.

Technical Assistance

A program enhancement of two positions (two technical assistance program specialists), one workyear, and \$602,000 is requested. To develop training and outreach activities to ensure that law enforcement agencies comply with the ADA and to increase outreach to under-served populations (small towns and businesses in rural areas, non-English speakers and minority populations and urban centers).

These initiatives will develop highly-illustrated tools to educate law enforcement, community, design, construction, and facilities professionals on the new ADA Standards, and will take advantage of electronic technology, compact disks (CDs), the Internet, and interactive meetings/teleconferences to disseminate information into every corner of our diverse nation

These initiatives cannot be accomplished with existing resources. Resources for technical assistance have declined or stayed level in recent years, while demand for services, the number and types of materials disseminated, and the number of people served, have increased. Without new funding for this initiative, the Section will not be able to meet the anticipated demand for technical assistance, and professionals in law enforcement and rural areas will not receive the information they need.

MULTI-ACTIVITY PROGRAM CHANGE

The Section is also seeking \$341,000 for Litigation Support activities. Narrative information is contained in the Multi-Activity justification.

	Parm.		Amount		
	Pos.	278	(8000)		
Office of Special Counsel for Immigration-					
Related Unfair Employment Practices (OSC)					
2000 Appropriation Enacted	29	2 ģ	86,027		
2001 Base	29	30	6,311		
2001 Matimate	37	24	5.906		
Increase/Decrease	8	4	573		

BASE PROGRAM DESCRIPTION: OSC was created by the Immigration Reform and Control Act of 1986 (IRCA) to prevent and combat employment discrimination associated with employer sanctions for knowingly hiring an undocumented worker.

Pursuant to 8 U.S.C. 1324b, OSC investigates and prosecutes cases of discrimination in hiring, firin or referral for a fee based on an individual's citizenship status or national origin. Section 1324b covers all employers with four or more employees. However, OSC does not have jurisdiction over national origin claims already covered by Title VII, i.e., employers with 15 or more employees.

In FY 1999, OSC experienced successful outcomes in its two-pronged mission of enforcement and prevention. In FY 1999, OSC increased its number of settlements (71% over FY 1998), back pay obtained (250% over FY 1998) and civil penalties awarded (350% over FY 1998).

As part of its prevention work and public outreach, OSC has continued to collaborate with other federal agencies such as the Equal Employment Opportunity Commission (EEOC), the Immigration and Naturalization Service (EMS), Social Security Administration (SSS) and the Department of Labor. OSC

provides grants to educate employers, employees and the general public and in FY 1999, expanded the

reach of its grants program through consolidation of existing grantees' budgets and initiation of projects in previously underserved regions to cover the changing demographics. Staff attorneys and grantees continue to make aducational presentations at employer and community conferences and workshops across the country.

In FY 1999, increased prevention work, presence in non-traditional heavily populated immigrant worker communities (including Nebraska, Massachusetts, Iowa and Arkansas), and presence on the Morld Wide Web have resulted in an increase in outreach requests, surpassing figures from prior years. In addition to the focus on new regions, the launching of new print, television and radio public service announcements, and new community-based organization (CBO) target marketing strategies such as the successful Asian Pacific American Meritage outreach to more than 250 CBOs nationwide, has increased and will continue to increase demand for discrimination prevention outreach.

In addition to charge referral through its Memorandum of Understanding (MOU) with the EEOC and the Department of Labor's Office of Federal Contract Compliance (DFCCP). OSC has reinvigorated 41 MOUs with state and local human rights agencies throughout the country. These MOUs are referral agreements aimed primarily at increasing OSC's presence around the nation and stretching enforcement dollars by educating state and local government fair employment agencies who can then refer charges to OSC. OSC is more fully implementing existing agreements by conducting local training and signed new MOUs with the cities of Chicago and Seattle. Continued expansion is expected in 2000, especially in the South and Nest.

OSC will continue to focus investigative resources on illegal discrimination against lawful immigrants and citizens in hiring and firing based on national origin and/or citizenship status and address new barriers to employment facing legal immigrants and "foreign looking" individuals.

PROGRAM CHANGES:

	POR	PTE	(3000)
Office of Special Counsel	8	4	\$573
Civil Righte Policy and			
New H-18 Civil Rights Enforcement	8	4	530
Multi-ActivityLitigation Support			43

OSC requests an increase of eight positions (five attorneys, two equal opportunity specialists and one clerical), and four FTE workyears and \$510,000 to enforce the new "fail to hire" provision of the American Competitiveness and Morkforce Improvement Act of 1998 (ACMIA) and to expand efforts addressing immigration-related civil rights policy matters.

ACNIA

OSC will receive and review "failure to salect" complaints from U.S. workers under ACNIA: ACNIA temporarily raised the statutory calling for H-IB visas, which are used to admit skilled foreign professionals to the United States to work on a temporary basis. OSC expects to be delegated the Attorney General's authority to protect qualified U.S. work authorized individuals who are not hired as a result of an employer's preference towards hiring H-IB workers. In PY 2000, OSC will conduct research and draft the implementing rule and perform enforcement activities similar to what it currently does(e.g. investigation, intervention, cause determination, referral, arbitration and outreach). This effort should be operational starting in 2000 pending the Attorney General's designation.

Pivotal to OSC's planned implementation of the Department's responsibilities under ACMIA is training a new and non-traditional community of employers and employees—the most effective discrimination prevention method. H-IB related cases are also expected to rise as a result of OSC's partnerships and educational outreach and because of the increased attention given to discrimination and "failure to hire" complaints, both by members of the public (potential aggrieved individuals) and by other agencies (e.g., Department of Labor, Department of State and Immigration and Naturalization Service).

DOL notes that approximately 300,000 H-18 labor certifications are filed each year. Under ACWIA, the number of available H-1B visas almost doubles and employer petitions are expected to be at an all-time high in FY 2001. Now that U.S. workers may obtain a remedy and the available number of B-1B visas will be increased substantially, far greater numbers of complainants are also expected to come forward to OSC. Because of OSC's limited resources and increases in caseload, successful outcomes and demand for services, delegation of new enforcement responsibilities requires enhanced resources in order to maintain, and not jeopardize, OSC's core mission to investigate and prosecute immigration-related unfair employment practices.

Increase in Civil Rights Policy Work

The Attorney General, in consultation with the Acting Assistant Attorney General (AAAG) for Civil Rights and the Special Counsel, has also directed OSC to increase its involvement in various immigration-related issues that involve immigrant civil rights and are closely tied not only to OSC's mission in the employment area but the overall USDOJ Strategic Plan.

Increased staff are necessary for OSC to continue and increase its efforts in working with offices and components and advise on many critical areas, such as:

Monitoring implementation of INS initiatives such as Operation Vanguard, where OSC has focused
on ensuring that work-authorized individuals will not be erroneously discharged from employment,

and the INS Quick Response Teams, where OSC is working with INS to protect the civil rights of immigrant and minority communities in light of increased interaction between IMS and local and state law enforcement agencies;

- Conducting in-person training of employers participating in, among other things, Immigration and Naturalization Service (INS) electronic employment verification pilot projects to avoid potential discrimination;
- Monitoring implementation and review of programs to ensure non-discriminatory and fair treatment for non-U.S. citizens (or those perceived to be foreign) where immigration or citizenship status may be a qualification for benefits; and,
- Formalizing our role in monitoring immigrant civil rights policy matters; working within the
 Department and with other government agencies to ensure that assistance is available to victims;
 of unfair treatment, including mechanisms for enforcement and tho provision of appropriate.
 remedies.

OSC's increased partnerships, new initiatives and work resulting from anticipated INS programs necessitate increased resources to train, update and educate employers and employees on their rights and responsibilities under the immigration laws, and to monitor and svaluate compliance with, including complaints of violations of, immigrant civil rights.

Increased resources will enable OSC to promote compliance with civil rights laws; enforce new protections for U.S. workers not selected for jobs that are filled by certain non-immigrant workers; improve coordination and partnership between OSC and other civil rights agencies, between OSC and state and local governments, and between the government generally and the business and community sectors.

MULTI-ACTIVITY PROGRAM CHANGE--Litigation Support

The Section is also seeking \$43,000 for Litigation Support activities. Narrative information is contained in the Multi-Activity justification.

	Pera,		Amount
	Pos.	PTH	(\$000)
Management and Administration			
2000 Appropriation Enacted	69	63	\$ 9,519
2001 Base	69	63	9,862
2001 Estimate	<u>8</u> 2	22	10.301
Increase/Decrease	13	9	441

This budget activity includes resources for Executive Direction and Control (which includes the Office of the Assistant Attorney General and the Administrative Management Section).

RASE PROGRAM DESCRIPTION: The Assistant Attorney General and Deputy Assistant Attorneys General establish policy and provide executive direction and control over litigation enforcement and administrative activities of the Division. Each of the Deputy Assistant Attorneys General oversees specific program-related Sections.

The Administrative Management Program provides a diverse array of management and technical services. These services include, but are not limited to, personnel administration, procurement, budget formulation and execution, litigation support, facilities services, mail and file operations, and automated systems.

Significant accomplishments in 1999 include:

continued operation of the Department's office automation system, Justice Consolidated Office Network (JCON) throughout the Division, and began planning for a technology refreshment to JCON II pursuant to the Department's standard architecture;

expanded use of continued improvements to the Geographical Information System (GIS) as a management tool for the Justice Management Division;

began the requirements analysis for re-engineering the QIS in preparation for the 2000 Census;

began final implementation of a sophisticated and critical Section 5 case tracking application consistent with the migration of systems from the Data General-based automated office system environment to a Mindows-based client server application with a Unix database platform to be integrated with JCON;

expended to four additional Sections a correspondence tracking system within the Division as a

prototype, and have redeveloped the application with a graphical user interface compatible with the JCDM environment. Users have the ability to define, record and report categories of correspondence: and.

the Division's case management system was successfully moved from its outmoded platform on the Data General to a Sun platform. We are currently developing case management, using an off-the-shelf product which will satisfy the Division's need for industry standardization and help to easily facilitate Department-wide reporting to the Attorney General.

During the next two years, the Division plans to consolidate our two remaining isolated networks into the JCON system: the Geographic Information System network and the Litigation Support Network. These now exist as separate systems for the use of specialized and case-specific applications. The resulting system, JCON 11, will also incorporate changes to make the overall system compatible with the Department's JCON standards. Additionally, we will begin to implement necessary upgrades to the GIS system for our Section to handle the demands of the Year 2000 Census and resulting redistricting. As funding permits, we will also enhance the JCON system by adding low-cost digital imaging for easy and real-time retrieval of the Division's files as well as to increase the productivity of our FOIA efforts.

The Administrative Management Program also contains the Freedom of Information/Privacy Act (POI/PA) Branch. The Branch's principal function is to ensure that the Division complies with all aspects of the Freedom of Information and Privacy Acts. The Branch also provides procedural guidance to citizens and legal counsel to other programs of the Civil Rights Division regarding POI/PA requests and coordinates and represents the Division's interests in FOI/PA litigation and in the administrative appeals of request denials.

The workload of the FOI/PA Branch on requests (without regard to appeals and litigation) has been a to stabilize in terms of incoming requests but still at a higher level of incoming requests. For Fiscal Year 2000, the number of projected incoming POI/PA requests will total 850-875. The continued decline (from 1039 in FY 1997, 914 in FY 1998, and 816 in FY 1999) in incoming requests is attributable to several factors — the primary factor being the posting of numerous records pertaining to the Americans with Disabilities Act on the CRT Website. The current backlog (i.e., requests pending over 20 days) totals 68 FOI/PA requests. Of the 845 FOI/PA requests closed during FY 1999, the median time for completing 921 of these closings was less than 20 days. The FOI/PA Branch will continue to make reductions in the backlog at a rate that allows for significant amounts of resources to be directed towards the larger volume requests. The Branch will come very close to eliminating its backlog in FY 2001. During FY 2000, the FOI/PA Branch will also be placing substantial staff time into a complete revision of the Civil Rights Division's Privacy Act Potice Systems of Record for publication in the faderal Register.

The Litigation Support Group (LSG) continued Division-wide Support of cases during FY 1999. This support has been varied in both the type of service and case law, as LSG provides assistance for cases throughout the Division. LSG is currently providing support to many important initiatives such as the investigations of police wisconduct, processing of Freedom of Information Act requests, the investigation of cases under Title II and III of the Americans with Disabilities Act (ADA), the enforcement of ADA regulations, and the prosecution of fair housing and landing discrimination. LSG will continue to support many of the types of cases it worked on in FY 1999 throughout FY 2000 and FY 2001. In addition to these cases, LSG will also continue to support initiatives such as hate crimes and violence against health care practitioners.

PROGRAM CHANGES:

	Foa.	FIE	Amount (\$900)
Management and Administration	13	9	\$441
Administrative Management	13	9	441

A program increase of 13 positions, nine FTS workyears and \$441,000. Four of the positions and workyears (two GS-11s and two GS-12s) do not have any funding increases associated with them and are necessary to meet responsibilities associated with new personnel authority that was previously the responsibility of the Justice Management Division.

The remaining nine positions are required to address increased responsibilities in the following areas: personnel (two GS-12s), budget (one GS-13), financial operations (two GS-9a), facilities (one GS-9), procurement (one GS-8), systems support and development (one GS-14), as well as litigation support (one GS-11).

In FYm 2000 and 2001, the growth of the other Division components has put, and will continue to put a severe strain on the Administrative Management Section's (AMS) ability to keep pace with providing services for the increased staffing level. During these two years alone, the Division is expected to increase in excess of 124 positions, a 218 increase over its FY 1999 authorized position level.

The Division's authorized parsonnel level has increased from 425, in FY 1989, to 705, or 40 percent, with respective funding increasing from \$27,755,000 to \$95,101,000 or a 214% increase. During this same 12 year time frame, the authorized position level for the Management and Administration decision unit has decreased by 10 authorized positions, despite substantial new responsibilities associated with the Division's growth, and new responsibilities associated with legislation passed: Government Performance Results Act (GPRA), Debt Collection, Consolidated Financial Statements, Financial Management Federal Integrity Act (FMFIA), Government Management Reform Act, as well as other

responsibilities including delegated personnel authority and increased procurement authority from \$2,500 to \$25,000.

It has only been through the use of automation and streamlining of operations that AMS has been able to address these issues without programmatic increases. However, it has now reached a point in time when the economies of scale have been maximized. Program increases are essential to address the influx of responsibilities associated with the Division's expansion and increasing Administrativa requirements.

AMS plays an integral part in ensuring that each of the respective components have the respective resources, both personnel and non-personnel, they need to accomplish their mission. Absent this essential commensurate funding for the administrative functions will create a bottleneck for the other Division programs ability to acquire adequate facilities to staff the new hires, bring the personnel they need on-board, procuring the services required, etc.. The additional personnel will be required to modify the existing information systems to accommodate the influx of personnel, track the expenditures associated with the increase funding levels, and provide an increased level of administrative support for its litigation support function.

Multi-Activity Program Change:

	Perm.		Amount	
	20a.	PTE	(\$000)	
Litigation Support Initiative			\$1,275	
Civil Rights Prosecution			233	
Special Litigation			106	
Voting			334	
Employment Litigation	111		177	
Housing and Civil Enforcement			41	
Disability Rights			341	
Office of Special Counsel for				
Immigration Review	,		43	

A program increase of \$1,275,000 for litigation support requirements for PY 2001, in order to meet the Division's ever-increasing demand for a flexible vehicle to respond to urgant litigation needs. This level of resources is based on the actual level of litigation support resources CRT used The Litigation Support Services Group (LSSG) supports a diverse variety of services in a wide range of civil rights case law. These services cover areas from hate crimes prosecution, investigations on police misconduct, to the enforcement of the Americans with Disabilities Act (ADA), and the

prosecution of fair housing and mortgage lending discrimination. These areas are directly related to the Attorney General's Department-wide goal of reducing societal divisions and the DOJ Strategic Plan goal "Protect the Civil Rights of All Americans".

The LSSG provides a way for the Division to foster maximum performance and efficiency, while maintaining a flexible vehicle to respond to ever-changing litigation requirements. In addition, the LSSG provides methods by which the litigative components can etreamline their investigative and litigative efforts, take advantage of cost savings, and snhance their court presentations. Services provided consist of, but are not limited to: trial support, exhibit preparation, statistical analysis, customized databases, development and implementation of imaging systems, workflow reviews, and temporary contract paralegals. All of these items are essential to the success of the Division's investigative and litigative efforts.

The Division has been able to realize substential cost savings as a result of the implementation of litigation support contracts in almost every one of its cases. In addition, the implementation of new technologies and being able to hire individuals with specialized training has increased productivity. Without listing out each individual case and the resulting savings, the main concepts behind the cost savings and increased productivity provided by the Litigation Support Program, are as follows:

- Provides a flexible vehicle to respond to urgent litigation needs;
- Is able to address a broad and diverse array of requirements;
- Able to foster maximum performance and efficiency, as contract personnel have very
 specialized training and expertise, are hired only for the duration of the project, and
 are very easily released if their performance does not meet expectations;
- Provides expertise to various sections to streamline litigative efforts (e.g. -- the development of an imaging system for the potentially thousands of documents retrieved in the investigative stage in a case, thus making it extremely easy to search and locate respective documents, enhancement of the court presentations by the litigative team and realize substantial costs savings to transport and store the documents);
- Provides the expertise to develop customized databases in house, that previously had to be performed by very expensive expensis;

- Provided expertise to streamline the day-to-day operations of the Sections (e.g. the Employment Litigation Section's issuance of right to sue letters issued, and other workflow reviews).
- The annual caseload for the LSSG is as follows:

Fiscal Year	Caselond	Piecal Year	Canaload
1994	31	1998	101
1995	45	1999	121
1996	55	2000 (est.)	163
1997	73	2001 (est.)	196

For the first seven months of FY 1999, LSSG-has continued to provide support to over 85 cases. This represents an increase in excess of 20% in case workload over FY 1998. This trend is expected to continue into both FY 2000 and FY 2001. The Division has never been provided resources to support this essential litigation support effort and has been forced to absorb all costs associated with this program over a period of several years when we were also required to absorb significant base level reductions. Additional resources are necessary to enable LSSG to meet existing and increasing needs of our litigative components, the Civil Rights Division has not received litigation support related funding to-date, thus does not have funding in its "base" for these critical expenses. The Division's Litigation Support program has been funded by the activities requiring services, from their respective allocations, at the expense of having to reduce funding from within other visble activities from within their program.

The average cost per case or matter varies significantly, depending upon the level of support required. The average cost can varies from a few hundred dollars to hundreds of thousands of dollars. Dropping out the real expensive cases, the average cost (based on actual cases and costs for FY 1998 and 1999) works out to be approximately \$35,200 per case.

In order to maintain flexibility in responding to changing litigation priorities, resources will be managed and reflected in the Management and Administration Decision Unit total resource availability.

APPELLATE SECTION

Data Source: All data was obtained from records maintained by the Appellate Section of the Civil Rights Division.

- A. Definitions of Terms or Explanations for Indicators: Clarify potentially confusing terms. Assume a low level of familiarity with your programs.
- #1. Cases: Supreme Court and courts of appeals cases in which the Division is a party or amicus.

Metters: Work performed on legal issues principally handled by other Divisions and federal agencies, internal research assistance, and cases we consider but decide not to participate in.

#2. Substantive papers: Non-procedural filings or applications to courts requesting an order or ruling affecting either the "Intermediate Outcome" or "End Outcome" of the case. The subcategories of briefs and substantive papers (e.g. amicus brief, appellee brief, brief as respondent) do not include filings as a party (petitioner/appellant) in the Supreme Court or courts of appeals. The following definitions are provided for only the briefs indicated on the Performance Measurement Table (PMT).

Amicus Brief: A document filed with the court's permission by one who is not a party to the lawsuit and provides information and argument to aid a court in reaching a proper decision or to urge a particular result. Amicus curiae means "friend of the court."

Appellee Brief: A document filed in an appellate court by the prevaiting party in the court below arguing against setting saids the judgment. This document is filed in response to brief filed by the Appellant.

Respondent Brief: An answer or response to a application to review a prior judgment. In this instance, review of a decision by an administrative law judge.

Inservenor Brief: A document filed in federal court by one who is not a party to the suit, but claims an interest in the subject matter and comes into the case in order to protect his interest or right.

- #3. Recommendations to the Solicitor General: Memoranda to the Solicitor pretenting the unit's legal judgment for or against an appeal, petitions for certiforari, or amous participation.
- 77. HUD Enforcement Actions: Cases involving judicial enforcement of final administrative orders.
- #8. Legal Counsel and Research Assistance: Formal comments (written and oral) to other Divisions, agencies, or the Solicitor General concerning cases handled by others, as well as other legal and policy memoranda not connected with a particular Division case, prepared at the respect of the Assistant Attorney General.
- #9. & #10. Non-Merita Decisions: Determinations of courts which do not effect the substance of a litigant's claim. These decisions are made on procedural motions and can be intermediate or final in result. See #13 & #14 for "End Outcome" non-merits decisions in which the Supreme Court decision courts of appeals denied stay.

- #9a. Certiorari: A means of obtaining review by the Supreme Court.
- #90. & 10b. Stay: A postponement by the court of the right of the winning party to enforce its judgment.
- #10n. Rehearing: Reconsideration of the Issues by the same court.
- B. FY 99 Program Performance Report. Categories reflect increases due to increased litigation in Disability Rights, Voting and Housing areas. This flacal year, we continue to defend a number of criminal prosecutions, and to successfully defend the constitutionality of the Prosdom of Access to Clinke Entrances Act (FACE). Section responsibility has increased as we intervene in cases to defend Congress's abrogation of status Eleventh Amendment inumanity under various civil rights statutes (Americans with Disabilities Act (ADA), Age Discrimination in Employment Act (ADEA), Take IX of the Education Amendments of 1972 and Talle VI of the Civil Rights Act of 1964 and the Equal Pay Act). See Output/Activity #3d and #4. Although activity in the Housing area (involving straight forward attacks on idegal housing practices based on race, color, religion, sex, or national origin) has increased, judicial enforcement of final administrative orders has declined. See Output/Activity #7, and see "C" below.
- C. Factors Affecting Selection of FY 2000 and 2001 Targets. Estimates or projections for future years in all categories are based on considerations of staffing, production in previous years, and the level of activity in the trial sections. It should be noted, however, that the work of this Program is closely correlated to the Output/Activity of litigative programs, and that its Supreme Court activity is dependent upon the types of cases which the Court decides to bear.

CRIMINAL SECTION

A. Definitions of terms or Emplemetions for Indicators:

""Date Source - The Criminal Section's sace management system to the data Source for the statistical information.

Item p. This figure reflects the total of Items 1(a) and 1(b).

time #(4a) The 'Mumber of Complaints Received from Citizens' includes letters received from citizens as well as telephone complaints received and controlled mail referred from the Mnits House, Congress and the Attorney General for review and response.

iges #100--The 'Mumber of Complaints Acceived from the FRI' includes lass serious, non-brutality complaints colled '037s' that are reviewed by paraloguis. The remaining complaints are FRI investigations ('Matters Investigated' Item 1) which are assigned to attorneys.

Item 62--This figure includes the total of all forms of complaints reviewed by the Program including PAI investigations, citizen complaints, citizen calls and controlled correspondence such as letters from Congress and the White House as well as letters editessed to the Attorney General. This total any exceed the number of complaints received because it includes complaints received during prior fiscal years.

Item 64.—This figure ratiacts all FBT investigations reviewed and closed in a given fiscal year including incidents prosecuted and closed upon conclusion of litigation. This number may accord FBT investigations pressived because it includes investigations received during prior fiscal years which remained active for various research, e.g., awaiting results of local/state prosecution to ensure federal interests vandacted, awaiting results of edulational investigative developments, menting federal prosecution and appeals process.

tion 85. This figure reflects the number of grand jury investigations initiated during a given flacal year.

from P6. This performance indicator was modified to include the actual number of defendants thereof by type of case.

Item \$6 tel - Official misconduct cases reflect cases involving law enforcement officials including, for example, police officers, deputy sheriffs, exate and federal prison correctional officers. IMS border patrol agents or detention enforcement officers, magistrates or judges.

Idl. - Other' are cases involving offeness not related to racial/religious violence which grew out of sacial/religious violence cases; involuntary convitude cases are also included on this line.

tion 85(8) -- 'Church Arson/Desecration' are cases (avolving tires or damage to churches. These types of cases were categorized as racist/religious violence (hate crimes) in the pert. The treation of the Mational Church Arson fask Proces (MACTS) and the separation of the statute used to enforce damage to religious property necessiteted the need to list this type of case separately.

tion 97. This figure indicates the number of training and outranch programs in which lawyers from the Criminal Section participated. e.g., training law enforcement agancies in an affort to prevent abuse. FM and IMM programs targeting federal, state and local law enforcement supervisors for training on civil rights issues, conferences designed to communicate here violence activities to public interest organizations.

Item #7a--This figure indicates the number of Criminal Section attorney hours agent conducting presentations at tritining and outreach programs.

Fire SE. This figure reflects the number of investigations pending raview and disposition at the end of a given fiscal year. This number includes cases charged but pending littleation.

Item 89. This fleute refers to matters assiting presentation to 9 federal grand tury or outcome of an on-moine grand tury investigation.

Itum 816. 'Buccass Mate' - (Convictions + Piess) (Convictions + Piess + Acquittels + Dississis).

Numbers reflect all activity occurring or projected within a given fiscal year. For example, some of the actual convictions, place and
acquittels occurring in a given fiscal year, which are used to calculate 'Success Sate', resulted from cases filed in prior fiscal years.

Items 811, 927 6 819--*Productivity/Efficiency: Indicators were based on the number of line attorneys authorized for that fiscal year (or 'n') Por example, the actual number of 'Investigatione Closed per Attorney' for PY 97 (98) was derived by dividing the number of 'Mesters (losed' 1354) by the number of 166 attorney (24)

1. FTSS Program Partermance Separt

It see 81 and 80-FF 1999 figures reflect the actual number of complaints received and matters investigated during FF99. Although we have no control over the number of complaints received and matters investigated during a specific time period, the number of FRI investigations and clisten complaints received during FF 1998 were approximately 10% higher than the number received during FF 1898 were approximately 10% higher than the number received during FF 1898 were approximately 10% higher than the number received during FF 1998 were approximately 10% higher than the number received during FF 29.

(tee 91-A large number of citysen complaints were resolved by the paralegal staff during FFSS resulting in a higher than usual tetal. Cititen complaints continue to be handled at a high rate even though the FFSS total number of complaints reviewed did not exceed FFSS disputes.

Itsm 64.-Manamed initiative to review and reselve investigations promptly resulted in an increase in the number of matters closed dating FYSD. We have been unable to matters along pass with increased responsibilities, e.g., participating in training and outteeth programs, expanded church areas jurisdiction, worker exploitation task force.

Exemple 5--PY 99 Output Recivity reflects actual activities and accomplishments during PY99. We have been unable to initiate the same number of great jury investigations as during PY99 but have devoted extra attention to resolving some of the origing grand jury investigations cresulting in an increase in the number of cases filed during PY99.

tive 89. The number of investigations approved for grand jury but not yet charged or closed has increased as attorneys continue to be required to handle many assignments simultaneously.

C. Factors Afforting Scientism of FT 60 and 01 Plans.

Whiteen additional attorney positions were authorized for FYOD to handle incremend incidence of official misconduct and hate crises activity and to coordinate on initiative to combet increment incidence of worker exploitation across the nation as well as to participate in training and outreach programs relating to crisinal civil rights enforcement and to continue to close non-marktorious investigations while at the same time developing cases for prosecution. FYOI projections are based on benefit of the full incremes of 13 attorneys subscribed during FYOID as well as two of the five attorneys requested for FYOID.

tran dia - While it is difficult to estimate how hany complaints will be received from citizens, we have based our FY00 and FY81 estimates on the actual number of citizen complaints received during FY99.

Items Bib and Bi-Am increase in the number of investigations received from TBT was seen when comparing the number received during PY64 to receive typenrs. Although it is difficult to estimate how many investigations will be received from TBT back year, FT69 and FT93 Plans reflect a 105 increase based on prior trends.

Items 82 and 84.-FY 48 Current Plan is based on activity during PYSP with full benefit of 3 of the 13 attorneys authorized during PYSP.

FYO: plan is based on 13 attorneys Authorized during PYSPOW with allowance for requested enhancement of five additional storreys for PYSP.

Although an increase of 13 attorneys was authorized during PYSPOW, we anticipate the benefit of 2 of the 13 attorneys during PYSPO. We do not enticipate the full storneys during PYSPOW, we settle path the benefit of 2 of the 13 attorneys during PYSPOW. We do not enticipate the full strength benefit until at least PYSPOW. FYRO targets derived by mubtracting P4 from 82 from PY PF Actuals to obtain complaints reviewed by non-attorney staff and adding projected number of matters closed during PY 89 for total complaints reviewed. The same formula was followed for PYSPOW.

Items 05 and 84.-Current Plans for P900 and P901 are based on projection of performance during P999 with allowance for anhancements. Nowwest, due to the complex nature of most cases and the uncertainty of the amount of attorney time appear to bring the cases to trial, it is difficult to predict sactify how many cases will be filed and how many defendance will be charged sact year.

Item 87--87 on and 81 targets based on performance during FF 19 with minimal increase allowed for enhancements.
Although 13 stronmeys were authorised during FF0 and 5 additional attorneys were requested for FF01, it is unlikely those attorneys will be able to assist with training and outerech efforts immediatel. Generally, sealor attorneys who have procedured federal criminal rights capes are willised for these types of assignments. As newer attorneys gain experience in this area, the group of attorneys emiliated to conduct training and outered seminars will expend and outered training and outered seminars will expend and outered;

items 86-Pergets for PY 00 and 01 are derived by adding pending matters (88) from prior year to matters investigated (\$3) during current year and subtracting number of matters closed (84) suring that year.

Item 89--Pargets for Fr 00 and 01 are based on projections of actual performance during FF 99. However, it is difficult to predict the complexity of each grand jury investigation and therefore difficult to determine an investigative timetable.

Except where noted above, all PY us and it targets are based on PY 19 Indicators with requested enhancements.

special Litteration section

- A. Definitions of Turns or Switzentions for Indicators:
- # 6. Date in this chart regarding institutional facilities includes date from seven pre-CRIPA cases still constored by the Section.
 Date for threat categories are rough estimates.
- 10 view of the workload demands of sizedy open CRIPA investigations and litigation in progress, it is expected that completion of investigations will take several fized years. Pewer PACE investigations are expected because of the chilling effect the statute has had on windlettee activity markness.
- e) CRIPA entorcement allows a period of time for woluntary compliance by subject institutions. This period includes time for the promised improvement to be sateblished, te-evaluation burs by consultants, review of the institution's resedial plans, and avaluation of the institution's progress in minimating identified constitutions and electronics. Additional findings latters may be issued when unsatisfactory progress is made. Pormal settlement agreement negotiations may common and say take one year or longer to conclude. Each investigation is considered individually and specific responses are made to institutions as required by the facts prepanted. New ChiPA investigations are taking longer to complete due to the allocation of staff resources to older investigations, PLRA requirements and negotiation of settlement agreement.

The development of cases pursuant to police misconduct authority is delayed by the enormous values of materials reviewed in the investigation stage. These setters are taking longer than appeared to reach the complaint stage.

- 86 Due to workload demands of CRIPA, police misconduct and FACE, the Section has filed favor suits than it would if there ware more staff resources.
- 68 Compliance reviews enalyze, inter alia, incidents of here and neglect, medical and psychietric care, use of restraint, stoffing ratios, adequacy of professional staffing, staff training and community placement.
- 49 We are interpreting a technical estimated unit to mean an instance where technical information on either police practices or institutional policy or practice has been provided.
- 919 Speechee end conferences are utilized as outreach to explain to interested groups and parties about Department policies and to solicit views.
- 8:1 Asierrals are usually made to the FBI for the purpose of providing criminal history checks or locating present addresses of witnesses in FACE and police misconduct matters.
- #12 Initial findings letters are sent at the and of the investigation period of CRIPA anforcement, as attatorily required. Delays in completing invantigations are coused by the time required to schedule consultants for tours, conduct of on site evaluations, review of voluminous institutional documents. Interviews of staff and other interested parties, etc. Often the unsillingment of state or local effectals to cooperate results in numerous negotiation sessions to recolve questions on the appropriateness of the method of the investigation.
- 61) Contempt motions are filed when defendants fail to comply with ordered relief. Typically, they occur after a protracted period of non-compliance.

710

- BIS Crows are not closed until minimum constitutional standards of care have been achieved. Lengthy negotiations over the terms of settlements and the degree to which facilities achieve compliance with those terms often takes several years, depending on the efforts made by the defendants. When compliance is achieved, consent decrees are travelanted, or orders of dismissal are sought.
- 3. Pr 2064 Program Performence Report.
- Sic Police misconduct complaints are increasing due to increased public visibility and Section outreach. The Section is compiling a log of sligged violations by law anforcement officials to datermine where investigation is warranted. When approved additional staff comes on board, we enticipate that all performance posts will be set in FT 2000.
- 84 The number of facilities monitored pursuant to settlement agreements is increasing. Substantial staff resources are devoted to compliance review and progress evaluation. Due to the volume of information to be analyzed, we are facing increasing difficulties in maintaining an effective and thorough compliance review progress. Additional approved staff will assist in emeting performance scale set forth in QPD/ table.
- C. Factors Affecting Selection of PT 2001 and 2001 Plans.
- 69 The number of facilities monitored pursuant to PLRA requirements will decrease in FY 2001 due to ampacted dismissale of some prison and jell cases.

- 13 Yoting Section election coverage records.
- 17-18 Voting Section staff calculations based on STAPS and personnel records.
- 1. Definitions of forms or Employetions for Indicators:
- 6 Antition that date Section 5 precidenance subminations are those that have eade subminations since 1986 and include states and counties covered under Section 4 of the Voting Rights Act (VRD), counties subject to praclearmore as a result of Section 1(s), and cities, school districts, and other such entities within these, will of which are counted individually in this seasure, since each submits changes independently of the others.
- 1 Quanties subject to mimority language requirements are counties and other political subdivisions subject to Section 6(f)(4) or Section 363(c) of the VEA.
- Counties eligible for federal cheaves election coverage are counties and other political mubdivisions cartified under Section 6 of the VRA or under Section 1(a) court pader.
- 76° Section 1 of the VRA prohibits practices that have a discriminatory result; we use it especially to challenge methods of election and redistricting plans that deny minorities a fair competuative to what dendidates of their choice.
- To Section 5 of the VMA requires the federal review of voting changes unde by specially covered states and counties, dities, school districts, and other political entities to assure that they are not discriminately. We bring Section 1 unforcement actions to enjoin the unforcement of changes to which an objection has been interposed by the Attermey General or which have not been received for the required review.
- 7c* A jurisdiction can seek a Section I declaratory judgment that an objected-to voting change is not discriminatory. These cases usually are complex, and their defense is a handiscretionary responsibility of the Program.
- 76 Sections 4(f)(4) and 10) of the VNA require Certain jurgedictions to use specified minority languages in their electors.
- 70 The Hational Voter Registration Act (BVRA) or "motor voter" less requires the states to conduct voter registration by unil, to parent voters us registration they obtain drivers' litumess, and to conduct voter registration at specified povernment approaches, and requires voter purpos to be conducted under very postproited conditions.
- 15° The Program ments to defend radistricting plans that provide execution fair apportunities to elect candidates of their choice and in which rece has been properly used, where such plans have been unfattly characterized on radial garryammars prohibited under Shgs v. Samp. Johnson v. Blilag, and Judy v. Bris.
- The Uniformed and Overseas Citizens Absence Voting Act (BOCAVA) provides a roundy for the late mailing of absentae heliote for federal elections to members of the Armed Forces and other citizens who are abroad.

the second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second secon

- Th Bellout actions are actions filed under Section 4(a) or Section 201(d) of the VRA to remove a jurisdiction from coverage under special provisions of the VRA.
- 4 An active case is a case with activity or significant compliance monitoring at some point during the year.
- Trials include evidentiary and summary judgment and other dispositive hearings and major substantive status conferences.
- ism.b. Each Section 5 submission contains one or more voting changes.
- 11c* Redistricting plans for states, counties, cities, and school districts are smong the complex and time-consuming voting changes that are subject to Section 5 review.
- 12 Under Section 8 of the VML federal observers selected by the Office of Personnel Management monitor elections where the Program has determined that observers are necessary to document and deter discrimination. In determining the number of elections monitored by federal observers, we count each time an election conducted by a county, city, or school district is monitored by federal observers.
- 13 included under Output/Activity are important but nondispositive cours decisions, for example, with respect to motions for example and summary judgment.
- Mote information from submitting enthaction with respect to Section 5 submissions is requested when necessary to enable us to determine whether or not the submitted changes are discriminatory. Section 9 objections are frequently preceded by *more information* requests.
- 15 Cees are classified complex by supervising attermays based on the legal and factual issues involved. Cases are classified as successfully litigated by supervising attermays when a consent decree is filed with the complaint, whim a court grants the railed that we have sought, er when we otherwise accomplish the objectives of the litigation. Cases may be included even if appeals or compliance monitoring are not completed. Multi-phase cases may be included more than once latther in the same year or in different vestal where multions inclusion is required to accountly reflect the work and accountains.
- 16a,b Section 5 objections almost always lead to compliance by the submitting jurisdiction. If the jurisdiction refuses to comply, an enforcement lawarit can be brought, in which it is not recessary to prove that the voting practice in quarties is discriminatory. Jurisdictions that rempond to an objection by requesting reconsideration or filing a declaratory judgment action normally comply with the objection until it is withdrawn or the declaratory judgment is granted.
- 16c.d By precisering a proposed voting change submitted under Section 5, the Attorney General makes the change legally enforceable under (adera) law. The numbers are passed on \$11s. 3 and \$15s. 6 b.
- 17 Attorney-reviewers are Program attorneys easigned to supervise Section 5 analysts in the review of voting changes and to prepare legal analyses of submissions.
- 16 Section 5 analysts also agains in litigation support and in election coverage preparation.
- S. PT St Progress terformance Resect
- 4 The number of entities subject to Section S has increased as new special districts are created, municipalities are incorporated, and entities that have not in the past mode subsidesions submit voting changes for review.
- 5 The need for greater than expected federal observer activity (see \$12) necessitated additional Section 6 certifications and Section 3 court orders.
- 24 The number of cases filed was lower than expected because we decided that our participation in some private lauguita would be in appropriate and because the filing of some authorized lauguits was postponed to provide opportunity for a negotiated assistance.

- The number of active case was lower than expected because the number of cases filed was lower (see \$7).
- 18 Because more jurisdictions than anticipated agreed to compant decrees, and because of the nature of the litigation and the chases of the litigation that predominated during the year, fever trials have been necessary than was apticlasted.
- (iii.b) The reduced numbers appear to be the result of a greater than expected decline in voting precinct changes as boundaries are frozen in anticipation of the 2000 census and a greater than expected reduction in changes in voter registration procedures as a result of the supposed registration concritentials devoted by the MTML.
- 13 More elections were monitored by federal observers and more federal observers were used than expected primarily because of increased coverage in Mississippi for the quadrantist primary election, which was the result in part of our first ever monitoring of Chortan language savistance in 5 counties rowered under Section 203 of the Act and lass programs then expected by the state in providing a discrimination fram election day experience for block voters.
- 14 The master of requests for more information reflects the nature of the subsidiations received during the fiscal year.
- [7] it The reduced number of submissions and changes (see \$)[a,b] resulted in a less burdensome workload for attorney reviewers and analysis.

C. Patters Affection Schooling of FT 40 and 61 Plans.

- 4 The number of entities subject to Section 5 will continue to increase as new special districts are created, numberipalities are incorporated, and entities that have not in the past made submissions submit voting changes for review.
- ?* The number of new rases will be higher in 2000 than in 1990 because of conclusion of a number of cases during 1999 and investigations during 1999 that are likely to lead to new littlesion in 2000. Another increase in reseal in expected in 2001 as sederateleting plane based on the 2000 census eye adapted and become the subject of littlesion.
- 9 Sased on the higher than expected use of federal observers in FY 1999 (see 812), we have increased our predictions for FY 2000 and 2001 for the use of Indepth observers and thus for election investigations.
- We expect, based on past experience in comparable years, to have more Section 5 submissions and themes in 2000 them in 1999 and more in 2001 than in 2000. The most drauntic increase (in 2001) will be in the number of redistrictions that are submitted. In the last few years before decennial census results are released, redistricting activity falls to very low levels. Once 2000 census data are released, however, jurgadictions will rush to prepare, adopt, and obtain preclaurance for new plane, so that elections held in 2001 and 2002 can be held un scheduls under new plane that setiefy the one person, one were requirement of the Equal Protection Clause of the 16th manufact. While we expect to receive only about 50 registractions in F7 2000, following the 1970 census we received \$11 in FY 1991, 1, 274 in FY 1992, and \$14 in FY 1999, a total of 2009 for the three wass. We expect even larger numbers after the 3005 rengus. Not only will all the jurisdictions that redistricted following the 1990 consus need to redistrict again, but also at least 500 jurisdictions that changed during the 1998s from electing their governing bodies at large to electing from districts will need to redistrict. In addition, other jurisdictions with minels member districts that did not redistrict fullowing the 1980 census (including those that had changed from at-large to simple member district election during the mid or late 1950s; will adopt new plane. Thus we expect to receive about 1,000 redistricting plans in the first three fiscs) years after cuneus regults are released (FT 2001, FY 2002, and FT 2003). Finally, because of wrester averages and improved technology, we aspect jurisdictions to react wore suithly than they have in past decades to the relesse of census data and thus to receive a higher proportion of the 3,000 plans we anticipate during earlier part of the three wear period.
- 13 We cannot actually set targets but can only project based on past experience the assume of federal observer election coverage; we react to the actions (or inactions) of others. While the amount of federal observer election coverage will vary depending on the amount of referral observers goes down. It is inactionally lift the number of federal observers goes down. The resources that we must devote to election coverage at only peritally reflected by election coverage statistics, as we are required to investigate and sort out problems for which relief under the VRA is required from those that are political in nature or for which a runnely under state law is appropriate (see S), election coverage, investigations). Based on the higher thus empected use of federal observers in FT 1959, we have increased our predictions for FY 1000 and 2001.

- is The number of requests for more information raflects the nature of the submissions received during the fiscal year.
- 47 Sections a substantially higher proportion of the voting changes to be reviewed in 2001 are redistricting plane (see \$110), which are for more time-consuming than seat other kinds of changes, the number of substantians reviewed per attorney-reviewer will decline from 2000 to 2001, this will require that atturneys who otherwise would be available to work on lirigation will, instead, be used for Section 5 review supervision.
- 18 Because a substantially higher proportion of the voting changes to be reviewed in 2001 are redistricting plans (see Size), which are far more time-consuming than most other kinds of changes, the number of changes reviewed per ES engiget will decline from 2004 to 2001.
- * Designates on Indicator covering a requested first program thange.

A Definitions of Terms or Euglangitions for Indicators.

#1 Pursuant to section 70% of Title VII of the Child Rights Act of 1964, as amended, the Equal Employment Opportunity Commission (EEOC) returns to the Opportunity Commission (EEOC) returns to the Opportunity of Auditor charges of discrimination against state and local governments that It believes are worthy of Righton.

#2 Title VII requires that charging parties receive notices of right-to-ever before commencing private Right-to-. The Employment Litigation Section is

Altegorable for issuing such billions when the charge involves a state or local government employer

#5 Pollom or practice Investigations refer to the Alternay General's self-standing authority self-toth in section 707 of Title VIII. Included are both proliminary investigations and investigations formula purcharized by the Assistant Alternay General.

#1 and #4 Not #8 EEOC referrals are investigated. Therefore, the numbers of EEOC referrals received and investigated will not be identical.

\$16 Represents decrees agreed to by parties sharing the facel year, even though the decree may not have yet ordered by the court.

SAZ1. Represents monetary rolled contained in decreas agreed to during facel year.

472 Represents estimated number of victims who will receive job refer under decrees agreed to during the Receiveer.

8 FY 95 Program Parlormance Report

- # 1 The EEOC charge referrate are now handled by the field effices. The field offices no longer are required to forward their referrate to EEOC headquarters
- for review prior to sending them to Justice. This has caused a significant increase in the number of referrals required in this office. The increase in referrals may also
- he attributable in part to an increase in the number of charges filed with the EEOC
- FS.4 17, 12 The number of effirmative 706 and 707 investigations and suits commenced is directly correlated to the number of defensive cases, and their
- complexity. that are fined and must be defended. At the present time, the Section is devoting more than 20% of its resources to defended. At the present time, the Section is devoting more than 20% of its resources to defended.
- our defenses responsibilities have affected our ability to indigity may Title VII Bigglion.
- #7 The Program has no central ever the number of determine cause that are filed and which I had a standary obligation is defend.
- F11 and F16 FY1988 Actuals includes 25 suits that were approved. against jurisdictions , pursuant to section 708 of Title VII of the Civil Rights Act of 1864
- for fedure to the EEO-4 forms
- C. Factore Affecting Selection of FY 99 and FY 2000 Targets. Provide information on the selection of larget levels of performance, where recessary.

The Program's shifty to investigate and Rigate violations of Title VII will be effected by the number and complexity of the defending cases it handles.

The Advance decision has resulted in numerous challenges to federal afformative action programs.

Culturing these and other defensive cases requires the program to given its resources from Title VII enforcement. Together, the purples of Title VII

Investigations commissioned and completed, as well as the number of Title VII suits initiated, will be investedy combined to the amount of columnics litigation.
That is extent

Coordination and Review

A. Definition of Torres or Embarations for Indicators

"DOI complaints" filems 1, 19, 19, 17-10: refers to the Section's administrative complaint investigation activities with respect to altegations of descrimination in violation of Title VI, Title DX, and enland assume working DOI's federally assisted programs. DOI, in addrson to its government-wide coordination role under E. O. 12350, also is one of the 28 Federal lumiling agencies.

Therefore, in responsible for enforcing the VI and reliable distances in its valueted programs.

E.O. 12356 (applicable to architists, discribed in issue 2-9, 11-13, and 15-161 in the Exercisive Order directing the Automay Centeral to provide for the construction different pulsars that cover federally reviews a region or provided for the construction and profit or the Cover federally assumed programs. The Sections out a coordination and reviews, agriculal estatations, and policy development programs or implement the Executive Order. The sections covered by E.O. 1230 are "Title VI of the Civil Rights Acts of 1564, which prohibits discrimination on the basis of act; culou, and national origin or independent programs, "I file 13" (I file 13" of the Civil file of acts, color, profit on 1971, which prohibit discrimination on the basis of sex in federally assisted programs, and the provisions of virtual programs classes that prohibits descrimination on she basis of sex; or or religion in federally assisted programs.

"Chapteghauge" (house II and 13) refers to the Section's function with respect to the coordination, assessment, and releval of complaints it receives (in its role as a central federal government revenues assets) to the appropriate federal funding agency for possible investigation.

8. FY 1999 Freezam Performance Report.

Home 1, 6, 11 and 15 reflect the positive response and continuing demand for the Section's explanded Title VI training program, which the Section is attempting to most with existing staff resources. Ompate the increase in the number of training sealors offered, however, the Section could not long pace with the demand for training, so the goal inlating to the percentage of training requests fulfilled (seem 11) was not met. The Section wall assess in 2000 and 2001 a number of options, including the use of video training and train-the-trainers courses to expend the particularly of 45 training.

Name 4,3,7 and 12 reflect the substantial increase in technical assistance connected in large part with the development by the Section of a proposed Title IX joint regulation, in which 24 agent as are participating.

C. Factors Affecting Selection of FY 2000 and 2001 Plans.

Name 9, 4-7, 8 and 12 reflect the knowness in 2001, as a result of an increase of two attorneys and one program specialist, of a 7ste XX training program for federal agencies patterned upon the Specius is highly successful Tide VX training program, following the issuance of final joint Title XX training and program for federal agencies.

House, 9, 14, 17 and 18 when the addition in 2000 of two attempts to focus on the investigation of complex golden misconduct and migrad administrative investigations, which disspits uses quasid increases in new complexes of 35% in 2000 and 25% in 2001, with result in miscipated increases in closures from 155 in 1999, to 213 to 2000, and 250 in 2001.

MODELLES AND CIVIL CHRONOCHEMY SECTION

4. Indinitions of Terms or Emplanations for Indicators:

Item \$1: In the workload category, the number of election and prompt judicial action referrals has been slightly greater than the cases filed. This is because even though such referrals are required to be filed by the Fair Mousing Act, there are occasions when they are not filed (e.g. when the case settles before filing in court, when newly discovered evidence indicates the referral should be returned to MMD for recomplishestion.)

tiend(4)(5) refers to "Other Pattern or Practice" cases. This category includes the pattern or practice cases we file that do not fell into one of the priority categories listed before them, i.e. testing, leading, industate or foring. Prior to FY 1998, we did not include in this category election cases in which a pattern or practice count was added. In FY 1998, we started counting such cases as not election cases and "other" pattern or practice cases, as this better reflects our workload.

tion 86: Investigations are defined as anters opened and requiring investigative activity by an attorney or paralogal.

P. PT 33 Program Porformages Assort.

The number of mondiscretionary case filings have continued at lower levels in FT 1999 because of continued low numbers of referrals from MAD. MAD had announced at the bestmains of FT 1999 that it expected to double the number of enforcement actions it brings under the Pair Monaine act, including referrals to the Congressed of Justice, but this has not yet materialized. Thus, we have lowered all our projections for MMD referrals and condiscretionary cases (which are virtually all based on MMD referrals) for 2000 and beyond. The Section expended resources dealing with 1 motestial prompt judicial actions from NED during the fiscal year. Nowever, we did not file In court any requests for prompt judicial actions because, in two of these cases, and as is our practice if possible, we were able to resolve the feates without resort to court action and, in the other case, we savised MOD that the facts presented to us did not warrant proceeding with such a request. The Housing and Civil Enforcement Section filed 19 pattern or practice cases in FT 1989, which is below the projected target of 25 much cases. A number of factors explain this result. First, resources have been dedicated to hindling a number of large capas that have been contested rather than immediately sattled. These cases include a suit alleging race discrimination segimet the City of Milford CT, swith silesing race or national sciuin discrimination segimet landlords in Las Young, Richmond, Idaho, New Orleans, and Spokens, suits eligating asxual harassment of tements seeingt landlords in Ohio, Texas, and Mississippi. Some of these cames eventually settled, but often only with the use of ADR, after extended litimation and are-triel proporation Staff assigned to those cases had little available time to devalor new cases. Second, a number of additional cases were authorized during FY 95 but were not filed during that time because us gave the defendants the apportunity despays in pre-suit memoriations, which extended the filing data meet the end of the fincal year. He also have a number of investigations in which we are alleging that multi-family housing was built without the accommissibility features required by the Poir Rouging Act. The conclusion of those investigations has been deleved in large part because we have had to rely on outside experts to review bluestints. We enticipate that with the hiring of un in-house erchitect that these inventigations can be concluded, and the cases filed or resolved, more quickly The Section's PY 2000 performance plan seffects an increase in discretionary case filings based on PY 2000 enhancements to Section staff recently approved. The Section has begun the process of advertising the new positions and making hiring decisions. Movever, it is anticipated that only a pertian of the approved Section enhancement will be in place at the end of the fiscal year.

C. Portory Affecting Salestian of PT 2005 and 2001 Plane.

We have significantly invered our projections for the mulber of non-discretionary eases that we expect to file in light of the actual referrals received from NUD. Prior projections have been significantly higher based on announced NUU plans to bring wave emforcement actions, but actual experiences indicates NUD has fallen for short of their weeks.

With respect to discretionary case filings, we expect an increase in pattern or practice cases to be filed in PY 2001 as a yearly of PY 2000 enhancements of this program. These enhancements were designed to provide additional resources for these important comes.

EDUCATIONAL OPPORTUNITIES LITIGATION SECTION

PY 2001 Plan Column - The asterisk (*) in this column indicates those activities projected to be affected by the FY 2001 program enhancements.

**The data provided in this table is taken from various sources to include the Section's case management system, weekly reports, congressional submissions and attorneys.

A. Definitions of forms or Explanations for Indicators: (Clarify paraeticily confusing terms. Assume a low loval of fundinarity with your process.)

67b. LSU refers to the Litigation Support Unit of the Educational Opportunities Litigation Section. In the latter part of 1996, bur support staff was reorganized to, among other things, provide the maximum litigation support to the attorneys in the Section.

\$4. Matter refers to any correspondence given a "good" DJ number; however, the school district involved is not operating under a desegragation order to which the United States is a party. Also, the issue(s) involved has the potential to generate a new case.

#85. OCR refers to the Office for Civil Rights of the U.S. Department of Education who has primary responsibility for enforcing Title VI of the Civil Rights Act of 1964, which prohibits public school districts that receive federal funds from discriminating on the basis of racs or mational origin in a program or activity. 10F refers to Latter of Finding re: investigation initiated of DOJ case.

89. Includes those school districts that are being activaly wonitored.

Bio. This is a high priority program initiative for the Section. The purpose of this project is to systematically review the unamaigned school districts on the Section's active case docket in an effort to seek compliance of those school districts *hat are in violation of their extant desegregation orders; and to administratively close those districts that are in compliance, thereby, reducing our massive case docket.

Bis. The bulk of our workload -- in addition to the higher education cames -- involves enforcement activities seeking compliance with extent desegregation orders and/or supplemental relief under those plans. Case activity necessary to obtain compliance with the existing court order and/or supplemental relief is prosecuted in the seeks manner as "new" litigation; and, thus, will be counted as such.

825b. A echool district is "administratively closed" when the review of the report to the court over a five year period has reflected no significant problems in the district.

#26. A "favorable decision" is a decision by the court which affirms the position advocated by the United States.

S. 27 35 Program Postornames Report

The Section's heavy non-discretionary workload continues to have a significant impact on efforts to aggressively pursue new program initiativas, i.e., with the performance goal of generating new cases. For . Ty 95, the Section has had to commit its staff resources to handling our enforcement activities, such as investigating citizen complaints in our extant school desegragation cases; evaluating and responding to various motions, including petitions to modify the desegragation plans imposed by the extant court orders; conducting extensive discovery for trisls and evidentiary bearings; managing the preparation of demonstrative exhibits; perticipating in trial and hearing procedures and many status conferences; and conducting extensive records and facilities' inspections, including reviewing and gathering hundreds of documents and touring schools. In particular, the courts have placed demands on our discretionary efforts by requiring that we review and determine whether a number of districts have achieved unitary status and, if not, put the districts on track to achieve that end. Currently, we are conducting labor intensive reviewe of 16 such districts in addition to ten trads schools and junior colleges, while continuing to litigate and monitor the 12 initial achool districts. Data for FY 99 reflect the actual workload/output activities to date.

C. Pactors affecting selection of FT OS and FT S1 Partnersmon Target(s)

Should the referenced factors -- including the expected increase in directives from the courts to determine the unitary status of school districts on our active case docket, as well as direct requests from school districts seeking such status -- persist for PY 2000 and PY 2001, it is conceivable that the Section will continue to have difficulty in meeting its performance projections for \$10 and \$16, even with the proposed enhancements in FY 2000. Accordingly, we have lowered our projections for the referenced workload/out put activities for FY 2000 and FY 2001.

A. F) 10 Program Performance Report.

- 1 and 1 🗂 important Pending Tricketor during FY 1999 retails from fewer cases concluded shap garmaning in FY 1999. This requiry is easing cases to us active plants for fewer cases.
- I see 3 "Investigations Pending" theret that , finally, in FY 2000 the number of investigations agending has started to hill, that to increased resources devoted to investigations.

t ms. 4. "Investigations Statest" reflects on named count of Investigations added to investigator countout, and actually worked upon a thus reflecting a more conservative and resiliatic view of cauchosts. (See decreasion of Line 3, below)

- I ser i I "Altrigation Concluded" shows an increase due to several auxiliariose.
- tion 13 h. "Referreds to Departments/DO/ Units." The increase in the 1999 actual represents a reversal of record trends and reflects a rise in correspondence to Disability Rights than needs referring and to increasing number of calest referred to U.S. Adaptiny's Offices
- I set 13d "Controstional Responsion" has decreased parameter due to a decrease in inlegations trapeleres from Congruenteens mad? We do not materialise this will quantize

Ling 14 "Certification Responses" reflects unit engageness that have been redirected from cartification to interrupting operation to respond to demand for those corrient from other agencies - particularly those refused to the cangoing rate-making activities

C. Farsara Afferting Selection of FY 2004 and 2001 Torques.

Lines (& 2. The FY 2001 plan increase reflects the might new onthrosment initiative program enhancement in FY 2001, a more superiorsed smill, and increased participation in hitigation, expectably intigation challenging the countriested by ADA. The increase of 10 cases from FY 2000 to FY 2001 represents the full programs initiative staff not being profitable for the paster year, and there may large between beginning investigations and starting fring hitigation.

Line 3. Over good in 2000 and 2001 is that Line 3 should decrease to a number approximately reposit to the total conclosus, of evolutionic investigations, More investigations should be concluded than started a result of increased recovery being terral to the large investory of as intitle composited.

1 has 4 "New-requirious Started" is thurphy reduced in SY 2000 and 2001 because it represents a redistic estimate of the number of cases the investigators can actually open (in addition to their require case legal), rather than "complainto received", as in past years

I be 7 "Certification Matters Pending". The projected increase in FY 2000 and FY 2001 results from a forestable response to a Program institutive in FY 2000 that will encourage states to take advantage of casis certification. The small reduction from Inhibit Plan to Current Plan in FY 2000 is bessed on current workload breads.

I see 3 "Interrogency Coordination Matters and Regulations Panding". This function is normally reactive, but in FY 1999 agencies were required to review their regulations under a Projectional regulatory reform installates, resulting in a Section obligation to review those revisions. It includes some examining from the Section's obligation to publish regulations implementing tribes if out IIII of the ATIA. However, the engineity of the terms orificated are the result of the Societies's obligation to provide legal advice and policy galatiness to other agencies, which we noticipate will secretae during FY 2000 and 2001 as agencies respond to the National Performance Review directives to revise their regulations.

Line 9 "Technical Assistance (TA) Requests" FY 2001 is projected at 15% higher than FY 2000, due to maticipated increases in demand. The FY 2000 projection was reduced in reflect actual experience in FY 1909.

1 ins 15 -1 itigation Cancledoff in FY 2001 increases because of stell efficiencies in FY 2000 and programs enhancements in FY 2001

Lim 12 "Investigations Concluded" — PY 2000 and 2001 targets reflect a equivale astimate of the member of comm the investigators can recovariety statchasts in a finant year, plus older cause closed for subminimental reasonable. Compliants withdrawn or cannot be located). The increase from PY 2000 to 2001 regulators additional investigator resources, but recognizes they will be smallable for only part of that year.

I ber 14 "Corolforation Reproduces." This reflects the product initiated in Line 7, at States submit their helicities codes for wide for wide communicate with the ADA.

4 me 19 "Interragency Coordination and Regulatory Responses" This function is largely mastries. It implements the Section's obtigation to provide legal softrion as medial by other species. Targets for FV 1000 and 2001 are based in the U.S. Architectural and Transportation Berriess Complement Board plants in which the ADA Accessibility Quightless. Fifty, some the ADA Accessibility of the Complement of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Accessibility of the ADA Access

OFFICE OF SPECIAL COUNSEL

A. Definitions of Terms or Explanations for indicators:

Items #1,2 & 1. A "Charge" is the written accusation that a person who thinks he/she has been discriminated against files with OSC. This includes charges that OSC initiates.

- † "Charges Investigated" or "Complete Charges" is a subset of the total number of charges received, and includes charges which proceed to the complaint and/or settlement stage. "Charges Investigated" are charges for which OSC has jurisdiction or reasonable cause to believe that a person or untily has suggested or is engaged or is engaging in an immigration related unfair employment practice. This includes ACWIA-related charges as described in #4.
- An "Independent Investigation" is an investigation conducted on the Special Counsel's own initiative where there is reasonable cause to believe that a person or entity has engaged or is engaging in an immigration related unfair employment practice.
- 3 "Charges Reviewed" are those charges that have been submitted and OSC has are inadequate to constitute a charge as defined in 28 CFR § 44.101(a), after preliminary review/or consultation with the charging party. This item was renamed from "non-actionable charges" because in some instances OSC concludes that the charging party has stated a cause of action, but under a different statute. Those charges are referred by OSC to the appropriate enforcement agency. Some non-actionable charges may be made complete at a later date, and thus, become actionable in the next fiscal year. This includes ACWIA-related charges as described in #4.
- 4. This is the total number of charges in restigated, initiated and reviewed. In FY 00, OSC expects to be delegated the Attorney General's authority under the American Competitiveness and Workforce Improvement Act (ACWIA) to begin investigating charges (expected to peak in FY 01) of U.S. workers whom H-1B dependent employers failed to select for 30bs filled by H-1B visa holders.
- 7 & B. "Worker" and "Employer Hottlines". OSC operates two nationwide toll-free telephone hot lines specifically designed to assist workers and employers with questions about immigration related unlair employment practices. The worker hottline can be quickly linked with AT&T's translator service to enable our professional staff to assist callers in a language other than English. The employer hottline, which was created in 1994, is fully automated (however, the caller can easily reach an OSC attorney) and includes a "fax back" feature which allows the caller to receive the latest information on INS Form 1-9 requirements, stc.
- 9 "Grants" OSC conducts an entitial grant program for governmental and nonprofit organizations throughout the country for the development and implementation of public education programs designed to address the unique needs of employers and communities with high alien and minority language populations
- 10c Under ACWIA (see definition #4), OSC will initiate binding arbitration proceedings in FY 01 through the Federal Mediation Conciliation Service (FMCS) where OSC finds reasonable cause to believe a failure-to-select violation has occurred.
- 12 "Grants Awarded" Each year OSC publishes a notice of availability of funds in the Federal Register announcing our annual grants program. In response to this announcement OSC receives more than 60 applications from agencies (described in #9) throughout the country. OSC conducts an extensive grant review process envolving much of OSC's professional and support staff in order to determine which agencies will be awarded grants.
- 13c. "National Contractor". OSC also conducts a national outreach campaign through a private contractor which includes television and radio announcements nationwide, as well as production and distribution of materials in many languages. "Outreach provided by the national contractor" is the number of times each paid advertisement has been aired. It should be noted that these advertisements are then often repeated several times free of charge as "public service announcements."

20 "Talephone Interventions" refers to each time an OSC attorney or other professional prevents discrimination from occurring/continuing by providing counsel/information to an employee or employer via our "1-800" telephone lines without a charge having to be filed. The information can either prevent discrimination against a specific individual or can stop an employer's origing it algorithms become employer with information about proper employment eligibility verification practices. As a result of examining data and calculation formulas from the past three years, OSC in FY 99 implemented more stringent definitions and guidelines for activities which fall under the category "Telephone Interventions" in order to obtain a more accurate assessment of time and resources invested into this process.

B. FY 99 Program Performance Report

The number of actual charges received in FY 99 does not yet approach earlier levels of years prior to FY 98. We believe this is caused by the following three factors: 1) increased public attention on illegal immigration has discouraged members of legal immigrant communities from conting forward to exert their rights under the law: 2) the success of our public outreach program to employers and employers and employers them of INA's antidiscrimination provisions; and 3) the success of our early intervention program which addresses and prevents discrimination prior to, and in lieu of, a formal charge being filled. In addition, the illegal Immigration Reform and Immigrant Responsibility Act of 1996 (RRIRA) included an "intent" amendment which now requires charging parties who allege document abuse to prove that the employer intended to discriminate against them based on their national origin and/or citizenship status. The imposition of this higher burden of proof upon charging parties who allege document abuse (our most frequent charge) may also deter immigrants from asserting their rights by filing charges with OSC. As ALJs interpret the intent standard, OSC is including it as a topic in its public advication efforts.

As a result of its public service announcement campaign, increased number of educational outreach grant recipients, and its increased partnership efforts with LEOC and stee and local civil rights agencies—particularly in states with new or large immigrant populations, OSC anticipates an increase in the number of actual charges received and feed of prevention work in FY 00.

The number of charges is not always an exact measure of the performance of the office. First, it does not reflect the prevention work done by the office through increased partnerships with busin-as associations, counseling of employers and educational efforts to sponsored with other governmental agencies. Second, the office has fostered early intervention and settlement of matters before they reach the complaints or linguistion stage. Already in FY 00, although they are not separately counted, job reinstatements by early intervention exceed reinstatements through this parion.

C. Factors Affecting Selection of FY 2000 and 2001 Plans.

The data above are derived from OSC's case management system and extrapolations from the case management system. The targets for 2000 and 2001 reflect OSC's expectations regarding demographics, public sentiments regarding immigration, and the unique characteristics of our target populations based on OSC's prior bistory and experience.

The record number of H-1B visus granted to the high-tech, medical and other industries will inevitably result in OSC receiving an increase in charges of immigration-related job discrimination either under existing OSC law or the new H-1B law. In addition to the anticipated peak in these types of cases in FYD1, OSC will be receiving a substantial increase of cases through referrals from new or reinvigorated partnerships with federal agencies (National Labor Relations Board, Equal Employment Opportunity Commission) and with state and local civil rights enforcement agencies in areas of traditionally-high immigrant concentrations (California, Plinois, Florida, Arizona). OSC has stretched its dollars by creating these partnerships to increase reach, accessibility and obsestion rationwise. The effectiveness of these partnerships is contineed upon OSC is ability to be responsive to the cases generated from this increased outresch.

Note: ISC appeals are comducted by the Aspellan Program

INTERPOL - U.S. NATIONAL CENTRAL BUREAU

H.;

743

United States National Central Bureau International Criminal Police Organization Summary Statement and Performance Plan Fiscal Year 2001

The United States National Central Bureau (USNCB) is requesting a total of 62 permanent positions, 64 work years, and \$7,686,000 in its Salaries and Expenses Appropriation. This request does not represent an increase over the 2001 base request of \$7,686,000. It is an increase of \$326,000 over the 2000 appropriations anticipated.

USNCB's 2001 anticipated appropriations of 64 positions, 62 work years, and \$7,686,000 supports continued implementation of the Administration's comprehensive criminal prosecution effort that began in 1996. A detailed explanation of the USNCB's FY 2001 base program is described on pages 7-8.

2001 Component Performance Plan and 1999 Accountability Report

A. Component Mission and Goals, and Relationship to DOJ Strategic Plan

The USNCB's FY 2001 budget request/performance plan directly supports continued implementation of the Administration's comprehensive international criminal investigative effort that began in 1996. In addition, it incorporates information on performance measurement that should lead to better accountability regarding actual results achieved.

The mission and goals of the United States National Central Bureau are to:

Communicate and exchange criminal investigative information between domestic and foreign law enforcement agencies through the International Criminal Police Organization (INTERPOL);

Ensure that the common interests of U.S. law enforcement are represented in the international enforcement community;

Provide leadership and expertise for global law enforcement symposia, conferences and meetings.

8. Highlights of 1999 Mission Critical Results

INTERPOL Channels Facilitate Capture of Transnational Fugitives:

On July 8'", Jamaican officials escorted a U.S. drug fugitive from prison and turned him over to the U.S. Marshals Service. The subject is alleged to have been one of three leaders of a major drug ring responsible for as many as 1,400 deaths throughout the U.S. He escaped to Jamaica and was placed on the FBI's Most Wanted list. Jamaican authorities arrested him in 1994, remanded him to custody, and rendered him extraditable in 1995. His return to the U.S. followed the rejection of his extradition appeal.

In 1997 INTERPOL Moscow requested the USNCB's assistance in locating a murder fugitive. Information regarding his possible location was provided. The USNCB forwarded the information to its domestic colleagues. U.S. Immigration officials subsequently arrested him in Massachusetts. The USNCB coordinated the exchange of deportation evidence. A lengthy hearing resulted in the issuance of a deportation order. He was returned to Moscow on June 25°, accompanied by U.S. Immigration officials.

Colombian authorities facilitated the capture of a multi-million dollar con artist by denying him entry, immediately placing him on a flight to the U.S., and alerting U.S. law enforcement. The subject had eluded capture through international travel. Federal authorities immediately arrested him upon his U.S. arrival. The expulsion and capture punctuate renewed levels of cooperation between Colombia and the U.S.

INTERPOL Channels Facilitate Multi-Million Dollar Recovery - In April USNCB sought the assistance of its INTERPOL colleagues in recovering \$4.5 million which had been transferred to banks in Germany and the Czech Republic prior to the U.S. bank's discovery that the funds were from fraudulent deposits. INTERPOL Prague was instrumental in the recovery of \$2.2 million and the arrest of 4 persons. INTERPOL Wiesbaden was instrumental in the recovery of another \$2.2 million and the arrest of 3 persons. The USNCB remains grateful for the prompt and professional assistance provided.

INTERPOL Red Notice Subject Deemed Extraditable - An African priest faces extradition to the International Criminal Tribunal for Rwanda, which has indicted him for alleged war crimes.

In a precedent-setting ruling, a U.S. federal court ruled he extraditable even though the U.S. government has no treaty authorizing the extradition. While acknowledging the historical practice of extraditions conducted pursuant to treaties, the court held that the Constitution does not require one. The priest is the former head of the Seventh Day Adventist in Rwanda, and has been indicted for alleged participation in the genocide of ethnic Tutsis during the country's 1994 civil war.

C. FY 2001 Performance Goals and Indicators

The USNCB is proposing an FY 2001 Performance Plan that is attainable within the requested level of resources and with demonstrable results, as shown below. These FY 2001 goal will establish a baseline upon which future performance may be tracked and reported upon, as required by the Government Performance and Results Act (GPRA).

Summary Level Performance Indicators

 International criminal investigative cases and assistance in support of U.S. federal, state, and local law enforcement.

USNCB Long Range Goal: Increase the international criminal investigative effectiveness of U.S. Federal, State, and local law enforcement through the use of the INTERPOL investigative services.

D. Data Validation and Verification Issues

Data Collection and Storage: Data on investigative cases statistics are collected automatically; however, reports on the statistics must be manual developed from printouts. The USNCB is planning to develop report generators.

Data Validation and Varification: Data on investigative statistics are reviewed and reconciled. Investigative cases are reviewed for quality by division managers and the compliance officer.

Data Limitation: Under the development, the automated compilation of data is incomplete. Further development is required for the collection of data, development of management reports to identify internal status and changes in the external users, such as what users are requesting investigative service and what types of criminal activity is emerging.

Program Performance Information

USNCB

USNCE	Perm. Pos.	FTE	Amount
2000 Appropriation Enacted	64 .	62	\$7,360
2001 Base	64	62	\$7,686
2001 Estimate	62	62	\$7,686
Increase/Decrease	0	٥	so

BASE PROGRAM DESCRIPTION: The USNCB has a base program of 64 positions, 62 FTE, and \$7,686,000. It is located in Washington, DC. It consists of four major initiatives.

Initiative: Interpol diffusions and Notices U.S. originated INTERPOL Diffusions and Notices represent less than 20% of Diffusions and Notices processed. Federal law enforcement agencies generated most of these cases. Now, the USNCB is working to raise the awareness among the U.S. law enforcement community, of its unique capabilities. The result of this effort will be a substantial increase of the number of diffusions and notices requested by U.S. State and local law enforcement agencies.

Initiative: International Investigative Assistance The demand for International Investigative Assistance services will increase due to the development of user-friendly investigative tools and by raising the awareness of the U.S. law enforcement community. In addition, the complexity and scope of international crime, which is inherently multidistrict and multinational, is burgeoning and will add to USNCB's workload.

Initiative: Strategic Partnership The Strategic Partnerships enhancement will enable the

USNCB to augment its continuing efforts to educate state and local law enforcement agencies about the important and unique services available to them. Domestic law enforcement generates 30% of USNCB's caseload. Studies (surveys) show that this is due, at least in part, to a lack of understanding of the USNCB specifically and INTERPOL overall. The Strategic Partnership strategy will seek to rectify this situation by providing funding for outreach programs that will result in enhanced state and local law enforcement participation.

Initiative: Information Technology The Information Technology program will provide the means to leverage the USNCB scarce detailee and analyst resources by incorporating automation tools. Computer-aided techniques will be used to process and store incoming electronic messages; macros will be used to ease the outgoing response process; and an advanced search capability will be extended to retrieve case specific data and related cases or investigative data. Internet technology in the form of Intranet tools will exchange internal communications and provide access to information. This enhancement will also provide funding to upgrade and implement automation.

Performance Measurement Tables Presented by Decision Unit

USACE Program

DOJ Core Tunction: INVESTIGATION AND PROSECUTION OF CREDITAL OFFICERS

Actual Performance Goal: Increase the international original investigative effectiveness of U.S. federal, state, and local law enforcement through the use of the INTERPOL investigative services.

A. Definitions of Terms or Explanations for Indicators and data sources:

ICTS - INTRADOL Case Tracking Bystem keeps track of all cases and their status.

INTERPOL Diffusions - Similar to U S. all points bulletin but provides worldwide neverage.

INTERPOL Notices Formal international original notices assaing the affect of fugitives and recovery of stelem property and lumdered somice.

Issues Affecting FY 1999 Program Performance. The UNIQU shoothed during expenses in FY 1999.

C. Factors Affecting Selection of PY2000 and FY2001 Plans. Progress is dependent on improvements in the UNICE's information technology and the increased swareness of state and local law anforcement in the use of the INTERECT international investigative services.

Basi: Program Description: For the past three years, the Legal Activities Office Automation (LAOA) find has been focused on the funding requirements for the Justice
Consolidated Office Network (JCON) Program. JCON is an enterprise information technology infristructure program which fulfills the Department's requirement for reliable,
robust, standard office automation platform upon which DCJ httgating and management Components operate their mission critical applications. The JCON Program is an
important strategic investment for DCJ and a sound business practice because office automation systems are mission critical tools for DCJ attempts and changings to function
effectively. Simply stated, JCON provides DCJ's legal and management offices the tools to perform their jobs.

JCON Program participants include the Antitrust, Civil, Civil Rights, Criminal, Environment and Natural Resources, and Tax Divisions, the United States Attorneys; the Executive Office for Immigration Review, the United States Trustees, the Community Relations Service, the Justice Management Division; and the Department's senior management offices (e.g. Attorney General, Deputy Attorney General, Solicitor Constru, etc.)

In 1998, DOJ conducted a review of the JCON Program. Based on this review, a new standard architecture was developed for the JCON Program. The JCON standard architecture is comprised of Intel-based servers and workstation runsuing. Microsoft NT operating system and electronic mail services complianced by several third-party system, management and security enhancement tools. The network protocol is TCP/IP running over a Fast Ethernet backbone. In addition, JCON Components will continue to use the Corel Office Suite for basic office applications (word processing, spreadsheet, etc.) and the Netscape Internet browser. Through the JCON infrastructure, Components will fulfill their proceifs office automation requirements with other third party chemisenver applications and legacy systems.

One of the Attorney General's highest priorities is to complete the roll-out of the JCON standard architecture as soon as possible. The urgest need to quinkly roll out JCON is based on the fact that several JCON Components including the United States Attorneys are currently operating old office automation systems that are unreliable, leak proper security controls, and can not meet mission critical requirements for data processing and electronic communication. In other words, the current information infrastructure is collapsing. The United States Attorneys and our specialized disgatung Components have been hindered by antiquated, and unsupportable office automation.

systems. The U.S. Attorneys can not communicate electronically in a timely, reliable menner within themselves, nor with other Government agracian that assist in our investigations, propositions and other litigation. Attorneys have severely restricted access to the Internet and other electronic media which impedes their ability to research issues and obtain access to the full range of investigation related information. Most of our current equipment and software can neither support, nor be made compliant with, basic computer security standards. The products also are no longer supported by the vandors. The unreliability of our current systems is a constant furnet to the enterpy's ability to file briefs and other court papers in a timely, complete manner. In sum, continued use of these systems the Department's ability to sufcree the national laws and the uniterests of the United States, the core mission of this Department. The Department of Justice attorneys must have current office automation technology functioning on a secure, reliable network infrastructure. We will fulfull this requirement through ECON.

By 2001, it will be three years from the time JCON was initially implemented in several of the Components. To maintain the reliability and security of the installed system, ICON must be recapitalized on a scheduled, incremental basis so that equipment and software does not become antiquated. However, before recapitalization can begin the initial deployment of JCON must be completed in all participating components.

Department of Austine Legal Activities Office Automation (LAOA) Salaries and Expenses Summery Statement and Performance Plan

The ECON Program is requesting a total of \$15,877,000 of base level appropriated resources to support the operation of the Program in 2001. No Program increases are being requested over the anticopoled appropriation.

- A. Justice Conselleted Office Network (JCON) Mission and Gooks and Raintimakin to DOJ Strategic Plans
- -Mission. To provide russion critical legal and mana terrent tools through a highly reliable, functionally complete, and cost effective office extomation system.
- -Organizational Goals:
 - Provide DOJ ettorneys and managers the ability to, -collect, organize, analyze, and dessensate or formation, -maintain data and information integrity, and -communicate satily and reliably
 - -Enture DOJ Component compliance with the Attorney General's policy of standardizing the legal and law enforcement tools used throughout the Department:
 - -Obtain implementation, operation and maintenance cost efficiencies
- -Supports DOJ Mission: The JCON will allow DOJ lingsting and management Components to continue to fulfill their evolving mission requirements and comply with emerging Federal management mandates consistent with the direction of the Attorney General. By providing the basic information technology (IT) infrastructure for these Components, the JCON Program plays an integral role in the fulfillment of two of the core functions identified in the Department's Sensingle Plan: legal representation, information of infamiliary, and defense of U.S. interests; and effective management.

The JCON Components ore the DOJ organizations who represent the United States in litigation and other legal matters, and who perform the Department's basic management

ICON Program participants include the Antitrust, Civil, Civil Rights, Criminal, Environment and Natural Resources, and Text Divisions; the United States Attorneys, the Executive Office for Immigration Review, the United States Trustees; the Community Relations Service; the Justice Management Division; and the Department's senjor management offices (e.g. Attorney Omera), Deputy Attorney General, Solicitor General, etc.).

scurvites DOJ attorneys and managers must have the ability to collect, organize, analyze, and disseminate information analys and reliably. Because the legal practice today requires these tasks be performed electronically, office automation tools are mission critical tools for DOJ attorneys. JCON is the facility upon which all litigating and management Component computing resources will reside or through which they will be accessed. Likewise, through the Department's office automation and management eystems (e.g., Financial Management Information System, the AO's, Correspondence Management System, and the Personal Computer Time & Attendance Remote Entry System - PC-TARE), DOJ is able to complete the myriad of administrative and management responsibilities mandated by law, Expoultive Order and policy.

ECON is a sound IT investment that will allow the ECON Components to maximize the use of information technology, a DOJ strategic goal within the management core activity. The ECON architecture is robust enough to host most Component administrative and management applications and flexible enough to provide access to all required external systems. The architecture integrates proven enterprise-level, commercial off-the-shelf (COTS) products. It also promotes interoperability, a strategic IRM goal, by conforming to all networking standards identified in the DOJ information Technology Architecture. The system design and management strategy were developed to fulfill user functionality and system security requirements while holding down the total cost of ownership. In addition, the ECON Program is designed to facilitate an incremental implementation of new musion critical technology.

B. Highlights of 1999 Mission Critical Results

During FY 1999, the ICON system was successfully deployed in the Environment and Natural Resources Division and the United States Trustees. Additionally, ICON deployments were instituted in the United States Attorneys and the Civil and Civil Rights Divisions. The Community Relations Service deployment was completed in October 1999 and the Tex Division deployment was completed in December 1999.

C. Summary Level Performance Indicator: The ICON Program has established to efollowing performance goal which was used to establish a baseline upon which the progress of the ICON project is monitored. The ICON Performance Goal relates to the percentage of ICON II Desistops deployed:

	FY 1998	FY 1999	FY 2000	FY 2001
% ICON Desktops Deployed	7%	14%	34%	87%

- D. New 2001 Initiatives: No new annatives are planned for 2001. The primary goal of the JCON Program in 2001 is to continue deploying JCON in the participating JCON Components.
- L. Data Collection/Validation Process: The JCON Program Menagement Office (PMO) manages the Legal Activities Office Automation (LAOA) account which is tued by perturposing JCON components to obtain hardware, software and services in support of their ICON II system deployments. As part of this process, Components must obtain PMO approval price o expending any of their JCON LAOA resources. This internal JCON budget process provides the PMO with across to accurate, timely and reliable data, which will be used to track the performance of the above resistanced indicator. In addition, the JCON PMO has overnight responsibility for the JCON deployments in each of the Components. As a result, the PMO closely mounted by progress of each JCON deployment.

BASE PROCESS DESCRIPTION: The major function of the Office of Dispute Resolution (CDM) is to develop policy for and promote the use of elternative dispute resolution within the Department of Justice and in other Federal monthless.

The Diffue of Disputs Resolution promotes the use of mediation and other forms of disputs resolution for use in appropriate tivil cases from wing the United States (00) adhibuts attorneys and dispute resolution strategies) identifies potential, private providers of dispute resolution, and serves as the Department's ADD representative in dealing with other spencies, Congress and the public. ODR wiso represents the Attorney Embers! In monitoring and supervising the activities of the Interspency Working Croup on ADR, a Presidentiality established Task force that promotes the use of dispute resolution throughout the Executive Branch of the Pencil poversents.

The position of Senior Counsel for Asternative Dispute Resolution was established within the Office of Associate Attorney General (ASG) in July 1995. Funding for the Senior Counsel, his staff and the operating appears of his office has come from a combination of sources including direct funding from the Department's General Administration decount and a variety of moniferablished entaints with readquarters furnighting Components, the U.S. Attorneys, and others. Pursuant to a reprogramming in June 1998, the Senior Counsel was moved from the Office of the Associate Attorney General and exhabitable as a separate and distinct Office of Original Resolution reporting to the ASG. At the direction of Congress, the Office's operational function is now derived from the General Legal Activities decorporations.

Funding for the services of dispute resolution neutrals in fiscal years 1996-1998 was derived from a \$1 million reprogramming from the fees and Expenses of Mitheleses appropriation. Upon exhaustion of that funding in Fr 1998, the participating components advanced additional funding for this purpose in enticipation of the approval of another funding transfer for this purpose. House objection to such a request in #1 1998 left these activities without a formal funding source. Another request to make funding services for contract meutrals in FY 1999 was also recorded that funding be transferred from this Fees and Expenses of Enterest in the FF 2000 budget request; a recording activity within the Fees and Expenses of Mitheleses appropriation will make funding for neutrals in the secund contract means and recorded and the funding for means of Mitheleses appropriation will make funding for neutrals in the secund contract means and recorded and funding for means of Mitheleses appropriation will make funding for neutrals in the abount of \$1 in 19 2000; and the 2001 request increases than emports of Mitheleses.

In November 1998, the Attorney General extablished within the DDR The position of Director of Community Dispute Resolution. The function of this position is to provide poticy guidance and coordinate enforces currently underway within the Department of Justice concerning such initiatives as peer mediation, community modition of community mediation centers. The Attorney General has expressed particular interest if another providing that the Department's efforts focus on, among other things, enauting that school teachers are trained both in how to use dispute resolution techniques to resolve groups among their students, and in how to teach their students to incorprise dispute resolution their own lives.

PACEARM CHANGES. The En 2001 program increase of \$350,000 will ensure full funding for this function as an independent Office reporting to the ASO, while requiring its operational funding entirely from within the resources of the GLA appropriation. This will permit 00% to function administratively in the manner approved in the reprogramming wherein Congress directed that the Office's shaff the funded from within amounts svaluable in the General Legal Activities account.

EXECUTIVE SUMMARY

The Antimist Division desperately needs additional resources to keep up with a crushing workload that is without historical precedent. Fundamental changes are occurring in the marketp acc, including increasing economic concentration across industries, globalization of markets, and rapidly advancing technology. These factors, added to the existing number and complexity of our investigations, have significantly increased the Division's overall workload, and additional staffing is needed to keep up. The continuing merger wave is substantially overwhelming current Division resources, and, in all our enforcement programs, the Division is litigating more, larger, and more complex cases than ever before. Indicators of this increased workload include.

- The Antitrust Division currently has the largest number of theils pending in recent history. With six thals
 pending or organing in CY 2000, our fungation activity is at least triple historical levels. This trend is
 expected to continue, as the rules of global composition are being redefined by the application of US
 antitrust law to foreign corporations whose illegal behavior affects. American consumers and businesses, and
 through the increasing internationalization of commerce.
- The Division is facing increasingly large and powerful curporations and conglomerates in its investigations.
 These companies, including American Airlines, Visa Masterl and, Companiare Viasoft, and
 Continental Northwest are able to hire substantial legal counsel, both in terms of statute and number. The
 Division is now consistently dealing with leading national and internal and law firms.
- Companies involved in discussions with the Division are apparently increasingly emboldened by their size
 and stature and less willing unitally to freely negotiate with the Division. Accordingly, discussions are
 frequently taking longer and requiring more proof in order to reach amicable resolution.
- The business transactions encountered by the Division are more and more complex and intertwined, frequently involving outlingle companies and counsel. As such, more investigatory effort is required, and descussions in egotiations are increasingly complex.

- Hased upon the increasing size and complexity of matters, larger amounts of data must be reviewed, commonly involving millions of documents and huge quantities of pricing and other relevant information in addition, the number of electronic data formats being encountered is exploding, with attendant requirements for creative hardware and software solutions for handling incoming information.
- The communities and issues involved are raising more difficult issues, frequently in areas that have just undergone deregulation and in which little or no precedent exists (e.g., energy, utilities), or in which behavior is difficult to prove (e.g., monopolization), or in which markets and the competitive issues they take are changing rapidly (e.g., information technology, electronic commerce, telecommunications)
- The matters encountered increasingly have international aspects and are more complex due to the need for discussions and coordination with foreign governments and emerging international organizations (e.g., the European Union (FU)), foreign document discovery, electronic data sharing (involving myriad hardware and software), foreign travel, and translation of documents from many languages.
- The work of the Artitrust Division in the international arena is increasingly important to the establishment of global trade policy and is helping set the worldwide standards for fair and open business behavior to the hencial of American consumers and businesses.

The increasingly large, complex, and international nature of the matters encountered by the Division is demonstrated by many of the Division's current and recent matters, including

Civil Non-Merger Enforcement

- Visa MasterCard in the financial services industry: trial scheduled, June 2000.
- American Arcines in the airline industry -trial pending, October 2000.

- Microsoft in the high-technology industry--trial oagoing
- Dentsply International in the health care industry-trial pending in Fall 2000
- Federation of Physicians & Dentists in the health care industry-trial scheduled, April 2000

Criminal Enforcement

- F. Hoffmann-La Roche--largest criminal fine in Department history (\$500 million) and BASF (\$225 million fine) (vitamins)—additional matters successfully pursued and pending
- UCAR International—\$110 million fine (graphite electrodes used in making steel)—additional matters successfully pursued and pending
- Archer Daniels Midland Company (ADM) --\$100 million fine (food & feed additives)--additional matters successfully pursued and pending

Merger Enforcement

- Northwest/Continental in the airline industry trial scheduled, October 2000
- Compuware/Viasoft in the high-technology industry-interger abandoned in February 2000; trial had been scheduled for April 2000
- WorldCom MCI/Sprint in the telecommunications industry-largest merger in history (\$130 hillion)
- Lockheed Martin/Northrop Grumman in the defense industry-largest merger challenged in U.S. history (\$11.6 hillion)

- Primestat/News Corporation et al. in the telecommunications industry—the proposed acquisition
 would have allowed five of the largest cable companies in the U.S., which control Primestar, to
 protect their monopolies and keep out new competitors.
- Lockhoed Martin/Comsai--satellite network-based solutions and terrestrial networking technologies that are altering the landscape of data transfer and setting the standards for future communications solutions.
- USA Waste Services/Waste Management in the waste management industry-largest merger the Investor filed star to block by size of transaction (\$13.5 hillion)
- Pacific Enterprise/Enova-first challenge of a merger between a gas and electric undits
- WorldCon MCI and NationsBank/Barnett-largest divestiture of a company in US history (\$1.75 billion) and second largest divestiture (\$4.1 billion in deposits associated with 124 branch banks).
- SBC/Ameritech, Bell Atlantic/GTE, AT&T/British Telecom--telecommunications mergers that are redrfining the industry
- Cargill-Confinental Grain and biotechnology issues—agricultural issues of critical importance to American furners and their future competitiveness

At the beginning of FY 2000, the Division had 166 preliminary inquiries, 89 Grand Junes, 104 criminal investigations, and 30 civil cases in progress. This represents a phenomenal 20 percent licrosse in our caseload since the start of FY 1998. This pace is continuing and can not be sustained without additional resources. As a basis of comparison, Antitrust Division staffing in FY 2000 is less than in FY 1980, when the transactions under the Division's jurisdiction were fewer in number, smaller in size, and less complex than today.

Between premerger filing fees collected and criminal fines obtained from FY 1997 to date, the Antitrust Division brought in five times its appropriations during the same period—investing in Antitrust Division resources will continue this trend and allow for additional returns to the Government and the American public

The current globalization and consolidation of businesses, both U.S. -owned and foreign, is expected to continue. The resulting markets will be the ones our children inherit. The importance of preserving economic competition in the global marketplace cannot be overstated. The threat to consumers is very real, as anticompetitive behavior leads directly to higher prices and reduced efficiency and innovation. The Division must have additional resources to meet these challenges and ensure the responsible enforcement of U.S. antitrust laws.

For FY 2001, the Antitrust Division requests a budget totaling 1,001 positions, 990 workyears, and \$134,224,000. The increase of \$20,955,000 over the FY 2001 base level will fund an additional 177 positions, including 61 attorneys and 116 paralegals, which are urgently needed as the Division strives to meet the challenges presented by the fundamental structural changes occurring in the global marketplace.

JUSTIFICATION FOR FY 2001 PROGRAM INCREASE

The requested funds are entical to achieving the Division's three Goals

- Enforcement. Decreasing anticompetitive behavior affecting U.S. businesses and consumers
- Environment Increasing the procompetitiveness of the national and international environment
- Education Increasing the breadth and depth of awareness of antitrust law

These Goals support the Division's Mission and Vision and relate directly to departmental goals

The funding increase for the Antitrust Division is urgently needed to assure that the antitrust laws are adequately enforced. With multi-billion dollar mergers being announced every week, the Division's resources are being stretched beyond the limit and corporate America knows it. There is a danger that corporate counsel will try to exploit this weakness. In October 1999, The Washington Post noted "The nation's trustbusters are simply overwhelmed, and Corporate America is catching on." According to the Post, "mergers and acquisitions specialists are whispering that this could be an ideal moment to ship through deals that might otherwise ring alarm bells."

As Chart I indicates, the Division's budgetary resources have not kept pace with our rising workload. The level of funding has been essentially constant over the last five fiscal years, with only marginal increases, while merger fillings and major litigation has skyrocketed.

Segal, David "Merger Deals Swamp Antitrust Regulators," The Witchington Post, October 23, 1999, p. E01

Segal, David. "Justice Department Scales a Mountain of Work," The Wathington Post, May 29, 1998. p. F1

To remedy this problem, the Antitrust Division's FY 2001 budget request includes a program increase of 177 positions, 127 workyears, and \$20,955,000. These resources would be allocated as follows:

- Preservation of a Competitive Market Structure Program, 113 positions, 113 workyears, and \$13,292,000.
- Lemmination & Prevention of Private Cartel Behavior Program 64 positions, 64 workyears, and \$7,663,000 (specifically for investigating and prosecuting international criminal cartel activity)

The 177 new hire, will consist of 61 atterneys and 116 paralegals. This hiring plan is in accordance with the Division is effect to increase our efficiency by utilizing lower level paralegal staff where feasible, thus allowing our atterneys mere time to interpret and apply complex arbitrust law. Given that paralegals are hired for two-year terms, the Division's increased use of this staffing pool enables us to more flexibly manage our resources.

With whikload increasing at a rapid rate, the Division has not estimated a lapse for recruiting efforts. It is anticipated that preliminary recruiting efforts will be made prior to the start of the fiscal year with new hires coming on board early in FY 2001.

The Antifrust Division's work toward our three Goals-Enforcement, Environment and Education-which impact ITS competitiveness in its broadest sense, is tremendously dependent upon outside factors. Several external trends have been identified which add to the level and complexity of the Division's workload and ultimately increase costs. These trends include

- Increasing economic concentration across industries
- Globalization of markets
- Rapidly advancing technology

A look at the unique challenges presented to the Division by each of these trends follows

INCREASING ECONOMIC CONCENTRATION ACROSS INDUSTRIES

New Records Set in FY 1999

The value of mergers occurring globally continued to climb to record levels, reaching \$3.4 trillion in CY 1999, a 36 percent increase over CY 1998 (itself a record year). According to Thomson Financial Securities Data, this is seven times the value of worldwide mergers in 1990. The steady annual climb in merger value reflects increasing consolidation among industry leaders. The merger frenzy "in this country translated into more than one merger an hour for the past 24 months - [and] established sweeping, global powerhouses in critical industries such as oil, telecommunications, media, and defense "5".

In the U.S., although the number of merger deals in CY 1999 declined slightly from CY 1998, their value surpassed \$1.79 trillion, topping the \$1.6 trillion in announced U.S. transactions occurring in CY 1998, which itself represented a 78 percent increase over CY 1997. Between FY 1995 and FY 1999, the value of U.S. therger transactions increased 357 percent. (See Chart 2, "Value of U.S. Merger Activity.") According to Thomson Financial Securities Data, "more than half of the value of all announced domestic mergers in the past decade have occurred in the last twenty-four months."

Although merger activity abated somewhat in the beginning of FY 1999 which resulted in a slight decline in premerger filings from FY 1998 levels, it has since regained momentum. In FY 1998, premerger filings increased over 30 percent, setting a new record and following increases of 20 percent in FY 1997, and 10 percent in FY 1996. Since FY 1990, chargeable premerger filings have more than tripled. (See Chart 3. "Chargeable Hart-Scott-Rodino Premerger Filings."). Merger reviews under the Hart-Scott-Rodino Antitrust Improvements Act of 1976 (HSR) are conducted under statutorily-mandated time frames. This workload is not discretionary, it results from the number of premerger filings we receive

Sugawara, Sandra "Merger Wave Accelerated in '99," The Witchington Post, December 31, 1999, p. F1

^{*}Peterson, Richard: "The World Is Not Enough To Merge: "Thomson Limiteral Securities David Free Relative, January 5, 2000.

HSR Premerger Investigations

Between FY 1990 and FY 1999. HSR investigations increased from 59 to 172, an increase of 191 percent. Of the six targest mergers in history, the Antitrust Division was responsible for reviewing five. In two other merger matters, Lockheed Martin Northrop Grumman and Priniestar/News Corporation et al., the Division was prepared for Intigation against substantial legal representation for the parties. Of the ten largest merger deals in 1999, as recorded by Mergerstat, the Division has been involved in the review of seven.

Record Number of Merger Challenges

In the midst of a record-breaking merger wave, the Antitrast Division challenged 48 mergers either formally or informally in FY 1999, close to the record 51 merger challenges in FY 1998. In FY 2000, the Division is on page to meet or exceed the FY 1999 level.

Unprecedented Workload in FY 2000

In FY 2000, the Division's workload includes many large, proposed mergers which will have a profound impact on the structure of their respective industries. For instance, the Division is currently reviewing WorldCom MCI/Spring (telecommunications). ATT/Media One (telecommunications), CBS/Viacom (media), Alcoi/Reynolds (energy), and numerous proposed mergers in the agriculture, utility, and banking industries. In the first quarter of FY 2000 alone, lawsuits have been filed to block 10 mergers. This is significantly higher than FY 1999 when, for the entire year, 21 lawsuits were filed to block proposed mergers. At the current rate, the number of merger lawsuits filed in FY 2000 will be almost double that of last year.

As trade barners fall and deregulation across industries continues, corporate consolidation is expected to remain rapid throughout 2000 and into 2001. "The dealmaking frenzy is a reflection of a brave new business world in which most things happen at Internet speed, acquisitions are funded by stunning stock market riches and boardrooms are in a panic at the thought of being left behind." "You think you've seen merger main?" Well, you ain't seen nother yet. By late this year, the odds are high that buyers will be chasing new partners at a pace that

Sugawara, Sandra - 'Merger Wave Accelerated in 1991, The Mitchington Prior December 31, 1999, p. E1.

could make today's brisk mating dance look stately by comparison." Mergers in the media, telecommunications and high-technology sectors are expected to lead the way.

Civil Non-Merger Enforcement

The Division is entrusted with the responsibility of enforcing the Sherman Act in civil non-merger cases where the anticompetitive activities typically pursued include group boycotts, exclusive dealing, and tying arrangements. Within the civil non-merger enforcement area, the Division has been involved with, among other things:

- investigating (and now hitigating) alleged predatory conduct in the pricing and scheduling practices of American Airlines against small, low-cost airlines.
- pursuing the onyong case against Microsoft,
- investigating (and now lingating) an arrangement between Visa and MasterCard; and
- investigating (and movel trigating) the conduct of both Denisply International and the Federation of Physicians and Dentists in the health care industry

The level of civil litigation activity underway at the Division is unprecedented in the last 20 years. If the schedules for these pending cases hold, we will have at least six large civil matters at trial in FY 2000, and more cases are in the pipeline.

GLOBALIZATION OF MARKETS

More Cases Against International Cartels

The effect of increasing internationalization on our Criminal Enforcement Strategy is reflected in the fact that over 30 percent of grand juries in FY 1999 are associated with investigations having subjects or targets located in foreign countries.

^{*}Holly, Shawn - It's Lone for Merger Mania D., Frotung, June 7, 1999. http://www.pathfinder.com/fortune-investor/1999-06-07/str.btmb

As recently as FY 1991, only one percent of corporate defendants were foreign and no foreign individuals were charged that year. In FY 1997, 32 percent of the corporate defendants in our entirial cases were foreign-based, and in FY 1998 and FY 1999, roughly 50 percent of corporate defendants were foreign-based.

Chart 4, "Locations of International Cariel Meetings Affecting United States Commerce" (February 1999), hists 30 countries and 77 cities, up from 24 countries and 60 cities one year earlier. The map shows conspiratorial meetings occurring in nearly every country in Western Europe and most of the Far East, including 31 European and 15 Asian cities. The actual number of international cariel meetings affecting U.S. commerce is actually far greater than even these numbers reflect, because the map does not reflect the fact that more than one international carted may have met on one or more occasions in any given city.

Costs of Internationalization

Since our work no longer takes place solely within the geographic borders of the U.S., we find parties, targets, witnesses, and potential evidence in foreign countries. As a result, the Antitrust Division must spend more for translators, interpreters, and communications. Division staff must travel greater distances to reach the people and information necessary to conduct investigations. (See Chart 4. **Locations of International Cartel Meetings Affecting United States Commerce**). Extensive inter-governmental negotiations are required to depose foreign nationals, obtain evidence and have searches and seizures conducted on our behalf. All of these elements of complexity add to the funding, personnel, and time required to enforce the law

The effect of increased internationalization on the Antitrust Division's workload manifests itself in several other ways. The number of merger transactions and opportunities for conduct that adversely affect U.S. consumers and businesses also increases, so the Division must be more vigilant. Also, as indicated above, the value of merger transactions and the scope of criminal conspiracies are larger. Most importantly, the complexity of these investigations significantly increases the resources necessary to enforce the law effectively. In FY 1999, 27 percent of the preliminary investigations opened in the Division's merger enforcement program and 31 percent of those opened in the civil non-merger enforcement program were international.

Fines from International Cartel Prosecutions

During the past several years the Division has uncovered international cartely operating in a broad spectrum of commerce, including vitamins, food and feed additives, chemicals, graphite electrodes (used in making steel), and marine construction and transportation services. In many of the prosecutions, the conspirator corporations were fined multiple millions of dollars.

- Eliffmant-La Roche and BASE agreed to pay a Jola, of \$725 million for their participation in the sylamins conspiracy (May 1999).
- SGL was fined \$135 million for its role in the graphite efectrodes conspiracy.
- UCAR paid a \$170 million fine for its participation in the graphite electrodes conspiracy, and
- ADM was fixed \$100 nollion for its role in the bisine and extric acid conspiracy.

Of the commal antitust fines secured by the Division since FY 1997, well over 90 percent were imposed in connection with the prosecution of international cartel activity, and the value of each fine has steadily been increasing from tens to hundreds of millions of dollars. The impact of this heightened penalty has been an increase in the participation of large firms in the Division's Corporate Lemency Program, bringing more and larger conspiractes to the Division's attention. ISSN Chart 5.1 Sherman Art Violations Fielding a Fine of \$16 Million or More.

RAPIDLY ADVANCING TECHNOLOGY

In addition to the complexity resulting from globalization, rapidly changing technology poses special challenges to the Division. Given that the pace of information flow has greatly accelerated, the collection and review of evidence has become even more laborious. In addition, as the marketplace becomes more technologically sophisticated, the methods used to constrain competition become more complex.

On a more fundamental level, the emergence of new technologies at breakneck speed has created new industries virtually overnight. A prime example of this is the global economy's growing dependence upon sophisticated. Internet technology. "The [Internet] industry is graduating from a speculative casino into a measurable force that is changing nearly every corner of modern capitalism." The precise impact of the Internet is still hard to quantify

One reason is its sheer rate of growth. Every second, another seven people around the globe tap in for the first time. But enough data have begun to emerge, that the glimmenings of a new business era are becoming visible, one that should endure through eventual recessions. The Amurust Division must keep abreast of all new developments, applying our expertise and ensuring a fair and competitive marketplace where innovation is fostered.

Additional layers of complexity result from the increasing hurdens on the Antitrust Division. For example, the cours are increasingly demanding stronger "proof" of the anticompetitive effects of transactions, estimating the potential price increase from a prospective transaction requires large quantities of data and sophisticated econometric modeline. In addition, assessing the legality and competitive effects of a variety of types of transactions is inner and note complexited by an ever-changing, increasingly intervoven web of national and international markets, regulatory agencies, and inter- and intra-governmental bodies, all of which may have bearing on a particular transaction. These complexities translate into additional expenditures of time and indoes by the Division, and the need for additional staff.

REVENUE ASSUMPTIONS

Filing fees of \$45,000 are paid by persons acquiring voting securities or assets who are required under HSR, 15 U.S.C. 18a, and the regulations promulgated thereunder, to file premerger notifications. The filing fees are divided events between and credited to the appropriations of the Antitrust Division and the Federal Trade Commission (FEC).

In terms of revenue projections, the average annual growth in premerger filings from FY 1993 to FY 1998 has been approximately 14 percent. Because merger activity ahaled somewhat in the beginning of FY 1999, we realized a 3 percent decline in premerger filings in 4-Y 1999 below the FY 1998 level. However, the rate of filings has since regained its earlier momentum. The strength of the U.S. economy and continuing consolidation across industries lead us to estimate a 14 percent increase in filings in both FY 2009 and FY 2001.

The research Mark Smart Time and Hissain Junite Jeanne. Internet's Economic Gers Real. The Machington Prof., June 20, 1999, AT

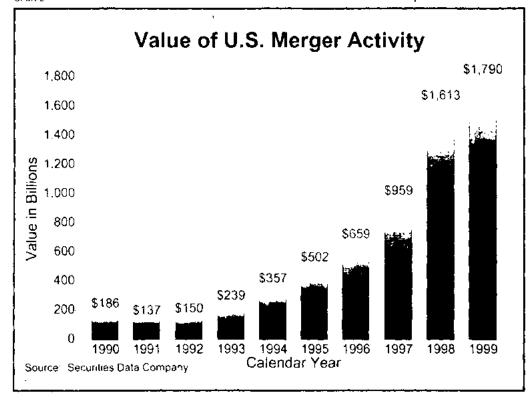

Our revenue estimate for FY 2001 reflects a restructuring of the HSR premerger Fling fee structure which has been proposed in the FTC's hadget request. The restructuring proposal would replace the current flat fee with a graduated fee scale based on transaction value. We have assumed that this proposal would be implemented at the start of FY 2001.

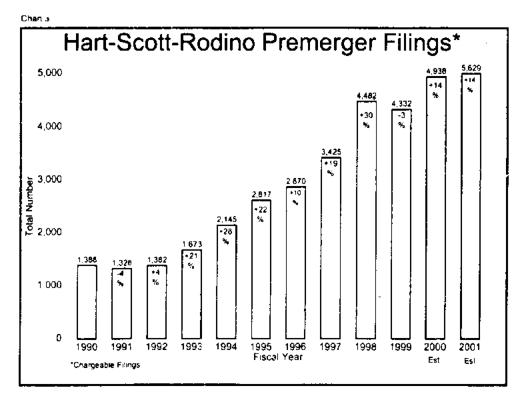

SUMMARY

The exponential growth in workload experienced by the Division in recent years as indistries consolidate, companies expand their reach across geographic borders, and new industries and products grow out of technological advancements has severely stranged current resources. Our staff has been stretched thin as the result of randing levels, which have not kept piece with workload increases. The requested EY 2001 budget of \$134,224,000 would allow the Division to increase staffing by 177 positions (6), attorneys and 116 paralegals) critically needed in continue the effective enforcement on the Nation's antitrust laws. While the Division is seeking a 22 percent funding increase (3 percent adjustment to annual base costs and 19 percent to address workload), in the last if seed year, the Division's werall caseload has increased substantially, with our trial activity at least triple historical levels. Our funding increase reflects the fact that lover the last few years, the Division's resource levels have not kept pace with this skyrocketing workload.

PROGRAM CHANGES BY INITIATIVE

INITIATIVE 1: MERGER ENFORCEMENT STRATEGY

Supports DOJ Core Function 3: Strategic Goel 3:3:5 Y 2003 Annual Performance Gold 3:3:5

Program Area	Positions	Workyears	Amount
Preservation of	69	69	\$8,053,000
Competitive Market			
Structure			

The speed at which companies are merging coupled with rapid advances in technology have served to increase not only the amount of work facing the Antitrust Division but also its complexity. The Division must strive to keep ahreast of new technologies as existing industries are transformed and new ones are created. We request additional funding of \$8,053,000 to support the hiring of 23 attorneys and 46 paralegals. This request is based on FY 2001 modular cost estimates for these staffing groups. Because workload is increasing at such a rapid rate, the Ois soon has not estimated a tapse for recruiting efforts. It is anticipated that preliminary recruiting efforts with be made prior to the start of the fiscal year with new hires coming on board early in FY 2001.

Although the number of staff assigned to a particular case varies according to the phase of the investigation and the scope and complexity of the matter the average staffing level per matter is approximately 5 positions. During intense phases such as the Pfeliminary Investigation, the average staffing level is closer to 9 positions. Of course, for particularly large and complicated cases like Lockheed Martin Northrop Grumman and Northwest Centinental Airlines, which are rapidly becoming the Division's "standard" merger matter, the number of staff on the teams has reached 20 or more. We have inherered that, in most cases, for each attorney on the ream, there are two paralegals. In calculating the budget request for our Merger Enforcement Strategy, we have estimated that al least three additional major cases (over the number handled in FY 2000) will be underway in FY 2001 necessitions an additional 20 attorneys and 40 paralegals. The remaining 3 attorneys and 6 paralegals will be needed to staff two additional cases of smaller size and scope.

A key component of the Antifust Dission's work to preserve the competitive forces that have shaped this country's economy involves the review of proposed mergers. Section 7 of the Clayton Act, as amended by HSR requires certain enterprises that plan to merge or to enter into acquisition transactions to notify the Antifust Dission and the FTC of their intention, and to submit certain information to us. These notifications allow the Dission to identify and block any potentially anticompetitive transactions before they are consummated. Since these HSR reviews must be completed within statutorily-mandated timetrames, the Dission's workload is not completely within our control. In addition to HSR merger reviews, the Dission also reviews from HSR transactions which are not subject to HSR reporting thresholds, as well as bank mergers.

INITIATIVE 2: CIVIL NON-MERGER ENFORCEMENT STRATEGY
Supports DOJ Core Function 3: Strategic Goal 3.3.1.7 y 2009 Annual Performance Goal 3.3.1.

Program Area	Positions	Workyears	Amount
Preservation of	14	44	\$5,239,000
Competitive Market			
Sire i turn			

To ensure our capacity to appropriately conduct our Civil Non-Merger Enforcement Strategy, we request an additional \$5,239,000 which will support the hiring of 16 attorneys and 28 paralegals. This request is based on FY 2001 modular cost estimates for these staffing groups. Because workload its increasing at such a rapid rate, the Antitrust Division has not estimated a lapse for recruiting efforts. It is anticipated that preliminary recruiting efforts with he made group to the start of the fiscal year with new hires coming on board early in FY 2001.

As mentioned previously, although the number of staff assigned to a particular case varies according to the phase of the investigation and the scope and complexity of the matter, the average staffing level per matter is approximately 5 positions. During intense phases of investigation such as the Civil Investigative Demand process, the average staffing level is closer to 9 positions. Of course, for particularly large and complicated

cases, which are rapidly becoming the Division's "standard," the number of staff on the teams has reached 20 or more, and the matters are still not fully staffed. We have observed that, in most cases, for each attorney on the team, there are two parallegals. In calculating the budget request for our Civil Non-Merger Enforcement Strategy, we have estimated that at least two additional major cases (over the number handled in FY 2000) will be underway in FY 2001 necessitating an additional following and 28 parallegals.

The Antitrust Division pursues matters under Section 1 of the Sherman Act in instances where the allegedly illegal behavior falls outside the traditional per so violations that fall under the Criminal Enforcement Strategy. The anticompetitive activities typically pursued under our Civil Non-Merger Enforcement Strategy include, for example, group boycotts and exclusive dealing arrangements. Given the worldwide business restructuring going on today, the application of antitrust laws to rapidly realigning industries presents new challenges. The level of civil litigation activity underway at the Division presently is unprecedented in the last 20 years. Today, in addition to the Microsoft case, we have active civil litigations challenging the conduct of Visa and MasterCard, the Federation of Physicians and Dentists, and Dentsply. The Antitrust Division must scrutimize these deals to ensure that predatory pricing and collusion does not occur and fair competition is preserved.

Initiative 3: Criminal Enforcement Strategy-International Criminal Cartel Investigations Supports DOJ Core Function 3: Strategic Goal 3:3: FY 2000 Annual Performance Goal 3:3:1

Program Area	Positions	Workyears	Amount
Fermination & Prevention of Private	63	, 62.5	\$7,569,000
Cartel Behavior			

The Antitrust Division requests a program increase of \$7,569,000 to support an additional 21 attorneys and 42 paralegals working against international criminal criters. This request is based on FY 2001 modular cost estimates for these staffing groups. Because workload is increasing at such a rapid tate, the Division has not

estimated a lapse for recruiting efforts. It is anlicipated that preliminary recruiting efforts will be made prior to the start of the fiscal year with new hires coming on board early in EY 2.001.

As mentioned previously, although the number of staff assigned to a particular case varies according to the phase of the investigation and the scope and complexity of the matter, the average staffing level per matter is approximately 5 positions. During increase phases of investigation such as grand pary investigations, the average staffing level is closer to 9 positions. Of course, for particularly large and complicated cases like ADM, which are rapidly becoming the Division's fraindard criminal matter, the number of staff on the teams has reached 20 or more, and the matters are still not fully staffed. We have observed that, in most cases, for each attorney on the team, there are two parallegals. In calculating the budget request for our Criminal Enforcement Strategy, we have estimated that at least three additional major cases rover the number currently being handled in FY 20001 will be underway in FY 2001 necessitating an additional 21 attorneys and 42 parallegals.

As part of our Criminal Enforcement Strategy, the Antitrust Division pursues illegal behavior as outlined under Section 1 of the Sherman Act, including price fixing, bid rigging, and horizontal customer and territorial allocations. These behaviors are perfect stolations of the antitrust laws, incaning that they are always considered to be illegal given the economic harm they inflict on consumers. As industries undergo global restructuring and endure ever-increasing competition, the prevalence and complexity of these schemes increases. State and local law enforcement efforts, while contributing to the prevention of locally-oriented cartel behavior, cannot cope with the complex interstate and international nature of conspiracies, and thus the responsibility for enforcement falls to the Antitrust Division.

Crosscutting Budget Committee-International Crime

This Initiative supports Goal 5, "Present Criminal Exploration of International Trade," and Goal 8, "Optimize the Full Range of U.S. Efforts," of the President's International Crime Control Strategy. Although the Annitrust Division coordinates with various Department components in these investigations and cases in g., the Criminal Division, the Federal Bureau of Investigation, and the U.S. Attorneys), most of Initiative 3 does not rise to the level of a crosscuting issue. However, \$361,000 of this Initiative is included in the Department's International

Crime Crosscutting Budget Committee's resource request for FY 2001 to fund the increasing amount of translation and interpretation related to the burgeoning number of international criminal cartel investigations and cases

INITIATIVE 4: CRIMINAL ENFORCEMENT STRATEGY-INTERNATIONAL AGREEMENTS

Supports DOJ Core Function 3: Strategic Goal 3:3, FY 2000 Annual Performance Goal 3:3.1

Program Area	Positions	Workyears	Amount
Termination &	1	0.5	\$94,000
Prevention of Private			
Cartel Behavior			

The Antitrust Division requests a program increase of \$94,000 to support an additional attorney to handle increasing workload related to existing and new international enforcement agreements as our overall workload becomes increasingly global in scope. As discussed previously, the Division's workload is becoming increasingly global as trade barriers collapse and cross-horder deals proliferate. In order to protect competition in the United States and encourage similar protection outside the country, the Division seeks to establish international enforcement agreements of various types. The increasing number of international matters across all of the Division's enforcement programs and the amount of coordination required to utilize an existing enforcement agreement in any one matter necessitates additional resources. It is anticipated that the new hire will come on board halfway through FY 2001.

Crosscutting Budget Committee-International Crime

This Initiative supports Goal 3, "Deny Safe Haven to International Criminals," of the President's International Crime Control Strategy, and is included for the Antifrust Division in the Department's International Crime Crosscutting Budget Committee's resource request for FY 2001. Our efforts support the President's goal of fostering international cooperation.

Section A: Environmental Assessment and Workload Impact

INTRODUCTION

The Division is tasked with carrying out its Mission in the face of several environmental trends that affect everything from the scope of criminal investigations, which routinely have international ramifications, to the number of merger transactions that require review, to the amount of resources required to provide timely feedback to the Federal Communications Commission (FCC) with regard to transactions in the wake of the Telecommunications Act of 1996. These are but a tow of many critical areas that must be addressed. Following is a description of the most important and challenging trends, and a discussion of how each impacts both the work and the overall workload of the Amittrust Division.

ECONOMIC TRENDS

Globalization of Markets

Today, the definitions of the "U.S. economy" and the "U.S. market" are less straightforward. More and more there is a recognition that economic activity, whether initiated in the 19.S. or abroad, is global in scope. More fluid capital markets and the advent of instantaneous, worldwide communications are two of many reasons for this trend. Other contributing factors show no signs of waning. We already see regional economic alliances, such as the EU, the Asia Pacific Economic Cooperation-APEC), the North American Free Trade Agreement (NATTA), and the still developing Free Trade Area of the Americas (FTAA), replacing strictly national economies. All signs point to the increasing interconnection among all national economies as part of an enormous international web of markets.

This trend is having—veral major impacts on the work of the Antitrust Division—First, it means that our work no longer takes place solely within the geographic borders of the U.S. In our enforcemen, efforts we find parties, potential evidence, and even impacts abroad, all of which add complexity, and ultimately cost, to the pursuit of matters. Whether that complexity—and cost—results from having to physically collect evidence overscas or from having to undertake extensive inter-governmental negotiations in order to depose a foreign national, it makes for a very different, and generally more difficult, investigatory process than would be the case

if our efforts were restricted to conduct and individuals in the U.S. The markets and competitors affecting U.S. business and consumers are more international in scope, and the variety of languages and business cultures which the Division cocounters has increased. Consequently, the Division must spend more for translators, interpreters, and communications, and Division staff must travel greater distances to reach the people and information required to effectively conduct an investigation, and expend more resources to coordinate our international ordinary with other countries and international organizations.

Second, it means that our matters involve companies and industries that are bigger and affect more dollars of commerce than ever before. Whether investigating an alleged international conspiracy or analyzing a transmissional merger, the Division is dealing with husinesses of a scale and scope not previously encountered. There are significant workload impacts, such as more documents to review, more employees to interview, and more competitors to survey. In such cases there are clearly more resource costs-time, money, and staff-involved in pursuing these matters.

Economic Expansion and Growth Through Mergers

The U.S. is in the midst of one of the most sustained periods of economic expansion in its history. Existing companies are growing in size and profitability, and start-up companies are emerging at an astonishing rate. One way companies are growing, be they large vertical or horizontal conglomerates, in small single-industry hasnesses, is through strategic intergers. Companies of all stripes are seeking to grow and enhance owner or shareholder value through combination with other concerns where there is some relationship between or among the goods and or services created. In the U.S., the value of mergers taking place in CY 1999 surpassed \$1.79 in tion, topping the \$1 out, ton in announced U.S. transactions occurring in CY 1998, which itself represented a "6 percent increase over CY 1997. Between EY 1995 and EY 1999, the value of U.S. merger transactions increased 257 percent inferior. Value of U.S. Merger Admity, in the Executive Summary it. Areas with the largest solution of activity in CY 1999 included telecommunications and financial services. Activity likely will continue in these sectors, as well as in technology and energy. In fact, "inferimation technology, communications and nied a companies announced 2,900 deals valued at \$545 hillion in the first six months of (1999). That exceeds

the \$488 billion in tech related deals for all of last year and is nearly double the \$283 billion in mergers and accurisitions in the first six months of 1998.78

Inis trend significantly impacts the work of the Antitrust Division in several ways. First, there is the impact on workload. As one of two bodies in the U.S. charged with reviewing all merger transactions of a certain size or scope, there is a correlation between the number of mergers taking place and the amount of work the Division must handle. It is worth noting, in addition, that the hulk of the Division's Merger Enforcement Strategy must be executed within statutority mandated time frames, so resource requirements to fulfill our obligations are externally driven. This workload is not discretionary, it results from the number of premerger fillings we receive. (Size Chart 3, "Chargeable Hart Scott Rodino Premerger Fillings," in the Executive Summary.) Second, with the strategic mergers of the 1990 s, where there is a competitive relationship between or among the goods and or services produced by the parties, the analysis necessary for thorough merger review becomes more complex. Competitive issues and efficiency defenses are more likely to surface in such reviews, adding complexity and cost to the Division's work.

TECHNOLOGICAL TRENDS

Technological Change and Information Flows

fechnological change is occurring at a bitstering pace, whether viewed in the capabilities of faster, higher-capacity computers that render the ones produced six months ago obsolete, or in the ability to hold an international meeting using teleconferencing equipment that allows simultaneous voice and data transmission. People and grows move at a fixed speed, however, information indeas, and data move with almost immeasurable speed.

This is a trend that shows up in the techniques of anticompetitive behavior taking place. As the tools of the trade become more sophisticated, there appears to be a corresponding growth in the solitlety and complexity with

The second of the residual consistency with the case Maked Means of the contribution of second sections.

which prices are fixed, hids are rigged, and market allocation schemes are devised. One way in which this first came to light was the increased use of electronic until tensalt, and even faster, more direct methods of communication. The evolution of electronic communication also results in an increase in the amount and variety of data and materials that the Antitiant Division must obtain and review in the course of an investigation. In addition to hard copy documents, telephone logs, and other information from public sources, including the Internet: the Division frequently receives magnetic tapes, computer diskettes, and CD ROMs of a company semial traffic and documents.

These changes in the technological environment bring with them a while new set of challenges, for the Antirrost Division, e.g., data storage, as we seek to obtain and review evidence of anticompetitive behavior. At the same time, the increasing anomals and new forms of information present the Division with additional apportunities for criecting and invertigating possible violations of the antitrust laws. Meeting the challenges and taking advantage of the opportunities both additional control by its ion's existing work and increase the Division's need for additional staffing with which to successfully pursue our Goals.

Technological Change and the Changing Face of Industry

Another outgrowth of the speed with which technological change is happening is the number and type of new industries emerging. One example is the rapid evolution from new husinesses dealing in computer software to manage e-mail systems to now husinesses dealing with the restoration of raccidentally or otherwise) deleted e-mail messages. A second example is seen in the seemingly overnight expansion of the Internet, where one maintenances were the sole practionness and providers of the service and the next, private Internet versice providers sprang up locality, and internationally.

Technological change is creating new Fusinesses and industries virtually evernight. "If information technology and; stries are having a hage impact on the economy, contributing more than one third of U.S. economic growth between 1995 and 1998. "If Certainly we will see even more advances in this area in coming years." The

There a series there is No. For entry, Engine of the Will have program of the College H. 4.

[Internet] industry is graduating from a speculative casino into a measurable force that is changing nearly every corner of modern capitalism. The precise impact of the Internet is still hard to quantify. One reason is its sheer rate of growth. Every second, another seven people around the globe tap in for the first time. But enough data have begun to emerge, that the glimmerings of a new business era are becoming visible, one that should endure through eventual recessions. ⁵¹²

This trend poses quite a challenge to the work of the Antitrust Division. Familiarity with and knowledge of an industry allows our staff to effectively and efficiently identify, investigate, and prosecute anticompetitive behavior. Industry expertise takes time to acquire, and while we believe we have significant strength in emerging areas, there is an unavoidable learning curve that comes with each new industry springing up as a result of rapid technological change. There is clearly additional work involved in traveling that learning curve, along with concomitant costs, particularly in terms of staff time.

LEGAL TRENDS

Increasing Deregulation

Recent years have seen an increase in the number of key industries deregulated in whole or in part. Telecommunications banking, and transportation are just a few examples. The trend is expected to continue, with major deregulatory efforts underway in the energy/utility industry, for example. "After an uncertain start, energy deregulation is finally picking up steam in the U.S. with an increasing number of what were once heavily regulated gas pipeline companies re-creating themselves as gas and electricity marketing companies."

This trend is having two major impacts on the work of the Antitrust Division. First, in newly deregulated industries, the Antitrust Division often shares responsibility for the oversight of competitive market development

¹⁶Leibosich, Mark, Smart, Tim, and Dugan, lanthe Jeanne. "Internet's Liconomy Gess Real." The Washington Past, June 20, 1999, AE

¹¹Morion Peter "Low Prices Driving Energy Mergers \$11 Billion of Deals Announced," National Past, February 23, 1999, C10.

with other I ederal or state agencies. Under the Telecommunications Act of 1996, for example, the Division has a statutory role in reviewing certain transactions and providing advice and guidance to the FCC with regard to those transactions. While our participation in such interagency processes entails analyses we are used to coorducting, the level of coordination and interaction, not to mention effort in terms of sheer volume of work, is something quite new — Second, newly deregulated industries, even those whose deregulation is done via lengthy legislation with proscribed rules and regulations, face a degree of uncertainly as they venture out in a newly competitive environment. The Antitrus Division is presented with questions and concerns about what will and will not pass antitrust muster in industries in which such questions have not previously been asked. The Division is thus called upon to devote time and resources to providing information and clarifying the new rules of the game.

Doctrinal Abyss

The foundation of antitrust law rests on the Sherman and Clayton Acis, both of which are broadly phrased. As a result, case law developed through the years has had a significant interpretive effect on those Acis, establishing parameters of acceptable and unacceptable behavior. In recent years, however, the frend has been toward settlement of matters prior to reaching court. While in some cases settlement is clearly an appropriate course of action, in other cases it only addresses an immediate issue while providing no longer term guidance. For example, "By settling now, the FTC can more quickly force Intel to change some of its practices. But without a judicial ruling, the larger question of how to apply decades-old antitrust statutes to today's fast-moving tech industry remains. Perhaps the Microsofi case will offer an answer." There has been little evolution of antitrust doctrine in the recent past, and the discrepancy between what existing case law covers and what today's businesses face in an international environment is growing ever larger.

This trend requires a thoughtful and thorough response from the Antorust Dission. Charged with enforcing the antorust laws, we have a responsibility to contribute to the continual evolution of antitrust doctrine and to ensure

Wilke, John R., Takahashi, Dean, and Period. Keith. Short Coloured. Accord Lets Intel Avoid Trial and a Beatine Such as Microsoft in Taking. The Holl Street Journal, March 9, 1999, AT

that the development of case law proceeds in a coherent manner that demonstrates applicability to current economic trends and industry practice. At the same time, litigation is a tool that we must strive in use only when and where it is appropriate. The challenge for the Division is fluiding appropriate ways to advance antitrust doctrine in the coarse of our work without making it the point of our work. In the Microsoft case, "Although—any sanctions the judge orders could be delayed two or three years by appeals--many in the computer business believe the courtroom battle itself has already helped to fundamentally reshape the technology industry."

POLITICAL TRENDS

Increasing Democratization and Capitalism Worldwide

In recent history—and since the fall of the Berlin Wall and the break up of the former Soviet Union in particular, the world has seen the spread of democracy and the beginnings of capitalist economies in a number of countries Central Europe is one area that stands out as making these long-term, difficult transitions—As these processes take place, we often see infusions of foreign capital and businesses—New regimes generally welcome the investment, and are pleased to have the products and services of existing businesses available to their populations.

This trend affects the workload of the Antitrust Division, primarily in increasing the demand for technical assistance. As newly-democratized countries take their first steps toward establishing free market economies, there is a reaognized need for rules and regulations to promote open and competitive international markets. The Antifrust Division receives requests for government-to-government assistance, including everything from giving speeches and seminars to drafting competition have to providing resident advisors, and must weigh the resource and alternative-use costs of undertaking this work against the benefits of helping to increase the competitive environment in which hownesses, including U.S. businesses, operate

^{*}Chandrasckaran, Rays : Microsoft That Ends with Eirm Chastened "The Hanhington Post, June 25, 1999, A1

International Governing Bodies

As the business community watches its horizons spread across the globe, the political community recognizes both the challenges and opportunities of increased interconnectedness and interdependencies on a scale not previously known. The resulting approach to managing this growth has been an increased emphasis on existing international governing bodies, such as the Organization for Economic Cooperation and Development (OECD),* and the development of new international governing bodies, such as the World Trade Organization (WTO). These groups have begun carving out issues and making their presence felt. It is clear that the work of these bodies will have impacts far and wide for all businesses competing in the international green.

The Antitrust Division has an important role in response to this frend, as these organizations present both challenges and opportunities. On one hand, we certainly do not want to be in a position of having competition policies or practices that fly in the face of or dilute U.S. antitrust laws dictated to us by an international governing hody. On the other hand, to the extent that we can influence other countries to adopt policies and practices we feel advance competitive principles on a world scale, our efforts provide major benefits to the U.S. and other countries. I inding the right balance between these two positions means devoting time and resources to the issue. Whether increasingly pressed to attend key meetings of such organizations or to research and develop position papers on the U.S. position vis-a-vis such organizations, the end result is additional work for the Division. The investment of time and effort at this point is money well spent in afteripting to limit violations of antitrust laws in the future, and in establishing level international playing fields for U.S. businesses.

In response to the effects of increasing globalization, in November 1997, Attorney General Janet Reno and Assistant Attorney General Joel Klein announced the formation of a new committee to help tackle the international antitrust problems of the 21st Century. The International Competition Policy Advisory Committee dCPACHs the first-ever on competition-related matters. It will advise the Attorney General and the Assistant Attorney General on international antitrust issues, including attacking transnational cartels, managing merger reviews across multiple jurisdictions, and dealing with anticompetitive practices that restrict international trade. Its report is due in early 2000, and it is expected to strongly underline the critical importance of international antitrust cooperation and enforcement to ensuring that global markets are open and freely competitive for U.S. hustingses and consumers.

SUMMARY

The confluence of these environmental trends has created a surge in the Antitrust Division's workload of unprecedented proportion. Although the spike in merger activity has been widely noted, it should be pointed out that the Division has experienced a significant rise in workload in all three of its enforcement areas: merger, criminal, and civil non-merger. Keeping pace with this crushing workload has substantially strained the Division's resources, highlighting the need for additional professional staff.

Over the past few years, the Division has been doing more with relatively fewer resources. However, the inexorable rise in the incidence and complexity of anticompetitive activity occurring both domestically and internationally makes the continued effective enforcement of antitrust law impossible. Our ongoing investigations and pending litigation in such global industries as telecommunications, airlines, and vitamins have required a phenomenal amount of resources, and we expect our caseload to continue to grow in FY 2000 and beyond. To ensure that the Division is prepared to meet the challenges of tomorrow, we must have an additional \$20,955,000 and 177 positions in FY 2001, providing an annual budget of \$134,224,000 and 1,001 positions without these resources, the Division will be unable to adequately protect the U.S. economy and consumers from anticompetitive behavior which would endanger economic growth and cost the American people millions of dollars through higher prices and reduced unnovation.

Section B: Annual Performance Plan

While the Results Act has been in force for seven years, it is fair to say that agencies across the federal Government still are struggling with its implementation to varying degrees. Law enforcement hodies, in particular, have been singled out in a variety of fora as having special challenges in their attempts to measure results. One of these challenges stems from the fact that most law enforcement hodies share the ultimate goal of deterring behavior, and thus ideally would capture as results the *absence* of that behavior. Another challenge arises as law enforcement hodies make thoughtful decisions about what to do and, equally important, what not to do, quantifying or even describing aneodotally the often important results of action not taken is difficult, at best. The Antitrust Division faces both of these challenges. Since there is no "antitrust crime rate," there is no single or simple way to measure antitrust "crimes" and thus no easy way to portray the effectiveness of the Division's work.

Despite these challenges, the Antitrusi Division is committed to fulfilling the letter of the Results Act and to implementing it for the benefit of the Division and for a wider audience. Although we have had to step back from the notion of deterrence to develop a note workable paradigm for viewing our work and the results of that work, we have done so in a thoughful way. We have surveyed our external operating environment to identify current frends that impact our work. We have surveyed our external operating environment to identify current frends that impact our work. We have taken an approach that looks not only at what we can measure, but also at what we should measure, whether it be for internal management or external review purposes. We continue to address the processes through which we will measure results in a more meaningful way over time. We believe that our elforts-however hampered by hinted resources, inadequate data, or other obstacles—ultimately will make a difference to the Division and to those who care about effective antitrust enforcement

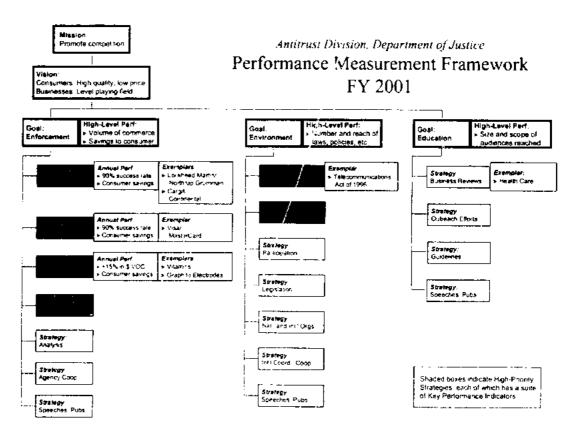

The framework that has been developed—as set forth below and presented on the chart following this Section-starts with Mission and Vision Statements for the Division. Cascading from these, we have articulated Goals and related Performance Indicators at several levels, which provide both institutional constancy and the flexibility needed as our operating environment changes. The three High-Level Goals and associated Performance Indicators speak to the long-term, and each is supported by a list of Strategies that comprise the

tools needed to achieve that Goal. A The High-Priority Strategies and associated Key Performance Indicators speak to the short-term, and represent the current focus of the work of the Division. In addition, we present Annual Performance Goals and associated Performance Indicators, which address just the fiscal year for which we are requesting funds. We note that this framework comports fully with the Department's Strategic Plan (FY 1997 - 2002) and FY 2001 Summary Performance Plan, and with the Departmentwide Goals set forth by the Attorney General. (See the Executive Summary for highlights of mission-critical results.)

¹⁴The Antimust Dissistor's Ferformance Plan and Performance Measurement Tables complement the Department's Strategic Plan (EV 1997 - 2002) and EV 2001 Summars. Performance Plan. We note however, there are two High-Level Performance Inductors fixed in the Department's Strategic Plan that do not appeal to come site with the presentation. (1) independs to two comments in high-priority enforcement areas that impact consumers and (2) use of Microarity Chyptic Resistant (ADR) and other sether techniques, where appropriate, as an alternative to high atom. The Dissistor's Performance Measurement Fahle for our Comman Enforcement Strategy includes a variety of Intermediate Outcome Indicators that address the fatter.

Performance Measurement Fahle for our Merger I intorgeneous Strategy includes a variety of Intermediate Guicome Indicators that address the fatter.

The Department's Strategic P an GY 1993-2002). Departmentwide Goals (FY 1993-2001), and FY 2001 Summary Performance Plan include reletances to the work of the Antitrust Dission. In the Strategic Plan, the Dission is represented principally under core function 3, "Legal Representation, inforcement of Federal Laws, and Deferse of U.S. Inverests," and specifically under goal 3, "Permote competition in the United States economy through enforcement or, improvements to, and education about antitrust laws and principles." In the Departmentwide Goals, the Division is represented in goal 3. "Reduce traditional and newformation principles." In the Departmentwide Goals, the Division is represented in goal 3. "Reduce traditional and newformation of temphases acided. In the FY 2001 Summary Performance Plan, the Division is represented in strategic goal 3 of our function 3 increasing to the Strategic Plant, and the Division is cated in the natrative for core function 1, Investigation and Presecution of Crimnal Offenses." In each instance, there is a clear, direct relationship between the Department's overall mission and goals and the Division's Mission, Vision, and Goals.

BEST AVAILABLE COPY

MISSION STATEMENT

The Mission of the Antitrust Division is to promote competition in the U.S. economy through enforcement of, improvements to, and education about antitrust laws and principles. The statutory authority for the Division's Mission includes Sections 1 and 2 of the Sherman Act, Section 7 of the Clayton Act, as amended by HSR, and a variety of other competition laws and regulations.

VISION STATEMENT

The Vision of the Antitrust Division is an environment in which U.S. consumers receive goods and services of the highest quality at the lowest price, and in which U.S. businesses compete on a level playing field nationally and internationally

HIGH-LEVEL GOALS, PERFORMANCE INDICATORS, AND ASSOCIATED STRATEGIES

Goal 1: Decrease anticompetitive behavior affecting U.S. businesses and consumers. [Enforcement]

High-Level Performance Indicator: Total dollar volume of U.S. commerce affected in instances where the Antitrust Division has taken specific action that resulted in less anticompetitive behavior.

High-Level Performance Indicator. Total dollar value of savings to U.S. consumers in instances where the Antitrust Division has taken specific action that resulted in less anticompetitive behavior.

Strategies in Support of Goal 1:

- Merger Enforcement
- Civil Non-Merger Enforcement
- Criminal Enforcement
- Establishment and Use of International Enforcement Agreements

- Enhancement of Analytical Framework
- Cooperation with Federal, State, and Local Law Enforcement Agencies
- Speeches, Publications, and Press

Goal 2 Increase the procompetitiveness of the national and international environment [Environment]

High Level Performance Indicator. Number and reach of national and international laws, policies, practices and procedures in instances where the Antitrust Division has played a role in the establishment or development of such laws, policies, practices or procedures that resulted in increased procompetitiveness of the national or international environment.

Strategies in Support of Goal 2

- Participation on Interagency Regulatory Processes
- Development of Procompetitive Case Law
- Participation in Interagency Relenakings, Task Forces, and Policy Development Efforts
- Participation in Legislative Development
- Partic pation in National and International Organizations
- Consultation and Coordination with International Antitrust Authorities
- Speeches, Publications, and Press

Goal 3 Increase the breadth and depth of awareness of antitrust law [Education]

High-Level Performance Indicator. Size and scope of audiences reached in instances where the Antitrust Division has undertaken activities that resulted in a greater awareness of antitrust law.

Strategies in Support of Goal 3

- Guidance to the Business Community via the Business Review Program
- Outreach Efforts to Federal, State, and Local Agencies, Business Groups, and Consumers

- Development and Publication of Antitrust Guidelines and Policy Statements
- Speeches, Publications, and Press

HIGH-PRIORITY STRATEGIES, KEY PERFORMANCE INDICATORS, AND EXEMPLARS

The High-Priority Strategies represent the current focus of the work of the Division and, as such, are the Strategies against which we intend to measure progress in the short-term. The Division has thus gathered a variety of Key Performance Indicators for these High-Priority Strategies, which are listed in the Performance Measurement Tables in this document. Unlike the Division's Mission and Vision Statements. High-Level Goals, associated Performance Indicators, and related Strategies, which are designed to be: stitutional and timeless, we fully anticipate that the suite of High-Priority Strategies will change over time, as will the Key Performance Indicators for each Strategy, providing maximum flexibility for the Division to respond to changes in our operating environment and in identified priorities. Included in Sections C. D. and E of this document. Exemplars demonstrate the ways in the which the Antitrust Division employs a variety of Strategies in light of the changing operating environment in order to achieve our Goals.

FY 2001 Performance Goals and Performance Indicators

The Antitrust Division has developed Key Performance Indicators for our High-Priority Strategies, as discussed above. In compliance with the Results Act and departmental instruction, we provide four FY 2001 Performance Goals and Indicators. Drawn from the universe of Key Performance Indicators for our High-Priority Strategies, these Annual Goals and Indicators establish expectations for FY 2001 for critical activities in our Merger, Civil Non-Merger, and Crimmal Enforcement Strategies in support of our Enforcement Goal, for which we are seeking a program increase in FY 2001. (See "Program Changes by Initiative.") Thus, the Division is proposing an FY 2001 Performance Plan that we believe is attainable within the requested level of resources and with demonstrable results, as shown below. We expect these FY 2001 Performance Goals will establish a baseline upon which future performance may be tracked and reported, as required by the Results Act

ې يې يې پې پې او PY 2001 Annual Performance Goal	TO A PARTY AND Associal Performance Indicement.
Achieve a narcon rate of at least 90 percent to ingeget transactoria challenged, taking into account continued increases in the number of transactions taking place that no are required to review, as well as continued growth in the sales, international scope, and investigatory complexity of those transactions.	Success rate for merger transactions challenged. Successes vaclade mergers that are abandoned. "fixed first," filed as cases with consent decrees, filed as cases but settled prior to literation, or filed as cases and impared successfully. "
Achieve a maceim rate of at least 90 percent in civil non-mergar maners where the Division expressed concern, Oking into account continued growth in the value, international acope, and investigatory complexity of those civil non-merger matters.	Success rate for civil non-merger matters where the Division expressed concern. Successes include matters where practices changed after investigation analysis, filter as cases with content decrees, filted as cases with the cases but settled prior to triggation, or filted as cases and triggated successfully."
Inversity our factor on detecting and successfulli-princeuting massive criminal posturitation that affect major mathess and obtinately farm significant numbers of U.S. consumers, demonstrating a 15 percent learnage to the define volume of U.S. consumers affected in relevant markets where positive outcomes are achieved over 1999.	Oxidar volume of U.S. commerce affected in relevant markets where positive onlyone achiesed in criminal agetters.
Continue to provide substantial serings to U.S. densumers across all deer of our Enforcement Strangues-Merger, Civil Non-Merger, and Crimenal	Fintal shallar haloe of resources to U.S. consumers in unstatutes where the Antitropa Division has labert a specific action that resulted in less anticompetitive behavior. CROSSCUTTING PROGRAMS AND OTHER COORDINATION EFFORTS

Based on our understanding of the Results Act, the Division participates in just one interagency crosscutting program by law and in practice we share responsibility for merger enforcement with the Federal Trade Commission (FTC). Section 7 of the Clayton Act, as amended by HSR, requires certain enterprises that plan to merge or to enter into acquisition transactions to notify the Antitrust Division and the FTC of their intention, and to submit certain information to those authorities. Once premerger notification has been made, the Division and the FTC employ a clearance process, based largely on complementary areas of expertise, in order quickly to determine which body will review a particular transaction. Following clearance, the transaction is reviewed to determine whether there are any competitive issues at stake.

While we work closely with the FTC on an almost-daily basis, we exist as separate entities with all the differences that implies. Accordingly, it is not surprising that we have taken separate and different approaches to implementation of the Results Act. We have, nonetheless, ended up with very similar frameworks for measuring the results of our work; we believe this provides a significant level of confidence in our individual approaches. We have also maintained communication throughout the development of our respective Performance Plans, and expect that we will continue to define and refine common and complementary Performance Indicators as these plans evolve.

With respect to other coordination efforts, the Division has cultivated and will maintain contacts with the Federal Bureau of Investigation (FBI) and the Criminal Division (CRM), as well as the Justice Management Division (JMD), to discuss and coordinate approaches to performance measurement in such areas as our Criminal Enforcement and International Enforcement Agreements Strategies. Most recently, the Division participated on the FY 2001 International Crime Crosscutting Budget Committee. (See "Program Changes by Initiative.")

FY 1999 DOJ SUMMARY PERFORMANCE PLAN, PERFORMANCE GOALS, TARGETS, AND ACTUALS (as modified by the FY 2000 DOJ Summary Performance Plan)

Core Function 3: Legal Representation, Enforcement of Federal Laws, and Defense of U.S. Interests

Strategic Plan Goal 3.3: Promote competition in the United States economy through enforcement of, improvements to, and education about antitrust laws and principles.

Key Summary Level Indicators	FY 1997 Actual	FY 1998 Actual	FY 1999 Planned	FY 1999 Actual	PY 2000 Planed	FY 2001 Planned
Success rate for merger transactions challenged. Successes include thergers that are "fixed first," filed as cases with consent decrees, filed as cases but settled prior to litigation, or filed as cases and litigated successfully.	94%	98%	90%	97%	90%	90%
Success rate for civil non-merger matters where the Antitrust Division expressed concern. Successes include masters where practices changed after investigation initiated, filed as cases with consent decrees, filed as cases but settled prior to litigation, or filed as cases and hitigated successfully.	N/A	93%	90%	100%	90%	90%
Dollar amount of U.S. commerce affected in relevant markets where positive outcome was achieved in craminal matters. ¹⁵	N/A	\$2.32 billion	N/A	\$2.45 billion	Not Projected	Not Projecies

¹⁰The dollar amount of U.S. commerce affected in criminal maners is estimated by the Antitrust Division based upon the best available information from investigative and public sources. It serves as a proxy for the potential effect of anticompetitive behavior. Suspect conspiracies usually are more extensive, sometimes fair more extensive, than are formally charged in an indictment, hence, we believe that the dollar amount of commerce affected it significantly understated. These values are estimates for the specific fiscal year and reflect only U.S. commerce. Previously reported data (for FY 1997 Actual, FY 1998 Actual, and FY 1999 Planned) included estimates of the dollar amount of commerce affected over the duration of the conspiracy and included global commerce. Our methodology for estimating the dollar amount of commerce affected in criminal matters changed in order to be consistent with calculations for dollar amount of commerce affected in remaining and provided as the first order of the consistent with calculations for dollar amount of commerce affected in remaining the dollar amount of commerce affected in criminal matters changed in order to be consistent with calculations for dollar amount of commerce affected in merger and civil non-merger matters. The "N/A" for FY 1997 Actual and FY 1999 Planned result from this change, since we lack revised data for FY 1997.

Number of Division requests for assistance from international antitrust enforcement authorities. (1)	15	11	15-20	12	10-15	10-15

Though the planned level of performance was not achieved due to external factors, there was no effect on overall program performance as a result indeed, as noted in the Executive Summary, the Division experienced a record year in international enforcement. The decline in Division requests for distributed in 1913, this program accords lemency frogram. Instituted in 1993, this program accords lemency to corporational reporting their illegal antitivist activities directly to the Division's Corporate Lemency Program, conditions are met. The majority of international matters—including the record-setting vitamins price-fixing prosecutions-had one or more conspirators use this program in EY 1999. This had the practical effect of reducing the number of Division requests for assistance from foreign government authorities as the Division was able to work closely and cooperatively with many of the identified conspirators.

Other external factors contributing to this level of performance include the fact & 1 international antitrust enforcement acceptation is in its early stages in many respects. Thus, even though assistance from a foreign country might otherwise be desirable, we may not have a formal mechanism available to use to pursue evidence, witnesses, or information that may be critical to the investigation. International enforcement agreements require a considerable amount of time to negotiate with foreign governments, and to coordinate within and between the executive and legislative branches of each government. Certain formal agreements require public continent periods, or, in some cases, Schale approval. Indeed, a formal enforcement agreement may result from years of discussion, negotiation, and approvals.

In addition, this Performance Indicator is extremely difficult to estimate since the number of requests are in part determined by the facts of each international matter the Division investigates and how the alteged conspiracy is identified to the Division. While the increasingly international nature of the Division's operating environment suggests that the need for foreign-located information should increase over time, "requests for assistance" are only one indicator, and it may not be the most appropriate performance measure. Performance levels for this indicator are being adjusted downward in future years to reflect actual performance in FV 1999, and possible alternate indicators are being pursued.

Total dollar value of savings to U.S. consumers in instances where the Antitrust Division has taken a specific action that resulted in less anticompetitive behavior. ⁹	N/A	54 4 billion	N/A	\$2.8 billion	Not Projected	Not Projected

VERIFICATION AND VALIDATION OF PERFORMANCE INDICATORS AND OTHER DATA ISSUES

The Results Act poses formidable measurement and analytical challenges. The Antitrust Division continues to engage these myriad opportunities. As discussed in Footnotes B and C for each of our Performance Measurement Tables, it is extremely difficult to isolate the effects of Division Strategies from other events and external factors that affect outcomes and over which the Division has little control. As a result, we remain concerned that performance information is interpreted and used with appropriate caution. Nonetheless, this section of the Division's FY 2001 Performance Plan highlights our measurement challenges, existing and initial efforts, and future plans.

The Results Act emphasizes outcome measurement. However, frequently it is not feasible to establish realistic outcome indicators on an annualized basis. This is particularly true in the area of law enforcement, where many outcomes occur over a longer time horizon than one year. As a result, some of our FY 2001 Performance

²²It is difficult to fully or precisely capture in a single number, or even a variety of numbers, the ultimate outcome of the Antitrust Division's enforcement efforta. It is not always clear just how far-reaching are the effects of a particular conspiraty or a proposed transaction or an anticompetitive behavior. Nonetheless, we believe that are not outcome, if not the ultimate outcome, of our winds asking to U.S. consumers that arise from owr successful enforcement actions. In calculating consumer savings across our inforcement areas, key input measures, such as market elasticines of demand, if not actually estimated in the investigation or case, often had to be estimated based on sneedotal information and observations. These values are both conservative and consistently estimated over time. Note that we believe our consumer savings figure to be a very conservative estimate in that it attempts to measure direct consumer benefits. That is, we have not attempted to value either the "spillover" effects or the determent effects of our successful enforcement efforts, though we said those who have written on the subject believe that such effects exist and are significant. Although there are significant limitations to this estimate (as with any estimate), we believe it goes a long way toward describing the objectioner of our work and lies directly to our vision of an environment to which U.S. consumers receive goods and services of the highest quality at the lowest price, and in which U.S. businesses compose on a level observation field.

Indicators are outputs, not outcomes. We believe that, over time, experience will improve our identification of Performance Indicators that provide program managers, policymakers, and taxpayers with information on our performance.

In accordance with departmental guidance, we have not established numerical targets in a number of areas. We are very concerned that estimated levels of performance not become bounty-hunting targets or otherwise lead to unintended and possibly adverse consequences. As a result, although we will report actual data after the fact, we will not set quantified targets for convictions and fines, in particular. In many areas, however, we have made projections for outyear data. In doing so, we have relied on a variety of tools and information. We started with a basic formula that captures factors for changes in productivity, FTE, inflation (where applicable), and trend, and then tailored this formula to individual Performance Indicators. We have relied largely on historic data in our analysis, and supplemented that with information gleaned from relevant program managers. We acknowledge that we are in the early stages of working with this projection methodology, but anticipate that this fairly objective approach—which delivers projections, rather than targets—will be fine-tuned over time and will allow us to more accurately describe the direction and magnitude of anticipated changes in performance.

Emphasis on Time Reporting and Other Data

In the short-term, we will continue to rely significantly on existing sources of Division statistics. These internal systems principally track workload, time reporting, and administrative activities; however, some outcome data also is collected. For the most part, baseline data exists for our Key Performance Indicators, which is used in the ordinary course of business. Much of the data comes from our internal Matter Tracking System (MTS), an Oracle-based system being phased in as a replacement for the Anxitrust Management Information System (AMIS). We also rely upon forms generated by staff as matters are opened and closed. We will continue to improve existing data collection systems, including their accuracy and reliability.

We are developing a new, online, daily Time Reporting System (TRS) designed to provide comprehensive data for all Antitrust Division employees. It will interface with the Division's budget structure, and our performance measurement and management initiatives. A phased implementation of TRS began in FY 1999, and it has replaced the paralegal Time Accounting System. In January 2000, TRS also replaced the time reporting function

of AMIS. Currently, about 90 percent of Division staff uses TRS. We expect all Division staff will utilize TRS by the end of FY 2000. We have seized opportunities to improve other data collection systems, from adding new data fields to existing online forms, to establishing online systems for tracking Key Performance Indicators for certain Performance Measurement Tables. We are working to better integrate our financial reporting systems with our performance measurement and management initiatives.

Development of Additional Measures

We are also working to develop definitions and quantifiable measures, or at least more advanced qualitative methods, to track certain inherent aspects of the Antitrust Division's work, such as, "complexity," "savings to the consumer," and "deterrence." Several years ago we established groups in each of our three enforcement areas: merger, civil non-merger, and criminal. Comprised of the appropriate Deputy Assistant Attorney General, a Chief from one appropriate section and an Assistant Chief from another, the Chief of the Division's Economic Litigation Section, and other key individuals, these groups have served a variety of roles in our performance measurement efforts.

Complexity

These groups participated in the development of a complexity matrix that was designed to identify specific attributes of matters in each enforcement area that suggested complexity on either an intellectual or resource level, or both. This was the starting point for ongoing efforts to objectively quantify both the increasing number of complex matters handled by the Division and the increasing complexity of those matters.

Armed with our draft complexity matrix we designed and executed a test. We asked mid-level managers across the Division to review a number of largely historical matters and rank the ten most and ten least complex of those. We then contacted lead attorneys who staffed the matters and asked them to complete checklists, noting which of a list of specific attributes applied to those matters. (Those specific attributes were developed as part of the complexity matrix, described above.) An in-house economist then used several statistical and econometric software packages to analyze the results of the managers' rankings and the attorneys' checklists.

Our second test was designed to mitigate somewhat our concerns about sample size and a number of other variables that may have adversely affected the results of the first test. We recently asked high-level managers in our enforcement areas to review a number of more recent and mostly current matters and rank the most and least complex of them. We contacted lead attorneys for more detailed information, and asked our economic staff to analyze these results both in isolation of the first test results and in conjunction with them. We anticipate that this latest effort will give us a greater level of confidence in moving forward with lists of attributes in each enforcement area that suggest complexity, and we hope to begin surveying the Division's workload for baseline complexity data in FY 2000.

Savings to the Consumer

The Division has consulted with the FTC on its methodology for projecting a true outcome measure in the crosscutting area of merger enforcement, savings to the consumer, and we are actively developing a methodology for each of the Division's three core Enforcement Strategies. As a result of the Antitrust Division's actions in FY 1999, estimated savings to the consumer totaled \$2.8 billion across all three enforcement areas. This represents a decline in consumer savings from the FY 1998 estimate of \$4.4 billion caused by the fact that the abandoned merger between Lockheed Martin and Northrop Grumman accounted for nearly 40 percent of the FY 1998 estimated savings.

Deterrence

We firmly believe that deterrence is perhaps the single most important ultimate outcome of the Division's work. We are just as sure that it presents the most significant measurement challenges, both to us in the area of antitrust law enforcement and to others across the Federal Government and across the globe in myriad contexts. Our determination to make some progress in this difficult area of performance measurement has led us, however, to something "soft" but nonetheless quantifiable. We spent time reviewing both antitrust and economic literature for clues as to how to tackle the measurement of deterrence, and we generated and discarded a number of "new" approaches. We were pleased to discover an external resource to devote to the question: a master's degree candidate at an Ivy League university participating in a thesis program that essentially lends students out to organizations to consult on public policy issues.

Our highly-qualified "consultant," paired with a leading antitrust scholar who is also a professor at the university, researched measuring deterrence in the field of antitrust law enforcement and decided that there was a clear gap between near-universal recognition of the so-called deterrent effect and its quantification. He set out to begin building a bridge by designing a survey of very specific questions intended to elicit numbers, however broad, describing the effects of the Antirust Division's enforcement efforts in the criminal area over a particular time period. Attorneys in private law firms across the country who specialize in criminal antitrust law were targeted, and they were asked to complete the two-page survey designed by our consultant. While acknowledging a fairly low survey response rate, we nonetheless feel there is a great deal of general value to the specific results of the survey: primarily, that if the Division stopped enforcing Section 1 of the Sherman Act there would be an estimated 150 percent increase in the number of conspiracies over the next five years, and an increase in the aggressiveness of those conspiracies.

It is perhaps the general thoughts and ideas behind the survey and the results it garnered, and the momentum gained by having gotten this far, that are the most valuable outcomes of our efforts to measure deterrence, to date. We learned perhaps as much as our consultant did through this project, and have a number of ideas for follow-on research. Whether we are able to devote in-house resources to pursuing these ideas, or we reach back into the pool of "consultants," our hope is to refine both the questions about the Division's deterrent effect and the resulting answers in order to demonstrate more clearly the very strong link between both our presence and our enforcement activities and their very real deterrence of anticompetitive activities.

Data Collection & Storage

Data is collected and stored on Antitrust Division's management information systems, primarily in the MTS and its companion user interfaces. Data is collected both manually and electronically using various forms, memoranda, etc., as well as on an ad hoc basis.

Data Validation and Verification

Data accuracy and validation for the Antitrust Division's management information systems occurs on three levels; manual, procedural, and automated. These levels include user training, software user's guides, on-line

data validation, batch data analysis, and ad hoc reviews. One of the most important automated solutions is on-line validation. Any errors which the system detects at this point can be quickly and efficiently corrected. Types of instantaneous on-line data validation employed by Division systems include date validity, inter-element cross-checks, numeric range checks, single element list-of-value checks, multi-element list-of-value checks, data type checks, and mandatory data elements. Systematic data validation checks are performed as part of the normal systems development life cycle, or an ad hoc basis.

CROSSCUT OF POSITIONS, FTE, AND DOLLARS BY CORE FUNCTION AND STRATEGIC GOAL

For fiscal years 1999, 2000 and 2001, all Antitrust Division resources are attributable to Core Function 3 and Strategic Goal 3.3 in the DOJ FY 2001 Summary Performance Plan.

		FY 1999		•	FY 2000			FY 2001	
Strategic Goal	\$1,000s	Pos.	FTE	\$1,000s	Pos.	FTE	\$1,000a	Pos.	FTE
3.3: Promote Competition	\$101,427	766	800	\$110,000	824	813	\$134,224	1,001	990

The accomplishment of this Strategic Goal requires experienced attorneys, economists, paralegals, and support staff. It also requires the Antitrust Division's MTS and its companion user interfaces; office systems, including our network and infrastructure; litigation support tools and applications, including those for courtroom presentations; and data storage capacity related to all of these technologies.

Management Challenges

Mo"high-risk" or other mission-critical management problems affecting our FY 2001 Performance Plan.

Future Evaluations

There are no ongoing or planned evaluations bearing upon our FY 2001 Performance Plan.

Performance Measurement Table: Presented by General Goal Supports DOJ Core Function 3, Strategic Goal 3.3, FY 2001 Summary Performance Plan Strategic Goal 3.3

General Gos) 1 (Enforcement): Decrease enticompetitive behavior effecting U.S. businesses and consumers.
General Gos) 2 (Environment): Increase the procompetitiveness of the national and international environment.
General Gos) 3 (Education): Increase the breadth and depth of awareness of entitrust law.

A. Definitions of Terms or Explanations for Indicators.

Dollar Range for FY 2009 Revised Plan and FY 2001 Plan: The range of Dollars for the FY 2000 Revised Plan and FY 2001 Plan represent our anticipated resource commitment to seek initiative, in each of those fiscal years, plus or minus the percent. Hence, the lower end of the range is five percent less than the estimated Dollars, and the upper and of the range is five percent more than the estimated Dollars.

FTE Range for FY 2000 Revised Plan and FY 2001 Plan: It is unlikely that FTE levels will decrease for any of these initiatives in FY 2000 or FY 2001 given the averall rise in the Antitrust Ovision's workload. Therefore, the range of FTE for the FY 2000 Revised Plan and FY 2001 Plan includes the FY 1999 Actual FTE for the lower end of the range, and the upper end of the range is based on projected FTE commitments to this Strategy, assuming maximum utilization of authorized or requested FTE.

Goe: 1: Decrease enticompetitive behavior affecting U.S. business and consumers

- Efforts to improve the accuracy and completeness of the Division's time reporting data and the roll out of a new Time Reporting System is enabling the
 Division to more accurately relate our resource expenditures. The deliars and FTE shown on this Performance Measurement Table for FY 1996 FY
 2001 is based on actual hours reported by program area in FY 1996.
- There is no entirust "crime rate" against which to measure the Division's achievements in Enforcement. There is, likewise, no easy or established methodology for calculating the deterrant effect of our Enforcement Strategies, though we firmly believe in the existence of such an effect. We are thus using—as a very high-level proxy—the Total Bollar Volume of U.S. Commerce Affected by our Enforcement Strategies to measure our effectiveness in achieving Goel 1—a decrease in anticompetitive behavior effecting U.S. oursinesses and consumers. While not an exactly correlated measure, Total Dollar Volume of U.S. Commerce Affected does give some indication of the magnitude of our Enforcement work, and speaks in part to the economic reach of our efforts.
- This indicator is an aggregate value comprised of the Total Dollar Volume of U.S. Commerce Affected for our "wins" (instances where we have taken specific action that resulted in less enticompetitive behavior) in all times enforcement areas including bank merger enforcement activities. Although we are aggregating several different values, we believe that we have selected the most meaningful sub-measure for such type of Enforcement Strategy, given the nature of the program, be it Criminal, Civil Non-Merger, or one of serveral types of Merger Enforcement.
- White we have used existing data sources in the Dhrision to compile this High-Level Parformance Indicator, we ecknowledge some limitations in our data that result in the completive underestimate of the value presented here. In the HSR merger and bank merger areas, we are required to review a significant number of applications, many of which are determined to pose no competitive issues. No investigation is opened in these cases, but Division resources are still imployed to ensure that the transactions being proposed will do no harm to the competitive environment. We currently do not include any measure of our Enforcement activity for these "quick looks," which are nonetheless critical to entitline taw enforcement. For the still three of the Division's Enforcement areas, we have improved our data collection efforts and no longer rely upon a central database which historically held incomplete information to collect. Volume of U.S. Commerce data. We collect this data directly from the attorneys and soonamists who work on the first.

cases and therefore have greater confidence in its accuracy

- For our Merger, Civil Non-Merger, and Criminel Enforcement areas we include the annualized U.S. Volume of Commerce affected in our "wins." The
 FY 1999 Actual is significantly below the FY 1998 Actual since the letter included the abandonment of the proposed merger between Lockheed Martin
 and Northrop Grummen which, by itself, accounted for nearly 25 percent of the estimated volume of commerce for FY 1998.
- It is very difficult to quantify the seemingly apparent market effects of our Enforcement actions; so many factors determine prices that it is extremely challenging to determine the precise effect of our intervention. However, we have developed a methodology for determining the appropriate data to estimate the Total Deliar Value of Sevings to the U.S. Consumer from our Enforcement Strategies. Data for FY 1998 and FY 1999 are included in this Performance Measurement Tables for our Merger, Civil Non-Merger, and Criminal Enforcement Strategies in Section C for comprehensive descriptions of this Key Performance Indicator.
- It should be noted that the quantitative projections shown in this and the other GPRA charts in the Enforcement area raly upon internal calculations
 based upon prior year data and assumed trends as well as the subjective predictions of subject matter experts. We have combined these two
 methodologies to maximize the meaningfulness of our outyear projections. We continue to refine our projection methodologies as actual data indicchanging trends.

Goal 2: Increase the procompetitiveness of the national and international environment.

- The Division undertakes a wide variety of activities that we believe contribute to the procompetitiveness of the Environment both here and abroad, from participation in interagency rulemakings and task forces, to proactive contributions to the development of legislation or case law, to integrated efforts with national and intermedional organizations or antitrust enforcement authorities. In all these instances we strive to influence the laws, policies, practices, and proactive discussed and implemented to the benefit of competition. We do so in fore both in the U.S. and overseas, knowing that as the world gets analise and smaller, activities here effect other, and events elsewhere affect us in significant ways. We think it is valuable to effectively making our plobal Environment more conductive to conception.
- This High-Level Performance Indicator is a fully of the Number and Reach of National and International Laws, Policies, Practices, and Procedures which the Division has had some role in establishing or developing. We have not included every submission of comments to the FCC, nor have we counted every interagency task force in which we participate. We have instead their to capture in this High-Level Performance Indicator situations in which we believe our comments were adopted and have resulted in a rule that encourages competition, and in which our task force participation led to a policy that promotes competitive behavior. In other words, we are attempting to capture the intermediate outcomes that arise from Division participation in a large number of fora and on a variety of planes, which we believe make the world a more competitive place and utilimately ensure the benefits of competition for consumers.

Gost 3: Increase the breadth and death of awareness of antitrust law.

- The Dhriston supports our Enforcement and Environment Goals with our Education Goal. In providing juidance to the business community through our Business Review program, in conducting outreach to Federal, stree, and local agencies, business gr. ups, and consumers, in developing and publishing antitrust guidelines and policy statements, and in speaking, publishing, and generating priess about our activities, we believe we deter would be antitrust violators and educate well-intentioned businesses and interested consumers allike. We view these activities as an integral component of our work that enhances our efforts in the Enforcement and Environment arenes.
- Since we do not believe it is possible nor particularly informative to develop one numerical measure for the Size and Scope of Audiences Reached given the breacht of the Division's activities, we have taken a more qualitative approach. The development of a qualitative measure combined with specific quantitative date on our activities is in accordance with OMB guidance and in line with the plants of other agencies. We have expanded our efforts to measure the specific Education activities undertakent by our staff. Although our stairing date collection systems have limitations which make the capture of accurate and specific information on our Education efforts difficult, we have endeavored to provide date on several activities which will give the reader the flavor of our work in this area. However, due to the difficulty of tracking all formal and informal outreach efforts and estimating the multiplier effect of these efforts, such as the number of clients who benefit from the information in a single Business Review letter sent by the Division to an entomey in a law firm, we assert that the full size and scope of our audience exceeds that which we are capable of tracking. The number of website hits is based on data available on www.usdol.gov/str/admin which is slightly incomplete due to the fact that statistics for several weeks during FY 1999 are unavailable. The following information reflects actual date from FY 1999, it should be noted that the Division's outreach efforts have been severely curtailed during this period due to funding constraints.

Number of internet website hits	7,879,013
Number of requests for public information (non-FOIA)	8,788
Number of "Antifrust Enforcement and the Consumer" pemphiets	
distributed by the Consumer Information Center	1.600
Number of FOIA requests received	247
Number of speeches given by headquarters staff	58
Number of Business Review letters issued	6
Field Office Outreach Efforts:	
Number of mellings	7
Number of presentations	65
Number of investigation referral/sed resulting from outrearch efforts.	

5. Factors Affecting FY 1999 Program Performance:

Goal 1: The FY 1999 Actual for Total Dollar Volume of U.S. Commerce Affected is lower than the FY 1998 Actual since FY 1998 data included the proposed megamerger between Lockheed Martin and Northrop Grumman which was ultimately abendoned. This single case accounted for nearly 25 percent of the total FY 1998 volume of commerce.

Goal 2. Final data supporting the FY 1999 Actual for the Number and Reach of National and International Lews, Policies, Practices and Procedures is reflected

Goal 3: Final data supporting the FY 1999 Actual for the Size and Scope of Audiences Reached is listed in Footnote A. However, the data does not reflect the multiplier effects of our work which we believe are significant. It should be noted that the Division's outreach efforts have been severely ourtgied during this period due to funding constraints.

C. Factors Affecting Selection of FY 2000 and FY 2001 Plans. It is exceptionally difficult to predict FY 2000 and FY 2001 Performance Plan values due to the significant number of external factors affecting each of the four High-Level Performance Indicators. Many of the metters that result in Embrorement actions, such as HSR mergers, are generated independently of Division activities and come to us in numbers beyond our control. In addition, Total Dollar Volume of Commerce Affected dues not always approximate the significance of an Embrorement action. Our work with others, both in the U.S. and oversees, on lews, policies, practices and procedures that contribute to a procompetitive Environment, is largely dependent on the processes and politics of those with whom we work. A myriad of other factors—also beyond our control—dictate the level of the tide in our work and the magnitude of our Education efforts. The Division have consolitates estimates attempted to employ an objective model in smiring at these estimates, where appropriate. We expect to refine this methodology over time to allow us to project with greater confidence the outcomes of activities in support of each of our three Goals.

SECTION C: GOAL 1 - ENFORCEMENT

In order to decrease anticompetitive behavior affecting U.S. businesses and consumers, the Antitrust Division employs a number of Strategies, including pursuing our three core Enforcement Strategies—Merger, Civil Non-Merger and Criminal. Certain Strategies, such as Establishing and Using International Enforcement Agreements and Cooperating with State and Local Law Enforcement Agencies, are initiatives devised by the Antitrust Division to further efficiency and effectiveness in achieving the cessation and deterrence of anticompetitive behavior in all its forms. Given the continuing expansion of the economy and the continuing rise in the number of mergers, especially strategic and transnational mergers, the Division currently is emphasizing our Merger Enforcement Strategy. (See Chart 3, "Chargeable Hant-Scott-Rodino Premerger Filings," in the Executive Summary.) The Civil Non-Merger Enforcement Strategy is another strategic focus under this Goal. In addition, in response to the increasing globalization of the economy and the necessity for international antitrust coordination, the Division currently is targeting international cartels through our Criminal Enforcement Strategy and Establishing and Using International Enforcement Agreements.

The full complement of Antitrust Division Strategies employed in pursuit of this Goal is listed below, and each Strategy is subsequently described more fully. Following that, four Exemplars demonstrate the Division's use of these Strategies in response to environmental trends and in pursuit of the Division's overarching Goals, and show the wide impact of the Division's programs. Finally, there are more specific Performance Measurement Tables for each of the current high-priority Strategies being pursued in support of this Goal, as indicated in the list of Strategies by an asterisk.

STRATEGIES

- Establishment and Use of International Enforcement Agreements*
- Enhancement of Analytical Framework
- Cooperation with State, Federal, and Local Law Enforcement Agencies
- Speeches, Publications, and Press

^{*} Indicates a High-priority Strategy

STRATEGY DESCRIPTIONS

Merger Enforcement*

The Division's merger work is performed by six Washington, DC, Sections and two Field Offices, although the bulk of the work is handled by one Section in Washington. Our Merger Enforcement Strategy serves to maintain the competitive structure of the national economy through investigation and litigation of instances in which monopoly power is sought, attained, or maintained through anticompetitive conduct and by seeking injunctive relief against mergers and acquisitions that may tend substantially to lessen competition. Work under the Division's Merger Enforcement Strategy can be divided into roughly three categories:

- review of HSR transactions brought to our attention by statutorily mandated filings;
- review of non-HSR transactions (those not subject to HSR reporting thresholds); and
- review of bank merger transactions.

Section 7 of the Clayton Act, as amended by the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires certain enterprises that plan to merge or to enter into acquisition transactions to notify the Antitrust Division and the FTC of their intention, and to submit certain information to us. These HSR premerger notifications provide advance notice of potentially anticompetitive transactions and allow the Division to identify and block such transactions before they are consummated. HSR premerger reviews are conducted under statutorily-mandated time frames. This workload is not discretionary; it results from the number of premerger fillings we receive. (See Chart 3, "Chargeable Hart-Scott-Rodino Premerger Fillings," in the Executive Summary.)

The number of HSR transactions reviewed includes all HSR filings the Division reviews, not just chargeable filings which provide revenue for the Division. HSR and Non-HSR transactions may be investigated and prosecuted under Section 7 of the Clayton Act, or under Sections 1 and 2 of the Sherman Act. Referrals for Non-HSR transactions both come from outside the Division, via competitors or consumers, and are generated from within the Division, based on staff knowledge of industries and information about current events. Bank Merger Applications, brought to our attention statuturily via the Bank Merger Act, the Bank Holding Company Act, the

Home Owners Loan Act, and the Bridge Bank section of the Federal Deposit Insurance Act, are reviewed through a somewhat different process. It is the Division's statutory responsibility, under three of the four statutes, to provide appropriate bank regulatory authorities with a report on the competitive effects of all depository institution merger and acquisition transactions that are submitted to those agencies for approval.

Civil Non-Merger Enforcement*

A single Section in Washington, DC, performs the majority of the Division's activities under the Civil Non-Merger Enforcement Strategy. Another four Sections located in Washington also support this Strategy. The Civil Non-Merger Enforcement Strategy picks up, to some degree, where the Antitrust Division's Criminal Enforcement Strategy leaves off, pursuing matters under Section I of the Sherman Act in instances in which the allegedly illegal behavior falls outside bid rigging, price fixing, and market allocation schemes, the areas traditionally covered by criminal prosecutory processes. Other behavior, such as group boycotts or exclusive dealing arrangements, that constitutes "...contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce..." is also illegal under Section I of the Sherman Act. It is typically prosecuted through the Division's Civil Non-Merger Enforcement Strategy.

A distinction between the Criminal and Civil Non-Merger Enforcement Strategies is that all conduct prosecuted through the Criminal Enforcement Strategy is considered a per se violation of the law, whereas conduct reviewed under the Civil Non-Merger Enforcement Strategy may constitute a per se violation of the law or may be brought using a rule of reason analysis. Per se violations are, in and of themselves, illegal. They are violations considered so clearly anticompetitive that the Division must prove only that they occurred. Violations brought under a rule of reason analysis, on the other hand, are those that may or may not, depending on the factual situation, be illegal. In these instances, the Division must not only prove that the violation occurred, but must also demonstrate that the violation resulted in anticompetitive effects. In addition to picking up matters under Section 1 of the Sherman Act, the Civil Non-Merger Enforcement Strategy also prosecutes violations of Section 2 of the Sherman Act, which prohibits monopolization and attempted monopolization, and Section 3 of the Clayton Act, the Civil Non-Merger Enforcement Strategy relies on civil compulsory process to investigate the alleged violation.

Criminal Enforcement*

Utilizing seven geographically dispersed Field Offices and one Section in Washington, DC, the Antitrust Division deters private cartel behavior by investigating and challenging violations of Section 1 of the Sherman Act, including such persecutions as price fixing, bid rigging, and horizontal customer and territorial allocations. A wide range of investigatory techniques is used to detect collusion and bid rigging, including joint investigations with the FBI and grand jury investigations. Staff economists collect and analyze market and pricing data, and provide expert testimony where appropriate. Once we detect and successfully prosecute collusion, we may obtain civil damages, criminal fines, or injunctive relief. The Division must monitor the firms subject to injunctions to ensure that they abide by the injunctive provisions of such relief. (See Chart 4, "Locations of International Cartel Meetings Affecting United States Commerce," and Chart 5, "Sherman Act Violations Yielding a Fine of \$10 Million or More," in the Executive Summary.)

Establishment and Use of International Enforcement Agreements*

With the passage of the International Antitrust Enforcement Assistance Act of 1994 (IAEAA), the Antitrust Division's Strategy of international cooperation entered a new era. Through the establishment of international enforcement agreements, via the IAEAA, Mutual Legal Assistance Treaties (MLATs), letters rogatory, and other types of formal and informal accords, the Division and our foreign counterparts more effectively combat anticompetitive behavior. These agreements provide for depositions of foreign nationals, search and seizure of critical evidence located in foreign countries, and punishment of foreign companies and individuals who act to harm U.S. businesses and consumers. The Division and the FTC completed the first enforcement agreement under the IAEAA with Australia, and also have been successful at trial against Canadian and Japanese companies and individuals. This Strategy of establishing international enforcement agreements provides Division staff with a critical tool for fighting and deterring anticompetitive behavior internationally.

Enhancement of Analytical Framework

In conducting our Merger Enforcement Strategy, the Antitrust Division strives to enhance the framework of analysis while ensuring against undue burden to the business community whose transactions are subject to that framework. Generally, to reach a decision about a particular matter, the Division looks at certain factors to anticipate competitive outcomes, such as product and geographic markets, substitution, market shares,

refficiencies, innovation, entry, competitive impacts (e.g., volume of commerce affected and price data), and so torth. In each of these areas, the Division seeks to improve the collection of relevant data, refine methodology, and develop new means of analysis. This is due to the Division's own emphasis on quality in our investigatory efforts, and in response to the changing environment around the Merger Enforcement Strategy. In response to changes in the law and judicial emphasis, the development of competitive effects theories, and technological advancement, the Division continuously strives to enhance the framework of analysis, and our efforts are on the cutting edge. As the courts have changed over time, and have more strongly emphasized price data and efficiencies analysis as critical to their deliberations in certain cases, the Division seeks to address these new issues and further our own analytical methods. In doing so we strive to maintain currency in our approach to antitrust law enforcement and adapt to the changing nature of competition. At its core, merger analysis is economic analysis, and the Division's economics play a central role in our enforcement efforts. The Division enjoys the benefits of an economic staff that is well-regarded by professionals outside the Division, and which includes specialists in particular industries and cutting-edge methods of analysis.

Cooperation with Federal, State, and Local Law Enforcement Agencies

An essential Strategy in support of the Antitrust Division's work is the establishment and ongoing development of cooperative relationships with other Federal, state, and local law enforcement agencies and officials who play critical roles in the processes of identifying and prosecuting anticompetitive behavior. With respect to the Division's Criminal Enforcement Strategy, through the Division's Quality Criminal Cases Initiative (QCCI), we actively seek to educate other law enforcement agencies about the antitrust laws, to encourage them to refer possible cases to the Division, and to enhance communication and cooperation between and among agencies. With respect to the Division's Merger and Civil Non-Merger Enforcement Strategies, cooperative efforts are no less important. In these enforcement areas, too, the Division proactively works to share information and even pursue matters jointly where the synergy between state or local and Federal resources means better results. All of these efforts have proven very effective, resulting in a more consistent and efficient Federal and state antitrust enforcement presence across the country, serving to assure conservation of government resources at all levels, deter violations of the antitrust laws, and provide greater consistency in law enforcement policy to enable businesses to flourish.

Speeches, Publications, and Press

The Antitrust Division routinely communicates with the media and the public through the issuance of press releases describing significant matters such as case filings, consent decrees, and judgement terminations. In addition, Division officials give speeches and grant interviews that relate to activities in our three core Enforcement Strategies (Criminal, Merger, and Civil Non-Merger), or that address enforcement activities in a particular industry. Through these mechanisms the Division publicizes the active enforcement of antitrust law and deters future anticompetitive behavior.

EXEMPLAR 1 - VITAMINS

Introduction

An outstanding example of the Antitrust Division's commitment to combating illegal private cartel activity is our investigation of a worldwide vitamin conspiracy which artificially inflated vitamins prices, harming consumers around the globe. The vitamin conspiracy is the largest and most pervasive cartel ever prosecuted by the Justice Department. By September 30, 1999, 14 criminal cases had been filed. Affected vitamins, specifically, A, B₂, B₃, B₄, C, and E, are among the most essential vitamins and those most commonly used as mutritional supplements and food enrichers. These vitamins, and especially mixes of them (vitamin premixes), find their way into the daily lives of every consumer in the United States. This cartel affected anyone who ever are a bowl of cereal, drank a glass of milk or orange juice, or took a daily vitamin supplement.

Participants in the cartel included some of the largest multinational companies in the world, including companies headquartered in the United States, Japan, Germany, Switzerland, France, and Canada. As a result of widespread price fixing and sales allocation. U.S. businesses and ultimately U.S. consumers paid more for a host of p oducts than they would have in a freely competitive market. The vitamins cartel was a highly sophisticated and elaborate conspiracy in which members took pains to conceal their illegal activities from detection in order to continue colluding and avoid prosecution.

Total fines assessed in our ongoing investigation amount to more than \$875 million. The Division's work has generated record-level criminal fines levied against leading chemical and pharmaceutical giants F. Hoffmann-La Roche Ltd. of Switzerland, and BASF of Germany. These fines will be deposited into the Crime Victims Fund used to fund block grants to states.

The investigation

The Antitrust Division's vitamin investigation began several years ago after a team of Division attorneys and FBI agents uncovered evidence of an international price fixing conspiracy. As the investigation progressed, the Division's Dallas Field Office and the FBI conducted approximately 100 interviews in nearly 20 states across the country, using teams of FBI agents and attorneys. In pursuing the investigation and collecting evidence, a Dallas

Field Office attorney-FBI agent team traveled abroad to deal with and obtain necessary information from key foreign executives of cartel companies who would not subject themselves to U.S. jurisdiction for these purposes. This effort is ongoing.

Initial Results

In March 1999, the Division announced the prosecution of six cases involving vitamins B_3 (niacia/niacinamide) and B_4 (choline chloride) resulting from the vitamins investigation. One of these cases was $\underline{U.S..v.}$ Lonza AG which was filed in September 1998 but held under seal pending continued investigative activity. Pursuant to a plea agreement, this major Swiss chemical and pharmaceutical firm agreed on plead guilty and pay a \$10.5 million fine for its role in an international conspiracy to raise and fix prices and allocate the market for vitamin B_3 . High ranking Lonza executives agreed to cooperate with the investigation as part of that agreement.

The five additional cases involved vitamin B₄. Three executives of Ducoa, Inc., a U.S. vitamin manufacturer hased in Illinois, and two executives of Chinook Group, Inc., the U.S. subsidiary of a Canadian vitamin producer, agreed to plead guitty for their roles in an international conspiracy to raise and fix prices and rig bids to U.S. customers for vitamin B₄. All of the executives agreed to cooperate with the Division's investigation and all agreed to sentences requiring them to pay fines and possibly serve jail time. Jail terms totaling over three years have been imposed, or are pending sentencing, in these five cases.

In May 1999, F. Hoffman-La Roche pleaded guilty and was fined \$500 million for its leading role in a worldwide conspiracy to raise and fix prices and allocate sales of vitamins A, B_2 (Riboflavin), B_3 (CalPan), C, E, and vitamin premixes. The half-billion dollar fine was not only the targest criminal antitrust fine in history, it is the largest fine ever obtained by the Department of Justice in any criminal matter. The same day, BASF agreed to plead guilty to raising and fixing prices and allocating sales of vitamina A, B_3 , C, E, and vitamin premixes and pay a \$225 million fine, the second largest fine ever obtained in an Antitrust Division prosecution. These prosecutions send a message around the world that if companies are involved in international cartels that hort U.S. businesses and consumers, they will be investigated and prosecuted to the fullest extent of the law.

In addition to the corporate charges against F. Hoffman-La Roche and BASF, Dr. Kuno Sommer, the former Director of Worldwide Marketing for the Fine Chemicals Division of La Roche, agreed to plead guilty, voluntarily subject himself to U.S. jurisdiction, and spend four months in a U.S. prison. Sommer also agreed to pay # \$100,000 fine for his role in the worldwide vitamin conspiracy and for lying to Antitrust Division investigators. He was the first European executive to submit to such punishment for an antitrust offense.

Subsequent successes

In August 1999, Sommer's superior, Dr. Roland Brönnimann, former President of La Roche's Fine Chemicals Division, also agreed to plead guilty, submit to U.S. jurisdiction, serve a five-month jail term and pay a \$150,000 fine. This case, charging yet another Swiss citizen and resident, underscores the Justice Department's resolve to prosecute and obtain significant sentences against foreign executives engaged in international cartel activities that raise prices baid by American consumers.

In September 1999, cases were filed in Dallas against three of Japan's leading chemical and pharmaceutical companies for their roles in fixing the prices and allocating sales volumes of certain major vitamins. The companies agreed to plead guilty and pay fines totaling \$137 million. Takeda Chemical Industries, Ltd. (Osaka, Japan) pled guilty and was sentenced to pay a \$72 million fine for price fixing and allocation activities involving vitamins B₂ (riboflavin) and C in the U.S. and worldwide. Eisai Co., Ltd. (Tokyo), pled guilty and was sentenced to pay a \$40 million fine for cartel conduct involving vitamin E. The third company, Dalichi Pharmaceutical Co., Ltd. (Tokyo), pled guilty and was sentenced to pay a \$25 million fine for its cartel activities involving vitamin B₄. All three companies agreed to cooperate with the Antitrust Division's investigation.

Finally, on September 29, 1999, Chinook Group Limited, a Canadian vitamin company, was charged and agreed to plead guilty and pay a \$5 million fine for its participation in an international conspiracy to raise and fix prices and allocate market shares of vitamin B₄ sold in the United States and elsewhere. The conduct of Chinook and its co-conspirators included agreeing to divide the world markets for vitamin B₄ and rigging bids on contracts to supply vitamin B₄ to U.S. customers, primarily companies engaged in the animal feed and nutrition industry.

Current Status and Related Events

The vitamins investigation is continuing with additional cases against individuals and corporations expected to be filed beginning in early CV 2000. Pursuant to its plea agreement with Division prosecutors, Takeda Chemical of Japan, is cooperating with the Department in an investigation of the food flavor enhancers industry. Food flavor enhancers, such as MSG and ribonucleotides, are sold in the U.S. by Japanese and Korean producers for use in various food products (e.g., canned soups).

Domestically, more than 80 independent civil lawsuits seeking damages have been filed in the United States, including more than 20 class action suits. The plaintiffs claim they were overcharged tens of millions of dollars for vitamins over a multi-year period. In September 1999, six of the largest vitamin purveyors in the world, including F. Hoffman-La Roche, BASF, and Rhone-Poulenc, agreed to settle civil claims brought by numerous corporate customers for \$1.1 billion. Other customer filed cases are still pending disposition, and are likely to result in further damage recoveries by victim U.S. companies.

Internationally, competition authorities in the EU, Canada, the United Kingdom, Taiwan, Australia, Brazil, Germany, Switzerland, and Japan have begun or are considering conducting their own vitamins investigations as a direct result of the Division's investigation and prosecutions.

To date the vitamins investigation involves 29 companies from around the world, 12 different vitamin products, and food flavor, enhancer products. The investigation has been long, comptex, and resource intensive, occupying at various times as many as 10 attorneys, more than six paralegals, numerous translators, 40 FBI agents, and various support staff over the last several years. The efforts needed to successfully complete the investigation will require the expenditure of substantial additional resources.

EXEMPLAR 2 - GRAPHITE ELECTRODES

Introduction and Background

The Anticrust Division's cases against UCAR International, Inc. (UCAR); Showa Denko Carbon, Inc. (Showa Denko); SGL Carbon AG (SGL) and its CEO Robert J. Koehler; Tokai Carbon Co., Etd. (Tokai); UCAR's former CEO Robert P. Krass and UCAR's former COO Robert J. Hart; Nippon Carbon Co., Etd. (Nippon); and SEC Corporation (SEC) highlight our Criminal Enforcement Strategy and demonstrate our success in decreasing anticompetitive behavior affecting U.S. businesses and consumers even when faced with complex conspiracies that are carried out both here and abroad. UCAR manufactures graphite electrodes in Clarksville, Tennessee. Showa Denko is located in South Carolina and is a U.S. subsidiary of a Japanese company. SGL, a German corporation, and Tokai, Nippon, and SEC, Japanese corporations, are manufacturers of graphite electrodes. These are large carbon columns used by steel-making "mini mills" in electric are furnaces to conduct electricity and generate the heat necessary to melt scrap steel. SGL is the world's second largest producer of graphite electrodes and ranked second in sales in the United States behind UCAR. Total sales of graphite electrodes in the U.S. along were estimated at \$500 million in 1996.

The investigation

In early 1997, the Division initiated an investigation of the graphite electrode industry based on certain indications of anticompetitive behavior from sources in the steel industry. Shortly thereafter, one of the smaller U.S. manufacturers of graphite electrodes, the Carbide/Graphite Group, was accepted into the Division's Corporate Leniency Program and agreed to cooperate in the investigation. As the investigation progressed, the Division found evidence that executives of the world's major producers of graphite electrodes had participated in meetings and conversations in Europe, the Far East, and the U.S. to fix the prices of graphite electrodes sold worldwide, including the United States. These agreements resulted in substantial price increases in the United States beginning in 1992.

In February and April 1998, Showa Denko and UCAR, respectively, agreed to plead guilty to charges of participating in an international conspiracy to fix the price and allocate the volume of graphite electrodes sold in the United States and elsewhere.

Then, pursuant to plea agreements, Tokai, SGL and its CEO, Robert J. Koehler, in May and June 1999, respectively, entered pleas of guilty to charges of their participation in the same conspiracy charged against UCAR and Showa Denko. Koehler, a German national, voluntarily submitted to jurisdiction pursuant to the plea agreement.

In September and November 1999, two former UCAR executives and two Japanese companies, respectively, were charged with participating in the same conspiracy to fix the price and allocate the volume of graphite electrodes. UCAR's former CEO, Robert P. Krass, and its former COO, Robert J. Hart, have agreed to plead guilty to the charges. Also pursuant to plea agreements, Nippon Carbon Co., Ltd., and SEC Corporation pleaded guilty to participating in the same conspiracy charged against UCAR, SDK, Tokai, SGL, Koehler, Krasa, and Hart.

Results

The charged conspiracy affected more than \$1.75 billion in sales in the U.S. from at least as early as July 1992 to at least June 1997. UCAR, the world's largest producer of electrodes, was fined \$110 million which was, at the time, the largest fine in the Division's history. Showa Denko, with significantly lower sales in the U.S., was fined \$32.5 million.

For its participation in this international criminal conspiracy, SGL was sentenced to pay a \$135 million fine. This fine also was a record at the time and is now the third largest fine ever imposed for a Sherman Act violation. Koehler was fined \$10 million, which is by far the largest individual fine ever imposed on an antitrust defendant. Tokai, which had minimal sales in the United States, was fined \$6 million.

Neither Krass nor Hart has been sentenced for their participation in the conspiracy. Their plea agreements call for imprisonment of 17 months and 9 months, respectively, and fines of \$1.25 million and \$1 million, respectively.

Nippon and SEC, each of which had limited sales in the United States and was less culpable than the leaders and organizers of the conspiracy, were fined \$2.5 million and \$4.8 million, respectively.

Related and Ongoing Investigations

The graphite electrodes investigation is continuing. A foreign company and a foreign national remain subjects of this continuing effort. All companies which have pleaded guilty as well as the Carbide/Graphite group have agreed to cooperate. As a result, possible conspiracies in other carbon products are now under investigation.

EXEMPLAR 3 - CARGILL/CONTINENTAL GRAIN

Background

Significant changes in the agricultural marketplace—from increasing concentration in many sectors to technological and productivity advances—give rise to an increased threat of anticompetitive behavior. The Antitrust Division is committed to protecting competition in all sectors of the U.S. economy, including agriculture. To this end, we spent considerable resources investigating several large agricultural mergers recently, including Cargill's proposed acquisition of Continental Grain.

Cargill and Continental operate nationwide distribution networks that annually move millions of tons of grain and soybeans to customers throughout the U.S. and around the world. The merger, as proposed, would have increased the number of Cargill's U.S. grain-handling facilities by 34 percent.

Investigation and Completet

With the assistance of the U.S. Department of Agriculture, the Commodity Futures Trading Commission, and several state attorneys general, the Division reviewed the proposed merger, assessing its likely impact, and concluded that competition would be adversely affected in a number of markets. Our concern was competition among Cargill and Continued in the "upstream" markets—competition for the purchase of grain and soybeans from farmers and other suppliers. As a result of the merger, reduced competition would force farmers to accept less money for their major crops.

In July 1999, the Division filed a lawsuit and proposed consent decree in U.S. District Court in Washington, D.C. The complaint alleged that the proposed transaction would eliminate an important competitor for the purchase of

crops from U.S. farmers and other suppliers, such as independent elevator operators. In the consent decree, we insisted on divestitures in three different markets where Cargill and Continental are two of a relatively small number of port elevator operators who compete for the purchase of crops originating in the elevators' overlapping draw areas: (1) the Pacific Northwest, where Cargill's Seattle facility and Continental's Tacoma facility compete to purchase corn and soybeans from farmers in portions of Minnesota, North Dakota, and South Dakota; (2) Central California, where Cargill's Sacramento facility and Continental's Stockton facility compete to purchase wheat and com from farmers in central California; and (3) the Texas Gulf, where Cargill's Houston facility and Continental's Beaumont facility compete to purchase soybeans and wheat from farmers in cast Texas and western Louisiana. In addition to benefitting farmers and other suppliers in these states (who are essentially captive to the elevators involved), the required divestitures would also benefit farmers and other suppliers in Illinois, Iowa, Nebraska, Missouri, Kansas, Oktahoma, Colorado, and New Mexico, who, while not necessarily captive to the elevators involved, nevertheless rely on them as competitive alternatives.

The consent decree also required divestiture of river elevators on the Mississippi River in East Dubuque, Illinois and Caruthersville, Missouri, and along the Illinois River between Morris and Chicago, where the merger would have otherwise harmed competition for the purchase of grain and soybeans from farmers in those areas.

In the case of the Illinois River divertitures, and an additional required divestiture of a port elevator in Chicago, the merger would also anticompetitively concentrate ownership of delivery points that were authorized by the Chicago Board of Trade (CBOT) for actilement of corn and soybean futures contracts. Approximately 80 percent of the storage capacity at delivery points authorized for the settlement of CBOT futures contracts would have been under the control of Cargill and one other firm, increasing the risk that prices for CBOT corn and soybean futures contracts could be manipulated. These required divestitures prevent adverse effects on competition in the futures markets.

In addition, we required divestiture of a rail terminal in Troy, Ohio, and are prohibiting Cargill from acquiring the rail terminal facility in Salina, Kansas, formerly operated by Continental, and from acquiring the river elevator at Birds Point, Missouri, in which Continental held a minority interest until recently, in order to protect competition for the purchase of grain and soybeans in those areas. We are also requiring that Cargill enter into what is known as

a "throughput agreement" making one-third of the loading capacity at its Havana, Illinois, river elevator available for leasing to an independent grain company (to address CBOT delivery point concentration concerns), and we imposed restrictions on Cargill in the event it seeks to enter into a throughput agreement with the operator of the Seattle facility.

Current Status

Cargill and Continental agreed to the terms of the consent decree and will comply with the required divestiture of a number of grain facilities throughout the Midwest and in the West, as well as in the Texas Gulf. While this consent decree, if approved by the court, will resolve the competitive problems, it is still pending before the court under a Tunney Act proceeding in which the court determines whether the decree is in the public interest.

Exemplar 4 · Lockheed Martin/Northrop Grumman

Introduction and Background

The Antitrust Division's investigation of and challenge to the proposed acquisition of Northrop Grumman by Lockheed Martin illustrates the large and complex nature of many of the transactions reviewed under our Merger Enforcement Strategy and emphasizes the burdens of preparedness the Division faces in its attempts to maintain competition. In late CY 1997, these two giants among defense industry companies announced their intention to combine. Lockheed Martin, a Maryland company with more than \$28 billion in sales that year, and Northrop Grumman, based in California with more than \$9 billion in sales that year, are aggressive competitors in the manufacture and sale of military aircraft and several types of radar, sonar, and other electronic systems. For example, Lockheed Martin serves as the prime electronics integrator for the Navy's attack submarines and Aegis ships, and builds military aircraft such as the F-22 and the F-117. Northrop Grumman's products include the B-2 stealth bomber and the E-2C surveillance aircraft. In CY 1997, 70 percent of Lockheed Martin's sales and 80 percent of Northrop Grumman's sales were made to the U.S. military.

The Investigation and the Challenge

With assistance from the Department of Defense, the Division launched a massive investigation to review the proposed transaction and its likely effects on competition within the defense industry. The assessment: if

allowed to proceed, the merger would result in the U.S. military suffering a substantial loss of competition and innovation for a number of critical systems and components, including high-performance military aircraft, radar for use it military aircraft, sonar systems used on surface ships, and electronic warfare systems designed to protect pilots from missile attack. In March 1998, the Division filed suit to block the acquisition of Northrop Gramman by Lockheed Martin. It was the single largest proposed merger ever challenged by Federal authorities.

Preparation for Trial Interrupted

Absent indications of an alternative solution, the Division prepared for trial, scheduled for early September 1998. Our preparation was extremely resource intensive as the parties used several hundred lawyers to perform the document review, transporting thousands of boxes to the Division. With numerous products and both horizontal and vertical theories involved, the Lockheed Martin-No, throp Grumman case required about nine times the resources of an average case at that time.

In mid-July, Lockheed Martin announced that it had abandoned its alternpt to acquire Northrop Grumman. The Division considers the outcome in this matter a win on multiple counts. Clearly the biggest win for the American people is the preservation of competition in the defense industry through the retention of these companies as flerce competitors. Also important is "winning back" taxpayer resources as money and staff earmarked for trial preparation were now available to fight for competition on other fronts. The net effect of the Division's intervention in the matter is the continued benefit to us all of having high quality, lower cost military products and services available for the defense of the Nation.

EXEMPLAR 5 - VISA/MASTERCARD

Introduction and Background

The Antitrust Division is charged with enforcing the antitrust laws, and does so as they pertain to potential criminal antitrust acts, as well as anticompetitive acts charged civilly and those that we believe may result from proposed merger transactions which we are responsible for reviewing. Our enforcement activities absorb a large proportion of our resources on an ongoing basis, but never so much as when we must litigate to protect competition for the

ultimate benefit of all U.S. businesses and consumers. We currently are litigating, and expending considerable resources on, a number of significant civil cases, including our pending case against Visa U.S.A., Visa International and MasterCard International.

Visa and MasterCard are associations that operate the two largest general purpose card networks in the United States, with market shares of approximately 50 percent and 25 percent, respectively. Although the associations hold themselves out as competing entities, they are effectively owned and controlled by banks that have significant financial interests in both networks—a market structure known in the banking industry as "duality." These banks have suppressed or delayed competitive initiatives by the associations, including the development of new products such as integrated circuit (smart) cards and secure Internet transaction technology that might lead consumers to switch from one association's brand of card to the other's. In addition, both associations have adopted rules that permit their member banks to issue cards on one another's networks, but prohibit the members from issuing cards on the smaller competing networks (the exclusionary rules).

In October 1998, the Antitrust Division filed a complaint against Visa and MasterCard in the Southern District of New York. The complaint alleges that duality has substantially lessened competition between Visa and MasterCard, and that the exclusionary rules have substantially lessened competition between the two associations and smaller competing networks, such as American Express and Discover. These restraints on network competition have lessened consumer choice and reduced innovation of new products, services, and technologies. Vigorous competition among credit card networks is critical to ensure that consumers have the benefit of the best payment methods, particularly as more and more commerce is conducted through credit cards and electronic forms of payment.

Pre-trial Preparation

The trial is set to begin in June 2000. Extensive fact discovery, including large numbers of depositions, will continue through the end of February, followed by discovery of each side's expert witnesses. In addition to discovery from each of the three defendants, the Division has subpoensed numerous third-party banks seeking documents and deposition testimony. To date, the discovery has yielded over five million pages of documents stored on CD-ROM disks. The pre-trial preparations are being conducted by 20 Division staff members, including

attorneys, economists and paralegals. The Division's Litigation Support Specialists have also committed significant resources to enable the litigation staff to review the millions of pages of documents provided on CD-ROM. The Division anticipates the continued involvement of significant portions of several sections and our Paralegal Unit through the conclusion of the trial.

Desired Relief

By filing this case, the Division hopes to obtain relief that would require that the banks governing both Visa and MasterCard be dedicated to their respective networks. We are also seeking to eliminate the exclusionary rules that allow banks to issue cards on the two largest networks but not their smaller competitors. The Division believes that this relief will promote innovation, resulting in higher quality in credit card products and greater choice for _____ consumers.

Performance Measurement Table Presented by Initiative Supports DOJ Core Function 3, Strategic Goal 3.3, FY 2001 Summary Performance Plan Strategic Goal 3.3

General Goal. Decrease anticompetitive behavior effecting U.S. business and consumers. A. Definitions of Terror or Explanations for Indicators:

- Dollars and FTE. For each fascal year, the total Dollars and FTE in this Table include actual obligations and FTE for FY 1998 Actual, and FY 1999 Actual; the President's Budget Request for FY 2000 Ptan and FY 2001 Ptan, and enacted appropriations for FY 1999 Final Ptan and FY 2000 Revised Ptan. Variations between Actual and Ptan for Dollars and FTE. If services fixed years, are due to modifications made to the Orision's estimates by the Department of Justice, OMB, and Congress during the annual budget cycle. In addition, Actual FTE are lower than relevant Ptan tevels due to oppoing resource allocation decisions effecting personnel and non-personnel costs in response to changing conditions in our operating environment, g.g., increasing complexity and internationalization of antitrust Enforcement, Efforts to improve the accuracy and completioness of the Division's time reporting data and the roll out of a new Time Reporting System is enabling the Division to more accurately relate our resource expenditures. The proportion of folial Division dollars and ETE shown on this Performance Measurement Table for FY 1998 FY 2001 is based on actual hours reported by program area in FY 1999.
- Doller Renge for FY 2000 Revised Plan and FY 2001 Plan: The range of Dollars for the FY 2000 Revised Plan and FY 2001 Plan represent our anticipated resource commitments to this Strategy in each of those fiscall years, plus or minus five percent. Hence, the lower end of the range is five percent more in his the estimated Dollars, and the upper end of the range is five percent more in his the estimated Dollars.
- FTE Range for FY 2000 Revised Plan and FY 2001 Plan. It is unlikely that FTE levels will decrease for this Strategy in FY 2000 or FY 2001 because of the Antifrust
 Division's increasing workload. Therefore, the range of FTE for the FY 2000 Revised Plan and FY 2001 Plan includes the FY 1998 actual FTE for the lower and of the
 range, and the upper and of the range is based on projected FTE commitments to this Strategy, assuming maximum polication of authorized or requested FTE.
- The Antimat Division's Merger Enforcement Strategy can be divided into quighty three categories, review of Harti-Scott-Rodino (HSR) transactions brought to our attention by statutority-mandeted filings, review of Mon-HSR transactions, agi, those not subject to HSR reporting thresholds, and review of bank merger transactions. Section 7 of the Cityston Act, as amended by the Harti-Scott-Rodino Antitiust Improvements Act of 1916 requires certain enterpress that plan to merge or to enter into acquisition transactions to notify the Antitrust Division and the STC of their intention, and to submit certain information to us. These HSR premerger notifications provide advance notice of potentially encourable transactions and allow the Division between, not sat chargeable filings which provide revenue for the Division. HSR and Non-HSR transactions Reviewed includes at HSR filings the Division reviews, not sat chargeable filings which provide revenue for the Division. HSR and Non-HSR transactions may be investigated and prosecuted under Section 7 of the Clayton Act, or under Sections 1 and 2 of the Sherman Act. Referrals for Non-HSR matters come from outside the Onvision, via competitors or consumers, and are generated from within the Division, based on staff knowledge of industries and information about current events. Bank Merger Applications, brought to our attention is statutions with the Bridge Bank section of the Flederal Deposit Insurance Act, are reviewed through a somewhat different process. It is the Division's statutory responsibility, under three of the four statuties, to provide appropriate bank regulatory authorities with a report on the competitive effects of all depository institution merger and acquisition transactions that are submitted to those appropriate bank feeting the Competitive effects of all depository institution merger and acquisition transactions that are submitted to those appropriate bank regulatory authorities with a report on the competitive effects of all depository institution merger and
- Given the intreasuring elobatication of localy's markeolace, much of the Division's workload involves HSR and non-HSR mergers which have international aspects. The following definition addresses the Division's international work in general and includes some references that are not directly applicable to the Merger Enforcement Strategy. Generally, cases are determined to have international Appects if they have the potential to adversely impact U.S. domestic or loneign competition, and if any

one of five otheris is met, leading to increased complexity and graster resource requirements. A case is considered international when (a) one or more involved parties (where "involved party" may be an individual or corporation that is the subject or barget, or potential target, of an HSR or non-HSR merger investigation or case; or otherwise a participant or potential participant in an investigation or case) is not a U.S. citizen or a U.S. business, (b) one or more involved parties is not located in the U.S., (c) potentially retevant information is located outside the U.S.; (d) conduct potentially litigal under U.S. law occurred outside the U.S.; or (e) aubstantive horizon observant activations or coordination is undertaken in complexion with the matter.

- When a merger filing initially is received through the HSR process, or a potentially enticompetitive Non-HSR merger is identified by the Antitrust Division, we develop information from the filing, the parties or complainant, trade publications, and other public sources. Once we develop a sufficient factual and legal basis for further investigation. Pre-liminary injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) injury (Pf) in
- Under HSR, a Second Request is a formal request for additional information or documentary materials relevant to the proposed acquisition, and it must be communicated to the parties within the initial 15-day (in the case of cash tender offers or bankruptcles) or 30-day (in the case of other acquisitions) waiting period. Only one Second Request can be made to each party in the transaction, so a proposed Second Request must be composed. The Second Request extends the waiting period before the transaction may be consummated for 10 (in the case of cash tender offers or bankruptcles) or 20 days (in the case of other acquisitions) from the time when all of the additional material it automated to the Division. Like a PI, the issuance of a Second Request another critical step in the process of evaluating an HSR merger transaction, and it provides under nother indication of the direction of an investigation and the corresponding workload impact.
- All three categories of Merger Enforcement essentially result in the same Intermediate Outcomies, regardess of how these transactions reach the Division, including Bank Merger Applications which are reported back to the regulatory agency. Transactions uttimately are consummated, abandoned, "fixed first," settled (through a consent decrees or during the course of legators), or legated to conclusion. The process by which the Division agrees to and enters into consent decrees with parties is most nearly equivalent to the use of Atternative Dispute Resolution (ADR) in lieu of litigation. The use of ADR is a High-Level Performance Indicator listed in the Department's Strategic Plan.
- The Dollar Volume of U.S. Commerce Affected in Relevant Markets for All MSR and Non-HSR Merger Wins and the Dollar Amount of Deposits Affected in Overlapping Markets for All Bank Mergers Wins are estimated by the Antitust Division based upon available, credible information. They serve as proxies for the potential effects of possibly anticompetitive merger transactions given our Strategy and ultimately our Vision. This indicator has been revised to reflect only those HSR and non-HSR merger crises in which the Dollar Volume of Permission and non-HSR merger crises in which the Dollar Volume of Commerce Affected in instances where we have counted an HSR and non-HSR merger win and the U.S. Dollar Volume of Commerce for bank merger wins. The FY 1999 Actual is significantly below the f.Y. 1993 Actual since the latter included the beandonment of the proposed merger between Lockheed Martin and Northrop Grumman which, by their accounted for 25 percent of the estimated volume of commerce for FY 1998.
- While we have used or isting data sources in the Division to compile Indicator 20, we acknowledge some limitations in our data that result in the unstallive undervatimate of the value presented here. In the HSR merger and bank merger areas, we are required to review a significant number of applications, many of which rise determined to pose no competitive is sues. No investigation is opened in these cases, but Division resources are still employed to ensure that the transactions being proposed will do no harm to the concettine environment. We currently do not include any measure of our Enforcement activity for these "quick looks," which are nonetheless antical to antitrust law enforcement.
- It is difficult to fully or precisely capture in a single number, or even a variety of numbers, the ultimate outcome of our Merger Entorcement Strategy. It is not always clear just how far-reaching the effects of particular proposed or actual transaction are or will be. It is not always possible to determine the magnitude of a pince increase that relates directly to per include proposed or actual transaction. We cannot consistently translate into numbers the competitive impact of a particular proposed or actual transaction nor can every dauge the deterrent effects of our inforcement efforts, though we and those who have written on the subject believe that such effects exist and are strong. Nonetheless, we believe that are efforted out untilinate outcome. On the utilization of our work in this size at the Sarchors to U.S. Consumers, that arise from our

successful protection of competition in the U.S. economy and our deterrance of anticompetitive behavior. Our estimates of consumer savings derive initially from our best measurement of volume of commerce in the relevant markets with which we were concerned from the majority of merger matters, we calcutated consumer savings for FY 1994 wire. That formula makes a real-stic assumption about the oligopotistic interaction among rival firms and incorporates estimates of pre-merger market shares and of market demand elasticity. In a few merger wire, primarily vertical mergers and those in which the anticompetitive effects included in protected reductions in knowation or other special considerations, it would not have been appropriate to apply that formula. For those wire, we developed conservative astimates of consumer benefits drawing on the details learned in the investigation. We note that the volume of commerce component of the calculation is estimated bead on the best evalable information from investigative and public courses, and it is annualized and confined to U.S. commerce. Despite the roughness of our installal methodology, we believe our consumer savings figure to be a conservative estimate in that it attempted to U.S. commerce. Despite the roughness of our installal methodology, we believe our consumer savings figure to be a conservative estimate in that it attempts of our approach or processor or accurate benefits. Whele we believe that these effects in most matters are very large, we are unable to approach measuring them. Although there clearly are significant limitations to the estimate (as with any estimate), we believe this goes a long way toward describing the outcome of our work and these directly to our Vision of an environment in which U.S. consumers covery apond and services on the highest quality at this lowest price, and in which U.S. businesses compets on a level toleyting field.

- There are several ways in which an HSR merger review may be terminated. For example, prior to requesting PI authority, Division staff may only take a quick look at a transaction, and based on a reasoned analysis and available information, we may decide infermally not to conduct a formal review. Another possibility, whether or not a PI has been authorized, to Early Termination. Normally, this must be requested by the parties in writing, they must have submitted their NSR notification and report forms, and the Antitrust Division and the FTC both determine not to take Enforcement action during the waiting period. However, Early Termination may be granted after a Second Request has been issued, even absent a request by the parties. (In such a shuadon, compliance with the Second Request is no longer necessary.) All Early Terminations must be printed in the <u>Federal Register</u>. HSR merger reviews also may be terminated with the suphration of the 15. (in the case of cash bender offers or bendarpoteds) or 30-day (in the case of other acquisitions) clock, in the absence of a Second Request. HSR merger reviews may be terminated following the issuance of a Second Request.
- Key Performance Indicators 29 and 26 demonstrate whether the Antitrust Division acts quickly and responsively so that we do not unreasonably burden the business
 community in the marger review process. Key Performance Indicator 27 provides an overall view of the Division's record, looking at attuations where the Division
 determines there to be anticompositive issues and noting our "success rate" in the outcomes for those situations. A success in this contact may be any one of the positive
 outcomes cachered under Key Performance Indicators 11-15 and 18.
- Projection Methodology, Given the inherent uncertainty about estimating future activity and performance, we nonetheless made every effort to use an objective model
 for projecting FY 2000 and FY 2001 Performance Ptens for Key Performance Indicators at the Output/Activity, Intermediate Outpoons, and End Outpoons levels. In doing
 so, we have applied a calculation to base-year data that takes into account the following factors where appropriats: FTE (Increase/decrease), productivity (increase),
 inflation, and trend (coldown).
- B. Factors Affecting FY 1999 Program Performance. The Antitrust Division's merger review workload has increased dramaticalty in the 1990's due to the record number and value of merger activity, including a rise in strategic and transpirational mergers. Indeed the value of U.S. merger activity increased from approximately \$1937 billion in CY 1991 to a record level of approximately \$595 billion in CY 1997. This served continued in CY 1999 with the value of demonstic mergers activity raising 78% to \$118 billion in CY 1999 and \$1.79 triflion in CY 1999. (See Chart 2, "Value of U.S. Merger Activity," in the Executive Summary.) The level of merger activity continues at a rapid rate and is driven by a hoat of external factors, including economic conditions, technological growth, deregulationy achiemes, inclusity-specific factors, etc. Therefore, the number of merger transactors reviewed by the Orivision is officult to estimate. At the same time, given the conditional occurring in major industries, like telephony and financial services, and the increase in international mergers, the Division's workload continues to increase due to the complexity of such reviews and enforcement actions. If should be noted that our absolutely increase in merger challenges resulting in intensive preparation for httgston severely strained the Division's merger of the segment of the increase in merger challenges resulting in intensive preparation for httgston severely strained the Division's mergers.

C. Factors Affecting Selection of FY 2000 and FY 2001 Plans: The Antitrust Division's mercer review workload has increased dramatically in the 1990s due to the record number and value of merger activity, including a rise in strategic and transnational mergers. Indeed the value of U.S. merger activity increased from approximately \$137 billion in CY 1991 to a record level of accroximately \$959 billion in CY 1997. This trend continued in CY 1998 and CY 1999 with the value of domestic memory activity rising 78% to \$1.6 trillion in CY 1998 and \$1.79 trillion in CY 1999. (See Chart 2. "Value of U.S. Merger Activity," in the Executive Summary.) However, it is difficult to project the level of activity for FY 2000 and FY 2001. Indeed, the level of merger activity is driven by a host of external factors, including economic conditions, technological growth deregulatory schemes, inclusity-specific factors, etc. Therefore, the number of mercer transactions reviewed by the Division is difficult to estimate. All the same time, given the contollidations occurring in major industries, like telecommunications, media, and energy, and the increase in luternational margers, the Division's workload continues to increase due to the complexity of such reviews and finforcoment actions. Under these conditions, issues such as market definition and the availability of accommic data for analysis—which go to determining conspetitive effect- become critical and time consuming. On a practical level, the Division's workpad and efficiency are dependent on the speed with which marging parties comply with Second Requests and CrDs, and their proclevity to work with the Division to address problem areas. These factors, among others, contribute to the Division's ability to select and achieve FY 2010 and FY 2011 Performance Plans. Given these uncertainties, we have projected the total number of "successes" for our intermediate Outcomes, rather than bying to project individual numbers for Key Performance Indicators 11-15 and 18. Each of those Intermediate Outcomes is a positive outcome, including successful (tigation. It is more appropriate to project the total number of successes for FY 2000 and FY 2001, rather than the specific resolution of each win. Further, given the Division's interest in seeking Costing outcomes once to ktoation, to the extent warranted, it is difficult to estimate the Number of Mercer Cases uniqueed to Judgment (Indicator 17) and the Number of Mercer Cases Appealed Indicator 19). As we update this Performance Measurement Fable over time, we will provide Actual data after the fact; however, at this time, a projection of successes-regar fless of type—is more valuable for establishing Performance Plans

- A. Definitions of Terms or Explanations for indicators and Deta Sources:
- Delians and FTE: For FY 1998 Actual and FY 1999 Actual the total Colliers and FTE in this fable include actual obligations and FTE. The FY 2000 Revised Plan and the FY 2001 Plan contain the total Colliers and FTE in the Division's FY 2000 appropriation and the Finalderic's budges request, respectively. Variations between Actual and Plan for Delians and FTE, and source flecial years, are due to modifications made to the Division's estimates by the Department, CMB, and Congress during the annual budget cycle. In addition, actual FTE are lower or higher than referent Plan levels due to ongoing resource allocation decisions affecting personnel and non-personnel costs in response to changing conditions in our operating environment, <u>e.g.</u>, increasing complexity, and internationalization of entitival enforcement. Efforts to improve the accuracy and completeness of the Division's time reporting data and the roll out of a new Time Reporting System are analizing the Division to more accurately reflect our resource expenditures. The dollars and FTE shown on this Performance Measurement Table for FY 1996 FY 2001 are based on actual hours reported by organization and FTE shown area in FY 1996.
- Delian Range for FY 2000 Revised Plan and FY 2001 Plan: The range of Dollars for the FY 2000 Revised Plan and FY 2001 Plan represent our articipated resource commitments to this Strategy in each of those Recili years, obtained produce and the language is five percent less than the estimated Dollars, and the upper and of the range is the content more than the estimated Dollars.
- FTE Range for FY 2000 Revised Pten end FY 2001 Plan: It is unitially that FTE terests will decrease for this Stategy in FY 2000 or FY 2001 because of the Antitrust Division's increasing workload. Therefore, the range is pased on projected FTE commitments to this Strategy, assuming maximum utilization of authorized or requested FTE.
- Number of Active Investigations is indicative of Division's bessine civil non-merger workload. Staff identifies and investigates alleged violations of Section 1 and 2 of the Sherman Act and Section 3 of the City/bor Act. Many times, this non-merger investigations take more than a year to develop sufficient exclance to the a tase or close the investigation. Because staff may be working on an investigation for more than a year, this indicator accounts for the number of investigations actually reported to it within the facial year, as proposed to the number of open investigations that facial year.
- Number of Active Investigations with CID(s) Issued is inductive of the number of active investigations that involved issuance of one or more CiDs within the fiscal year. CIDs are used to compel production of information and documents from any natural or juridical person, including suspected violators, potentially injured persons, witnesses and record custodians, if there is reseen to believe that the person may have documentary meterial or information relevant to a civil antitrust investigation. The decision to issue CIDs generally involves a significant expansion in resource commitments by the Daysion and is reade only after serious consideration.
- Investigations or Cases Having International Aspects are so defined if they involve possible adverse impacts on U.S. domestic or famign competition, and if any one of the following the criteria is met, leading to increased complexity and greater resource requirements. A case or natitar is considered to be "international" when I (a) one or many involved parties (where "involved parties may be an individual or corporation that is subject or target, or potential subject or potential supplicat or potential participant or or case; or otherwise a participant or potential participant in an investigation or case; or otherwise a participant or potential participant in an investigation or case; or otherwise a participant or potential participant in an investigation or case; or otherwise a participant or potential participant in an investigation or case; (b) one or more involved parties is not located in the U.S.; (c) potentially retevent information is located outside the U.S.; (d) conduct potentially integral under U.S. law occurred outside the U.S.; or (e) substantive foreign coverment consultation or coordination is undertaken in connection with the means.
- Matters Referred to Other Enforcement Entities Where Division Support Provided Post-Referral reflects those instances when a complaint or the outcome of an investigation suggests that this—up would be better handled by another enforcement entity, such as the Federal Trade Commission, a state Attorney General's office, or a foreign competition surfacely. We are counting those meties which were referred to other entities, but to which the Division continues to devote eignificant resources to the meter, either in the form of consultation or sessions with the investigation.

- Number of Mattere in Which Practices Changed After Investigation initiated includes investigations in which: a party that is the subject of an investigation learns that the Division has opered an investigation and potentially anticompatitive practice or agreement ones not resume at the end of the Investigation. (The definition provided for indicator 8 does not include those matters in which the Division provided official comments and/or unofficial guidance to another government agency which resulted in a competitive benefit. Though the results of that activity may be reflected under Indicator 7 of the High-Level Performance Measurement Table in Section 8, it should be noted that much of the Division provided on the supervision of the Civil Non-Marger Entercement Strategy.)
- Total Dotter Volume of U.S. Commerce Affected Where Positive Outcome Achieved is estimated by the Antitrust Division based upon the best available information from investigative and public sources. The volume of commerce serves as a proxy for the potential effect of anticompetitive behavior. In estimating the Dollar Volume of U.S. Commerce Affected in a civil riory-merger case, staffs estimate an aggregate volume of commerce for each relevant domestic market effected by the enticompetitive practice or agreement. Obviously, many anticompetitive practices or agreements are more extensive, then are formatly charged, hence we believe that the Dollar Volume of U.S. Commerce Affected is an underestimate of the actual value.
- The and outcome of our work in the Civil Non-Merger Enforcement Strategy is the Savings to U.S. Consumers that srise from our successful elimination and deterrence of anticompetitive behavior. There are two components to our estimate of consumer savings: the volume of commerce affected by the antibomorpatitive behavior commerce is estimated based on the best available information from investigative and public sources, and it is annualized and confined to U.S. commerce. We are more limited in our ability to estimate price effect, and thus rely on a conservative one percent figure for our estimate (except for one instance in FY 1998 where we have more refined data). Note that we believe our consumer savings figure to be a very conservative estimate in that it attempts to measure direct on sumer benefits. That is, we have not attempted to vatue either the "spelover" effects (where our challenge to or expression of concern about specific conduct leads to changes in behavior now occurring beyond the directly-affected markets and industries) or the deterrent effects (where our challenge to or expression of concern about specific conduct prevents influence, similarly-objectionable behavior in associated markets and industries) of our successful enforcement efforts. While we believe that the sum of these effects in most marters is a multiple of the direct consumer benefits, we are unable to approach measuring them. Similarly, it can be difficult to quantify the effects of anticompetitive behavior in the sum of these effects in most marters is a multiple of the direct consumer benefits, we are unable to approach measuring them. Similarly, it can be difficult to quantify the effects of anticompetitive behavior to affect and consumer benefits and our enforcement effects of united to the effects of anticompetitive behavior to previous effects of the investment of particular enfolongetitive behavior to approach the course when enforcement effects of our enforcement effects of our enforcement effects of our enforcement effec
- A Positive Dutcome includes the Number of Statiers in Which Practices Changed After Investigation fullstated (indicator 9), Number of Cases Filled with Consent Decrees (indicator 10), Number of Cases Not Estated at Filing but Settled at Litigation (indicator 11), and Number of Cases Litigated to Judgement Buccessfully (indicator 13). In general, adequate relief in a civil entitrust case is relief that will (1) stop the inlegal practices alleged in the complaint, (2) prevent their renewal, and (3) restore competition to the state that would have existed had the violation not occurred.
 - Matters Where the Division Expressed Concern include those in which; a complaint has been filled; the subject or target of an investigation has been informed that the Assistant Attorney General (AAG) has authorized the filling of a complaint; the subject or target of an investigation has been informed that the staff is recommending that a complaint be filled, and the subject or target changes its practices in a way that causes the matter to be closed before the AAG makes a decision whether to file a complaint; or the subject or target of an investigation has been informed that the staff has serious concerns about the practice, and the subject or target inhanges its practices in a way that causes the matter to be closed before the FLBI makes a recommendation to file a complaint.

Projection flathedology: We are actively trying to develop a projection methodology for the Civil Non-Merger Enforcement Performance Measurement Table. Given the inherent uncertainty about estimating future activity and performance, we are making every effort to develop an objective model for projecting FY 2000 and FY 2001 Performance Plans for Key Performance Indicators at the Output/Activity and End Outcome levels. In doing so, we plan to apply a calculation to been-year data (likely FY 1998) that takes into account the following actions where appropriate: FTE (increase), productivity (increases), inflation, and trend (up/down). Currently, we are utilizing staff estimates based on current Division workload and projected changes in FTE to predict out-year performance.

B. Januar Affecting FY 1999 Program Performance:

In FY 1999, we proceeded in litigating three complex, resource-intensive cases of both national and international prominence. The Microsoft trial continued through the end of September. The credit card bigation against Visa and MasterCard is in decovery and pretrial preparation. In May, we liked our first preciation case in over 20 years against American Artines. The outcome of sect of these three cases will affect shroat every domestic consumer. Although these cases are not yet ripe for decision, we have prevailed in most of the pretrial motion practice which stoc has consumed a substantial amount of resources. We also have two smaller but still significant cases in litigation: Dentapty, a monopolization suit brought against the matter of takes teeth, and Federation of Physicians and Centrists, a suit alleging collable activities by doctors. This is a resultantable number of civil non-marger cases to have in litigation invultanceusly. Because traited Division resources we one consumed in the Rigation described above, there was a decrease in the resources we were able to devote to initial investigations, and correspondingly, a decrease in the number of civil non-marger cases. Several to the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of

G. leaves Affecting Selection of FY 2000 and FY 2001 Plans:

The course of the three large cases in litigation will have a significant impact on the Performance Plans for FY 2000 and FY 2001. Both the credit can's and airline itigations appear to be proceeding to Intel and can be expected to remein resource intensive. While the Microsoft litigation will lemein open pending a decision from the judge, with the conclusion of the trial, we should be able to devote more resources to initial investigative afforts. Accordingly, the Division expects this Number of Active Investigations to increase elightly over the next two flequesty years, depending on resource levies, as the Division's eability to select and enhance FY 2000 and FY 2001 Performance Plans include the increasingly complex and internstonal scope of our civil non-marger investigations, the cooperation of subjects and trifird-parties to both voluntary and computerly informance of litigation, the resources required to effectively litigate civil non-marger cases, and the availability of aconomic data for analysis

A. Definitions of Terms or Espianetions for Indicators and Data Sources.

- Dollars and FTE: For FY 1998 Actual and FY 1999 Actual this total Dollars and FTE in this table include actual obligations and FTE. The FY 2000 Revised Plan and the FY 2001 Plan contains the lotal dollars and FTE in the FY 2000 appropriation and the President's budget request, respectively. Variations between Actual and Plan for Dollars and FTE, and across fiscal years, are due to modifications mode to the Division is estimated by the Department. DMB, and Congress during the annual budget cycle. The difference between Actual and Plan Dollars and FTE in FY 1999 occurred as the Division developed a more accurate methodology for calculating these values, in addition, Actual FTE are to where or higher than relevant Plan I levels due to orgonize resource allocation decisions affecting personnel and non-personnel costs in response to changing conditions in our operating environment, e.g., increasing completing and internationalization of artificial Enforcement. Ethoris to improve the accuracy and completiness of the Division is time reporting data and the roll out of a new Time Reporting System are enabling the Division to more accurately reflect our resource expenditures. The Dollars and FTE shown on this Performance Measurement Table for FY 1999 FY 2001 is based on accurately called hour seponded by program area in FY 1999.
- Dollar Range for FY 2000 Revised Plan and FY 2001 Plan. The range of Dollars for the FY 2000 Revised Plan and FY 2001 Plan represent our anticipated resource commitments to this Strategy in each of those fiscal years, plus or minus tive percent. Hence, the lower end of the range is five percent less than the estimated Dollars, and the upper end of the trange as they percent more than the estimated Dollars.
- FTE Range for FY 2000 Ravised Plan and FY 2001 Plan. It is unlikely that FTE levels will decrease for this Strategy in FY 2000 or FY 2001 because of the Antificial Division's increasing workload. Therefore, the range of FTE for the FY 2000 Revised Plan and FY 2001 Plan includes the FY 1999 Actual FTE for the lower end of the range is based on projected FTE commitments to this Strategy, sustaining maximum utilization of surface and requested FTE.
- When a complaint or releval initially is received, or a matter is identified by the Antitrust Division, we develop information from the complainant, and from trade publications and other sources. Once we develop a sufficient factual and legal basis for further investigation, a Prailiminary Inquiry (PI) may be authorized. Once approved, a PI may take from a few weaks to several moniths to conduct, and at that point we make a determination about whether to proceed by grand jury or to close the PI. Thus a PI is often mole than a quick assagament, which is usually done when a matter is ministry received or identified, and less than a format grand jury sinvestigation. It is a critical step is the investigation process, and the number of active PIs is indicative of the Division's basisfier workload. (Note that a PI is not a necessary pre-grand jury stage, if the Division has sufficient factual and legal basis from the complaint or referral, a decision may be made to proceed immediately by grand jury without further investigation through a PI.1.
- During the course of the year, if the Amthrust Division subpoents incloiduals to, questions withesets before, presents information to, or otherwise has contact with a grand jury to one of our investigations, it is considered an Active Grand Jury. In some instances, the Division may conduct an investigation during the output of year, but not bring withouses before or present evidence to the applicable grand jury unit is autosequent year. For example, if may require a significant amount of investigation price or contribution of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of th
- Number of Positive Outcomes includes those cases filed during the fiscal year pursuant to a plea agreement, or indicted in a previous fiscal year and resulted in guilty pleas or guilty verdicts this facult year.

- Only criminal fines Agreed to by Defendants or Imposed by Court against individuals and corporations are included in this performance measurement table; the collection of imposed kines is the responsibility of the courts. Other fines Agreed to by Oefendants or Imposed by Court against individuals and corporations, such as civil damages, civil penalties, and restitutions, are not included. In accordance with departmental guidance, we have not established numerical tergets in a number of areas. We are very concerned that estimated levels of performance not become bountly-hunting largets or otherwise lead to unintended and possibly adverse consequences. As a result, although we report Actual data after the fact, we will not set our output of convinctions and fines.
 - The Cotter Volume of U.S. Commerce Affected is estimated by the Antitrust Division based upon the best available information from investigative and public sources. It serves as a priory for the potential effect of anicompositive behavior. Suspect conspiracies are more extensive, sometimes fair more extensive, than are formally charged in an indictionary, hence we believe that the Collar Volume of U.S. Commerce Affected is an indicessment of the actual value. In estimating the Collar Volume of Commerce Affected in a criminal investigation, staffs include the sales of all products affected by the conspiracy.
 - It is difficult to fully or precisely capture in a single number, or even a vanety of numbers, the ultimate outcome of our Criminal Enforcement Strategy. It is not always clear just how fair reacting the effects of a particular conspiracy are it is not always possible to determine the magnitude of the price increase that relates directly to a particular conspiracy, we cannot consistently translate into numbers the compostive with part of a given conspiracy and in our can we gauge the determine effects of our Enforcement efforts, though we and those who have written on the subject believe that such effects exist and are strong. Nonetheleas, we believe that an end outcome, a not the ultimate outcome, of our work in this area is the Sevings to U.S. Consumers that arise from our successful elimination and deterrence of criminal conspiracies. There are two components to correstinate of consumers assumes the price effect of the conspiracy and the volume of commerce affected by the conspiracy of Johannes of commerce as estimated based on the best available information from investigative and public sources. Note that this results in an underrestimate of consumer savings as the vast majority of conspiracies of its visit over a year. We six more limited in our ability to estimate price effect, and thus in most cases rely on the 10 percent figure in the U.S. Santenon-og Guidelines Manual (November 1, 1997, Section 24.1.1; Application Note 1, page 227) as the "average gain from price-tioning" (used in determining times for convicted organizations) for our estimate in price fixing, bid rigging, and other commal arithmat conspiracies. Although there are a gnific ant limitations to this estimate (as with any astimate), we believe it goes a long way toward describing the outcome of our work and loss directly to our Vision of an environment in which U.S. consumers receive goods and services of the headers.

Projection Methodology. We are actively tyring to develop a projection methodology for the Criminal Enforcement Performance Measurement Table. Given the inherent uncertainty about estimating future activity and performance, we are making every effort to develop an objective model for projecting EY 2000 and EY 2001 Performance. Plans for Key Performance indicators at the Output/Activity and End Outcome levels. In doing so, we plan to apply a calculation to base-year date that takes into account the following factors where appropriate. ETE increase/decrease) productivity (increase), inflation, and trend (up/cown). Currently, we are utilizing staff estimates based on current Division workload and projected changes in ETE to predict out-year performance.

B. Issues Affecting FY 1999 Program Performance

The record amount of crim-rannes Agreed to by Defendants or imposed by Court in FY 1999 is over three times the previous record in FY 1998. This is due to several factors, including the increasing size and international scope of carell activity. One of the most important factors is the Divisions' unprecedented application of a statute allowing atternative sentencing for animust who should not a fine results of this were seen in the record times imposed against defendants in the Animust Division is food and feed additives investigations in FY 1997. In those cases, for the first time, 18 U.S.C. §3571 was used to exceed the statutory maximum fine of \$10 million. In FY 1999, approximately \$1.1 billion in lines have been agreed to or imposed by the court. This includes F. Hoffmann-La Roche, which agreed to pay the largest fine in Department of Justice history--\$500 million. (Sad Examplar I in this Section I...)

C. (saues Affecting Selection of FY 2000 and FY 2001 Plans

his difficult to develop Performance Plans for FY 2000 and FY 2001 given the number and impact of external factors which affect the Antitrust Division's Criminal Enforcement Strategy. The rate of completants and referrals varies randomly, though we have some impact on the rale through our proactive education and outreach efforts (see Section 6). Criminal Enforcement Rev Performance Indicators. The increasingly complex and international acope of our criminal investigations, the availability of evidence, and the svalued first of cooperating witnesses affect the number of Pts. grand jury scrivity, the number and amount of fines Agreed to by Defendants or Imposed by Court, and the Dollar Volume of U.S. Commence Affected. Given these factors, it is critical to new the suste of Key Performance indicators in soliation. The Division expects the Number of Active Pts and the Number of Active Grand Junes will remain constant through FY 2000; however, this is due to a conscious shift in our Crimmal Enforcement Strategy—in response to our operating environment—to apply resources to those matters involving International Materia, a subset of the Number of Active Grand Junes Involving International Materia, a subset of the Number of Active Grand Junes Involving International Materia, a subset of the Number of Active Grand Junes Involving International Materia, a subset of the Number of Active Grand Junes Involving International Materia, a subset of the Number of Active Grand Junes Involving International Materia, a subset of the Number of Active Grand Junes Involving International Materia, a subset of the Number of Active Grand Junes Involving International Materia, a subset of the Number of Active Grand Junes Involving International Materia, a subset of the Number of Active Grand Junes Involving International Materia, and International Materia, and International Materia, and International Materia, and International Materia, and International Materia, and International Materia, and International Materia, and International Mate

A. Definitions of Terms or Explanations for Indicators and Data Sources:

Dollar Range for FY 2000 Revised Plan and FY 2001 Plan: The range of Dollars for the FY 2000 Revised Plan and FY 2001 Plan represent our enlicipated resource commitments to this Strategy in each of those fiscal years, plus or minus five percent. Hence, the lower end of the range is five percent less than the estimated Dollars, and the upper end of the range is five percent more than the estimated Dollars.

- The Number of Countries to Which the Division Provided Significant Assistance includes technical and other assistance funded by the Antirust Division, the US Agency for International Development (USAID), other US Government agencies, the host country, or some combination thereof. In perficular, since FY 1991, the Division has executed several Inter-Agency Agreements with USAID to provide technical assistance to our counterpart agencies in Central & Eastern Europe, Latin America, the Caribbean, South Africa, and the New Independent States. The Division's USAID-funded assistance programs are conducted jointly with the Federal Trade Commission (FTC), and may include a variety of assistance formats, e.g., ahort-term missions (usually one or two weeks), long-term resident advisors (from approximately three to mine months); internating in drafting or commenting on proposed competition laws and amendments thereto, discussing procompetitive interpretations of competition laws, consulting an aspecific competitive issues or sectors, drafting enforcement guidelines, and providing training on investigatory techniques. The Antitrust Division views such assistance to foreign countries as an investment in future international enforcement cooperation, for without the basic legal and institutional infrastricture to sustain competition law, it will be difficult to establish more sophisticated mechanisms for enforcement assistance as described below. (Note: Only Division funding is included in Input Indicator 1, funding from USAID, other US Government agencies, and host countries is not included in Input Indicator 1,
- The Number of International Entitles in Which the Olvision Participated includes those international organizations where the Antitrust Division advocates international enforcement cooperation. Participation in such groups, e.g., the Organization for Economic Cooperation and Development (OECD), the World Trade Organization (WTO), and Asia Pacific Economic Cooperation (APEC), provides a larger venue for the Division to influence individual countries and overall policy on the ments of international enforcement assistance. Indeed, activity in such organizations is another type of investment in future enforcement cooperation between the US and other countries.
- Mutual Law Enforcement Assistance Agreements include various mechanisms for international enforcement cooperation, e.g., agreements pursuant
