**DEPARTMENT OF COMMERCE****Bureau of the Census****[Docket Number 150409353-5353-01]****2020 Decennial Census Residence Rule and Residence Situations****AGENCY:** Bureau of the Census, Department of Commerce.**ACTION:** Notice and Request for Comment.

SUMMARY: The Bureau of the Census (U.S. Census Bureau) requests public comment on the 2010 Census Residence Rule and Residence Situations. The Residence Rule is applied to living situations to determine where people should be counted during the decennial Census. Specific Residence Situations have been included with the Residence Rule to illustrate how the Rule is applied. The Census Bureau is currently reviewing the 2010 Residence Rule and Residence Situations, to determine if changes should be made to the Rule and/or if the situations should be updated for the 2020 Census. The Census Bureau anticipates publishing the final 2020 Census Residence Rule and Residence Situations in late 2017.

DATES: To ensure consideration during the decision-making process, comments must be received by July 20, 2015. The Census Bureau anticipates publishing a summary of comments received in response to this Federal Register notice in late 2015. The Census Bureau will then publish the final 2020 Census Residence Rule and Residence Situations in late 2017.

ADDRESSES: Direct all written comments regarding the 2010 Census Residence Rule and Residence Situations to Karen Humes, Chief, Population Division, U.S. Census Bureau, Room 5H174, Washington, DC 20233; or Email [POP.2020.Residence.Rule@census.gov].

FOR FURTHER INFORMATION CONTACT: Population and Housing Programs Branch, U.S. Census Bureau, 6H185, Washington, DC 20233, telephone (301) 763-2381; or Email [POP.2020.Residence.Rule@census.gov].

SUPPLEMENTARY INFORMATION:**A. Background**

The Census Bureau is committed to counting every person in the 2020 Census. Just as important, however, is the Census Bureau's commitment to counting every person in the correct place. The fundamental reason that the decennial census is conducted is to fulfill the Constitutional requirement (Article I, Section 2) to apportion the seats in the U.S. House of

Representatives among the states. Thus, for a fair and equitable apportionment, it is crucial that people are counted in the right place during the 2020 Census.

The Census Act of 1790 established the concept of "usual residence" as the main principle in determining where people are to be counted. This concept has been followed in all subsequent censuses. Usual residence has been defined as the place where a person lives and sleeps most of the time. This place is not necessarily the same as the person's voting residence or legal residence.

Every decade the Census Bureau undertakes a review of the decennial residence rule guidance to ensure that the concept of usual residence is interpreted and applied in the decennial census as intended, and that these interpretations are in keeping with the intent of law, which directs the Census Bureau to enumerate people at their usual residence. This review also serves as an opportunity to identify new or changing living situations resulting from societal change, and create or revise the residence rule guidance where those situations are concerned.

Determining usual residence is straightforward for most people. However, given our Nation's wide diversity in types of living arrangements, the usual residence for some people is not as apparent. A few examples are people experiencing homelessness, people with a seasonal/second residence, people in prisons, people in the process of moving, people in hospitals, children in shared custody arrangements, college students, live-in employees, military personnel, and people who live in workers' dormitories. For these "residence situations," the Census Bureau has provided guidance on how to interpret the usual residence concept to determine where to count those people.

The Census Bureau is requesting public comment on the 2010 Residence Rule (section "B") and on the 2010 Residence Situations (section "B," numbers 1-21, including all subparagraphs under each numbered section) to determine if changes should be made to the Rule and/or if the situations should be updated for the 2020 Census. The 2010 Residence Rule and Residence Situations are described in the next sections of this Federal Register notice.

B. The Residence Rule and Residence Situations for the 2010 Census of the United States

The Residence Rule was used to determine where people should be

counted during the 2010 Census. The Rule said:

- Count people at their usual residence, which is the place where they live and sleep most of the time.
- People in certain types of facilities or shelters (i.e., places where groups of people live together) on Census Day should be counted at the facility or shelter.
- People who do not have a usual residence, or cannot determine a usual residence, should be counted where they are on Census Day.

The following sections describe how the Residence Rule applied for people in various living situations.

1. People Away From Their Usual Residence on Census Day

a) People away from their usual residence on Thursday, April 1, 2010 (Census Day), such as on a vacation or a business trip, visiting, traveling outside the U.S., or working elsewhere without a usual residence there (for example, as a truck driver or traveling salesperson)—Counted at the residence where they live and sleep most of the time.

2. Visitors on Census Day

a) Visitors on Thursday, April 1, 2010 (Census Day), who will return to their usual residence—Counted at the residence where they live and sleep most of the time.

b) Citizens of foreign countries who are visiting the U.S. on Thursday, April 1, 2010 (Census Day), such as on a vacation or a business trip—Not counted in the census.

3. People Who Live in More Than One Place

(a) People living away most of the time while working, such as people who live at a residence close to where they work and return regularly to another residence—Counted at the residence where they live and sleep most of the time. If there is no residence where they live and sleep more than anywhere else, if time is equally divided, or if usual residence cannot be determined, they are counted at the residence where they are staying on Thursday, April 1, 2010 (Census Day).

(b) People who live at two or more residences (during the week, month, or year), such as people who travel seasonally between residences (for example, snowbirds)—Counted at the residence where they live and sleep most of the time. If there is no residence where they live and sleep most of the time, they are counted where they live and sleep more than anywhere else. If

time is equally divided, or if usual residence cannot be determined, they are counted at the residence where they are staying on Thursday, April 1, 2010 (Census Day).

(c) *Children in shared custody or other arrangements who live at more than one residence*—Counted at the residence where they live and sleep most of the time. If time is equally divided, they are counted at the residence where they are staying on Thursday, April 1, 2010 (Census Day).

4. People Without a Usual Residence

(a) *People who cannot determine a usual residence*—Counted where they are staying on Thursday, April 1, 2010 (Census Day).

(b) *People at soup kitchens and regularly scheduled mobile food vans*—Counted at the residence where they live and sleep most of the time. If they do not have a place they live and sleep most of the time, they are counted at the soup kitchen or mobile food van location where they are on Thursday, April 1, 2010 (Census Day).

(c) *People at targeted non-sheltered outdoor locations*—Counted at the outdoor location where people experiencing homelessness stay without paying.

5. Students

(a) *Boarding school students living away from their parental home while attending boarding school below the college level, including Bureau of Indian Affairs boarding schools*—Counted at their parental home rather than at the boarding school.

(b) *College students living at their parental home while attending college*—Counted at their parental home.

(c) *College students living away from their parental home while attending college in the U.S. (living either on-campus or off-campus)*—Counted at the on-campus or off-campus residence where they live and sleep most of the time.

(d) *College students living away from their parental home while attending college in the U.S. (living either on-campus or off-campus) but staying at their parental home while on break or vacation*—Counted at the on-campus or off-campus residence where they live and sleep most of the time.

(e) *U.S. college students living outside the U.S. while attending college outside the U.S.*—Not counted in the census.

(f) *Foreign students living in the U.S. while attending college in the U.S. (living either on-campus or off-campus)*—Counted at the on-campus or off-campus residence where they live and sleep most of the time.

6. Movers on Census Day

(a) *People who move into a residence on Thursday, April 1, 2010 (Census Day), who have not been listed on a questionnaire for any residence*—Counted at the residence they move into on Census Day.

(b) *People who move out of a residence on Thursday, April 1, 2010 (Census Day), and have not moved into a new residence on Thursday, April 1, 2010, and who have not been listed on a questionnaire for any residence*—Counted at the residence from which they moved.

(c) *People who move out of a residence or move into a residence on Thursday, April 1, 2010 (Census Day), who have already been listed on a questionnaire for any residence*—If they have already been listed on one questionnaire, do not list them on any other questionnaire.

7. People Who Are Born or Die on Census Day

(a) *Babies born on or before 11:59:59 p.m. on Thursday, April 1, 2010 (Census Day)*—Counted at the residence where they will live and sleep most of the time, even if they are still in the hospital on April 1, 2010 (Census Day).

(b) *Babies born after 11:59:59 p.m. on Thursday, April 1, 2010 (Census Day)*—Not counted in the census.

(c) *People who die before Thursday, April 1, 2010 (Census Day)*—Not counted in the census.

(d) *People who die on Thursday, April 1, 2010 (Census Day)*—Counted in the census if they are alive at any time on April 1, 2010.

8. Nonrelatives of the Householder

(a) *Roomers or boarders*—Counted at the residence where they live and sleep most of the time.

(b) *Housemates or roommates*—Counted at the residence where they live and sleep most of the time.

(c) *Unmarried partners*—Counted at the residence where they live and sleep most of the time.

(d) *Foster children or foster adults*—Counted at the residence where they live and sleep most of the time.

(e) *Live-in employees, such as caregivers or domestic workers*—Counted at the residence where they live and sleep most of the time.

9. U.S. Military Personnel

(a) *U.S. military personnel living in military barracks in the U.S.*—Counted at the military barracks.

(b) *U.S. military personnel living in the U.S. (living either on base or off base) but not in barracks*—Counted at

the residence where they live and sleep most of the time.

(c) *U.S. military personnel on U.S. military vessels with a U.S. homeport*—Counted at the onshore U.S. residence where they live and sleep most of the time. If they have no onshore U.S. residence, they are counted at their vessel's homeport.

(d) *People in military disciplinary barracks and jails in the U.S.*—Counted at the facility.

(e) *People in military treatment facilities with assigned active duty patients in the U.S.*—Counted at the facility if they are assigned there.

(f) *U.S. military personnel living on or off a military installation outside the U.S., including dependents living with them*—Counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire.

(g) *U.S. military personnel on U.S. military vessels with a homeport outside the U.S.*—Counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire.

10. Merchant Marine Personnel on U.S. Flag Maritime/Merchant Vessels

(a) *Crews of U.S. flag maritime/merchant vessels docked in a U.S. port or sailing from one U.S. port to another U.S. port on Thursday, April 1, 2010 (Census Day)*—Counted at the onshore U.S. residence where they live and sleep most of the time. If they have no onshore U.S. residence, they are counted at their vessel. If the vessel is docked in a U.S. port, crew members with no onshore U.S. residence are counted at the port. If the vessel is sailing from one U.S. port to another U.S. port, crew members with no onshore U.S. residence are counted at the port of departure.

(b) *Crews of U.S. flag maritime/merchant vessels engaged in U.S. inland waterway transportation on Thursday, April 1, 2010 (Census Day)*—Counted at the onshore residence where they live and sleep most of the time.

(c) *Crews of U.S. flag maritime/merchant vessels docked in a foreign port, sailing from one foreign port to another foreign port, sailing from a U.S. port to a foreign port, or sailing from a foreign port to a U.S. port on Thursday, April 1, 2010 (Census Day)*—Not counted in the census.

11. Foreign Citizens in the U.S.

(a) *Citizens of foreign countries living in the U.S.*—Counted at the U.S. residence where they live and sleep most of the time.

(b) *Citizens of foreign countries living in the U.S. who are members of the diplomatic community*—Counted at the embassy, consulate, United Nations' facility, or other residences where diplomats live.

(c) *Citizens of foreign countries visiting the U.S., such as on a vacation or business trip*—Not counted in the census.

12. U.S. Citizens and Their Dependents Living Outside the U.S.

(a) *U.S. citizens living outside the U.S. who are employed as civilians by the U.S. Government, including dependents living with them*—Counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire.

(b) *U.S. citizens living outside the U.S. who are not employed by the U.S. Government, including dependents living with them*—Not counted in the census.

(c) *U.S. military personnel living on or off a military installation outside the U.S., including dependents living with them*—Counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire.

(d) *U.S. military personnel on U.S. military vessels with a homeport outside the U.S.*—Counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire.

13. People in Correctional Facilities for Adults

(a) *People in correctional residential facilities on Thursday, April 1, 2010 (Census Day)*—Counted at the facility.

(b) *People in federal detention centers on Thursday, April 1, 2010 (Census Day)*—Counted at the facility.

(c) *People in federal and state prisons on Thursday, April 1, 2010 (Census Day)*—Counted at the facility.

(d) *People in local jails and other municipal confinement facilities on Thursday, April 1, 2010 (Census Day)*—Counted at the facility.

14. People in Group Homes and Residential Treatment Centers for Adults

(a) *People in group homes intended for adults (non-correctional)*—Counted at the facility.

(b) *People in residential treatment centers for adults (non-correctional)*—Counted at the residence where they live and sleep most of the time. If they do not have a residence where they live and sleep most of the time, they are counted at the facility.

15. People in Health Care Facilities

(a) *Patients in general or Veterans Affairs hospitals (except psychiatric units) on Thursday, April 1, 2010 (Census Day), including newborn babies still in the hospital on Census Day*—Counted at the residence where they live and sleep most of the time. Newborn babies should be counted at the residence where they will live and sleep most of the time.

(b) *People in hospitals on Thursday, April 1, 2010 (Census Day), who have no usual home elsewhere*—Counted at the facility.

(c) *People staying in in-patient hospice facilities on Thursday, April 1, 2010 (Census Day)*—Counted at the residence where they live and sleep most of the time. If they do not have a residence where they live and sleep most of the time, they are counted at the facility.

(d) *People in mental (psychiatric) hospitals and psychiatric units for long-term non-acute care in other hospitals on Thursday, April 1, 2010 (Census Day)*—Counted at the facility.

(e) *People in nursing facilities/skilled nursing facilities on Thursday, April 1, 2010 (Census Day)*—Counted at the facility.

16. People in Juvenile Facilities

(a) *People in correctional facilities intended for juveniles on Thursday, April 1, 2010 (Census Day)*—Counted at the facility.

(b) *People in group homes for juveniles (non-correctional) on Thursday, April 1, 2010 (Census Day)*—Counted at the facility.

(c) *People in residential treatment centers for juveniles (non-correctional) on Thursday, April 1, 2010 (Census Day)*—Counted at the facility.

17. People in Residential School-Related Facilities

(a) *People in college/university student housing*—Counted at the college/university student housing.

(b) *Boarding school students living away from their parental home while attending boarding school below the college level, including Bureau of Indian Affairs boarding schools*—Counted at their parental home rather than at the boarding school.

(c) *People in residential schools for people with disabilities on Thursday, April 1, 2010 (Census Day)*—Counted at the school.

18. People in Shelters

(a) *People in emergency and transitional shelters (with sleeping facilities) on Thursday, April 1, 2010*

(Census Day), for people experiencing homelessness

—Counted at the shelter.

(b) *People in living quarters for victims of natural disasters*—Counted at the residence where they live and sleep most of the time. If they do not have a residence where they live and sleep most of the time, they are counted at the facility.

(c) *People in domestic violence shelters on Thursday, April 1, 2010 (Census Day)*—Counted at the shelter.

19. People in Transitory Locations

(a) *People at transitory locations such as recreational vehicle (RV) parks, campgrounds, hotels and motels (including those on military sites), hostels, marinas, racetracks, circuses, or carnivals*—Counted at the residence where they live and sleep most of the time. If there is no residence where they live and sleep most of the time, they are counted where they live and sleep more than anywhere else. If time is equally divided, or if usual residence cannot be determined, they are counted at the place where they are staying on Thursday, April 1, 2010 (Census Day).

20. People in Religious-Related Residential Facilities

(a) *People in religious group quarters such as convents and monasteries*—Counted at the residence where they live and sleep most of the time. If they do not have a residence where they live and sleep most of the time, they are counted at the facility.

21. People in Workers' Residential Facilities

(a) *People in workers' group living quarters and Job Corps Centers*—Counted at the residence where they live and sleep most of the time. If they do not have a residence where they live and sleep most of the time, they are counted at the facility.

Dated: May 13, 2015.

John H. Thompson,

Director, Bureau of the Census.

BILLING CODE 3510-07-P

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Full-Text Log of Comment Submissions to "2020 Decennial Census Residence Rule and Residence Situations; Notice and Request for Comment," 80 Federal Register 28950 (May 20, 2015)

Comment Submission #	Full Text of Comment Submission
c1	<p>I was chairman of the last Redistricting Committee here in _____ County, a rural county in _____ and I am disappointed that we ended up with severe malapportionment because the Census Bureau counted inmates in a prison in the county as if they were residents of that neighborhood. I am now a County Commissioner and I am working very hard to correct this problem for my county, but I also know we are just one of many counties that are similarly affected.</p> <p>Thank you for the opportunity to comment on the Census Bureau’s Residence Rule and Residence Situations, especially to address where prisoners should be counted. I am writing you to share our experience of using the Census’ data for redistricting and to urge you to count incarcerated people at their home address so that counties like mine can achieve fair representation.</p> <p>As a county in _____, we are basically faced with a classic ‘Catch 22.’</p> <p>Our goal was to follow the Constitution and give equal representation to all the citizens of our County. _____, however, told us that we had to count the prison population in our count when we did our redistricting because that is what the Census showed, even though that runs counter to the state’s residence law. I realize that the Census’ definition of residence is unlikely to perfectly track the 50 state’s definitions, but let me walk you through the _____ residence law (as described by the Secretary of State’s “Guidelines for Determining Residency”) to explain why the current interpretation of the Census Residence Rule and Residence Situations fails to count people where they live:</p> <p>“1. The residence of a person is the place where the person’s habitation is fixed and is where, during periods of absence, the person definitely intends to return.”</p> <p>Now, while I’m sure that a few of our guests at the gray bar hotel will return, (recidivism is a terrible problem in this country), I can pretty much guarantee that there isn’t any one of them that “definitely intends to return.” after they get out.</p> <p>“3. A change of residence is made not only by relocation, but also by intent to remain in the new location permanently, and by demonstrating actions consistent with that intention.”</p> <p>These men have no intention of staying in our fair county one second longer than they have to. If not for the barbed wire and armed guards that place would empty out faster than the county courthouse at quitting time on a Friday afternoon.</p> <p>These men all come from outside our county. Upon release they immediately leave our county. They are not buying homes, raising families and putting down roots here. They came here, quite simply because they were forced to at gunpoint and they stay here only because of walls, wire and armed guards.</p> <p>The 2010 Census put the population of _____ County at approximately 22,000. The inmates at the _____ County Correctional Facility number approximately 2,400. When we break the county up into 6 districts, that puts 3,667 people in each district. But whichever district gets the prison block will only have 1,267 actual residents in it and 2,400 prisoners. That adds a lot of weight to the votes cast in</p>

	<p>that district.</p> <p>To be exact, we end up with the residents of one of our districts having 3 times the representation of the residents in the rest of the county.</p> <p>And the problem has only gotten worse. Previously we had 2 prisons in our county. But one prison was shut down and the other facility was expanded to take in the inmates of the closed unit as well as additional prisoners. This resulted in just one census block containing 10% of our county's population, not one of whom is allowed to vote and not one of whom even considers themselves to be a resident of _____ County.</p> <p>It is impossible to count population bloc like that in our county electoral system and still achieve equal representation among the citizens of this county.</p> <p>In Reynolds v. Sims the U.S. Supreme Court said "The weight of a citizen's vote cannot be made to depend on where he lives." Yet that is exactly what we are forced to do because of the Census. We're left with a 3 to 1 disparity in the representation of the residents in the district with the prison over the residents in other _____ County districts.</p> <p>As a County commissioner here in _____ County I am asking you to please help us correct this problem and get back to the "One Man, One Vote" ideal. Please help us to achieve fair and equal representation to all the citizens of our county, and those across this great nation by revising the Residence Rule or Residence Situations to count incarcerated people at home in the Census.</p>
c2	<p>I would like to comment on Federal Register Notice: 80 FR 28950, 2020 Decennial Census Residence Rule and Residence Situations</p> <p>My comments are related to situation 13: People in Correctional Facilities for Adults</p> <ul style="list-style-type: none"> - Many people in local jails are not sentenced (61% is a number mentioned in a report on New York local jails – outside New York city, see http://www.criminaljustice.ny.gov/crimnet/ojsa/jail_pop_y.pdf). Many of these inmates are probably also included on a household questionnaire, especially when the questionnaire was returned before Census Day as they didn't anticipate being in jail that day. With the presumption of innocence, many innocent people are counted in correctional facilities and I would encourage the Census Bureau to consider counting unsentenced people at their usual place of residence and not in the jail. - Furthermore, I encourage to include a time stamp in the descriptions, for example 6AM and further include all people that are in transit to (or from) that location at that time. People can spend only part of Census day in certain location and be released or be on transit between facilities. <p>A comment not directly related to the residence rules:</p> <ul style="list-style-type: none"> - I would like to see more federal register notices like this that relate to the Decennial Census counting and publication rules. In particular I can think of <ul style="list-style-type: none"> o classification of Group Quarters o classification of vacancy status o definition of households and families, especially for situations with same-sex and unmarried partners.
c3	<p>The Lionheart Foundation submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p>

	<p>The Lionheart Foundation works with thousands of prisoners throughout the United States. Also, I personally live in an urban community where many of the men and women in the community are incarcerated in small towns far from their homes. By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated this population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes.</p> <p>In fairness to all citizens and to preserve the democracy, the growth in the prison population requires the Census to update its methodology to count people where their true home is situated. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universality implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because The Lionheart Foundation believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c4	<p>I write in regards to the Census Bureau's Notice and Request for Comment on the 2020 Decennial Census Residence Rule and Residence Situations (Docket No: 150409353-5353-01) published in the Federal Register on May 20, 2015, to determine if changes and updates are needed in advance of the 2020 Census. My office has heard from constituents regarding the impacts of Residence Rule No. 9, U.S. Military Personnel, and the need for modification.</p> <p>In advance of the 2020 Census, the Census Bureau should create a distinction between service members and their families stationed overseas at a U.S. military base and those service members temporarily deployed for contingency operations.</p> <p>The results of the 2010 Census displayed an anomaly that misrepresents the counting of deployed service members for overseas contingency operations. These service members, despite not having a change in their permanent duty station, and who return to their duty station upon completion of their deployment, were counted in accordance with Rule 9(f):</p> <p style="padding-left: 40px;">(f) U.S. military personnel living on or off a military installation outside of the U.S. including dependents living with them – Count as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire</p> <p>The Census Bureau attributes U.S. overseas population to the state on an individual's home-of-record. This practice may work well for members of the Department of State or other government agencies operating outside of the United States, but the Department of Defense fails to properly, and accurately, maintain their records. According to the "2010 Census Federally Affiliated Overseas Count Operation Assessment Report," dated March 19, 2012, "only 59 percent of the 2010 Department of Defense Records contained a home of record."</p>

As a result of using inaccurate and missing records for the tabulation of deployed service members, the surrounding military communities, which support the families of those service members, were calculated to have a lower population than what should be attributed to the community.

My constituents that reside in the region around Fort Campbell, Kentucky, experienced this first-hand following the 2010 census. Despite record home sales, increased public school enrollment, and other economic indicators supporting population growth, the population remained relatively unchanged from the 2000 Census. The only explanation for the discrepancy is the deployment of service members from Fort Campbell to Afghanistan.

Starting in late 2009 and continuing through 2010, members of the 1st, 2nd, 3rd, and 4th Brigade Combat teams of the 101st, the 101st Sustainment Brigade, the 159th and 101st Combat Aviation brigades were all deployed to sustain the military “surge” in Afghanistan. It is estimated that at least 10,000 service members were deployed at the collection time of the 2010 Census. Those service members then returned to Fort Campbell at the end of their deployment.

I request that the Census Bureau count all deployed service members at the base or port in which they were stationed prior to a short-term deployment for overseas contingency operations. This will create one consistent and logical method for counting deployed service members. By counting deployed service members according to where they actually live, the Bureau more accurately reports the population and ensures communities have the needed resources to support these soldiers and their families.

As you consider the need to update residency rules for the 2020 Census, I ask that you continue to keep in mind the impacts of inaction that could severely hinder the support efforts of communities that provide for our deployed military service members and their families.

Thank you for your time and thoughtful consideration.

c5 I am writing in opposition to the proposed Census Prison Adjustments. Current provisions state that all people in correctional facilities for adults will be counted at the facility. The proposed adjustments will alter this; people in correctional facilities will instead be counted at their previous “usual residence.” I firmly believe that the residency rules agreed to in the 2010 Decennial Census, wherein incarcerated individuals are counted at their facility, should remain the same for the foreseeable future.

Firstly, changing current standards will create unneeded confusion and expense. States which have adopted the prison adjustment as proposed – New York, Maryland, and Delaware – continue to have difficulty accounting for all prisoners accurately. Attempting to adopt this system at the Federal level will add a layer of superfluous complexity to the enumeration process. For example, accounting for prisoners incarcerated in a different state from their “usual residence” or a different state from their conviction would involve reviewing and adjusting prisoner counts. This could consequently change the numbers used in the apportionment of United States House seats in 2020. Moreover, the pre-incarceration residences of many prisoners can be difficult to establish, and in some cases may just be guessed based on where the prisoner was arrested.

Part of the issue at hand is that the effects of reapportionment and redistricting are not clearly known to individual states. It is no secret that the push to change current rules is being driven by activist groups who seek to gain politically from the proposed rule changes. This could leave the Census Bureau exposed to a conflict similar to the adjustment controversy of 2000, wherein miscounting led to the misallocation of a US congressional seat.

In summary, I urge you to oppose the residency rule changes for incarcerated individuals. We currently have a system that works, makes

	sense, and is non-partisan.
c6	<p>I am writing you this humid, hot North Carolina afternoon asking that you please reconsider the proposal to change the manner in which prisoners are counted for by the Bureau.</p> <p>I believe that the Bureau would be making a huge mistake if it were to not continue with business as it is currently done and count the prisoners in the location of their incarceration; the rules regarding residency that were established in the 2010 Decennial Census should remain the same.</p> <p>Firstly, how is the Bureau going to establish the residences of prisoners prior to their incarceration? It may seem rather easy to do; however, what about the career criminals who bounces back-and-forth between halfway houses and correctional institutions? Are you going to simply base their residence on the location of their most recent arrest?</p> <p>While I think that some may think this is a very elementary task of determining the residency of prisoners, this is just another solution in search of a problem. As we used to say in the Army, this briefs well. What I mean is that in theory this may seem easy to do but if the Bureau was to actually implement this policy, the results would be disastrous.</p> <p>Also, if the proposed rule changes take hold, it is possible that minority communities located in rural areas will be disenfranchised, and not protected as they should be per the Voting Rights Act. This could also open the door to future adjustments motivated by political gain, such as adjustments of residency rules for college students and military personnel.</p> <p>In closing, I urge you again to oppose the residency rule changes for incarcerated individuals.</p>
c7	<p>The Real Cost of Prisons Project submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Every day, we advocate on 'behalf of incarcerated women and men, so that the powers that be know there is someone paying attention, and holding them accountable. We are dedicated to making known the ideas of men and women who are incarcerated. We see firsthand the importance of an accurate count of incarcerated people.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Illinois, for example, 60% of incarcerated people have their home residences in Cook County (Chicago), yet the Bureau counted 99% of them as if they resided outside Cook County.</p>

	<p>When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes.</p> <p>New York State is not the only jurisdiction taking action. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universality implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because the Real Cost of Prisons Project believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c8	<p>I represent the _____ District in the Virginia House of Delegates and submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation's population.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Virginia, this resulted in a single state house district where people counted in state and federal facilities account for 12% of the district's total population.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p>

	<p>But this ad hoc approach is neither efficient nor universality implementable. It makes far more sense for the Bureau to provide accurate redistricting data in the first place, rather than leaving it up to each state to have to adjust the Census' data to count incarcerated people in their home district.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because democracy relies on a population count that accurately represents communities, I urge you to count incarcerated people as residents of their home address.</p>
c9	<p>I am submitting these brief comments in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge the Census Bureau to count incarcerated individuals at their home address and not at the address of the prison facility.</p> <p>I am an active user of census data for the academic analysis of redistricting plans. I also frequently serve as a consultant to state and local governments as they develop redistricting plans, and as an expert witness in litigation pertaining to redistricting plans. Given the size of the incarcerated population in United States, counting the prisoner population at the site of the prison can produce inequitable results in the redistricting process. Such results can be particularly problematic for local government electoral districts with smaller total populations, and minority groups if their electoral strength is decreased by counting group members at the site of a prison and not at their home addresses.</p> <p>An excellent example of "prison gerrymandering" in my home state of Wyoming pertains to state senate districts 3 and 6. To avoid having two incumbents in the same district, an appendage from district 6 is drawn north for 17 miles to include a prison housing approximately 500 individuals. The ideal population for a Wyoming state senate district is approximately 19,000 individuals. Thus, counting 500 non-voting prisoners at the site of the prison inflates the value of ballots cast by non-prison voters in district 6 relative to surrounding state senate districts. Simply said, this is unfair to the voters in the other 29 state senate districts. A map of district 6 can be viewed at the link below:</p> <p>(http://www2.census.gov/geo/maps/dc10map/SLD_RefMap/upper/st56_wy/sldu56006/DC10SLDU56006_001.pdf).</p>
c10	<p>Fair Elections Legal Network (FELN) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular prison facility they happen to be located at on Census day.</p> <p>FELN is a national nonpartisan voting rights and legal support organization whose mission is to remove barriers to registration and voting for traditionally underrepresented constituencies. We work to improve overall election administration through administrative, legal, and legislative reform as well as provide legal and technical assistance to voter mobilization organizations. As such, we recognize that the Bureau's use of the prison as a "residence" contradicts most state constitutions and statutes, which explicitly state that incarceration does not change a residence.</p> <p>When state and local officials use the Census Bureau's prison count data, they give extra representation to the communities that host the prisons despite the fact that those who are able to vote from prison must invariably do so by absentee ballot from their home address – not from the prison address. By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. The current definition of residence dilutes representation and is detrimental to democracy.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the</p>

	<p>right place in keeping with changes in society and population realities. Fair Elections Legal Network believes in a population count that accurately represents communities, thus, we urge you to count incarcerated people as residents of their home address.</p>
c11	<p>I am writing in response to your May 20 federal register notice regarding the Residence Rule and Residence Situations.</p> <p>I serve as an elected Town Meeting Representative in Precinct _____ in _____, _____, a community that hosts a correctional institution (_____, which actually straddles our border with the town of _____). Ever since _____ adopted a Representative Town Meeting form of government in 1971, the town charter has stipulated that our 150 Representatives in Town Meeting (RTMs) must be apportioned between the precincts (Town Meeting districts) according to the “number of inhabitants” in each precinct. In concept, this means the most populous precinct should have the most number of RTMs, while the smallest precinct by census should have the least number of RTMs. In general, for a Representative Town Meeting which is, by its very name, intended to be “representative” of the people, this form of apportionment makes sense.</p> <p>But because the Census Bureau counted people incarcerated at _____ as if they were residents of Precinct _____ (where the prison is located), Precinct _____ became the third most populous precinct in town, at least on paper. Without the prison, Precinct _____ is actually the least populous, and should therefore have the least number of RTMs. And as it is, Precinct _____ has the least number of registered voters of all precincts.</p> <p>In 2010 the Census Bureau assigned _____ prisoners at _____ to a census block in our town. So now Precinct _____ gets a bump of about three extra RTMs. This boost unfairly gives extra influence to Precinct _____ voters, who get more representation for fewer actual residents. Under state law, prisoners are not allowed to vote and, because of their incarceration, don’t typically use town services.</p> <p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of our population.</p> <p>_____ is one of seven communities in _____ with a Representative Town Meeting that doesn’t adjust Census data when apportioning RTMs among precincts. The other towns are _____.</p> <p>Our problem isn’t unique; when state and local officials use the Census Bureau’s prison count data, they give extra representation to the communities, and individual precincts, that host the prisons and dilute the representation of everyone else. This is bad for democracy.</p> <p>Because I believe in a population count that accurately represents my community, I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p>
c12	<p>Hi there. I am writing to comment on the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015).</p> <p>First, I urge you adjust the “usual residence” rule to count incarcerated people at their home address, not where they happen to be incarcerated on census day. Second, I want to thank you for giving this apparently small technical point the attention it deserves. Details like this are what make the Census Bureau such an important and reliable source of information.</p> <p>I am a professional researcher. For the past five years I have done research at SEIU, the labor union; for five years before that I was research director at Campaign for America's Future, a think tank; for ten years before that I worked in and around the criminal justice system. It would be hard to overestimate how often I use Census data or what I use it for. But locating population for purposes of political apportionment is central and fundamental.</p> <p>As you know, the US rate of prison incarceration hovered around 100 per 100,000 up until roughly 1980. Nowadays it is closer to 500 per 100,000, without even including local jails. Along with the explosive growth in custody has come growth in racial disparities, with African American men incarcerated at roughly six times the rate of white men. Nowadays over two million people are in prison or jail – one in 100 adults, and more people than our three least populous states combined (I know that from census data; thanks!).</p>

	<p>Applying the simple usual residence rule to people in custody might once have been reasonable. But times have changed. Above all else, it affects redistricting, the fundamental purpose of the census. Jurisdictions rely on census data to draw political districts and fairly allocate voters among representative districts. Counting people in custody where they are confined – not where they actually live – introduces avoidable error. Most people in prison will return to their usual residence in far less time than a decennial census.</p> <p>Four states and over 200 counties and municipalities have enacted new rules to adjust population data when drawing government districts. The states are California, Delaware, Maryland, and New York, who represent 20% of the US population between them. Other states that have considered or are currently considering related actions include Virginia, Illinois, Texas, Georgia and Oregon. If that much of the country thinks something is wrong, it is time for the Census Bureau to act. Indeed, a deliberate national correction is far preferable to ad hoc efforts by assorted jurisdictions on their own.</p> <p>I note that the Massachusetts legislature might have made a similar adjustment, but it determined that the state constitution binds it to the state to the Census Bureau’s determinations regarding residence and it specifically requested the Census Bureau to change the rule. I expect that still other jurisdictions may have hit similar obstacles or simply haven’t dealt with the problem yet.</p> <p>Thank you for considering a change in the rule. Because the Census count is fundamental to our representative democracy, I urge you to count incarcerated people where they actually live, not where they are temporarily confined.</p>
c13	<p>Prisoners' Legal Services of New York (PLS) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). PLS urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Founded in 1976, PLS provides direct civil legal services to more than 10,000 incarcerated individuals annually. PLS provides this underserved population with legal representation on a myriad of civil legal issues such as access to adequate medical and mental health care, proper housing, education and programming, child support and visitation, challenges to disciplinary proceedings and the use of excessive force, and matters relating to jail time credit and sentence calculations. All of the work PLS does helps prepare incarcerated individuals for release and successful reintegration into society.</p> <p>Along those lines, PLS is extremely interested in ensuring that the individuals we serve are given equal and appropriate representation by representatives of the communities from which they came and to which they will return. Counting incarcerated individuals at their home address gives those who will be returning to their communities a vested interest in helping to shape the future of their community.</p> <p>In the fall of 2006, the National Research Council issued a report commissioned by the United States Census Bureau finding that counting prisoners as residents of the prisons where they were housed distorted the political process and raised legitimate concerns about the fairness of the census itself. Thus, the issue of where to count prisoners in the census is not new.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge</p>

	<p>implications for the accuracy of the Census. By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people.</p> <p>For instance, in New York's Livingston County, which uses weighted voting, the town of Groveland derived 62% of its population from one large prison after the 2000 census; allowing the Groveland Supervisor to exercise 107 Board of Supervisor votes instead of the 40 votes he would be entitled to without the prison. And the problem extended to the State Legislature as well; seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes.</p> <p>New York State is not the only jurisdiction taking action. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts Legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because PLS believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c14	<p>The Pennsylvania Institutional Law Project [PILP] submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>The PILP provides free civil legal assistance to the institutionalized population in Pennsylvania. We have a state law 25 P.S.2813 that sets an inmates home residence as the proper residence for voting purposes. We believe the entire country should follow our example.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people.</p>

	<p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>The PILP also has identified specific inaccuracies flowing from the Bureau's current method of counting incarcerated persons as follows [cite examples]. We have previously called upon the Census Bureau to change its practice as well in prior correspondence.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because [org name] believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c15	<p>A New PATH (Parents for Addiction Treatment & Healing) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). A New PATH urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>A New PATH (Parents for Addiction Treatment and Healing) is a non-profit advocacy organization. We advocate for treatment instead of incarceration for individuals who have been convicted of non-violent drug-related crimes, and for treatment behind bars. Our mission is to reduce the stigma associated with addictive illness through education and compassionate support and to advocate for therapeutic rather than punitive drug policies.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because A New PATH believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c16	<p>My name is _____ and I am the Coordinator Community Alliance on Prisons. We submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015).</p> <p>Community Alliance on Prisons urges you to count incarcerated people at their home address, rather than at the particular facility where they happen to be located on Census day.</p> <p>Community Alliance on Prisons is a community initiative promoting smart justice policies in Hawai'i for more than a decade. This testimony is respectfully offered and always mindful that approximately 6,000 Hawai'i individuals are under the 'care and custody' of the Department of Public Safety, including 1,400 men who are serving their sentences abroad, thousands of miles from their loved ones, their homes and, for the disproportionate number of incarcerated Native Hawaiians, far from their ancestral lands.</p>

The disproportionate impact of the criminal justice system on Native Hawaiians accumulates at each stage of the criminal justice system. Native Hawaiians are also more likely to receive a sentence of incarceration over probation.¹

Hawai'i contracts with Corrections Corporation of America to house more than 1,400 of our incarcerated men in Saguaro Correctional Center in Eloy, Arizona. Hawaiians are over-represented in the incarcerated population that is banished from Hawai'i.

In researching Eloy, Arizona on the web, we found that the population there has increased 63.8% since the 2000 census.

Population in 2013²: 16,996 (68% urban, 32% rural).

Population change since 2000: + 63.8%

Males: 11,038 (64.9%)

Females: 5,958 (35.1%)

The **male population has increased 64.9%**. This is not difficult to believe since Corrections Corporation of America opened **Red Rock Correctional Center in 2006** with a capacity of **1,596**; **Saguaro Correctional Center in 2007** with a capacity of 1,896 and recently increased capacity by 30 beds = **1926**; and **La Palma Correctional Center in 2008** with a capacity of **3,060**.

These three prisons added 6,582 men to the “population” of Eloy – a 59.6% increase in the male population!

The tragedy of this skewed census count is that most of Hawai'i's incarcerated individuals are not from Eloy -- or even from Arizona, for that matter.

The census count is used as the basis for many of the decisions that affect Hawaiians (Kanaka Maoli), the first people of the islands; our host culture. Counting incarcerated persons where they are involuntarily housed causes harm to Hawai'i, in general and to Hawaiians, in particular. Incarcerated people in Hawaii are disproportionately Hawaiian. In the 2000 Census, 18% of the state was Native Hawaiian. A more recent figure reported in the 2010 report *The Disparate Treatment of Native Hawaiians in the Criminal Justice System*³ reported that 24% of the population is Native Hawaiian. The Department of Public Safety reports that approximately 40% of incarcerated people are of Hawaiian ancestry; yet is widely known that the population of incarcerated Native Hawaiians is approximately 60%.

This means that CCA's three prisons house almost 60% of the male population in Eloy, AZ. Federal funds are based on population, impacting Hawai'i's share of federal funds.

The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.

A prison cell is NOT a residence, despite being designated as such in the 2010 Census. By doing so, the Census Bureau concentrated a population that is disproportionately male and persons of color, and in our case Hawaiian, who are located far from their

actual homes and ancestral lands.

Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.”⁴ The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. But a longstanding flaw in the Census counts incarcerated people as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community.

When legislators claim people incarcerated in their districts are legitimate constituents, they give people who live close to the prison more of a say in government than everybody else. This is not fair or accurate.

We urge the Census Bureau to fix this egregious flaw that is motivated by politics, rather than thoughtful policymaking.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities.

Because Community Alliance on Prisons believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.

⁴ But it wasn’t until 1963 that “One person, one vote” became a widely articulated core principle of the Constitution when it was first spoken by Chief Justice Earl Warren’s Supreme Court. <http://www.theconstitutionproject.com/portfolio/one-person-one-vote/>

c17 Liberty County Georgia is home to Fort Stewart, 3rd Infantry Division. The population of Fort Stewart is approximately 22,000. Liberty County is very proud to be home to this great military division. However, these soldiers impact our community greatly in their utilization of our roads, court system, schools, and other infrastructure. During the last Census, April 1, 2010, the entire 3rd Infantry Division was deployed overseas to a war zone. The division redeployed to Fort Stewart completely by July 31, 2010. During this time, the number of soldiers that was deployed numbered between 13,000 and 16,000.

When the Census count was taken on April 1, 2010 we estimated that Liberty County was under counted between 11,000 and 13,000 people. We would like to note also this is the second U.S. Census that we were under counted as the 3rd Infantry Division was also deployed April 1st 1990. We are able to confirm this under count by reviewing the Command Data Summary Report that Fort Stewart produces on an annual basis. It shows the troop strength on a monthly time frame so we know how many soldiers are at Fort Stewart on any given month. A snap shot of April 1, 2010 indicates that its population was about 8,000 which included those families that lived in post housing. Once the soldiers all returned, that number on September 1, 2010 was approximately 20,000 or a difference of over 12,000 people.

The Army’s deployment rotation is normally 9 to 12 months depending on the mission. These units deploy and then come back to the same base of origination. A home station is established, they leave and return. There is a rule already in place by the Bureau, Number 9

	<p>(c) that is established for U.S. military personnel on U.S. military vessels (Navel) with a U.S. homeport. These personnel are counted at the onshore U.S. residence where they live and sleep most of the time. If they have no onshore U.S. residence, they are counted at their vessel's homeport." It is our direct feeling that all military personnel, regardless of their branch affiliation, should be handled and counted in the same manner.</p> <p>In closing, the disproportionate treatment in this count methodology has and will result in direct economic loss to the county as many grant opportunities are affected. We cannot control the timing of deployments but must maintain a consistent level of service during their occurrences. We only get one shot every ten years to accurately reflect the impacts and needs of our community. Please consider changing the current rule to be consistent with all branches of the service.</p>
c18	<p>I am a senior citizen and witnessed the growth in the 1990's of ten (10) new prisons built in 'depressed areas' of New York State, during a time when crime was actually going down! Yes, it provided more jobs BUT ... WHAT IT'S ALSO DONE ... is given greater population numbers to (political) representatives in those districts ... thus the obvious imbalance of political clout! Well over 95% of the number of inmates in those prisons did not come from those districts and therefore, those numbers should <u>not</u> be considered in any census count ... unless (perhaps) counted in the districts where they came from. However, given the fact that once they're released, they can't vote anyway ... then just simply subtract their numbers from the district they're housed at!</p>
c19	<p>I am writing in response to your May 20 federal register notice regarding the Residence Rule and Residence Situations.</p> <p>A lot of people from my community end up in prison, and it's not fair that they get counted as if they were residents of the prison town instead of at home with us. Giving our political power to people who want to lock up more of our community members just doesn't make sense.</p> <p>Because I believe in a population count that accurately represents my community, I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p>
c20	<p>In 2010, the U.S. Census Bureau counted deployed service members as part of the population of their home of record. During this time, there were approximately 10,000 service members stationed at Fort Campbell who were deployed from the installation at the time of the census. Furthermore, over 250,000 United States military personnel were temporarily deployed overseas in support of contingency operations, or for other short-term missions. Home of record is generally defined as the permanent home at the time of entry or re-enlistment into the Armed Forces as included in personnel files; when a deployment ends, soldiers return to their home base- not their original home town or home of record.</p> <p>This once a decade head count sets a baseline population upon which annual estimates are based for the next ten years. Many federal and state assistance programs use formulas based on the decennial census or derivatives from the decennial census data. With the current methodology, the communities in which these service members reside prior to deployment are deprived of potentially large sums of federal and state funding.</p> <p>By using the last duty station to count deployed service members the 2020 Census data will depict a more accurate representation of where the deployed service members live prior to deployment and in return allow the communities where these service members live access to more funding to provide services and programs for the military members and their dependents during the following ten year period.</p> <p>Thank you for consideration of this request.</p>

c23	<p>I am a volunteer in the Massachusetts Prison system. I submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility where they happen to be housed on Census day.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because I believe in a population count that accurately represents</p>

	<p>communities, I urge you to count incarcerated people as residents of their home address.</p>
c24	<p>I'm writing in response to your federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015).</p> <p>So many individuals in my state of Florida end up in prison. But they are not counted as if they are residents of their home town but as residents of some far off town- which in fact is mostly rural-meaning town's with very little of our state's population.</p> <p>Therefore we are now "giving" our political power to these individuals-those who benefit highly from incarcerating most individuals-- as our society's solution to problems that we "all" face. Does this serve the "best" interest of "one and all" or rather the interests of a few select?</p> <p>I urge you therefore, to count incarcerated people in their home town, and not in some distant rural town where the facility is located "on" that particular Census Day!</p>
c25	<p>Justice Strategies is submitting this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Justice Strategies urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Justice Strategies conducts research on criminal justice and immigration detention issues and supports advocates who seek practical policy solutions and more humane, effective and safe alternatives to the massive and unprecedented incarceration levels that has made the United States number one among all nations for the number of people it places in jails and prisons. The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. Since then, the nation's incarcerated population has more than quadrupled to over two million people, the vast majority of whom will ultimately return to their home communities. The manner in which this population is counted now has huge implications for the accuracy of the Census, and more importantly the very nature of what it means to be a representative democracy.</p> <p>In order to ensure the proper apportionment of local representatives to our national Congress, Article 1 Sec. 2 of the United States Constitution calls for the enumeration of the population every ten years. The "usual residence" rule violates the spirit, if not the letter, of this constitutional principle, by counting people in correctional facilities as residence of political jurisdictions where neither they, their families, nor their fellow community members are likely to live, and from which their political interests are not represented.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. Today, the growth in the prison population requires the Census to update its methodology, not only to safeguard the accuracy of the Census, but the political interests of the people of the United States as well.</p> <p>The inaccuracies inherent in the "usual residence" rule are not just problematic for the proper apportionment of political representation at the national level. States rely heavily on the accuracy of the US Census to do much the same, sometimes with peculiar results. In Illinois, for example, 60% of incarcerated people have their home residences in Cook County (Chicago), yet the Bureau counted 99% of them as if they resided outside Cook County. In New York State, after the 2000 Census, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents.</p> <p>New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes. However, New York is not the only State taking such action. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach. Additionally, over 200 counties and municipalities individually adjust population data to avoid prison</p>

	<p>gerrymandering when drawing their local government districts.</p> <p>Although these ad hoc measures by localities and states are appropriate and necessary adjustments to the inaccuracies inherent in the US Census Bureau's application of the "usual residence" rule, they are neither efficient nor universally implementable. The Massachusetts legislature concluded that its state constitution did not allow it to pass similar legislation. The Massachusetts legislature sent the Bureau a resolution in 2014 urging it to tabulate incarcerated persons at their home addresses. See The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014). We urge the same.</p> <p>Justice Strategies believes in a population count that accurately represents communities. The accuracy of the US Census is a critically important linchpin of our democracy. We strongly urge you to count incarcerated people as residents of their home address.</p> <p>Thank you for the opportunity to comment on the Residence Rule and Residence Situations.</p>
c26	<p>As a member of the board of directors of the Prison Policy Initiative, and as a resident of a state in which the current Residence Rule distorted election district boundaries, I submit this comment in response to the Census Bureau's federal register notice regarding proposed changes to the Residence Rule and Residence Situations as outlined in 80 FR 28950 (May 20, 2015).</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and Black or Latino into 5,393 census blocks that are located far from the actual homes of incarcerated people. When the PL 94-171 data are used for redistricting purposes, as is almost always the case, prison populations unfairly inflate the political power of people who live near prisons.</p> <p>In my home state of North Carolina, two counties removed the prison populations tabulated in the PL 94-171 data when they conducted redistricting for local government, thereby avoiding inflating the political clout of people who lived in the county districts that contained the prisons. On the other hand, one county commission district and school district in Granville County, NC is heavily underpopulated due to the county's decision to rely on the PL 94-171 data for redistricting, which counted the people incarcerated in the county as if they resided in the county. (Granville County is home to a massive federal prison complex, the population of which was included in county election district redistricting and state legislative district redistricting.) The former are examples of the lengths to which local governments must go to adjust data effected by the Residence Rule, and the latter is an example of the political distortion that the Residence Rule causes when local governments rely on the PL 94-171 data provided by the Census Bureau.</p> <p>Thank you for the opportunity to comment on the proposed changes to the Residence Rule and Residence Situations. As a board member of an organization that has been studying the effect of the Residence Rule on prison populations and redistricting for more than a decade, and as a resident of a state in which the Residence Rule impacts election district boundaries, I respectfully urge the Census Bureau to count incarcerated people as residents of their last home address.</p>
c27	<p>I am writing in response to your May 20th federal register notice regarding the Residence Rule and Residence Situations.</p> <p>I think you should strongly consider revising the policy with regard to where general quarters populations are counted, particularly prisoners. Prisoners are often short term residents in correctional facilities with ongoing and permanent ties to their original homes. They are part of communities where they come from. When they are counted as living in prisons, and not in their real communities, it does damage to those communities. This damage occurs when federal and local officials use census data to make policy decisions, and to draw district maps. It dilutes the representation the home communities and increases the representation of the district with the prison.</p>

	<p>Further people living in prisons are disproportionately black and hispanic. When you count all of those black and hispanic people in their facilities, rather than their homes, you weaken the black and hispanic vote. This is bad for democracy.</p> <p>We live in a country with two million incarcerated people. We cannot continue distorting our democracy by misplacing all two million of them.</p>
c28	<p>We are public health physicians who have retired from the Centers for Disease Control and Prevention.</p> <p>We submit this comment in response to the Census Bureau's Federal Register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Our comments are based on public health analysis.</p> <p>We urge you to count incarcerated people at their home address, rather than at the particular correctional facility where they are located on Census Day.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau place the incarcerated people, who are disproportionately male, urban, and African-American or Latino, into the 5,393 Census blocks of the prisons where they are held, which are located far from the actual homes of the incarcerated people. When these data are used for Congressional redistricting, the incarcerated people increase the political power of the districts where prisons are located. At the same time, the political power of the home communities of the incarcerated people is diminished.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right.</p> <p>Because we believe in a population count that accurately represents communities, we urge you to count incarcerated people as residents at their home addresses.</p>
c29	<p>The New Jersey Tenants Organization (NJTO) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>The NJTO is the oldest, largest statewide tenant membership organization in the United States. Over the last 46 years, NJTO has changed New Jersey from one of the worst states for tenants to (arguably) the best. NJTO has been successful in establishing the basic rights of tenants to organize and be treated as human beings with the right to safe, healthy, and affordable homes, rather than just lessees at the mercy of lessors. We have also been the driving force behind the movement for municipal rent control in New Jersey.</p> <p>But our efforts to ensure fair tenant laws are hindered when communities are shortchanged on representation. When the Bureau routinely publishes redistricting data that counts our incarcerated residents as if they lived across the state, it shifts political power, and consequently shifts our legislature's priorities.</p> <p>We commend the Bureau for striving to count everyone in the right place and thank you for this opportunity to comment on the residence rules. NJTO believes our state, and the nation, needs a population count that accurately represents all communities, so we urge you to count incarcerated people as residents of their home address.</p>
c30	<p>In 2010, the U.S. Census Bureau counted deployed service members as part of the population of their home of record. During this time, there were approximately 10,000 service members stationed at Fort Campbell who were deployed from the installation at the time of the census. c31	<p>Colorado-CURE submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>We at Colorado-CURE are interested in ending prison gerrymandering/ensuring equal representation in the entire United States. We are a 25 year old criminal justice organization in Colorado.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as 1985, Colorado had less than 3,400 people in state prisons, by 2012 that figure was 20,462. As a percentage of our total population over that same time period, Colorado's incarceration rate has quadrupled. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a Colorado population that is disproportionately male, urban, and African-American, Latino or Native American into less than two dozen facilities that are typically located far from the actual homes of incarcerated people.</p> <p>Because Colorado has not passed legislation like California, Delaware, Maryland, and New York to adjust the Census' population totals to count incarcerated people at home for state legislative' redistricting purposes, this flawed data distorts the legislative redistricting process in Colorado.</p> <p>However unlike some other states, our state does not contain any instances of prison gerrymandering at the county level because our legislature had the forethought in 2002 to pass Senate Bill 02-007, an Act Concerning County Commissioner Redistricting which requires (emphasis added):</p> <p>Each district shall be as nearly equal in population as possible based on the most recent federal census of the United States minus the</p>

	<p>number of persons serving a sentence of detention or confinement in any correctional facility in the county as indicated in the statistical report of the Department of Corrections for the most recent fiscal year.</p> <p>Each district shall be as nearly equal in population as possible based on the most recent federal census of the United States minus the number of persons serving a sentence of detention or confinement in any correctional facility in the county as indicated in the statistical report of the Department of Corrections for the most recent fiscal year.</p> <p>(This statute only applies to county redistricting, but my understanding is that all of the relevant cities in Colorado that contain large correctional facilities have chosen to adjust their redistricting data in similar ways.)</p> <p>We urge you to bring uniformity and simplicity to this process by counting incarcerated people at home in the next Census.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Colorado-CURE believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c32	<p>Ohio Voice submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Ohio Voice urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>We are the Ohio affiliate of State Voices, Ohio Voice which represents a diverse group of 5013c organizations that support civic engagement, fair representation and engagement and empowerment of underrepresented communities. We have long held a particular interest in fair representation in legislative bodies. The current system of counting incarcerated people, as a part of a legislative district where the prison is located skews and in no way is method for ensuring equal representation.</p> <p>American demographics and living situations have changed since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. The number of incarcerated people currently is over two million people. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Ohio, this process added more than 9000 people to a district by counting the prison population and this is only one example.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census’ population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts. This ad hoc approach is neither efficient nor universality implementable.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place. Because Ohio Voice believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>

c33	<p>The League of Women Voters of Wisconsin submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>The League supports equality in representation for all citizens in our state. In 2010 we supported legislation to amend our state constitution to exclude incarcerated, disenfranchised felons from the enumeration of population for the purposes of apportionment and redistricting of legislative, county and certain other district offices. We believe this resolution is an important step in achieving equality. However, we noted at the time that it would be preferable if the U.S. Census Bureau would change the way it counts incarcerated offenders.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the past few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. For example, Wisconsin has historically drawn legislative districts so that their population-sizes are within 2% of the average. But by counting incarcerated individuals as part of the districts in which they are incarcerated, Wisconsin awards greater political representation to districts with prisons than to those without them. To make matters worse, many of the incarcerated individuals are disenfranchised, which reduces the number of eligible voters in the prison districts and magnifies the influence of their vote.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census population totals to count incarcerated people in their home district, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>While this strategy lessens the problem in those four states, such an ad hoc approach is not an efficient solution overall nor will it work in every state. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</i></p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because the League of Women Voters of Wisconsin believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c34	<p>On behalf of the State of North Carolina, we have read the 2020 Decennial Census Residence Rule and Residence Situations Federal Register notice of May 20, 2015. We are grateful that the Census Bureau has demonstrated a continuing commitment to producing accurate data to support state government, business, and public needs. We appreciate the opportunity to review and comment on the residence rules used in conducting the decennial census.</p>

The current Census residency rules do not count the deployed military in the military communities where they usually reside: During emergency deployments this process produces flawed data that harms funding and planning in military communities. Deployed military populations must be counted in the county of the military community in which they usually reside. For these reasons, North Carolina recommends the following changes to the Census residency rules for deployed military populations:

1. Assign Last Duty Station as the primary residency field from the Defense Manpower Data Center records for deployed military. This will allocate deployed military to their supporting community, is consistent with Census counting of group quarters populations at their group quarters community, and efficiently uses established administrative records resources already used by the Census Bureau.
2. Count deployed spouses with their families. Local experience in 2010 suggests that families of deployed spouses were confused by Census instructions and did not complete their Census form, increasing the undercount of population in military communities. Changing the residency rule and instructions to count deployed spouses with their family will simplify Census participation, reduce confusion, improve data quality, and count the deployed military in their usual place of residence.
3. Work with military bases, including National Guard and Reserve facilities, to locate more accurate administrative records for counting deployed military in their communities.
4. Use administrative records to provide socioeconomic characteristic information on the deployed military population.

Census data is vital to policy, service, and economic development of communities. Changing residency rules for deployed military populations to count these populations within a county is consistent with Census processes for other types of group quarters and provides more accurate information for military communities. We appreciate the value of reliable data, and North Carolina is committed to working with the Census Bureau to improve the quality of this valuable resource.

c35 I am submitting this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility in which they happen to be located on Census day.

Since my days in the Wisconsin State Senate, I have attempted to end the gerrymandering of prisoners in order to ensure equal representation. The Wisconsin Legislature did not accept my motion to change how prisoners were counted in the census. In Wisconsin, prisoners do not remain in the communities in which they were incarcerated, but rather, they return to their home communities. The originating home communities are then penalized due to the way the census is tabulated.

The growth in the prison population over the past decades necessitates the Census Bureau to update its methodology, as it relates to incarcerated persons. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million and now the number of incarcerated people has more than quadrupled, to over two million people behind bars. This longstanding flaw in the Census counts incarcerated people as residents of the prison location, even though they cannot vote and are not part of the surrounding community. The manner in which this population is counted now has huge implications for the accuracy of the Census. When you count incarcerated people in districts as legitimate constituents, it awards people who live close to the prison more of say in government than everybody else.

Further, the designation of a prison cell as a residence in the 2010 Census concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated individuals. In Wisconsin for instance, Milwaukee County contains 18% of the state population but the state's prison population is made up of 42% of

	<p>Milwaukee County residents. Virtually all of the state's prison cells are located outside of the county. In effect, each group of 9 residents in one particular district has as much political power as 10 residents elsewhere in the state. Wisconsin has historically drawn legislative districts so that their population- sizes are within 2% of the average. However, with the way incarcerated individuals are counted, Wisconsin awards greater political representation to districts with prisons than to those without them.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state- wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Census Bureau strives to count everyone in the right place in keeping with changes in society and population realities. I urge you to count incarcerated people as residents of their home address.</p>
c36	<p>The Correctional Association of New York (CA) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>The CA is an independent, non-profit organization founded by concerned citizens in 1844 and granted unique authority by the NY State Legislature to inspect prisons and to report its findings and recommendations to the legislature, the public and the press. Utilizing a strategic model of research, policy analysis, prison monitoring, coalition building, leadership development and advocacy, the CA strives to make the administration of justice in New York State more fair, efficient and humane. The CA's three principal programs - the Prison Visiting Project, the Women in Prison Project and the Juvenile Justice Project - work to stop the ineffective use of incarceration to address social, economic and public health problems; advocate for humane prison conditions; empower people directly affected by incarceration to become leaders; and promote transparency and accountability in the criminal and juvenile justice systems.</p> <p>Ending mass incarceration requires fair representation, but the Census Bureau's current methodology systematically shifts political power to legislators with large incarcerated populations in their districts. This "constituent" bonus incentivizes legislators to support maintaining bloated prison populations.</p> <p>But this wasn't always a problem; as you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the nation's incarcerated population has more than quadrupled to over two million people. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated</p>

	<p>people.</p> <p>When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, our state passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes.</p> <p>While we and three other states (and over 200 counties and municipalities) all individually adjust population data to avoid prison gerrymandering, it makes far more sense for the Census Bureau to count incarcerated people at home, accurately counting incarcerated people nation-wide.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because the Correctional Association believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c37	<p>I am writing concerning Federal Register Notice [Docket Number 150409353-5353-01] requesting comments regarding the 2020 Decennial Census Residence Rule and Residence Situations.</p> <p>I wish to begin by saying that these residence rules, developed through the Bureau's extensive experience through many decennial censuses, should remain as they are stated in the above referenced notice.</p> <p>I am particularly concerned about proposals to adjust group quarters residence rules for those incarcerated in prisons. The primary rule governing decennial census counts is that the enumeration should represent a "snapshot" of where persons are residing on Census Day, <i>not where they formerly resided</i>. Such adjustments will only open the door to further manipulation of the census counts to suit the sociological and political goals of persons proposing such rule changes.</p> <p>Furthermore, these changes could embroil the Bureau in political conflicts and decrease the confidence of the American public in the neutrality of the decennial census process. It could also decrease the participation rate in the enumeration with faulty census information. There may be a possibility that these adjustments could alter the numbers determining the reapportionment of the seats of the U. S. House among the States, and bring on unnecessary litigation.</p> <p>In 2010 Decennial Census process (New York, Maryland and Delaware) demonstrated that the procedures used yielded questionable results and, in some cases allocating inmate counts to general, rather than specific locations due to lack of sufficient information. It is also notable that the three states which engaged in prison adjustment in 2011 are Democrat-controlled states, and this adjustment would not have been done were it not advantageous to the party in power. <i>Once again, the Bureau should not act as an agent for increasing partisan advantage.</i></p> <p>The Bureau will have to deal with the issue that adjustment of individual counts for group quarter, from where they resided on Census Day to their former residence, may involve moving these counts to other states.</p> <p>Because of the expense and complexity of initiating this process on a nationwide basis, I believe such adjustments should be left up to the individual states, and not be imposed by the Federal Government.</p> <p>For these reasons, I oppose changes to the residence rules stated in the Federal Register notice, and urge the Bureau to readopt the previous rules. What is the MOTIVE behind changing it in the first place?!</p>
c38	<p>I am submitting this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility where they happen to be located on Census day.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated</p>

	<p>people. When this data is used for redistricting, prisons inflate the political power of those people who live near them, and take away the ability of people in the incarcerated peoples' home neighborhoods to fully participate in our democracy. This disturbs me hugely as a citizen.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because I believe in a population count that accurately represents communities, I urge you to count incarcerated people as residents of their home address.</p>
c39	<p>Common Cause in Connecticut submits this comment in response to the Census Bureau 's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility where they happen to be located on Census day.</p> <p>Common Cause is an organization dedicated to strengthening our laws to protect voting rights and to ensuring that every voter has an equal say in our elections. Using the Census counts to draw state and local legislative districts enhances the weight of a vote cast by people who live near prisons at the expense of everyone else in the state or county.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people.</p> <p>In Connecticut this resulted in the majority-white residents of 7 State House districts getting significantly more representation in the legislature because each of their districts included at least 1,000 incarcerated African Americans and Latinos from other parts of the state.</p> <p>For example, State House District 59, (Enfield) claimed more than 3,300 African Americans and Latinos as constituents. But 72% of the African Americans and 60% of Latinos were not actually residents of the district, but rather were temporarily incarcerated in the Enfield, Willard, and Robinson Correctional Institutions.</p> <p>The resulting dilution of African-American and Latino political power was not limited to the 59th district: 86% of the state's prison cells are located in disproportionately white house districts.</p> <p>We have been working to pass state legislation to end this problem in the state but the U.S. Census could do this nationwide.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p>

	<p>But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Common Cause believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c40	<p>As a former member of Maine Regional School Unit 13's Board of Directors I submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>As a former elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of our population.</p> <p>Our Regional School Unit (RSU 13) uses a weighted voting system to apportion votes among the member towns. When we two districts consolidated to make one, we based the weighted vote system on Census Bureau estimates for 2006, we relied on Census data that counted the people incarcerated at the Maine State Prison as if they resided in the town of Thomaston. The prisoners had been moved to a neighboring town of Warren three years prior. This most unfortunate result gave every nine people in Thomaston as much of a say over our children's education as 10 residents from the other towns. This was a classic case of vote dilution.</p> <p>To some, this may seem like an academic discussion, but the distorted vote allocation has serious practical legislative consequences. In 2011, for example, a very narrow vote by the RSU 13 Board moved my town of St. George's 8th graders to an 8th and 9th grade school in Thomaston. (We have since withdrawn from the school district and this was a catalyst) The supporters of the school shift prevailed only because the representatives from Thomaston were able to cast additional votes because of the Census prisoner misallocation. It was tough to explain to my constituents why their vote was equal to that of somebody incarnated in Warren, but perhaps from New York. Simply put, it wasn't and isn't fair to the population to dilute the vote this way. I worked tirelessly to correct this matter, but it wasn't until petitions, and motions were filed trying to fix this, and finally the new number from the Census Bureau arrived. It wasn't until the new numbers arrived that this problem was finally corrected, but the damage was done.</p> <p>The RSU 13 eventually redistricted again, and this time, adjusted the Bureau's data but our reliance on the Bureau's data in the past left lasting harms. And while we solved the problem ourselves, albeit through a long drawn out exercise, and continue to apply our band-aid solution in the future, I doubt we're the only ones whose democratic institutions would benefit from more accurate data coming straight from the Census Bureau.</p> <p>Thank you for this opportunity to comment on your residence rules, all the work you do, and I urge you to count incarcerated people as residents of their home address.</p>
c41	<p>I write in response to your May 20 federal register notice regarding the Residence Rule and Residence Situations. Thank for giving the public a chance to contribute on this matter because it is one that I feel strongly about.</p> <p>I believe in a population count that accurately represents my community, I urge you therefore to count incarcerated people at their home</p>

	<p>address, rather than at the facility that they happen to be located at on Census day.</p> <p>For example a lot of people from New York City end up incarcerated in Dannemora, N.Y.S. From your Census count of 2010, <u>as you now count it</u>, we know Dannemora has 3, 936 <i>residents</i>. But that at least 2,800 of those '<i>residents</i>' are incarcerated men in the Clinton Correctional Facility in Dannemora.</p> <p>I lived, voted, and paid my taxes in New York City when a member of my community was incarcerated in Clinton Correctional Facility in Dannemora for several years.</p> <p>Neither he, nor any of his peers who came from N.Y.C. ever felt they were democratically represented by political representatives from that region. Quite simply, the political concerns of people living in N.Y.C. are very different from those of rural upstate Dannemora.</p> <p>I give a tiny example from our personal experience to show how unjust the situation is as it stands. I do this because I know our situation is not unique.</p> <p>One weekend when visiting said community member, I was walking back from the facility to my overnight accommodation across from the outside wall of the prison. I put some candy wrapper I had in a garbage can and walked on. I heard someone shouting, but thought nothing of it. The shouting continued and continued. I finally looked about and realized the shouting was indeed directed at me. It was a prison guard on duty high up on the tower in the prison. He told me to take my garbage out of the garbage bin because it was a private garbage bin, not for public use. I excused myself and did so, and then I asked him where I might find a public garbage bin. He thought for a moment, and then he said there were no public garbage bins in Dannemora. I asked what should I do with my garbage as I had come from NY for the weekend... He replied 'Take it back to New York City with you'.</p> <p>Ms. Humes, every weekend at least 100 people from N.Y.C. visit loved ones in Dannemora. The economy of Dannemora and surrounds receives millions yearly as a result of our loved ones being incarcerated there.</p> <p>Right now the Census Bureau recognizes Clinton Correctional Facility as the '<i>residence</i>' to 1000's of men from New York City. Over the years that is a count of several thousands of men from New York City who were or are counted as being '<i>residents</i>' of Dannemora.</p> <p>But the political representation for our loved ones incarcerated in Dannemora did not reach to include the availability of one garbage bin being on the street for use by their families when visiting them in their '<i>residence</i>' in Dannemora.</p> <p>This is only one tiny example. Most respectfully, one does not need to be a social nor political scientist to see this is not fair representation.</p>
c42	<p>I urge you to revise your procedures for including incarcerated people in future U.S. Censuses. The figures for incarcerated people are basic to redistricting and in areas with high prison populations, districts become unequal in voting eligible population when people who cannot vote are included in the census.</p> <p>In my state, Arizona, for example, there are districts with much higher prison populations than other districts. Some of the prisons are explicitly for the purpose of housing non-citizens waiting determination of status. None of these people are eligible to register to vote, yet they must be included in determining the size of the district.</p> <p>Further, incarcerated people are generally disproportionately members of minority groups. Since redistricting calls for fair representation</p>

	<p>of minorities in districts, counting the prison population who live in otherwise largely non-minority districts leads to unfair results. I recommend that you count these people as living at their home address, not their residential address.</p> <p>In the case of non-citizens, they should not be listed as residents of the prison area. There are a few large incarceration centers in Arizona established for the explicit purpose of housing non-citizens, but they are currently included when counting total population and minority population. This makes minority representation in a few districts highly misleading when redistricting since they cannot vote, both because of their citizenship status and their incarceration status.</p> <p>Thank you for your consideration.</p>
c43	<p>Family Reconciliation Center (formerly Reconciliation, Inc.) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Family Reconciliation Center believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c44	<p>International Citizens United for Rehabilitation of Errants (CURE) and its state and issue chapters submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). International CURE urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>International CURE is a grassroots organization dedicated to the reduction of crime through the reform of the criminal justice system (especially prison reform.). Although we are now an international organization, we were founded in Texas in 1972 and our US National and state chapters remain at the core of our mission. We write to you now on behalf of and in conjunction with those chapters because we are concerned about the U.S. Census Bureau's role, however unintentional it might be, in tilting the US electoral system in favor of those who support mass incarceration and against those who seek a just criminal justice system.</p> <p>By counting incarcerated people as if a prison cell were their residence, the Census Bureau counts incarcerated people, who are disproportionately male, urban, and African-American or Latino, in the wrong place. When this data is used for redistricting, prisons inflate the political power of those people who live near them and dilute the votes of everyone else.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place. Because International CURE believes in a population count that accurately represents all communities, we urge you to count incarcerated people as residents of their home address in the decennial census.</p>
c45	<p>I am writing in response to your May 20 federal register notice regarding the Residence Rule and Residence Situations.</p> <p>A lot of people from my community end up in prison, and it's not fair that they get counted as if they were residents of the prison town instead of at home with us.</p>

	<p>Giving our political power to people who want to lock up more of our community members just doesn't make sense. Because I believe in a population count that accurately represents my community, I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p>
c46	<p>The League of Women Voters of the Northwoods submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility where they happen to be located on Census day.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of the incarcerated people. For example, Wisconsin has historically drawn legislative districts so that their population-sizes are within 2% of the average. But by counting incarcerated individuals as part of the districts in which they are incarcerated, Wisconsin awards greater political representation to districts with prisons than to those without them. To make matters worse, the incarcerated individuals are disenfranchised. The number of eligible voters in the prison districts are reduced and the influence of the voters in the district is magnified. When this data is used for redistricting, prisons inflate the political power of the people who live near them.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because League of Women Voters of the Northwoods believes in a population count that accurately represents communities and the principles of one person, one vote, we urge you to count incarcerated people as residents of their home address.</p>
c47	<p>The League of Women Voters of Dane County (Wisconsin) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility where they happen to be located on Census day.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and minority into just 5,393 Census blocks that are located far from the actual homes of the incarcerated people. When this data is used for redistricting, it removes power, influence, and financial resources from the neighborhoods from which this population comes and to which this population will return.</p> <p>Thank you for the opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because the League of Women Voters of Dane County (Wisconsin) believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c48	<p>Californians United for a Responsible Budget (CURB) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>As a statewide coalition of over 70 organizations, CURB is working to stop prison and jail construction, reduce the amount of people inside, and reinvest the saved resources into alternatives to incarceration, education, and restoring the social safety net.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p>

	<p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In California, this resulted in Los Angeles County being misrepresented. Los Angeles County contains 28% of California’s population, yet it only contains 3% of California’s state prison cells. In other words, few persons are incarcerated in Los Angeles County compared to the number of persons incarcerated that come from this county, which is 34%. According to the 2010 U.S. Census Summary, Blacks make up only 6% percent of California’s total population, yet they make up 27% of the incarcerated population.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a statewide approach to adjust the Census’ population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. See The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because CURB believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c49	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations 80FR28950 (May 20, 2015). We are a church which is a community of faith by and for prisoners. They and their families become members. We network with prisoners during their incarceration and after their release. Over the years we have been involved in the movement to have prisoners counted for the Census at their home addresses rather than in the facility where they are located.</p> <p>For years district leaders and legislators in New York State have fought to have new prisons built in their district so that the prison population would add to the population of that district. Some districts would not exist if it were not for counting the prisoners. Prisons inflate the political power of those who reside there and minimize the power of those who live in the urban centers—who are chiefly African American and Latino,</p> <p>The practice of prison gerrymandering when government districts are drawn must stop.</p> <p>Thank you for the opportunity to comment on the Residence Rule and Residence Situations as the Census Bureau strives to count everyone in the right place in keeping with changes in society and population realities.</p> <p>We at the Church of Gethsemane believe in a population count that accurately represents communities. We are asking you to count incarcerated people as residents of their home addresses.</p>
c50	<p>I am writing in response to your May 20 federal register notice regarding the Residence Rule and Residence Situations.</p>

	<p>A lot of people from Dallas County end up in prison, and it's not fair that they get counted as if they were residents of the prison town instead of at home with us. Giving our political power to people who want to lock up more of our community members just doesn't make sense.</p> <p>Because I believe in a population count that accurately represents my community, I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p>
c51	<p>Legal Services for Prisoners with Children (LSPC) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). LSPC urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Founded in 1978, Legal Services for Prisoners with Children (LSPC) enjoys a long history advocating for the civil and human rights of people in prison, their loved ones and the broader community. Our vision of public safety is more than a lock and key. We believe that the escalation of tough-on-crime policies over the past three decades has not made us safer. We believe that in order to build truly safe and healthy communities we must ensure that all people have access to adequate housing, quality health care and education, healthy food, meaningful work and the ability to fully participate in the democratic process, regardless of their involvement with the criminal justice system.</p> <p>California law says a prison cell is not a residence. "A person does not gain or lose a domicile solely by reason of his or her presence or absence from a place while ... kept in an almshouse, asylum or prison." (California Elections Code § 2025.) But a longstanding flaw in the Census counts incarcerated people as residents of the prison location, even though they can't vote and aren't a part of the surrounding community. When legislators claim people incarcerated in their districts are legitimate constituents, they award people who live close to the prisons more say in government and dilute the representation of everyone else. This is bad for democracy.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. For example, Los Angeles County contains 28% of California's overall population, and 34% of the state's prisoners' population. However, few prisoners are actually incarcerated in Los Angeles, which contains only 3% of California state prison cells. The consequences include, counting thousands of incarcerated men and women as members of the wrong communities and enhancing the political clout of the people who live near prisons. (<i>California 2010 Census Guide</i>. Peter Wagner, Mar. 2010. Web. 08 July 2015.)</p> <p>Another problem with the prison population in California is the racial disparities between Whites, African Americans, and Latinos. African Americans are over-represented in the prison and jails population; African Americans represent 7% of our population but 27% are incarcerated. Hispanics are also over-represented in California prisons and jails; Hispanics represent 38% of our total population and 41%</p>

	<p>are incarcerated. Compared to Whites who are underrepresented in California Prisons and jails; White make up 40% of our population but represent 26% of the incarcerated population. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. The Census Bureau needs to improve the accuracy of the data about the African-American and Latino population. (Wagner, Peter. "California Profile, Prison Policy Initiative." <i>California Profile</i>. N.p., n.d. Web. 08 July 2015.)</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a statewide approach to adjust the Census's population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. LSPC believes in a population count that accurately represents communities, so we urge you to count incarcerated people as residents of their home address.</p>
c52	<p>I am writing in response to your May 20 federal register notice regarding the Residence Rule and Residence Situations.</p> <p>A lot of people from my community end up in prison, and it's not fair that they get counted as if they were residents of the prison town instead of at home with us. Giving our political power to people who want to lock up more of our community members just doesn't make sense.</p> <p>Because I believe in a population count that accurately represents my community, I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p>
c53	<p>Voice of the Ex-Offender (V.O.T.E.) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>We at V.O.T.E. are interested in ending prison gerrymandering/ensuring equal representation in the entire United States. We are a membership-based organization founded and run by formerly incarcerated persons, and we believe that the communities that our members come from are the ones most impacted by the malapportionment that prison gerrymandering causes.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, due to the massive growth in the prison population, the Census needs to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. In 1980, there were less than 10,000 people incarcerated in Louisiana, but by 2012, there were approximately 40,000 people incarcerated in the state of Louisiana alone. New Orleans, where V.O.T.E. is located, incarcerates more people per capita than anywhere in the world. As a result, the manner in which the incarcerated is counted has huge implications for the accuracy of the Census and for the political representation of</p>

	<p>the communities hardest hit by incarceration. In fact, over half of Louisiana's state prison population comes from just four parishes: Orleans, Caddo, East Baton Rouge, and Jefferson.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into facilities that are typically located far from the actual homes of incarcerated people.</p> <p>Because Louisiana has not passed legislation like California, Delaware, Maryland, and New York to adjust the Census' population totals to count incarcerated people at home for state legislative redistricting purposes, this flawed data distorts the legislative redistricting process at the state and, even more so, at the local level. For example, twelve of Louisiana's State House Districts and ten of Louisiana's State Senate Districts drawn after the 2010 Census fail to meet constitutional population requirements without prison populations. Locally, in Allen Parish, a federal prison population is 66% of one district, and a state prison is 39% of another district. In Catahoula Parish, half of one district is incarcerated, meaning five people in that district have as much voting power as ten people in any other one of Catahoula Parish's districts.</p> <p>We urge you to bring uniformity and simplicity to this process by counting incarcerated people at home in the next Census.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Voice of the Ex-Offender believes in a population count that accurately represents communities, as we did in February 2013, we once again urge you to count incarcerated people as residents of their home address.</p>
c54	<p>Colorado Common Cause submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). For purposes of the census, we urge you to count incarcerated people at their last-listed home address, rather than at the particular facility where they happen to be incarcerated on Census Day.</p> <p>Redistricting is a top issue for Colorado Common Cause. We believe districts should fairly represent their communities. When county populations include people incarcerated in area prisons, state legislators use inaccurate information when re-drawing Congressional and legislative districts. The Census Bureau, to which most states – including Colorado – refer when apportioning residents for redistricting purposes, has the power to change this practice.</p> <p>As with many other states, the majority of people incarcerated in Colorado's prisons are convicted in urban counties but incarcerated in prisons located in rural counties. For example, fifty percent of the people admitted to prison in Colorado in 2012 were convicted in the urban counties of Denver, Arapahoe, Jefferson, and El Paso, but the great majority of incarcerated people in Colorado were housed in rural counties. Fremont County, Colorado, represents the most egregious example. Only 1.23% of the Colorado Department of Corrections' 2012 public prison population had a home address in Fremont County, but the county's six state prisons are the incarcerated address for 29 percent of the state's 2012 public prison population.</p> <p>Since the African American and Hispanic/Latino populations are disproportionately incarcerated in Colorado, and these populations tend to live in the state's urban areas, these populations are also misrepresented during the census by counting their prison cell as their residence. Votes cast in these prison districts carry more weight than others as a result of the artificial residency number, while the urban districts where the prisoners are from have less; this is a fundamental unfairness we seek to redress.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations. Because Colorado Common Cause believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address</p>

	on Census Day.
c55	<i>This comment submission contains graphics and cannot be displayed in this table. It is available as Appendix Attachment c55.</i>
c56	<p>Grassroots Leadership submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Grassroots Leadership fights to end for-profit incarceration and reduce reliance on criminalization and detention through direct action, organizing, research, and public education. We are interested in ensuring fair political representation for the communities hardest hit by incarceration.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the nation’s incarcerated population has more than quadrupled to over 2 million people. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Illinois, for example, 60% of incarcerated people have their home residences in Cook County (Chicago), yet the Bureau counted 99% of them as if they resided outside Cook County.</p> <p>When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York passed state legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes.</p> <p>In addition to New York, three other states (California, Delaware, and Maryland) are taking a similar statewide approach, and over 200 counties and municipalities individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the Massachusetts state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>While Grassroots Leadership is a national organization, we have identified specific inaccuracies flowing from the Bureau’s current method of counting incarcerated persons in the state of Texas, where we are based. In two districts (District 13 near Walker County and District 8 near Anderson County), almost 12% of each district’s 2000 Census population is incarcerated. As a result, each group of 88 actual residents in these two districts is given as much political clout as 100 people elsewhere in Texas.</p>

	<p>In February 2013, we called upon the Census Bureau to change this practice, and we once again urge you to count incarcerated people as residents of their home address, ensuring a population count that accurately represents all communities.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations and your work to count everyone in the right place in light of changes in society and population realities.</p>
c57	<p>On behalf of my constituents, I am writing to support changing the Census Bureau’s residence rules to count incarcerated individuals at their homes, rather than designating prisons as their “usual residences.”</p> <p>As the prison population of the United States grows, it has become increasingly important to account for prisoners accurately in the Census. Prisons are often located in areas that otherwise have low population densities, so counting prisoners as residents of those areas is massively distorting. The current rule complicates the drawing of representative electoral districts, and it disproportionately misrepresents the residence of minority men.</p> <p>Counting prisoners at their home addresses is important in ensuring they are represented in our democracy. Prisoners’ legal residence remains their home address, and they usually return to that address when released. Those who can vote do so absentee using their home address; under Michigan law, they remain electors in their home districts. As a legislator, I can assure you that most of my colleagues do not treat prisoners brought into their districts as their constituents. Instead, prisoners are referred to the legislative office representing their home address.</p> <p>Michigan has done its best to keep misleading prison Census numbers from distorting redistricting, but the solution is far from perfect. Problems have arisen regarding federal facilities, and Michigan’s policies are different from those used in other states. In order to ensure that the same method is used to account for prisoners’ residences across the United States, I respectfully urge the Census Bureau to adjust the residence rule to count prisoners in their home districts. This change will provide better data both for social science and for drawing the electoral districts upon which our representative democracy depends.</p>
c58	<p>FairVote: The Center for Voting and Democracy submits these comments in response to the Census Bureau’s notice regarding the Residence Rule and Residence Situations, 80 Fed. Reg. 28950 (May 20, 2015) (the “Rule”). FairVote urges the Bureau to change the Rule to count incarcerated people not as residents of the facility in which they are housed during the Census but as residents of their home address or place of residence prior to incarceration.</p> <p>FairVote is a 501(c)(3) non-profit organization founded in 1992 whose mission is to advocate for fairer political representation through election reform. FairVote develops analysis and educational tools necessary to win and sustain improvements to American elections. FairVote is particularly dedicated to the principle of fair representation for every voter, and it works for reforms that promote respect for every vote and every voice in every election.</p> <p>As this comment describes, the problem of “prison gerrymandering” violates important democratic principles. Representatives are most accountable to non-voting populations when they represent their actual residences – the communities that share values and interests with those populations. When a person is incarcerated and moved to a different location, it does not mean that the representative in that location will be accountable to them; instead, it merely inflates the voting power of the community of voters in that new location while diminishing the voting power of their own home community.</p> <p>Under the current Rule, prison cells are designated as a residence. People who are incarcerated on Census Day are considered residents of the facility in which they are housed, rather than their actual homes or places of residence. As a result, a large segment</p>

of the population is classified as residing away from their actual homes and communities. This population also happens to be disproportionately male, urban, and African-American or Latino.

Since 1980, the United States' incarcerated population has more than quadrupled from less than half a million to over two million people. The rapid rise in the number of incarcerated people has major implications for the accuracy of the Census and, consequently, the accuracy of electoral districts drawn using that data.

The skewed Census data resulting from the Rule affects our political system at every level of government. Most jurisdictions rely on Census data to draw legislative districts with roughly equivalent populations. However, when the Census contains skewed residence information, districts containing prisons may be considered "equal" in size despite containing fewer residents. As a result, voters in these districts have more powerful votes than those of other districts. For example, in New York after the 2000 Census, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were actual residents of those districts. This disparity led New York State to pass legislation to which adjusts Census data to count incarcerated people at home for redistricting purposes.

The inclusion of incarcerated people as district residents has led several states, including New York, to take action. New York has passed legislation which adjusts Census data to count incarcerated people at their actual or prior residences for the purposes of redistricting. California, Delaware, and Maryland are also taking a similar state-wide approach. In addition, more than 200 counties and municipalities have all individually adjusted population data to avoid artificially inflating the population of prison districts when drawing their local government districts.

However, this type of stop-gap is neither efficient nor available for all jurisdictions. The Massachusetts legislature was unable to pass legislation similar to that of New York after it concluded that the state constitution did not allow it. As a result, in 2014, the Massachusetts legislature sent a resolution to the Bureau urging it to tabulate incarcerated persons at their home addresses.¹

FairVote appreciates having the opportunity to comment on the Residence Rule and Residence Situations. As the Bureau strives to count all people in their proper place, FairVote urges that the Residence Rule and Residence Situations be amended to require counting incarcerated people as residents of their home address or place of residence prior to incarceration.

¹ See The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).

c59 I am writing, in both my personal capacity and as a coordinator of research groups on de/incarceration here at _____ and in the community in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015).

Our members, situated in upstate and small town New York and active in local jail and prison research and teaching, urge the Census to record incarcerated persons in their home, originating, districts. This is commonly couched in New York and elsewhere as an issue for large cities, but as data on New York and other similar states would indicated, many prisoners return to small and rural towns—almost half of New York's released prisons return to "upstate" New York for example—well beyond the New York City metropolitan area.

If we want an accurate picture of the population we need to update the methodology of the Census. Some states have done this; it would be

	<p>very critical for the Census to change the “usual residence” rule as well. A federal standard would, moreover, provide a common basis for current state rulings which vary considerably.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations.</p>
c60	<p>Women Who Never Give-Up (“WWNG”) submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). WWNG is a 501(c)(3) nonprofit organization that confronts a wide range of criminal justice and prison-related issues. We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population. Because WWNG believes in a population count that accurately represents all communities, we urge you to count incarcerated people as residents of their home address.</p>
c61	<p>The Minnesota Second Chance Coalition submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>The Minnesota Second Chance Coalition is a partnership of over 50 organizations that advocate for fair and responsible laws, policies, and practices that allow those who have committed crimes to redeem themselves, fully support themselves and their families, and contribute to their communities to their full potential. An accurate count of incarcerated people is vital to ensuring fair representation that reflects our communities and advances these goals.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Minnesota, this resulted in four state house districts that derive at least 3% of their required population from prisons located in the district.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p>

	<p>But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because the Coalition believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c62	<p>The Council on Crime and Justice (The Council) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). The Council urges you to count incarcerated people at their home address, rather than at the address of facility where they happen to be located on Census day.</p> <p>The Council on Crime and Justice is a private, non-profit agency located in Minneapolis, MN, that has been a leader in the field of criminal and social justice for over 56 years. The Council provides an independent voice for a balanced approach to criminal justice. It has also been at the forefront of many new programs in such areas as offender services, alternative sanctions, victim's rights, and restorative justice. The Council's work seeks a criminal justice system that is equitable and just, treats people with compassion and dignity, and allows for second chances, creating a safe and thriving community.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. c63	<p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because [org name] believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p> <p>The Criminal Justice Policy Coalition submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situation, 80 FR 28950 (May 20, 2015).The Criminal Justice Policy Coalition urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>As a non-profit organization dedicated to the advancement of effective, just, and humane criminal justice policy in Massachusetts, the Criminal Justice Policy Coalition has a significant interest in ending prison gerrymandering and ensuring equal representation. The current Census Bureau policy of counting incarcerated people at their particular facility constitutes a violation of justice and democracy.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Massachusetts, this resulted in roughly 10,000 people counted at their facility location rather than their actual home, which is their legal address for other purposes.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a statewide approach to adjust the Census’ population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>This ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. See The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014). In following our state’s initiative and the calls of other organizations such as the Prison Policy Initiative, we, the Criminal Justice Policy Coalition, urge the Census Bureau to count incarcerated people at their home address for the 2020 census.</p> <p>The Prison Policy Initiative also has identified specific inaccuracies at both the state and local levels flowing from the Bureau’s current method of counting incarcerated persons. Within Massachusetts, the most significant problems arise when towns rely on accurate data from the Census Bureau to assign representatives for their representative town meeting government, but the towns unknowingly use skewed numbers due to the Census Bureau methodology. For example, the town of Plymouth has a total of nine representative members, three of which are directly attributable to the Plymouth County Correctional Facility. That is, 33% of the representatives come from the incarcerated population. The same is the case in the town of Ludlow, where 5 of the 15 precinct representatives are attributable to the</p>
-----	---

	<p>Hampden County Correctional Center. Additionally, the people incarcerated in the Bristol County House of Correction and Jail, Bristol County Sheriff's Office Women's Center, and the C. Carlos Carreiro Immigration Detention Center account for 13 of the 44 representatives (30%) at Dartmouth town meeting.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because the Criminal Justice Policy Coalition believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c64	<p>The National Association of Criminal Defense Lawyers (NACDL) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). NACDL urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>The NACDL encourages, at all levels of federal, state and local government, a rational and humane criminal justice policy for America -- one that promotes fairness for all; due process for even the least among us who may be accused of wrongdoing; compassion for witnesses and victims of crime; and just punishment for the guilty. But such justice is hard to achieve when legislators gain constituents based on the number of prisoners the Bureau counts in their district.</p> <p>As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the nation's incarcerated population has more than quadrupled to over two million people. The manner in which this population is counted now has huge implications for the accuracy of the Census thus the fairness of redistricting.</p> <p>When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. In New York after the 2000 Census, for example, seven state senate districts only met minimum population requirements because the Census counted incarcerated people as if they were upstate residents. This is just one example of the recurring systematic shift of political power away from communities most affected by incarceration to communities that host large prisons. In New York this political shift stymied reform of the harsh Rockefeller Drug Laws long after the public came to understand that these mandatory incarceration laws were both ineffective and counterproductive. In addition, communities where prisoners are most likely to come from are not recipients of the economic benefits that exist for communities that are able to count prisoners as their residents. This further impedes the economic development of communities most in need.</p> <p>As you know, four states have passed legislation to adjust their redistricting to count incarcerated people at home for redistricting purposes. But this ad hoc approach is neither efficient nor practical.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place. Because NACDL believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home addresses.</p>
c65	<p>Cover Girls for Change submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Cover Girls for Change is a platform highlighting the voices of models, whose faces are known but whose voices are often overlooked. We seek to advocate for social change through film, documentaries, and social advocacy and to raise the voices of the voiceless. We believe that this includes the over 2 million people incarcerated in the U.S. and their families and communities.</p>

	<p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades as the incarcerated population has expanded at a rate like never before in the history of the U.S. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. Every two weeks for the last 4–5 years, I have been visiting a friend in prison. Thus, I am very familiar with the landscape of the prison system in New York, D.C., and the other places where my friend has been imprisoned. It is so clear from my experience that most prisons are located far away from the communities that incarcerated people are from. When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located.</p> <p>In New York — where Cover Girls for Change is based — after the 2000 Census, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State fortunately passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes.</p> <p>New York is not the only jurisdiction taking action. Three other states (California, Delaware, and Maryland) are taking a similar statewide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>We previously called upon the Census Bureau to change its practice in 2013, and we once again urge you to count incarcerated people as residents of their home address.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities.</p>
c66	<p>On behalf of The Leadership Conference on Civil and Human Rights, a coalition charged by its diverse membership of more than 200 national organizations to promote and protect the civil and human rights of all persons in the United States, we appreciate the opportunity to provide comments in response to the Census Bureau’s Federal Register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). The Leadership Conference considers a fair and accurate census, and the collection of useful, objective data about our nation’s people, housing, economy, and communities, among the most significant civil rights issues facing the country today. Today, the growth and disbursement of the prison population requires the Census Bureau to update its methodology with respect to the “usual place of residence” of incarcerated people, so that the size and power of the communities that host the prisons are not inflated at the expense of others. Therefore, we urge you to count incarcerated people as members of the community from which they come and not as</p>

members of the community in which they are incarcerated on Census Day.

The Census Bureau counts people in prison as if they were residents of the communities where they are incarcerated at the time of enumeration, even though they remain legal residents of the places they lived prior to incarceration. Because census data are used to apportion political representation at all levels of government, this practice gives extra political influence to people who reside in legislative districts that contain prisons and dilutes the votes cast in all other districts. This vote dilution is particularly extreme for urban and minority communities that have disproportionately high rates of incarceration.

The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million.ⁱ Since then, the nation’s incarcerated population has more than quadrupled to over two million people.ⁱⁱ The manner in which this population is counted now has huge implications for the accuracy of the census and the fair allocation of political representation and governmental resources.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 census blocks that are located far from the actual homes of incarcerated people.ⁱⁱⁱ In Illinois, for example, 60 percent of incarcerated people have their home residences in Cook County (Chicago), yet the Bureau counted 99 percent of them as if they resided outside of Cook County.^{iv}

When these data are used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. In New York after the 2000 Census, for example, seven State Senate districts only met population requirements because the census counted incarcerated people as if they were upstate residents. For this reason, the New York State Legislature passed legislation to adjust the population data after the 2010 Census to count incarcerated people at their home of record (that is, the place they resided before incarceration) for redistricting purposes.^v

The composition and structure of America’s population and households have changed dramatically in the 225 years since the first census. The census has evolved in response to many of these changes, in order to continue providing an accurate picture of the nation and to help policymakers meet society’s needs. Because The Leadership Conference supports a population count that accurately represents communities, we urge you to count incarcerated people as residents of their pre-incarceration household. We stand ready to work with you to ensure that the voices of the civil and human rights community are heard in this important, ongoing national conversation.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place, to reflect enormous demographic shifts, changes in the prison infrastructure, and the urgent needs of communities. If you have any questions about these comments, please contact _____, Managing Policy Director, at _____.

c67	<p>The Pennsylvania Prison Society submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). The Society urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>The Prison Society was founded in 1787 and is the oldest prison reform organization in the world. We have continued our mission of humane treatment and justice for over two centuries. We now provide reentry services to men and women incarcerated in Pennsylvania state correctional institutions and county jails. We also provide services to families of inmates. The families often undergo hardships while their loved ones are incarcerated. The neighborhoods they live in also need resources. These communities need support and representation.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again. In Pennsylvania alone, there are over 50,000 men and women in the state system.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because The Pennsylvania Prison Society believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c68	<p>Regarding B. 5. Students; (f) Foreign students living in the U. S. while attending college (living either on-campus or off-campus...):</p> <p>For Census 2020, I suggest changing the wording that pertains to the resident rules for students to include, "...while attending school (either college or high school)...".</p> <p>In Umatilla County, Oregon, we have a boarding school that houses foreign high school students. These students are from other countries, and are attending the boarding school during the school year. The boarding school is their usual place of residence for the school year, which is most of the year.</p> <p>While the numbers of foreign high school students at this boarding school is small (10 boys and 10 girls), there currently is no category in which to count or include these students even though they reside in the U.S. during most of the year. Likely there are other situations similar to the Umatilla County boarding school in other parts of the U.S.</p>
c69	<p>I am writing to you as the Chief of the Population Division in response to the federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015).</p> <p>In the last few Censuses I was counted as if I was a resident of the prison where I was incarcerated, not in Harlem New York City where I</p>

	<p>lived prior to my incarceration. This was not fair to my community, nor to any community in the state that didn't have a prison.</p> <p>It is particularly painful for me, as I was incarcerated for 23 years 11 months and 10 days for a crime I did not commit. Thanks to the efforts of a police officer who investigated the case in his private time, I am now out of prison.</p> <p>Clearly the elected representatives in Upstate New York do not have a desire to help people in their areas get out of prison. I am convinced though, that I could have been freed a lot sooner had I been able to ask for help from the political representatives in Harlem where I lived prior to my incarceration. But these people are already over-burdened, so as a policy they cannot offer assistance to <u>'residents outside their voting district'</u>.</p> <p>Although my situation is not common, it is not unique. I knew of 13 other innocent people during my time in prison. Eleven of them were from minority communities. They had the same experience as me, that is to say, they could not ask for support from the elected representatives in the areas where they lived before they were arrested.</p> <p>As you can see, a population count that accurately counts residents at their home address is very important, so I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p>
c70	<p><i>This comment submission contains graphics and cannot be displayed in this table. It is available as Appendix Attachment c70.</i></p>
c71	<p>The Integrated Justice Alliance of New Jersey submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). The Integrated Justice Alliance urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>The Integrated Justice Alliance of New Jersey (IJA) is a statewide network working toward a fair and effective criminal justice system: one that promotes public safety and the restoration of individuals and families, protects and safeguards the rights of individuals in state custody, promotes transparency and ensures accountability, and spends taxpayer dollars wisely. Our website: http://www.integratedjusticealliance.org/</p> <p>The IJA is dedicated to ending prison gerrymandering in order to ensure equal representation across our state. In 2011, members of the IJA gave testimony before the Apportionment Commission of New Jersey in Toms River (1-29-2011), Newark (2-9-2011), and Jersey City (2-11-2011) to request that we count incarcerated people fairly as residents of their home communities and not in the communities where they are incarcerated. We also gave testimony on May 14, 2012 before the New Jersey Senate State Government, Wagering, Tourism, and Historic Preservation Committee in support of Senate Bill 1055: Ending Prison-Based Gerrymandering in New Jersey. The IJA was also one of more than 200 signators of a letter to Census Bureau Acting Director Thomas Mesenbourg (of February 14, 2013), requesting that the Census Bureau count incarcerated persons at their home address.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the exponential growth in the prison population of the past 30 years requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p>

	<p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In New Jersey, the state's prison population comes disproportionately from certain counties: Essex County (Newark) is home for less than 9% of the state, but 16% of its incarcerated people; Camden County (Camden) is home for 6% of the state, but 12% of its incarcerated people. Crediting the state's incarcerated population to the census blocks that contain the state's 13 correctional facilities serves to enhance the weight of a vote cast in those 13 districts, while diluting the votes cast in every other district.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because the Integrated Justice Alliance of New Jersey believes in a population count that accurately represents all communities, we urge you to count incarcerated people as residents of their home address.</p>
c72	<p>I represent Senate District _____, _____ and submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation's population.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. Also, in Missouri, after the 2000 Census, each House district in Missouri should have had 34,326 residents. District 113, which claimed the populations of 2 large prisons, however, had only 30,014 actual residents. This means that the actual population of the district was 10% smaller than the average district in the state.</p> <p>Currently, four states (California, Delaware, Maryland and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universality implementable. It makes far more sense for the Bureau to provide accurate redistricting data in the first place, rather than leaving it up to each state to have to adjust the Census' data to count incarcerated people in their home district.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place and keeping with changes in society and population realities. Because democracy relies on a population count that accurately represents communities. I urge you to count incarcerated people as residents of their home address.</p>

c73	<p>I am writing in response to your May 20 federal register notice regarding the Residence Rule and Residence Situations.</p> <p>A lot of people from the city I live in end up in prison, and it's not fair that they get counted as if they were residents of the prison town instead of at home. Giving their political power to people who want to lock up more of our community members just doesn't make sense.</p> <p>Because I believe in a population count that accurately represents my community, I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p>
c74	<p>LatinoJustice PRLDEF submits this Comment in response to the Census Bureau's Federal Register Notice regarding the 2020 Decennial Residence Rule and Residence Situations, 80 FR 28950 (Released May 20, 2015). We write to urge the U.S. Census Bureau to count and enumerate incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>LatinoJustice PRLDEF, originally established as the Puerto Rican Legal Defense and Education Fund (PRLDEF) in 1972, is one of the country's leading nonprofit civil rights public interest law organizations. We work to advance, promote and protect the legal rights of Latinas and Latinos¹ throughout the nation. Our work is focused on addressing systemic discrimination and ensuring equal access to justice in the advancement of voting rights, housing rights, educational equity, immigrant rights, language access rights, employment rights and workplace justice, seeking to address all forms of discriminatory bias that adversely impact Latinas and Latinos.</p> <p>As a civil rights organization, we are directly concerned with how Latinas, Latinos, and other communities of color may be impacted by current Census Residence Rules and Residence Situations, particularly where population counts based on Census Residence Rules are employed by elected and appointed officials in redistricting and apportionment schemes. Our organization has litigated in support of New York's state law in <i>Little v. LATFOR</i>, which we discuss more in detail below. We believe that ensuring equal representation is imperative to the health of the nation, because it allows for a just democratic system and avoids any racially discriminatory effects of prison gerrymandering.</p> <p>Prison gerrymandering occurs when incarcerated people are counted in the facilities where they are temporarily detained, which inevitably misconstrues population demographics for state and local redistricting purposes.² Partisan political interests that control the redistricting process often engage in prison gerrymandering, using captive prison populations to increase partisan representation.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African American or Latino into just 5,393 Census blocks that are removed far from the actual homes of incarcerated people.³ In Illinois, for example, 60% of incarcerated people's home residences were in Cook County, yet the Bureau counted 99% of them as if they resided outside Cook County.⁴ When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. The consequences of the Bureau's decision to count incarcerated people in the city or town where a prison facility is located carries long-lasting effects, both in the communities where detained people come from and return to, as well as the communities in which detained people are temporarily held.⁵</p> <p>The Bureau should change its current practice of counting incarcerated people's "usual residence" in state prison facilities to their last primary permanent residence or "usual residence" as identified by those incarcerated for three critical reasons, discussed in detail below.</p> <p><u>First, the current method of counting incarcerated people in communities where a prison facility is located is untenable, because it is not an accurate count of the population.</u></p>

The current use of prisons as a "usual residence" for those detained there misconstrues the actual population sizes of communities across the country and results in inadequate community representation in the redistricting context. Census counts of incarcerated people in prisons as a "usual residence" may lead to illegal gerrymandering in state based apportionment or redistricting, where largely white rural populations are overrepresented and more diverse urban populations are underrepresented⁶ due to the location of the prison itself.

African Americans are incarcerated at a rate about 5 times higher than whites and Latinos are incarcerated at a rate about 2 times higher than non-Latino whites, underscoring the racially discriminatory implications of prison gerrymandering,⁷ which can lead to potential vote dilution. In 2000, African Americans and Latinos only made up a quarter of the general population but represented almost 63% of the incarcerated population in the whole United States.⁸ In 2010, there were 20 counties across the United States where the incarcerated Latino population outnumbered Latinos who were not incarcerated in those same counties – in California, Colorado, Florida, Illinois, Kentucky, Missouri, New York, Pennsylvania, Virginia and West Virginia.⁹ This creates inaccuracies on a large scale that labels counties as "diverse" when they are not, and in fact, the majority of the Latino population detained in these communities is segregated by prison walls from the rest of the population. When state legislatures used this flawed data to draw or apportion legislative districts, they impute Latino political clout and political participation to districts where Latinos in actuality have little to no civic voice.¹⁰

An overwhelmingly large number of Latinos are thus discounted from their communities of origin and enumerated in counties with a very different demographic and geographic profile than their own,¹¹ since most states incarcerate people far from their usual place of residence. In states as populous as New York, Pennsylvania, Illinois, Georgia, Florida and Texas, Latinos are more likely to be locked up in prisons located in communities that remain largely white, non-diverse, and miles apart, both literally and figuratively, from communities in their home counties.¹²

More often than not, the majority of state prison populations housed in rural areas were counted there despite maintaining a prior usual residence in urban metropolitan areas such as New York City, Chicago, Detroit, Los Angeles and Philadelphia—all of which include significant African American and Latino communities.¹³ In 2000, only 25% of New York's state population lived upstate, yet 91% of detained people in state prisons were incarcerated there.¹⁴ In Illinois, 60% of detained people previously resided in Chicago, yet 99% of the prisons were located elsewhere.¹⁵ In California, 30% of incarcerated people hailed from Los Angeles County, but only 3% of them were located there.¹⁶ Forty percent of incarcerated people in Pennsylvania were from Philadelphia, but the city had no state prisons, hence, no people who were detained were counted in Philadelphia.¹⁷

In Michigan, 30% of the state's incarcerated people were from Detroit, but only 11% of the state's cells were located there.¹⁸ The Census Bureau is therefore inaccurately counting the size of the populations in many urban communities that detained people are actually members of, by counting them in the community where the prison is located.

The use of the prison location itself as a "usual residence" for Census population counts is also misleading and results in inaccurate conclusions¹⁹ for apportionment purposes. Some counties were reported to be growing when in fact it was their prison population that was increasing.²⁰ With regard to Latino populations, many counties may report a large number of Latino residents because they have a large Latino population that is incarcerated.²¹ In actuality, the Latino population is overrepresented in counties where they are not residing by choice.²² In turn, they are underrepresented in their actual place of "usual residence" and communities of origin.²³ This creates a high risk for inaccuracies and increases the risk of a distinctively racially discriminatory impact on the representation of African American and Latino communities.²⁴

Second, the current method of counting incarcerated people in communities where a prison facility is located is untenable because it contributes to possible unlawful gerrymandering in violation of the Equal Protection Clause under the Fourteenth Amendment, as well as potential vote dilution.

These outcomes do not appear to comport with the Supreme Court's Fourteenth Amendment equal protection jurisprudence "one person one vote" standard.²⁵ In *Gray v. Sanders*, the Supreme Court held that Georgia's county-unit system was in violation of the Equal Protection Clause because the method of counting votes diluted a person's vote as the county population increased, therefore, rural votes weighed far more than the urban vote.²⁶

The U.S. Supreme Court made clear in *Reynolds v. Sims*, 337 U.S. 533 (1964), that the "one person one vote" standard requires that voting districts contain relatively equal population numbers, so that individual voting power is equalized in accordance to the Fourteenth Amendment.²⁷ In *Wesberry v. Sanders*, the Court established that equal representation for the number of people is a fundamental principal of our government.²⁸ Race, sex, economic, status, or place of residence must not undermine this fundamental principle.²⁹

Given that state and local governments use Census data to redistrict for voting purposes, the current method of counting prisons as a "usual residence" may contribute to the potential violation of the equipopulous "one person, one vote"³⁰ standard, which may also lead to unlawful vote dilution.³¹

Unlawful vote dilution occurs whenever a State minimizes or cancels out the true voting strength of a racial or language minority under the Federal Voting Rights Act of 1965. What triggers the protections of the Act is the existence of disproportionality in the execution of what may otherwise be race-neutral policies. The combination of the Census Bureau's usual residence rule as it exists today along with the racially skewed disproportionate outcomes of many criminal justice systems in the United States could result in minimizing the collective voting strength of Latino and African American communities. For example, on a national scale, 1 out of every 15 African American men are incarcerated, and 1 out of every 36 Latino men in the U.S. are incarcerated.³² Compared to the ratio of 1 of every 106 white men³³ incarcerated, the outcomes of the criminal justice system exacerbate the loss of concomitant political power in minority communities, and therefore dilute minority voting strength.

In New York, this was evident before the state legislature corrected the usual residence policy for state and local redistricting. Latinos in New York State were 18 % of the general population³⁴ but were overrepresented at 22% of the state prison population.³⁵ This raises direct concerns over potential vote dilution of Latino voting strength. Study after study³⁶ has shown that state criminal justice systems in fact carry a racially discriminatory effect where they disproportionately disenfranchise people of color, whether or not such disenfranchisement is intentional. This creates unlawful racial gerrymandering and vote dilution where prison populations reflect the systemic over-incarceration of African American and Latino communities. This practice not only mischaracterizes the demographics of the community and constituents represented, it also reinforces systemic ethnic and racial inequality.³⁷

In addition, nine of the state house districts in Connecticut were able to meet the federal minimum population in Connecticut 's 2011 statewide redistricting process by including the prison populations in those areas.³⁸ Connecticut 's Enfield District reported 3,300 African American and Latinos residing in their district, when in reality, 72% of the African American and 60% of the Latino populations of that district were incarcerated in the local correctional facilities.³⁹ Hence, African American and Latino voting power was not only potentially diluted, it was largely displaced in these largely rural, white communities from largely African American and Latino communities.⁴⁰

In at least seven state house districts in Connecticut, white residents gained significantly more power because of the minimum 1,000 incarcerated African American and Latino people that were counted in their districts.⁴¹ This in effect gave the largely white population who lived near the prisons extra electoral clout compared to the largely African American and Latino neighborhoods in urban areas of Connecticut that are the home districts of these prisoners. In addition, by counting the incarcerated population in the town's general population, the prison population remains physically and forcefully segregated from the surrounding community.

Prison gerrymandering could also lead to a potential vote dilution claim under Section 2 of the Voting Rights Act of 1965 (VRA).⁴² Voting rights advocates have suggested that in order to bring a Section 2 claim, the plaintiff must specifically indicate a remedy to their claim, and reallocating incarcerated people to their place of prior permanent residence could serve as a Section 2 remedy.⁴³ This could equalize voting in both communities with and without prison facilities because incarcerated people will no longer be misplaced in the location of the prison where they are held. Despite the Ninth Circuit's opinion in *Farrakhan v. Gregoire* that a Section 2 vote dilution challenge under the VRA based on felony disenfranchisement required a showing of intentional discrimination by the state criminal justice system itself,⁴⁴ the U.S. Supreme Court has upheld the Section 2 VRA vote dilution standard to address discriminatory effect as well as discriminatory intent.⁴⁵

Third, it is imperative for the Bureau to change its current method of counting incarcerated people in communities where the prison facility is located, because over 200 counties and municipalities in a majority of states do not count or consider prisons as a "usual residence" in redistricting.

Over 200 counties and cities in a majority of states avoid prison-based gerrymandering through state constitutional provisions and/or state and local legislation.⁴⁶ At last count, 225 of these cities and counties do not count prisons as a "usual residence" for local and state based redistricting and apportionment counts, and instead rely on detained people's usual residence prior to incarceration.⁴⁷

Municipalities in states with the largest Latino populations are amongst the majority, and include municipalities in Arizona, California, Colorado, Connecticut, Florida, Illinois, New Mexico, Nevada, New Jersey, New York, and Texas.⁴⁸ Of these states, Arizona, California, Connecticut, Florida, New York and Texas contain explicit language in their state laws that an incarcerated person's domicile does not change when they are in a state or public prison.⁴⁹ Colorado, Nevada and New York include similar language in their state constitutions.⁵⁰

In New York, in particular, after the 2000 Census, seven state senate districts only met population requirements in state apportionment because the Census counted detained people as if they were upstate residents.⁵¹ The New York State Constitution makes clear that "For the purpose of voting, no person shall be deemed to have gained or lost a residence... while confined in any public prison."⁵² For this reason, New York State passed legislation to adjust the population data after the 2010 Census, to count incarcerated people at their home addresses in state legislative apportionment and redistricting.⁵³

In *Little v. LATFOR*, the Supreme Court of the State of New York in Albany upheld this state law that requires incarcerated people to be reported under their address prior to incarceration.⁵⁴ The Court reasoned that there was nothing in the record that indicated that the incarcerated people had any permanency in the locations of the facilities or that they intended to remain there after their release.⁵⁵ The Court found that the Department of Corrections and Community Supervision decided when and where incarcerated people would be transferred, not the incarcerated people themselves.⁵⁶ There were no records that indicated that the incarcerated people had ties to the communities where they were incarcerated, where they were "involuntarily and temporarily located."⁵⁷

Following the ruling in *Little*, it would be incongruous at best, and erroneous at worst, for the U.S. Census Bureau to count incarcerated people living in the communities where prison and criminal detention facilities are located, because incarcerated people are both *de jure* and *de facto* excluded from participating in the civic life of these communities. People incarcerated for felony convictions, for example, cannot vote in virtually every state in the country due to felony disenfranchisement laws.⁵⁸ California, Florida, Texas, and New York are among the states that disenfranchise people who are serving time in state prisons for felony convictions.⁵⁹ Furthermore, people so detained cannot purchase homes, become employed, or make a living while they are incarcerated.⁶⁰

California and New York, two states with the largest Latino populations,⁶¹ are joined by Delaware and Maryland in taking a statewide approach to avoiding prison gerrymandering, modifying the Census Bureau data to count detained people in their residence prior to their incarceration.⁶² Counting detained people in their prior residence serves not only the ideals of equity and equal protection in democracy, but is also rooted in the understanding that people who are detained are transferred often and incarcerated in distinctly different jurisdictions temporarily.

Most incarcerated people do not choose the location of the facility where they will be incarcerated, nor the length of time they will be incarcerated at that facility.⁶³ The average state prison term is 34 months, and during their sentence, detained people may be transferred to a different facility numerous times, at the state custodial agency's discretion.⁶⁴ In New York, for example, the median time served in a facility for 2007 was seven months.⁶⁵ When the Census Bureau counts detained people where they are temporarily incarcerated, it appears to contradict the Bureau's goal of accuracy in enumeration, because the Bureau is recognizing a temporary, involuntary stay as a "usual residence".⁶⁶ Once detained people complete their sentence, they are not allowed to remain in the facility; they are more likely than not to return to the community where they lived prior to being forcibly removed.⁶⁷

As the most comprehensive data collection system in the United States, the U.S. Census Bureau can improve its accuracy and efficacy by counting incarcerated people in their last primary residence rather than in their facility where they are temporarily detained. Because it is a resource that government agencies at all levels rely on to make vital decisions for all of its communities, it is imperative that the U.S. Census Bureau report all incarcerated persons in their "usual residence" as defined by the persons themselves, or based on the last residence the incarcerated person resided prior to incarceration.⁶⁸ A majority of the states have at least one city or county that favors this change.⁶⁹ The U.S. Census Bureau should follow suit to achieve a more accurate and fair count of the U.S. population by changing its policy.⁷⁰

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because LatinoJustice PRLDEF believes in a population count that accurately and equitably represents the demographics of diverse communities, we urge the U.S. Census Bureau to count incarcerated and detained people as "usual residents" at their regular or permanent home addresses.⁷¹

¹ As used in this Comment, the terms "Hispanic" or "Latino" are used interchangeably as defined by the U.S. Census Bureau and "refer to a person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin regardless of race." c75	<p>I represent the _____ District in _____, and submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation's population.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. It makes far more sense for the Bureau to provide accurate redistricting data in the first place, rather than leaving it up to each state to have to adjust the Census' data to count incarcerated people in their home district.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because democracy relies on a population count that accurately</p>

	represents communities, I urge you to count incarcerated people as residents of their home address.
c76	<p>The Campaign for Youth Justice (CFYJ) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20,2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>CFYJ is a national organization focused entirely on ending the practice of prosecuting, sentencing, and incarcerating youth under the age of 18 in the adult criminal justice system. The strategic goals of CFYJ are to reduce the total number of youth prosecuted in the adult criminal justice system and to decrease the harmful impact of trying youth in adult court.</p> <p>We strongly believe that any movement must involve those who are most impacted by the laws and policies. Thus, we seek to empower those affected by encouraging them to use their voices and experiences to affect meaningful change. Therefore, we are particularly troubled by the Census Bureau's interpretation of the residence rule; counting incarcerated people as if they were residents of the prison locations rather than residents of their communities hurts our democracy and further disempowers our communities.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place. We want to ensure equal representation for all communities so that those most impacted by youth incarceration can have an equal voice in setting criminal justice policy, and so we urge you to count incarcerated people as residents of their home address.</p>
c77	<p>The prison population has increase dramatically in the last decade thus incarcerated people should be counted in their home districts, not where the prison is located. If this is done, extra representation is given to the communities that house the prisons. Especially African-American and Latinos communities are then under counted because of the high number of minorities in the prison population.</p> <p>Gerrymandering of legislative districts is bad enough as it is, we do not need further under representation.</p>
c78	<p>My comment is in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR28950 (May 20, 2015).</p> <p>I urge you to count incarcerated people at their home address, rather than at the particular facility that they are located in on Census Day. By designating a prison cell as a residence in the 2010 Census, the Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of these incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>North Carolina has three of the top ten most gerrymandered districts (1st, 4th, and 12th) in the country. Counting prisoners as local residents only gives more unethical power to the politicians.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Census Bureau</p>

	<p>strives to count everyone in the right place. In keeping with changes in society and population realities, I believe in a population count that accurately represents communities. This would be accomplished by counting incarcerated people as residents at their home address.</p>
c79	<p>Project Vote submits this comment in response to the Census Bureau’s Federal Register notice entitled, 2020 Decennial Census Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015), Docket No. 150409353-5353. Project Vote urges you to count incarcerated people at their home address, rather than at the particular facility at which they happen to be located on Census day.</p> <p>Project Vote is a national nonpartisan, non-profit organization dedicated to building an electorate that accurately represents the diversity of America’s citizenry. Project Vote takes a leadership role in nationwide voting rights and election administration issues, working through research, litigation, and advocacy to ensure that every eligible citizen can register, vote, and cast a ballot that counts.</p> <p>Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly detrimental to proper representation of African-American and Latino communities. These communities are already historically underrepresented in the electorate and prison gerrymandering only contributes to this problem. Thus by designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks¹ that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located.</p> <p>Various states, including New York, California, Delaware, and Maryland, have taken statewide action to end prison gerrymandering when drawing districts, and other localities have made similar efforts.² But this ad hoc approach cannot be implemented universally. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so in 2014 it passed and sent the Census Bureau a resolution urging the Bureau to count incarcerated persons at their home addresses.³ A national approach is needed to ensure proper representation of communities.</p> <p>Thank you for this opportunity to comment on the 2020 Decennial Census Residence Rule and Residence Situations. Because Project Vote believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p> <p>¹ Prison Gerrymandering Project, <i>Detailed Demographics of Correctional Populations Now Available for Nation</i> (Sept. 13, 2011), http://www.prisonersofthecensus.org/news/2011/09/13/sf1/ (last visited July 7, 2015).</p> <p>² Prison Gerrymandering Project, <i>Legislation</i>, http://www.prisonersofthecensus.org/legislation.html (last visited July 7, 2015).</p> <p>³ See The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (188th Session, Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014), <i>available at</i> http://www.prisonersofthecensus.org/resolutions/MA-resolution-081414.pdf.</p>
c80	<p>I am writing to urge you to change the residence designation of prison inmates from the place where they are incarcerated to the place of last known residence before incarceration, when counting for the 2020 U.S. Census.</p> <p>Counting prisoners where they are incarcerated, as opposed to their last residence, distorts the one-man, one-vote rule which is a linchpin of our</p>

	<p>decennial redistricting. Counting prisoners in a large institution as resident of the area where the prison is located artificially increases the representational strength of the prison area, while diluting the representational strength of the areas where the prisoners hail from. In Oregon, the Snake River Correctional Institution in the extreme eastern part of the state gives extra representational power to residents in those legislative and congresssional districts. The prisoners are in this area only temporarily, have no connection to the community and cannot vote. Yet they are counted as part of the population for purposes of redistricting.</p> <p>I urge you to adopt a nationwide policy of counting prisoners as residents of their last area before incarceration to end this distortion of our redistricting process.</p>
c81	<p>Prison Action Network is submitting this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015).</p> <p>We suggest the Census bureau revise their rules because the way prisoners are counted now results in unequal representation in the political process.</p> <p>The needs of citizens in the neighborhoods from which prisoners were taken are not the same as those in the districts where they are counted. It makes no sense to include incarcerated people in their prison's district. Why include people who are temporary and whose needs are not considered by the officials elected to represent the district?</p> <p>It also dilutes the voting power of those located outside the districts with prisons. For instance, in New York, where we are located, each Senate district should have 306,072 residents. District 45, which claims the populations of thirteen large prisons, however, has only 286,614 actual residents. Crediting all of New York’s incarcerated people to a few locations, far from home, enhances the political clout of the people who live near prisons, while diluting voting power of all other New Yorkers.</p> <p>That’s why NY is taking a state-wide approach to adjust the Census’ population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>Why not make it easier and move that responsibility to the Census Bureau that has decades of experience?</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Prison Action Network believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c82	<p>I serve as the State Representative for _____ Legislative District (including _____), and I would like to submit this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p>

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into a handful of Census blocks far from their actual homes. In my state, for example, 60% of incarcerated people have their home residences in _____ County, yet the Bureau counted 99% of them as if they resided outside _____ County.

I have long supported counting incarcerated people at home, and have been working on a solution for _____ since 2009, when I introduced the Prisoner Census Adjustment Act in the _____ and again in the _____ proposing that for purposes of creating election districts and redistricting, requires that State and local governmental bodies use census figures adjusted to reflect the pre-incarceration addresses of persons imprisoned in State or federal facilities in _____; this measure passed the House, but stalled in the Senate. As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the state's population.

When we use this data for redistricting, we shift political power to people who live near prisons. This needs to be corrected. The legislation I introduced would adjust redistricting data to count incarcerated people where they live. The bill applies to state, county, and municipal redistricting data, ensuring that prison populations are not used to skew political power in state or local government. And although the bills I introduced in _____ specifically had no impact on funding formulas, I am confident that our state's aid distribution is sophisticated enough that a methodology change at the Bureau will not have any significant impact on our funding streams. (For example, _____ highway funds already separately fund _____, so that no change in the population count would shift highway funds from _____ to _____.)

Currently, four states (California, Delaware, Maryland, and New York) are implementing a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts, including at least 22 here in _____.

But this ad hoc approach is not efficient. It makes far more sense for the Bureau to provide accurate redistricting data in the first place, rather than leaving it up to each state or county to have to adjust the Census' data to count incarcerated people in their home district.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because democracy relies on a population count that accurately represents communities, I urge you to count incarcerated people as residents of their home address.

c83

The census claims to report where people reside but its definition of "reside" is amiss. It's inappropriate to say that a person held against his will resides in the jail.

Such a claim has implications for elections.

Iowa law creates election districts based on population. But if the population includes prisoners, they should not count as residents. They cannot vote.

Anamosa, Iowa once found itself with an election district comprised of so many prisoner "residents" that practically no one in the district could vote. Yet they were supposed to elect a member of the city council.

Anamosa had to eliminate districts altogether to get around this problem

caused by the Census Bureau.

My own state senate district is also home to a pair of state prisons. Why do those prisoners count as residents here when they cannot vote? With so many Americans in prison this can lead to a lot of distortion.

Some changes should be made in this practice.

c84 The Latino and Puerto Rican Affairs Commission (LPRAC) was created by an act of the Connecticut General Assembly in 1994. In essence, we are a 21 member non-partisan commission mandated by state law to make recommendations to the legislature and the Governor of Connecticut for new or enhanced policies that will foster progress in achieving health, safety, educational success, economic self-sufficiency, and end discrimination for the Latino community in our state. LPRAC conducts educational and outreach activities to strengthen connections across the state's Latino population, establishing innovative partnerships, listening to stakeholders on issues particularly impacting the Latino population, and conducting wide-ranging socioeconomic research to fill gaps in the state's data collection and provide policy makers with comprehensive, up-to-date statistical information from which to develop effective and responsive laws, regulations, policies and procedures.

We strongly recommend that residence rules should be changed in the 2020 census for *People in Correctional Facilities for Adults* and *People in Juvenile Facilities*. The current residence rules and residence situations adversely affect the political representation of Hispanics in Connecticut.

For example, in the town of Somers, CT, the prison population accounts for 20 percent of the total population.¹ Furthermore, 24 percent of prisoners in Somers are Hispanic.² There are approximately 535 Hispanic prisoners in Somers but only 150 Hispanic residents who are not in the prison population.³ Consequently, the Hispanic prison population in Somers outnumbers Hispanic residents by over 250 percent. Furthermore, most of the Hispanic prisoners in Somers come from urban areas such as Hartford and Bridgeport, while Somers is a predominately-white rural town.

Because of the current practice of counting prisoners at their prison location, political representation for residents of Somers is **artificially increased** when legislative district boundaries are drawn for state senators and representatives. In order to stop this skewing of political representation, we ask that the residence rules and residence situations for *People in Correctional Facilities for Adults* be changed as

follows:

- (a) **People in correctional residential facilities on Census Day:** Prisoners with a household residence in Connecticut should be counted at the location of their household residence. Prisoners with a household residence outside Connecticut should be counted at the correctional residential facility.
- (b) **People in federal detention centers on Census Day:** Prisoners with a household residence in Connecticut should be counted at the location of their household residence. Prisoners with a household residence outside Connecticut should be counted at the federal detention center.
- (c) **People in federal and state prisons on Census Day:** Prisoners with a household residence in Connecticut should be counted at the location of their household residence. Prisoners with a household residence outside Connecticut should be counted at the location of the federal or state prison.
- (d) **People in local jails and other municipal confinement facilities on Census Day:** Prisoners with a household residence in Connecticut should be counted at the location of their household residence. Prisoners with a household residence outside Connecticut should be counted at the location of the local jail or the municipal confinement facility.

For *People in Juvenile Facilities*, residence rules should be similarly changed as follows:

- (a) **People in correctional facilities intended for juveniles on Census Day:** Juveniles with a household residence in Connecticut should be counted at the location of their household residence. Juveniles with a household residence outside Connecticut should be counted at the correctional facility.
- (b) **People in group homes for juveniles (non-correctional) on Census Day:** Juveniles with a household residence in Connecticut should be counted at the location of their household residence. Juveniles with a household residence outside Connecticut should be counted at the group home.
- (c) **People in residential treatment centers for juveniles (non-correctional) on Census Day:** Juveniles with a household residence in Connecticut should be counted at the location of their household residence. Juveniles with a household residence outside Connecticut should be counted at the residential treatment center.

These recommended changes to residence rules and residence situations will *not affect* congressional reapportionment; however, it will end the existing over-representation in state legislatures of communities with group quarters such as correctional and juvenile facilities. Furthermore, in Connecticut most of the communities with these types of facilities have a predominately-white population while the prison and juvenile facilities located in these communities are disproportionately Hispanic. These suggested changes in residence rules and residence situations will end the current dilution of political representation in Connecticut's predominately-Hispanic urban areas.

c85 Thank you for this opportunity to respond to the Bureau's Notice, seeking comments on the Bureau's 2010 Census Residence Rule and Residence Situations (80 FR 28950, dated May 20, 2015). The League of Women Voters of Virginia urges a change to Rule 13, People in Correctional Facilities for Adults, due to the impact it has on voter representation and on the work of the League to protect voting rights, ensure fair and equal representation, and promote accurate redistricting.

The Bureau's current policy, as reflected in Rule 13, has the effect of improperly inflating the true population of a county or state district. Counting prisoners as if they are residents of the prison location effectively gives greater representation to people who happen to live in

districts that contain prisons. Often those prisoner counts are in the hundreds and at times in excess of one thousand per prison. Thus, prisoners, whose home residences are in cities and towns scattered across the state, are concentrated and counted in just one block. The result: a county supervisor representing a district with a prison will have fewer actual constituents in his or her district than a legislator in an adjoining district that has no prison. This results in an unfair diluted representation for residents of the district with no prison.

Prisoner home addresses are in the communities they come from and most often typically return to. While incarcerated prisoners in Virginia cannot vote, they do retain affiliation with their home communities because their families, friends and roots are in their home area. Prisoners in one state in this country who can vote while incarcerated must do so by absentee ballot, using their home address, not their prison address. In no sense can a prison be considered a home.

Currently, Virginia's inmate population in state and federal prisons is over 30,000. Those prisons are located predominately in rural areas where local districts experience the greatest impact when redistricting. During the 2011 decennial redistricting in Virginia, the prison populations identified by the Census Bureau were all counted at their prison locations for state House and Senate districts. This resulted in skewed representation at the state legislature. People incarcerated in state and federal prisons located in State House District 75, for example, accounted for over 12% of the district's population as reported by the Census in 2010. This means that residents of District 75 were given more voting power in the Legislature than any other resident in the state.

Some Virginia county governments have sought to avoid this kind of undemocratic outcome. Lack of uniformity prevails, however, in the way prisoner counts are used for redistricting in local jurisdictions. Six counties adjust the Census data and do not include prisoner counts when drawing their supervisors' districts. Eighteen other counties in Virginia use Census counts and include prison populations when they redistrict, leaving them with inaccurate population counts upon which to draw boundaries.

This hodgepodge manner in which census data is used during the redistricting process at the local level strikes at the heart of fairness in electoral representation. Counting prisoners uniformly at their home addresses would solve that problem.

For all of these reasons, the League of Women Voters urges the Bureau to change Rule 13 and count prisoners at their true home addresses in 2020 so state and local districts can be drawn accurately, consistently, and fairly during redistricting.

c86 The Tribal Law Journal of the University of New Mexico School of Law writes in response to your May 20 federal register notice regarding the Residence Rule and Residence Situations.

As a premier academic and legal journal, we take an interest in the accuracy of the methodology that the U.S. Census Bureau uses to count the U.S. population. Our authors often rely on population data offered by the U.S. Census Bureau in their articles. In turn, members of the legal profession depend on our articles to support advocacy efforts, lawmaking, rulemaking, legal strategy, and jurisprudence.

It has come to our attention that the US Census Bureau's 2010 Residence Rule and Residence Situations skews the accuracy of the U.S. Census data by counting incarcerated people at the facilities that they are confined in, rather than at their home addresses, on Census day. By designating a prison cell as a residence in the 2010 Census, the Census Bureau located a population that is disproportionately male, urban, and Black, Native American or Latino into Census blocks far from their homes. This inflates the apparent size of the towns of people who live near prisons. When this data is used in submissions to our publications, the reliability of important scholarship is risked.

More worrisome, when used for redistricting, the 2010 U.S. Census deprives political power from those communities, including sovereign tribal nations, where a disproportionate amount of people are arrested and imprisoned away from home. Members of our journals identify with those communities.

	<p>Because we believe in a population count that accurately represents our Nation, we urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Thank you for your consideration.</p>
c87	<p>The Drug Policy Alliance submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). The Drug Policy Alliance urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>The Drug Policy Alliance is the nation’s leading organization promoting drug policies grounded in science, compassion, health and human rights. We work to ensure that our nation’s drug policies no longer arrest, incarcerate, disenfranchise and otherwise harm millions – particularly young people and people of color who are disproportionately affected by the war on drugs. Prison gerrymandering is one of the most troubling ways that our current policies discriminate against communities worst harmed by the war on drugs.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million but since then, the nation’s incarcerated population has more than quadrupled to over two million people. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Illinois, for example, 60% of incarcerated people have their home residences in Cook County (Chicago), yet the Bureau counted 99% of them as if they resided outside Cook County.</p> <p>When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes.</p> <p>New York State is not the only jurisdiction taking action. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p>

	<p>The Drug Policy Alliance is concerned that the Bureau’s current method of counting incarcerated people is inaccurate. We share the following two examples of specific inaccuracies flowing from the Bureau’s current method of counting incarcerated persons as follows: Consider a statistic from New York, where the upstate region has steadily been losing population: in the 2000 Census, almost one-third of the persons credited as having “moved” into upstate New York during the previous decade were persons sentenced to prison terms in upstate prisons. Such false migratory patterns can wreak havoc on seemingly sound policy decisions. In Texas, in two legislative districts drawn after 2000, 12% of the population consisted of incarcerated persons.</p> <p>We supported the passage of New York’s law ending prison gerrymandering. On the national front, we have also previously called upon the Census Bureau to change its practice in a 2013 letter submitted along with 209 other organizations.</p> <p>So we thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because the Drug Policy Alliance believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c88	<p>The Voting Rights and Civic Participation Project and the Racial Justice Project at New York Law School submit this comment in response to the Census Bureau’s Federal Register notice regarding the Residence Rule and Residence Situations, 80 Fed. Reg. 28950 (May 20, 2015). We urge the Bureau to change the “usual residency” rule to count incarcerated people at their home address, rather than at the correctional facility where they are located on Census Day.</p> <p>Under the current rule, the Bureau counts people in prison as residents of their prison cells rather than their home communities. Based on this census data, incarcerated individuals are grouped with non-incarcerated individuals living in the surrounding community to form legislative districts. However, the vast majority of people in prison cannot vote and they have no ties to the local community beyond being sent there by the Department of Corrections.¹ Consequently, people in prison become “ghost constituents” to whom the legislator from the district has no connection or accountability, but whose presence in the prison allows the legislator’s district to exist. The voting strength of the actual constituents who live adjacent to the prison is unfairly inflated simply because of their proximity to a correctional facility.</p> <p>The inverse to this skew in the prison districts is the erosion of voting strength in the home communities – often located many miles away – to which most incarcerated individuals return.² Every person counted in prison on Census Day is one fewer resident counted in the home community. The result is fewer voices and fewer votes to demand accountability and representation by local officials. As the prison districts artificially inflate, the representation of home communities diminishes and declines. A similar imbalance occurs between neighboring districts. A district that contains a prison will have inflated voting strength compared to a neighboring district without a prison, creating inequalities between residents of neighboring communities.</p> <p>The home communities that are disproportionately impacted by the current usual residency rule are largely urban communities of color. Aggressive policing tactics in recent decades have targeted minority neighborhoods across the country. Because of high incarceration rates, these neighborhoods lose significantly more residents than other neighboring districts, the impact of which is felt for decades. Losing residents means losing political power.³</p> <p>In 2010, New York and Maryland were the first states in the country to pass laws to correct the skew caused by the Bureau’s current “usual residency” rule. Under the 2010 laws, officials in New York and Maryland undertook the process to remove each individual who was incarcerated in state prison on April 1, 2010 from their prison district and reallocate that person back to his home address for purposes of drawing new legislative districts.</p> <p>Professor Erika Wood’s recent analysis of how Maryland and New York implemented their new laws explains in detail the process each</p>

state undertook to reallocate each incarcerated person back to his or her home community, and provides detailed information about the specific steps each state took to implement these new laws.⁴ The report details the challenges each state faced, including legal disputes and data deficiencies, and the steps taken to meet and overcome those challenges.

While Maryland and New York were successful in correcting the imbalance caused by the current policy, doing so was required significant effort, hours and dollars. Passing and implementing the Maryland and New York laws involved multiple agencies and actors, including legislators and their staff, government agencies, the Attorneys General's offices, private software companies and consultants, and outside advocacy organizations. In researching this process, including interviews with dozens of officials in each state, it became clear that there was widespread consensus among officials in both states that the most effective way to correct the imbalance caused by the current practice, is for the Bureau to change its usual residence rule to count people in prison as residents of their home communities rather than their prison cells.

Professor Wood's analysis resulted in the following specific recommendations for the Bureau:

1. Update the interpretation of the Usual Residency rule to ensure that incarcerated persons are allocated to their home residence rather than at the location of a correctional facility. The Bureau should consult with stakeholders, including redistricting experts, elections officials, corrections officials, criminal justice advocates, and others to develop the best strategies and data choices for meeting this goal.
2. Consider using "self-enumeration" data wherever possible to tabulate incarcerated people. Allowing incarcerated individuals to complete and submit their own Census forms would allow them to identify their race and ethnicity as well as enable them to directly list their current home address.
 - Conduct a self-enumeration pilot study in select correctional facilities to develop protocols and test the utility of inmate-completed forms, as suggested by the Bureau's 2013 Ethnographic Study.
 - Where administrative records are to be used to tabulate incarcerated people, rely on agency-level administrative records collected by the Federal Bureau of Prisons and state correctional agencies – as suggested by the Bureau's 2013 *Ethnographic Study of the Group Quarters Population in the 2010 Census: Jails and Prisons*⁵ – rather than collecting this data on the individual facility level.
 - Consult with the Bureau of Justice Statistics to identify best practices for designing effective systems for collecting accurate and reliable state corrections data.⁶
 - Assure that state correctional agencies are aware of the Office of Management and Budget's (OMB) Standards for the Classification of Federal Data on Race and Ethnicity, and advise state correctional agencies on how data systems can be structured to facilitate data collection consistent with these standards. Encouraging states to use the OMB standards would eliminate inconsistencies in how race and ethnicity data are recorded.⁷
3. Conduct experiments using existing state corrections data to evaluate how these administrative records, in their current form, would impact Census Bureau workflow and quality standards, as well as to develop protocols for addresses that cannot be successfully geocoded.
4. Consider how to allocate persons in the limited circumstances where an individual's home address is unknown or nonexistent. For example, the Bureau may have to tabulate a limited number of people at the correctional facility where there is insufficient home address information.
5. Explore whether the recommendation of the 2013 Ethnographic Study of the Group Quarters Population in the 2010 Census: Jails and Prisons to establish "correctional specialists" to coordinate the Bureau's enumeration of people confined in correctional facilities will improve efficiency and standardization.⁸

As long as the Bureau continues to count incarcerated individuals as residents of their prison cells, the demographic data of their home communities will continue to be skewed and incomplete, resulting in long-term disenfranchisement and disempowerment. To correct this injustice, we urge the Bureau to amend its usual residency rule to count incarcerated individuals as residents of their home communities.

¹ Only Maine and Vermont allow people to vote while in prison. See Erika Wood, Brennan Center for Justice, *Restoring the Right to Vote* 3 (May 11, 2009), available at <http://www.brennancenter.org/publication/restoring-right-vote>. In those two states, incarcerated people maintain residency in their home communities for voting purposes and vote in their home district by absentee ballot; they do not vote in the district where they are incarcerated. See Vt. Stat. Ann. tit. 17, § 2122(a); Me. Rev. Stat. Ann. tit. 21-A, § 112(14).

² See *Fletcher v. Lamone*, No. 1:11-cv-03220, at 18 (D. Md. Dec. 23, 2011), *aff'd* 133 S. Ct. 29 (2012) (mem.) (citing Nancy G. La Vigne *et al.*, *A Portrait of Prisoner Reentry in Maryland* 33 (Urban Institute 2003) available at http://www.urban.org/UploadedPDF/410655_MDPortraitReentry.pdf which found that most Maryland prisoners returned to Baltimore after their release from prison).

³ See Erika L. Wood, *One Significant Step: How Reforms to Prison Districts Begin to Address Political Inequality*, 49 U. MICH. J. LAW REF. 101 (2015) (forthcoming).

⁴ See Erika L. Wood, *Implementing Reform: How Maryland and New York Ended Prison Gerrymandering* (Demos 2014), available at <http://www.demos.org/publication/implementing-reform-how-maryland-new-york-ended-prison-gerrymandering>.

⁵ Barbara Owen and Anna Chan, *Ethnographic Study of the Group Quarters Population in the 2010 Census: Jails and Prisons* 2-3 (2013), available at <http://www.census.gov/srd/papers/pdf/ssm2013-06.pdf>.

⁶ The Bureau of Justice Statistics conducted a survey of state correctional data systems in 1998, finding that the majority of state prison systems had mostly complete electronic records of home addresses. See Bureau of Justice Statistics *et al.*, *State and Federal Corrections Information Systems: An Inventory of Data Elements and an Assessment of Reporting Capabilities*, Bureau of Justice Statistics (Aug. 1998), available at <http://www.bjs.gov/content/pub/pdf/sfcisq.pdf>. The Census Bureau should determine how these data collections have improved in the last sixteen years, and consider how the Bureau can help these systems continue to improve as 2020 approaches. Further, the Census Bureau may wish to explore the state of data collection in the nation's largest jail systems; the fifty largest jail systems in the U.S. hold more than a third of the nation's jail population.

⁷ The OMB standards provide a common language to promote uniformity and comparability for data on race and ethnicity and were developed in cooperation with federal agencies, including the Census Bureau, to provide consistent data on race and ethnicity throughout the federal government. For an explanation of OMB standards, see Office of Mgmt. & Budget, *Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity* (Oct. 30, 1997), available at http://www.whitehouse.gov/omb/fedreg_1997standards/.

⁸ Owen and Chan, *supra* note 5, at 37.

c89 I am writing this letter in response to the NOFA of the U.S. Census Bureau requesting public comment on the 2010 Census Residence Rule and Residence Situations. I strongly believe that the Bureau's method of counting incarcerated people at prison locations, rather than in their home communities, leads to an unequal distribution of political power in state and local governments known as "prison gerrymandering." I have attached an April 1, 2013 joint Congressional letter written to then Acting Director Thomas Mesenbourg outlining our support for changing this Census program. Please do not hesitate to contact my office regarding any questions or concerns regarding this issue. Thank you.

April 1, 2013

Mr. Thomas Mesenbourg
Acting Director
U.S. Census Bureau
4600 Silver Hill Road
Washington, DC 20233

Dear Mr. Mesenbourg:

We are writing to request that the Census Bureau begin counting incarcerated people as residents of their home addresses rather than of the prisons in which they are confined. The Census Bureau has long maintained that an accurate census count yields not only a correct number of residents, but also the correct location for each resident. We believe additional thought should be given to the deemed place of residence in this unique situation. As Members of Congress, we have an interest in ensuring that the decennial enumeration provides fair and equitable representation for all.

In 2011, nearly 1 in 107 adults in the United States was imprisoned.¹ The Census Bureau's current "residence rules" count incarcerated individuals as residents of the prisons where they are serving their sentences. These incarcerated individuals normally have no ties to the prison location, cannot vote, and most often return to their home communities upon release. The designation of a prison cell as a residence prevents populations in more than 1,500 Federal and state prisons that are largely male, urban, and African-American or Latino from being counted as residents of their home communities.

Four states containing 21% percent of the U.S. population have enacted legislation to adjust census data to ensure that prisoner counts do not comprise legislative districts. Maryland and New York enacted legislation to ensure that incarcerated people are counted by home addresses, and Maryland's "No Representation without Population Act" was recently upheld by the U.S. Supreme Court.²

We applaud the Census Bureau's decision to release prison data from the 2010 census to assist individual state and local governments in their redistricting efforts. We hope the Census Bureau will develop a standardized national solution to the problem of redistricting distortion, relieving state and local governments from the need to make piecemeal adjustments to ensure prisoners are accurately assigned to their home residences and accurately allocated among legislative and Congressional districts. We therefore urge the Census Bureau to take the steps necessary to ensure that Census 2020 counts prisoners at their home addresses to assist state and local governments in accurately representing these populations.

We thank you for your careful consideration of this issue.

¹ Office of Justice Programs, Bureau of Justice Statistics, *Correctional Populations in the United States, 2011* (Nov. 27, 2012) (online at www.bjs.ojp.usdoj.gov/index.cfm?ty=pbdetail&iid=4537).

² *Fletcher v. Lamone*, ___ U.S. ___, 2012 WL 1030482 (June 25, 2012).

c90	<p>I am writing in response to your federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015).</p> <p>I was incarcerated at York Correctional Institution in Niantic, Connecticut from December 7, 2007 to March 18, 2014. Knowing my convictions remained on appeal and were, therefore, legally stayed, the local registrar of voters in my hometown of Orange, Connecticut never removed my name from the town's list of registered voters.</p> <p>Because of the current residence rule, during the last Census I was counted as if I were a resident of Niantic, the town containing the prison where I was incarcerated, despite the fact that I was registered to vote in another town: Orange, Connecticut. This was not fair to my community, nor to any community in Connecticut that didn't have a prison.</p> <p>Furthermore, it is an inaccurate way to count voters. The right to vote is sacred; counting me in one town when I was registered in another is a poor example of how to protect a citizen's most treasured right.</p>
-----	--

	<p>Because I believe in a population count that accurately represents my community and counts voters where they are actually registered, I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p>
c91	<p>The City of Fayetteville, Cumberland County and the Fayetteville Regional Chamber formed a partnership that works collaboratively to engage with the federal government and pursue funding assistance for strategic focus areas identified in an annual, collectively established agenda. The partnership's combined efforts are critical to the growth and strength of our community. These efforts ensure protection and preservation of essential community assets and resources, allowing all areas of the community and surrounding metropolitan and unincorporated areas to thrive.</p> <p>We would like to thank you for the opportunity to submit comments regarding the Census Bureau's Residence Rule and Residence Situations. One of our community federal agenda goals is to further advance the issues associated with the current process utilized by the US Census Bureau for counting deployed soldiers. The partnership would like to request that the Census Bureau undertake a review of the decades-old policy to prevent further undercounting in the garrison communities.</p> <p>It is our understanding that you are currently reviewing the 2010 Residence Rule and Residence Situations in order to determine if changes should be made to the Rule and/or if the situations should be updated for the 2020 decennial Census. As shown below, we believe that the Rule should be applied to the situation of military personnel who are temporarily deployed overseas to a conflict zone. We are also suggesting several updates to Situation 9(f) for the 2020 Census.</p> <p>Please note that the City of Fayetteville is located in Cumberland County, NC. Cumberland County is the home of Fort Bragg, the largest Army installation in the United States. Because of its size, Fort Bragg influences the population of our City, our County, and the surrounding region. Also, please note that in 2008, the North Carolina General Assembly annexed most of the Cumberland County part of Fort Bragg into the City of Fayetteville; the remainder was annexed into the Town of Spring Lake.</p> <p>In the comments that follow, we refer to the Rule and Situations as outlined in the Federal Register notice published on May 20, 2015.</p> <p>Comments Regarding the Residence Rule</p> <p>As we understand it, the Residence Rule is based on the basic idea that people should be counted at their usual residence, which is the place where they live and sleep most of the time. We agree with this Rule, and we believe that this Rule should be applied to the situation of military personnel who are temporarily deployed overseas to a conflict zone. This would result in these temporarily deployed persons being counted as part of the resident population of the military community from which they were deployed.</p> <p>Comments Regarding Situation 9(f)</p> <p>Situation 9(f) pertains to "U.S. military personnel living on or off a military installation outside the U.S., including dependents living with them." According to the Federal Register Notice, these people are currently "counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire."</p> <p>We think that this current situation is not fair for cities and counties that are located near military installations which are subject to large troop deployments. (Appendix 1 explains how the Census Bureau's current procedures for counting deployed military members have negatively impacted North Carolina and its military communities. Appendix 1 provides information on the impacts at the state level, the</p>

military county level, the Fort Bragg annexation area level, and the City of Fayetteville level.)

We would like to offer the following suggestions for updates to Situation 9(f):

Suggestion 1: The Census Bureau should revise Situation 9(f) so that it reflects at least the following two categories of U.S. overseas military populations:

Category 1- Military Members Temporarily Deployed Overseas to a Conflict Zone-For these members, the deployment will hopefully consist of a "there and back" experience. These members might find themselves in places such as Iraq and Afghanistan, but they intend to return to the military installation from which they were temporarily deployed. Members are expected to return to the location from where they deployed, rather than reporting to their next rotational duty assignment. But for being deployed, these members would be back at their last duty station. Although these members might be deployed for 6 to 9 months, we would argue that this is a "temporary" deployment, when considered in light of the overall amount of time these members are assigned to a stateside military base. It is assumed that these members would not likely have dependents living with them while temporarily deployed overseas to a conflict zone.

Category 2-Military Members Assigned Overseas Outside of a Conflict Zone-For these members, the experience of being assigned overseas is part of their career rotation. These members might find themselves assigned to places such as Germany and Japan. For these members, their next rotational duty assignment will very likely be somewhere different from their previous location. It is assumed that these members might have dependents living with them while stationed overseas outside of a conflict zone.

Suggestion 2: The Census Bureau should revise its method of counting overseas military population. In the Federal Register Notice, there is no information on how U.S. military personnel in Situation 9(f) are to be counted, except that these persons are to be counted "as part of the overseas population." We understand that under current procedures, overseas military personnel are counted through administrative records rather than a census questionnaire. We understand that these administrative records are maintained by the Defense Manpower Data Center (DMDC). We also understand that under current procedures, the Census Bureau currently counts these people as part of the apportionment population, but not part of the U.S. resident population. We understand that the Census Bureau allocates these people to a state's apportionment population based on a hierarchy of information that is shown in a person's file maintained by the DMDC. This hierarchy currently starts with the person's home of record, then the person's legal residence, and finally, the person's last duty station. We understand that the Census Bureau has used this hierarchy for the past several decennial censuses.

Suggestion 2(a): The Census Bureau should revise its method of counting overseas military by reversing the hierarchy of information that it currently uses to allocate people to a state's apportionment population. The reversed hierarchy should start with the person's last duty station, then the person's legal residence, and finally, the person's home of record. This suggestion of reversing the hierarchy is intended to be applied to both Category 1 and Category 2 of the overseas population suggested above; this would ensure that both categories are treated the same way. However, if the Census Bureau is not able to treat both categories in the same way, then we would encourage the Census Bureau to apply the reversed hierarchy to at least Category 1. After all, people in Category 1 are the ones who intend to return to their last duty station. They are the ones most likely to return to their last duty station after their deployment ends; this last duty station is also likely where their immediate families are living.

Suggestion 3: Assuming that the Census Bureau is willing to use the reversed hierarchy for at least the people in Category 1, the Census Bureau should count the people in Category 1 as part of a state's resident population, as well as part of a state's apportionment population. As noted above, the people in Category 1 intend to return to their last duty station and they are most likely to return to their last duty station, after their deployment ends.

Suggestion 4: Assuming that the Census Bureau is willing to count the people in Category 1 as part of a state's resident population, the Census Bureau should use the actual address of a person in Category 1 and allocate the person to the census block in which they resided before being deployed. This would ensure that the person is properly counted in the correct jurisdiction (city and county) in which the person resided before being deployed. We assume that the person's actual address would be in the administrative (DMDC) record for the person, because if the person were injured while being deployed, the military would need to be able to notify the person's family members of the injury. We assume that demographic characteristics (e.g., age, sex, and race) about the person in Category 1 would also be available in the administrative record for the person.

Suggestion 5: Consider adding a new question to the Census form. This question would ask: "Is a member of this household currently temporarily deployed overseas to a conflict zone?" A follow-up question would ask: "If yes, please provide the person's name (and age, sex, and race)." This information would then be matched against the administrative record for the Category 1 deployed person.

Suggestion 6: Clarify the Census instructions provided to military families. Local experience has suggested that families of deployed spouses were confused by Census instructions and did not complete their Census form. This increased the undercount of population in military communities. The instructions need to state that if a family member is temporarily deployed overseas to a conflict zone, the person filling out the form should list the deployed family member on the Census form. The instructions should also clearly state that all members of the family should be listed on the form, if a person from the family is temporarily deployed overseas to a conflict zone.

In summary, if the Census Bureau would adopt these suggestions, people in Category 1 (military members temporarily deployed overseas to a conflict zone) would be counted as part of the resident population of the community from which they were deployed. This would correct the undercount problem that has existed in military communities. If the Census Bureau would adopt these suggestions, people in Category 1 would be treated like the people in Situation 1 (people away from their usual residence on Census Day). They would be counted at the residence where they live and sleep most of the time, but for being deployed.

Again, thank you for the opportunity to make these suggestions. If you have any questions, feel free to contact us through the City of Fayetteville's Demographic Planner, _____, at _____, or by way of email at _____.

Appendix 1

How the Census Bureau's Current Procedures for Counting Deployed Military Members Have Negatively Impacted North Carolina and its Military Communities

Introduction and Purpose of This Appendix 1

In the letter preceding this Appendix 1, The City of Fayetteville, Cumberland County and the Fayetteville Regional Chamber partnership, has made several suggestions to the Census Bureau regarding the Census Bureau's current procedures for counting deployed military members. These procedures are based on the 2010 Census residence rule and situation 9(f). The purpose of this Appendix 1 is to show that the current procedures have negatively impacted North Carolina and its military communities. This Appendix 1 provides data in support of the partnership's suggestions for changing the Census Bureau's current procedures.

Background on the Census Bureau's Current Procedures

Prior to the 2010 Census, state and local leaders in North Carolina asked the Census Bureau to revise procedures for counting military members who are deployed overseas. Under the current procedures for the decennial census, in effect from prior censuses, the Census Bureau counted deployed military members as part of the overseas population. For the apportionment counts, the Census Bureau allocated deployed military members to a state's overseas population. The Census Bureau first used the home of record. If home of record was not available, the Census Bureau used the legal residence. If neither home of record or legal residence were available, the Census Bureau used the last duty station.

State and local leaders in North Carolina were concerned that the Census Bureau's current procedures would harm North Carolina, especially if a large number of military members stationed in North Carolina were temporarily deployed while the 2010 Census was conducted. Officials from the Census Bureau told the state that there was not time to change the methods for the 2010 Census. (Census Bureau officials suggested that they would consider changes before the 2020 Census.)

On April 1, 2010, the 2010 Census was conducted.

When the US Census Bureau conducted the 2010 Census, many military personnel stationed at military installations in North Carolina were temporarily deployed overseas. State officials estimate that more than 40,000 military members were deployed from military bases in North Carolina around the time of the 2010 Census (April 1, 2010). (Fayetteville Observer, 3/30/11, p 1A.)

On December 21, 2010, the Census Bureau released the first counts from the 2010 Census. These counts were known as the apportionment counts. These counts were used to apportion the seats in the U.S. House of Representatives to the 50 states. The apportionment population for a state consisted of two numbers: the resident population of the state and the U.S. overseas population allocated to the state, based on home of record information.

Table 1 below shows the apportionment populations for the U.S. and North Carolina, based on the 2010 Census.

Table 1
Apportionment Populations for the U.S. and North Carolina, Based on 2010 Census

Geographic area	Number of representatives	Apportionment population		
		Total	Resident population	U.S. overseas population
United States	435	309,183,463*	308,745,538	1,042,523
North Carolina	13	9,565,781	9,535,483	30,298

Notes:*The total apportionment population of the US includes the resident population for the 50 states, as ascertained by the Twenty-Third Decennial Census under Title 13, United States Code, and counts of overseas U.S. military and federal civilian employees (and their dependents living with them) allocated to their home state, as reported by the employing federal agencies. The apportionment population excludes the resident and overseas population of the District of Columbia.

Source: U.S. Census Bureau. 2010 Census. Population and Housing Unit Counts. United States Summary. Table A.- "Apportionment of U.S. House of Representatives and Apportionment Population Based on 2010 Census."

As shown in Table 1 above, the total U.S. overseas population was 1,042,523, and the North Carolina overseas population was 30,298.

Data on the components of the U.S. overseas population are shown below in the left half of Table 2. As shown, there were 410,696 persons classified as in the Armed Forces and living overseas in the 2010 Census. The City staff assumes that detailed records are available on each of these deployed members of the military. The staff assumes that the military could break this figure down by the number who are deployed temporarily to conflict zones (such as Afghanistan and Iraq), and the number who are assigned to long term duty stations outside of a conflict zone (such as Germany and Japan). (These distinctions are referred to as Category 1 and Category 2 in the partnership's letter.)

Unfortunately, it has not been possible to locate any data sources showing the components of the North Carolina overseas population. (On July 15, 2015, City staff was told that the North Carolina data were not published and cannot be released at this time.)

Therefore, the City staff has estimated the components of the North Carolina overseas population, based on the U.S. percentages. These estimates are shown below in the right half of Table 2.

Table 2
Details on the U.S. Overseas Population and Estimates for North Carolina

	2010-United States		2010-North Carolina (estimated)	
	Number	Percent*	Number	Percent
Total	1,042,523	100.00%	30,298	100.00%
Federal Employees	434,382	41.67%	12,624	41.67%
Armed Forces	410,696	39.39%	11,936	39.39%
Fed Civilian Employees	23,686	2.27%	688	2.27%
Dependents of Fed Employees	608,141	58.33%	17,674	58.33%
Armed Forces Dependents	592,153	56.80%	17,209	56.80%
Fed Civilian Dependents	15,988	1.53%	465	1.53%
Total Armed Forces & Dependents	1,002,849	96.19%	29,145	96.19%
Total Fed Civ Empl & Dependents	39,674	3.81%	1,153	3.81%

Source: US data based on report entitled, 2010 Census Federally Affiliated Overseas Count Operation Assessment Report. Data were in an unnumbered table on page 2 of the report. NC data calculated, based on US percentages.

Note:*Published percentages were rounded and did not show any decimal places. Percentages shown above are shown to 2 decimal places.

As shown above in Table 2, City staff has estimated that 29,145 people in the North Carolina overseas population were members of the Armed Forces and their dependents. Out of this, 11,936 were estimated to be members of the Armed Forces, while 17,209 were estimated to be dependents of the Armed Forces members.

If the Census Bureau would adopt the suggestions in the partnership's letter [e.g., if the Census Bureau would distinguish between Category 1 (temporarily deployed overseas) and Category 2 (assigned overseas for a longer term), and if the Census Bureau would use the last duty station criteria in allocating overseas military members to states,) the City staff believes the numbers for North Carolina shown in Table 2 above would be very different.

On March 2, 2012, the Census Bureau released the P.L. 94-171 Redistricting Summary File Data for North Carolina. This release provided

detailed information down to the block level for resident total population by race, voting age population by race, Hispanic Origin, and number of housing units. The Census Bureau provided summaries of this data by block groups, census tracts, voting districts, cities, and counties. Thus, local officials were able for the first time to know what their new 2010 Census populations were. The Redistricting Data release did not include any information about the group quarters population.

Assessment of the Impacts of the Current Procedure

As pointed out in Table 2 of the preceding section, the Census Bureau reported that the North Carolina overseas population was 30,298. Overseas military members made up a large part of this number, but it has not been possible to determine the actual number. However, state officials estimated that more than 40,000 military members were deployed from military bases in North Carolina around the time of the 2010 Census (Fayetteville Observer, 3/30/11, p. 1A).

City staff has tried to locate studies documenting the impacts of the current procedure on North Carolina. City staff has also performed its own analysis, using Census Bureau data. These studies and analysis efforts are discussed below.

Study of Defense Department Data. This is the most important study that City staff has been able to identify. Although City staff has not been able to locate a copy of this study, it was mentioned in a major story in The Fayetteville Observer published on March 30, 2011. This story was entitled, "Deployment Costly for State in Census." This story was based on a staff and wire report. The story referred to a study of Defense Department data that was provided to the Associated Press.

One of the main findings from the study was: "North Carolina officials estimate more than 40,000 troops were deployed from the state's military bases around the time of the census one year ago. But only 12,200 of the nation's overseas military personnel listed North Carolina as their home state, according to Department of Defense data provided to AP." This created a gap of around 28,000 troops, which was costly to the state. For example, had the apportionment population of the state been only 15,000 higher, the state would have been eligible for an extra congressional seat. This gap also likely resulted in considerable federal funding losses, which are often distributed based on population. (Fayetteville Observer, 3/30/11, p 1A.)

City Staff's Analysis Based on Census Bureau Data - City staff has used the data released as part of the 2010 Census to analyze the extent to which deployments have affected populations in North Carolina. This included using the Advanced Group Quarters Data, which was released on April 20, 2011, via the Census Bureau's FTP site. (It is believed that this data was later incorporated into the 2010 Census Summary File 1 dataset.) The term, "group quarters," refers to living quarters other than traditional housing units. Examples of group quarters are: nursing homes, college dormitories, and military quarters, i.e., military barracks.

The release of the Advance Group Quarters data made it possible for the first time to approximate the number of group quarters military personnel who were deployed from North Carolina. The general approach was to compare the number of people living in military quarters in the 2010 Census against the same number from the 2000 Census. It is assumed that military quarters population is a good indicator of the overall military population of an area.

The City staff has used Census Bureau data at four different scales: the state level, the military county level, Fort Bragg annexation area level, and the City of Fayetteville level. Each is discussed below.

Analysis at the State Level-Table 3 below shows the number of persons living in military quarters (i.e., barracks) in North Carolina in 2000 and 2010.

Table 3
Number of Persons Living in Military Quarters in North Carolina in 2000 and 2010

Geographic Area	2000 Census	2010 Census	Absolute Change, 2000-2010	Percent Change, 2000-2010
North Carolina	37,022	26,326	-10,696	-28.89%

The data in Table 3 show that the military quarters population decreased by 10,696 between 2000 and 2010. It seems reasonable to conclude that at least part of this decrease was due to the Census Bureau's procedures for counting deployed military personnel from the various military bases in North Carolina.

However, other factors could have affected this decrease. For example, the decrease could be a function of modernization programs at military bases in North Carolina. For example, a base might have torn down some barracks between 2000 and 2010; in this situation, it is assumed the base would have provided opportunities for the displaced military personnel to live off base.

Analysis at the Military County Level - "Military County" refers to any county with people living in military quarters. Table 4 below shows the number of persons living in military quarters in North Carolina by county in 2000 and 2010. The counties are ranked in the order of their military quarters population in 2000.

Table 4
Number of Persons Living in Military Quarters in North Carolina, by County, in 2000 and 2010

Geographic Area	2000 Census	2010 Census	Absolute Change, 2000-2010	Percent Change, 2000-2010
Onslow Co	18,491	16,697	- 1,794	- 9.70%
Cumberland Co	13,857	5,949	-7,908	-57.07%
Craven Co	3,420	2,986	- 434	-12.69%
Wayne Co	563	594	31	5.51%
Richmond Co	374	0	- 374	-100.00%
Brunswick Co	222	4	- 218	- 98.20%
Pasquotank Co	33	41	8	24.24%
Dare Co	27	6	- 21	- 77.78%
New Hanover	22	29	7	31.82%
Carteret Co	13	15	2	15.38%
Pamlico Co	0	4	4	
Mecklenburg	0	1	1	

Total-NC	37,022	26,326	-10,696	- 28.89%
----------	--------	--------	---------	----------

As shown above, Cumberland County (the home of Fort Bragg) experienced the largest absolute decrease in military quarters population of any county in North Carolina between 2000 and 2010.

It is assumed that this decrease is significantly related to deployment of troops from Fort Bragg around the time of the 2010 Census, and to the Census Bureau's procedures for counting deployed military members.

According to The Fayetteville Observer, Fort Bragg officials estimate that 13,000 soldiers returned to Fort Bragg in 2010 after being deployed to Afghanistan, Iraq, and Haiti. It was estimated that many of these returning troops returned after the date of the 2010 Census (April 1, 2010). (Fayetteville Observer, 3/30/11, p. 1A.)

Analysis at the Fort Bragg Annexation Area Level - A large part of Fort Bragg was annexed into the City of Fayetteville on September 1, 2008. Since the date of annexation, the military quarters population of this part of Fort Bragg has declined significantly. This decrease in the military quarters population definitely impacted the population of the City of Fayetteville, as reflected in the population estimates prepared by the State Demographer.

Table 5 shows data for the part of Fort Bragg annexed into the City of Fayetteville for four time periods (as of the 2000 Census, as of July 1, 2008, as of July 1, 2009, and as of the 2010 Census).

Table 5
Data for the Part of Fort Bragg Annexed Into the City of Fayetteville Effective 9/1/08

Population Components	As of 2000 Census (1)	As of July 1, 2008 (2)	As of July 1, 2009 (2)	As of 2010 Census (3)
Total Number Housing Units	4,142	4,338	4,338	4,185
# Vacant Housing Units	103	500	500	379
# Occupied Housing Units	4,039	3,838	3,838	3,806
Average Household Size	3.7096	3.6201	3.6201	3.1742
Household Population	14,983	13,894	13,894	12,081
Group Quarters Population	13,132	12,053	11,028	5,116
Total Population	28,115	25,947	24,922	17,197

Sources:

1. The data as of the 2000 Census are based on a tabulation of 2000 census blocks that were completely within the boundaries of the area annexed in 2008. When 2000 census blocks straddled the annexation boundary, City staff worked with a staff member from Fort Bragg in allocating housing units and population to the part of the block included within the annexation boundary. The City had to submit these estimates, based on 2000 Census data, to the US Justice Department for preclearance of the annexation of Fort Bragg.
2. The housing count data and the household population data for July 1, 2008 and for July 1, 2009 are from information provided by Fort Bragg officials to the City for submission to the State Demographer. The group quarters population data for July 1, 2008 and for July 1, 2009 are from information provided by Fort Bragg officials to the State Demographer. The State Demographer used all of this information in preparing her "standard" estimate of population for the City of Fayetteville.
3. The data as of the 2010 Census are based on a tabulation of 2010 census blocks that were completely within the boundaries of the area annexed in 2008. This involved using GIS to join block-level group quarters data, by facility type, to the shape file of census blocks.

The information in Table 5 above shows that there was a gradual decrease in the group quarters population in the Fort Bragg annex area between the 2000 Census and July 1, 2009. This might have been a function of the demolition of old barracks and the provision of opportunities for barracks residents to move off-post.

The information in Table 5 above also shows that there was a very sharp decrease in the group quarters population in the Fort Bragg annex area between July 1, 2009 and the 2010 Census. This was very likely due to the deployment of troops living in barracks on Fort Bragg, and to the Census Bureau's procedures for counting deployed military members.

The information in Table 5 above also suggests that the impact of deployments can be detected in the Fort Bragg annex area, in terms of a decrease in household population between July 1, 2009 and the 2010 Census. (It should be noted that in addition to barracks, many people on Fort Bragg live in traditional family units. These units are typically single-family detached units.) For example, while the number of occupied housing units declined slightly, the average household size decreased significantly. This might be because of the deployment of one adult from the household. Under this scenario, another adult would have been left in the household, along with any children from the household.

Analysis at the City of Fayetteville Level - The decrease in the military quarters population within the part of Fort Bragg that was annexed into the City of Fayetteville in 2008 has definitely impacted the overall population of the City of Fayetteville.

For example, the overall population of the City according to the 2010 Census was only 200,564. Prior to the release of the 2010 Census data for Fayetteville, the North Carolina State Demographer had estimated that the City's population was approximately 208,000.

It should be noted that this analysis of deployment impacts has not included a study of neighborhoods located off-post from Fort Bragg but within the City of Fayetteville. It is possible that if such a study were done, it would reveal that average household size was suppressed by the absence of an adult from the household who was deployed at the time of the 2010 Census.

Officials from another military community in North Carolina, Jacksonville, have reported that there was an undercount of household population in the Jacksonville area. It is believed that the undercount resulted in part from confusing instructions on how to fill out the Census form. A study of this problem has not been done in the Fayetteville area.

Summary of the Impacts of the Current Procedure

The study of Defense Department data outlined above, along with the City staff's analysis of Census Bureau data at several geographic

	<p>scales, suggest that the 2010 Census populations of military base communities in North Carolina were significantly impacted by the Census Bureaus' procedures for counting military members who were temporarily deployed overseas to a conflict zone. It is unfortunate that many of these deployed members of the military were apparently deployed just prior to the 2010 Census. This meant that under the current procedures of the Census Bureau, they were not counted in state, county, and city resident population counts. However, if the Census Bureau will adopt the suggestions outlined in the partnership's letter, this situation will likely not happen again.</p>
c92	<p>The Maryland State Conference of NAACP Branches, the Somerset County Branch of the NAACP (together, “the NAACP”) and the American Civil Liberties Union of Maryland (“the ACLU-MD”)¹ submit this comment in response to the Census Bureau’s <i>Federal Register</i> notice regarding the Residence Rule and Specific Residence Situations, 80 FR 28950 (May 20, 2015) to support counting incarcerated people at their places of last residence, rather than at their places of incarceration. As detailed below, our experience with this issue in Maryland provides strong support, from a civil rights perspective, for this change.</p> <p>The NAACP and the ACLU-MD are committed to preserving all citizens’ right to be equally represented in the electoral system, and we have worked to make that promise a reality in our own state. Somerset County, on Maryland’s Eastern Shore, has long been one of the state’s most racially-divided communities, with a sad history that includes lynchings, formal opposition to school integration through the 1960s, and court-ordered reforms to racially discriminatory election and employment practices into the 1980s and 1990s.²</p> <p>At the time of the last U.S. Census, Somerset County was 42 percent African American—the highest ratio of blacks to whites in any Eastern Shore County.³ Yet, despite Somerset’s demographic diversity, blacks have historically been left virtually unrepresented in County government.⁴ Indeed, until 2010, no black person had <i>ever</i> been elected or appointed— in all of the County’s 350-year history—to <i>any</i> top County office, including County Commissioner, County Administrator, Sheriff, Detention Center Warden, Judge, State’s Attorney, State Delegate, County Treasurer, County Finance Director, County Attorney, County Personnel Director, County Planning Director, County Fire Marshall, County Emergency Management Director or County Elections Administrator, among others.⁵ The situation persisted even though the historically black University of Maryland, Eastern Shore (“UMES”), located within the county, graduates many candidates qualified for government jobs and offices.</p> <p>In 2008 and 2009, the NAACP and ACLU-MD began to understand that part of the reason African Americans had remained shut out of Somerset government for so long related to what is now known as “prison-based gerrymandering.” Because the County is rural and relatively sparsely populated, the inclusion for redistricting purposes of the large prison population at Eastern Correctional Institution (“ECI”) severely undermined the racial fairness of the local election system.</p> <p>Due to a Voting Rights Act challenge to the County’s at-large election system in the mid-1980s, the County switched to a system of five single-member districts to elect its County Commission. The County planned one district as a remedial district with a majority black population, but by the time that district was established, ECI had opened. ECI’s mostly minority inmates were counted as residents of the so-called remedial district, even though they were ineligible to vote in Somerset elections. The prison’s inclusion distorted the district’s voting power, because only a small share of those counted in the district were actually eligible to vote, and an even smaller share of those eligible to vote were African American. As such, the district could not and did not function as a true remedial district, and for two decades consistently elected white officials to represent the “minority” district. Moreover, because inmates significantly outnumbered other district residents, their inclusion in the redistricting database led to over-representation of non- prison residents within that district, as compared to residents in other districts that did not include a prison.</p> <p>In 2009 and 2010, the NAACP and ACLU-MD partnered with community leaders to challenge this system. Together, they advocated with local Somerset officials, the Maryland Attorney General, and the Maryland General Assembly for exclusion of the prison population from the redistricting database. Eventually, as a result of this advocacy, the Maryland legislature became the first in the nation to adopt a</p>

law mandating that prisoners be counted at their place of last residence, rather than their place of incarceration.⁶ This simple change finally gave meaning to the voting rights remedy put in place by Somerset County in 1986 and paved the way for greater participation by minorities in Somerset County’s local government. In fact, the County’s first black County Commissioner, Rev. Craig Mathies, was elected shortly after the law was enacted. Furthermore, Somerset’s 2012 redistricting plan includes two districts with majority minority populations, better reflecting the demographics of the community and enhancing minority electoral opportunities within the County.

The story of Somerset County illustrates one adverse collateral consequence that can follow from the dramatic growth of our nation’s prison population over the past few decades: a reduction in the suitability of current Census counts for use in redistricting. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million.⁷ But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars.⁸ This change implicates a need for corresponding change in application of the Census’s “usual residence” rule with respect to incarcerated persons, to ensure that redistricting decisions and remedies count populations accurately and promote electoral fairness for all.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people.⁹ Although Maryland (along with California, Delaware, New York, and over 200 counties and municipalities) has approved a measure to adjust the Census’ population totals to count incarcerated people at home, this ad hoc approach is neither efficient nor universally feasible. For example, the Massachusetts state legislature concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses.¹⁰

Thank you for this opportunity to comment on the Residence Rule and Specific Residence Situations as the Bureau strives to count everyone in the right place, in keeping with changes in society and population realities. Because of our experience in Somerset County—and our awareness of the difference that Maryland’s new rule made to African American residents there—the Maryland State Conference of NAACP Branches, the Somerset County Branch of the NAACP and the ACLU of Maryland urge the U.S. Census Bureau to count incarcerated people as residents of their last home addresses.

¹ The American Civil Liberties Union submitted separate comments to the Census Bureau reflecting the work of the ACLU nationwide to ensure population counts that accurately represent our communities.

² See ACLU of Maryland and Somerset County NAACP, “Semper Eadem—‘Always the Same?’” at 5 (2009), available at http://www.aclu-md.org/uploaded_files/0000/0348/finalreportwapp.pdf [hereinafter “Report”].

³ See U.S. CENSUS, “2010 Census Interactive Population Map,” available at <http://www.census.gov/2010census/popmap/>. According to the 2010 U.S. Census, Somerset County is 53.53% white and 42.28% black; the only parts of Maryland with a higher percentage of black residents are Prince George’s County and Baltimore City.

⁴ See Report, *supra* note 1, at 4. According to the Report, African Americans represent 35 percent of Somerset County’s available labor force, but only 12.6 percent of County employees.

⁵ See *id.* at 2–3. Indeed, according to EEO filings at that time, not a single African American was employed by the County in a professional capacity. The County employed 46 people full or part time that year in official, professional, technical or paraprofessional positions, but *none* was African American.

	<p>¹⁰ See The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p>
c93	<p>I am writing in response to the May 20 Federal Register notice soliciting comments on the Residence Rule and Residence Situations.</p> <p>I am a data scientist (BS Math Caltech '86, PhD Math MIT '89) with several refereed publications on the mathematics of voting. The data which the census bureau collects inmates according to the home address is of critical importance and I strongly urge you to count inmates at their home address rather than the particular prison in which they are incarcerated on April 1, 2020.</p> <p>This data will help us researcher understand the effect of incarceration on the home community.</p> <p>On a more practical level, without this data, citizens who are barred from voting become literally political prisoners as their place of incarceration can be chosen to transfer representation from their home community to the location of their prison.</p> <p>I would be happy to discuss this matter in more detail with you or any members of your staff.</p>
c94	<p>Prison inmates should be counted as residents of their permanent home addresses, not at the places of incarceration. I will not attempt a comprehensive discussion of this issue, which many competent persons have addressed. I wish, however, to call attention to one facet of the question that should receive more attention: the inconsistent treatment of transient populations.</p> <p>I will then offer some observations based on my own experience. I directed the staff work on redistricting for successive Minority Leaders of the New York State Senate, from 1980 through my retirement at the end of 2005; was the principal consultant to the Committee on Election Law of the Bar Association of the City of New York in the development of its 2007 report on reform of the New York redistricting process; worked closely with legal teams on litigation concerning New York redistricting during each of the last four decades; consulted with New York State Senate and Assembly staff on the drafting of the prison population re-allocation law enacted in 2010; and consulted with California Assembly staff in connection with the latest amendment to California’s prison population re-allocation law. (I am not a lawyer.)</p> <p>I. The counting of prisoners at the places of incarceration is not part of a consistent rule for defining residence.</p> <p>This can be understood by comparing the rules for counting three categories of transient populations: a) college and university students away from home; b) persons traveling for business and pleasure; and c) those who are away from home as prison inmates. I do not wish to argue that the rules for students and travelers should be changed. But the comparison will illuminate the problem with the rule that applies to prisoners.</p> <p>Students and prisoners are counted at their temporary residences, and travelers are counted at their permanent home addresses. Yet the students and the travelers have much in common with each other, in ways in which both groups differ from the prisoners. Unlike the prisoners, both the students and the travelers:</p> <ol style="list-style-type: none"> 1. are at their Census Day location voluntarily; 2. are part of the social and economic fabric of the communities where they temporarily reside: walking freely in the streets, using the roads and public transit, frequenting restaurants, visiting parks, attending sports events, museums, theatres, etc., and free to participate in politics and other aspects of civic life;

3. use public services financed by local taxes: roads, public transport, police, ambulances and emergency rooms, building code enforcement, restaurant inspections, etc.; and
4. pay local taxes: sales taxes, for both groups; hotel occupancy taxes and, indirectly, real estate taxes, for travelers; and real estate taxes, either directly or indirectly (depending on whether they own or rent), for students living off-campus.

Students may also be employed, holding the sort of jobs that might also be held by permanent local residents, and likewise subject to taxes on their earnings. And many travelers are paid to perform duties away from home in connection with their employment.

Furthermore, members of Congress and state legislators, in furthering the interests of the permanent residents of their districts, also seek to further the interests of the students and visitors. It is not only from the love of learning or recognition of the social value of research that elected officials seek to support and expand institutions of higher learning in their districts. But by seeking to maximize the local economic benefit derived from such institutions – supporting expansion and making the colleges and universities attractive to students – they also further the interests of the students.

Similarly, in seeking prosperity for their districts by making them attractive destinations for business travelers and tourists, they serve the interests of the visitors. In both cases, the elected representatives would entirely fail to serve the interests of their permanent constituents if they did not also faithfully serve the interests of the students and visitors.

In contrast, no Congress member or state legislator seeks to represent the interests of the prisoners incarcerated in his or her district. Their offices do not offer the prisoners the ‘constituent services’ that they provide to permanent residents of their districts. To the degree that they seek to maximize the economic value of the prisons – which are, indeed, the major local employer in some places, as universities are in others – they regard the prisoners merely as the raw material of a local industry. To the degree that the prisoners enjoy representation in Congress or state legislatures, it is only from the representatives of the communities where they left behind their families and friends, to which they will eventually return, and where they may once again be voters.

New York City, where I live, is disadvantaged by the census rules relating to both prisoners and visitors.

On the one hand, thousands of permanent residents of the city are counted at prisons outside of the city. Under the New York State law¹ subtracting prisoners, for purposes of legislative apportionment, from their places of incarceration, and re-allocating them insofar as possible to their permanent home addresses, the population of New York City showed a net increase of 21,082, while the balance of the state showed a net decrease of 14,705. This actually understates the effect on New York City of the rule for counting prisoners, because the legislative task force² charged with making the calculations had no access to data from Federal agencies or other states, a subject I will return to below.

At the same time, the city’s population is permanently swollen by hundreds of thousands of visitors, but these persons are not counted here.³ There is, of course, a good deal of turnover among the individuals who constitute this transient population, but the total remains fairly steady. There is seasonal variation in this number, but not nearly so large as the seasonal variation in the number of students in a college town. In many college towns, almost the whole student population will vanish about two months after Census Day, not to return for about three months. And when the fall term begins, many who were counted in April will be gone, to be replaced by new enrollees.

For all of these reasons, if visitors are to be counted at their permanent home addresses, not where they are sleeping on Census Day, there is an even stronger argument for applying that principle to prisoners.

The Census Bureau should be guided by the ruling of the three-judge court in *Fletcher v. Lamone*, 831 F. Supp.2d 887 (D. Md. 2011), that the careful attribution of prisoners to their permanent home addresses for congressional and legislative redistricting is consistent with the constitutional rules. There is no basis for supposing that such attribution is permissible for congressional redistricting, but not for congressional reapportionment. Note especially the Court's observation distinguishing prisoners from other 'group quarters' populations:

We also observe that the plaintiffs' argument on this point implies that college students, soldiers, and prisoners are all similarly situated groups. This assumption, however, is questionable at best. College students and members of the military are eligible to vote, while incarcerated persons are not. In addition, college students and military personnel have the liberty to interact with members of the surrounding community and to engage fully in civic life. In this sense, both groups have a much more substantial connection to, and effect on, the communities where they reside than do prisoners. (*Id.* at 896)

The Court also observed that:

According to the Census Bureau, prisoners are counted where they are incarcerated for pragmatic and administrative reasons, not legal ones. The Bureau has explained that counting prisoners at their home addresses would require "collecting information from each prisoner individually" and necessitate "an extensive coordination procedure" with correctional facilities. (*Id.* at 895)

But while it is possible to imagine many technical difficulties that would arise in counting business travelers and tourists where they are actually sleeping on Census Day, we now have extensive experience demonstrating that it would be quite practicable to count prisoners at their permanent home addresses. The states of New York and Maryland successfully adjusted their population databases for the 2010-12 redistricting without a huge investment of resources. An account of how New York and Maryland accomplished this, and an excellent review of the entire subject, is provided in Prof. Erika L. Wood's study, *Implementing Reform: How Maryland and New York Ended Prison Gerrymandering* (New York: Dēmos, 2014).⁴ These experiences can provide a model, and should lead the Census Bureau to reconsider its previous view that it would be prohibitively expensive to do what New York and Maryland accomplished.

II. I wish to add a few observations from my own experience to Prof. Wood's findings and recommendations.

A. In the discussions leading to the enactment of the New York law in 2010, those of us who had experience with redistricting databases, and with the use of geographic information systems to geocode addresses to census blocks, agreed that it would be possible to re-allocate to their home addresses about 60% of the prisoners on the list to be provided by the NYS Department of Corrections and Community Supervision (DOCCS).⁵ We were wrong. As Prof. Wood documents, 79% of the addresses on the DOCCS list were successfully attributed to New York census blocks. And even that figure understates the success of the project, since the remaining 21% includes those prisoners whose permanent homes were not in New York State.

B. In my consultations during 2010 with New York legislative staff concerning the drafting of Part XX of Chap. 57, it was clear that the decision to exclude congressional redistricting from the use of the adjusted database was entirely a matter of legal caution. There was case law supporting the use of an adjusted database for state legislative redistricting, but there was much uncertainty about whether the courts would permit such a database to be used for congressional redistricting. The use of the adjusted database was limited to legislative redistricting to avoid creating a possible basis for a legal challenge to the congressional districts to be enacted in 2012. Happily, Maryland was more bold, and the matter was settled in *Fletcher*. I am certain, from the discussions in which I participated, that the New York law

would have encompassed congressional redistricting if the issues later decided in *Fletcher* had already been settled in 2010.⁶

C. The California re-allocation law, which will apply to the next decennial redistricting, originally provided for subtraction of prisoners from their places of incarceration only if they could be re-allocated to a permanent home address within the state. The law therefore excluded prisoners in the custody of the U.S. Government. The law has now been amended to provide, as in the New York law, for the subtraction of all inmates of Federal and state prisons, and then for their re-allocation to their permanent home addresses insofar as possible. The laws in both states are now based on the principle that counting a person in the *wrong* place distorts the apportionment database even more than excluding the person entirely.

D. There is nothing novel about excluding from the PL94-171 data set those persons who are part of the U.S. population, but who cannot be attributed to a specific U.S. address for purposes of reapportionment and redistricting. That is the rule for U.S. citizens and their dependents living outside the U.S. while in the employ of the U.S. Government or serving in the armed forces.

E. The drafters of the New York law assumed that it would be impossible to obtain from the U.S. Bureau of Prisons the sort of list that was provided by NYSDOCCS. Maryland did attempt to obtain such a list from BOP, and was rebuffed. BOP explained its refusal as based on a concern to protect the confidentiality of records about prisoners. This a legitimate concern, and underlies the confidentiality provisions that were written into the New York and California re-allocation laws. One cannot blame BOP for being cautious about providing such lists to state agencies, and of course the state legislatures cannot command BOP's cooperation. But the Census Bureau may well be able to address BOP's concerns about preserving confidentiality. If the Census Bureau can obtain the necessary lists from BOP (and also from ICE), it will be in a far better position than the states, individually or collectively, to allocate prisoners to the census blocks of their permanent home addresses. The Census Bureau, unlike the states, will also be able to re-allocate those prisoners who are being held, either by Federal or state authorities, in a state other than that of their permanent residence.

For all of the above reasons, the residence rule for prison inmates should be changed. Prisoners should be counted at the homes to which they will eventually return, where they left behind their families and friends, where they are represented by elected officials, and where they may once again be voters.

¹ Legislative Law, Section 83-m, Subsection 13, enacted by Part XX of Chapter 57 of the Laws of 2010.

² The Legislative Task Force on Demographic Research and Reapportionment, known as LATFOR, an acronym derived from an older name of the task force.

³ NYC & Company, the city's tourism promotion organization, estimates that there were 54.3 million visitors in 2013.

[<http://www.nycgo.com/articles/nyc-statistics-page>] The *New York Times* reports that there were 108,592 hotel rooms in the city in 2013, and estimates that the average daily occupancy was 68% in January 2015, down 4.7% from January 2014 (the January 2014 figure having been swollen by the Super Bowl). [<http://www.nytimes.com/2015/03/04/realestate/commercial/hotel-market-staggers-in-new-york-city.html>; web edition, March 3, 2015; New York print edition, March 4, 2015, p. B6] Allowing for some uncertainty about the estimated number of visitors, the proportion who did not remain for the night, the average number of persons in an occupied hotel room, and the proportion of visitors who found other accommodations, it is reasonable to suppose that some 200,000 visitors sleep here on an average night. That is a good enough estimate for the present discussion.

⁴ Available at: <http://www.demos.org/publication/implementing-reform-how-maryland-new-york-ended-prison-gerrymandering>

⁵ The list provided all of the address information available to DOCCS about each prisoner, but no names. Each record was identified only by a number that the Legislative Task Force could use in addressing inquiries to DOCCS. Furthermore, the Task Force was required to hold all of the address information in confidence, making public only the revised block-level counts. The California law has a similar provision.

⁶ In the event, the New York Legislature failed to agree on a congressional redistricting plan in 2012, and the task fell to a U.S. District Court after all. But that was not foreseen in 2010.

c95

I am writing in response to your May 20 Federal Register notice regarding the Residence Rule and Residence situations.

As a philosopher of science focused on social demography and social ecology, I analyze studies that, among other things, investigate the effects of crime, incarceration, and recidivism in American communities. In order to understand those effects it is crucial to have reliable data regarding the incarceration rates in those communities. The Census Bureau is the only reliable source of demographic data. Should the proposed rule be adopted this research would be impossible. I, therefore, urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census Day.

Thank you for your consideration.

c96

These comments are submitted in response to the Public Notice, dated May 20, 2015, regarding proposed changes to the Residence Rule and Residence Situations for the upcoming 2020 Census.¹ The Public Notice sought comment on the Residence Rule, and the undersigned seeks to provide comment on the Residence Rule as it relates to those who are incarcerated (Rule 13) and those in Juvenile Facilities (Rule 16) (collectively, the “Detainees”).

I have served as the *pro bono* counsel for the family members of those who have been incarcerated in a proceeding before the Federal Communications Commission since 2010. The proceeding relates to the telephone rates and other charges that are imposed on families to remain in contact with Detainees, and I have actively advocated before the FCC, Congress, and the US District Court for the establishment of rate caps and elimination of excessive fees. The telephone is uniquely important to the families I represent *because correctional facilities tend to be located very far away from their homes*. In this context, I have become uniquely aware of the economic and personal impact of the difficulties of family members to remain in contact with Detainees, especially with the 1.7 million children with at least one family member who are Detainees.

Rule 13 and Rule 16 count Detainees as being a resident at the facility, rather than their residence before being detained, i.e., their permanent residence. Not only is this determination different than many states’ laws which specifically do not change Detainees’ permanent residences, and actually permit Detainees to vote for candidates at their permanent residence. Thus, the rules are in conflict with state law, and do not reflect the reality of how states treat Detainees in connection with their right to vote.

Moreover, this rule incentivizes the construction of detention facilities at distant locations far away from the Detainees’ permanent residences. In particular, because Census figures are used to determine state legislative districts, these rules skew the population of districts by adding additional people to districts that do not actually have the ability to vote for candidates in those very same congressional districts.

Because the current Census rules count Detainees as residents at the facility location, there is a strong incentive for communities to volunteer to construct detention facilities in order to increase their population without permitting the Detainees to vote in local elections. Studies have shown that more than 60% of those incarcerated are at facilities more than 100 miles from their permanent residence, and 10% of those incarcerated are located at facilities more than 500 miles from their permanent residence.²

The more reasonable approach would be for the Census Bureau to count Detainees at their permanent residence. This would lead to the accurate determination of the number of eligible voting residents for that particular district. Moreover, it would eliminate the perverse incentive to site detention facilities far distances from Detainees’ permanent residences. If detention facilities are more easily accessible, then the recidivism rate will be reduced by increase contact between families and friends and Detainees, which will reduce the prison and jail costs.

Thank you this opportunity to provide comments on this very important criminal justice matter.

¹ See *Notice and Request for Comment*, 80 Fed. Reg. 28950 (rel. May 20, 2015) (the “Public Notice”).

² *Incarcerated Parents and Their Children*, Bureau of Justice Statistics (Aug. 2000) (www.bjs.gov/content/pub/pdf/iptc.pdf).

c97

I am writing this letter to respond to the proposed 2020 Census “Residence Rule and Residence Situations” that is open for public comment.

I believe that there is a serious problem with category number 13, (“People in Correctional Facilities for Adults”). In each of the listed subcategories (a through d) of number 13, people are proposed to be: “Counted at the Facility.”

Your question was about problems seen in the 2010 Census with the rules; but as this part of the rule has been unchanged for at least the last several decades; my experience in the 1990, 2000 and 2010 redistricting cycles may be helpful.

I live, since the late 1990's, in Franklin County, New York, a rural county that has a large prison population. Prisoners are not residents of our community as they originate outside of our community, they have no interaction with our community and immediately leave the community when their sentences expire or when the Department of Corrections chooses to transfer them elsewhere. Enumerating these populations as part of our community forces our community to choose between either: (1) rejecting your counts, or (2) using census data that dilutes the votes of most of our community's residents to the benefit of the few who live immediately adjacent to the prison.

I have been concerned about the implications of your "residence rule" for democracy within rural communities since the 1990 Census when I was a resident of another upstate New York county which similarly hosted a large correctional facility. I, and many of my Jefferson County neighbors were concerned and raised public awareness that relying on your counts resulted in county apportionment that diluted the votes of residents who did not live near the prisons.

In the late 1990's, I moved to Franklin County and was again involved as a citizen activist in redistricting. There, I was pleasantly surprised to learn that I would not need to organize a post-2000 lawsuit against Franklin County because my county was already committed to modifying your census data to remove the prison populations and avoid what is now commonly called "prison gerrymandering."

However, a controversy that erupted in the neighboring county of St. Lawrence over prison-counting after the 2000 Census led me to discover that the rejection of Census Bureau prison counts in rural communities was the rule, not the exception. In summary,

St. Lawrence County had, after the 1990 Census, traditionally rejected your prison counts, but for “outcome determinative” reasons decided to include the prison populations in the post-2000 districts. The public objected, with thousands of county residents signing a petition requesting the redistricting plan be put on the ballot. The county leadership rejected the petition and in response the public defeated the political party responsible for the prison gerrymandering in the next election.

Around this time, an upstate newspaper contacted other counties in the state to see how they were currently handling the prison populations, and I surveyed several counties that this newspaper missed. This survey work inspired the Prison Policy Initiative to do a more formal survey analysis which they published as “Phantom constituents in the Empire State: How outdated Census Bureau methodology burdens New York counties“ concluding that the majority of New York State counties with large prisons rejected prison gerrymandering.

	<p>What should be obvious from my letter is that I, along with the elected leaders of my county, were concerned that including the prison population where the Census Bureau counted it but where those people -- 10% of our county's Census population -- do not reside would have a vote dilutive impact on the other parts of our county. We simply did not want to draw a county legislative districts that had a preponderance of incarcerated people. Such districts would have given every county resident living near the prisons much more voting power than the other residents of the county.</p> <p>Having considered the effects of "prison gerrymandering" on rural counties that host prisons, I and many of my neighbors came to the obvious conclusion that the Census Bureau's counts are inaccurate in so far as the Bureau counted incarcerated people as residents of the prison locations. As a result, we removed the prison populations from the one set of legislative districts that we could control -- our county districts.</p> <p>And here I feel I need to clarify our approach, given current statements from some plaintiffs in the current Texas case about excluding some non-voting populations from redistricting.</p> <p>For us, in Franklin County, the decision was not whether to count incarcerated people, but where they should rightly be counted, which we think is at their home of record. We had no right to count prisoners as local constituents, they relied on the representative services of their home legislators, and there is nothing that one of our county legislators could do for them.</p> <p>Removing the prison population was the best we could do because we lacked authority over the redistricting bodies of the New York City Council, the Albany City Council and the other home locations of the incarcerated people. As I, along with two neighbors wrote to you in our July 9, 2004 comment letter: "We know of no complaints from prisoners as a result, as they no doubt look to the New York City Council for the local issues of interest to them."</p> <p>Thankfully, New York State took things one step further with the passage of Part XX (ending prison gerrymandering at the state and local levels) which made sure that all state prisoners are counted in the appropriate locations. This is legislation that I and many of my neighbors supported. And while I support Part XX, I must note that the law had one shortcoming that only the Census Bureau can fix: Part XX did not reallocate federal prisoners to their homes; it simply removed them from the count.</p> <p>The Census Bureau is the only entity which can provide a complete solution to the redistricting confusion caused by the current "usual residence rule." I urge you to adjust this policy and count all prisoners at their homes of record in the next federal Census.</p>
c98	<p>My name is _____. For over 25 years, I have provided redistricting expertise to civil rights organizations, community groups, and local governments across the country. I estimate that I have developed state and local election plans for at least 750 jurisdictions in about 40 states – primarily in the American South and Rocky Mountain West (Indian Country). I have testified in federal courts on voting matters in about 35 cases and submitted declarations or been deposed in an additional 50 cases.</p> <p>I always recommend to local-level clients that the prison population should be removed or reallocated to establish an apportionment base that is in keeping with the principle of one-person, one-vote. But this adjustment is not always possible to do, given the current structure of the PL94-171 files and some state and local laws that restrict the apportionment base to the counts in the PL94-171 files.</p> <p>I submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility where they happen to be located on Census Day. Below are four specific steps that I believe you must take for the 2020 Census to more accurately reflect present-day demographic realities.</p>

- (1) Reassign or reallocate all adults in prisons and jails to their home address. This single step would eliminate a distortion in the complete count Census that often results in extreme violations of the one-person, one-vote constitutional principle in state and local election plans.
- (2) Cordon off all prisons and jails (using building footprints) into 2020 census blocks that contain only incarcerated persons. This step is necessary because some percentage of the incarcerated population will continue to list prison and jail facilities as their home address. This will facilitate overpopulating prison-impacted districts to meet one-person, one-vote requirements in statewide election plans and allow for the removal or reassignment (using other official prisoner address documents not relied upon by the Census Bureau) of this remaining non-voting population in local election plans.
- (3) Release an Advance Group Quarters Summary File as I understand you plan to do, within the PL94-171 files (I use the 2010 Advance Group Quarters Summary File almost every day to identify prisons, college dorms, military bases, etc. as I develop election plans. I cannot overstate how useful the 2010 file has been for my work.) The 2020 Advance Group Quarters Summary File will be extremely helpful to identify any of the remaining incarcerated persons who report prison facilities as their home address, as noted in (2) above.
- (4) Release a complete count census block-level summary file that tallies the reallocated prison population by race, age, and ethnicity. I have in mind that this file would be identical in format to the PL94-171 file. It should be released no later than the early summer of 2021. This block-level summary file is critical for Voting Rights Act “ability to elect” analysis -- especially for districts that are close to having 50% minority voting-age populations.

In conclusion, the incarcerated population in the United States is now about 2.3 million. There are 16 states with populations that are less than 2.3 million. A summary file as noted in (4) above is important for various social policy and programmatic reasons unrelated to election plans, such as community development, targeted neighborhood-level programs to reduce recidivism, academic research, etc. Such a summary file will pay for itself over time.

Thank you for the opportunity to comment on the Residence Rule and Residence Situations, as it pertains to the 2020 Census.

c99

I am writing in response to your federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Thank you for asking for input from the public.

I was once incarcerated. My last residence prior to my incarceration in various Upstate New York prisons was in Queens, New York City. But, I was always counted as if I were a resident of the prison where I was incarcerated.

This most respectfully skews the results of the census so badly, that one is forced to ask: “What is the point of using the census results to ascertain political representation?”

For example. I was in _____ in the town of Warwarsing for some years, and in that town this is what the Census in 2010 showed:
According to the 2010 Census :

Total number of residents in Warwarsing:	13,157
Total prison population in Warwarsing:	1,723

Thus 13% more people are counted as living in Warwarsing than actually live there. As a result Warwarsing is allocated 13% political

	<p>representation more than it should have. Representation which some other community is being deprived of. Like the community I lived in before I was incarcerated for example. And, if you add to that equation the evidence that that African-Americans and Latinos are disproportionately incarcerated, then the figures may even be more seriously skewed for incarcerated members of these communities.</p> <p>I urge you therefore to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>The present system of counting residences in a community, may have worked before the 1980's when the number of people in prison in the U.S. was much lower than it is now. But now, as your own Census Bureau data shows: The count is so skewed, it cannot be considered accurate.</p> <p>In which case one has to ask why bother doing a census at all if the results are inaccurate up to 13% and perhaps even more?</p> <p>Before closing I would like to thank you again for requesting public feedback. This is a very important part of the democratic process.</p>
c100	<p>My name is ____ I spent a considerable amount of time in Federal Prison despite never being convicted of a crime. It is because I have never been convicted that my voting rights remain intact. I was not aware for most of my incarceration that I was being counted in the various states of my incarceration for certain purposes but would be denied the right to vote in those states due to a lack of residency.</p> <p>In 2014 while being held in the United States Medical Center for Federal Prisoners in Springfield, Missouri I attempted to register to vote. I received the voting registration forms and submitted them to the Greene County Clerk. I received mail stating that my registration was not completed because I had not submitted identification and I did not provide an acceptable address. I assumed this to mean that I could not use a P.O. Box as an address and I corrected this by resubmitting my form with a copy of identification and the physical address of the facility. Even at this point the Greene County clerk refused to complete my registration on the grounds that I was not considered a resident for voting purposes despite being counted as a resident for districting purposes. For this level of disenfranchisement to exist in the United States in 2015 is incredibly alarming and in need of immediate attention at all levels of federal and state government.</p>
c101	<p>The NAACP Legal Defense and Educational Fund, Inc. (“LDF”) submits this comment letter in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015), (“Rule”). Beginning with the 2020 Census and each subsequent decennial census, LDF urges the Census Bureau to count incarcerated people as residents of their last known pre-arrest home address, rather than of the particular prison facility where they happen to be located on Census day. Not only would this change to the Rule be consistent with many state laws, whereby incarcerated people maintain their pre-arrest address and do not lose that residence by virtue of being temporarily incarcerated, but also it would help bring the redistricting processes of states and localities into greater conformity with fundamental principles of an inclusive democracy.</p> <p>Founded under the leadership of Thurgood Marshall, LDF, now in its 75th anniversary year, is the nation’s oldest civil rights and racial justice law firm. One of LDF’s core missions is the achievement of the full, equal, and active participation of all Americans, particularly Black Americans, in the political process.¹ Consistent with this mission, LDF has advocated – through litigation and public policy – for the elimination of prison-based gerrymandering, the practice by states and localities of counting, for redistricting purposes, incarcerated people as residents of the prison facilities where they are held, rather than where they actually lived prior to their arrest.²</p> <p>In carrying out prison-based gerrymandering, states and localities often rely on Census data and, under the current Rule, the Census Bureau counts incarcerated people where they are confined.³ As explained in further detail below, however, prison-based gerrymandering is unlawful precisely because it artificially inflates population numbers, and thus, the political influence, of districts</p>

where prisons are located, at the expense of voters living in all other districts. Indeed, prison-based gerrymandering is all-too reminiscent of the infamous “three-fifths compromise,” whereby enslaved and disfranchised African American people were counted to inflate the number of constituents in—and thus, the political influence of—Southern states before the Civil War.⁴

On previous occasions, LDF has called upon the Census Bureau to change its Rule⁵ to count incarcerated people at their last known pre-arrest home address, not where they are incarcerated, to: (1) conform with legal principles on residence; (2) conform with the ordinary definition of resident; (3) avoid inflating the political power of more rural and suburban areas where prisons tend to be located and where white residents predominantly live, at the expense of urban areas where there are fewer prisons and minority communities predominantly live; and, (4) provide a more accurate picture of the nation.

First, the current Rule, which counts incarcerated people as residents of the facilities wherein they are incarcerated, contravenes basic legal principles on residence. Nearly every state has a constitutional provision or statute providing that a person does not gain or lose residence in a place by virtue of being incarcerated. Rather, an incarcerated person typically “retains the legal residence that he or she had prior to arrest, and continues to maintain residence in that county for a variety of purposes, such as court and tax filings.”⁶ For example, under Connecticut state law, a person does not gain or lose legal residence by virtue of being incarcerated,⁷ and, similarly, under Rhode Island state law, a person’s domicile shall not be lost based on confinement in a correctional facility.⁸

Second, incarcerated people are not residents, in the ordinary sense of the word, of the areas in which they are confined. Most fundamentally, in the overwhelming majority of states, incarcerated people cannot vote as residents of the places where they are confined.⁹ And, in the limited places where incarcerated people are permitted to vote, as in Maine and Vermont, they do so by absentee ballot in their home communities.¹⁰ Incarcerated people do not choose the places in which they are confined and can be moved at any time at the discretion of prison officials.¹¹ Wherever they are located, incarcerated people do not interact with or develop meaningful and enduring ties to the communities surrounding the prison facilities since, for example, they cannot use local services such as parks, libraries, highways, and roads.

Third, counting incarcerated people as residents of the places in which they are confined artificially inflates the population numbers, and thus, the political influence of the residents in districts where prisoners are located, to the detriment of all other voters who do not live in districts with prisons.¹² Additionally, by counting incarcerated people as residents of the facilities where they are incarcerated, rather than in the place where they lived prior to incarceration, Census data suggests many counties are racially and ethnically diverse, even when this is not the reality.¹³ Subsequently, officials use that flawed data to draw legislative districts, and the districts that gain political clout are often places where diverse populations have little presence, voice, or influence.¹⁴

Indeed, the stark racial and ethnic disparities that exist between those in prison and those living in the surrounding county, due at least in part from the prison construction boom, which took place primarily in rural areas, is distressing. For example, in Martin County, Kentucky, 884 incarcerated Black individuals make up 56 percent of the incarcerated population, but 12 Black residents make up only about 1 percent of the county’s non-incarcerated population.¹⁵

Ultimately, artificial inflation of voting power often benefits more rural and suburban areas where prisons tend to be located and where white residents predominantly live.¹⁶ Conversely, this artificial inflation dilutes the voting strength of urban areas where prisons are fewer and, thereby, weakens the political power of minority communities. This contravenes the constitutional principle of one person, one vote, which requires that everyone is represented equally in the political process,¹⁷ as well as the prohibition by the Voting Rights Act, now celebrating its 50th anniversary year, on the dilution of the voting strength of minority communities.¹⁸

For example, after the 2000 Census, while 68 percent of Maryland’s incarcerated individuals were from Baltimore, the Census Bureau counted only 17 percent of the state’s incarcerated individuals in that City.¹⁹ Maryland responded to this distortion of its legislative districts in 2010 by passing legislation, which requires certain officials to work in tandem to adjust population data so that incarcerated individuals are counted at their last-known residence for Congressional, state, and local redistricting.²⁰

Similarly, after the 2000 Census, in New York, seven state senate districts met minimum population requirements only because the Census counted incarcerated people as if they were upstate residents.²¹ New York responded to this artificial inflation of these legislative districts by passing legislation to adjust the population data after the 2010 Census to count incarcerated people at their respective homes for redistricting purposes.²²

Maryland and New York are not the only leading jurisdictions to take action statewide to end the problem of prison-based gerrymandering. Other states, like California and Delaware have passed similar laws,²³ and over 200 local counties and municipalities, have all individually adjusted population data to avoid prison-based gerrymandering when drawing their districts.²⁴ Notably, the democracy-distorting effects of prison-based gerrymandering are felt most keenly at the local level where total population numbers are smaller and the presence of large prison facilities can have a greater skewing effect.

Meanwhile, other states, like Illinois, where, for example, 60 percent of incarcerated people have their home residences in Cook County (Chicago), yet 99 percent of them were counted in the 2010 Census as if they resided outside of Cook County,²⁵ have considered legislation to respond to such artificial inflation.²⁶

Despite progress on these fronts, this ad hoc—state by state and locality by locality— approach to addressing prison-based gerrymandering is neither efficient nor universally implementable. The Massachusetts Legislature, for example, concluded that the state constitution did not permit legislation to eliminate the practice of prison-based gerrymandering; though, in recognizing the need to address the problematic practice, the Legislature sent the Census Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses.²⁷ The Bureau should heed these calls to update the Rule.

Consistent with the Bureau’s notice inviting comments on the Rule, and the Census Bureau’s agreement in 2010 to make prisoner population numbers available to states and localities in time for those figures to be taken into account in the redistricting process, LDF recognizes that the Census Bureau continues to strive to count everyone in the right place in keeping with changes in society and population realities. And, indeed, society has changed with the incarcerated population in the U.S. exploding from less than half a million in the 1980s to over two million people today.²⁸ This incarcerated population is disproportionately male and Black and Brown.²⁹ Accordingly, the current Rule should be updated to count incarcerated people at their last known pre-arrest address rather than the prison facility where they are confined on Census day.

By changing the current Rule, the Census Bureau will support state and localities’ efforts to ensure compliance with the one-person, one vote constitutional principle and the Voting Rights Act’s protection of minority communities’ voting strength. Ultimately then, an updated and more accurate Rule that counts incarcerated people at their pre-arrest address, rather than at the prison facilities where they are incarcerated, will help ensure a more robust democracy for the benefit of all Americans.

Thank you for this opportunity to comment on the Rule. If you have any questions or concerns, please do not hesitate to contact _____, Assistant Counsel, at _____ or me.

c102

After the 2010 census, my students at DePauw University, located in Putnam County, Indiana, did a project on local government redistricting. As part of this process, we found that some of Indiana's 23 state and 3 federal prisons were distorting representation in local governments, sometimes dramatically.

For example, we have four school corporations and one major state prison in our county. At the time of the 2010 census, the South Putnam School Board had four single-member electoral districts plus one member elected at-large. Seventy percent of the "residents" of one of those electoral districts were actually prisoners in Putnamville prison. The 765 "free residents" of that district elected one board member, as did the 2,493 residents of the school board's most populous district. Thus, voters in the district with a prison had nearly four times the electoral power of voters in the district without a prison. We persuaded the South Putnam School Board to switch to residential districts rather than single-member electoral districts to address this problem, but Henry, Madison, and Vigo were other counties that used single member electoral districts and in which sizable portions of one school board district were prisoners.

School boards were not the only local governments in which we saw dramatic effects. The Sullivan County Council has four members elected from single-member districts (plus three at-large seats). In 2010, Sullivan County had 21,475 residents. Thus, the ideal size of each of the four county council districts would be 5,369. The Wabash Valley correctional complex had 2,118 prisoners or 39% of one district. We found 7 other counties (Henry, LaPorte, Madison, Miami, Parke, Perry and Vigo) where large prisons or prison complexes were seriously distorting democratic representation. My students created a informative website on every county council in Indiana, including maps and analysis, which you might find of interest: <http://indianalocalredistricting.com/counties>

Counting prisoners as residents of their prison rather than as residents of their home undermines one-person-one-vote by giving greater electoral power to those who happen to live near prisons than to other members of their community or district who do not live near a prison. Furthermore, unlike other transient populations who live in group quarters, such as college students and military families, prisoners are disenfranchised, their residency is non-voluntary, they do not participate in the local economy, they are not beneficiaries of local government decisions, which they are powerless to influence, and, in the case of school board districts, prisoners rarely have children who attend local schools.

A survey of all members of the Indiana House of Representatives in 2004 showed that our elected officials who happen to have prisons in their districts do not consider the prisoners to be their constituents. The survey asked:

Which inmate would you feel was more truly a part of your constituency?

- a) An inmate who is currently incarcerated in a prison located in your district, but has no other ties to your district.
- b) An inmate who is currently incarcerated in a prison in another district, but who lived in your district before being convicted and/or whose family still lives in your district.

To quote the study:

"Every single one of the forty respondents who answered the question - regardless of their political party or the presence or absence of a prison in their district - chose answer (b). . . . [I]t is quite clear that representatives do not consider inmates to be constituents of the districts in which they are incarcerated - unless, of course, they happen to have prior ties to those districts." ("Counting Matters," *Virginia Journal of Social Policy and the Law*, Winter 2004)

Electoral equality and representational equality in Indiana would be best served by not counting prisoners as residents of the prison where they happen to be incarcerated at the time of the census.

c103

In response to the Census Bureau's *Federal Register Notice and Request for Comment* dated May 20, 2015, the League of Women Voters of New Jersey respectfully submits this comment regarding Residence Rule and Residence Situations, 80 FR 28950.

The League of Women Voters of New Jersey urges you to count incarcerated people as residents of their legal home addresses. The Census Bureau is "committed to counting every person in the correct place...to fulfill the Constitutional requirement (Article 1, Section 2) to apportion the seats in the US House of Representatives among the states."¹ For fair and equitable apportionment for legal voters, counting incarcerated populations at a correctional institutional is counting them at the incorrect location, one in which they happen to be temporarily located on Census day.

The League of Women Voters has been dedicated to protecting voter's rights since our organization was founded in 1920. The League's mission – Making Democracy Work® – includes ensuring a free, fair and accessible electoral system for all eligible voters. In protecting voting rights, we also want to ensure that each vote carries equal weight when electing state and federal legislators.

Counting incarcerated people at their facility address violates the constitutional principle of "One Person, One Vote" and the Supreme Court's mandate that districts be designed to give each resident the same access to government.² Including prison populations as legitimate constituents in the prison's district gives disproportionate weight to the votes of those legal voters living in that district, more weight than voters living in districts that do not have correctional facilities.

The consequences of the Census Bureau's policy of tabulating incarcerated people as residents of prison locations, rather than at their home addresses, skews democracy on both the state and local levels and is especially problematic in New Jersey where this policy unfairly enhances the weight of cast vote in 13 districts where state correctional facilities are located while diluting the vote in every other district.^{3,4}

This is particularly unfair for residents in Newark, New Jersey's largest city, where the added prison population does not offset the disproportionate number of residents that have been incarcerated and counted in a different district.⁵ Another urban center, Camden, is considered the poorest city in the nation and prison gerrymandering has reassigned 12% of its residents to faraway districts, diluting further the power of the remaining voters.⁶

	<p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. For New Jersey, that number represents 76% of offenders in New Jersey correctional institutions as of January 2015.⁷</p> <p>The League of Women Voters of New Jersey also has identified other unfair outcomes flowing from the Bureau’s current method of counting incarcerated persons. For example, New Jersey does not require school board districts based on population that have 8 or fewer members to exclude correctional populations when apportioning county districts thereby creating significant vote dilution in districts with prison populations.⁸</p> <p>We have previously called upon the Census Bureau to change its practice when the League joined in a letter to Census Bureau Acting Director Thomas Mesenbourg (of February 14, 2013), requesting that the Census Bureau count incarcerated persons at their home address.⁹ The League will continue to watch the NJ Senate Bill 480 and Assembly Bill A-659 that require incarcerated individuals to be counted at their residential address for legislative redistricting purposes.¹⁰</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because the League of Women Voters of New Jersey believes in a population count that accurately represents communities, we urge you to implement changes to the ‘usual residence’ rule to provide a count in the 2020 Census of incarcerated persons at their pre-incarceration addresses.</p> <p>¹ http://www.census.gov/population/www/cen2010/resid_rules/resid_rules.html ² http://www.njleg.state.nj.us/legislativepub/our.asp Legislators are elected from 40 legislative districts of substantially equal population. ³ http://www.state.nj.us/corrections/pages/about_us/org_struct/Division_of_Ops.html ⁴ This count does not include a 14th state facility opened since the 2010 Census. http://www.prisonersofthecensus.org/50states/newprisons.html ⁵ 14% according to http://www.state.nj.us/corrections/pdf/offender_statistics/2015/By%20County%20of%20Commitment%202015.pdf ⁶ http://www.state.nj.us/corrections/pages/about_us/org_struct/Division_of_Ops.html and http://www.state.nj.us/corrections/pdf/offender_statistics/2015/By%20County%20of%20Commitment%202015.pdf ⁷ http://www.state.nj.us/corrections/pdf/offender_statistics/2015/By%20Ethnicity_Race%202015.pdf ⁸ http://www.prisonersofthecensus.org/50states/NJ.html ⁹ http://lww.org/content/league-urges-census-bureau-end-prison-based-gerrymandering ¹⁰ https://legiscan.com/NJ/text/S480/id/916795/New_Jersey-2014-S480-Introduced.html</p>

We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because [org name] believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c106	Common Cause Delaware (CCDE) and Delaware Americans for Democratic Action (ADA) submit this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge

you to count incarcerated people at their home addresses, rather than at the particular facility that they happen to be located at on Census day.

Ensuring that redistricting is impartial and that legislative lines are drawn in a fair and transparent way is part of the core mission of both CCDE and ADA to promote civic engagement and accountability in government, as is ensuring that every eligible American's vote is counted fairly. Counting incarcerated persons as residents of the district in which they are temporarily held has the effect of unfairly enhancing the political power of those who live and vote in the prison district, while unfairly diluting the votes of those in districts without prisons. Legislators with a prison in their district should not get a bonus for keeping the prison full. This dynamic hurts our democracy, and it hurts the communities from which these incarcerated persons hail.

As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the explosion in the prison population requires the Census to update its methodology again. A fair redistricting process not only involves complying with the federal law of "one person, one vote" but also with the federal Voting Rights Acts of 1965 which protects minority communities' opportunities "to participate in the political process and to elect representatives of their choice."

The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.

Currently, four states including our own (California, Delaware, Maryland, and New York) have taken a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities individually adjust population data to avoid prison gerrymandering, when drawing their local government districts.

In 2010, Delaware became the second state to pass a law to end prison-based gerrymandering. House Bill 384 required the Department of Correction to collect the home addresses of incarcerated people and required the legislature to draw its districts on the basis of Census Bureau data corrected to count incarcerated people at their home addresses. The Department of Corrections collected and transmitted the address information but, unfortunately, the state was unable to arrange for the geocoding of this address data in time for the legislature's deadline on making their proposals public and had to, reluctantly, postpone full implementation until 2021. A change in the residence rule for incarcerated people by the Census Bureau would meet the state's needs in a much more streamlined fashion.

We're proud Delaware took the first step towards undoing prison-based gerrymandering, but it hasn't been a smooth process, and there is a better way. This ad hoc approach in a few states is neither efficient nor universality implementable. If the Census Bureau would change its practice of counting incarcerated individuals at their home address rather than at the prison location, it would significantly alleviate the burden on state and local agencies and provide an efficient solution to greatly improve the fairness of apportionment and representation for millions of Americans. As you well know, states across the country look to the Census Bureau as the nation's foremost expert on national demographics and data, and more often than not count incarcerated persons the way the Bureau does. Once the Bureau leads the way with an update to a now outdated practice, states are sure to follow.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations; we appreciate the Bureau's aim to count everyone in the right place in keeping with changes in society and population realities. Because Common Cause Delaware and Delaware Americans for Democratic Action believe in a population count that accurately represents communities, we urge you to count

	incarcerated people as residents of their last-known home addresses.
c107	<p>Common Cause Minnesota submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Common Cause Minnesota works to insure every voice in every community is heard and that those we elect to serve in office are held accountable. Counting those incarcerated at the particular facility fails Minnesota’s democracy in two ways.</p> <p>First, counting prison populations as if they were actual constituents of the district the prison is located gives a few small communities more political power at the expense of everyone who does not live near a prison. The effect is that everyone who does not live in a district that contains a prison has their vote diluted by these artificially inflated populations.</p> <p>Second, counting prison populations in this way also creates a second and more serious problem here in Minnesota in that if people are being counted in prison, they are not being counted in their home community. 47% of people currently incarcerated are people of color which is a huge disparity with the 18.1 % people of color represent in Minnesota’s population. In turn, the communities in which those incarcerated lived are now under-represented in terms of their size for every elected official, from city council all the way to their congressional representation.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. c108	<p>On behalf of the NAACP, our nation’s oldest, largest and most widely-recognized grassroots-based civil rights organization, I would like to submit this letter as a comment on the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950, issued on May 20, 2015. We strongly support the Census Bureau’s counting incarcerated people at their most recent residence prior</p>

to incarceration, rather than at the particular facility in which they are incarcerated in on Census day.

As was recently described in its report “The Racial Geography of Mass Incarceration,” the Prison Policy Initiative found that stark racial and ethnic disparities exist between incarcerated people and the people in the county outside the prison's walls¹. The report found that the transfer of African American and Latino incarcerated people to communities very different than their own is a national problem not confined to select states. As a result, hundreds of counties have a 10-to-1 “ratio of over-representation” between incarcerated African Americans and African Americans in the surrounding county — meaning that the portion of the prison that is African American is at least 10 times larger than the portion of the surrounding county².

One example cited in the report is Martin County, Kentucky, which has a ratio of the percentage of its incarcerated population that is African American to the percentage of its non-incarcerated population that is African American of 529, because the 884 incarcerated African Americans make up 56% of the incarcerated population but the 12 African Americans freely living in the county make up only about 0.1% of the county's free population³. This large scale census inaccuracy leads to Martin County, and similar counties like this all across our nation, as being considered diverse when they are not. Furthermore, because of felon dis-enfranchisement laws, the non-ethnic population has much more political power than the racial and ethnic minorities who reside among them. As a result, when state legislatures use that flawed data to draw legislative districts, they transfer African American political values to districts where African Americans have no voice.

The report concludes by saying that “this large-scale transfer of (African American) and Latino people to areas demographically very different than their homes has even larger effects thanks to a unique quirk in the federal Census that counts incarcerated people as if they were willing residents of the county that contains the correctional facility for redistricting purposes.”⁴

The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades; and as clearly demonstrated by the report cited above, the time to update this rule is now. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million people. But since then, the nation's incarcerated population has more than quadrupled to over two million people. The manner in which this population is counted now has huge implications for the accuracy of the Census.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located.

As the Bureau strives to count everyone in the right place in keeping with changes in society and population realities, it is imperative that the changes proposed to the Residence Rule be updated. Because the NAACP believes in a population count that accurately represents communities, and because it so acutely impacts the people and we serve and represent, we urge you to count incarcerated people as residents of their home address.

Thank you again for the opportunity to comment on the Census Bureau's Proposed Residence Rule. Should you have any questions or comments on the NAACP position, please feel free to contact me at _____.

c109	<p>Asian Americans Advancing Justice AAJC (Advancing Justice AAJC) submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Advancing Justice AAJC is a national non-profit, non-partisan organization founded in 1991. Advancing Justice AAJC’s mission is to advance the human and civil rights of Asian Americans, and build and promote a fair and equitable society for all. Our wide-ranging efforts include promoting civic engagement, forging strong and safe communities and creating an inclusive society. Advancing Justice AAJC is part of Asian Americans Advancing Justice (Advancing Justice), a national affiliation of five nonprofit organizations in Los Angeles and San Francisco, CA, Chicago, IL, Atlanta, GA and Washington, D.C. who joined to promote a fair and equitable society for all by working for civil and human rights and empowering Asian Americans and Pacific Islanders and other underserved communities. Additionally, 120 organizations are involved in Advancing Justice’s community partners network, serving communities in 29 states and the District of Columbia.</p> <p>Together with the Advancing Justice affiliates and our Community Partners, AAJC has been extensively involved in improving the current level of political and civic engagement among Asian American communities and increasing Asian American access to the voting process. We work on enforcement and protection of the VRA and other voting statutes, protection of the vote, and improvement of election administration. During the last redistricting cycle, we worked with the Advancing Justice affiliates and our local partners to ensure Asian American communities had a voice during the redistricting process and were able to work to keep their communities of interest together. Since those efforts, Advancing Justice AAJC has been engaged in conversations around redistricting reform and ensuring proper representation for all.</p> <p>We recognize that American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the nation’s incarcerated population has more than quadrupled to over two million people. The Asian American and Pacific Islander (AAPI) prison population increased by 30 percent from 1999 to 2004 while the white prison population rose by only 2.5 percent. During the prison boom in the 1990s, the AAPI prison population grew 250 percent to the overall prison population’s 77 percent. And a closer look at disaggregated data shows that mass incarceration has increasingly become more of an issue for specific AAPI communities. For example, according to a study by the Office of Hawaiian Affairs in 2010, Native Hawaiians comprised about 39 percent of Hawaii's state prison population in comparison to the state's overall Native Hawaiian population of 24 percent.¹ In California, a study found that 64.6 percent of the state’s AAPI prisoners were immigrants and refugees. The largest populations among them were Vietnamese (22 percent) and Filipino (19.8 percent), followed by Pacific Islanders (9.9 percent) and Laotians (8.5 percent).² Thus, the manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Illinois, for example, 60% of incarcerated people have their home residences in Cook County (Chicago), yet the Bureau counted 99% of them as if they resided outside Cook County.</p>

When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes.

New York State is not the only jurisdiction taking action. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.

But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. *See* The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Advancing Justice | AAJC believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.

c110

Common Cause/PA submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Our organization strongly urges you to begin counting incarcerated individuals at their home address, rather than at the particular facility that they happen to be located at on Census day.

For over four decades Common Cause/PA has been working to ensure that every citizen of our state who is entitled to vote has the opportunity to do so – and that every vote is counted as cast. However, voters also must believe their votes are meaningful if they are going to participate in elections, and have the opportunity to hold their elected officials accountable. That means we must have competitive elections and every voter’s vote must have nearly equal value. When incarcerated individuals – who cannot vote in Pennsylvania – are counted by the census at their penal facility residence instead of their pre-incarceration home address, that translates into inflated populations for penal institution municipalities. This skews the redistricting process. To ensure that every citizen’s vote carries relatively equal weight when legislative and congressional districts are designed, incarcerated persons must be counted at their pre-sentencing address.

As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.

The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated

	<p>people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census, and ultimately on the fairness of redistricting.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Pennsylvania, this has resulted in significant skewing of legislative and congressional districts. Pennsylvania has 18 congressional districts with average populations of 705,688 residents. Over 51,000 inmates are incarcerated in 26 state prisons which are dispersed across twelve of those congressional districts (six districts have no state prisons), according to the PA Dept. of Corrections. Five congressional districts have one state prison; four have two state prisons; two have three state prisons; and the very large rural 5th Congressional District has seven state prisons. The problem becomes even more severe when it is applied to the much smaller state senate and legislative districts which respectively average 254,048 and 62,573 residents.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. c111	<p>The State of Connecticut African-American Affairs Commission has as its mission to improve and promote the economic development, education, health and political well-being of the African-American community in the State of Connecticut.</p> <p>We strongly urge that the residence rules be changed in the 2020 census for people in correctional facilities for adults and people in juvenile facilities. As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>The great racial disproportionality in the make-up of the prison population skews the demographics for communities when doing census calculations and gives certain communities over representation in state legislatures. A prisoner is not a part of the community that they happen to end up incarcerated in therefore they should not be included in the population count.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. I urge you to count incarcerated people as residents of their</p>

	home address.
c112	<p>Common Cause NY submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Common Cause NY urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Ensuring that redistricting is impartial and that legislative lines are drawn in a fair and transparent way is part of our core mission to promote civic engagement and accountability in government. Counting people in prison as residents of the district in which they are incarcerated has the effect of unfairly enhancing the political power of those who live in the district with the prison in it while unfairly diluting the votes of those in districts without prisons. Legislators with a prison in their district should not get a bonus for keeping the prison full. This dynamic hurts our democracy.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again. A fair redistricting process not only involves complying with the federal law of “one person, one vote,” but also with the federal Voting Rights Acts of 1965 which protects minority communities’ opportunity “to participate in the political process and to elect representatives of their choice.”</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>Currently, four states including our own (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census’ population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>After New York finally passed its law to end prison based gerrymandering, the NYS Legislative Task Force on Demographic Research and Reapportionment (LATFOR) was mandated to re-allocate state prisoners to their pre-incarceration home address. Part XX of Chapter 57 of the Laws of 2010 states:</p> <p style="padding-left: 40px;">“Upon receipt of such information for each incarcerated person subject to the jurisdiction of the department of correctional services, the task force shall determine the census block corresponding to the street address of each such person's residential address prior to incarceration (if any), and the census block corresponding to the street address of the correctional facility in which such person was held subject to the jurisdiction of such department. Until such time as the United States bureau of the census shall implement a policy of reporting each such incarcerated person at such person's residential address prior to incarceration, the task force shall use such data to develop a database in which all incarcerated persons shall be, where possible, allocated for redistricting purposes, such that each geographic unit reflects incarcerated populations at their respective residential addresses prior to incarceration rather than at the addresses of such correctional facilities.....The assembly and senate districts shall be drawn using such amended population data set.”</p> <p>Task Force technical staff adjusted the Census Bureau’s 2010 Public Law 94-171 data for New York State legislative redistricting. They created three statewide block-level files, which included every category necessary to accommodate the adjusted data and to make the Department of Correctional Services (DOCCS) data compatible with PL 94-171. The prisoner total to be subtracted from prison based census blocks was 60,708 in 2010. One file was generated with all of the geocoded prisoner addresses and racial/ethnic information from DOCCS (to be added to PL 94-171). Another file was created through aggregating racial and ethnic information by correctional facility</p>

and then disaggregating when prisons were located on multiple blocks. A third block-level file was produced for federal prisoners. The adjustment is based on: Adjusted PL = PL + Geocoded prisoner addresses – DOCCS facilities – Federal facilities. This process took a long time, with considerable bureaucratic delays. LATFOR did not complete its prisoner reallocation until 2012.

Such prisoner reallocation greatly impacted how the people of NYS are represented. North Brooklyn Senate District 18, represented by Senator Martin Dilan, had the largest gain in reallocated prisoner population with 2,100 people. In total, Brooklyn Senate Districts gained over 8,500 people, and New York City as a whole gained over 21,000, mostly minority people. Assembly Districts 55 and 56 in central Brooklyn, both represented by African American women, also had significant gains in population after prisoner readjustment, 1,193 and 1,090 people respectively. In contrast, Senate District 45, which encompasses Clinton, Essex, Franklin, Saint Lawrence, Warren and Washington counties, lost over 12,000 of its population count due to the prisoner readjustment. According to a 2012 DOCCS report, almost half, or about 47%, of the incarcerated population had a home residence in the five boroughs of New York City, and only 12% were committed from Long Island, Rockland and Westchester counties. The rest of the incarcerated population came from upstate. Of the total incarcerated population, 49.5% was African-American and 23.6% Hispanic.

The importance of re-knitting a community's once-fractured state of political representation cannot be overstated and many New York State's upstate counties also strengthened the voice of their minority communities through reallocation. For example, Monroe County gained almost 3,000 people, with over 2,000 African-Americans while Onondaga County counted almost 2,000 residents, over half of them minorities.

There were several challenges with implementing New York's law, namely the technical challenges for LATFOR, partisan political opposition to applying the law's mandates and the extreme delays in receiving data from DOCCS, which deferred the entire redistricting process and complicated public engagement efforts of democracy advocates. Also, New York's 2010 law only requires population data to be adjusted for state Senate and Assembly districts, not for Congressional districts, and thus does not solve the problem of underrepresentation for New Yorkers in its entirety.

This ad hoc approach in a few states is neither efficient nor universality implementable. If the Census Bureau would change its practice of counting incarcerated individuals at their home address rather than at the prison location, it would significantly alleviate the burden on state and local agencies and provide an efficient solution to greatly improve the fairness of apportionment and representation for millions of Americans.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Common Cause NY believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.

c113

Common Cause Rhode Island submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Common Cause Rhode Island urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census Day.

Common Cause Rhode Island has been supportive of ending prison-based gerrymandering for five years, advocating for legislation before the Rhode Island General Assembly that would count prisoners in their home communities, consistent with Rhode Island law. Because Rhode Island has a single prison complex the problem of prison-based gerrymandering is particularly pernicious in our state.

As you know, the American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the

	<p>growth of the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 201 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Rhode Island, this resulted in a state legislative district in which 15% of the population is incarcerated, diluting the voting power of the state's other residents.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts. The Rhode Island Senate has passed legislation to do the same after the 2020 Census.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Common Cause Rhode Island believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c114	<p>On behalf of Connecticut Working Families, I submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Working Families organizes for social, economic and racial justice. We have historically advocated for laws and policies that improve the quality of life of workers and their families. Our model is centered on building power within communities by engaging all people in the political process. We firmly believe in political participation, both at the polls and at the General Assembly.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p>

	<p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Connecticut, while Black individuals make up only 10% of the population, they make up 41% of the incarcerated population. Similarly, Latino individuals make up 13% of the total population but represent 29% of the incarcerated population. The practice of counting a prison cell as a residence has undoubtedly removed power from urban communities of color to mostly white suburban areas. In our state, the vast majority of the prison population was concentrated in 5 small towns, whose residents are mostly white. These towns have been able to count thousands of African Americans and Latinos as their own residents, even though these individuals were housed there only temporarily, and sentenced to those particular facilities for reasons that are frequently arbitrary.</p> <p>We believe that the practice of counting incarcerated people as residents of the area in which they are housed compromises the democratic process. Those areas that house prisons add to their population count and thus their political clout. Larger districts are drawn thereby increasing the power of not only those that are elected but those who live near these prisons. But incarcerated people see no direct benefit for the usurpation of their political power.</p> <p>This must change and it can start with the Census reforming its approach.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Working Families believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c115	<p>Please accept these comments in response to the Census Bureau’s notice regarding the 2020 Decennial Census Residence Rule and Residence Situations.¹ I write to respectfully ask that the Bureau count incarcerated people at their home address, rather than at the particular facility in which they happen to be confined on census day.</p> <p>I urge the Bureau to revise its methodology regarding the residency of incarcerated people for two reasons: one practical, and one historical. From a practical perspective, the Bureau’s decision to deem prison cells as residences had the effect—in the 2010 Census—of concentrating a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>I know this dynamic from personal experience: during the 2000 Census, I lived in Colorado’s Fifth Congressional District, which benefits substantially from the Bureau’s method of counting incarcerated populations. The Fifth District is comprised of many rural communities including Fremont and Chaffee Counties, which currently house roughly one-third of Colorado’s adult prison population.² An additional 47% of Colorado prisoners are held in facilities in the Forth Congressional District, which covers the eastern plains.³ All of this despite the fact that half of the state’s adult inmates come from the urban counties of Denver, Jefferson, Adams, and Arapahoe⁴ (all of which are located outside of the prison-laden Fourth and Fifth Districts). I currently live in Oregon, where I am on the opposite side of this dynamic: I live in the Willamette Valley, which houses the majority of the state’s population (and, by extension, is home to the majority of people sent to prison). Yet over half of Oregon’s prisons are located in rural areas outside the Willamette Valley. This unfortunate dynamic is replicated in most states, and the problematic distortions that arise from the Bureau’s methodology are widely acknowledged.⁵ The Bureau’s current methodology (which the Bureau proposes to continue during the 2020 Decennial Census) exacerbates these problems and should be revised.</p> <p>There are also historical reasons in support of revising the Bureau’s methodology. The first Census-related policy in the country’s history consisted of the notorious three-fifths clause in article I, section 2 of the U.S. Constitution. The history behind this provision provides</p>

additional support for revising the Bureau’s current methodology. The original draft language of the Constitution called for Congressional apportionment according to principles of “wealth” and the number of inhabitants.⁶ This original language was designed to protect the power of agricultural, slave-holding states. The reference to wealth was removed after delegates argued it would lead to political manipulations that would protect entrenched interests at the expense of democratic representation.⁷ Arguing successfully in favor of removing the reference to wealth, delegate James Wilson of Pennsylvania noted that concerns about population growth and concomitant increases in political power had led to the separation of the colonies from Britain, and that similar problems would beset the new nation if it did not allocate power based on straightforward population counts: “if numbers be not a proper rule,” argued Wilson, “why is not some better rule pointed out.”⁸

Although the Constitutional Convention removed the reference to wealth, the three-fifths provision remained in force until it was vitiated by the ratification of the Fourteenth Amendment in 1868. It is now time to erase all historical vestiges of inequality by ensuring fair and equitable enumeration of incarcerated people. The debates of the Constitutional Convention show that the framers desired political representation that was based on an accurate enumeration of population; the three-fifths provision was added as a political compromise to appease regional powers that ultimately lost this long-running argument in the Civil War. Today, mass incarceration has replaced slavery as a preeminent method of social, political, and economic control. Prisoners are increasingly commoditized and treated as economic units rather than people—a troubling dynamic that is exacerbated by the Bureau’s current methodology regarding correctional facilities.⁹ Incarcerated people are involuntarily confined and have no choice in selecting the location of their incarceration; further, unless someone happens to be incarcerated in their community of origin, they have no real economic, political, or emotional connection to the place of their confinement. Accordingly, the Bureau should count incarcerated people as members of the communities where they maintain ties: namely, the community in which they resided prior to incarceration.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. I believe that history and sound principles of public policy demand a population count that accurately represents communities; accordingly, I urge you to count incarcerated people as residents of their home address.

Common Cause Oregon submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We ask that you count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.

Common Cause is a nonpartisan not-for-profit public interest group that works to safeguard and improve the democratic process. The organization has a long history of leadership, both nationally and here in Oregon, in support of fair and democratic redistricting. In Oregon, we just helped pass state legislation to bring more public participation and transparency to the state’s redistricting process. We’ve also been

	<p>working to address the very problem you are considering now – the fact that counting prisoners where they are incarcerated serves to arbitrarily concentrate a large group of non-voters and thus skew the relative strength of voters.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>In Oregon, the Native American population is one population that has lost voting strength due to this distortion. With incarceration rates at more than twice the rate of White Oregonians, Native Americans make up 1% of the total Oregon population but 3% of the incarcerated population. For the most part, Oregon prisons are located outside of tribal areas so that that voting power of non-incarcerated Native Americans is diluted.</p> <p>This distorting effect plays out not only between communities with and without prisons, but also within the communities where prisons are located. For instance, in Pendleton Oregon, the prison population at the Eastern Oregon Correctional Institution makes up roughly 28% of a single Pendleton city council district. Every 3 residents of that district have the political power of 4 residents in other parts of the city.</p> <p>While Common Cause and others are trying to remedy this situation here in Oregon, it would be far better to resolve this through the Census Bureau’s own process. This is too important an issue – getting at the heart of the one-person-one-vote principal – to address piecemeal, state by state.</p> <p>We appreciate that you are looking into this matter and thank you for this opportunity to comment.</p>
c117	<p>Common Cause Indiana submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Common Cause Indiana urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Ensuring that redistricting is impartial and that legislative lines are drawn in a fair and transparent way is part of our core mission to promote civic engagement and accountability in government. So is ensuring that every eligible American’s vote is counted fairly. Counting incarcerated persons as residents of the district in which they are temporarily held has the effect of unfairly enhancing the political power of those who live and vote in the prison district while unfairly diluting the votes of those in districts without prisons. Legislators with a prison in their district should not get a bonus for keeping the prison full. This dynamic hurts our democracy. And it hurts the communities from which these incarcerated persons hail.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the explosion in the prison population requires the Census to update its methodology again. A fair redistricting process not only involves complying with the federal law of “one person, one vote” but also with the federal Voting Rights Acts of 1965 which protects minority communities’ opportunities “to participate in the political process and to elect representatives of their choice.”</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p>

In Indiana, the city of Terre Haute (the county seat of Vigo County) exemplifies the problem. The 2000 Census counted 1,764 federal prisoners as if they were residents of the city, and when the city used that data for redistricting it drew a City Council where more than 20% of the “residents” were in fact prisoners in a federal prison complex located within town boundaries. This gave each group of 8 residents in that district the same clout as 10 residents in other city council districts. Because the prison nearly doubled in size over the ensuing decade, the distortion of voting power would have been particularly dramatic after the next redistricting. After the 2010 Census just two people who live near the prison could have had as much say in city affairs as three people in any other district. With such stark numbers, the flaw in the Census’ data became apparent and the City corrected the 2010 Census data and was able to then draw equal districts. (For more details, see the attached editorial from a local paper.)

While Terre Haute has created an interim solution, the situation also illustrates the inefficiency of such a one by one approach. As I mentioned earlier, Terre Haute is the county seat of Vigo County, which had to tackle the same problem in its own redistricting even after Terre Haute solved theirs.

As our cities and counties continue to individually tackle the inaccuracies in the Bureau’s data, four states (California, Delaware, Maryland, and New York) have taken a state-wide approach to adjust the Census’ population totals to count incarcerated people at home, and over 200 counties and municipalities individually adjust population data to avoid prison gerrymandering when drawing their local government districts.

This ad hoc approach in a few states is neither efficient nor universally implementable. If the Census Bureau would change its practice of counting incarcerated individuals at their home address rather than at the prison location, it would significantly alleviate the burden on state and local agencies and provide an efficient solution to greatly improve the fairness of apportionment and representation for millions of Americans. As you well know, states across the country look to the Census Bureau as the nation’s foremost expert on national demographics and data, and more often than not count incarcerated persons the way the Bureau does. Once the Bureau leads the way with an update to a now outdated practice, states are sure to follow.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations; we appreciate the Bureau’s aim to count everyone in the right place in keeping with changes in society and population realities. Because Common Cause Indiana believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their last-known home addresses.

c118

I represent Wisconsin State Assembly Legislative district _____ in _____, Wisconsin and submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.

As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests in part on an accurate count of the nation's population. Moreover, an accurate count of the nation's population has far reaching implications for how legislative and congressional districts are drawn and how important federal and state resources are allocated.

The Census has evolved immensely since the first Census 225 years ago. Today, the growth in the prison population requires the Census continue that evolution. The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.

	<p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Wisconsin, state legislative district 53, drawn after the 2000 Census, contained 5,131 prisoners from other parts of the state. This artificially decreased the population of the district by almost 10%. In effect, each group of 9 residents in district 53 had as much political power as 10 residents elsewhere in the state.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>However, going forward, this ad hoc approach is untenable. It makes far more sense for the Bureau to provide accurate redistricting data in the first place, rather than leaving it up to each state to have to adjust the Census' data to count incarcerated people in their home district.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Democracy relies on a population count that accurately represents communities, therefore I urge you to count incarcerated people as residents of their home address.</p>
c119	<p>The Civil Rights Committee of the New York City Bar Association submits this comment in response to the Census Bureau's Federal Register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge that you change the proposed rule from counting incarcerated people at the facility in which they are housed and use their last permanent residence or "usual residence" as defined by the prisoner instead.</p> <p>The New York City Bar Association is among the nation's oldest and largest bar association. Through its more than 160 committees, the Association promotes reforms in the law and seeks to improve the administration of justice. The Civil Rights Committee is directly concerned with how communities of color may be impacted by current Census Residence Rules and Residence Situations, particularly where population counts based on Census Residence Rules are employed by elected and appointed officials in redistricting and apportionment schemes. We believe that ensuring equal representation is imperative to the health of the nation because it allows for a just democratic system and avoids any racially discriminatory effects of prison gerrymandering.</p> <p>American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino¹ into just 5,393 Census blocks that are located far from the actual homes of incarcerated people.² In New York, in particular, after the 2000 Census, seven state senate districts met population requirements in state apportionment only because the Census counted detained people as if they were upstate residents.³ For example, each Senate district in New York should have had 306,072 residents after the 2000 Census. District 45, which claimed the populations of thirteen large prisons,</p>

however, had only 286,614 actual residents.⁴

Because of the distortions in political representation caused relying on the Census count of prisoners for the purposes of redistricting, New York State passed legislation to adjust the population data after the 2010 Census, to count incarcerated people at their home addresses in state legislative apportionment and redistricting.⁵ In *Little v. LATFOR*, the Supreme Court of the State of New York in Albany upheld this state law.⁶ The Court reasoned that the incarcerated people lacked any permanency in the locations of the facilities nor did they intend to remain there after their release.⁷ The court found that the Department of Corrections and Community Supervision decided when and where incarcerated people would be transferred, not the incarcerated people themselves.⁸ There were no records that indicated that the incarcerated people had ties to the communities where they were incarcerated, where they were “involuntarily and temporarily located.”⁹

Given the logic of the ruling in *Little*, it would be incongruous at best, and erroneous at worst, for the U.S. Census Bureau to count incarcerated people living in the communities where prison and criminal detention facilities are located, when incarcerated people are both *de jure* and *de facto* excluded from participating in the civic life of these communities. Detained people cannot purchase homes, become employed, or make a living while they are incarcerated.¹⁰

In 2010 there were 161 counties in 31 states where the incarcerated African-American population outnumbered the number of free African-Americans, and 20 counties in 10 states where the incarcerated Latino population outnumbered the number of free Latinos in those same counties.¹¹ In states as populous as New York, Pennsylvania, Illinois, Georgia, Florida and Texas, African-Americans and Latinos are more likely to be locked up in prisons in communities that remain largely white, non-diverse, and miles apart, both literally and figuratively, from communities in their home counties.¹²

African-Americans and Latinos in New York are overincarcerated. Even though African Americans comprise 16% and Latinos 18% of the general population in New York State, African-Americans comprise 53% and Latinos 22% of the incarcerated state population.¹³ New York is also more likely to incarcerate African-Americans and Latinos outside their communities of usual residence.¹⁴ In 2000, only 25% of New York’s state population lived upstate, yet 91% of detained people in state prisons were incarcerated there.¹⁵

When the Census Bureau counts detainees where they are temporarily incarcerated, it appears to contradict the Bureau’s goal of accuracy in enumeration, because the Bureau is recognizing a temporary, involuntary stay as a “usual residence”.¹⁶ In New York, the median time served in a facility in 2007 was seven months, a statistic that further reflects that the place of incarceration is not the permanent residence of the incarcerated individual.¹⁷ Counting detained people in their prior residence serves not only the ideals of equity and equal protection in democracy, but is also rooted in common sense -- people who are detained are transferred often and incarcerated temporarily.

Currently, California, Delaware, Maryland, and New York are taking a state-wide approach to adjust the Census’ population totals to count incarcerated people at their actual homes, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts. The U.S. Census should follow suit by changing its policy to achieve a more accurate population count that serves the goals of fairness, equity, and equality in enumeration.

Finally, when state legislatures used this flawed data to draw or apportion legislative districts, they impute African-American and Latino political clout and political participation to districts where African-American and Latino communities in actuality have little to no civic voice.¹⁸ These outcomes do not appear to comport with the Supreme Court’s Fourteenth Amendment equal protection jurisprudence “one person one vote” standard.¹⁹

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because The Civil Rights Committee of the New York City Bar Association supports a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.

¹ As used in this Comment, the terms “Hispanic” or “Latino” are used interchangeably as defined by the U.S. Census Bureau and “refer to a person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin regardless of race.” Karen R. Humes, Nicholas A. Jones & Roberto R. Ramirez, *Overview of Race and Hispanic Origin: 2010*, 2010 Census Briefs, 1, 2 (March, 2011), <http://www.census.gov/prod/cen2010/briefs/c2010br02.pdf>.

Once the geographical unit for which a representative is to be chosen is designated, all who participate in the election are to have an equal vote [. . .]. This is required by the Equal Protection Clause of the Fourteenth Amendment”); *Reynolds v. Sims*, 377 U.S. 533, 566 (1964).

c120

We at Common Cause appreciate the Census Bureau's invitation to submit these comments in response to its federal register notice regarding Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). To ensure that each district in this country fairly captures its residential population, for purposes of voting and fair representation, we urge the Bureau to count incarcerated people at their home addresses, rather than at the prison facilities in which they are temporarily located. Making this change to the residence rules is fundamental to ensuring that votes from prison districts do not hold more power than those from districts without prisons.

Founded in 1970, Common Cause is a national nonpartisan advocacy organization dedicated to empowering citizens in making their voices heard in the political process and holding government accountable to the people. Ensuring that every eligible citizen has an opportunity to cast a vote, free from discrimination and obstacles, is fundamental to a democracy that aims for and professes representation of all. So too is ensuring that each vote cast is weighed fairly, in keeping with the principle of "one-person, one-vote" announced by the Supreme Court in *Reynolds v. Sims*. To protect these principles, Common Cause, through its national office and 35 state organizations, advances a number of elections reforms throughout the country, including the elimination of prison-based gerrymandering.

The practice of prison-based gerrymandering is at odds with our principles of democracy. Prisons are typically located in rural - often, white-majority districts¹ - and in many instances the prisoners make up a large majority of the district's population. States engaging in prison-based gerrymandering - by adopting the Bureau's residence rules and allocating incarcerated persons to prison districts - necessarily inflate the votes of their rural, white voters at the expense of those cast by people of color living in non-prison, often urban, districts. The number of people affected by the practice, moreover, is not insignificant. In 2010, non-Hispanic Black men were incarcerated at a rate seven times higher than non-Hispanic White men²; it is these typically urban, minority-majority communities, to which incarcerated persons most often return upon completion of sentences, whose votes are made - by the practice of prison-based gerrymandering - to matter less than those of mostly white, rural voters.

When the Bureau first began counting Americans in 1790, the issue of where to count prisoners did not hold the same significance, or result in the same disparities, as it does today. As is well known, American demographics and living situations have changed dramatically over the past two centuries, and the Census has appropriately evolved in response to many such changes in order to provide an accurate picture of the nation. The prison population's explosion, particularly over the past two decades³, requires the Census Bureau to again update its methodology in order to create, as the Bureau strives for, a "fair and equitable apportionment" that reflects "changing living situation resulting from societal change."⁴

While waiting for the Bureau to make this needed change, a number of states have begun to take action. New York State, California, Delaware, and Maryland have all passed legislation to eliminate the state-wide practice of prison-based gerrymandering, and over 200 counties and municipalities individually adjust population data to avoid the practice when drawing their local government districts. A number of others states - including Oregon, Illinois, Rhode Island, and New Jersey - have also begun considering legislation that would ban the outdated practice of counting incarcerated persons in the prisons where they temporarily remain.

As evident by these state and local actions, states are not legally required to adopt the Census Bureau's definition of "residence" when allocating individuals for redistricting purposes. However, the reality is that they almost all do. After all, the Bureau provides the "leading source of quality data about the nation's people ...",⁵ and is best suited to lead the way - and thus guide remaining states - on this important issue. An ad hoc approach on how to apportion incarcerated persons is neither efficient nor fair; votes across districts, and across the country, should hold equal weight.⁶ States ascribing to the same definition of "residency" for incarcerated persons makes good sense, particularly since all incarcerated persons share the same characteristic of temporary removal from both greater society and their own homes. Indeed, they don't partake of the prison district's roads, parks, or schools; they are confined within that district only temporarily; and, in the vast majority of instances, they return to the districts in which they lived before incarceration. Changing the residence rule to reflect this reality would provide long-awaited guidance to states.

Thank you for this opportunity to comment on your Residence Rule and Residence Situations. We appreciate that the Bureau strives to

	<p>count all individuals in the right place in keeping with changes in society and population realities. Because Common Cause believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p> <p>¹ For example, 98% of New York's prison cells are located in state senate districts that are disproportionately White; in Connecticut, 75% of the state's prisons are in state house districts that are disproportionately White. See Peter Wagner, 98% of New York's Prison Cells Are in Disproportionately White Senate Districts, Prison Pol'y Initiative (Nov. 17, 2010), http://www.prisonersofthecensus.org/new/2005/01/17/white-senate-districts/; see also Ending Prison-Based Gerrymandering Would Aid in African-American and Latino Vote in Connecticut, Prison Pol'y Initiative (Nov. 17, 2010), http://www.prisonersofthecensus.org/factsheets/ct/CT_AfricanAmericans_Latinos.pdf</p> <p>² U.S. Dept. of Justice, "Prisoners in 2010," avail. at http://www.bjs.gov/content/pub/pdf/p10.pdf</p> <p>³ NAACP, Criminal Justice Factsheet, available at www.naacp.org/pages/criminal-justice-fact-sheet</p> <p>⁴ 2020 Decennial Census Residence Rule and Residence Situations, 80 Fed. Reg. 28950-28952 (May 20, 2015)</p> <p>⁵ See Census Bureau website at http://www.census.gov/about.html, last visited on July 9, 2015.</p> <p>⁶ Moreover, Massachusetts cannot easily make such changes to the ways in which it allocates prisoners for redistricting purposes until the Census Bureau issues a change in its residence rules, due to a state constitutional requirement that it follow the Bureau's rules. The Massachusetts legislature sent the Bureau a resolution in 2014 urging it to tabulate incarcerated persons at their home addresses. See The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p>
c121	<p>I am a Professor of Law at _____, _____.¹ I teach constitutional law and the law of democracy — which means that I have the privilege of studying, analyzing, and teaching the Constitution from start to finish. From the first words of the Preamble to the final words of the 27th Amendment, our founding document is concerned with how We the People are represented: what we authorize our representatives to do, what we do not permit our representatives to do, and how we structure authority to allow our representatives to check and balance each other in the interest of ensuring that the republic serves us all.</p> <p>My examination of the Constitution and the law of democracy is not merely theoretical. I have had the privilege to practice in this arena as well, including work with institutions and organizations attempting to foster meaningful representation of the American public. My work has included the publication of studies and reports; the provision of testimony and informal assistance to federal and state legislative and administrative bodies and officials with responsibility for apportionment, districting, and the electoral process; and, when necessary, participation in litigation to compel jurisdictions to comply with their obligations under state and federal law.</p> <p>Much of my work, including my research and scholarship, confronts the structure of representation and the factual predicates of that structure. I have analyzed, in detail, the effect of different voting systems and districting plans that purport to further meaningful representation, the manner in which the Census count impacts that representation, and various jurisdictions' efforts to modify and adapt the Census default. I believe that it is no coincidence that an enumeration of the People is the very first substantive duty that our founding charter gives to the newly established collective government, for it is this enumeration that drives the representation at the core of our constitutional order.</p> <p>It is therefore a privilege to respond to your call for comment on the existing Census Residence Rule and Residence Situations. I am heartened that the Census Bureau is evaluating its rules governing where individuals should be counted, in order to determine whether they best effectuate the constitutional mandate or whether they might be improved for 2020.</p> <p>For most individuals, the Census Bureau's current default for determining residence has a sound representational logic. The vast majority of persons counted by the Census will be counted at a place they consider "home": the address that they would also consider their permanent legal, electoral, and social residence. For these people, the residence rules generate no meaningful controversy.</p>

Some people are away from “home” when the Census comes calling. Many (but not all)² of these individuals are counted at the place considered their “usual residence,” where they live and sleep most of the time. For most such individuals whose “usual residence” is not “home,” the current Census default is also entirely sensible. These individuals may be people who have been called away from home for military or other public service, job relocation, or education, and they are generally intertwined with the communities where they are laying their heads most often. They eat locally, shop locally, seek entertainment locally, and walk, bike, bus, and drive locally. While they are away from home, they use local services, utilities, and public assistance just as their new neighbors do. They interact regularly with the other members of the local community, and in so doing, they are subject to the same rules and regulations and ordinances that govern others in the community, and they enjoy many of the same benefits. All of the above interaction with the local community makes it logical for the Census to tally most of these sojourners in tandem with the local communities in which they are usually physically present, for purposes of representation of their interests by local, state, and federal government.

There is one sizable group of people, however, for whom the above description is not at all accurate. The 2.2 million individuals who are incarcerated in the United States³ were counted by the Census Bureau in 2010 at the locations where they had involuntarily been placed. The vast majority of them showed no intent at all to change their legal or electoral residence. (Indeed, consistent with the common principle that a temporary absence does not amount to a change in legal or electoral residence, 28 states have explicitly provided that incarceration does not itself provoke such a change.⁴ And in most if not all of the other states, the implication of their more general rule would lead to the same conclusion.)

Individuals who are transferred to a correctional facility often have little in common with more usual “usual residents” of the area. Incarcerated individuals are often from a demographic and socioeconomic background quite distinct from those who live in the neighborhood. And in many areas, the racial or ethnic disparity is quite stark. For example, a recent study found that there are now more than 450 counties where the proportion of African-Americans in the incarcerated population is larger than the proportion of African-Americans in the surrounding county — and more than 200 counties where the proportion of African-Americans in the incarcerated population is more than ten times larger than the proportion of African-Americans in the surrounding county.⁵ As another researcher concluded, “In 173 counties nationwide, more than 50% of the purported African-American ‘residents’ are behind bars.”⁶

Moreover, unlike all of the other sojourners above who are away from “home” on Census Day, incarcerated individuals do not meaningfully interact — indeed, are not permitted to meaningfully interact — with the communities to which the Census Bureau assigned them in 2010. Individuals incarcerated in Village Township do not eat at the restaurants of Village Township, shop in Village Township stores, attend Village Township movie theaters, or use Village Township roads, sidewalks, or public transportation. While incarcerated, they are not affected by Village Township county or municipal codes and cannot attend Village Township public meetings. They may be confined in a location physically adjacent to Village Township residents, but most Village Township residents will not likely consider them “neighbors.”

Because of both the lack of similarity and the lack of interaction, it would be quite surprising to find that incarcerated individuals feel represented — either directly or indirectly — by the officials representing the physical locations to which they were assigned by the Census Bureau in 2010. At least some officials representing communities with sizable correctional facilities keenly understand the disconnect. When an Iowa city councilman was asked whether he considered the incarcerated individuals comprising 96% of the population in his district to be his constituents, he said, simply, “not really.”⁷ And in 2002, a New York state legislator representing a district housing thousands of incarcerated individuals said that given a choice between the district’s cows and the district’s prisoners, he would “take his chances” with the cows, because “[t]hey would be more likely to vote for me.”⁸

The practice of tallying incarcerated individuals at the facilities where they are confined is wrong. It creates both informational and

democratic harm, and should be corrected in the 2020 Census.

The practice creates informational harm by painting a misleading picture of community demographics. A researcher or policymaker or planner seeking to better understand an area will look to the valuable information compiled by the Census for a rich portrait of the local residents. For those areas that include a correctional facility, the snapshot will include those who are incarcerated, when it is likely that neither the people inside nor those outside the facility regard the prison population as a true part of the community.

The practice creates democratic harm as well, in several ways. The Constitution requires that local, state, and federal districts be drawn such that district populations are approximately equal.⁹ When the population tally counts incarcerated individuals where they are confined, districts are built on the backs of “ghost constituents,” with no meaningful ability to influence their purported representatives, directly or indirectly.¹⁰ These individuals and the communities where they are truly from, accordingly, lose representation; in certain circumstances, the dilution may give rise to a claim under the Voting Rights Act.¹¹ As the National Academy of Sciences recognized, “The prison population includes disproportionate numbers of racial minorities and persons from large urban areas; that this population is counted in the largely rural areas where prisons tend to be located, and that they are included in redistricting calculations despite being barred from voting in most cases, raises legitimate concerns of equity and fairness in the census.”¹²

On the other side of the coin, the non-incarcerated residents of districts with prisons garner unduly disproportionate influence. For example, in Lake County, Tennessee, after the most recent census, 87% of the population of one County Commissioner district was allotted to a local correctional facility. As a result, the 344 non-incarcerated residents of the district receive the same voice on county policy as the approximately 2500 or 2600 individuals in each of Lake’s two other districts.¹³

Even when correctional facilities do not distort representation, they may well distort the candidate pool. Many jurisdictions allow voters throughout the jurisdiction to vote on candidates, but require the candidates to be from geographic districts of approximately equal size. If such districts are drawn to include large correctional facilities, there may be districts with no individuals eligible to run as candidates.¹⁴

Sometimes, these factors align. In Anamosa, Iowa, after the 2000 Census, 1300 of the 1358 individuals allotted to City Council ward 2 were incarcerated there, giving the 58 other residents of that ward strikingly disproportionate political power.¹⁵ And after subtracting individuals ineligible to run for city council, that also left the ward strikingly few potential officeholders. In the 2005 municipal election, ward 2 had no candidates on the ballot, and only three voters, total.¹⁶ The winner, selected with two write-in votes, did not even vote for himself.¹⁷

Though Anamosa’s situation is an extreme, the practice of counting incarcerated individuals where they are confined does democratic damage everywhere. This explains why more than 200 known counties, cities, and school boards in at least 30 states have attempted to correct or otherwise compensate for the 2010 Census tally, usually adjusting local population totals to account for populations in correctional facilities when drawing their own districts.¹⁸ At least six states require certain local governments to adjust existing population tallies in order to more equitably account for incarcerated individuals when drawing local districts;¹⁹ additional states expressly permit or encourage the practice.²⁰ And four states, representing 65 million people, have already decided that in 2020, they will endeavor to correct the Census Bureau’s count of incarcerated populations in drawing state and federal legislative districts, if the Census Bureau does not correct its own misallocation.²¹ Legislation has been proposed in others.

The Census Bureau’s practice of counting incarcerated individuals where they are confined was based on principles developed well before the Supreme Court cases establishing the equal representation principle, and well before the comparatively recent explosion in the incarcerated population.²² States and localities are attempting to compensate for the inadequate allocation as best they can. It is time for

the Census Bureau to assist them.

It would be in keeping with the bulk of the Census Bureau's representational logic to tally incarcerated individuals in the communities to which they are most closely connected on Census Day. That location is not where they are involuntarily confined, but rather where their relatives and friends and support systems are often located, where their children may live, where they are most likely to return when they are released from incarceration,²³ and where their inclusion will illuminate and not distort the snapshot of the true local community. While in individual cases these indicators may point to different addresses, the best available proxy — and a far superior proxy than the deeply flawed alternative of the carceral facility — is the individual's last known residence before incarceration. This is the most recent place that an incarcerated individual is from, and the last place that they chose to make their "usual" residence. A decision to tally incarcerated individuals at their last known address would come far closer to aligning such individuals with their legal and social residence than the Census Bureau's past practice. And it would further the opportunity for these individuals to be adequately represented, better fulfilling the rationale for the Census's core function.

Counting incarcerated individuals at their last known residence before incarceration, rather than where they are involuntarily confined, is a feasible solution as well as a just one. There are several options for collecting this information. Incarcerated individuals may be surveyed by interview and questionnaire, just as the vast majority of other individuals are surveyed.²⁴ In the alternative, or to supplement coverage gaps, the Census Bureau could collect most last prior addresses from the existing administrative records of correctional, parole and probation, or judicial offices.²⁵

I encourage the Census Bureau to consider revising its Residence Rule and Residence Situations, to tally incarcerated individuals at their last known address before incarceration. Correcting the outmoded alternative practice in place during the last Census is a pragmatic means to align the residence rules in a way that furthers just representation of individuals in the communities to which they are truly attached on Census Day.

I thank the Census Bureau for this opportunity to comment. If you have any further questions, please feel free to contact me at your convenience. I can best be reached by email, at _____, or by phone at _____.

c122	<p>I am writing in response to your May 20 Federal Register notice regarding the Residence Rule and Residence Situations.</p> <p>As a native Texan, I am unnerved by the Census Bureau’s policy to count incarcerated people as residents of prison facilities, not of their hometowns. That practice, especially when the data are intended for redistricting, clearly runs counter to the Texas Election Code, which specifies:</p> <p style="padding-left: 40px;">In this code, “residence” means domicile, that is, one’s home and fixed place of habitation to which one intends to return after any temporary absence... A person who is an inmate in a penal institution... does not, while an inmate, acquire residence at the place where the institution is located.¹</p> <p>The Census Bureau’s Residence Rule ignores Texas law, so community leaders have had to take this problem into their own hands. In an investigation of jurisdictions with large prison populations, researchers found that almost all (86%) Texas communities rejected prison gerrymandering by excluding prisoners from population counts, even if the vote dilution impacts of including prisoners were miniscule.² In some parts of the state, the effects of using uncorrected Census Bureau data would have been far from innocuous. For example, in some jurisdictions – including districts in Childress, Walker, Anderson, Karnes, and Mitchell Counties – prisoners would have made up at least 50% of the population if unaltered Census Bureau data were used, giving voters living near prison facilities undue political influence.³</p> <p>Fortunately, local government leaders in Texas have overwhelmingly rejected the Census Bureau’s interpretation of the Residence Rule in order to avoid prison gerrymandering and uphold the “one person, one vote” principle. After Census 2010, Hale County Judge Bill Coleman told the <i>Austin American-Statesman</i> that excluding prisoners from precinct populations for redistricting purposes was simply common sense:</p> <p style="padding-left: 40px;">If your altruistic goal is to try to make each precinct have an equal number of at least potential voters, and a significant chunk of you population is not allowed to vote, aren’t you sort of undermining the whole purpose of this thing?⁴</p> <p>Still, Texas officials have not made the commitment to end prison gerrymandering at the state level as other states, such as California, Delaware, Maryland, and New York, have done. Despite multiple efforts by government leaders and grassroots organizations, Texas continues to rely on your data, which count incarcerated people as residents of prisons. As a result, African Americans and Latinos who disproportionately fill Texas correctional facilities are being used to pad white votes in prison-hosting state districts while also diluting minority votes elsewhere. For example, after Census 2000, 45,000 Texas prisoners were moved from competitive, marginal districts to more conservative districts as a political strategy. Such an egregious example of prison gerrymandering is both troubling and, more importantly, avoidable.</p>

	<p>Today, Texas stands among the nation’s leaders in many measures of criminal justice severity. My state incarcerates its residents at a higher rate than entire countries like Cuba, Rwanda, and El Salvador.⁵ Where prisoners are counted has a profound impact on the integrity of American democracy. I therefore urge you to count incarcerated people at their home addresses, rather than at the particular facilities where they happen to be located on Census Day.</p> <p>¹ Texas State Legislature, <i>Texas Election Code</i>, Sec. 1.015(e). c123	<p>I am writing in response to your May 20 Federal Register notice regarding the Residence Rule and Residence Situations.</p> <p>As a social justice and voting rights activist from West Virginia, I am horrified by the racial injustice that is caused by counting incarcerated people as residents of prisons instead of their hometowns. According to the Census, Blacks in West Virginia make up only 3% of the total population, but they represent 28% of the incarcerated population. Like most states, West Virginia has a significant racial disparity in its incarceration rates, but there is another problem: the state host many federal prisons that are disproportionately filled with incarcerated African-Americans from other places, in particular, the District of Columbia.</p> <p>The Residence Rule harms the democratic process because incarcerated people in West Virginia (and 47 other states) cannot vote. As a result, the Census Bureau’s practice of counting incarcerated people in prisons, instead of their hometowns, essentially keeps the Three-Fifths Compromise alive. Before the Civil War, people who lived among slaves had greater relative voting power than others because Black slaves were used to determine political representation but were barred from the polls. Today, people who live near prisons experience the exact same increase in voting power to the detriment of other West Virginian citizens as well as the citizens of the incarcerated individuals hometown.</p> <p>West Virginia was founded on the principles of freedom and equality – the state formed when its citizens refused to join Virginia in its secession from the Union and its fight to maintain slavery. But even in 2015, West Virginians are not free and equal because incarcerated people of color are included in population counts but excluded on Election Day.</p> <p>The Residence Rule violates the “one person, one vote” principle by padding white votes and diluting Black votes, contrary to the Voters Rights Act of 1964. I urge you to fix this violation of democracy by counting all incarcerated people at their homes, rather than at the prison facilities where they happen to be on Census Day.</p>
c124	<p>We write in response to your May 20 federal register notice regarding the Residence Rule and Residence Situations.</p> <p>As editors of premier academic and legal journals, and leaders of premier law school student associations, we take an interest in the accuracy of the methodology that the U.S. Census Bureau uses to count the U.S. population. Our academic and legal journal authors often rely on population data provided by the U.S. Census Bureau in their articles. In turn, members of the legal profession depend on our articles to support advocacy efforts, lawmaking, rulemaking, legal strategy, and jurisprudence.</p> <p>It has come to our attention that the US Census Bureau’s 2010 Residence Rule and Residence Situations skews the accuracy of the U.S. Census data by counting incarcerated people at the facilities that they are confined in, rather than at the their home addresses, on</p>

	<p>Census day. By designating a prison cell as a residence in the 2010 Census, the Census Bureau located a population that is disproportionately male, urban, and Black or Latino into Census blocks far from their homes. This inflates the apparent size of the towns of people who live near prisons. When this data is used in submissions to our academic and legal journal publications, the reliability of important scholarship published by the law schools with which we are associated is risked.</p> <p>More worrisome, when used for redistricting, the 2010 U.S. Census deprives political power from those communities where a disproportionate amount of people are arrested and imprisoned away from home. Members of our organizations identify with those communities.</p> <p>Because we believe in a population count that accurately represents our nation, we urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Thank you for your consideration.</p>
c125	<p>The undersigned national civil rights, voting rights, labor and criminal justice organizations submit this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. When the “usual residence” rule was first implemented in the first Census, incarcerated persons comprised a vanishingly tiny portion of the country and had no significant impact on representational fairness. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the nation’s incarcerated population has more than quadrupled to over two million people. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Illinois, for example, 60% of incarcerated people have their home residences in Cook County (Chicago), yet the Bureau counted 99% of them as if they resided outside Cook County.</p> <p>When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes.</p> <p>New York State is not the only jurisdiction taking action to correct the inaccuracies resulting from tabulating incarcerated persons at the prison location. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. The states and localities that have decided to avoid the</p>

	<p>distortions of the current Census rule must create their own population data, because the Census Bureau is not yet publishing the data on home residence that is needed to count this population accurately. Other states find themselves unable to change their practices even when they would like to. The Massachusetts legislature, for example, concluded that the state constitution required it to follow Census Bureau data despite the inaccuracies with respect to incarcerated persons; so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>For all these reasons, the Census Bureau must modify its residence rule with respect to incarcerated persons so that all states and localities will have the opportunity to accurately reflect the incarcerated population in their redistricting plans.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because we believe in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c126	<p>I write in response to the U.S. Census Bureau’s Federal Register Notice on the Residence Rule and Residence Situations [80 FR 28950 (May 20, 2015)]. I strongly urge your office to count incarcerated people at their last home address instead of the current practice of using the correctional facility they happen to be in when the Census is counted.</p> <p>As a former State Representative for the City of Hartford, a Vice President of the Greater Hartford Labor Council and as a Board Member of the Capital Community College Foundation*, I know the impact that undercounting city residents has for our Capital City. Most correctional institutions in our state are located in very rural, very Caucasian towns. Most Connecticut inmates come from our state’s three biggest cities – Bridgeport, Hartford and New Haven. They are disproportionately African American and Latino. By using the current method of counting these inmates, the political power of our economically-depressed cities is significantly reduced.</p> <p>This is especially egregious because Connecticut has never fully addressed the inequities that stem from mal-apportionment of State Representative and State Senate districts from World War II to the mid-1960s. In 1964, ninety-six towns with an aggregate population of 303,086 (12 percent of the people) elected a majority of the State Representatives(148 of the 294). It was the most mal-apportioned lower house in the country. However, by the time the CT General Assembly had enacted a redistricting plan which withstood legal scrutiny, the population and power had shifted from the cities to the suburbs.</p> <p>Thank you for the opportunity to comment on this important issue affecting the people of Connecticut.</p> <p>*Capital Community College (CCC) has the 2nd highest percentage of minority students among 252 New England Schools and Colleges. Over 60% of the student body is African-American or Latino/a and CCC is the ONLY College in CT designated as a Hispanic Servicing Institution.</p>
c127	<p>I submit this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>My name is _____, and I am a former _____, Louisiana school board member. As someone who represented what was considered a minority district that housed a prison, I am troubled by the way that incarcerated people are counted as residents of wherever they are imprisoned. As a minority myself, an American Indian, I believe that it is invaluable to our democracy that redistricting allows for equal representation of all people, and prison gerrymandering stands in the way of this.</p>

Because of the way incarcerated people are counted as residents of the particular facility that they happen to be imprisoned at on Census day, the people who live near _____ in _____ have greater political clout than those who do not for the sole reason that they happen to live near the prison. I represented the district that housed _____, and it was clear that the approximately 900 people imprisoned in this district were being counted in the wrong place.

Another detriment of having the prison population count in my district is that it has limited my school enrollment to approximately 292 students. This school is a Pre-Kindergarten thru 12th grade school. The students in my district are not offered music past elementary, art, band nor football to list a few of the programs that are offered at **ALL** of the other Jr. High and High Schools in the _____ School System. Bond Taxes are forced on my district thru millage, knowing that we are starting 900 votes short on any election therefore we do not have the votes to vote it down even if every voter turned out. Over \$8 million was forced upon my district last bond election with very little being spent at our school. The bond tax previous to the \$8 million one was for \$22 million and out of that only \$1,200.00 was spent in my school. Starting out any election 900 votes short we do not have any choice in these millage taxes being levied against my district. We are rural and my district is where the millage tax comes from. This is **TAXATION WITHOUT REPRESENTATION!!!** 900 NO votes would cancel any tax in this parish. Not only is this affecting our voice it is affecting millions of dollars also.

In 2012, our school board evaluated two redistricting plans including one that would have excluded the _____ population. I had hoped that my parish school board would follow the police juries in Avoyelles, Caldwell, Claiborne, Concordia, East Carroll, East Feliciana, Evangeline, Grant, La Salle, Richland, West Carroll, West Feliciana, and Winn Parishes as well as the council-president in Iberville and adjust your Census counts of the prison population to avoid prison gerrymandering.

Unfortunately, my colleagues on the school board voted for the plan that gives the district I represented unearned influence. I believe that many of my colleagues voted for the redistricting plan that used the prison population not out of any belief that people incarcerated there had anything to do with the administration of education in the school board but out of fear that by voting against prison gerrymandering they would somehow complicate negotiations to save the prison from closure. I saw that decision as unrelated; and the fact that the prison did close and is now in the process of reopening in a new and smaller form does illustrate that not only are the people who were confined in my district rather transient, so is the actual facility.

To repeat in another way, my school board engaged in prison gerrymandering to give extra representation to the one district that didn't want the extra representation; and it did so using a prison population that it knew was expected to cease to exist in our Parish.

For these reasons I urge you to count incarcerated people at their home addresses so that Parishes and School Boards like mine won't have to go through this unnecessary debate in the future. Thank you for this opportunity to comment.

c128

I represent Rhode Island House district _____ and submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.

As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation's population.

As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the

growth in the prison population requires the Census to update its methodology again.

The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Rhode Island I was the first member of the Rhode Island House of Representatives to introduce legislation on February 27, 2010, H 7833, the Residence of Those in Government Custody Act, to correct this problem for purposes of drawing new legislative districts.

Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.

But this ad hoc approach is neither efficient nor universality implementable. It makes far more sense for the Bureau to provide accurate redistricting data in the first place, rather than leaving it up to each state to have to adjust the Census' data to count incarcerated people in their home district.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because democracy relies on a population count that accurately represents communities, I urge you to count incarcerated people as residents of their home address.

c129

The American Civil Liberties Union submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, specifically Section 13, "People in Correctional Facilities with Adults."¹ We urge you to count incarcerated people at their home address, rather than at the particular facility at which they happen to be located on Census day.

For nearly 100 years, the ACLU has been our nation's guardian of liberty, working in courts, legislatures, and communities to defend and preserve the individual rights and liberties that the Constitution and the laws of the United States guarantee everyone in this country. The ACLU takes up the toughest civil liberties cases and issues to defend all people from government abuse and overreach. With more than a million members, activists, and supporters, the ACLU is a nationwide organization that fights in all 50 states, Puerto Rico, and Washington, D.C., for the principle that every individual's rights must be protected equally under the law, regardless of race, religion, gender, sexual orientation, disability, or national origin.

I. Background on the Need to Change the Current Residence Rule to Count Incarcerated People at their Home Address

Under Article I, Section 2 of the Constitution, every inhabitant of the United States must be counted in the Census – but they must be counted in the correct place.²

American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. In the 1980s, the incarcerated population in the U.S. totaled less than half a million, but since then, the nation's incarcerated population has more than quadrupled to over

two million people.³ The significant growth in the nation's prison population over the past 30 years requires the Census Bureau to update its methodology again, by changing the "usual residence" rule.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a normally city-based population that is disproportionately male and African-American or Latino into just 5,393 Census blocks that are located far from their actual homes and often in rural areas. In Illinois, for example, 60 percent of incarcerated people have their home residences in Cook County (Chicago), yet the Bureau counted 99 percent of them as if they resided outside Cook County.⁴

When this data is used for redistricting, the political power of the areas where the prisons are located is artificially inflated. In New York after the 2000 Census, for example, seven state Senate districts only met population requirements because the Census counted incarcerated people as if they were residents of upstate New York, though most of the state's prisoners are residents of New York City.⁵ For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for state redistricting purposes.⁶

New York State is not the only jurisdiction taking action. Three other states, California, Delaware, and Maryland, are taking a similar state-wide approach, and more than 200 counties and municipalities each individually adjust population data to avoid prison-based gerrymandering when drawing their local government districts.⁷

But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses.⁸ A universal process by the Census Bureau is necessary to provide clarity and accuracy in representing our nation's communities nationwide.

II. ACLU Efforts Nationwide to Ensure Fair and Accurate Representation

Until Bureau practice changes, the ACLU will work across the country to mitigate problems created by the current Census approach.

1. Maryland

In Maryland, the ACLU partnered with the NAACP and other community leaders to raise concerns about local redistricting practices in Somerset County, an area with a long, sad history of racial segregation and violence. Although the county is 42 percent African-American and includes the historically black University of Maryland, Eastern Shore, no black person had ever been elected or appointed to a top county office as of 2009. Prison-based gerrymandering was part of the reason. When the county had drawn new voting districts in the 1980s, to resolve a federal challenge to minority vote dilution, it included in its remedial "majority-minority" district the Eastern Correctional Institution (ECI), where prisoners were counted as residents for redistricting. The inmate population was large in comparison with the rest of the district, and mostly made up of people of color, while the rest of the district was mostly white. Because the inmate population was ineligible to vote in Somerset elections, the white, non-inmate population was overrepresented, and the district's voting power was distorted in comparison to the county's other districts.

As a result, the district did not function as a true remedial district and consistently elected white officials over the course of two decades. The ACLU and NAACP advocated for exclusion of the prison population from Somerset's local redistricting database, and in 2010, the Maryland legislature responded by passing a law mandating that prisoners throughout Maryland be counted at their place of last residence, rather than their place of incarceration. Shortly thereafter, Somerset County's first black County

Commissioner, Rev. Craig Mathies, was elected.⁹

2. New York

In New York, the ACLU defended the constitutionality of New York State's practice of counting incarcerated individuals at home. In 2010, the New York legislature passed a law, "Part XX," that requires that incarcerated persons be allocated to their home communities for redistricting and reapportionment of state and local legislative districts. The NYCLU, Brennan Center for Justice, the Center for Law and Social Justice, Dēmos, LatinoJustice PRLDEF, NAACP Legal Defense and Educational Fund, and Prison Policy Initiative, representing 15 rural and urban voters as intervenors, defended the law against a legal challenge brought by a state senator whose district included 12,000 incarcerated persons and was therefore significantly impacted by the law. In December 2011, a New York court ruled that the law was constitutional, and Part XX remains in effect today.

3. South Carolina

In South Carolina, the ACLU was victorious in a recent reapportionment case for the Jasper County School District that would have improperly counted the correctional population when creating school board districts.¹⁰ Jasper County's population in 2010 was 24,777. Located in that county is the Ridgeland Correctional Institution, with an average population of 1,163. The prisoners sent to that institution come from all counties in the state. The school board has 9 single-member districts. If the population calculations included the prisoners, each district would have needed to have 2,753 people, but one of the districts would have comprised over 40 percent prisoner population – unable to vote, resulting in unequal representation for voters in that district. Following a remedial order, all parties to the lawsuit agreed to remove the prison population from the calculations.¹¹

4. Florida

In Florida, the ACLU and the Florida Justice Institute filed a lawsuit challenging the redistricting plan that the Jefferson County Board of Commissioners and the Jefferson County School Board adopted in 2013, as a violation of the plaintiffs' Fourteenth Amendment right to equal representation under the "one person, one vote" principle of the Equal Protection Clause. The complaint, filed in March 2015, alleges that the defendants' decision to include the inmate population at Jefferson Correctional Institution ("JCI") unlawfully inflates the political strength of non-inmate residents in the district that houses the prison (District 3) and dilutes the voting strength of those living in all of the other districts in the county. The incarcerated population at JCI constitutes 43.2 percent of the voting-age population in the district. The ACLU argues that, the total population deviation when the prison is excluded at 42.63%, is far outside the constitutional limits on population deviation under the "one person, one vote" principle.¹² As a result, every four non-inmate residents of District 3 have as much political influence in county and school affairs as seven residents in any other district. Moreover, Jefferson County's decision to count non-resident inmates also underrepresents minority voting strength in the community as a whole. When the prison is excluded from the total population count, the Black voting age population decreases from 47.62 percent to 32.73 percent, and the Hispanic voting age population decreases from 7.35 percent to 2.80 percent.

5. Rhode Island

In Rhode Island, the ACLU has been working to address this issue through litigation and legislation. The problem is especially acute in Rhode Island because of the state's small size and the fact that its entire prison system is concentrated in one city, Cranston. Because everybody incarcerated at the prison is counted as a resident of Cranston, but barred from voting there, three voters in the City Council district where the prison is located have as much voting power as four voters in every other City Council district. In

February 2014, the ACLU filed a lawsuit challenging this malapportionment, and in September 2014, a federal judge denied the City's motion to dismiss the case.¹³ In addition, for the last three years, the ACLU has promoted legislation that would require all prisoners to be counted, for redistricting purposes only, at their last known address. In 2015 and 2014, the bill passed the Rhode Island Senate with bipartisan support, only to die in the House.¹⁴

6. New Hampshire

In New Hampshire, the ACLU has been advocating against the prison-based gerrymandering engaged in by the City of Concord. The Concord population according to the 2010 census is 42,695. Concord consists of 10 voting wards, each of which elects a representative to the local City Council. The goal behind the city's 2010 Redistricting Plan, which is currently in effect, is to have each of the City's 10 wards contain approximately 4,270 residents with a target deviation of +/-5%. However, Concord's 2010 Redistricting Plan, relying on Census Bureau data, specifically includes in the population of Ward 3 the Concord State Prison for Men, which houses 1,531 inmates.¹⁵ Thus, these inmates represent 34 percent of Concord's Ward 3's 4,459 population, though its prisoners are unable to vote.¹⁶ As a result of the inclusion of the prison population in Ward 3, the voting power of Ward 3's approximately 3,000 voting residents—who represent 66 percent of Ward 3's population—is strengthened, while the voting power of residents of the other nine wards is significantly diluted. The voting population size of Ward 3 represents an approximately 30 percent deviation from the target 4,270-per-ward population size.

7. Connecticut

In Connecticut, the ACLU continues to work towards a districting system that accurately reflects "one person one vote" principle by counting prisoners in their home communities rather than the location where they are incarcerated. The majority of Connecticut's prison beds are located in five small towns. Connecticut currently counts the people incarcerated in those prisons as residents of the towns in which the prisons are located. As a result, seven legislative districts are counted as having more than 1,000 additional residents than have actually chosen to live in those districts willingly. Earlier this year, the ACLU supported Senate Bill 980, which had a public hearing before the state Senate's judiciary committee. If passed, Senate Bill 980 would have made clear that the population of a prison should not be included as part of the population of the legislative district in which the prison is located.

8. New Jersey

In New Jersey, the ACLU has supported legislation to end prison-based gerrymandering in the last several legislative sessions. New Jersey's demographic realities illustrate how the current system unfairly inflates or deflates the voting power of certain communities. Camden County, a largely urban county, has only six percent of the state's population, but its residents account for 12 percent of the state's prisoners. Essex County, too, sends a disproportionate number of people to prison: It is home to less than nine percent of New Jerseyans, but its residents account for 16 percent of its incarcerated population. On the other hand, rural Cumberland County is home to three large prisons, which account for almost five percent of the total county population. This means the voting power of residents living in Cumberland County is artificially inflated by a significant amount as a result of the prisoners being counted there, and voting power in Camden and Essex counties is likewise diminished.

9. Wisconsin

In Wisconsin, a state prison population of fewer than 5,000 persons in 1978 has, by 2014, grown to more than 22,000 persons. Wisconsin has, by far, the highest rate of incarceration of African-American men in the United States, with about 1 in 8 working-age

African-American men behind bars. Wisconsin similarly leads the nation in incarceration of Native American men, with about 1 in 13 working-age Native American men behind bars. These individuals are routinely incarcerated far from their home communities, they cannot and do not vote while incarcerated, and their interests are seldom represented in the communities in which they are counted for census purposes. Meanwhile, the communities from which these prisoners come, to which they are likely to return, and with whose other residents they share policy interests are deprived of political representation. The disparity is so stark that, planning maps for the Milwaukee metropolitan area make special note of the fact that minority population concentrations outside the central city are due to incarcerated populations.¹⁷

Additionally, at the federal level, the ACLU has met with Director John H. Thompson to call on the Census Bureau to change the “usual residence” rule as it relates to people in prison.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations. Because the ACLU believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address. Please contact _____, Legislative Policy Analyst, at _____, if we can provide further information.

c130

I am writing in response to your federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015) to urge you to count incarcerated people in their home districts.

My name is _____ and I live and work in Essex County in northern New York, near the border with Canada. I live in the state's largest and most sparsely populated Senate district. My Senate district has more people incarcerated in state prisons than any other district in the state.

I would like to focus my comment on documenting that my county does not consider incarcerated people to be residents of our county. Prior to the passage of Part XX in 2010 that ended prison gerrymandering in New York State, counties like mine had a choice as to whether to use the prison populations in county redistricting. My county, and all neighboring counties that also contained prisons, all choose not to count the prison populations when drawing county districts or designing weighted voting systems.

My county, Essex, justified its decision in its local law with a lengthy discussion on the practical and legal grounds of why inmates are not residents of the county. While I understand that more than 200 counties across the United States do this as well, I have read that my county was the one of the few to put its reasoning in writing and then vote it in to law.

For that reason, I would like to share with you part of Essex Local Law No 144 of 2012:

“Persons incarcerated in the state and federal correctional institutions have been convicted of criminal acts constituting felonies and their presence in Essex County is considered involuntary. These incarcerated persons: are not residents of the County since they are here involuntarily and can be relocated by the Commissioner of Corrections at the latter’s discretion; are not entitled to vote and thus are not voters in Essex County; and receive no services from the County - except when they commit new criminal acts and are brought before County Court, or when they are entitled to assignment of counsel as indigents in connection with parole hearings under New York Executive Law Article 12-B. Persons incarcerated in state and federal correctional institutions live in a separate environment, do not participate in the life of Essex County, and do not affect the social and economic character of the towns in which they are located.

“The inclusion of these federal and state correctional facility inmates unfairly dilutes the votes or voting weight of persons residing in other towns within Essex County.”

Very similar language was also used in Essex County Local Law No. 1 of 2003. Recognizing that you may not have ready access to my small county’s local laws, I have attached the 2003 and 2012 laws to this letter.

I urge you to follow the lead of Essex County New York and count incarcerated people as residents of their pre-incarceration addresses and not as residents of my county.

Thank you for your consideration.

c131

As a coalition of groups involved with the 2011 Massachusetts Redistricting process, we submit this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to change the way the Census Bureau counts incarcerated people. Rather than counting them at the particular facility that they happen to be located at on Census day, we urge you to count them at their home addresses.

The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census and for the voting strength of certain communities.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks, which are located far from the actual homes of incarcerated people. Just two examples of specific impacts in Massachusetts include:

- Without using prison populations as padding, 5 Massachusetts House districts drawn after the 2000 Census did not meet constitutional population requirements. For example, while each House district in Massachusetts should have had 39,682 residents, the 3rd Suffolk District, which claimed the population of the Suffolk County House of Corrections, had only 36,428 actual residents. This means that the actual population of the district was 8.2% smaller than the average district in the state.
- When the city of Gardner last updated their districts in 2001, they were faced with the prospect of giving the residents on the eastern side of the city, near the state prison, extra influence over city affairs, or rejecting the flawed Census counts. The City Council ruled to reject the Census counts because doing otherwise would have given each group of 8 people who live near the prison as much say over city affairs as every group of 10 residents elsewhere in the city.

In 2011, advocates like us asked the Massachusetts Joint Committee on Redistricting to reverse the “usual residence” policy like Gardner did and to count persons at their legal address prior to incarceration, rather than in prison for state districts. The Committee agreed with us that the way prisoners are counted does a disservice to the state and should be changed. However, the Committee and legal counsel thought that the Massachusetts state Constitution, which dictates that the federal census be the basis for determining the representative, senatorial, and councillor districts, would prevent Massachusetts from unilaterally changing this rule for these districts. Instead, the Committee recommended to the General Court that it adopt a resolution calling for such a change to send to Congress and to the Census Bureau. Such a resolution was passed on August 14, 2014 (attached).

In fact, currently four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census’ population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts. But as we have seen, this is not an approach that is unilaterally applicable.

For these reasons, we urge you to change Census Bureau policy to count incarcerated people as residents of their home address, rather than at the place of their incarceration. Thank you for this opportunity to comment on the Residence Rule and Residence Situations.

***The Massachusetts General Court
Resolutions***

**URGING THE CENSUS BUREAU TO PROVIDE REDISTRICTING DATA THAT COUNTS PRISONERS
IN A MANNER CONSISTENT WITH THE PRINCIPLES OF “ONE PERSON, ONE VOTE”.**

WHEREAS, OBTAINING AN ACCURATE COUNT OF THE POPULATION IS SO VITAL TO REPRESENTATIVE DEMOCRACY THAT THE FRAMERS OF THE UNITED STATES CONSTITUTION ADDRESSED THE ISSUE OF THE CENSUS AND APPORTIONMENT IN THE OPENING PARAGRAPHS OF THE CONSTITUTION; AND

WHEREAS, THE MASSACHUSETTS CONSTITUTION REQUIRES THAT FEDERAL CENSUS DATA BE THE BASIS FOR STATE REDISTRICTING; AND

WHEREAS, THE CENSUS BUREAU CURRENTLY HAS A POLICY OF COUNTING INCARCERATED PEOPLE AT THE ADDRESS OF THE CORRECTIONAL INSTITUTION, EVEN THOUGH FOR OTHER LEGAL PURPOSES THEIR HOME ADDRESS REMAINS THEIR LEGAL RESIDENCE; AND

WHEREAS, THIS CENSUS DATA RESULTS IN DISTORTIONS OF THE ONE-PERSON, ONE-VOTE PRINCIPLE IN DRAWING ELECTORAL DISTRICTS IN MASSACHUSETTS, DILUTING THE REPRESENTATION OF THE MAJORITY OF DISTRICTS THAT DO NOT CONTAIN PRISONS; AND

WHEREAS, THE SIMPLEST SOLUTION TO THE CONFLICT BETWEEN FEDERAL CONSTITUTIONAL REQUIREMENTS OF "ONE PERSON, ONE VOTE" AND MASSACHUSETTS CONSTITUTIONAL REQUIREMENTS OF USING THE FEDERAL CENSUS IS FOR THE CENSUS BUREAU TO PUBLISH REDISTRICTING DATA BASED ON THE LOCATION OF AN INCARCERATED PERSON'S RESIDENCE, NOT PRISON LOCATION; AND

WHEREAS, THE CENSUS BUREAU HAS ALREADY RECOGNIZED THE DEMAND FROM STATES AND COUNTIES FOR DATA THAT BETTER REFLECTS THEIR ACTUAL POPULATIONS, AND HAS AGREED TO RELEASE DATA ON PRISON POPULATIONS TO STATES IN TIME FOR REDISTRICTING, ENABLING SOME STATES TO INDIVIDUALLY ADJUST THE POPULATION DATA USED FOR REDISTRICTING; AND

WHEREAS, PUBLIC LAW 94-171 REQUIRES THE CENSUS BUREAU TO WORK WITH STATES TO PROVIDE GEOGRAPHICALLY RELEVANT DATA AND THE CENSUS BUREAU HAS BEEN RESPONSIVE TO STATE'S DATA NEEDS FOR THE PAST 3 DECADES; NOW THEREFORE BE IT

RESOLVED, THAT THE MASSACHUSETTS GENERAL COURT HEREBY URGES THE CENSUS BUREAU, IN THE NEXT CENSUS AND THEREAFTER, TO PROVIDE STATES WITH REDISTRICTING DATA THAT COUNTS INCARCERATED PERSONS AT THEIR RESIDENTIAL ADDRESS, RATHER THAN THE ADDRESS OF THE CORRECTIONAL INSTITUTION WHERE THEY ARE TEMPORARILY LOCATED; AND BE IT FURTHER

RESOLVED, THAT A COPY OF THESE RESOLUTIONS BE TRANSMITTED FORTHWITH BY THE CLERK OF THE SENATE TO THE DIRECTOR OF THE CENSUS BUREAU.

c132

I hope you are doing well. I am writing on behalf of the Prison Justice League (P JL) to comment in response to the Census Bureau's federal register notice regarding Residence Rule and Residence Situations 80 FR 28950 (May 20, 2015). P JL is a civil rights organization that works to improve conditions in Texas prisons through litigation, advocacy, and by empowering our members. As a civil and human rights organization that works with incarcerated people every day, I urge you to change the current system of counting prisoners where they are incarcerated instead of at their home address.

The prison system in Texas is one of the largest in the nation, incarcerating over 150,000 individuals across the state. Incarceration rates disproportionately impact communities of color, particularly African Americans. Although African Americans represent only 12% of the total state population, they represent over 30% of the prison population.

Furthermore, most incarcerated people reside in urban counties before being sent to prison but most prisons are in rural parts of the state. In general, rural areas of the state are white and conservative, while urban areas are more diverse and less conservative. Counting prisoners in prison for census purposes distorts the population data that is so critical to accurately apportion congressional districts.

Thank you for the opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the correct place. The Prison Justice League believes in a population count that accurately represents communities, and we urge you to count incarcerated people as residents of their home address.

The National LGBTQ Task Force is pleased to have the opportunity to comment on the Residence Rule and Residence Situations for the 2020 Decennial Census. We applaud the efforts of the Census Bureau to count people experiencing homelessness. This comment seeks to highlight the unique ways that lesbian, gay, bisexual, transgender, and queer (LGBTQ) people often experience homelessness. Changing pieces of language and adding examples that more clearly reflect the reality of LGBTQ people experiencing homelessness will help ensure an accurate population count and therefore adequate resource distribution.

Of course, the utility of having an accurate count of LGBTQ people experiencing homelessness will increase significantly if sexual orientation and gender identity measures are included on the census survey, something that the National LGBTQ Task Force continues to recommend. Even without such measures, however, the LGBTQ community will benefit from being fully counted.

Research Findings

1. LGBTQ People Are Disproportionately Likely to Experience Homelessness

LGBTQ youth, including those questioning their sexual orientation or gender identity, face high levels of rejection from their homes, pervasive discrimination in service-providing institutions, and significant lack of access to the safety net systems designed to house and protect vulnerable youth. One study indicates that fully one half of LGBTQ youth experience negative reactions from family members when they come out as LGBT, while one quarter are ejected from their homes.ⁱ While the foster care and adoption system acts as a safety net to protect those youth who are rejected from their families or have no family to start with, reactions to expression of sexual orientation or gender identity in this system may be even worse. Youth often run away from foster and group homes because they are mistreated or harassed,ⁱⁱ and a full one-third of all youth who come out as LGBT while in the care of social services experience a violent sexual assault.ⁱⁱⁱ In addition, studies show that 12%-36% of youth report being homeless at least once after being emancipated from foster care.^{iv}

In addition, LGBTQ youth are disproportionately represented in child welfare and juvenile justice systems,^v face increased victimization at school,^{vi} and lack protections against employment and housing discrimination in a majority of states.^{vii} Housing discrimination has a particularly stark impact on transgender and gender non-conforming people – 19% of respondents in one study were denied a home or apartment and 11% were evicted because of their gender identity or expression.^{viii}

Because of this multi-faceted discrimination and the resultant inability to find refuge, LGBTQ youth face homelessness at alarming rates. Difficulties in counting youth experiencing homelessness render an exact number difficult to report, but estimates range from just over 500,000 to 1.7 million.^{ix} Of this population, an estimated 20% to 40% of homeless youth in the United States identify as – or believe they may be – LGBTQ,^x compared to an estimated 5% to 7% of youth in the general population.^{xi} Thus, LGBTQ youth are disproportionately represented in the homeless population.

LGBTQ adults also face pervasive discrimination, particularly in the employment and housing contexts. They also face disproportionate rates of poverty. Same-sex couples are more likely to live in poverty, especially if they are African American and/or have children.^{xii} And transgender people are four times more likely to live in extreme poverty (making less than \$10,000 a year) than cisgender people.^{xiii} In addition, 19% of transgender and gender non-conforming people reported being homeless at some point in their lives, and 1.7% were homeless at the time of the study, compared to an estimated 0.9% of the general population.^{xiv} Thus, while we lack statistics on the adult homeless population, there is strong reason to believe that LGBTQ adults are also more likely to experience homelessness.

2. LGBTQ People Experience Homelessness in Unique Ways

In addition, LGBTQ people tend to experience homelessness in unique ways. Research indicates that shelters can be difficult places for LGBTQ youth and adults. LGBTQ youth may worry that shelters will contact the local child and family services office and attempt to reconnect them with their families, many of which are openly hostile about the youth's sexual orientation or gender identity. In addition, a 2010 survey of transgender people found that 29% had been turned away from a shelter because of their transgender status, 42% were forced to stay in facilities designated for the wrong gender, and others encountered a hostile environment.^{xv} These circumstances make transgender people less likely to seek shelter altogether, or to do so intermittently.

LGBTQ youth and adults use various strategies to secure shelter. Many LGBTQ youth end up “couch-surfing,” staying with friends or acquaintances for short or indefinite periods of time.^{xvi} And a recent study of LGBTQ youth experiencing homelessness found that they are 7 times more likely to trade sex for shelter than their heterosexual counterparts.^{xvii} Similarly, 25% of transgender and gender non-conforming people report staying with friends or family, and 12% report having sex with people in order to sleep in a bed.^{xviii}

Recommendations to the Residence Rule and Residence Situations

The tendency of LGBTQ people to experience homelessness in unique ways yields two important considerations for counting them through the Census. First, because LGBTQ people are less likely to use group shelters, they are less likely to be counted there on Census Day. Second, to the extent that they couch-surf or exchange sex for a place to sleep, LGBTQ people may be less likely to be regarded as “residents” by those with whom they are staying. Census respondents might assume that such people have another residence where they spend more time or might otherwise dismiss counting them as part of their residence. This is especially likely if they are staying somewhere else on Census Day. LGBTQ youth might be particularly likely to be overlooked and uncounted because Census respondents might mistakenly assume that the youth are being counted by their parents or guardians.

This pattern is compounded by the fact that LGBTQ people are disproportionately likely to experience homelessness, amounting to a strong probability that many LGBTQ people are left uncounted. Because the Decennial Census has implications for apportioning seats in the House of Representatives, it is important that we count the U.S. population accurately and in full. And because resources are distributed based on these figures, an accurate count is necessary to get crucial support to members of the LGBTQ community who are experiencing homelessness.

The following recommendations attempt to address the concern that this group is being overlooked and uncounted in Census reporting.

- 1. Residence Rule – Add a fourth bullet point that better captures LGBTQ people experiencing homelessness and provides clearer guidance for Census respondents**
 - a. **Explanation:** The rule itself addresses people in facilities and shelters, but it does not expressly address other people experiencing homelessness. In addition, it does not provide clear guidance to Census respondents -- it does not address how to determine whether someone has a usual residence, nor does it address situations where people have a place where they live and sleep more than anywhere else but not “most of the time.” The suggested language remedies this issue.
 - b. **Recommendation:** Add the following as a fourth bullet point:

- *Someone who stays at different places periodically or intermittently might not have a usual residence. Ask them whether they have a place where they live and sleep more than anywhere else. If the answer is 'Yes,' they should be counted at that place. If the answer is 'No,' they should be counted where they are on Census Day."*

2. Residence Situations

- **Situation 2. Visitors on Census Day – Eliminate this category and, instead, include its examples in Situation 1**
 - a. Explanation: “Visitor” is a vague term that could include people who are living and sleeping at a place temporarily. Because LGBTQ people experiencing homelessness are more likely to couch-surf or stay with people temporarily, they might be understood as “visitors” by Census respondents with whom they are staying. The examples provided in Situation 2, however, involve people who have other residences, and they instruct the Census respondent not to count them. This type of situation is better reflected in Situation 1: “People Away From Their Usual Residence on Census Day.” By getting rid of Situation 2 and instead incorporating its examples into Situation 1, Census respondents will be less likely to mistakenly consider a temporary guest who *should* be counted as part of their residence as a “visitor” who should not be counted as part of their residence.
 - b. Recommendation: Eliminate the heading for Situation 2, re-label its two examples to “b” and “c” respectively, and include them in Situation 1.
- **Situation 3. People Who Live in More Than One Place – Change the heading to “People With Multiple Residences”**
 - a. Explanation: The current heading of this section – “People Who Live in More Than One Place” – could apply to LGBTQ people experiencing homelessness. But the following section (Situation 4) handles such people better, providing clearer examples and guidance. To avoid the possibility that a Census respondent might be confused as to how to categorize a person staying with them or might not read Section 4, the heading of Section 3 should more adequately distinguish people who travel for work or travel seasonally between residences from people who are experiencing homelessness and ensure that all people get counted.
 - b. Recommendation: Change this heading to “*People With Multiple Residences.*”
- **Situation 4. People Without a Usual Residence**
 - a. Explanation: This section gives examples of where people experiencing homelessness might be counted (i.e. soup kitchens, mobile food vans, and outdoor locations). These examples, however, represent a more typical conception of homelessness, which often does not align with LGBTQ people experiencing homelessness. Because Census respondents might overlook youth or adults who are staying with them for short or indefinite periods, including this as another example would be illustrative and provide clearer guidance.
 - b. Recommendation: Add the following:

(d) Couch-surfers, youth experiencing homelessness, or other people staying in your residence for short or

indefinite periods of time—Counted at the residence where they live and sleep most of the time. If there is no residence where they live and sleep most of the time, they are counted where they live and sleep more than anywhere else. If time is equally divided, or if a usual residence cannot be determined, they are counted at the residence where they are staying on Wednesday, April 1, 2020 (Census Day).

- **Situation 8: Nonrelatives of the Householder**

a. Explanation: This section gives examples of people who might be staying in one’s home and guidance about how to count them. Because the heading of this section references the “householder,” it might be more likely to be read by the head of a household than other sections with less descriptive headings (e.g. People Without a Usual Residence). In addition, because it reference “nonrelatives,” this section is particularly relevant to householders who have provided space for someone experiencing homelessness. Thus, including a more specific example of people experiencing homelessness would be illustrative and provide clearer guidance to Census respondents.

b. Recommendation: Add the following:

(f) *Couch-surfers, youth experiencing homelessness, or other people staying in your residence for short or indefinite periods of time*—Counted at the residence where they live and sleep most of the time. If there is no residence where they live and sleep most of the time, they are counted where they live and sleep more than anywhere else. If time is equally divided, or if a usual residence cannot be determined, they are counted at the residence where they are staying on Wednesday, April 1, 2020 (Census Day).”

The National LGBTQ Task Force urges the U.S. Census Bureau to integrate these recommendations into the Residence Rule and Residency Situations for the 2020 Decennial Census. c134	<p>The League of Women Voters of Delaware urges the Bureau to correct its long-standing practice of counting incarcerated individuals as residents of the prison cells where they happen to be located on Census day rather than their home communities. This practice has created the problem known as "prison-based gerrymandering."</p> <p>We believe that the Census Bureau's current method of assigning residence to incarcerated people is bad for democracy and inconsistent with the principle of "one person, one vote" as enunciated by the Supreme Court in <i>Reynolds v. Sims</i> (1964).</p> <p>When legislative districts are drawn based on the census numbers, incarcerated individuals become "ghost constituents" of districts that contain prisons. In Delaware, 25 percent of male prisoners and 40% of female prisoners are on pre-trial detention. They and others who are not felons are eligible to vote by absentee ballot at their home address, not at the location of the prison. Even felons, who are eligible to vote after completing their sentences, typically spend less than the ten years between Census counts and will be back in their home districts before the next Census.</p> <p>Allocating prisoners to legislative districts where the prison is located artificially inflates the political power of the districts where the prisons are located, while their home communities—often predominantly poor and minority—suffer the inverse effects of losing representation and voting strength for a decade. This issue has been exacerbated as our prison population has soared in the last few decades and, as a result, has increased the inequity of the current residence rule.</p> <p>In 2010, Delaware became the second state to pass a law to end prison-based gerrymandering. House Bill 384 (145th General Assembly) required the Department of Correction to collect the home addresses of incarcerated people and required the legislature to draw its districts on the basis of Census Bureau data corrected to count incarcerated people at their home addresses.</p> <p>The bill was sponsored by Rep. Helene Keeley and Senator Margaret Rose Henry with several additional sponsors and cosponsors. Although Senator Henry represents a legislative district that contains a prison currently counted as part of her district, she and other legislators recognized that the issue of fairness and accuracy in statewide redistricting should take precedence over individual concerns.</p> <p>Unfortunately, even though our Department of Correction provided home addresses, Delaware was unable to arrange for the geocoding of this address data in time for the legislature to meet its deadline for finalizing their redistricting proposals. As a result, our legislature reluctantly postponed full implementation until 2021.</p> <p>A change in the Bureau's residence rule for incarcerated people would allow Delaware - and other states - to eliminate the inequities of prison-based gerrymandering and meet the state's needs in a much more streamlined and cost-effective manner.</p>

	We urge the Bureau to correct its residence rule for prisoners for the 2020 Census!
c135	<p>The City of Havelock respectfully responds to your request for comments on the 2010 Census Residence Rule. As the proud host city to Marine Corps Air Station Cherry Point, Havelock seeks to ensure that the heroes who live among us are fairly and adequately counted.</p> <p>At the center of the issue is the question of where their usual residence is. We contend there is no question that whether deployed for a short period or even in time of war, our military associated with this base and those similarly situated, have their usual residence here. This is where their families are and clearly where they intend to return after a deployment.</p> <p>Havelock, Craven County and similar military communities were deeply affected by the count during the 2010 Census that set the service member's Census enumeration as their Home of Record, but left confused family members in the same household to reconcile a directive that they be considered residents of this community. For many, they simply did not fill out the forms because of this confusion.</p> <p>We ask that you treat our military as you do others who have work that requires them to travel or temporarily be somewhere for that work. Their intentions are to return to their usual residence where their family and community ties exist.</p> <p>We appreciate this opportunity to speak about an issue that has significantly impacted our community's status and ability to serve these dedicated service members. We stand ready to speak further on this issue and thank you for receiving this and our attached comments.</p> <p>City of Havelock, NC Response to Federal Register Request for comments on the 2020 Census Count Issues Specifically: Census of Military Persons during Deployments, wartime and normal rotation June 2015</p> <p>Summary During the 2010 Census, Vietnam era guidance was used to count deployed military at their home of record rather than from the bases and host communities where they lived. Family members were to be counted at their homes on or in the communities around the bases, but many families incorrectly assumed the guidance also applied to them, and did not complete Census documents reflecting their status. For the State of North Carolina, thousands of servicemembers were enumerated at locations that had little to do with them, and for the host communities around the bases, the loss of an accurate count resulted in perceptions of a poor economy, reduced revenues based on population and a much reduced base count on which a decade of estimates are now based.</p> <p>Request To work with the services to determine the best method of counting, including temporary deployments and deployments during wartime or simply count the military with their spouses where that is their usual residence, even if both spouses are deployed. The City requests deployed military members be counted at their usual residence in 2020. That is the usual residence from which they deployed from, and the one to which they intend to return. The City believes this rule, which follows the logic of other persons temporarily away from their home working are counted at their usual place of residence, should apply both in wartime and for non-wartime deployments.</p>

Background

Guidance for the 2010 military counts came from a specific publication:

*"The military overseas population includes U.S. military personnel deployed for **wartime** efforts and U.S. military personnel on U.S. military vessels with a homeport outside the United States." Citation from 2010 Census publication D-3277*

From the Residency rules in the public notice for Military Persons:

"1(a) People away from their usual residence on Thursday, April 1, 2010 (Census Day), such as on a vacation or a business trip, visiting, traveling outside the U.S., or working elsewhere without a usual residence there (for example, as a truck driver or traveling salesperson)—Counted at the residence where they live and sleep most of the time. (80 FR 28950)

"9(a) U.S. military personnel living in military barracks in the U.S.—Counted at the military barracks.

"9(b) U.S. military personnel living in the U.S. (living either on base or off base) but not in barracks—Counted at the residence where they live and sleep most of the time. (80 FR 28951)

"9(c) U.S. military personnel on U.S. military vessels with a U.S. homeport—Counted at the onshore U.S. residence where they live and sleep most of the time. If they have no onshore U.S. residence, they are counted at their vessel's homeport. (80 FR 28951)

Effects from the 2010 Census in our area:

1. **Single Military** who were stationed at area bases (communities) who were **deployed** were **not counted** as **residents** of their bases.
2. **Military with families** (on or off bases) who were deployed were **not counted where their families were**.
3. **Military associated persons living off base were less likely to fill out Census forms when their military member was told they would be counted elsewhere**

Our View

The premise of the rules cited in the request for comment Federal Register Residency Rules directs that if someone is temporarily away from their usual place of residence, they should be counted at their usual place of residence. The City of Havelock encourages this premise to apply to military persons who are temporarily deployed.

For purposes of our discussion, we used the Marine Corps term deployed, which in most cases indicates a temporary assignment, duty or otherwise not permanent assignment for an individual or a unit. A temporary assignment could be up to a year or more.

In 2010, a large number of military persons assigned to bases within North Carolina were counted at their home of record because they were deployed. Many of those persons assigned in North Carolina, but not counted in North Carolina, were temporarily assigned to the War on Terror or assigned to routine training. The publically facing basis was the application of a rule cited in the 2010 Census

publication D-3277 which as stated above, called on wartime deployments to be counted at their home of record.

For those assigned to Marine Corps Air Station Cherry Point, it was clear that they were to return to the base from where they deployed and where their families and loved ones were still in residence, and not return to their home of record. In the case of a single service member who resides in the barracks, the barracks rooms are reassigned to different service members during the deployed period but a room at the same base will be assigned upon the service members return from deployment.

Because they were assigned to units associated with area bases, the service members have a usual (not necessarily specific) residence on or nearby the bases. Their assignment, even in wartime, is temporary and they intend to return to their usual residence on or nearby the bases from which they were deployed.

It is estimated that the 2010 Census had about 25,000 to 34,000 troops from North Carolina counted elsewhere. Nationally, about 1.4 million persons were counted away from their assigned bases in 2010. NC gained 30,298 in counting the home of record status for all troops. This count does not accrue to local jurisdictions, but only to the entire state's population count for apportionment.

The failure to count these troops as residents led to perceptions of a significant loss of population for our community. It caused those who read the headlines to back away from economic advances for our community. Additionally, the lower count robbed local communities of allocated revenues based on population used to support the military families and other citizens of our community.

The counting of military personnel on Military vessels with a U.S. homeport also needs adjustment. Marines from North Carolina bases deploy on U.S. vessels home ported in other states. Married service members have an onshore residence in the State of North Carolina but single service members who have given up their barracks room or residence for the duration of the deployment were not counted in North Carolina. These service members are not considered permanent "Ships Company" and should not be counted at the ships homeport. Service Members from deployed Marine Units, even on Ships, should be counted at their permanent assigned duty station or base.

Home of Record frequently not accurate

During the preparation for the 2010 Census, City officials contacted the Special Populations branch to inquire about military counts. Technical Paper 62 was cited as the guidance for the directive in 2010 Census publication D-3277. The paper reflected that Congressional intent was to have military deployed, temporarily or otherwise, be counted in the Census. A system that would count the personnel was identified but "because of a lack of funding and other constraints...the DOD cancelled its plans" and a decision was reached to count deployed persons at their home of record as the first option.¹

The Home of Record is completely unrelated to the definitions used in the Residency Rule for usual residence and that the application of the premise of using their usual residence is most accurate.

Secondary Effect

Because the deployed military member was counted at a home of record in 2010, their remaining family members who should have been counted in their shared usual residence (and where the military member will most likely return) were sometimes confused about their status. Many families declined to be counted locally because of the confusion. Some believed filling out the form would change their status in contradiction to the military member's status for other purposes. Many states allow military on active duty to remain a citizen of their state for tax purposes, without regard for their usual residence during this period.

Through the partnership with the US Census, our community's Complete Count Committee launched billboards and messages from trusted voices to encourage military families whose active member or members were being counted at their home of record to fill out the Census questionnaire indicating what was truly their usual residence in the community.

Routinely Marine troops are deployed as part of a Marine Expeditionary Unit. Primarily, these are US Navy ship-based and roam a specific theater frequently being given assignments based on world events. Assignments were normally six-months, but world conditions and circumstances drive the length of the deployment. Proud of the moniker as the "President's 9-1-1 force," other Marine units may deploy by other means to a theater based on world events or on standby. In each case, the units intend to perform their assignments and return back to the base from which they deployed.

Counting Marine troops aboard ships as being residents of the homeport of the ship does not represent their usual residence as the ship is merely a transport and platform on which they perform their duties. In most cases, the ships arrive at ports in North Carolina or off shore where they pick up the service members assigned to the deploying units.

"Rear Presence"

Marine units deployed frequently have a full-time presence at the base whether or not it is deployed. This is further evidence of the relative permanence of their base operations and more evidence that members of that unit should clearly be counted as part of the base host community where they come from; either in base housing or as living off base.

Even if the unit does not have a rear presence, the clear evidence of usual residence is that they validate their intention to return to the Marine bases because that is where their families live either on base or in the community. This demonstration of rear presence is demonstrated at the celebrations of returning deployed persons met by families who largely are residents of the community.

Suggestions for the 2020 Census

The City supports actions that would cause the administration of the services to present the count of troops as they are assigned for a duty station. For troops assigned a foreign base, they are part of the overseas population. For troops assigned a main on shore base, they should be counted there even if they are temporarily deployed. They clearly intend to return to the assigned base after their deployment, and believe that to be their usual residence.

We believe that each service should be challenged to prepare the count of deployed persons.

- For military persons living in a barracks, the count should reflect their assignment to that base and should be filled out by the military as part of the normal Quarters count.
- For military persons living with their families, the count should reflect their usual residence, whether it is on base or off base. Families with a deployed member should be encouraged to mark the temporally deployed persons as deployed and the base to which the member is assigned.

The City of Havelock is proud of our military members and wants to accurately count persons in our community.

c136	<p>Common Cause Georgia submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Making sure that census figures accurately reflect a county’s population ensures that officeholders are held accountable by citizens who actually live in their district. Even the perception of ‘prison gerrymandering’ erodes trust in the system, further exacerbating low voter turnout and political engagement. Ending it would perceptibly improve our democracy.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Butts County, Georgia, for example, residents in District 3 of the county are given twice as much influence over county affairs because 49% of their district is incarcerated.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census’ population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universality implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. See The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (Adopted by the Senate on</p>

	<p>July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Common Cause Georgia believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c137	<p>I submit this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day. I now live in Kentucky, which I’m sure has its fair share problems with prison gerrymandering, but I’m writing to draw your attention to the trouble that the Bureau’s prisoner miscount caused for us in Arizona, where I lived at the start of this decade. As I am sure you know, in 2010 the Bureau yet again counted anyone who happened to be in a prison or jail on Census day as if they were residents of that facility’s location. When it came time to redistrict, there was a lot of discussion about what to do about that. The Arizona Independent Redistricting Commission eventually decided to use the Bureau’s data, but at the same time to be mindful that incarcerated people were counted in the wrong place. So as the state redistricted, it kept in mind that the data they relied on included a large number of non-voting incarcerated people, and made sure to keep an eye on any potential electoral consequences. The Commission was particularly worried about how the data might misrepresent minority voting strength so they excluded prison populations when performing their Voting Rights Act analysis. Without keeping a close eye on the inaccuracies in the Bureau’s data, the voting strength of Arizona’s Tribal communities would have been particularly affected. Thank you for this opportunity to comment on the Residence Rule and Residence Situations. I urge you to count incarcerated people as residents of their home address, and hope that I don’t need to relive Arizona’s troubles in my new home state in 2020.</p>
c138	<p><i>This comment submission contains graphics and cannot be displayed in this table. It is available as Appendix Attachment c138.</i></p>
c139	<p>Common Cause New Mexico and the Central New Mexico Chapter of Progressive Democrats of America submit this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Common Cause New Mexico urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Ensuring that redistricting is impartial and that legislative lines are drawn in a fair and transparent way is part of our core mission to promote civic engagement and accountability in government. So is ensuring that every eligible American’s vote is counted fairly. Counting incarcerated persons as residents of the district in which they are temporarily held has the effect of unfairly enhancing the political power of those who live and vote in the prison district while also unfairly diluting the votes of those in districts without prisons. Legislators with a prison in their district should not get a bonus for keeping the prison full. This dynamic hurts our democracy. And it hurts the communities from which these incarcerated persons hail.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the explosion in the prison population requires the Census to update its methodology again. A fair redistricting process not only involves complying with the federal law of “one person, one vote” but also with the federal Voting Rights Acts of 1965, which protects minority communities’ opportunities “to participate in the political process and to elect representatives of their choice.”</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p>

	<p>In New Mexico, the practice of prison-based gerrymandering distorts our districts. Two districts drawn after the 2000 Census include more than 1,000 incarcerated people as constituents. The actual residents of districts 8 and 62 are being granted about 4% more influence than the residents of each other district. On the local level, in the city of Hobbs, 21% of people in District 5, drawn after the 2000 Census, were incarcerated at the Lea County Correctional Facility. This means that every 79 residents in District 5 had as much political power as 100 residents in the other districts.¹</p> <p>Aztec City drew districts based on actual resident populations after the 2000 Census, rejecting prison-based gerrymandering. New prisons constructed in Cibola and Union counties over the last decade will require county officials to decide for the first time whether they will count incarcerated persons in the prison districts.² If the Census Bureau were to right an outdated mode of counting, then counties with new prisons would have proper guidance to follow.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) have taken a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>This ad hoc approach in a few states, counties, and municipalities is neither efficient nor universality implementable. If the Census Bureau would change its practice of counting incarcerated individuals at their home address rather than at the prison location, it would significantly alleviate the burden on state and local agencies and provide an efficient solution to greatly improve the fairness of apportionment and representation for millions of Americans. As you well know, states across the country look to the Census Bureau as the nation's foremost expert on national demographics and data, and more often than not count incarcerated persons the way the Bureau does. Once the Bureau leads the way with an update to a now outdated practice, states are sure to follow.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations; we appreciate the Bureau's aim to count everyone in the right place in keeping with changes in society and population realities. Because Common Cause New Mexico and the Central New Mexico Chapter of Progressive Democrats of America believe in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their last-known home addresses.</p> <p>¹ See Prison Policy Initiative, Fixing Prison-Based Gerrymandering After the 2010 Census: New Mexico, (Jul. 15, 2015, 7:53 PM), http://www.prisonersofthecensus.org/50states/NM.html</p> <p>² Id.</p>
c140	<p>I serve as a Senator in the Georgia State Senate, representing District _____, and I submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility where they happen to be located when the Census is taken.</p> <p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation's population.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. 	<p>people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Georgia, this results in decennial misallocation of constituents among state legislative districts. Additionally, about 35 of our counties, cities, and school boards have their districts skewed by the Bureau's 2010 prisoner miscount. The largest vote dilution is 36%.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts. In our state alone 16 counties, cities, and school boards each adjusted the census data to avoid skewing their districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. It makes far more sense for the Bureau to provide accurate redistricting data in the first place, rather than leaving it up to each state and local jurisdiction to have to adjust the Census' data to incarcerated people in their home district.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because our democracy relies on a population count that accurately represents communities, I urge you to count incarcerated people as resident of their home address.</p>
c141	<p>I submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because I believe in a population count that accurately represents communities, I urge you to count incarcerated people as residents of their home address.</p>
c142	<p>Common Cause Illinois submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Common Cause Illinois urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Common Cause Illinois is committed to ensuring that all individuals are given equal representation. If changes are not made to the existing process, incarcerated people will continue to incorrectly skew the results of the census, enhancing the political clout of people who live near prisons while diluting the overall voting power of all other Illinoisans.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p>

	<p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Illinois, this resulted in 11 House districts that derived 2 or more percent of their population from people incarcerated at correctional facilities located within the districts. There are also important racial considerations at play in the state, where African Americans are considerably overrepresented in Illinois prisons and jails. Across the state, African Americans make up 15% of the total population but account for 56% of the incarcerated population.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census’ population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. c144	<p>The Brennan Center for Justice at New York University School of Law submits this comment in response to the Census Bureau's federal register notice regarding the 2020 Decennial Census Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). For the reasons set forth below, we respectfully ask the Census Bureau build on the changes it made in conjunction with the 2010 Census and update the usual residence rule for the 2020 Census so that all incarcerated persons are counted at their home address rather than the prison facility where they are located on Census Day.</p> <p>Founded in 1995 to honor the extraordinary contributions of Justice William J. Brennan, Jr., the Brennan Center is a not-for-profit, nonpartisan think tank and public interest law institute that seeks to improve systems of democracy and justice. Based on the findings of our research, we have long expressed concerns about the negative societal impact of counting prisoners where they are incarcerated and urged that they be enumerated at their pre-incarceration home addresses instead. In New York, we participated heavily in the drafting of a landmark law passed by the legislature in 2010 which required that the state's redistricting agency reallocate prisoners to their home communities for purposes of apportionment. We subsequently successfully defended the law from legal challenges.¹</p> <p>The high rate of mass incarceration in the United States continues to exacerbate the urgency of counting incarcerated people at their home address. The number of people incarcerated in state and federal prisons has dramatically risen from approximately 200,000 in 1970 to more than 1.5 million in 2013.² Although some states have begun to enact criminal justice reforms to reduce the high rate of incarceration, the likelihood is that a high number of people still will be imprisoned on Census Day in 2020.</p> <p>This high rate of incarceration creates a significant distortive effect when it comes to apportionment, particularly at the state legislative level. This is because most incarcerated persons are being held in facilities located far away from their home communities, often in rural communities. For example, ten years ago about 91% of people incarcerated in New York were held in upstate New York facilities despite the fact that 66% of the inmates were from New York City. This meant that communities in New York City were unrepresented in the state's legislature. Similar sorts of distortions are common across the United States. While New York's state legislature addressed the imbalance through legislation in 2010, many states continue to count inmates where prisons are located because they are not able for a variety of reasons to make adjustments on their own.</p> <p><i>Prisoners lack ties to the communities where they are incarcerated.</i></p> <p>As detailed in our 2004 report, <i>Accuracy Counts: Incarcerated People and the Census</i>, statistics, legal precedent, and historical context all make changing the way incarcerated persons are counted a matter of pressing public policy.³ In the forward to the report, Dr. Kenneth Prewitt, Director of the U.S. Bureau from 1998 to 2001, powerfully argued that, "Counting people in prison as residents of their home communities offers a more accurate picture of the size, demographics, and needs of our nation's communities." Dr. Prewitt went on to emphasize two themes that continue to be relevant today: "Incarcerated people have virtually no contact with the community surrounding the prison. Upon release the vast majority return to the community in which they lived prior to incarceration." A decade later, those concerns remain pressing.</p>

Counting incarcerated persons where they are imprisoned, as Dr. Prewitt said in his forward, "ignores the reality of prison life." Prisoners have only tenuous connection at best to the communities where prisons are located. They are unable to vote, utilize local parks, enroll in schools, or visit libraries in the communities where they are being held. They have no connection to civic life outside of the prison facility. By contrast, prisoners maintain much stronger ties to their home communities. In fact, the U.S. Department of Justice estimated in 1999 that 55% and 63% of state and federal prisoners, respectively, had children that were minors, a high percentage of whom reside in prisoners' home communities. It is not surprising then that the vast majority of the more than 680,000 persons released from prison each year return to the communities they resided in prior to their incarceration.

Counting prisoners in their home communities would be more consistent with how prisoners are treated for other purposes

Finally, considering incarcerated individuals as residents of the area where their prison facility is located is at odds with how most jurisdictions define the residency of prisoners. For instance, over 100 years ago, the New York Court of Appeals held in *New York v. Cady* (1894)⁴ that a prisoner's legal residence is where he or she chooses to live as opposed to where that person is incarcerated. Likewise, the Sixth Circuit in *Stifel v. Hopkins* (1973)⁵ determined that there is a rebuttable presumption that a person's residence prior to incarceration remains his or her residence unless that person intends to change it. Many states have similar residence rules that govern residency, venue in judicial proceedings, and voting.⁶ Changing the usual residence rule to be consistent with practice of the majority of states would bring the federal rule in line with what states have long recognized: prisoners are not part of the communities where prisons are located.

Thank you again for the opportunity to comment on the 2020 Decennial Census Residence Rule and Residence Situations as the Census Bureau strives to count each person in his or her correct location. Because of the importance of a population count that accurately portrays communities throughout the United States, we ask that you update the usual residence rule to count incarcerated individuals as residents at their home addresses. We are happy to answer any questions.

c145 As _____ of the Delaware Housing Coalition, I am writing in response to your May 20 federal register notice regarding the Residence Rule and Residence Situations.

Our organization relies on population data that accurately represents communities. Each year, we publish/update two publications that depend on Census data and that housing organizations throughout the state depend on for data that they use in planning their programs and that helps them apply for funding: *Who Can Afford to Live in Delaware?*, a comprehensive report on housing affordability, and *Out of Reach* that focuses on rental data.

	<p>We are very concerned about the Bureau’s practice of counting incarcerated individuals at the prison location since this skews population data. Most particularly, this undercounts male and African American Delawareans in our cities. I therefore urge you to count incarcerated people at their home address, rather than at the particular facility where they happen to be located on Census day.</p>
c146	<p><i>This comment submission contains graphics and cannot be displayed in this table. It is available as Appendix Attachment c146.</i></p>
c147	<p>This message is in response to the May 20, 2015 Federal Register Notice regarding the “2020 Decennial Census Residence Rule and Residence Situations” (https://federalregister.gov/a/2015-12118). As part of a state agency that utilizes Census Bureau data on a daily basis, I want to emphasize that the determination and communication of an easily-interpreted and logically consistent residence rule for each type of residence situation is essential for coherent and useful census tabulations. This includes communication from the Census Bureau on how respondents should interpret the often-used Residence Rule phrase “most of the time.”</p> <p>Along with easily-interpreted and logically consistent rules, consistent communication and application of the rules by residence type from place to place across the country is critical. To provide this, I think the Census Bureau must ensure (1) adequate and uniform training of 2020 Census field workers, along with readily available guidelines and contacts, <i>especially</i> to manage less common residence situations, and (2) clear communication of residence rules and guidelines to 2020 Census partners and respondents (the public) as part of 2020 Census <i>preparation</i>. A designated point-of-contact for residence determination may also be useful for Census Bureau staff, as well as 2020 Census partners and respondents.</p> <p>I also want to encourage the Census Bureau to provide 2020 Census summary file tabulations based on (2010 Census form question 10 or equivalent) “Does Person [X] sometimes live or stay somewhere else?” (including tabulations of the follow-up information from respondents who answer Yes). I have not heard discussion of this by Census Bureau staff before, but to help facilitate the best interpretation and use of decennial census data at the state and local level throughout the decade, I think it’s important that it be considered.</p> <p>Finally, I want to note that for any 2020 version of the 2010 Census Individual Census Report form (special form used for group quarters enumeration), Military Census Report form, or alternative forms used in enumeration, the Census Bureau should consider a question to the effect of “Do you sometimes live or stay somewhere else?” (including the follow-up information about that residence for respondents who answer Yes, equivalent to the regular 2010 Census form question 10). (For the 2010 Census, my record is that there was Individual Census Report question 7 “(If No) What is the full address of a place where you live or stay MOST OF THE TIME?” (I believe there was research on different versions of this question) but that was only for the subset of respondents who answered No to question 6 “Do you live or stay at this facility MOST OF THE TIME?” and, additionally, it didn’t provide the additional follow-up information about that other residence.)</p> <p>Please let me know if you have any questions or if any further information would be helpful, and thank you for all your work to ensure a successful 2020 Census.</p>
c148	<p>I am writing in response to your May 20 federal register notice regarding the Residence Rule and Residence Situations. I am a Professor of Sociology. I and my colleagues use Census data in a wide variety of ways to understand patterns of inequality in the United States. My own research has focused on identifying the causes and consequences of racial disparities in incarceration. As part of this research, I have discovered many cases in which the population characteristics of smaller rural counties have been extremely distorted by counting prisoners in the places where they are incarcerated. There would be a more accurate representation of the social characteristics of different places if people were counted where they resided at the time of their sentencing.</p> <p>As I do quantitative analysis, I took the time to dig a little more into available statistics provided by the Prison Policy Initiative on county-level counts of incarcerated and non-incarcerated persons by race for my state of Wisconsin. There are seven Wisconsin counties in which incarcerated people are 3.2%-6.4% of the county’s total enumerated population, a large enough fraction to distort local socioeconomic measures.</p>

	<p>Only five Wisconsin counties are more than 2% Black for their non-incarcerated populations. Due to the locations of prisons, in 10 of Wisconsin's 72 counties, a <i>majority</i> (in some cases over 80%) of the apparent Black "residents" of the county are incarcerated, in another 6 counties 25-50% of the apparent Black residents are incarcerated, and in another 7 between 10-25% of the apparent residents are incarcerated. These incarcerated "residents" are unlikely to have resided in that county before incarceration and their presence distorts local statistics.</p> <p>Although aggregate Census data do not permit identifying the home county of those incarcerated, using the criterion of counties whose non-incarcerated Black population is less than 2% and have a higher percentage of the state's Black prisoners than their percentage in the population, I estimate that at least 2.3% of the state of Wisconsin's total Black population (all ages, incarcerated and not) is attributed to "White" counties where they are imprisoned instead of to the place they resided before incarceration. This seems like a pretty large shift to me. As a citizen I am concerned about the undemocratic aspects of shifting representation from minorities and cities to predominantly-White rural areas.</p>
c149	<p>The undersigned members of the Massachusetts Coalition for Effective Public Safety (CEPS) submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). A number of CEPS members not listed here have already sent letters to the Bureau on behalf of their respective organizations. We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>CEPS is a coalition of advocates, program providers, parolees, formerly incarcerated men and women, friends and relatives of prisoners, and human rights activists who have joined forces to promote and safeguard the human rights of all people across the Commonwealth of Massachusetts and focus on parole, solitary confinement and medical release reform.</p> <p>We are, therefore, particularly troubled by the Census Bureau's interpretation of the residence rule to count incarcerated people as if they were residents of the prison locations rather than residents of their communities. When this data is used for redistricting it results in prison gerrymandering; prisons inflate the political power of those people who live near them. This misallocation of constituents shifts political priorities, delaying justice for our communities.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census and for our democracy.</p> <p>And while some states have been able to address the prison gerrymandering problem to some extent on their own, our legislature ran into a complication with the state constitution, and so passed a resolution calling on the Bureau to solve the problem instead.</p> <p>We echo our legislators' call and urge you to count incarcerated people at home.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities.</p>
c150	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015), to urge you to count incarcerated people at their home address.</p> <p>I am a _____ of the David J. Epstein Program in Public Interest Law and Policy at UCLA School of Law. Prior to joining</p>

UCLA I was the _____ for the Campaign for Youth Justice, a national nonprofit devoted to removing youth from the adult criminal justice system. My research focus is on the dangers of incarceration for youth and its impact on families and communities of color.

Although I am not a demographer, I can clearly see the practical results of the Bureau's decision to count incarcerated people as if they resided at the particular facility that they happen to be located at on Census day. When the Bureau's data is used for redistricting, it inflates the political power of people who live near prisons. The result of this arrangement is compounding policy choices that are against the best interests of the communities most impacted by incarceration

And while I am proud that California is one of the states leading the way to ameliorate the skewing effects of the Bureau's miscount, I wish that it were not necessary. In 2011 California was the fourth state in the country to pass a law to adjust Census data for state-wide redistricting. The new law will take effect for the 2020 round of redistricting and requires the Department of Corrections to report the home addresses of incarcerated people to the Citizens Redistricting Commission so that the Commission may count incarcerated people at home for redistricting purposes.

Even before the state took action, virtually all California counties with large prisons took it upon themselves to avoid prison gerrymandering within their own governments. These include Amador, Del Norte, Imperial, Kern, Kings, Lassen, Madera, Monterey, San Luis Obispo, and Tuolumne counties. Madera County actually went as far as to pass a resolution explaining why they could not use the Bureau's data as-is for redistricting (the resolution is attached).

Therefore it may at first glance appear that my state has the prison gerrymandering problem solved, but even we would greatly benefit from the Bureau updating its methodology to count incarcerated people at home. For example, our redistricting commission is independent of the legislature, so even if the state adjusts the Bureau's data to count incarcerated people at home, there is a chance that the commission might default to the Census data published by the Bureau. And taking a bigger picture view, it makes little sense for each state or county government across the country to have to make these necessary adjustments on their own.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place. I believe that a strong democracy and fair criminal justice policy depend on a population count that accurately represents all communities, so I urge you to count incarcerated people as residents of their home address.

BEFORE
THE BOARD OF SUPERVISORS
OF THE COUNTY OF MADERA
STATE OF CALIFORNIA

In the Matter of
BOARD OF SUPERVISORS

Resolution No.: 2011 - 100
A RESOLUTION REGARDING PRISON
POPULATIONS AND SUPERVISORIAL
DISTRICTS

WHEREAS, the U.S. Census currently counts incarcerated people as residents of their place of incarceration; and

WHEREAS, the Constitution of the State of California, Article II Section 4, states "The Legislature shall prohibit improper practices that affect elections and shall provide for the disqualification of electors while mentally incompetent or imprisoned or on parole for the conviction of a felony."; and

WHEREAS, almost all of the people incarcerated at the correctional facilities located within the borders of our County are not residents of our County; and

WHEREAS, these incarcerated persons do not become residents of the County when they are incarcerated, since they are here involuntarily and can be relocated by the state Department of Corrections and Rehabilitation; and

WHEREAS, persons incarcerated in state and federal correctional institutions live in a separate environment, do not vote or otherwise participate in the life of Madera County, cannot build enduring ties in Madera County, and do not individually affect the social and economic character of the towns in which the correctional facilities are located; and

WHEREAS, although these individuals are counted by the U.S. Census as if they were residents of our County, in the past the County has not used these Census counts to draw legislative districts; and

WHEREAS, when the County uses prison populations to draw legislative districts, it gives extra influence to the districts that contain the prisons. For example, the two prisons in District 2 house approximately 7,000 inmates. Dividing the total county wide population of 150,865 by the five Supervisorial districts allows for a population of 30,173 per district. Seven thousand out of that 30,173 are inmates, or 23 percent of the population of District 2. This leaves each group of 77 people in District 2 as much say over county issues as 100 people in the other four districts; and

WHEREAS, this prison-based gerrymandering contradicts the basic principles of equal representation embraced by the State of California and federal Constitutions; and

WHEREAS, the counties of Amador, Del Norte, Imperial, Kern, Kings, Lassen, Monterey, San Luis Obispo, and Tuolumne, as well as more than 100 counties across the United States avoid the problem of prison-based gerrymandering by ignoring the prison populations when drawing legislative districts; and

NOW THEREFORE, BE IT RESOLVED by the Board of Supervisors of the County of Madera, State of California, that the Board will remove the prison populations from the redistricting data used to draw County legislative districts.

The foregoing Resolution was adopted this 24th day of May _____, 2011, by the following vote:

c151

United Congress of Community and Religious Organizations (UCCRO) is writing in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.

UCCRO is a coalition of seven community-based organizations covering communities in the Chicagoland area that's been working on the issue of prison gerrymandering for over 4 years. These communities which are largely African American and Hispanic account for about 20 percent of statewide prisoners statewide, and nearly half of city of Chicago prisoners in the state. Though these prisoners are released to the communities of their legal address the vast majority are counted in the prison districts where they are incarcerated, giving those prison districts additional representation because of the inflated count. Prison gerrymandering is bad for democracy and is a practice that needs to be corrected to reflect the true demographics of the all of the communities impacted. Illinois law says that a prison cell is not a residence.

As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.

	<p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <ul style="list-style-type: none"> • By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Illinois, this resulted in about 56 percent of the prison population being black. In Illinois blacks are incarcerated nearly ten times the rate of whites. Yet there are counties that receive an unfair advantage in political power. One county for example is Lee County that counts 25% of its population from a federal; prison, thereby giving every group of 75 people the political clout of 100 people in surrounding districts. <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census’ population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universality implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>United Congress of Community and Religious Organizations call upon the Census Bureau to change its practice as well.</p> <p>We appreciate this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because UCCRO believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c152	<p>The Southern Center for Human Rights (SCHR) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). SCHR urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>The Southern Center for Human Rights (SCHR) is a non profit law firm based in Atlanta, Georgia, that dedicated to providing legal representation to people facing the death penalty, challenging human rights violations in prisons and jails, seeking through litigation and advocacy to improve legal representation for poor people accused of crimes, and advocating for criminal justice reform on behalf of those affected by the system in the Southern United States.</p> <p>In the course of carrying out our work, it has become increasingly clear that it is imperative to end prison gerrymandering so that we may ensure equal representation throughout Georgia. SCHR urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Georgia has a relatively high incarceration rate, currently locking up more than one person for each group of 200 people. But many of the state's prisons are located in sparsely populated areas, resulting in a significant distortion in how the Census portrays these communities. In ten Georgia counties, more than 10% of the county's Census population is incarcerated. Twenty percent of Calhoun County is incarcerated.</p>

	<p>These are not the most punitive counties in the state, they just happen to be the places where the prisons are located.</p> <p>Nine Georgia House Districts drawn after the 2000 Census derived more than 5% of their required population from incarcerated, disenfranchised people. One district was almost 11% incarcerated, giving every 89 people who live in that district with the prison as much influence as 100 people who live in another other district in the state that does not contain a large prison.</p> <p>There are significant political differences between the places that most incarcerated individuals come from and the places where they are incarcerated. An analysis by the state Department of Corrections found more Georgia prison inmates come from Atlanta zip code 30318 than any other of the state's 965 ZIP codes. Atlanta as a whole is city that strongly votes with the Democratic Party, yet due to prison gerrymandering, residents of conservative Butts County (Georgia District 3) were given twice as much influence over county affairs as residents of other districts because 49% of District 3 was incarcerated at the Georgia Diagnostic and Classification Center.</p> <p>Either the Census Bureau needs to change how it counts prisoners, or states like Georgia need to find their own ways to count their population prior to redrawing district boundary lines. Otherwise, the geographic and racial disparities in our criminal justice system will continue to spill over into our electoral system.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because SCHR believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c153	<p>The Fortune Society (Fortune) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Fortune urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because The Fortune Society believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p> <p>Please do not hesitate to contact me by email at _____ or by phone at _____, if you have any questions regarding this letter.</p>
c154	<p>In 2010, the U.S. Census Bureau counted deployed service members as part of the population of their home of record. During this time, there were approximately 10,000 service members stationed at Fort Campbell who were deployed from the installation at the time of the census. Furthermore, over 250,000 United States military personnel were temporarily deployed overseas in support of contingency operations, or for other short-term missions. Home of record is generally defined as the permanent home at the time of entry or re-enlistment into the Armed Forces as included in personnel files; when a deployment ends, soldiers return to their home base--not their original home town or home of record.</p> <p>This once a decade head count sets a baseline population upon which annual estimates are based for the next ten years. Many federal and state assistance programs use formulas based on the decennial census or derivatives from the decennial census data. With the current methodology, the communities in which these service members reside prior to deployment are deprived of potentially large sums of federal and state funding.</p>

	<p>By using the last duty station to count deployed service members the 2020 Census data will depict a more accurate representation of where the deployed service members live prior to deployment and in return allow the communities where these service members live access to more funding to provide services and programs for the military members and their dependents during the following ten year period.</p> <p>Thank you for consideration of this request.</p>
c155	<p>In response to the Federal Census Bureau 's Register Notice regarding the Residence Rules and Residence Situation 8 FR 28950 (5/20/2015), New Jersey Association on Correction hereby advises the following comment; New Jersey Association on Correction urges you to count those incarcerated as residents of their home address rather than then the address of the particular facility they happen to be located in on Census Day.</p> <p>In the 2010 Census, prison cells were designated as residences which therefore determined a disproportionate population of males both African American and Latino. 5,393 census blocks were located far from the actual homes of the incarcerated population. When this data is used for redistricting, prisons inflate the political power of those who live near them.</p> <p>Thank you for the opportunity to comment on the Bureau's efforts to count everyone in the right place. New Jersey Association on Correction believes in a population count that is accurate.</p> <p>Thank you for your consideration.</p>
c156	<p>Arkansas Voices for the Children Left Behind submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be imprisoned at on Census day.</p> <p>Arkansas Voices for the Children Left Behind advocates for the children of incarcerated parents and, therefore, we are very concerned about ensuring equal representation for the home communities of these children.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>I frequently visit Arkansas prisons and have observed a few similarities between the different prisons in the state. First, the prisons are located far away from the home communities of incarcerated people. It often takes a significant amount of time and expense for children to visit their incarcerated parents, straining incredibly important relationships. Second, the prisons are located in parts of the state with vastly different demographics than the home communities of incarcerated people. Nationally, by designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people.</p> <p>Because Arkansas is not one of the four states that have found a statewide solution to counting incarcerated people at home, particular</p>

	<p>Arkansas counties are underrepresented politically because the state's prison population comes disproportionately from some counties such as Sebastian County (home for 4.3% of the state but 8.3% of its incarcerated people) and Crittenden County (home for 1.8% of the state, but 3.9% of its incarcerated people). Further, since Blacks are overrepresented in Arkansas prisons and jails, they are going to bear the brunt of prison gerrymandering. Blacks are incarcerated four times more than Whites in Arkansas.</p> <p>In addition to the handful of states that have ended prison gerrymandering, there are over 200 counties and municipalities that have individually adjusted their population data to avoid prison gerrymandering, but this ad hoc approach is not always possible. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations. Arkansas Voices for the Children Left Behind previously called upon the Census Bureau to change its practice back in February 2013, and we are glad to see that the Bureau is taking a step forward to count everyone in the right and most accurate place. Because Arkansas Voices for Children Left Behind believes in a population count that accurately represents communities — especially those hardest hit by incarceration — we urge you to count incarcerated people as residents of their home address.</p>
c157	<p>Justice For Families (J4F) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Our organization and members urge you to count those that are incarcerated at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>J4F is a national organization that was created by families, for families that have been impacted by the criminal justice system and incarceration. We have nearly 3000 families in 38 states and the District of Columbia. As families that remain behind when our loved ones are incarcerated, we understand and live with the consequences of unequal representation in the Census data. The majority of our families live in poor communities of color that have little to no say in their local and state government, thus making an already vulnerable community even more vulnerable. Our families' experiences have proven time and again that the best solutions to community problems come from the impacted community. When the community is denied accurate representation in the Census data, their solutions and voices go unheard while the voices of those who have no stake and little understanding of the community are given greater value and power.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the nation's incarcerated population has more than quadrupled to over two million people. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Illinois, for example, 60% of incarcerated people have their home residences in Cook County (Chicago), yet the Bureau counted 99% of them as if they resided outside Cook County.</p>

	<p>When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes.</p> <p>New York State is not the only jurisdiction taking action. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because J4F believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c158	<p>As the _____ and _____ of AmericanTribune.org, please count our voice in favor of counting prisoners at their home addresses.</p> <p>As a former prisoner myself, I'm aware that every prisoner has his/her home address listed in their personnel files.</p> <p>Prisons, prison staff and the respective communities in which they may be temporally housed all expect that prisoners will return to their own respective communities. The courts and parole/probation departments expect and anticipate that eventuality. If the prisoner should change his/her "home address," then that is vetted and approved by this latter authority and their new home residence so listed.</p> <p>As a rule, most if not all "prison communities" have passed local ordinances that REQUIRE prisoners, not already members of those respective communities, <u>to vacate the area within a certain time period upon release</u> (usually 2-hrs-or-so) under penalty of law.</p> <p>Prisoners are routinely advised of this ordinance by prison staff and given a certain minimal stipend and a bus ticket to accomplish that purpose. They are usually not simply released directly from their respective institution, but are driven to such transportation within a certain time constraint to effect their passage from the community. Home/friend pick-ups from the institution is discouraged if not prohibited.</p> <p>As with college students and others, it only makes accurate and reasonable sense to count prisoners from their listed home commitment/address for any proper home census to be accurate.</p> <p>Thank you for this opportunity to speak to this issue.</p>
c159	<p>Ex-Prisoners and Prisoners Organizing for Community Advancement (EPOCA) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people in their home districts, rather than in districts where they are temporarily incarcerated, and are often barred by state law from voting.</p> <p>We are ex-prisoners and current prisoners, along with allies, friends and family, working together to create resources and opportunities for those who have paid their debt to society. We believe that social change can only be led by the people who most need the change. Therefore, those of us who have the least advantage, the least power within the traditional system, have to work together to change the situation ourselves. And as such we are particularly impacted and troubled by the Census Bureau's interpretation of the residence rule. Counting incarcerated people as if they were residents of the prison locations rather than residents of their communities hurts our democracy and further disempowers our communities.</p>

	<p>EPOCA believes that a population count that accurately represents communities is a prerequisite to equal representation, and so we urge you to count incarcerated people as residents of their home addresses.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>In Massachusetts, there are currently four districts that meet federal minimum population requirements only because the Bureau counted correctional facilities' populations as if the people incarcerated there were actual residents of those districts. So the 8th Plymouth, 37th Middlesex, 7th Middlesex, and 12th Worcester districts each have actual resident populations that are 5.6% to 7.4% smaller than the ideal district size.</p> <p>While some states have been able to address the problem to some extent on their own, our legislature ran into a complication with the state constitution, and so passed a resolution calling on the Bureau to solve the problem instead.</p> <p>We echo their call and urge you to count incarcerated people at home.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities.</p>
c160	<p>I represent the _____ district of _____ and submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they are located at on Census day.</p> <p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation's population.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, which has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology once again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Massachusetts, law already states that a prison cell is not a residence. The city of Gardner had to choose in 2001 whether or not to give residents who lived in a close proximity to the state prison extra impact on city affairs or deny the inaccurate Census counts. The source of this information can be located at http://www.prisonersofthecensus.org/50states/, along with examples from other states affected by prison gerrymandering.</p>

	<p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust to the Census' population totals to count incarcerated people at home. Over 200 counties and municipalities all individually have to adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universality implementable. It makes far more sense for the Bureau to provide accurate redistricting data in the first place, rather than leaving it up to each state to have to adjust the Census' data to count incarcerated people in their home district.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because democracy relies on a population count that accurately represents communities, I encourage you to count incarcerated people as residents of their home address.</p>
c161	<p>We write to submit our comments in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge the Census Bureau to count incarcerated people at their permanent home of record address rather than at their place of incarceration for the 2020 Decennial Census.</p> <p>During the last redistricting cycle, the Special Joint Committee on Redistricting received a tremendous amount of testimony and advice on the issue of group quarters and the counting of prisoners at their last place of residence rather than where they are incarcerated. It was pointed out to the Committee that prisons are frequently located in areas geographically and demographically removed from the home communities of incarcerated persons. By counting prisoners at their place of incarceration, rather than the legal address of the person prior to incarceration, the relative strength of votes by residents in that district are inflated at the expense of voters in all other districts in the Commonwealth. The Massachusetts legislature, acting on this testimony and a recommendation by the Committee, sent to the Director of the Census Bureau on August 14, 2014 a resolution urging that the next Census "counts incarcerated persons at their residential address rather than the address of the correctional institution where they are temporarily located".</p> <p>The U.S. Census continued use of the "usual place of residence" rather than a "legal residence" when counting prison populations means individual states and localities are required to produce their own methodologies for counting prisoners. Currently, California, Delaware, Maryland, and New York take a state-wide approach to adjust the Census' population totals to count incarcerated people at home address. As you may know, the approaches used by Maryland and New York were challenged in court. Other states may face issues such as we do in Massachusetts where the state Constitution dictates that the federal census be the basis for determining our representative, senatorial, and councillor districts. The question becomes how the counting of prisoners can be handled in the future? We believe that the likelihood of continued uncertainty on the appropriate enumeration of prisoners may result in further litigation on this matter as long as states unilaterally attempt to tailor U.S. Census figures to meet local needs. The most expedient and streamlined avenue for changing the method for counting prison populations lies with the Census Bureau changing their prisoner residence rule procedure. This would provide a systematic and consistent tabulation approach for calculating Congressional re-apportionment and one that is uniform for redistricting in all 50 states. Such a change on the federal level will rectify the perceived inequalities in counting prisoners and eliminate costly litigation for states to defend redistricting plans based on adjusting local prison populations.</p> <p>Accordingly, we urge you to change Census Bureau policy to count incarcerated people as residents of their home address, rather than at the place of their incarceration.</p> <p style="text-align: center;"><i>The Massachusetts General Court Resolutions</i></p>

**URGING THE CENSUS BUREAU TO PROVIDE REDISTRICTING DATA THAT COUNTS PRISONERS
IN A MANNER CONSISTENT WITH THE PRINCIPLES OF "ONE PERSON, ONE VOTE".**

WHEREAS, OBTAINING AN ACCURATE COUNT OF THE POPULATION IS SO VITAL TO REPRESENTATIVE DEMOCRACY THAT THE FRAMERS OF THE UNITED STATES CONSTITUTION ADDRESS THE ISSUE OF THE CENSUS AND APPORTIONMENT IN THE OPENING PARAGRAPHS OF THE CONSTITUTION; AND

WHEREAS, THE MASSACHUSETTS CONSTITUTION REQUIRES THAT FEDERAL CENSUS DATA BE THE BASIS FOR STATE REDISTRICTING; AND

WHEREAS, THE CENSUS BUREAU CURRENTLY HAS A POLICY OF COUNTING INCARCERATED PEOPLE AT THE ADDRESS OF THE CORRECTIONAL INSTITUTION, EVEN THOUGH FOR OTHER LEGAL PURPOSES THEIR HOME ADDRESS REMAINS THEIR LEGAL RESIDENCE; AND

WHEREAS, THIS CENSUS DATA RESULTS IN DISTORTIONS OF THE ONE-PERSON, ONE-VOTE PRINCIPLE IN DRAWING ELECTORAL DISTRICTS IN MASSACHUSETTS, DILUTING THE REPRESENTATION OF THE MAJORITY OF DISTRICTS THAT DO NOT CONTAIN PRISONS; AND

WHEREAS, THE SIMPLEST SOLUTION TO THE CONFLICT BETWEEN FEDERAL CONSTITUTIONAL REQUIREMENTS OF "ONE PERSON, ONE VOTE" AND MASSACHUSETTS CONSTITUTIONAL REQUIREMENTS OF USING THE FEDERAL CENSUS IS FOR THE CENSUS BUREAU TO PUBLISH REDISTRICTING DATA BASED ON THE LOCATION OF AN INCARCERATED PERSON'S RESIDENCE, NOT PRISON LOCATION; AND

WHEREAS, THE CENSUS BUREAU HAS ALREADY RECOGNIZED THE DEMAND FROM STATES AND COUNTIES FOR DATA THAT BETTER REFLECTS THEIR ACTUAL POPULATIONS, AND HAS AGREED TO RELEASE DATA ON PRISON POPULATIONS TO STATES IN TIME FOR REDISTRICTING, ENABLING SOME STATES TO INDIVIDUALLY ADJUST THE POPULATION DATA USED FOR REDISTRICTING; AND

WHEREAS, PUBLIC LAW 94-171 REQUIRES THE CENSUS BUREAU TO WORK WITH STATES TO PROVIDE GEOGRAPHICALLY RELEVANT DATA AND THE CENSUS BUREAU HAS BEEN RESPONSIVE TO STATE'S DATA NEEDS FOR THE PAST 3 DECADES; NOW THEREFORE BE IT

RESOLVED, THAT THE MASSACHUSETTS GENERAL COURT HEREBY URGES THE CENSUS BUREAU, IN THE NEXT CENSUS AND THEREAFTER, TO PROVIDE STATES WITH REDISTRICTING DATA THAT COUNTS INCARCERATED PERSONS AT THEIR RESIDENTIAL ADDRESS, RATHER THAN THE ADDRESS OF THE CORRECTIONAL INSTITUTION WHERE THEY ARE TEMPORARILY LOCATED; AND BE IT FURTHER

RESOLVED, THAT A COPY OF THESE RESOLUTIONS BE TRANSMITTED FORTHWITH BY THE CLERK OF THE SENATE TO THE DIRECTOR OF THE CENSUS BUREAU.

c162

I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you and your colleagues at Census to count incarcerated people at their home address, rather than at the particular facility in which they happen to be located on Census day.

I am a Professor of Law at the University of Michigan Law School, and my work focuses on criminal law and criminal justice policy. I am also an empirical economist. I use data in my work, and I know how important data can be, both in arriving at truth and in helping us understand the world. It also affects the world, as you well know. Counting incarcerated people in the wrong place inflates the

political power of people who live near prisons, when those counts are used for redistricting or other purposes. As you can imagine, this practice has serious repercussions for state legislative decisions that impact incarceration, but also it can have a huge impact on representational equality in the small communities that host the facilities.

I'm pleased to note that Michigan has been at the forefront of how to deal with such population quirks. In our state, cities and counties are required to adjust their redistricting data to exclude people in state institutions who are not residents of the county or city where the facility is located. (Mich. Comp. Laws Ann. §§ 117.27a(1)(5) and 46.404(g), respectively.) Essentially, localities are forbidden from engaging what is now commonly termed "prison gerrymandering" (though these statutes date back to the 1960s). At the same time, the state clearly views Census data as generally the best data to use for redistricting; the same statutes identify the "latest official published figures of the United States official census" as the default source of data, but then creates an exemption for cases where the Bureau's data falls short of Michigan's standards of accuracy (such as counting incarcerated people in the wrong place).

I believe that a strong democracy and fair criminal justice policy depend on a population count that accurately represents all communities. Accordingly, I urge you to count incarcerated people as residents in the jurisdiction of their home address. Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place.

c163

I am writing concerning Federal Register Notice [Docket Number 150409353-5353.01] requesting comments regarding the 2020 Decennial Census Residence Rule and Residence Situations.

I wish to begin by saying that these residence rules, developed through the Bureau's extensive experience through many decennial censuses, should remain as they are stated in the above referenced notice.

I am particularly concerned about proposals to adjust group quarters residence rules for those incarcerated in prisons. The primary rule governing decennial census counts is that the enumeration should represent a "snapshot" of where persons are residing on Census Day, not where they formerly resided.

Such adjustments will only open the door to further manipulation of the census counts to suit the sociological and political goals of persons proposing such rule changes.

Furthermore, these changes could embroil the Bureau in political conflicts and decrease the confidence of the American public in the neutrality of the decennial census process. It could also decrease the participation rate in the enumeration.

The Decennial Census process is becoming increasingly difficult and expensive to administer. Prison adjustment is a very complex process and will only add to the expense and timely completion of the enumeration. The Bureau should concentrate its resources on a full and accurate count, and avoid such complex diversions.

Initiating such an arbitrary and expensive modification to the census residence rules could also endanger the Bureau's appropriations, if the Bureau has money for doing prison adjustment, maybe they need less funding.

It is also possible that these adjustments could alter the numbers determining the reapportionment of the seats of the U. S. House among the States, bring on unnecessary litigation.

The experience of the three states which engaged in prison adjustment following the 2010 Decennial Census process (New York, Maryland and Delaware) demonstrated that the procedures used yielded questionable results and, in some cases allocating inmate counts to general,

	<p>rather that specific locations due to lack of sufficient information.</p> <p>It is also notable that the three states which engaged in prison adjustment in 2011 are Democrat-controlled states, and this adjustment would not have been done were it not advantageous to the party in power. Once again, the Bureau should not act as an agent for increasing partisan advantage.</p> <p>There is also a lack of thorough nationwide studies by neutral entities which analyze the affect of prison adjustment on the redistricting process in all of the different States. It is possible that these adjustments could adversely affect the redistricting process for minority districts. Particularly in rural areas were minority districts may be drawn.</p> <p>Another issue is that if group quarters residence rules are modified to remove individual counts from the group quarters for prisoner enumeration to disperse these counts throughout each state, then why not perform the same adjustments on other group quarters, such as college dorms and nursing homes.</p> <p>Also, the Bureau will have to deal with the issue that adjustment of individual counts for group quarter, from where they resided on Census Day to their former residence, may involve moving these counts to other states.</p> <p>Because of the expense and complexity of initiating this process on a nationwide basis, I believe such adjustments should be left up to the individual states, and not be imposed by the Federal Government.</p> <p>For these reasons, I oppose changes to the residence rules stated in the Federal Register notice, and urge the Bureau to readopt the previous rules.</p>
c164	<p>I am writing concerning Federal Register Notice [Docket Number 150409353-5353-01] requesting comments regarding the 2020 Decennial Census Residence Rule and Residence Situations.</p> <p>I believe such adjustments should be left up to the individual states, and not be imposed by the Federal Government. I adamantly oppose changes to the residence rules stated in the Federal Register notice. Please urge the Bureau to re-adopt the previous rules.</p>
c165	<p>I serve as a Representative in the ____ Legislature, representing residents of ____, which includes a large incarcerated population in a county House of Correction, and I submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in tum, rests on an accurate count of the nation's population.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p>

	<p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people.</p> <p>This problem is hardly limited to our state; and currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universally implementable. In Massachusetts, for example, we concluded that the state constitution did not allow us to pass similar legislation, so we sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>And even if we could solve the problem ourselves, it makes far more sense for the Bureau to provide accurate redistricting data in the first place, rather than leaving it up to each state to have to adjust the Census' data to count incarcerated people in their home district.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because democracy relies on a population count that accurately represents communities, I urge you to count incarcerated people as residents of their home address.</p>
c166	<p>I represent the ____ District, ____ and I submit this comment in response to the Census Bureau's federal register notice regarding the Resident Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation's population. In Massachusetts incarcerated individuals who are allowed to vote are required to vote by absentee ballot, thus have never been allowed to vote in the town or city where the incarcerated individual is housed. Many of these municipalities' already received special tax privileges; they should not also, receive special political favors by the federal government through the Census Bureau.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S totaled less than half a million. But since then, the number of incarcerated people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a resident in the 2010 Census, the Census Bureau concentrated a population that is disproportionately males, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people.</p> <p>Impacts at the state level include but are not limited to the following:</p> <ul style="list-style-type: none"> • Without using prison populations as padding, 5 Massachusetts House districts drawn after the 2000 Census did not meet constitutional population requirements.

- For example, each House district in Massachusetts should have had 39,682 residents. The 3rd Suffolk District, which claimed the population of the Suffolk County House of Corrections, however, had only 36,428 actual residents. This means that the actual population of the district was 8.2% smaller than the average district in the state.
- Crediting all of Massachusetts' incarcerated people to a few locations, far from home, enhances the political clout of the people who live near prisons, while diluting voting power of all other Bay Staters.

Impacts at the local level include but are not limited to the following:

- Some cities grapple with the Census Bureau prison counts that threaten to distort voting rights. Cities, for example, must also draw city council districts based on population. But because these council districts are so much smaller than state legislative districts, a single large prison can have a huge effect.

Currently, four states (California, Delaware, Maryland, New York) are taking a state-wide approach to adjust the Census' population totals that is to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.

But this ad hoc approach is neither efficient nor universality implementable. It makes far more sense for the Bureau to provide accurate redistricting data in the first place, rather than leaving it up to each state to have to adjust the Census' data to count incarcerated people in their home district.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Democracy relies on a population count that accurately represents communities, I urge you to count incarcerated people as residents of their home address.

I would like to thank you in advance for your kind consideration on this matter.

c167

I am writing concerning Federal Register Notice [Docket Number 150409353-5353-01] requesting comments regarding the 2020 Decennial Census Residence Rule and Residence Situations.

I wish to begin by saying that these residence rules, developed through the Bureau's extensive experience through many decennial censuses, should remain as they are stated in the above referenced notice.

c168	<p>Democracy North Carolina submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>We are interested in ending prison gerrymandering because our mission is to achieve a government that is truly of the people, by the people, and for the people. By violating the constitutional principle of "one person, one vote," prison gerrymandering stands in the way of our mission.</p> <p>As you know, American demographics and living situations have changed dramatically in the 225 years since the first Census, and the</p>

	<p>Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census and for the political representation of residents of urban areas of North Carolina.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In North Carolina, after the 2000 Census, seven residents of Anson County's District 6 — where a prison is located — had as much influence as <i>ten</i> residents of any of Anson County's other districts. Anson County did not redistrict after the 2010 Census so this problem still persists.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state- wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is inefficient. For example, even though North Carolina state law says a prison cell is not a residence, that policy is not integrated into redistricting decisions at the state or local level. Public officials in Caswell County and Columbus County, two rural counties with significant prison populations, had to take extra steps to specifically avoid prison gerrymandering.</p> <p>Along with other organizations, we previously called upon the Census Bureau to change its practice of counting incarcerated people in February 2013, and we once again urge you to count incarcerated people as residents of their home address.</p> <p>We thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities.</p>
c169	<p>Neighbor to Neighbor submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). We urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Neighbor to Neighbor is a membership organization comprised of low-income, working class, and people of color. We are dedicated to achieving economic and environmental justice. We build the power of our members through issue and electoral organizing. We operate chapters in Lynn, Worcester, Springfield and Holyoke, where poverty and unemployment rates are high. Many of our members and their families have and continue to be deeply affected by the issue of mass incarceration. Given the challenges our members face coupled with our focus on civic engagements, we have a particular concern in ending prison gerrymandering and ensuring equal representation.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated</p>

	<p>people as more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Massachusetts, this resulted in roughly 10,000 people counted at their facility location rather than their actual home, which is their legal address for other purposes.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>But this ad hoc approach is neither efficient nor universality implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Neighbor to Neighbor believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c170	<p>I submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be imprisoned at on Census day.</p> <p>My son is incarcerated in Texas, and I am a member of the Mothers of Incarcerated Sons Society, a support group for families of incarcerated individuals.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Rhode Island, this practice has a disproportionate effect on African-American and Latino communities since African-Americans are incarcerated at a rate almost nine times as much as Whites are. The incarceration rate for Latinos in Rhode Island is three times higher than that for Whites.</p>

	<p>Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home and avoid prison gerrymandering, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>Unfortunately, this is not the case in Rhode Island. Even though Rhode Island law states that a prison cell is not a residence, incarcerated people are included in population counts for redistricting. This is worrisome because currently, all of the state's prisons are clustered in Cranston.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations. I am glad to see that the Bureau is taking a step forward to count everyone in the right and most accurate place. I believe that the Census should accurately represent communities, and therefore I urge you to count incarcerated people as residents of their home address.</p>
<p>c171-247</p> <p><i>Note: Comment submissions 171-247 were sent as a group and are identical except for the name of the sender.</i></p>	<p>In Christian County, Kentucky we take great pride in our continued relationship with Fort Campbell. We strive to provide a community where soldiers and their families always feel welcome; never taking for granted the hard work, dedication and sacrifice that our military families make for our country. Fort Campbell is home to the Army's most deployed contingency forces. As a community, we embrace the cycles of deployment and ensure our military members and their families receive access to high quality services and programs.</p> <p>We take pride in serving those that serve our country. It is important that our service members are included as part of this community in the census. This once a decade head count sets a baseline population upon which annual estimates are based for the next ten years. Many federal and state assistance programs use formulas based on the decennial census or derivatives from the decennial census data. With the current methodology, the communities in which these service members reside prior to deployment are deprived of potentially large sums of federal and state funding; funding that is used to benefit the community including the service members and their families.</p> <p>By using the last duty station to count deployed service members the 2020 Census data will depict a more accurate representation of where the deployed service members live prior to deployment and in return allow the communities where these service members live access to more funding to provide services and programs for the military members and their dependents during the following ten year period.</p> <p>Thank you for consideration of this request.</p>
<p>c248</p>	<p>Common Cause Florida submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Common Cause Florida urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Ensuring that redistricting is impartial and that legislative lines are drawn in a fair and transparent way is part of our core mission to promote civic engagement and accountability in government. So is ensuring that every eligible American's vote is counted fairly. Counting incarcerated persons as residents of the district in which they are temporarily held has the effect of unfairly enhancing the political power of those who live and vote in the prison district while unfairly diluting the votes of those in districts without prisons. Legislators with a prison in their district should not get a bonus for keeping the prison full. This dynamic hurts our democracy. And it hurts the communities from which these incarcerated persons hail.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the explosion in the prison population requires the Census to update its methodology again. A fair redistricting process not only involves complying with the federal law of "one person, one vote" but also with the federal Voting Rights Acts of 1965 which protects minority communities' opportunities "to participate in the political process and to elect representatives of their choice."</p>

The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census. In Florida, the growth of the prison population in recent decades has been enormous. In 2000, there were 71,616¹ individuals incarcerated by the Florida Department of Corrections, whereas today there are just over 102,000² individuals incarcerated, an increase of 42.4%. In that same time period, Florida's population grew by only 17.6%.³

Because of the rise in incarceration rates, the practice of allocating incarcerated persons to prison districts substantially skews redistricting. This is especially true because prisons are frequently located in areas geographically and demographically removed from the home communities of incarcerated persons.

An example of this skewed redistricting can be found in Florida's House District 10. After the 2000 Census, the ideal population for each State House district in Florida was 133,186 residents. But more than 7% of House District 10 is incarcerated disenfranchised people from other parts of the state, which makes the population of House District 10 really about 7% smaller than the ideal district size. This means that every 93 people in House District 10 have as much voting power and representation as 100 people elsewhere in the state. Similar distortions can be found in House Districts 12, 5 and 7. Ultimately, everyone in Florida who does not live in a district that contains a prison has their voting strength and representation diluted in the Florida State Legislature as compared to districts that are padded with a prison population.

The distortion is even greater at the local level. In the Calhoun County Board of County Commissioners, for example, 48% of the people in District 4 are incarcerated at the Calhoun Correctional Institution. As a result, the actual residents of District 4 are given almost twice as much political clout as people elsewhere in the county. Significant distortion of voting power also occurs in several other counties, including Baker, Hardee, Jefferson, and Wakulla Counties.

A handful of Florida counties proactively reject prison-based gerrymandering and base their county districts on actual residents instead of prison populations. Gulf County is one such county that already bases its districts on actual populations, not prison populations, by excluding the prison population from its redistricting data for purposes of local redistricting. Although the Florida Attorney General issued an opinion stating that Gulf County must include prison populations when drawing its county districts, the county ignored this advice in favor of drawing districts based on the constitutional and democratic principle of “one person, one vote.” Columbia, Hamilton, Holmes, and Madison Counties also base their county districts on actual residents and exclude prison populations.

Currently, four states (California, Delaware, Maryland, and New York) have taken a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities individually adjust population data to avoid prison gerrymandering when drawing their local government districts.

This ad hoc approach in a few states, counties, and municipalities is neither efficient nor universality implementable. If the Census Bureau would change its practice of counting incarcerated individuals at their home address rather than at the prison location, it would significantly alleviate the burden on state and local agencies and provide an efficient solution to greatly improve the fairness of apportionment and representation for millions of Americans. As you well know, states across the country look to the Census Bureau as the nation's foremost expert on national demographics and data, and more often than not count incarcerated persons the way the Bureau does. Once the Bureau leads the way with an update to a now outdated practice, states are sure to follow.

	<p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations; we appreciate the Bureau's aim to count everyone in the right place in keeping with changes in society and population realities. Because Common Cause Florida believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their last-known home addresses.</p> <p>¹ Prison Populations on June 30, 2000, Prison Policy Initiative, available at http://www.prisonersofthecensus.org/resources/prisons2000.html. ² About the Florida Department of Corrections, Florida Department of Corrections, available at http://www.dc.state.fl.us/about.html; Trends in Admission Populations May 2011, Florida Department of Corrections, available at http://www.dc.state.fl.us/pub/pop/monthly/index.html. ³ Florida By the Numbers, Florida House of Representatives Redistricting Committee, available at http://censusvalidator.blob.core.windows.net/mydistrictbuilderdata/Public%20Participation/Redistricting - By the Numbers.pdf.</p>
c249	<p>Common Cause in Wisconsin submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Common Cause Wisconsin urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>Ensuring that redistricting is impartial and that legislative lines are drawn in a fair and transparent way is part of our core mission to promote civic engagement and accountability in government. So is ensuring that every eligible American's vote is counted fairly. Counting incarcerated persons as residents of the district in which they are temporarily held has the effect of unfairly enhancing the political power of those who live and vote in the prison district while unfairly diluting the votes of those in districts without prisons. Legislators with a prison in their district should not get a bonus for keeping the prison full. This dynamic hurts our democracy. And it hurts the communities from which these incarcerated persons hail.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the explosion in the prison population requires the Census to update its methodology again. A fair redistricting process not only involves complying with the federal law of “one person, one vote” but also with the federal Voting Rights Acts of 1965 which protects minority communities' opportunities “to participate in the political process and to elect representatives of their choice.”</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>Currently, four states (California, Delaware, Maryland, and New York) have taken a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities individually adjust population data to avoid prison gerrymandering when drawing their local government districts. This is the direction all states should follow.</p> <p>Wisconsin, though, continues to count incarcerated persons the way the Census Bureau does. In 2011, the legislature used 5,583 incarcerated people to pad out the population of District 53. Without the incarcerated populations, the district is 10% below the required size. This gives every 90 residents of the 53rd district the same influence as 100 residents of any other district in the state.</p> <p>Not only do the Census Bureau's methods skew our district populations, but they also paint a flawed picture of their demographic makeup. District 53, for example, seems to have a large African-American population, larger than 74 other districts. But of the 2,784 African-Americans in the district, all but 590 are incarcerated. The day the people incarcerated in the district are allowed to vote again,</p>

	<p>they will be on a bus, heading back to their home districts. The Census counts the prison districts' incarcerated populations as if they resided there even though they are not a part of this district and never will be – they don't use the roads, visit the libraries, enjoy the state's public education, or walk through the parks. For all purposes, they simply do not reside in these districts.</p> <p>But even these examples are nearly unremarkable compared to the dramatic vote distortions that people face in their local governments. For example, 80% of a district in Juneau County is incarcerated. This gives every 20 residents of that district the same voting power as 100 residents of any other ward. To say that this is unfair would be an understatement. Yet Juneau is hardly the only county significantly affected; 75% of District 2 in Waupun County is incarcerated, 62% of Adams County's Districts 13 and 5 are incarcerated, 53% of a district in Juneau City is incarcerated, and 51% of Jackson County's District 12 is incarcerated, to name a few.</p> <p>Nevertheless, there 6 cities and counties rejected the Census Bureau's prison counts, successfully adjusting their redistricting population to create fair districts.</p> <p>This ad hoc approach is neither efficient nor universality implementable. If the Census Bureau would change its practice of counting incarcerated individuals at their home address rather than at the prison location, it would significantly alleviate the burden on state and local agencies and provide an efficient solution to greatly improve the fairness of apportionment and representation for millions of Americans. As you well know, states across the country look to the Census Bureau as the nation's foremost expert on national demographics and data, and more often than not count incarcerated persons the way the Bureau does. Once the Bureau leads the way with an update to a now outdated practice, states are sure to follow.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations; we appreciate the Bureau's aim to count everyone in the right place in keeping with changes in society and population realities. Because Common Cause Wisconsin believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their last-known home addresses.</p>
c250	<p>The Texas Criminal Justice Coalition submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). The Texas Criminal Justice Coalition urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, prisons inflate the political power of those people who live near them.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because the Texas Criminal Justice Coalition believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p>
c251	<p>I submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be imprisoned at on Census day.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p>

	<p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>As a volunteer for the Alternatives to Violence Project and someone who has facilitated workshops in a handful of California state prisons, I know that California prisons are often located far away from the home communities of incarcerated people. Fortunately, California is one of the states that have ended prison gerrymandering, and there are over 200 counties and municipalities that have also individually adjusted their population data to avoid prison gerrymandering.</p> <p>But, nationally, by designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In California, African-Americans are incarcerated at a rate almost seven times as much as whites are.</p> <p>Further, it is not always possible for states to end prison gerrymandering on their own. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations. I am glad to see that the Bureau is taking a step forward to count everyone in the right and most accurate place. I believe that the Census should accurately represent communities, and therefore I urge you to count incarcerated people as residents of their home address.</p>
c252	<p>I am a former member of the Vermont House of Representatives (2008-2014) and currently _____ of Vermonters for Criminal Justice Reform, and I submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census Day.</p> <p>From my years of experience serving as an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation's population. And in my work with Vermonters for Criminal Justice Reform I see the results of how a malapportioned legislative system creates and perpetuates unjust laws.</p> <p>As you know, American demographics and living situations have changed drastically in the 225 years since the first census, and the census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Bureau to update its methodology again.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the census.</p> <p>By designating a prison cell as a residence in the 2010 census, the Census Bureau concentrated the nation's entire incarcerated population into just 5,393 census blocks that are located far from the actual homes of incarcerated people. In Vermont this means that the residents of</p>

places like Burlington, Rutland and Bennington, are instead systematically counted at the location of the state's seven prisons—or out of state in the private prison in Baldwin, Michigan.

This miscount is unjustifiable anywhere, but **my state exemplifies the incongruity between the Census Bureau's residence rules and where people actually reside.** While prisoners remain residents of their home address in all states, in Vermont they also retain the right to vote while in prison. So they are represented by, and vote for, their home legislator, but at redistricting time, they are counted toward the constituency total of the legislators who have prisons in their districts.

Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the census's population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.

But this ad hoc approach is neither efficient nor universally implementable. It makes far more sense for the Bureau to provide accurate redistricting data in the first place, rather than leaving it up to each state to have to adjust the census's data to count incarcerated people in their home district.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because democracy relies on a population count that accurately represents communities, I urge you to count incarcerated people as residents of their home address.

Re: Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015)

Dear Ms. Humes,

The Texas Civil Rights Project respectfully submits these comments in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations 80 FR 28950 (May 20, 2015).

We strongly urge you to count incarcerated people at their home addresses rather than their prison addresses, because the current system grossly distorts the census results. This is particularly true in Texas.

- Texas consistently is at or near the highest rate of incarceration in the United States.
- Most convictions are in Texas' urban areas, but most prisons are in very rural areas.
- African Americans are disproportionately affected: they represent only 11.8% of the state population but 31% of the prison population.

When the census counts inmates at their prison addresses, it reinforces state political dynamics which contribute to the phenomenon of mass incarceration in Texas.

A. Texas' prison population has grown vastly since 1980

In 1978, Texas' prison population was 24,575.¹

The 2014 prison population was 150,361.² That is a **511%** increase in 36 years.

The increase is largely the result of the state legislature creating longer and longer sentences for the same crimes.

¹ *Ruiz v. Estelle*, 503 F. Supp. 1265, 1275 (S.D.Tex 1980).

² TDCJ Statistical Report FY 2014, available at http://tdcj.state.tx.us/documents/Statistical_Report_FY2014.pdf.

B. African American residents are disproportionately affected.

African Americans represent roughly **11.8%** of the Texas population.

However, they represent about **31%** of Texas' prison population.

Most Texas prisoners are incarcerated for a short time. Half the people convicted every year are sentenced to two years or less, and another quarter are sentenced to 3-5 years. State law does not permit prisoners to vote, but they become eligible again after being released and finishing parole (if applicable).³

C. Prisoners are mostly from urban areas, but prisons are mostly in rural areas.

In 1978 there were 17 prisons in Texas with a total capacity for 27,253 inmates. They were distributed across **7 counties**.⁴

Today, there are 109 prisons with a total capacity for 160,023 inmates, distributed across **52 counties**.

³ Texas Election Code 11.002(4).

⁴ See Appendix A.

Counting prisoners where they are incarcerated but cannot vote – in regions of the state that are primarily rural, white, and conservative – results in the state government being disproportionately rural, white, and conservative. It simultaneously disenfranchises some residents while empowering others, which creates a snowballing effect for mass incarceration. It is no accident that the Texas prison population has not only grown since 1980, but that the growth continued to accelerate through the 1990's.

As a civil rights advocate, I strongly encourage you to change the current system. Not only would it make the electoral system more representative generally, it might be essential to breaking the cycle of mass incarceration in Texas in our lifetimes.

Reference: Notice and Request for Comment: **2010 Census Residence Rule**

Madam:

The City of Jacksonville respectfully responds to your request for comments on the 2010 Census Residence Rule. As the proud host city to Marine Corps Base Camp Lejeune and Marine Air Station New River, Jacksonville seeks to ensure that the heroes who live among us are fairly and adequately counted.

At the center of the issue is the question of where their usual residence is. We contend there is no question that whether deployed for a short period or even in time of war, our military associated with these bases and those similarly situated, have their usual residence here. This is where their families are and clearly where they intend to return after a deployment.

Jacksonville, Onslow County and similar military communities were deeply affected by the count during the 2010 Census that set the servicemember's Census enumeration as their Home of Record, but left confused family members in the same household to reconcile a directive that they be considered residents of this community. For many, they simply did not fill out the forms because of this confusion.

We ask that you treat our military as you do others who have work that requires them to travel or temporarily be somewhere for that work. Their intentions are to return to their usual residence where their family and community ties exist.

We appreciate this opportunity to speak about an issue that has significantly impacted our community's status and ability to serve these dedicated servicemembers. We stand ready to speak further on this issue and thank you for receiving this and our attached comments.

City of Jacksonville, NC

Response to Federal Register Request for comments on the 2020 Census Count Issues

Specifically: Census of Military Persons during Deployments, wartime and normal rotation

May 2015

Summary

During the 2010 Census, Vietnam era guidance was used to count deployed military at their home of record rather than from the bases and host communities where they lived. Family members were to be counted at their homes on or in the communities around the bases, but many families incorrectly assumed the guidance applied also to them, and did not complete Census documents reflecting their status. For the State of North Carolina, thousands of servicemembers were enumerated at locations that had little to do with them, and for the host communities around the bases, the loss of an accurate count resulted in perceptions of a poor economy, reduced revenues based on population and a much reduced base count on which a decade of estimates are now based.

Request

To work with the services to determine the best method of counting, including temporary deployments and deployments during wartime or to simply count the military with their spouses where that is their usual residence, even if both spouses are deployed.

The City requests deployed military members be counted at their usual residence in 2020. That is the usual residence from which they deployed from, and the one to which they intend to return. The City believes this rule, which follows the logic of other persons temporarily away from their home working are counted at their usual place of residence, should apply both in wartime and for non-wartime deployments.

Background

Guidance for the 2010 military counts came from a specific publication:

*"The military overseas population includes U.S. military personnel deployed for **wartime** efforts and U.S. military personnel on U.S. military vessels with a homeport outside the United States." Citation from 2010 Census publication D-3277*

From the Residency rules in the public notice for Military Persons:

"1(a) People away from their usual residence on Thursday, April 1, 2010 (Census Day), such as on a vacation or a business trip, visiting, traveling outside the U.S., or working elsewhere without a usual residence there (for example, as a truck driver or traveling salesperson)—Counted at the residence where they live and sleep most of the time. (80 FR 28950)

"9(a) U.S. military personnel living in military barracks in the U.S.—Counted at the military barracks.

"9(b) U.S. military personnel living in the U.S. (living either on base or off base) but not in barracks—Counted at the residence where they live and sleep most of the time. (80 FR 28951)

“9(c) U.S. military personnel on U.S. military vessels with a U.S. homeport—Counted at the onshore U.S. residence where they live and sleep most of the time. If they have no onshore U.S. residence, they are counted at their vessel's homeport. (80 FR 28951)

Effects from the 2010 Census in our area:

1. **Single Military** who were stationed at area bases (communities) who were **deployed** were **not counted** as **residents** of their bases.
2. **Military with families** (on or off bases) who were deployed were **not counted where their families were.**
3. **Military associated persons living off base were less likely to fill out Census forms when their military member was told they would be counted elsewhere**

Our View

The premise of the rules cited in the request for comment Federal Register Residency Rules directs that if someone is temporarily away from their usual place of residence, they should be counted at their usual place of residence. The City of Jacksonville encourages this premise to apply to military persons who are temporarily deployed.

For purposes of our discussion, we used the Marine Corps term deployed, which in most cases indicates a temporary assignment, duty or otherwise not permanent assignment for an individual or a unit.

In 2010, a large number of military persons assigned to bases within North Carolina were counted at their home of record because they were deployed. Many were assigned to the War on Terror, and some were assigned to routine training. The publically facing basis was the application of a rule cited in the 2010 Census publication D-3277 which as stated above, called on wartime deployments to be counted at their home of record.

For those assigned to Camp Lejeune Marine Corps Base and the Marine Corps Air Station New River it was clear that they were to return to the bases from where they deployed and where their families and loved ones were still in residence, and not return to their home of record.

Because they were assigned to units associated with area bases, the servicemembers have a usual residence on or nearby the bases. Their assignment, even in wartime, is temporary and they intend to return to their usual residence on or nearby the bases from which they were deployed.

It is estimated that the 2010 Census had about 25,000 to 34,000 troops from North Carolina counted elsewhere. Nationally, about 1.4 million persons were counted away from their assigned bases in 2010. NC gained 30,298 in counting the home of record status for all troops. This count does not accrue to local jurisdictions, but only to the entire state's population count for apportionment.

The failure to count these troops as residents led to perceptions of a significant loss of population for our community. It caused those who read the headlines to back away from economic advances for our community. Additionally, the lower count robbed local communities of allocated revenues based on population used to support the military families and other citizens of our community.

Home of Record frequently not accurate

During the preparation for the 2010 Census, City officials contacted the Special Populations branch to inquire about military counts. Technical Paper 62 was cited as the guidance for the directive in 2010 Census publication D-3277. The paper reflected that Congressional intent was

to have military deployed, temporarily or otherwise, be counted in the Census. A system that would count the personnel was identified but "(b)ecause of a lack of funding and other constraints...the DOD cancelled its plans" and a decision was reached to count deployed persons at their home of record as the first option.¹

In many cases, the Home of Record for a US Marine may indicate the recruiting station where they entered service rather than from the community they came. Years after entering the service, the home of record may not reflect their usual residence. The City believes the Home of Record is completely unrelated to the definitions used in the Residency Rule for usual residence and that the application of the premise of using their usual residence is most accurate.

Secondary Effect

Because the deployed military member was counted at a home of record in 2010, their remaining family members who should have been counted in their shared usual residence (and where the military member will most likely return) were sometimes confused about their status. The City of Jacksonville found many families who declined to be counted locally because of the confusion. Some believed filling out the form would change their status in contradiction to the military member's status for other purposes. Many states allow military on active duty to remain a citizen of their state for tax purposes, without regard for their usual residence during this period.

Through the partnership with the US Census, our community's Complete Count Committee launched billboards and messages from trusted voices to encourage military families whose active member or members were being counted at their home of record to fill out the Census questionnaire indicating what was truly their usual residence in the community.

Routinely Marine troops are deployed as part of a Marine Expeditionary Unit. Primarily, these are US Navy ship-based and roam a specific theater frequently being given assignments based on world events. Assignments were normally six-months, but world conditions and circumstances drive the length of the deployment. Proud of the moniker as the "President's 9-1-1 force," other Marine units may deploy by other means to a theater based on world events or on standby. In each case, the units intend to perform their assignments and return back to the base from which they deployed.

Counting Marine troops aboard ships as being residents of the homeport of the ship does not represent their usual residence as the ship is merely a transport and platform on which they perform their duties. In most cases, the ships arrive at ports in North Carolina or off shore where they pick up the service members assigned to the deploying units.

"Rear Presence"

Marine units deployed frequently have a full-time presence at the base whether or not it is deployed. This is further evidence of the relative permanence of their base operations and more evidence that members of that unit should clearly be counted as part of the base host community where they come from; either in base housing or as living off base.

Even if the unit does not have a rear presence, the clear evidence of usual residence is that they validate their intention to return to the Marine bases because that is where their families live either on base or in the community. This demonstration of rear presence is demonstrated at the celebrations of returning deployed persons met by families who largely are residents of the community.

¹ US Department of Commerce, Economics and Statistics Administration, Bureau of the Census, Karen M. Mills, Technical Paper 62, "Americans Overseas in U.S. Censuses" (portions are attached)

Congressional Attention

The City of Jacksonville worked with other communities to bring attention to the application of counting deployed troops during wartime at their home of record, and elicited a series of letters drawing attention to the issues. A majority of the State's 2010 Congressional delegation and a House Committee on military affairs signed two letters.

In addition to the work done by the City of Jacksonville prior to the Census, the City convened a group at the Onslow County Multipurpose Complex April 6, 2011 to gain State attention to the matter. Representatives from Cumberland County, Fayetteville, Craven County, Havelock, Wayne County and Goldsboro attended. Governor's Census Liaison Bob Coats was helpful in relaying the issue to others and interpreting Census actions.

Suggestions for the 2020 Census

The City supports actions that would cause the administration of the services to present the count of troops as they are assigned for a duty station. For troops assigned a foreign base, they are part of the overseas population. For troops assigned a main on shore base, they should be counted there even if they are temporarily deployed. They clearly intend to return to the assigned base after their deployment, and believe that to be their usual residence.

We believe that each service should be challenged to prepare the count of deployed persons.

- For military persons living in a barracks, the count should reflect their assignment to that base and should be filled out by the military as part of the normal Quarters count.
- For military persons living with their families, the count should reflect their usual residence, whether it is on base or off base. Families with a deployed member should be encouraged to mark the temporarily deployed persons as deployed and the base to which the member is assigned.

The City of Jacksonville is proud of our military members and wants to accurately count persons in our community.

IT'S IN OUR HANDS

WHAT YOU NEED TO KNOW

Sound Off for the 2010 Census: A Guide for U.S. Military Personnel

Where Will You and Your Family Be Counted?

People in the United States will be counted at their usual residence, the place where they live and sleep most of the time. This place is not necessarily the same as the person's voting residence, legal residence, or permanent residence. Determining usual residence is easy for most people—but it may not be so apparent for people in the military and their families.

- U.S. military personnel residing in the United States are counted at the residence where they live and sleep most of the time. This residence might be on or off the military installation.
- Crews of military vessels with a U.S. homeport are counted at the onshore residence where they live and sleep most of the time. If they do not report an onshore residence, they are counted at their vessel's homeport.
- U.S. military personnel stationed outside the United States, including dependents living with them, will be counted as part of the U.S. overseas population using administrative records from the Department of Defense. These persons stationed overseas will be included in the state totals used to determine the allocation of seats in the U.S. House of Representatives. The military overseas population includes U.S. military personnel deployed for wartime efforts and U.S. military personnel on U.S. military vessels with a homeport outside the United States.

An Overview of the 2010 Census for the Armed Forces.

Military installations in the United States appoint a project officer to work with the Local Census Office (LCO). The LCO trains base personnel, provides materials, and assists with any questions or problems during the census.

- Armed forces personnel, who live in military group quarters such as barracks/dormitories, disciplinary barracks/jails, or military treatment facilities, will be given a special census form called a Military Census Report (MCR). Personnel assigned to a military group quarter will be counted at the group quarter.
- U.S. military personnel on board Navy and Coast Guard vessels with a U.S. homeport will receive a Shipboard Census Report (SCR) to complete. If they have an onshore address, they can claim it as their home address. If not, they will be counted on board the ship at its homeport.
- People living in family housing on base in the United States will receive the standard census questionnaire through the mail.
- Vessel personnel, who also have an onshore address, will receive the standard census questionnaire at their home address **AS WELL AS A SHIPBOARD CENSUS REPORT ON BOARD THE SHIP**. Please complete both the standard census questionnaire and the Shipboard Census Report. When completing the Shipboard Census Report, make sure to write in the full address **OF YOUR ONSHORE RESIDENCE IF you live or stay THERE** most of the time.

The 2010 Census: Quick, Easy, and Confidential.

- 2010 Military Census Reports contain 6 questions and are simple to fill out.
- By law, the Census Bureau cannot share an individual's census questionnaire responses with anyone, including other federal agencies and law enforcement entities.

Your Participation Is Vital.

The U.S. Constitution directs the Census Bureau to conduct a complete count of all people living in the United States every 10 years. Census information helps in determining how federal, state, local, and tribal governments make decisions affecting the people of this country and how over \$400 billion per year of taxpayers' money is allocated by government. Participating in the census is in everyone's best interest. People who answer the census help their communities obtain state and federal funding for neighborhood improvements, such as deciding where to build schools, hospitals, and roads, or about services for the elderly, job training, and more. The best way to make sure people like yourself are counted in the census is to fill out the form and encourage others to do so.

By law, the Census Bureau cannot share individual answers it receives with anyone. Also, we do not share individual answers with welfare agencies, courts, police, or the military. Census workers are sworn to secrecy. The Census Bureau workforce understands the importance of safeguarding confidential data. They know that if they give out any information, they can face a \$250,000 fine and jail time.

For additional information about the 2010 Census, visit the Census Bureau's Internet site at <http://www.census.gov> or call one of our Regional Census Centers across the country:

Subject: Counting military deployed for the 2010 Census
Attachments: Tech Paper 62.pdf; Home of Record 4903.pdf

[REDACTED], below is some information on how we count military personnel stationed or deployed overseas. We have used the same procedures for counting overseas military personnel and dependents since 1990. The address that military personnel enter on their Census questionnaire will not affect their Home of Record. I will pass this information on to our PR department. I will also bring this up at our next scheduled meeting with the Department of Defense in November.

The Census Bureau will obtain counts of U.S. military and federal civilian employees stationed overseas and their dependents living with them that can be allocated to a home state for the purpose of reapportioning seats in the U.S. House of Representatives. The term "overseas" is defined as anywhere outside the 50 U.S. States and the District of Columbia. Federal government departments and agencies will provide overseas certified counts by home state from their administrative records.

These overseas data are used for apportionment purposes only. Overseas counts are not included in PL94 for Congressional redistricting or SF1. The data do not provide the sub-state geographical precision required to allocate this group to jurisdictions below the state level.

These procedures and data products for federally affiliated Americans living overseas follow the same processes that were in place during Census 2000.

Overseas military personnel, both stationed and deployed (including the National Guard), will be included in the overseas count in Census 2010.

They are counted administratively using counts from the Defense Manpower Data Center (DMDC), Department of Defense, based on home of Record (HOR) information as close to April 1, 2010, as possible. When HOR is not available we use legal residence and if that is not available then we use last duty station. The counts are added to the resident population totals for each state and used to determine the apportionment counts for the 2010 Census.

Below are some documents on our decision to use HOR for the overseas counts

Pages 5 and 6 of Tech Paper 62, provide information on the decision to go with HOR.

 RE: Counting military deployed for
 the 2010 Census

Sir,
 I appreciate your response and your explanation. Since this send, I've been discussing this with many persons.

Several questions have repeatedly been asked of me:
 1. "If the person is living off base, they have a family here, they get a Census questionnaire, do they record the family member living here?"

- 1. Military personnel living off base will receive the standard Census questionnaire. All members of the household should be entered on this form with the exception of a family member deployed overseas.
 - a. Scenario 1 - John, Mary and their 2 children live off base.
 - i. Result - John, Mary and the 2 children should be

entered on the standard Census questionnaire that they receive in the mail.

- b. Scenario 2 - John, Mary and their 2 children live off base but John was deployed to Iraq on March 1, 2010.
 - i. Result - John is counted in the overseas population via administrative records from the Department of Defense. John will not have to fill out any Census forms.
 - ii. Result - Mary and the 2 children receive a standard Census questionnaire in the mail. Mary and the 2 children should be entered on the standard Census questionnaire. John should NOT be entered on the questionnaire since he is being counted in the overseas population.

2. "What about apartments where two or more service members are living. One or more are deployed and the remaining person gets the Census form. Are they wrong to report the person as living there but deployed?"

--- 2. Military personnel living off base will receive the standard Census questionnaire. Everyone at the address should be entered on this form with the exception of the resident deployed overseas.

- a. Scenario 1 - John and Rob share an apartment off base.
 - i. Result - John and Rob fill out 1 standard Census questionnaire for the address and they should both be entered on the form.
- b. Scenario 2 - John and Rob share an apartment off base but John was deployed to Iraq on March 1, 2010.
 - i. Result - John is counted in the overseas population via administrative records from the Department of Defense. John will not have to fill out any Census forms.
 - ii. Result - Rob will receive a standard Census questionnaire in the mail. Rob should be entered on the standard Census questionnaire. John should NOT be entered on the questionnaire since he is being counted in the overseas population.

3. Is there any more underlying specific guidance for the military persons who are designated as "project officer" for this activity?

--- Each GQ (barrack/dormitory, disciplinary barrack/jail, military treatment facility) will be asked to provide a "Project Officer" to help with the Census. The Project Officer will be trained between March 16-27, 2010 on how to enumerate the GQ. This training will provide a step by step guide on how to enumerate the GQ and will take about 2 hours. We ask that the Project Officer enumerate the GQ on April 1, 2010 or soon after.

--- Non GQ addresses will be enumerated by Census staff and will require an escort while on the installation.

Technical Paper 62

Americans Overseas in U.S. Censuses

by
Karen M. Mills

U.S. Department of Commerce
Economics and Statistics Administration
BUREAU OF THE CENSUS

- Data were readily available from administrative records for Americans overseas affiliated with the Federal Government. Data on overseas Armed Forces personnel, Federal civilian employees, and their dependents living with them could be obtained from the Departments of Defense and State and the Office of Personnel Management (OPM).
- Complete or even adequate counts of private Americans overseas not affiliated with the Federal Government could not be obtained in 1960 and 1970, when special efforts were made to enumerate these persons, and there was some question as to whether this universe could be properly defined. Major problems associated with obtaining an accurate count of this component included the voluntary basis on which this group had to be enumerated (respondents had to go to a U.S. embassy or consulate to obtain a form), the lack of up-to-date embassy and consulate mailing lists for Americans living in their jurisdictions, and the definitional problem of who should be included in such an enumeration.

With regard to the definitional issue, many alternatives could be considered. For example, should an enumeration of private Americans overseas include all persons with a claim to U.S. citizenship? Only U.S. citizens who intended to return to the United States? All persons born in the United States (some of whom would have gone on to become citizens of the country in which they currently resided)? Only those citizens eligible to vote? Only those tied financially to the United States, such as Social Security beneficiaries or employees of U.S. or multinational corporations? People having dual (U.S. and second-nation) citizenship?

It was believed that even if a clear operational definition of this universe could have been developed, it still would have been necessary to contact a much broader range of potential respondents in order to identify those who actually met the conceptual criteria for inclusion.

The 1990 census, for only the second time in census history, included certain components of Americans overseas in the apportionment population. The overseas components included were members of the Armed Forces, Federal civilian employees, and their dependents living with them. Counts of these persons were obtained from 30 Federal departments and agencies and were based primarily on administrative records.

A significant factor in the Census Bureau's decision to allocate segments of the overseas population to their home State for apportionment purposes was the substantial amount of bipartisan congressional support given to this matter late in the 1980 decade. Several bills requiring inclusion of overseas military personnel in the apportionment counts were introduced in both houses of the 100th and 101st Congresses.

The Department of Commerce, in an August 1989 press release, announced plans to include overseas military and civilian DOD employees in the 1990 census apportionment

population. In addition, the Deputy Director of the Census Bureau testified before the House Subcommittee on Census and Population in September 1989 that the Bureau would include overseas military and civilian DOD employees and their associated dependents in the 1990 apportionment counts. He cited several reasons for the decision:

- The 1969 Justice Department opinion recognizing that the Director of the Census Bureau had discretionary authority to decide whether to include overseas Americans in the apportionment population.
- Bipartisan congressional support for including overseas military personnel.
- The DOD's decision that it could provide the necessary data to the Bureau in time to meet the December 31, 1990 deadline for reporting apportionment counts to the President.

About the time of the hearing, the DOD, with technical assistance from the Census Bureau, planned to enumerate its overseas personnel and dependents concurrent with the 1990 stateside census enumeration. These data would be used by the Bureau for inclusion in the apportionment counts and by DOD for a variety of programs.

The Deputy Director further testified that these overseas personnel and their dependents would have maintained a usual residence in the United States had they not been assigned abroad in fulfillment of their military and professional obligations.

Because of a lack of funding and other constraints, in December 1989, the DOD cancelled its plans to conduct an overseas enumeration but agreed to provide overseas counts from its existing automated administrative records. The DOD identified three alternative methods from its administrative files for determining home State affiliation of its overseas military personnel:

- Home of record—State declared by the member of the Armed Forces to be the permanent home at time of entry or reenlistment into the service. Home of record is used to determine the travel stipend granted upon discharge (derived from personnel files).
- Legal residence—State of residence a member declares for State income tax withholding purposes (derived from payroll files).
- Last duty station—State location of the facility to which the member was assigned before going overseas (derived from personnel files).

After reviewing the three data sources available in DOD records for providing counts, the Census Bureau concluded in July 1990 that DOD's "home of record" was the most consistent with the concept of "usual residence," used since 1790 as the basis for determining residency in the decennial census. Also, home of record was the concept used in allocating most overseas military personnel in the 1970 census.

In many cases, legal residence might reflect a State chosen because it had no or low taxes or one where military personnel were exempt from paying income taxes. A 1987 General Accounting Office report had indicated that a significant proportion of military personnel declared their legal residence in one of the States that did not tax personal wages or exempted all military pay from their income.

The use of last duty station, reflecting the location of the last facility to which a person was assigned, would result in counting some military personnel and their dependents in States other than their actual previous U.S. residence. For example, those assigned to the Pentagon would be counted as District of Columbia residents even though they might have actually lived in Maryland or Virginia (although physically located in Virginia, the Pentagon has a duty station of the District of Columbia).

Furthermore, one bill requiring the inclusion of overseas military personnel and dependents in the apportionment population (H.R. 4903) mandated the use of "home of record." That bill passed the House of Representatives in June 1990, and a similar proposal (S. 2675) had been referred to the appropriate Senate committee for consideration.⁶

In response to the strong congressional support for the use of home of record data, the Commerce Department decided to use those data, supplemented and improved with DOD's automated records for missing information, as the basis for including overseas military and dependents in the 1990 apportionment counts.

A June 1990 Congressional Research Service report for Congress found that allocating military personnel by State using home of record most closely resembled the State-by-State distribution of the resident population. An allocation based on last duty station varied from the resident population distribution by 10 times as much as home of record, and legal residence, by nearly 3 times as much.

In addition to the arrangement made with DOD for obtaining counts of its overseas military personnel, the Census Bureau obtained counts of overseas personnel by home State from 29 other Federal agencies. These counts were based principally on administrative records from the employing agency. The DOD also conducted a survey of

⁶Once the Census Bureau decided to include overseas military personnel and their dependents in the apportionment population, no further action was taken in the 101st Congress on this matter.

its overseas civilian employees and dependents using a short, self-administered questionnaire.

As in the 1970 census, allocations of the 1990 overseas population for apportionment purposes were made at the State level only. This population was not included, therefore, in the substate counts used for redistricting because the administrative records did not contain detailed (street/place) addresses.

In May 1991, the Commonwealth of Massachusetts filed a legal challenge against the Secretary of Commerce and others. One of the issues in the case was the constitutionality and/or legality of including overseas U.S. military and Federal civilian employees and their dependents living with them in the 1990 census counts used to apportion the U.S. House of Representatives. Massachusetts lost its 11th House seat by a narrow margin as a result of the apportionment after the 1990 census. This seat, the 435th House seat allocated under the apportionment formula, was shifted to Washington State.

The 1990 census apportionment, calculated by the "method of equal proportions" that had been used since the 1940 census, assigned a priority value to each congressional seat. Constitutionally, every State starts with one seat. Under the method of equal proportions, additional seats are added to each State's delegation based on the priority value for that State's next seat relative to the other 49 States' priority values for their next seats. Using the 1990 apportionment population, Washington's 9th seat was the 435th and last seat assigned; Massachusetts' 11th seat would have been the 436th.

In February 1992, a three-judge panel of the U.S. District Court for the District of Massachusetts held that the decision of the Secretary of Commerce to include overseas military and Federal civilian employees and their dependents living with them in the apportionment counts was "arbitrary and capricious" under the standards of the Federal Administrative Procedure Act.

In an appeal by the Commerce Department, the U.S. Supreme Court in June 1992 unanimously reversed the three-judge panel's decision. Thus, the Secretary of Commerce's decision to allocate Federal military and civilian personnel serving abroad and their dependents living with them to the State population totals for purposes of apportioning the U.S. House of Representatives was allowed to stand and, as a result, Massachusetts lost a seat in the House of Representatives.

1980 CENSUS

The U.S. population abroad reported in the 1980 census was 995,546. As of April 1, 1980, this figure comprised—

- land-based U.S. military personnel stationed abroad and their dependents living with them.
- crews of U.S. Navy vessels deployed to the 6th or 7th Fleets.
- Federal civilian employees stationed abroad and their dependents living with them.

Thus, the overseas population in 1980 was restricted to those Americans affiliated with the Federal Government and their dependents living abroad with them. It did not include private U.S. citizens abroad for an extended period or crews of U.S. merchant marine vessels outside American waters, as was true for both the 1960 and 1970 censuses. Also unlike 1970, no component of Americans overseas was included in the apportionment population for 1980.

Information on the federally-affiliated population overseas was obtained from administrative records rather than by direct enumeration. The Department of Defense (DOD) provided counts of its military and civilian employees stationed abroad and their dependents living with them. The Office of Personnel Management and Department of State provided counts for all other overseas Federal employees and their dependents abroad. No provision was made in 1980 for the enumeration of any component of the overseas population on census report forms, as had been done in censuses since 1950.

The modifications to recent past enumeration procedures were made for the following reasons: The number of Americans overseas who were affiliated with the Federal Government was smaller than in 1970; the data were readily available from administrative records for the major population groups overseas; there was no legal requirement for the direct enumeration of Americans overseas or

for including Americans overseas in the apportionment population; and the 1960 and 1970 census experience had shown that the count of Americans living overseas who were not affiliated with the Federal Government could not be obtained in a complete manner, nor could this group be readily defined.

Crew members of U.S. merchant marine vessels outside U.S. territorial waters on April 1, 1980, were not enumerated or otherwise counted in the 1980 census. Masters of such vessels completed a location report (D-3091) but, if outside territorial waters, crew members were not required to complete a Shipboard Census Report (Form D-23), the individual enumeration form for crews of vessels in the 1980 census.

Residence Rules

Entries relating to the overseas population in the table of residence rules contained in the 1980 *Questionnaire Reference Book* for stateside enumeration were the following:

<i>Type of Person</i>	<i>Resident of—</i>
Member of the Armed Forces:	
Assigned to a military vessel which is deployed to the 6th or 7th Fleet.	The vessel
American citizen abroad:	
Employed by U.S. Government with place of duty abroad or member of the family of such person living with him or her.	DO NOT LIST
Any other American working or living abroad for extended period of time.	DO NOT LIST

To amend title 13, United States Code, to ensure that military personnel stationed outside the United States are not excluded from any census of population. (Engrossed as Agreed to or Passed by House)

101st CONGRESS

2d Session

H. R. 4903

AN ACT

To amend title 13, United States Code, to ensure that military personnel stationed outside the United States are not excluded from any census of population.

HR 4903 EH

101st CONGRESS

2d Session

H. R. 4903

AN ACT

To amend title 13, United States Code, to ensure that military personnel stationed outside the United States are not excluded from any census of population.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. INCLUSION OF CIVILIAN AND MILITARY PERSONNEL STATIONED ABROAD.

Section 141 of title 13, United States Code, is amended--

(1) by redesignating subsection (g) as subsection (h); and

(2) by inserting after subsection (f) the following:

`(g) Effective beginning with the 1990 decennial census of population, in taking any tabulation of total population by States for purposes of the apportionment of Representatives in Congress among the several States, the Secretary shall take appropriate measures to ensure that--

`(1) each member of the armed forces assigned to a post of duty outside the United States shall be included, together with any of the member's dependents who reside at or near the same post; and

`(2) each member of the armed forces, and any dependent of any such member, included in accordance with paragraph (1) shall be enumerated as if residing at such member's `home of record', as defined by the Department of Defense for administrative purposes.'.

SEC. 2. ADDITIONAL REPORTING REQUIREMENT.

Not later than 6 months after submitting the report required under section 141(b) of title 13, United States Code, with respect to the 1990 decennial census of population to the President, the Secretary of Commerce shall submit to the appropriate committees of Congress a report setting forth--

(1) for each State, what portion of the total population reported for such State under such section 141(b) consisted of--

(A) members of the armed forces (or their dependents) stationed (or living) abroad; or

(B) civilian employees of the Federal Government (or their dependents) stationed (or living) abroad;

(2) which departments or agencies of the Federal Government participated in any program or measures designed to provide for the inclusion of individuals described in paragraph (1) (A) or (B) in the 1990 decennial census of population; and

(3) what criteria were used by each such department or agency in attributing individuals described in paragraph (1) (A) or (B) to particular States for purposes of such census.

Passed the House of Representatives June 26, 1990.

Attest:

Clerk.

OFFICE
The U.S. Trade Representative
Washington, D.C. 20230

July 23, 1990

Honorable Herbert H. Kohl
United States Senate
Washington, D.C. 20510

Dear Senator Kohl:

As you are aware, the Department of Commerce (DOC) reached an agreement with the Department of Defense (DOD) last year to include overseas military personnel and their dependents in the 1990 census counts to be used to reapportion the U.S. House of Representatives. It was agreed that the home state affiliation of such persons would be determined in a manner as consistent as possible with the concept of "usual residence" used by the Census Bureau for two hundred years to count the nation's population.

After reviewing the alternative data sources identified by DOD for providing such counts, DOC has decided to use home of record designations in existing DOD administrative records rather than the legal residence or last U.S. duty station of military personnel to determine home state affiliation. Census Bureau technical staff believe that home of record is most consistent with our policy for determining residency.

In a recent letter to House Armed Services Committee Chairman Les Aspin, Assistant Secretary of Defense Christopher Jehn stated that last duty station most closely approximates the "usual residence" concept. However, because last duty station merely reflects the location of the facility to which a person is assigned, many military personnel and their dependents would be counted in states other than their actual previous residence (such as those assigned to the Pentagon, who would be counted as D.C. residents even though they lived in Maryland or Virginia). The option of using legal residence was rejected because in many cases legal residence may be a place where the person has never lived.

While Assistant Secretary Jehn's letter indicated that approximately ten percent of DOD's personnel files are missing home of record data, DOD has agreed to use all automated records available to supplement these files in order to provide data of sufficient quality for apportionment purposes. Bureau staff will work closely with DOD staff to assure the quality of those data.

Sincerely,

Michael R. Darby
Under Secretary
for Economic Affairs

The Honorable Barack Obama
 The White House
 1600 Pennsylvania Ave, NW
 Washington, DC 20500

Dear Mr. President:

We were gratified to hear during the State of the Union message of the First Lady's efforts "to forge a national commitment to support military families." As she pointed out in January in her address to military wives, that national commitment is not only reflected in the \$8.8 billion you have requested for military family programs in your fiscal year 2011 defense budget, but also must be accompanied by the efforts of citizens and others outside the Department of Defense.

However, we believe that the process now underway for the 2010 Census will jeopardize the ability of states and local communities to help forge and fully participate in that national commitment. The problem arises in the way that the 2010 Census will count the 250,000 or more military personnel temporarily deployed overseas from the United States and its territories in support of contingency operations, or for other short-term missions. This is not a question of adding additional money to state and local programs, but rather an effort to ensure outdated rules do not inhibit the ability of states and local communities to support military families as a result of the loss of funds they would normally have been eligible for in other than census years. We believe the matter deserves your immediate attention and corrective action.

Under rules established in 1970, all military personnel stationed overseas will be counted among the totals of the state of their home of record – that is, the place from which they entered the military service, or re-enlisted in the service. If a home of record is not available in Department of Defense administrative records, then the service member will be counted in the state of his or her legal residence; and, if neither of the first two data elements is available, then the overseas service member will be counted in the state of the base of his or her last duty station. In most cases that means the base or location from which the service member deployed overseas.

These counting rules may have made sense in 1970 for the Vietnam-era military that was heavily composed of draftees. Such allocation rules do not make sense today for the all-volunteer

force that is heavily and frequently deployed, causing the military populations residing on those bases, the local areas around those bases, and states to be severely, but temporarily reduced. For example, in November 2009, the North Carolina population, concentrated largely around Camp Lejeune and Fort Bragg, shrank by nearly 28,000 service members temporarily deployed on contingency operations. No state or territory or local areas near a military base is exempt from such reductions.

Many federal and state assistance programs use formulas based on the decennial census or derivates from the decennial census data. As a result, military overseas population data based on the home of record deprives the state and local areas, where those service members actually live most of the time, of potentially large sums of federal and state funding. Reduced funding means that those local communities and states to will have a reduced ability to support the military populations with which they are inextricably linked. For example, a recent estimate of the impact in Onslow County, North Carolina, near Camp Lejeune, cited potential losses of up to \$4 million under current decennial census rules for counting military personnel stationed overseas.

Given the potential for similar significant financial impacts across the nation, we urge you to direct the Secretary of Commerce, the Secretary of Defense, and the Director of the United States Census to take the necessary administrative actions to adopt for the 2010 and future decennial censuses the following method of counting our military men and women, who are temporarily deployed from the United States to overseas contingency missions, or other short term overseas assignments: Such persons must be counted, first in the state of their most recent base of stateside assignment; then, if such data is not available, by their legal residence; and, finally, by their home of record.

We understand that there are many issues related to residency and census counting. These can and should be examined over the long term. In the near term, the resolution of those issues should not be tied to the immediate need to address the ability of states and local communities to join the national commitment to support military families.

Therefore, we look forward to assisting you in measures to ensure there is no loss of federal or state and local resources to assist local communities in maintaining and improving military family quality of life. We thus anticipate your favorable commitment to the course of action we have proposed.

We look forward to your response.

Sincerely,

Howard P. "Buck" McKeon

Congress of the United States
Washington, DC 20515

March 31, 2010

The Honorable Barack Obama
The White House
1600 Pennsylvania Avenue, NW
Washington, DC 20500

Dear Mr. President:

We are writing to express our concern that the 2010 Census will jeopardize North Carolina's ability to be fairly counted. The problem is the way the 2010 Census will count the more than 33,000 military personnel temporarily deployed overseas from North Carolina. Please do not penalize the communities that these men and women rely on when they are stateside. We believe the matter deserves your immediate attention and corrective action.

Under rules established in 1970, military personnel stationed overseas are counted by the state of their home of record – that is, the place from which they entered military service, or re-enlisted in the service. If a home of record is not available in the Department of Defense records, the service member will be counted in the state of his or her legal residence; and, if neither of the first two data elements are available, then the overseas service member will be counted in the state of the military base of his or her last duty station. In most cases that means the base or location from which the service member deployed overseas.

These rules may have made sense for the Vietnam-era military that was heavily composed of draftees. But they do not make sense for today's all-volunteer force that is frequently deployed, causing the military populations residing on and around bases to be severely, but temporarily, reduced. For example, in November 2009, North Carolina's military population shrank by nearly 28,000 service members who were temporarily deployed overseas.

Many federal and state programs use formulas tied to the decennial census. As a result, counting deployed military personnel based on current census rules will deprive military communities, where those service members actually live most of the time, of funding they are rightly entitled to. Reduced funding means North Carolina's military communities' ability to support their military populations is compromised. For example, a recent estimate of the impact in Onslow County, North Carolina, home of Marine Corps Base Camp Lejeune, cited potential losses of up to \$4 million annually.

Given the potential for similar significant financial impacts in the North Carolina communities around Fort Bragg, Pope Air Force Base, Seymour Johnson Air Force Base, and MCAS Cherry Point, we urge you as Commander in Chief to direct your administration to change the method of counting military personnel who are temporarily deployed outside the United States to the following: Such persons must be counted, first in the state of their most

recent base of stateside assignment; then, if such data is not available, by their legal residence; and finally, by their home of record.

On behalf of North Carolina's military communities, we thank you for your consideration of this urgent request and look forward to your favorable commitment to the course of action we have proposed.

UNITED STATES DEPARTMENT OF COMMERCE
The Secretary of Commerce
Washington, D.C. 20230

May 25, 2010

The Honorable Walter B. Jones, Jr.
U.S. House of Representatives
Washington, DC 20515

Dear Representative Jones:

Thank you for your letter to President Obama concerning the counting of overseas military personnel in the 2010 Census. The President asked me to respond to your concerns.

The current order of priority for determining the home State of overseas military personnel was established by the Census Bureau for use in 1990 Census and was based on discussions with Congress and the Department of Defense at that time.

In 1990 the U.S. House of Representatives considered a bill (H.R. 4903) requiring the inclusion of overseas military personnel and their dependents in the apportionment population and mandating the use of "home of record." H.R. 4903 passed the House of Representatives in June 1990. A similar proposal (S. 2675) was referred to the appropriate Senate committee for consideration, but it was not acted upon. A June 1990 Congressional Research Service report found that "home of record" most closely resembled the State-by-State distribution of the resident military population. The Congressional Research Service report further stated that an allocation of the Federally-affiliated overseas population by legal residence varied from the resident military population distribution by three times as much as "home of record." The last duty station varied from the resident population distribution by ten times as much.

Therefore, in response to the strong congressional support for the use of "home of record" data, the Census Bureau decided to use those data—supplemented by legal residence and last duty station for missing information—as the basis for including overseas military and their dependents living with them in the 1990 and 2000 apportionment counts. For the 2010 Census, the Census Bureau decided in January 2007 that it would continue the 1990 and 2000 method of counting Federally-affiliated overseas personnel in the apportionment counts.

The Honorable Walter B. Jones, Jr.
Page 2

As you know, the decennial census is the largest domestic mobilization that our country undertakes. Planning for this undertaking requires years of testing and coordination. It is too late in the process to consider changing the plan for counting overseas military personnel in the 2010 Census; however, we will revisit these issues as we begin planning for future decennial censuses.

Thank you for your inquiry. If we can be of further assistance, please contact April Boyd, Assistant Secretary for Legislative and Intergovernmental Affairs, at (202) 482-3663.

Sincerely,

A handwritten signature in cursive script that reads "Gary Locke". The signature is written in black ink and is positioned above the printed name.

April 7, 2010

The Honorable Beverly Eaves Perdue
 Governor of North Carolina
 Raleigh, NC 27699-0301

Dear Governor Perdue:

Thank you for your letter proposing that the U.S. Census Bureau to reverse the order of priority for determining the count of deployed armed service members by using the member's last military base of deployment.

The Census Bureau established the order of priority for determining overseas military personnel's home state for use in the 1990 Census. This order resulted from discussions with Congress and the Department of Defense at that time.

In 1990 a bill requiring the inclusion of overseas military personnel and dependents in the apportionment population (H.R. 4903) mandated the use of home of record. That bill passed the House of Representatives in June 1990, and a similar proposal (S. 2675) was referred to the appropriate Senate committee for consideration.

A June 1990 Congressional Research Service (CRS) report found home-of-record data most closely resembled the state-by-state distribution of the resident population. The CRS report further stated that allocating the federally affiliated overseas population by legal residence varied from the resident population distribution by three times as much as home of record. Allocating by last duty station varied from the resident population distribution by ten times as much.

In response to the strong Congressional support for the use of home-of-record data, the Census Bureau decided to use those data as the basis for including overseas military and dependents in the 1990 and 2000 apportionment counts. Legal-residence and last-duty-station data were supplemented for missing information.

For the 2010 Census, the Census Bureau decided in January 2007 to repeat the 1990 and 2000 method of counting federally affiliated overseas personnel in the apportionment counts.

As you know, the decennial census is the largest peacetime mobilization that our country undertakes. Planning for this once-a-decade civic procedure requires years of testing and coordination. While it is too late in the process to consider such a change for the 2010 Census, we will consider revisiting the issue as we begin planning for the 2020 Census.

The Honorable Beverly Eades Perdue

July 20, 2015

Karen Humes
Chief, Population Division
U.S. Census Bureau, Room 5H174
Washington, DC 20233

Transmitted electronically only: POP.2020.Residence.Rule@census.gov

Dear Ms. Humes:

We are submitting these comments on behalf of the American Civil Liberties Union of Wisconsin (ACLU-WI), the Benedict Center, the Justice Initiatives Institute (JII), the NAACP – Milwaukee Branch, and WISDOM, in response to the Census Bureau’s request for comment on its proposed “2020 Decennial Census Residence Rule and Residence Situations,” 80 Fed.Reg. 28950 (May 20, 2015).

We urge you to count incarcerated people at their home addresses, rather than at the addresses of particular facilities at which they happen to be located on Census day.

Our Wisconsin-based organizations are all concerned about ensuring fair representation for persons and communities of color, about protecting the rights of incarcerated persons, and about reforming the criminal justice system to achieve more equity and justice.

- The **American Civil Liberties Union of Wisconsin** is the Wisconsin affiliate of the national ACLU¹ and is a non-profit, non-partisan, private organization. The ACLU-WI uses advocacy, education, and litigation to preserve and extend constitutionally guaranteed rights to people who have historically been denied their rights on the basis of race, to protect and expand Americans’ freedom to vote, and to end mass incarceration by reducing the use of the criminal justice system to address social issues and by substantially reducing the number of people behind bars.
- The **Benedict Center** is an interfaith, nonprofit criminal justice agency in Milwaukee, working with victims, offenders and the community to achieve a system of justice that is fair and treats everyone with dignity and respect. It provides community-based treatment alternatives to incarceration for women so they can live safer and healthier lives for themselves, their children and the community, and advocates for changes in the criminal justice system, with an emphasis on restorative community alternatives to imprisonment, to ensure fair and equitable justice for all.
- The **Justice Initiatives Institute** is a Milwaukee-based private, non-profit agency, the first of its kind in Wisconsin, dedicated to promoting criminal justice reform based on

¹ The American Civil Liberties Union submitted separate comments to the Census Bureau, reflecting the work of ACLU nationwide to ensure population counts that accurately represent our communities.

evidence-informed planning, organized to provide knowledge and technical assistance for criminal justice stakeholders in communities throughout the State of Wisconsin. JII seeks policy reforms, based on practices and research that are cost effective and promote public safety. JII's mission is based on a keen understanding of the intersection of criminal justice issues with the particular needs of the most impoverished, marginalized populations in Wisconsin. When districts with prisons receive enhanced representation, every other district in the state without a prison sees its votes diluted. And this vote dilution is even larger in the districts with the highest incarceration rates. Thus, the communities that bear the most direct costs of crime are therefore the communities that are the biggest victims of prison-based gerrymandering.

- The **NAACP- Milwaukee Branch** works on criminal justice issues in many ways, including seeking to eliminate harsh and unfair sentencing practices that are responsible for mass incarceration and racial disparities in the prison system, seeking to increase trust and public safety by advancing effective law enforcement practices, fighting for the restoration of the voting rights of formerly incarcerated people and the removal of barriers to employment, and resolving to end the war on drugs for its disproportionate collateral consequences that harm communities of color.
- **WISDOM** is a Wisconsin statewide network of interfaith organizations which includes 160 congregations, of 19 different faith traditions. It has strong concerns about the criminal justice system and over-incarceration, and which has built a strong group of formerly-incarcerated people who work collectively to increase the chances for successful re-entry. WISDOM strongly objects to having imprisoned people counted as members of communities where they have no voice and no connections. Since a disproportionate number of incarcerated people come from poor communities, the effect of the current system is to further weaken the neighborhoods that are already the most stressed, taking away resources and political power from those who have already been marginalized.

The need for change in the “usual residence” rule as it relates to incarcerated persons has been growing in recent decades, raising significant issues of census accuracy. As recently as the 1980s, the incarcerated population in the United States totaled fewer than one-half million persons. Since then, the number of incarcerated people has more than quadrupled, resulting in more than two million people behind bars. An even greater increase is found in Wisconsin, where a prison population of fewer than 5000 persons in 1978 was, by 2014, more than 22,000 persons.² Further, Wisconsin has, by far, the highest rate of incarceration for African-American

²“State Prison Population in Wisconsin,” prepared by Peter Wagner, Prison Policy Initiatives, based on Bureau of Justice Statistics, Corrections Statistics Analysis Tool (May 2014) (viewed 7/14/15 at: <http://www.prisonpolicy.org/graphs/incsize/WI.html>); “Adult Correctional Facility Populations - Male Population and Inflationary Costs, and Prison Contract Bed Funding,” Wisc. Legislative Fiscal Bureau Paper #235 (May 19, 2015) (viewed 7/14/15 at: <http://legis.wisconsin.gov/lfb/publications/budget/2015-17%20Budget/Documents/Budget%20Papers/235.pdf>)

men in the United States, with about 1 in 8 working-age African-American men behind bars.³ Wisconsin similarly leads the nation in incarceration of Native American men, with about 1 in 13 working age Native American men behind bars.⁴

By designating a prison cell as a residence in the 2010 Census, the Census Bureau set up a methodology that concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks located far from the actual homes of incarcerated people. This methodology gives additional representation to communities in which incarcerated persons are housed – while at the same time these inmates generally cannot and do not vote and their interests are seldom represented in the communities in which they are counted for census purposes. Meanwhile, the communities from which these prisoners come, to which they are likely to return and with whose other residents they share policy interests are deprived of political representation. The disparity is so stark that, for example, the regional planning commission in the Milwaukee metropolitan area has to make special note of the fact that minority population concentrations outside the central city are due to incarceration.⁵

Four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and more than 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts. Rather than continuing an unworkable ad hoc approach, the Census definition should be changed to ensure that all state and local governments are counting prisoners where they live, not where they are incarcerated.

We thank you for this opportunity to comment on the Residence Rule. Because we believe in a population count that accurately represents communities, we again urge you to count incarcerated people as residents of their home addresses.

Karen Humes
Chief, Population Division
U.S. Census Bureau, Room 5H174 Washington, D.C. 20233
pop.2020.residence.rule@census.gov

Dear Ms. Humes,

The Prison Policy Initiative submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015). Based on our research after the 2000 and 2010 censuses, we urge you to count incarcerated people at home in 2020.

The non-profit, non-partisan Prison Policy Initiative produces cutting edge research to expose the broader harm of mass criminalization, and then sparks advocacy campaigns to create a more just society. And over the last 14 years, our work has focused on the sweeping effects of the Census Bureau's prisoner miscount.

We have found that the Bureau's decision to count incarcerated people at the location of the facility they happen to be at on Census day, rather than at home, has shifted political power to people who live near correctional facilities to the detriment of every resident of this country who does not live immediately adjacent to their state's largest prison complex.

This comment will urge you to accept the argument made by former Census Bureau director Kenneth Prewitt in 2004 that "[c]urrent census residency rules ignore the reality of prison life."¹

This comment presents evidence that the usual residence rule is outdated and produces inaccurate data because of two relatively recent changes: the prison boom and the apportionment revolution that requires decennial redistricting at all levels of government on the basis of population. This comment reviews the harm of prison gerrymandering for our democracy in state legislative, county and municipal districting, and then presents evidence of a national consensus for ending prison gerrymandering. Finally, this comment presents evidence that despite its considerable impact on redistricting and some assumptions to the contrary, measurable effects of the rule's interpretation do not extend to other areas.

We thank you for your attention to this issue, including this call for comments. We take this opportunity to share with you our 14 years of research into the effects of the

¹ Dr. Kenneth Prewitt, Foreword to *Accuracy Counts*, Brennan Center for Justice at NYU School of Law. Available at <https://www.brennancenter.org/publication/accuracy-counts>

Bureau's current interpretation of the residence rule, and urge you to count incarcerated people at home.

The usual residence rule for incarcerated people is outdated and produces inaccurate data.

The Census Bureau's method of counting incarcerated people as residents of the correctional facilities is outdated and inaccurate because both our society and our need for accurate data have changed since the residence rules were first articulated for incarcerated people.

The prison boom has changed the demographic landscape

In the history of this country and the Census, the fact that we lock up such a large portion of our society is relatively new:

Figure 1. The 1990 Census was the first to register the beginning of mass incarceration. As a result of the Census Bureau's now outdated usual residence rule for incarcerated people, the 2010 Census counted a record portion of our population in the wrong location.

The prison boom began in the 1970s, but its impact on the 1980 Census was, from a national viewpoint, modest. In fact, the Bureau didn't even see it as necessary to mention incarcerated household members on the census form until the 1990 Census. But by 2000, the incarceration rate was more than four times higher than just two decades earlier. So the Bureau's data did not result in a significant harm to our democracy until after the 2000 and 2010 Censuses.

At the last Census, the Bureau counted over 2 million incarcerated people in the wrong place. That in itself is problematic for an agency that prides itself on providing

accurate data, but the significance and disparate impact of that miscount is even greater than it might first appear.

First, while the popular perception may be that most people in prisons and jails are serving long sentences, the opposite is actually true. The typical state prison sentence is only two or three years, and the incarcerated people are frequently shuffled between facilities at the discretion of administrators. For example, statistics in New York State show that the median time an incarcerated person has been at his or her current facility is just over 7 months.² (And the jail population turns over even faster than that in the prisons. At Rikers Island, New York City's jail, the average stay is 57 days.³)

Further, a stark and significant racial disparity in who goes to prison compounds the impact of a growing prison population. Our analysis of 2010 Census data shows that Blacks are incarcerated at 5 times the rate of non-Hispanic Whites, and Latinos are incarcerated at a rate almost two times higher than non-Hispanic Whites.⁴ Within those disparities are greater disparities by age and gender. For example, the incarceration rate for Black men aged 25-29 peaked in 2001 when a shocking 13% of Black men of those ages were incarcerated in federal and state prisons or local jails. By contrast, that same year, only 0.04% of white women aged 45-55 were incarcerated.⁵

For the Census, however, another factor compounds the racial distortions: the enduring and troubling trend to build the prisons in communities that are very different demographically than the people they confine. As discussed in the attached report released last week, *The Racial Geography of Mass Incarceration*, we reviewed the magnitude of the gulf between the incarcerated population and the surrounding counties; finding 161 counties where incarcerated Blacks outnumber free Blacks, and 20 counties where incarcerated Latinos outnumber free Latinos. In many counties, the disparity is particularly stark. We found 208 counties where the portion of the county that was Black was at least 10 times smaller than the portion of the prison that was Black. For Latinos, we found 41 counties where the portion of the county that was Latino was at least 10 times smaller than the portion of the prison that was Latino. These counties are spread throughout a majority of the states:

⁵ U.S. Department of Justice, Bureau of Justice Statistics, Prison and Jail Inmates at Midyear, 2001, NCJ 191702 (Washington, DC: U.S. Department of Justice, 2002), Table 15.

Maps showing the number and locations of counties where the portion of the county's Black or Latino population was at least 10 times smaller than the portion of the county's incarcerated population that was Black or Latino

Figure 2. These maps shows where Blacks or Latinos are over-represented by at least 10 times in the prison population compared to the surrounding county. Many of the states without any counties marked on this map are states where counties are less relevant as a unit of analysis (ie. Massachusetts and Rhode Island) or where the Black or Latino population is very small and therefore excluded from our analysis (i.e. Montana). For Latinos, the over-representation is significant in most states but is less dramatic than for Blacks.

Modern requirements of equal representation have created new data users and a need for more accurate data.

The Census Bureau's practice of tabulating incarcerated people as residents of the prison location not only predates the prison boom; it also predates the modern era of redistricting. The early Censuses were primarily concerned with the relative population of each state for the purposes of apportionment. In the 1960s, however, the Supreme Court's "one person one vote" cases, which require regular population-based redistricting at the state and local level, changed that. And the Census Bureau quickly became *the* data source for redistricting because it had the ability to provide accurate data down to the block level.

But it is precisely this need — accurate block level data — that is most dramatically undermined by the Bureau's current interpretation of the usual residence rule. The Census is using a method that tabulates 1% of our entire adult population — and 6.4% of our Black adult male population — in the wrong location.⁶

And to be clear, the statement that it is the "wrong" location is not a moral judgment subject to the eye of the beholder. The common law rule is that a prison cell is not a

⁶ This calculation uses Census 2010 data for the 18+ population for both the incarcerated and total populations.

residence, and the majority of states have explicit constitutional clauses or election law statutes that declare that a prison cell is not a residence.⁷

This “prison miscount” creates serious challenges for democracy at most levels of government

Prison gerrymandering is a problem for all levels of government that contain both a sizable correctional facility and a district form of government. As we will explain below, the problem is most significant in rural districts where a single prison can easily become the majority of a district; but it also creates a consistent misallocation of populations among state legislative districts, and a negative influence on the state-wide public policy decisions that result.

When state legislative district populations are skewed by Census data, for example:

- Seven New York state senate districts drawn after the 2000 Census met minimum population requirements only because they used prison populations as padding.⁸
- In Maryland, one state house district in western Maryland drawn after the 2000 Census drew 18% of its population from a large prison complex.⁹ As a result, every four voting residents in this district were granted as much political influence as five residents elsewhere.¹⁰

The policy and racial justice implications are severe as well, for example:

- Virtually all — 98% — of New York state’s prison cells were located in state senate districts that were disproportionately White, diluting the votes of African-American and Latino voters.¹¹ Similarly, in Connecticut, 75% of the state’s prison cells were in state house districts that were disproportionately White.¹²

⁷ British common law and virtually all states define residence as the place a person chooses to be without a current intention to go elsewhere. In most states, constitutions and statutes go even further, explicitly declaring that incarceration does not change a residence. *See, e.g.*, Ariz. Const. art. VII, § 3; Colo. Const. art. VII, § 4; Minn. Const. art. VII, § 2; Mo. Const. art. VIII, § 6; Nev. Const. art. II, § 2; N.Y. Const. art. II, § 4; Or. Const. art. II, § 4; Wash. Const. art. VI, § 4; Alaska Stat. § 15.05.020(1) (2011); Cal. Elec. Code § 2025 (2011); Conn. Gen. Stat. § 9-14 (2011); D.C. Code § 1-1001.02(2)(D) (2011); Haw. Rev. Stat. § 11-13(5) (2011); Idaho Code Ann. § 34-405 (2011); Me. Rev. Stat. tit. 21-A, § 112(7) (2011); Mich. Comp. Laws § 168.11 (2011); Miss. Code Ann. § 47-1-63 (2011); Mont. Code Ann. § 13-1-112(2) (2011); N.H. Rev. Stat. Ann. § 654:2-a (2011); N.M. Stat. Ann. § 1-1-7(D) (2011); Pa. Cons. Stat. § 1302(a)(3) (2011); R.I. Gen. Laws § 17-1-3.1 (2011); Tenn. Code Ann. § 2-2-122(7) (2011); Tex. Elec. Code Ann. § 1.015(e) (2011); Utah Code Ann. § 20A-2-101(2)(a), -105(4)(c)(iii) (2011); Vt. Stat. Ann. tit. 17, § 2122 (2011).

¹² *Ending Prison-Based Gerrymandering Would Aid the African-American and Latino Vote in Connecticut*, (Nov. 17, 2010),

http://www.prisonersofthecensus.org/factsheets/ct/CT_AfricanAmericans_Latinos.pdf.

- Of the seven New York senate districts discussed above, four of the senators sat on the powerful Codes Committee where they opposed reforming the state's draconian Rockefeller drug laws that boosted the state's prison population.¹³ The inflated populations of these senators' districts gave them little incentive to consider or pursue policies that might reduce the number of people sent to prison or the length of time they spend there. One of them, New York state Senator Dale Volker, boasted that he was glad that the almost 9,000 people confined in his district cannot vote because "they would never vote for me."¹⁴

The impact of prison-based gerrymandering on state legislative districting gets the most attention from state policymakers, but the problem is even more significant in rural counties and cities that contain prisons. Their county board districts and city council districts are smaller than state legislative districts, so a single prison can have a massive effect. The most well-known example is in Anamosa, Iowa, where the state's largest prison constituted 96% of the city's second ward.¹⁵ In 2005, there were no second ward candidates for city election, and the winner won with two write-in votes, one cast by his wife and another by a neighbor.¹⁶ Citizen outcry about the unfairness of granting some residents twenty-five times as much political influence as other voters led Anamosa to change its form of city government.¹⁷

The extreme example of Anamosa is far from unique. Other examples include:

- Lake County Tennessee drew a district after the 2000 Census "where 88% of the population in County Commissioner District 1 was not local residents, but incarcerated people in the Northwest Correctional Complex."¹⁸ This gave every group of three residents in District 1 as much say in county affairs as twenty-five residents in other districts.¹⁹
- Half of one city ward in Rome, New York, drawn after the 2000 Census, was incarcerated,²⁰ and the majority of the clout given to the Chair of the Livingston County, New York Board of Supervisors came from claiming incarcerated people as residents of his town.²¹

²¹ *Prison-Based Gerrymandering in Livingston County*, (June 16, 2010), <http://www.prisonersofthecensus.org/factsheets/ny/livingston.pdf>.

- Wisconsin has a number of county and municipal districts where prisons constitute the majority of individual districts. The Waupun City Council drew a district after the 2000 Census that was 79% incarcerated,²² and Juneau County drew a district after the 2010 Census that was 80% incarcerated.²³
- The most troubling example may be from Somerset County Maryland where prison-based gerrymandering made it impossible to elect an African-American.

Somerset County, which until 2010 had never elected an African-American to county government, settled a voting rights act lawsuit in the 1980s by agreeing to create one district where African-Americans could elect the candidate of their choice. Unfortunately, a prison was built and the 1990 Census was taken shortly after the first election, leaving a small African-American vote-eligible population in the district. This made it difficult for residents of the district to field strong candidates and for voters to elect an African-American Commissioner. An effective African-American district could have been drawn if the prison population had not been included in the population count.²⁴

Ending prison gerrymandering would benefit most of the country

Because prison gerrymandering is an issue unlike most Census controversies that operate like a zero-sum game with clear winners and losers, many of the people who benefit in one way from prison gerrymandering lose in another. For example, someone who lives in the state house district with the largest prison might have their votes diluted in their state senate or county commission district because they do not also live in the respective state senate or county commission district with the largest prison.

We've calculated that of the 19 million people in New York state, only 15,300 people simultaneously benefit from prison gerrymandering in their state senate district, in their state assembly district, and in their county legislative district.²⁵ That's less than 0.08% of the state's residents, and of course all 19 million people in New York State benefit when the democratic process improves. And New York isn't alone. We found

²⁵ Letter from Peter Wagner, Executive Director, Prison Policy Initiative to John Thompson, Director, U.S. Census Bureau, November 6, 2013, on file with the Prison Policy Initiative.

the same thing when we analyzed to Rhode Island's districts. Out of the entire state, only 112 people (0.01% of the state) simultaneously live in the state senate district and the state house district with the largest prison population.²⁶ Everyone else in the state has their vote diluted in one or both chambers as a result of prison gerrymandering.

For these reasons, it should be no surprise that ending prison gerrymandering is popular. Currently, at least 1 in 5 Americans live in a state or local government that has ended prison gerrymandering. New York, Maryland, Delaware and California have passed legislation to end prison gerrymandering statewide. The statutes of Colorado²⁷, Michigan²⁸, and New Jersey²⁹ command some or all their local governments to avoid prison gerrymandering. In Mississippi, the Attorney General instructs counties to avoid prison gerrymandering, while also declaring that the Census Bureau is wrong and that the Bureau should have counted incarcerated people at home:

Inmates under the jurisdiction of the Mississippi Department of Corrections ... are not deemed "residents" of that county or locality, as incarceration cannot be viewed as a voluntary abandonment of residency in one locale in favor of residency in the facility or jail. **For purposes of the Census, these individuals should have been counted in their actual place of residence.** Such inmates should not be used in determining the population of county supervisor districts for redistricting purposes by virtue of their temporary presence in a detention facility or jail in the county, unless their actual place of residence is also in the county.³⁰

Many counties and other local governments that choose to avoid prison gerrymandering on their own must jump through considerable hoops to do so. To be sure, your decision to publish the Advance Group Quarters Summary File as part of the 2010 Census was a tremendous benefit to these jurisdictions, and the fact that you were able to add this product to the design of the 2010 Census *and* publish this file several weeks earlier than the Bureau had told people to expect it were all improvements that cannot be understated. Further, the Director's announcement that in 2020 the Group Quarters Summary File will be included within the PL94-171 Redistricting data will be a great aid in terms of visibility, timeliness and ease of use.

The Census Bureau cannot leave fixing the prison miscount to the states.

However, all of this interest and activity in ending prison gerrymandering does not mean that the Census Bureau can leave this decision to the data users. As you know, the Massachusetts legislature concluded that that state's constitution prohibits it from

²⁶ These 112 people also live in the city council ward with the largest prison population, Cranston Ward 6. For more on these Rhode Island calculations and some maps, see Peter Wagner, How many people benefit from ending prison gerrymandering?, Prison Policy Initiative, August 21, 2014, available at: <http://www.prisonersofthecensus.org/news/2014/08/21/how-many/>

²⁷ Colorado Revised Statutes §30-10-306.7(5)(a) applying to counties.

²⁸ Mich. Comp. Laws § 117.27a (5) applying to cities and Mich. Comp. Laws § 46.404(g) applying to counties.

²⁹ N.J. Stat. Ann. § 18A:13-8; Board v. New Jersey, 372 N.J. Super. 341, 858 A.2d 576 (2004) applying to school boards of nine or more members.

³⁰ Opinion No. 2002-0060; 2002 WL 321998 (Miss. A.G.) Emphasis added.

passing legislation ending prison gerrymandering. For that reason, the legislature sent you an earnest bipartisan resolution calling on you to count incarcerated people at home in the next census.³¹

These ad hoc solutions are even more out of reach for local governments. Many of the most dramatic instances of prison gerrymandering are concentrated in just a handful of states like Minnesota, Tennessee, and Wisconsin, where state constitutions or state law appear to prohibit the cities and counties from adjusting the Bureau's data when drawing their districts without regard to the absurd and undemocratic results. For example, the Minnesota statutes declare "When used in reference to population, 'population' and 'inhabitants' mean that shown by the last preceding federal decennial census"³² This results in cities like Waseca drawing city council districts that are 34.5% incarcerated, giving every 2 residents who live near the prison the political influence on city council of 3 residents in other parts of the city.

To address all of these problems experienced by redistricting data users in state and local governments, the only viable solution is for the Census Bureau to update its interpretation of the residence rule for incarcerated people and count this growing part of our population in the right place — at home.

There is national consensus for ending prison gerrymandering

Over the last fourteen years, a strong national consensus has evolved in opposition to prison gerrymandering. Beyond the actions of state officials covered elsewhere in this letter, the civil rights and good governments groups are speaking with one voice on this issue and the relevant scientific bodies have shown their support.

In 2013, more than 200 civil rights, voting rights, and criminal justice organizations sent the Bureau a letter³³ asking you to seize a timely opportunity to research alternative ways to count incarcerated people in the decennial Census. In 2014, ending prison gerrymandering was principle #3 in the 10 Redistricting Principles for a More Perfect Union endorsed by 16 civil rights and democracy organizations.³⁴

The National Black Caucus of State Legislators declared in 2010 that:

“... THEREFORE BE IT RESOLVED, that the National Black Caucus of State Legislators (NBCSL) believes that the Census Bureau should count incarcerated individuals at their addresses of residence, rather than the address of the prison during the 2020 and all future decennial Censuses;

“BE IT FURTHER RESOLVED, that until the Census Bureau counts incarcerated individuals at their actual residential addresses, the NBCSL

³¹ A copy of the resolution is at <http://www.prisonersofthecensus.org/resolutions/MA-resolution-081414.pdf>

³² Minn. Stat. Ann. § 645.44(8)

³³ Available at <http://www.prisonersofthecensus.org/letters/feb2013.html>

³⁴ Available at <http://www.commoncause.org/issues/voting-and-elections/redistricting/redistricting-principles.html>

encourages states to enact legislation modeled after the Delaware, Maryland, and New York laws...”³⁵

The NAACP has had convention resolutions calling for an end to prison gerrymandering for four consecutive years from 2008 to 2010; and the 2010 resolution concluded:

“THEREFORE, BE IT RESOLVED, that the NAACP reaffirms the 2009 resolution on ending prison-based gerrymandering; and

“BE IT FURTHER RESOLVED, the NAACP will continue to advocate to the United States Congress, the United States Department of Commerce and to the public that the Census count incarcerated people as residents of their last home address; and [...]

“BE IT FURTHER RESOLVED, that the NAACP concludes that until the Census Bureau counts incarcerated people as residents of their homes, the fundamental principle of one person one vote” would be best satisfied if redistricting committees refused to use prison counts to mask population shortfalls in districts that contain prisons; and

“BE IT FINALLY RESOLVED, that the NAACP advocate that the prison population census count not be used in any legislative district at the local, state and federal level.”³⁶

Finally, the Census Bureau’s own advisors on the National Research Council of the National Academies concluded in 2006 that “[t]he evidence of political inequities in redistricting that can arise due to the counting of prisoners at the prison location is compelling”³⁷ and called for you to take immediate steps to develop a solution. Your own appointed Advisory Committees repeatedly urged you to take steps to end prison gerrymandering with recommendations in 2003, 2009, 2010, and 2011.³⁸

Our research shows that (contrary to common assumptions) the prison miscount does not affect three key uses of Census data

After spending many pages on the impact seen from the Census Bureau’s outdated usual residence rule for incarcerated people, we wanted to share three places where some might expect to see an impact but where our research suggests there was none:

1. Apportionment is unlikely to be impacted. In general, apportionment is very unlikely to be affected by the current rule — and by extension — any change in it because most incarcerated people do not cross state lines. Only a few state prison systems send incarcerated people to other states and those arrangements tend to be relatively temporary and difficult to predict, so there is no long-term expected impact from these cross-state transfers. While we

³⁵ Available at <http://www.nbcsl.org/public-policy/resolutions/item/75-law-justice-and-ethics-resolution-lje-11-03.html>

³⁶ Available at http://www.prisonersofthecensus.org/resolutions/NAACP_2010.html

³⁷ Available at <http://www.nap.edu/catalog/11727/once-only-once-and-in-the-right-place-residence-rules>

³⁸ Excerpts and copies of the resolution text available at <http://www.prisonersofthecensus.org/resolutions/>

assume that most people in the federal prison system come from other states, the fact that federal prisons exist in about 37 states means that the net effect is going to be quite small. While it is indeed possible that a change to the usual residence rule for incarcerated people — or any group for that matter — could change apportionment, it is extremely unlikely that the rule for incarcerated people would change apportionment. (And our analysis of the 2000 and 2010 apportionment suggests that it has not in the past.)

2. Congressional redistricting is not affected. Congressional districts are too large (at about 700,000 people) to be significantly impacted by a large prison or even the typical cluster³⁹ of large prisons. As illustrated above, the impact of prison gerrymandering is inversely proportional to the ideal population size of the district. So while a cluster of large prisons typically has a negligible effect on a Congressional district of 700,000 people, the impact of a single 1,000-person prison can be massive in a county commission district of only 1,200 people.
3. Funding formulas are not affected. While Census data is important to many funding formulas, prison populations have very little impact. First, most federal funding formulas are block grants to states for things like Medicaid reimbursement and highways and because most incarcerated people do not cross state lines, there is no impact. Most other federal and state funding formulas are more complex than straight headcount distributions, instead using a sophisticated mix of data. For example, school aid often uses for the population *portion* of the formula not the total population but factors like the number of school age children or the number of pupils enrolled. Similarly, formulas for programs focused on poverty typically use household statistics (which do not include the incarcerated people) or poverty statistics (which are based on household income). The only notable exceptions we've seen are in very small funds destined for rural areas, like programs for impoverished Appalachian communities distributed by the Appalachian Regional Commission, whose formula allows prison hosting communities to get a very tiny additional share of money that probably should have gone to similarly situated rural Appalachian communities without prisons. But in no case were urban communities shortchanged by this small flaw in the way money intended for rural Appalachia was distributed to rural Appalachia. In short, the current rule has not caused a substantial unjustified formula-fund enrichment of rural prison-hosting areas nor has it caused an unjustified reduction in formula funding for urban areas.

Conclusion

We understand that conducting the Census is an important, complicated, and difficult task which underpins the very core of our democracy, and we applaud the Bureau's continual efforts to improve the quality and utility of Census data.

³⁹ The only notable exception is California, where the unique cluster of prisons in the central valley in 2010 created a Congressional district that was 5.7% incarcerated.

We believe that the next step forward for the Census Bureau is to update the usual residence rule for incarcerated people. We hope the Bureau concludes that the 2010 Census should be the last Census in our history to count more than 2 million people in the wrong location. When evaluating the 2010 Census and thinking about what changes should be made for 2020, we urge the Bureau to count incarcerated people at their home addresses.

If my organization can answer any questions or be of any assistance to you in your work, please do not hesitate to contact us.

Enclosure:

The Racial Geography of Mass Incarceration

The Racial Geography of Mass Incarceration

by [Peter Wagner](#) and [Daniel Kopf](#)

July, 2015

Key findings

- Entirely separate from the more commonly discussed problem of racial disparities in who goes to prison, this data addresses a distressing racial and ethnic disparity in where prisons have been built.
- Stark racial and ethnic disparities exist between incarcerated people and the people in the county outside the prison's walls.
- The transfer of Black and Latino incarcerated people to communities very different than their own is a national problem not confined to select states.
- Hundreds of counties have a 10-to-1 “ratio of over-representation” between incarcerated Blacks and Blacks in the surrounding county — meaning that the portion of the prison that is Black is at least 10 times larger than the portion of the surrounding county that is Black.

Introduction

The racial disparities underlying the United States’ record growth in imprisonment are well documented, as is the fact that the prison construction boom was disproportionately a rural prison construction boom. While these two characteristics have been studied separately, there has been, until now, no national effort to analyze each state’s decision to engage in mass incarceration through a racial geography lens.

This report fills a critical gap in understanding the mass incarceration phenomenon: it offers a way to quantify the degree to which in each state mass incarceration is about sending Blacks and Latinos to communities with very different racial/ethnic make-ups than their own. We use data from the 2010 Census to compare the race and ethnicity of incarcerated people to that of the people in the surrounding county, finding that, for many counties, the racial and ethnic make-up of these populations is very different.

This analysis addresses the degree to which each state’s use of the prison is about transferring people of color to communities that are very different from the communities that people in prison come from. This data does not address the bias in policing or sentencing found in individual counties; instead it reflects each state’s political decision to build prisons in particular locations.

We anticipate this analysis will be most useful to answer two questions:

1. Why do some states struggle to hire sufficient Black and Latino correctional staff?
2. To what degree does prison gerrymandering — the practice of using U.S. Census counts of incarcerated people as residents of the prison location for legislative districting purposes — have a disproportionate racial impact in particular states?

In addition, definitively showing that the people incarcerated in some states and counties are very different demographically from the surrounding community is powerful evidence that the people incarcerated there are from somewhere else.¹ This has immediate and profound implications for a number of issues from prison gerrymandering to the need for programs that make it easier for families to visit incarcerated loved ones.

The racial geography of mass incarceration for Blacks

Blacks are incarcerated at a rate about 5 times higher than whites, but prisons are disproportionately located in majority-white areas. This combination has tremendous implications for the prison system's ability to hire appropriate numbers of Black staff, and it gives the problem of prison gerrymandering a distinct veneer of racial discrimination.²

Policymakers have been aware of the problem of racial disparities between staff and incarcerated people at least since the infamous Attica prison rebellion in 1971. Incarcerated people seized the prison, held it for four days, and invited the media in to document their grievances before the state police assaulted the prison, killing 43, all filmed on national television. The striking racial imbalance between the incarcerated people and the guards garnered national attention: the people incarcerated were 63% Black or Latino but at that time there were no Blacks and only one Latino serving as guards. Increasing staff diversity was widely considered important, but progress was very slow because Attica and the hundreds of new prisons built in the subsequent decades were built in rural, disproportionately White, areas of states.

Our national analysis of counties finds that Wyoming County — where Attica and another large New York state prison are located — is not alone. We find that in 2010 there were 161 counties spread across 31 states where the incarcerated Black population outnumbers the number of free Blacks.³

We find a substantial number of counties where the incarcerated populations are largely Black but where Blacks are only a tiny portion of the county's non-

largely Black but where Blacks are only a tiny portion of the county's non-incarcerated population:

Figure 1. This chart shows that in many counties Black people in prison are overrepresented compared to the portion of Black people in the free population. Notably, many of these counties are concentrated in the far left of the graph; where Blacks make up 20% to 60% of the prison populations yet less than 5% of the free population.

Analysis of the graph reveals two conclusions:

1. The vast majority of counties are in the top left half of the graph, all reflecting that the prisons have proportionately larger Black populations than the surrounding county does.
2. There is a huge concentration of counties with prisons along the left edge of the graph, reflecting that many counties have only very small Black populations while their prisons have much larger Black populations.

To further quantify this distribution, we calculated the degree of racial difference between the incarcerated and non-incarcerated populations in each county. We calculated the ratio of the percentage of each county's incarcerated population that is Black to the percentage of each county's non-incarcerated population that is Black. Higher numbers mean a much larger difference between the two populations. In the 15 counties where the ratio is less than 1, the county's non-incarcerated Black population is proportionately larger than the incarcerated Black population in the county. But the table below quantifies what is seen in the above chart: most counties have a ratio over 1 and 208 counties have ratios of over 10. A ratio of at least 10 000235

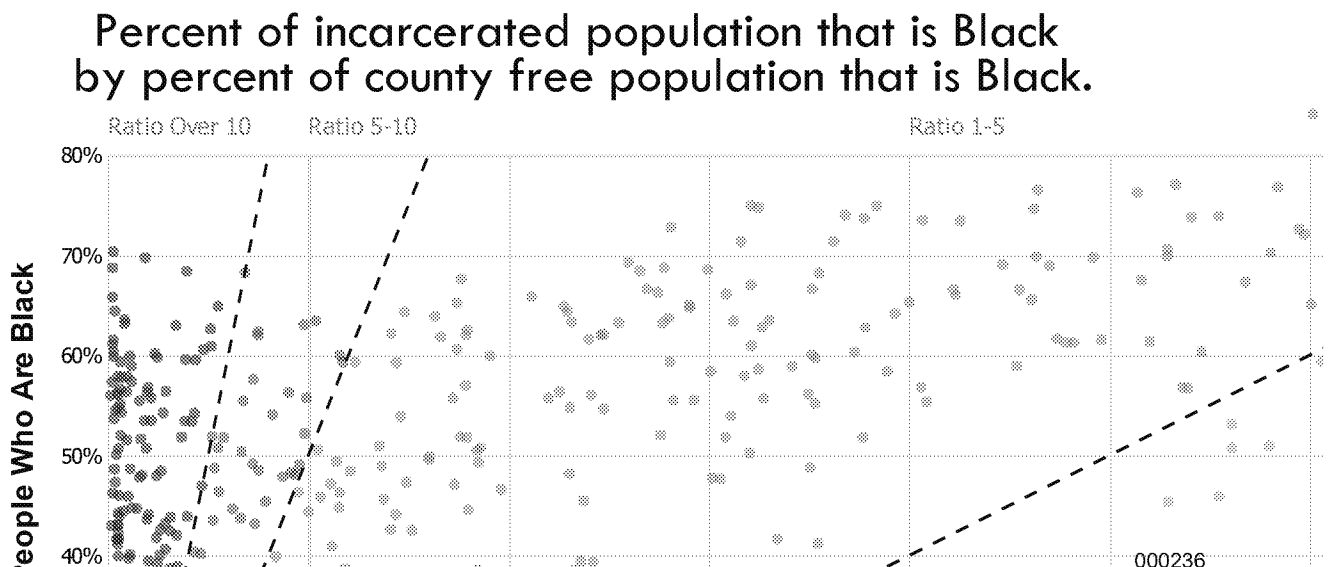

ratio of 10 or more means that the portion of the prison that is Black is at least 10 times larger than the portion of the surrounding county that is Black. For example, Martin County, Kentucky has a ratio of 529, because the 884 incarcerated Blacks make up 56% of the incarcerated population but the 12 Blacks freely living in the county make up only about 0.1% of the county's free population.

Figure 2. Number of counties by ratio of Black over-representation. The 34 states containing counties with ratios over 10 are: Alabama (1), Arizona (2), Arkansas (1), California (9), Colorado (8), Connecticut (1), Florida (3), Georgia (1), Illinois (20), Indiana (7), Iowa (4), Kansas (5), Kentucky (10), Maryland (1), Michigan (13), Minnesota (6), Missouri (10), Nebraska (1), Nevada (3), New Jersey (1), New York (13), North Carolina (4), Ohio (11), Oklahoma (12), Oregon (3), Pennsylvania (14), South Dakota (1), Tennessee (5), Texas (14), Utah (1), Virginia (6), Washington (4), West Virginia (4), and Wisconsin (9).

Ratio Category	Number of counties	Number of states containing those counties
0-1	15	8
1.01-5	194	26
5.01-10	55	23
More than 10	208	34

It is these high-ratio counties — and clusters of high-ratio counties — that make prison gerrymandering such a significant problem for racial justice. This large scale census inaccuracy labels these counties as diverse when they are anything but. When state legislatures use that flawed data to draw legislative districts, they transfer Black political clout to districts where Blacks have little to no voice.

To allow readers and other researchers to explore the details of individual counties, we created this interactive version that allows for looking up individual counties and their respective incarcerated and non-incarcerated Black populations:

Figure 3. This interactive chart shows the percentage of each county’s incarcerated and free populations that are Black. Click on a dot for the name of the county and the total numbers.

To explore whether the counties with the most dramatic racial disparities between the prison and free populations are concentrated in particular states, we calculated the median ratio of all our analyzed counties by state. We found that Blacks are more likely to be locked up in communities very different than their homes in states such as Michigan or Wisconsin, and least likely in states such as Mississippi:

Blacks are more likely to be locked up in communities very different than their homes in states such as Michigan or Wisconsin

Figure 4. Ranking of states by greatest median disparity between incarcerated Blacks and non-incarcerated Blacks, showing only states that had at least 10 analyzed counties. (For the complete calculations for all states, as well as data on the average and 5th, 25th, 75th and 95th percentiles, see Appendix B: Percentiles of County Ratios by State for Blacks.) And for an alternative way to approach this idea of ranking states, see Appendix D: Portion of each state’s incarcerated population that is incarcerated in disproportionately White counties. For the raw data behind this analysis, see methodology and Appendix A: Counties.

State (Number of Counties Analyzed)	Median Ratio of the percentage of each county’s incarcerated population that is Black to the percentage of each county’s free population that is Black.
Michigan (16)	120.0
Wisconsin (10)	78.5
Pennsylvania (15)	38.7
New York (16)	32.0
Illinois (23)	31.5
Ohio (13)	24.8

Kentucky (15)	24.2
Indiana (11)	23.2
California (12)	19.8
Missouri (16)	14.2
Oklahoma (17)	13.4
Texas (50)	4.5
Florida (30)	4.4
Virginia (24)	3.0
Alabama (10)	2.6
Louisiana (24)	2.2
North Carolina (22)	2.0
Georgia (41)	2.0
South Carolina (11)	1.4
Mississippi (17)	1.4

The racial geography of mass incarceration for Latinos

Latinos are incarcerated at a rate about 2 times higher than non-Latino whites, but prisons are disproportionately located in non-Latino areas. This combination has tremendous implications for the prison system’s ability to hire appropriate numbers of Latino staff, and it gives the problem of prison gerrymandering a distinct veneer of ethnic discrimination.⁴

We find that in 2010 there were 20 counties spread across 10 states where the Latino population that is incarcerated outnumbered those who are free.¹⁰ We also found a substantial number of counties where the incarcerated populations are largely Latino but where Latinos are only a very small portion of the county’s non-incarcerated population:

Figure 5. This chart shows that in many counties Latino people in prison are overrepresented compared to the portion of Latino people in the free population. (The outliers on the top right are a Municipality (county) in Puerto Rico and two in Texas, and the outlier counties on the top left are Stewart County, Georgia and Adams County, Mississippi, both of which host large federal immigration detention facilities.

Analysis of the graph reveals two conclusions:

1. The vast majority of counties are in the top left half of the graph, reflecting that the prisons have proportionately larger Latino populations than the surrounding county does.
2. There is a huge concentration of counties with prisons along the left edge of the graph, reflecting that many counties have only very small Latino populations while their prisons have much larger Latino populations.

To further quantify this distribution, we calculated the degree of ethnic difference between the incarcerated and non-incarcerated populations in each county. We calculated the ratio of the percentage of each county’s incarcerated population that is Latino to the percentage of each county’s non-incarcerated population that is Latino. Higher numbers mean a much larger difference between the two populations. In the 50 counties where the ratio is less than 1, the county’s non-incarcerated Latino population is proportionately larger than the incarcerated Latino population in the county. But the table below quantifies what is seen in the above chart: most counties in this study have a ratio over 1, and there are many counties such as Georgia's Stewart County, Illinois' Brown County, or West Virginia's Gilmer County where virtually the entire Latino population is incarcerated.

Figure 6. Number of counties by ratio of Latino over-representation. The 16 states containing counties with ratios over 10 are: Arkansas (1), Georgia (2), Illinois (5), Indiana (1), Kentucky (4), Louisiana (3), Minnesota (1), Mississippi (3), New York (4), Ohio (1), Oklahoma (1), Pennsylvania (8), South Carolina (3), Virginia (1), West Virginia (2), and Wisconsin (1).

Ratio Category	Number of counties	Number of states containing those counties
0-1	50	17
1.01-5	141	31

5.01-10	39	16
Over 10	41	16

It is these high-ratio counties — and clusters of high-ratio counties — that make prison gerrymandering such a significant problem for ethnic justice. This large scale census inaccuracy labels these counties as diverse when they are anything but. When state legislatures use that flawed data to draw legislative districts, they transfer Latino political clout to districts where Latinos have little to no voice.

To allow readers and other researchers to explore the details of individual counties, we created this interactive version that allows for looking up individual counties and their respective incarcerated and non-incarcerated Latino populations.

Figure 7. This interactive chart shows the percentage of each county’s incarcerated and free populations that are Latino. Click on a dot for the name of the county and the total numbers.

To explore whether the counties with the most dramatic ethnic disparities between the prison and free populations are concentrated in particular states, we calculated the

000240

median ratio of all our analyzed counties by state. We found that Latinos are more likely to be locked up in communities different than their homes in states such as Pennsylvania or New York, and least likely in states such as California:

Figure 8. Ranking of states by greatest median disparity between incarcerated Latinos and non-incarcerated Latinos. This table only includes states that had at least 10 analyzed counties. (For the complete calculations for all states, as well as data on the average and 5th, 25th, 75th and 95th percentiles, see the Latino Percentiles appendix table.) And for an alternative way to approach this idea of ranking states, see the incarcerated in disproportionately white counties appendix table. For the raw data behind this analysis, see methodology and Appendix A: Counties.

State (Number of Counties Meeting Filters)	Median Ratio of Counties
Pennsylvania (14)	12.5
New York (16)	7.6
Illinois (20)	7.0
Georgia (10)	3.4
Florida (26)	2.2
Texas (59)	1.2
California (12)	1.2

Conclusion

One of the defining characteristics of mass incarceration in the United States is the racial disparity in who goes to prison. Less discussed but just as important is the shocking racial disparity in where those prisons are built.

Sadly, as Rachel Gandy recently reviewed in her analysis of the racial and ethnic disparities between incarcerated people and the people who staff the prisons, the fact that building prisons in rural areas makes it difficult to recruit appropriate numbers of Black and Latino staff has been well known — and entirely ignored — since long before the prison boom began.

This report reviews the magnitude of the gulf between the incarcerated population and the surrounding counties; finding 161 counties where incarcerated Blacks outnumber free Blacks, and 20 counties where incarcerated Latinos outnumber free Latinos. In many counties, the disparity is particularly stark. We found 208 counties where the portion of the county that was Black was at least 10 times smaller than the portion of the prison that was Black. For Latinos, we found 41 counties where the portion of the county that was Latino was at least 10 times smaller than the portion of the prison that was Latino. These counties are spread throughout a majority of the states:

Maps showing the number and locations of counties where the portion of the county's 000241

Black or Latino population was at least 10 times smaller than the portion of the county's incarcerated population that was Black or Latino

Figure 9. These maps shows where Blacks or Latinos are over-represented at least 10 times in the prison population compared to the surrounding county. Many of the states without any counties marked on this map are states where counties are less relevant as a unit of analysis (ie. Massachusetts and Rhode Island) or where the Black or Latino population is very small and therefore excluded from our analysis (ie. Montana). For Latinos, the over-representation is significant in most states but is less dramatic than for Blacks.

In short, one of the reasons many states struggle to hire sufficient numbers of Black and Latino staff is because the prisons themselves were built in places that Blacks and Latinos do not live.

But this large-scale transfer of Black and Latino people to areas demographically very different than their homes has even larger effects thanks to a unique quirk in the federal Census that counts incarcerated people as if they were willing residents of the county that contains the correctional facility for redistricting purposes.

The racial inequities that result from the practice of prison gerrymandering have been well documented in states like New York and Wisconsin, but as this report makes clear, they are not alone. The transfer of Black and Latino incarcerated people to communities very different than their own is a national problem with implications for prison gerrymandering as well as family visitation policies and reentry.

V. About the Prison Policy Initiative and the authors

The non-profit, non-partisan Prison Policy Initiative produces cutting edge research to expose the broader harm of mass criminalization, and then sparks advocacy campaigns to create a more just society. In 2002, the organization launched the national movement against prison gerrymandering with the publication of Importing Constituents: Prisoners and Political Clout in New York addressing how using Census Bureau counts of incarcerated people as residents of the prison location diluted the votes of state residents who did not live next to prisons in violation of the state constitutional definition of residence.

Peter Wagner is an attorney and Executive Director of the Prison Policy Initiative.

Daniel Kopf is a data scientist in California who volunteers with the Prison Policy Initiative through our Young Professionals Network. He has a Masters in Economics from the London School of Economics.

VI. Methodology

This goal of this report was to quantify the magnitude of the difference of the racial and ethnic makeup between the people incarcerated in a given county and the actual residents of that county.

For this data, we took advantage of a unique quirk in Census Bureau methodology that counts incarcerated people as residents of the county that contains the correctional facilities.

Filters:

While we make all of our data available in an appendix, we applied two filters to the county graphs and tables above to remove from the data what we considered noise:

- Counties where the percentage of the total population that was incarcerated was less than 1.5%. The Prison Policy Initiative discovered for our 2004 report, Too big to ignore: How counting people in prisons distorted Census 2000 that this was an effective filter to remove counties that contained very large jails but no significant state or federal prisons. We wanted to separate out jails because jails tend to confine people for short periods very close to home so these facilities will have much smaller and much less relevant disparities between the facility and the surrounding county. This initial filtering process reduced the number of analyzed counties to 539. (Note the unit of analysis in this analysis was counties, not facilities. We estimate that these counties contained 1,037 prisons.⁵)
- Our analyses of Black disparities remove any county where there were less

than 100 incarcerated Blacks, and we used a similar filter in the Latino disparities section. In both cases, we wanted to avoid highlighting counties with small populations of non-incarcerated people of color and only slightly larger numbers of incarcerated people of color. While this analysis removes many counties from our analysis — and in particular removes many counties in western states where the Black population is relatively small — it allows us to clearly show that there is a very large number of counties where substantial numbers of people of color are being moved by the prison system to communities very different from their homes.

Additionally, in order to make the distribution pattern in [figures 1](#) and [5](#) clear, we chose not to show the handful of counties where there was only 1 county in that particular “bin”. These handful of outliers were generally the product of unique facilities, such as a private federal immigration prison that was [92% Latino](#) in majority-Black Adams County, Mississippi.

On race and ethnicity definitions

For this project we used the Census Bureau’s conception of race and ethnicity that has two main characteristics:

- Hispanic/Latino origin is an ethnicity separate from race; so people may or may not be Hispanic/Latino in addition to being Black, White, Asian, etc.
- People may be of more than one race, of an “other” race, or of a combination of an “other” race with one or more other races.

The resulting number of possible combinations is quite high⁶, but as the Census Bureau publishes very few data tables that allow one to easily access the race and ethnicity of the incarcerated population, the choices available for use were actually quite limited. We used data that provided for 9 combinations, of which we used only 3 (marked in bold):

- White alone
- **Black alone**⁷
- American Indian or Alaska Native alone
- Asian alone
- Native Hawaiian or other Pacific Islander alone
- Some other race alone
- Two or more races
- **Hispanic or Latinos**⁸
- **White alone not Hispanic or Latino**⁹

Limited in this way by the types of data available for the incarcerated population, we chose to use Census tables that reflected the non-incarcerated population in exactly⁰⁰⁰²⁴⁴

the same way.

Data sources

We used the following data tables from the U.S. Census in our analysis:

- Population: 2010 Census, Summary File 1, Table P1.
- White population (White alone non-Hispanic population): 2010 Census, Summary File 1, Table P5.
- Black population (Black alone population): 2010 Census, Summary File 1, Table P3.
- Hispanic/Latino population: 2010 Census, Summary File 1, Table P4.
- Incarcerated population: 2010 Census, Summary File 1, Table P42.
- Incarcerated White population (White alone, not-Hispanic): 2010 Census, Summary File 1, Table PCT20I.
- Incarcerated Black population (Black alone): 2010 Census, Summary File 1, Table PCT20B.
- Incarcerated Hispanic/Latino population: 2010 Census, Summary File 1, Table PCT20H.

For the non-incarcerated populations, we simply subtracted the incarcerated populations from the total populations of the same race/ethnicity groupings.

For the ratios, we simply found the portion of the incarcerated population that was of a given race or ethnicity and divided this by the portion of a county that was of a given race or ethnicity. For example, if Black people made up of 20% of the incarcerated population, and 40% of the non-incarcerated population. The ratio of over-representation of Black people in prison would be 0.5. By contrast, if Black people made up of 80% of the incarcerated population, and 20% of the non-incarcerated population, the ratio of over-representation of Black people in prison would be 4. Recognizing that other researchers may have alternative ideas on the best way to rank and filter counties and states, we've made [all of this county-level data available](#) so that others may use this data in new ways.

Recommended readings

This report is far from the first or last word on the topic of the political, racial and economic geography of mass incarceration. Some of our favorite articles on these topics are:

Footnotes

1. The inverse, however, is not true. Zoe Gottlieb, a law student at the New York University School of Law, showed that the pattern of shifting prisoners from Black urban cities to rural White towns does not hold in some southern states. The movement of the incarcerated in North Carolina and Georgia does not involve a clear cross-race transfer. Black populations can be found in both rural and urban areas in these states, making the racial geography problem in these states less important than it is elsewhere in the United States. ↵
2. For example, in New York, 98% of prison cells are located in state Senate districts that are disproportionately white. Counting incarcerated people as residents of correctional facilities thus increases the influence of nearby, largely white, residents. ↵
3. Without the filters described in the methodology that removed some counties with smaller facilities and smaller incarcerated Black populations from the analysis, we would have reported 184 counties where incarcerated Blacks outnumber non-incarcerated Blacks. The 161 counties are in these 31 states: Arizona, Arkansas, California, Colorado, Florida, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nebraska, Nevada, New York, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, South Dakota, Tennessee, Texas, Virginia, Washington, West Virginia, and Wisconsin. ↵
4. Earlier Prison Policy Initiative research shows that 7 State House districts in Connecticut were granted significantly more representation in the state legislature because the majority of Connecticut’s prison cells (which disproportionately held Latino and Black residents) were located in these areas. The incarcerated people counted here, however, were from other parts of Connecticut. For example, in State House District 59, 60% of the Latinos counted as constituents were actually incarcerated residents of other parts of the state. ↵
5. To estimate prisons, we counted the number of Census blocks within these

counties that contain a correctional facility of at least 100 people. This methodology excluded 360 census blocks that are likely either jails or small parts of the facilities already included in our estimate. ↵

6. Without the filters described in the methodology that removed some counties with smaller facilities and smaller incarcerated Latino populations from the analysis, we would have reported 33 counties where incarcerated Latinos outnumber non-incarcerated Latinos. The 20 counties are in these 10 states: California, Colorado, Florida, Illinois, Kentucky, Missouri, New York, Pennsylvania, Virginia, and West Virginia. ↵
7. There are 126 possible combinations of race and ethnicity. ↵
8. This category would include Latinos who said they were of just one race, “Black”. ↵
9. This category includes Latinos of any race or races. ↵
10. This category includes people who said they were of just one race, “white” but who said they were not of the ethnicity Latino. ↵

Comment: Residence Rule and Residence Situations , 80 FR 28950 (May 20, 2015)

Dear Ms. Humes:

Dēmos appreciates the opportunity to submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015).

Dēmos is a national public policy organization working for an America where we all have an equal say in our democracy and an equal chance in our economy. Dēmos has been working with state and national groups, redistricting experts, and other stakeholders for nearly a decade to support reform of the Bureau's "usual residence" rule as it applies to incarcerated persons. Dēmos also has served as counsel or co-counsel in many of the legal actions described in this comment.

The Bureau's existing residence rule, as it applies to incarcerated persons, results in serious distortions in how our nation's population is reflected and tabulated for redistricting purposes, and fails to reflect accurately the demographics of numerous communities throughout our country. Because of this outdated rule, some 2 million incarcerated people are being counted in the wrong place for purposes of redistricting, undermining the equal representation principle of the 14th Amendment to the U.S. Constitution. In particular, using this flawed data to draw local and state districts grants the people who happen to live near large prisons extra representation in government, at the expense of voters everywhere else in the jurisdiction.

To end these distortions and inaccuracies – commonly referred to as “prison gerrymandering” – Dēmos urges the Bureau to revise its Residence Rule to tabulate incarcerated people at their home address, rather than at the particular facility where they happen to be present on Census day.

Dēmos has reviewed and fully endorses the factual background on this issue that is explained in the comment filed by the Prison Policy Initiative, with which we work closely on the issue of prison gerrymandering. To avoid duplication, we will not repeat that background here. Dēmos instead will use this comment letter primarily to discuss some of the insights revealed by past and recent litigation over the issue of prison gerrymandering, and how such litigation reinforces the wisdom of a change in the Census Bureau’s approach to tabulating incarcerated persons.

As background for this discussion, it is useful to refer to the U.S. Supreme Court’s 1992 decision in *Franklin v. Massachusetts*, 505 U.S. 788 (1992). In *Franklin*, the Supreme Court upheld the Census Bureau’s authority and decision to change its method of determining the residence of overseas military personnel. In that case, the Census Bureau advocated for a flexible interpretation of the usual residence rule, arguing that: “[i]t is far too late in the Nation’s history to suggest that enumeration of the population of the States must be based on a rigid rule of physical presence on the census date.”¹

In its *Franklin* ruling, the Supreme Court upheld the Census Bureau’s change in the residence rule so as to count military personnel at their “home of record”. The Court distinguished “usual residence” from mere physical presence, noting that the former “has been used broadly enough to include some element of allegiance or enduring tie to a place.” 505 U.S. at 804. *Franklin* supports the Census Bureau’s authority to change the manner in which it applies its residence rule to particular populations in response to changes in social and demographic factors affecting the rule’s application. In recent years, the Bureau’s current rules on tabulation of incarcerated persons have also proven to be outdated and to require change.

¹ Brief for the Appellants at 17, *Franklin v. Massachusetts*, 505 U.S. 788 (1992) (No. 91-1502), cited in Kirsten D. Livingston & Christopher Muller, Brennan Center for Justice at NYU School of Law, “Home” in 2010: A Report on the Feasibility of Enumerating People in Prison at Their Home Addresses in the Next Census 9 (Feb. 15, 2006), <https://www.brennancenter.org/publication/home-2010>.

Reform laws in New York and Maryland

The inadequacies of the Bureau's current counting rules with respect to incarcerated persons are reflected in the decision of four states, thus far, to reject the Bureau's population data on incarcerated persons, and to require instead that incarcerated persons be tabulated as residents of their pre-prison home addresses. New York, Maryland, California, and Delaware have all enacted legislation requiring this change.² New York and Maryland implemented this change with respect to their states' redistricting after the 2010 Census, while California and Delaware will implement this new approach in response to the 2020 Census. The experiences of Maryland and New York in implementing their reform laws for the 2010 round of have been reviewed and analyzed in a report prepared for Demos by Erika L. Wood, Professor of Law at New York Law School.³

In both New York and Maryland, the reform laws withstood legal challenges. New York's reform law was challenged on state constitutional grounds and was upheld in 2011.⁴ Demos served as co-counsel for individuals and organizations who intervened in the lawsuit to defend the reform. In Maryland, the reform law that counted incarcerated people at their home address in the post-2010 redistricting process came under a federal constitutional challenge. Dēmos, along with the ACLU of Maryland, the Maryland and Somerset County NAACP, the Howard University Civil Rights Clinic, and the NAACP Legal Defense Fund, joined in filing an amicus brief to defend the constitutionality of Maryland's reform law. The three-judge district court agreed that Maryland's law requiring reallocation of incarcerated persons to their home address was fully consistent with the U.S. Constitution. On appeal of that ruling, the U.S. Supreme Court affirmed.⁵

Grappling with prison population in court-ordered plan in Kansas

A three-judge federal district court in Kansas also had to grapple with the distortions caused by application of the usual residence rule to incarcerated persons in 2012, when the Kansas legislature failed to agree on a state legislative redistricting plan. The unique concentration of state, federal and private prisons in the Leavenworth area in Kansas posed a problem for map-

drawers, because combining that population in one district would have meant that a substantial portion of that district would be made up of phantom constituents -- people who are from other parts of the state (or country) and who are not allowed to vote or interact with the community in any other way. The plan proposed by the Kansas House would have done precisely that, resulting in a district with 5,622 incarcerated persons and a population deviation of over 20%. This would have given every four residents of that district the political influence of 5 residents in any other district.⁶

The plan ultimately adopted by the federal district court ameliorated this problem by splitting the Leavenworth facilities among three different House districts instead of concentrating them into one.⁷ Nonetheless, this was still only a partial solution to the problem, because the federal court had no data on the actual home addresses of the persons incarcerated at the Leavenworth facilities, and thus could not assign them to their true residences.

Prison gerrymandering in Cranston, Rhode Island – a constitutional challenge

In 2014, a group of residents of Cranston, Rhode Island, along with the Rhode Island ACLU, filed a federal court challenge to an extreme instance of prison gerrymandering of the City Council and School Committee districts in Cranston, Rhode Island.⁸ Dēmos, the ACLU, and the Prison Policy Initiative are representing the plaintiffs in this case.

Following the 2010 Census, the City of Cranston redrew the districts used to elect City Council and School Committee members. Cranston houses Rhode Island’s only state prison complex, the Adult Correctional Institutions (“ACI”). The ACI contains an incarcerated population of 3,433.⁹

During the public discussions leading up to Cranston’s 2012 redistricting, the members of the City Council were confronted with the question of how and whether to count the incarcerated population of the ACI. At a public hearing on the proposed districting plan, the Council heard

testimony as to the severe distortions that would be created by counting all of the inmates of the ACI in a single ward.¹⁰ In spite of this, the Cranston City Council approved a districting plan that includes the prison population in its base population count and counts the entire population of the only state correctional facility in Rhode Island in a single ward—Ward 6.

Without the incarcerated population, Ward 6 includes only 10,227 residents, compared with 13,000-14,000 persons making up each of the other five city wards. Thus, persons involuntarily incarcerated in the ACI—who are in no sense true “residents” of Ward 6—constitute almost a quarter of the population counted toward Ward 6’s population total. This results in an actual maximum population deviation among all Cranston wards of approximately 28%.¹¹

Put differently, because Ward 6 has significantly fewer actual residents than any of the other five wards, three Ward 6 constituents enjoy more representation and political power in City government than four similar people across the district line.

In response to the filing of plaintiffs’ one person, one vote challenge to the City of Cranston’s districting plan, the City filed a motion to dismiss the complaint, arguing that because the City relied upon U.S. Census Data, the inclusion of the incarcerated population is not subject to constitutional challenge. The District Court disagreed, and explained its reasoning as follows:

[T]he case now before this Court presents an alleged set of circumstances that appears to be justified by neither the principle of electoral equality nor of representational equality. Clearly, the inclusion of the ACI prison population is not advancing the principle of electoral equality because the majority of prisoners, pursuant to the State’s Constitution, cannot vote, and those who can vote are required by State law to vote by absentee ballot from their pre-incarceration address. Consequently, according to Plaintiffs, a full 25% of the population of Ward Six cannot vote in the Ward. . . .

Furthermore, if Plaintiffs’ allegations are true, the prisoners’ inclusion in Ward Six does nothing to advance the principle of representational equality. Nonvoting residents generally have a right to petition elected officials, even if they were not able to vote for them; and they may generally be presumed to have a great interest in the management

of their municipalities. This is true of minors, noncitizens, college students, and military and naval personnel. . . .

Based on Plaintiffs' allegations, it appears to the Court that the ACI population does not participate in any aspect of the City's civic life. According to Plaintiffs, they cannot send their children to school in Cranston; they cannot visit the City's parks; they do not pay taxes to the City; they do not drive on the City's roads. It is not clear from the information available to the Court at this juncture of the litigation that the prisoners at the ACI's inclusion in Ward Six furthers the Constitutional goals of either representational or electoral equality.¹²

The Court therefore denied the City's motion to dismiss and allowed the plaintiffs to proceed with discovery to flesh out the facts concerning the ACI population and its interaction, or lack thereof, with the community and City officials.

Subsequent discovery in *Davidson v. City of Cranston* has confirmed that the ACI population does not partake in the civic life of the community and is not represented by elected officials in Cranston in any meaningful sense. The overwhelming majority of persons incarcerated in the ACI are not domiciled residents in Ward 6, but remain residents of the communities where they lived prior to their incarceration.¹³ The median length of stay for individuals at the ACI is only 99 days.¹⁴ Incarcerated persons at the ACI did not choose where they would be incarcerated.¹⁵ They cannot voluntarily visit or patronize public or private establishments and cannot participate in the life of the Ward 6 community. Their children are not even permitted to attend Cranston public schools by claiming residence of the parent at the ACI.¹⁶ A significant proportion of ACI inmates are not eligible to vote in City or School Committee elections because they have been convicted of a felony.¹⁷ Those who can still vote typically cannot claim the ACI

as their domicile for voting purposes, but must instead vote by absentee ballot from their pre-incarceration domicile.¹⁸

Discovery in the case has now concluded, and no evidence has been produced that any elected official in Cranston has made campaign visits to the ACI to seek the electoral support of persons incarcerated there or to identify their needs and views about city governance. The City Councilor who represents Ward 6 acknowledged in his deposition that he is unable to identify any group of persons in Ward 6 that is more isolated from the rest of the community than the ACI population.¹⁹ The only correspondence prior to the lawsuit from anyone incarcerated at the ACI that the City could identify was a single letter in 2012, to which no one in city government apparently ever responded.²⁰

Cranston officials are by no means unique in this regard. One researcher conducted a survey of all of the members of the lower house of the Indiana state legislature, asking the following question:

Which inmate would you feel was more truly a part of your constituency?

- a) An inmate who is currently incarcerated in a prison located in your district, but has no other ties to your district.
- b) An inmate who is currently incarcerated in a prison in another district, but who lived in your district before being convicted and/or whose family still lives in your district.²¹

The results were uniform. “Every single one of the forty respondents who answered the question – regardless of their political party or the presence or absence of a prison in their district – chose answer (b).”²² *Id.* A similar survey of Maryland legislators also shows decisively

that legislators view incarcerated persons as their constituents based on their home addresses, not based on the location of the prisons where they are incarcerated. The survey asked legislators who they would be more likely to consider a constituent: someone from their district who is incarcerated elsewhere, or someone who is from elsewhere but is incarcerated in their district. Again, virtually all legislators (92%) said they would be more likely to consider persons from their district who are incarcerated elsewhere to be their constituents.²³

As noted at the outset, the facts and legal rulings discussed in this Comment make up only a small part of the vast record of evidence that the Census Bureau's current residence rule, as applied to incarcerated persons, is outdated and no longer accurately reflects the population that it seeks to count. Dēmos urges the Census Bureau, in the 2020 Census, to tabulate incarcerated persons at their pre-prison home addresses.

Thank you very much for the opportunity to submit this Comment.

²³ Representative-Inmate Survey, Senate Education, Health, and Environmental Affairs Committee, Bill File: 2010 Md. S.B. 400 at 22-28. The Maryland researchers found similar results regardless of whether the legislator had a prison in his or her district. The survey also found that legislators are far more likely to receive communications from incarcerated persons whose home community is in their district than from persons who are incarcerated in a prison in the legislator's district.

EXECUTIVE SUMMARY

In 2010 and 2011, Maryland and New York took bold steps to correct the problem known as prison gerrymandering, a problem resulting from the United States Census Bureau's practice of counting incarcerated individuals as residents of their prison cells rather than their home communities. When legislative districts are drawn based on the census numbers, incarcerated individuals become "ghost constituents" of districts that contain prisons. Although in forty-eight states incarcerated individuals cannot vote, have no ties to the local community, are often hundreds of miles from home, and spend an average of just three years in prison, they are allocated to legislative districts in a way that artificially inflates the political power of the districts where the prisons are located, while their home communities—often predominantly poor and minority—suffer the inverse effects of losing representation and voting strength for a decade.

Although the Census Bureau did not change its practice of counting incarcerated individuals in prison on a national level for the 2010 census, Maryland and New York took responsibility for correcting this injustice in their states. In doing so, these two states not only conducted an important experiment in policy innovation, but also demonstrated how various state and local agencies can work together to successfully implement new and important policy reforms to alleviate the problem of prison gerrymandering.

The efforts and coordination by state policymakers, corrections officials, data experts, technicians, planning personnel and lawyers was exemplary and should serve as an inspiration to those across the country who want to take a stand to end this injustice. As a result of their efforts and for the first time in history, the legislative and local districts in Maryland and New York are no longer distorted by prison gerrymandering.

This report provides detailed information about the specific steps Maryland and New York took to implement these new laws based on the 2010 census in conjunction with their redistricting schedules. It details the challenges each state faced as the first in the country to implement this reform—including legal disputes and data deficiencies—and the steps taken to meet and overcome those challenges. It also provides concrete recommendations, based on the experience and expertise of the actors in each state, to assist other jurisdictions in permanently ending prison gerrymandering.

INTRODUCTION

The Problem

Once every ten years, the United States conducts the decennial census to determine the country's population. The U.S. Constitution requires this enumeration in order to determine the apportionment for the U.S. House of Representatives, but today census data are used for wide ranging calculations, research and study, including determining apportionment for state legislative and congressional districts and local political races on the county, city and town level.

Planners of the first U.S. census in 1790 established the concept of "usual residency" to determine where people would be counted on "Census Day"—April 1 of the decennial year. Usual residence was defined as the place where the person lives and sleeps most of the time.¹ As a consequence of the usual residency rule, people who are incarcerated on Census Day are counted as residents of the correctional facility because the census has determined that is where they "live and sleep most of the time."

Once the census is complete, states and localities use the data to draw legislative districts for Congress, the state legislature and local government. As local populations shift and move, congressional, state, county and municipal legislative districts must be redrawn to assure that each district has roughly equal population. This in turn protects the principle of "one person, one vote," assuring that every voter has equal representation in our government.²

Because the census data count people in prison as residents of the prison, incarcerated individuals are grouped together with non-incarcerated individuals living in the surrounding community to form legislative districts. However, the vast majority of incarcerated individuals cannot vote while in prison and they have no ties to the local community beyond being sent there by the Department of Corrections.³ Consequently, people in prison become "ghost constituents" to whom the legislator from the district has no connection or accountability, but whose presence in the prison allows the legislator's district to exist. The voting strength of the actual constituents who live adjacent to the prison is unfairly inflated simply because of their proximity to a correctional facility. This phenomenon is called "prison gerrymandering."

Over the last four decades incarceration rates in our country have skyrocketed, increasing by 400% since 1970.⁴ From 1925 to 1970, the incarceration rate remained remarkably stable, hovering around

110 per 100,000 of the population.⁵ But beginning in the 1970s and increasing dramatically through the next few decades, the nation enacted stiffer sentencing and “tough-on-crime” laws. The result is that today there are approximately 1.6 million people in state and federal prison in the United States, eight times as many as there were in 1970.⁶ The census applying the “usual residency” rule throughout this period results in more than a million incarcerated individuals in our country being deemed residents of their prison cells rather than their home communities to which most will return in less than three years.⁷

The inverse to this skew in the prison districts is the erosion of voting strength in the home communities—often located many miles away—to which most incarcerated individuals return. Every person counted in prison on Census Day is one fewer resident counted in the home community, which is often disproportionately urban, poor and minority. The result is fewer voices and fewer votes to demand accountability and representation by local officials. As the prison districts artificially inflate, the representation of home communities declines.

A similar imbalance occurs between neighboring districts. A district that contains a prison will have inflated voting strength compared to a neighboring district without a prison, creating inequalities between residents of neighboring communities.

Prison gerrymandering has other troubling implications. A legislator whose district depends on the people incarcerated in a correctional facility to meet its population requirement has every incentive to keep that prison not just open, but filled to capacity. This incentive may influence the legislator’s positions on criminal justice policies and sentencing laws. For example, two of the most vocal opponents to reforming New York’s stiff drug sentencing laws were Republican senators whose districts held more than 17% of the state’s incarcerated population;⁸ nearly a third of the individuals in one of these districts were incarcerated on drug related offenses.⁹

Two States Illustrating the Problem: Maryland and New York

Maryland

The average number of people incarcerated in Maryland state correctional facilities is approximately 22,000.¹⁰ Sixty-eight percent of incarcerated individuals come from Baltimore City, but approximately 85% of Maryland’s 28 correctional facilities are located in rural or suburban communities outside of Baltimore.¹¹ The average

distance of each facility from Baltimore is 60 miles, and five facilities are more than 100 miles away;¹² this in a state that is only 12,000 square miles. More than 98% of people incarcerated in Maryland will be released, and most after just a few years.¹³ The average length of time served in Maryland state prisons is only 2.5 years.¹⁴

This prison geography creates a significant political imbalance. For example, in Somerset County, a large prison was 64% of the county's First Commission District, giving each resident in that district 2.7 times as much influence as residents in other county districts.¹⁵ Similarly, 18% of state delegate District 2B in Washington County was incarcerated, giving every group of four state District 2B residents as much political influence as five residents elsewhere in the state.¹⁶ Of the 5,268 African-Americans in state District 2B, 90% are incarcerated.¹⁷

New York

For decades, the distortion created by prison gerrymandering was particularly severe in New York. Approximately three-quarters of New York's prisons are located more than 100 miles from New York City; in fact, more than 60% are located over 200 miles from the City, and over a third are located more than 300 miles from the City.¹⁸ The Prison Policy Initiative's analysis of the 2000 redistricting cycle found that 66% of New York State's prisoners were from New York City,¹⁹ but 91% were incarcerated upstate.²⁰ While the state's prison population was 77% African-American or Latino, 98% of the state's prison cells were located in disproportionately white state Senate districts.²¹ Moreover, although the prisons themselves look permanent, the people confined there are quite temporary. According to New York corrections data, "the median time that an incarcerated person has been at his or her current facility is just over [seven] months."²²

The policy of basing legislative districts on prison populations creates an imbalance not just between upstate and downstate communities, but also between upstate communities with prisons and upstate communities without prisons. A district that includes a prison has inflated voting strength compared to any other district without a prison, including one right next door.

For example, in the districts drawn after the 2000 census, New York Senate District 45 gained extra influence by using almost 13,000 incarcerated people to inflate its population, giving residents of the district more influence than residents of other districts, including neighboring rural District 43 which contained no state

prisons.²³ The small upstate city of Rome had a city council ward that was 50% incarcerated, giving the residents of that ward twice the influence over city affairs as residents in other parts of the city.²⁴

During the 2000 redistricting cycle in New York, the New York Senate interpreted the redistricting formula provided by the New York State Constitution to require 62 senate districts, each of which should have held approximately 306,000 people.²⁵ According to the Supreme Court's one-person-one-vote principle, each district should have equal population so that each resident will have the same electoral power as any other resident elsewhere in the state. A 10% total deviation from absolute population equality (plus or minus 5% for any individual district) is generally permissible for state legislative districts. But drawing the new senate districts based on Census Bureau data that allocate people in prison as "residents" of the prison location meant that several districts in New York were padded with individuals who were not considered legal residents for any other purpose, and who could not vote locally.²⁶ Indeed, while nominally within the permitted 10% deviation, seven New York state senate districts drawn after the 2000 census met minimum population requirements only by including incarcerated people who were residents of other communities.²⁷

New York Under-Populated Senate Districts after 2000 Redistricting²⁵

Senate District	Senator	Type	Reported Population	Prisoners to remove	Corrected Population	Corrected Deviation
45	Ronald Stafford	Rural	299,603	12,989	286,614	-6.36%
47	Raymond Meier	Rural	291,303	3,563	287,740	-5.99%
48	James Wright	Rural	290,925	5,291	285,634	-6.68%
49	Nancy L. Hoffman	Rural	291,303	2,881	288,422	-5.77%
51	James Seward	Rural	291,482	3,108	288,374	-5.78%
54	Michael Nozzolio	Rural	291,303	3,551	287,752	-5.99%
59	Dale Volker	Rural	294,256	8,951	285,305	-6.79%

The Solutions

Solutions at the National Level

The most obvious solution to the inequity and imbalance caused by prison gerrymandering is for the Census Bureau to count people who are in prison as residents of their home communities, rather than where they are incarcerated. By allocating people in prison to their home communities, the Census Bureau would provide accurate population data that states and localities could use to design fair, accountable districts. Recently, more than 200 organizations signed a letter urging the Census Bureau to conduct the research necessary to ensure that the 2020 census counts incarcerated people at their home addresses.²⁹ In addition, the Census Bureau's Center for Survey Measurement released an ethnographic study of the 2010 count of the jail and prison group quarters population, which includes a recommendation that the Census Bureau create a self-enumeration pilot study to determine the utility of prison inmates completing their own census forms.³⁰

In 2011, for the first time, the Census Bureau released the Advanced Group Quarters data to the states earlier in the redistricting cycle. Traditionally, the first counts of people in "group quarters"—which include prisons—were not available until the summer of the year after the census, too late to be useful for redistricting in most states. In 2000, even states that were aware of the problems caused by prison gerrymandering were unable to correct the data because they did not have access to the group quarters data at the time they were apportioning their residents for districts.

In response to requests by advocates and the Congressional Subcommittee on Information Policy, census and National Archives, the Census Bureau released its group quarters data in April 2011, significantly earlier than it had in previous decades. While this data did not include home address information, its earlier release allowed states and localities that were interested in adjusting the incarcerated population to have access to crucial data necessary to do so. The Census Bureau explained, "This decade we are releasing early counts of prisoners...so that states can leave the prisoners counted where the prisons are, delete them from the redistricting formulas, or assign them to some other locale."³¹

State Solutions

The early release of the Group Quarters data made it easier for more states and localities to avoid prison gerrymandering when redistricting. Legislation to end prison gerrymandering has been introduced in 17 states since the start of 2010,³² and over 200 counties and municipalities now avoid padding local government districts with incarcerated populations.³³

In the last few years, California, Delaware, Maryland and New York passed laws to reallocate people in prison back to their home communities.³⁴ California and Delaware will implement their new laws after the 2020 census, but Maryland and New York were able to implement their new laws in time for the 2010 redistricting cycle. Accordingly, the experience of Maryland and New York in implementing their reform laws after the 2010 census is examined in depth below.

Summary Comparison of New York and Maryland Reform Laws³⁵

	New York	Maryland
Applies to state legislative districts?	YES	YES
Applies to congressional districts?	NO	YES
Applies to local districts?	YES	YES
Applies to state prisons?	YES	YES
Applies to federal prisons?	YES for subtraction NO for reallocation	YES
Specifies implementing agency?	YES	NO
Directs correctional system to provide specific data?	YES	NO
Out-of-state and unknown addresses allocated?	NO—excluded from dataset	YES—allocated to correctional facility

I. MARYLAND'S SOLUTION: THE NO REPRESENTATION WITHOUT POPULATION ACT

In April 2010, Maryland's governor signed into law the No Representation without Population Act, H.B. 496.³⁶ The No Representation without Population Act required that the population count used to create legislative districts for the General Assembly, counties and municipalities, as well as for the U.S. House of Representatives, not include individuals incarcerated in state or federal correctional facilities or those individuals who were not residents of the state before their incarceration.³⁷ The Act further required that incarcerated individuals be allocated to their last known residence before incarceration if the individuals were residents of the state. Maryland's law was broader than New York's law, in that it applied to both state and federal prisons and applied to congressional as well as state and local legislative districts.

1. Implementation of Maryland's Reform Law

a. State Redistricting Law

Under the Maryland Constitution, the governor must prepare a plan for state legislative districts and present it to the President of the Senate and the Speaker of the House of Delegates.³⁸ The president and the speaker must introduce the governor's plan as a joint resolution no later than the first day of the regular legislative session in the second year following the census.³⁹ If a redistricting plan is adopted by the 45th day after the opening of the legislative session, that plan becomes law.⁴⁰ If no plan is adopted by the 45th day, then the governor's plan becomes law.⁴¹ Maryland law provides no specific guidance on the procedure for enacting a plan for congressional districts; the plan for congressional districts is introduced as a regular bill that must be passed by both houses and signed by the governor, subject to veto power.⁴²

The Governor's Redistricting Advisory Committee (GRAC) reviews redistricting plans submitted by outside groups and makes district plan recommendations to the governor.⁴³ The Maryland Department of Planning (MDP) provides staff support to the governor's office and GRAC, preparing maps and data, producing statistical data reports, and providing communications and outreach needed to develop redistricting plans.⁴⁴

b. Agency in Charge

The first step in implementing Maryland's No Representation without Population Act was to determine who would be responsible for the implementation since the legislation did not specify the agency that would be in charge of reallocating individuals to their home address. Because MDP had provided support for previous re-districting cycles and already employed a technical team of data and geocoding experts, it was determined that MDP, with the assistance of the Department of Legislative Services (DLS) and the Department of Public Safety and Correctional Services (DPSCS), would conduct the geocoding. There was also legal authority for MDP to act as the implementing agency: (1) the State Finance and Procurement Article of Maryland's code designates MDP as the staff agency of the governor for planning matters;⁴⁵ and (2) MDP has a Memorandum of Understanding with the U.S. Census Bureau designating it as Maryland's census agency.⁴⁶

c. Regulations

MDP proposed draft regulations that would provide additional guidance and details on how to implement the new law. For example, the law did not define "last known residence" or provide guidance on the steps necessary to geocode the data. "Geocoding" is the process of locating geographic coordinates from data such as a street address. Geocoding takes an address, matches it to a street and specific segment (usually a "block"), and then inserts the position of the address within that segment.⁴⁷ Once the geographic coordinates are located, the address can be mapped and entered into a Geographic Information System (GIS) to allow technical staff and policymakers to draw legislative districts.

The redistricting timeline did not allow MDP the approximately six months it usually takes to adopt regulations in Maryland, so it adopted regulations on an expedited basis to allow it to adjust the data in time for the state's redistricting deadline. Although the regulations were adopted through an expedited schedule, MDP thoroughly vetted the regulations, seeking input from DLS, the Attorney General's office, DPSCS, and MDP technical staff.

The regulations adopted by MDP filled in some additional detail to help the technical staff determine how to allocate incarcerated individuals. For example, the regulations clarified that "incarcerated individuals" included only those detained in state and federal correctional facilities, and not local (i.e., county or city) facilities, or those whose last known address was out of state.⁴⁸ They also

provided some additional guidance on how to geocode the last known residence of incarcerated individuals, requiring the department to make “reasonable efforts” to correct any last known address that was “ungeocodable”, including: verifying and correcting the zip code against the U.S. Postal Service zip code locator; correcting misspellings of city and street names; correcting or adding street suffixes against the postal service zip code locator, correcting street direction using the US postal service zip code locator, removing extra information from the address field, removing the apartment number and removing any decimal points in the address.⁴⁹

The regulations further provided that if, after these reasonable efforts, MDP was still unable to geocode the last known address for an incarcerated individual by February 11, 2011, then the last known address “shall be the state or federal correctional facility where the individual is incarcerated.”⁵⁰ This created another difference between the Maryland and New York laws: in New York, a person with an unknown address was simply not allocated to any legislative district, while in Maryland the person would be allocated back to the district that contains the prison.

Finally, the regulations provide examples of “ungeocodable” addresses, including: no address or an address of “homeless,” address of a correctional facility, rural route address, post office box, address with no house number, addresses with multiple errors or no street suffix, and addresses that are incorrect or not included in the census bureau’s TIGER street centerline file used to geocode addresses.⁵¹

d. Federal Prison Data

Implementation of the statutory provision to reallocate people in federal correctional facilities met with some resistance from the Federal Bureau of Prisons (BOP). In July 2010, MDP requested from the BOP an electronic database containing a unique prisoner identifying number and the address of the last known residence before incarceration for every inmate housed in the one federal prison located in Maryland on April 1, 2010.⁵² The BOP would not release the information, citing the Privacy Act of 1974,⁵³ and explaining that “the release of the requested information could constitute an unwarranted invasion of the individuals’ personal privacy.”⁵⁴ Despite two appeals, the BOP refused to release the information.

MDP determined the number of people in the federal prison by examining the 2010 census block level data for the facility and concluded that 1,514 federal prisoners were in these census blocks.⁵⁵ MDP also examined the weekly population report from the Federal

Bureau of Prisons available on the BOP's website.⁵⁶ In accordance with the regulations, the federal inmates remained allocated to the census blocks where the correctional facility was located.⁵⁷

e. State Prison Data

MDP and DLS reached out to the Maryland Department of Public Safety and Correctional Services (DPSCS) to request inmate address information after passage of the Act. DPSCS formed a team consisting of case managers at each facility as well as database technicians to work on collecting and organizing the necessary data.

To gather the data required by the No Representation without Population Act, DPSCS first consulted its own database—the Offender Based State Corrections Information System (OBSCIS)—that maintains demographic and other information concerning inmates confined in Maryland correctional facilities.⁵⁸ The OBSCIS system was used to determine which inmates were confined in Maryland correctional facilities on Census Day, April 1, 2010. The list of inmates was then separated into two additional lists: one for those listed as Maryland residents and one for those listed as out-of-state residents.⁵⁹ These lists were forwarded to the correctional facilities where the inmates were incarcerated so the data could be reviewed for accuracy and so that missing address fields could be completed and inaccurate fields could be corrected.⁶⁰ Each correctional facility then completed and corrected the missing and inaccurate address fields, relying on three sources: (1) an interview with the inmate and sometimes his or her family; (2) the pre-sentence investigation document; or (3) the correctional facility intake form.⁶¹ The corrected information was then entered into one database that was provided to MDP.

On February 4, 2011, MDP received a computer database from DPSCS containing address records for 22,064 inmates who were under the supervision of the Division of Corrections on April 1, 2010, Census Day.⁶² There were some inconsistencies in the way DPSCS categorized and recorded data regarding inmates' race, and the categories used by the U.S. census. DPSCS collected only five categories of race: White, Black, American Indian, Asian and "unknown."⁶³ Notably, the DPSCS data did not have a category for Hispanic or Latino, "two or more" races, Native Hawaiian/Pacific Islander, or the "other race category" as used in the census. Because of the inconsistency in the demographic categories, MDP analyzed the proposed districts with unadjusted numbers for Hispanics and certain racial groups. MDP concluded that because of the small

number of people involved, the inconsistency in data was not statistically significant.⁶⁴

f. Geocoding and Reallocation

Once the address data were received, the implementation task was handed over to the MDP data experts for geocoding. The first task was to examine the data to assure that only addresses approved by the statute were used in the reallocation process. MDP examined the data and removed addresses for pretrial detainees, people in juvenile facilities and those serving home detention, none of which were “correctional facilities” under the statute. During this process, MDP also removed 1,321 out-of-state addresses that were clearly excluded by the statute, and missing or invalid addresses such as “homeless” or post office boxes. MDP staff labeled these entries “discarded addresses”—3,358 in total—and removed them from the database.⁶⁵

Once the “discarded addresses” were removed, the geocoders were left with 18,706 “assumed geocodable” records.⁶⁶ MDP then conducted a second review of this remaining data to identify incomplete or incorrect address fields.⁶⁷ Staff first focused on easily correctable items, such as misspelled or abbreviated city names or incorrect abbreviations for extensions. They then turned to making other corrections, such as missing or incorrect zip codes and incorrect street names, which took a bit more research. To correct these fields, MDP consulted maps of municipal boundaries and zip codes, census TIGER files and MDiMap, an online mapping site maintained by the state of Maryland. In the end, only 12% (2,337) of the records required some type of correction.⁶⁸

After making these corrections, MDP geocoded the remaining data using ESRI GIS software and the U.S. Census Bureau’s 2010 TIGER/line street file for Maryland as the basis for the address locator. The database produced 17,140 addresses geocoded to the person’s last known residence, representing 77.7% of the original 22,064 in the database of prisoners received from DPSCS.⁶⁹ A total of 6.0% of the original prisoners had been identified as out-of-state residents and successfully removed from the redistricting dataset under the statute, bringing the successful reallocation to 83.7%.⁷⁰

g. Adjustment

In late February 2011, once MDP had completed its geocoding, it transferred the data to DLS. DLS had contracted with the Caliper Corporation, developer of Maptitude (a software program widely used to create legislative districts) to assign the geocoded incarcerat-

ed individuals to the appropriate census blocks. Using its Maptitude software, Caliper first removed the incarcerated individuals from the census blocks where the correctional facilities were located.⁷³ Caliper then assigned each geocoded address to its appropriate census block. Caliper generated tracts and blocks and determined the increase and decrease in population.⁷² This process also served as an independent review of MDP's geocoding.

MDP's and DLS's timeframe for adjusting the census data was informed in large part by the City of Baltimore's early redistricting deadline. Under the City Charter, the Mayor must present a redistricting plan to the City Council not later than the first day of February of the first municipal election year following the census.⁷³ The Baltimore City Council then has sixty days to adopt or amend the plan.⁷⁴ Because Baltimore neighborhoods were so heavily impacted by prison gerrymandering, it was important for the adjusted data to be available for the city's redistricting. MDP released its final adjusted data on March 22, 2011, in time for Baltimore to redraw its City Council districts.

h. Public Education

Once the geocoding was complete and MDP had generated the adjusted data, MDP took affirmative steps to ensure that counties and municipalities used the adjusted data, not just the census PL 94-171 redistricting data they had used in the past. In order to get the word out across the state concerning the adjusted data, the Attorney General's Office participated in a Bar Association training for local and county attorneys, and MDP informed county and municipal planners. The MDP geocoding staff also did outreach to the local GIS community. MDP issued a press release when the adjusted data was certified and the adjusted data was posted to MDP's website for download.

2. A Legal Challenge: *Fletcher v. Lamone*

On November 10, 2011, a lawsuit financed by the Legacy Foundation,⁷⁵ a conservative Iowa-based advocacy group, was filed in U.S. District Court for Maryland.⁷⁶ Among other redistricting claims, the plaintiffs argued that Maryland's congressional districts violated the one-person-one-vote principle because they were based on the adjusted population data and not the numbers as they were reported by the U.S. census.⁷⁷ Plaintiffs also argued that the districts discriminated against racial minorities because the number of inmates who were identified as having a last known address outside the state of

Maryland, and thus were not reallocated to their home districts, were disproportionately African-American.⁷⁸ Specifically, plaintiffs argued that “omitting certain persons residing in state prisons whose last known addresses are from outside the State of Maryland and who are disproportionately minority” amounted to intentional racial discrimination in violation of the Fourteenth and Fifteenth Amendments.⁷⁹

The state was represented by the Attorney General’s redistricting team which consisted of attorneys representing the General Assembly, MDP and the Civil Litigation Unit. In addition, a number of civil rights and voting rights groups appeared as *amici curiae* to defend the constitutionality of the new law, including Howard University Law School’s Civil Rights Clinic, the Maryland NAACP, the NAACP Legal Defense and Educational Fund, the Maryland ACLU, Demos and the Prison Policy Initiative.⁸⁰ *Amici* argued that the Maryland legislature determined that the new law was necessary to “correct the striking inequity that existed previously due to the crediting of incarcerated people to electoral districts where they cannot vote, where they have no community ties, and where they are not considered residents for any other purpose other than the census.”⁸¹

On December 23, 2011, a three-judge panel granted the state’s motion for summary judgment, finding the No Population without Representation law to be constitutional and MDP’s implementation of the law to be proper and nondiscriminatory.⁸² In a lengthy opinion, the court carefully weighed all of plaintiffs’ arguments, examined MDP’s implementation of the law, and found that a state may choose to adjust census data, as long as the adjustment is thoroughly documented and “applied in a nonarbitrary fashion.”⁸³ The court also noted that Maryland’s adjustment of census data during redistricting did not conflict with the practices of the Census Bureau, explaining that according to the Bureau, “prisoners are counted where they are incarcerated for pragmatic and administrative reasons, not legal ones.”⁸⁴

The court concluded that Maryland’s adjustment to the census data was made in the systematic manner demanded by the United States Supreme Court. Citing the regulations, the court noted that MDP “undertook and documented a multistep process” to identify the last known address of all individuals in Maryland’s prisons.⁸⁵ Finally, the court found no evidence to support plaintiffs’ claim that the adjustment resulted from intentional racial discrimination. The court was careful to explain: “Our review of the record reveals

no evidence that intentional racial classifications were the moving force behind the passage of this Act. In fact, the evidence before us points to precisely the opposite conclusion.”⁸⁶ Relying on the amicus briefs filed by civil and voting rights organizations, the court acknowledged that the act was “the product of years of work by groups dedicated to advancing the interests of minorities.”⁸⁷ The United States Supreme Court affirmed the judgment on June 25, 2012.⁸⁸ Consequently, Maryland’s law and the 2011 adjustment were upheld.

Maryland Timeline

April 13, 2010	No Representation without Population Act signed into law
February 9, 2011	Census 2010 redistricting population counts (P.L. 94-171) received from U.S. Census Bureau
March 22, 2011	MDP releases adjusted population per No Representation without Population Act
May 2, 2011	Precinct population counts adjusted per No Representation without Population Act released
October 4, 2011	GRAC submits recommended congressional redistricting plan to governor
October 17, 2011	Special legislative session called to adopt congressional redistricting plan
October 20, 2011	Maryland 2011 congressional districts adopted
December 16, 2011	GRAC submits recommended state legislative redistricting plan to governor
December 23, 2011	<i>Fletcher v. Lamone</i> dismissed; No Representation without Population Act upheld by U.S. District Court
January 11, 2012	Governor submits state legislative redistricting plan to Senate President and Speaker of the House of Delegates
February 24, 2012	New state legislative district plan becomes law
November 6, 2012	Congressional district plan approved by ballot referendum

II. NEW YORK'S SOLUTION: PART XX

On August 11, 2010, Part XX of Chapter 57 of the Laws of 2010 (Part XX) was signed into law to fix the skew created by allocating New York's prison populations to the districts where they are incarcerated. Part XX directed the New York State Legislative Task Force on Demographic Research and Reapportionment (LATFOR) to reallocate people in correctional facilities back to their home communities for purposes of drawing state and local districts.⁸⁹

Part XX directed the New York State Department of Corrections and Community Supervision (DOCCS) to deliver to LATFOR by September 1 of the census year, the following information for each person in its custody on Census Day: (1) a unique identifier, not including the name; (2) the address of the correctional facility in which the person was incarcerated; (3) the residential address of the person prior to incarceration; and (4) any additional information specified by LATFOR.⁹⁰ Part XX also required LATFOR, upon receipt of this information from DOCCS, to determine the census block corresponding to the street address of each incarcerated person's residential address prior to incarceration and the census block corresponding to the address of the correctional facility.⁹¹ The new law then directs LATFOR to create a database in which "all incarcerated persons shall be . . . allocated for redistricting purposes, such that each geographic unit reflects incarcerated populations at their respective residential addresses prior to incarceration rather than at the addresses of [the] correctional facilities."⁹² Part XX requires LATFOR to maintain the amended population dataset and use the dataset to draw state assembly and senate districts.⁹³

Part XX addressed the appropriate population base for local (county, city, town and village) redistricting by amending the Municipal Home Rule Law to clarify that for purposes of establishing the population base requirements for local redistricting plans, "no person shall be deemed to have gained or lost a residence, or to have become a resident of a local government . . . by reason of being subject to the jurisdiction of the department of corrections."⁹⁴ The new law also required LATFOR to make the adjusted dataset available to local governments.⁹⁵

Under Part XX, all individuals with out-of-state or unknown pre-incarceration addresses, and all individuals incarcerated in federal correctional facilities are "counted at an address unknown" and not included in the redistricting dataset.⁹⁶ Effectively this means that these individuals would be "subtracted" from the prison district,

but not reallocated to a home district. The choice to not reallocate those in federal prisons reflected concerns about the privacy laws that govern federal facilities and the lack of state authority over those in federal custody. The Privacy Act of 1974 regulates what personal information the federal government can collect about private individuals and how that information can be used.⁹⁷ While there is concern that federal prisons may be restricted from disclosing personal records, even if the records do not include personally identifiable information, it is also clear that at least one state—Kansas—has a long history of successful cooperation between federal and state agencies. Kansas reallocates people living on military bases for redistricting, and the U.S. military has worked with the state to collect and share home residence data for people living on military bases in the state.⁹⁸

1. A Legal Challenge: *Little v. LATFOR*

On April 4, 2011, a group of upstate Republican New York State senators—all of whom represented districts that included at least one New York state prison—and a handful of voters who lived in those districts, filed a lawsuit against LATFOR and DOCCS arguing that Part XX was unconstitutional and asking the court to enjoin LATFOR and DOCCS from implementing the new law.⁹⁹ Plaintiffs argued that the new law violated Article III, section 4 of the New York State Constitution which provides that the federal census “shall be controlling as to the number of inhabitants in the state or any part thereof for the purpose of apportionment of members of the assembly and adjustment or alteration of senate and assembly Districts.”¹⁰⁰ The Complaint alleged that Part XX “creat[ed] a structural change by an artificial realignment of political power in the State” in violation of Article III, section 4, which, plaintiffs claimed, required the census to be “controlling” for apportionment purposes.¹⁰¹

Numerous voting rights and civil rights groups that had advocated for the reforms in Part XX intervened on behalf of the state defendants, representing voters from both upstate and downstate communities. The voters who intervened represented different interests, including: (1) those who lived in districts with high numbers of incarcerated individuals; (2) those who lived in both upstate and downstate counties that did not contain a prison; and (3) those who lived in a county where a prison was located but whose vote would nevertheless be diluted if the lawsuit prevailed because their local

county legislative districts did not contain a prison.¹⁰²

On December 1, 2011, on cross motions for summary judgment, the New York State Supreme Court in Albany County upheld Part XX.¹⁰³ Relying in part on the new census policy of releasing the Group Quarters data early, the court found that plaintiffs had not demonstrated that Part XX “rendered the data provided by the Census Bureau to be anything less than ‘controlling’ in the redistricting process.”¹⁰⁴ The court further explained that there was nothing in the record indicating that people in prison “have any actual permanency in these locations or have an intent to remain. . . . [P]laintiffs have not proffered evidence that inmates have substantial ties to the communities in which they are involuntarily and temporarily located.”¹⁰⁵

Plaintiffs’ attempt to appeal directly to the New York Court of Appeals was denied, and they chose not to appeal the Supreme Court’s decision to the mid-level appellate court. As a result, New York’s law was upheld and successfully implemented in time for districts to be drawn before the 2012 state-wide elections, as required by the New York Constitution.

2. Implementation of New York’s Reform Law

a. State Redistricting Law

The New York legislature has primary responsibility for drawing the state’s congressional and state legislative district lines.¹⁰⁶ The New York State Legislative Task Force on Demographic Research and Reapportionment (LATFOR), a six-member advisory commission comprised of members appointed by the Senate and Assembly majority and minority leaders, provides technical assistance to the legislature.¹⁰⁷ While LATFOR recommends congressional and state legislative plans to the legislature, the legislature is free to amend or even ignore its proposals.¹⁰⁸ New York law does not impose a deadline for drawing district lines, but in practice districts must be final prior to the filing deadlines for the next primary election.

b. State Prison Data

On August 26, 2010, the LATFOR co-chairs sent a letter to the New York Department of Corrections and Community Supervision (DOCCS) requesting the following information for each incarcerated person subject to DOCCS jurisdiction on April 1, 2010:

1. A unique identifier, not including the name, for each incarcerated person;
2. The street address of the correctional facility in which such persons were incarcerated at the time of the census;
3. The residential address of such persons prior to incarceration;
4. The race, Hispanic origin, age and gender of such persons; and
5. Any additional information as the task force may specify pursuant to law.¹⁰⁹

DOCCS provided the data in September 2010. The data included a list of addresses for the people held in DOCCS custody on April 1, 2010. The spreadsheet included 58,237 rows, one per inmate, with each inmate denoted by a unique identification number.¹¹⁰ Each column of the spreadsheet was devoted to a different category of personal information associated with each inmate, including the county of conviction and the correctional facility where the inmate was incarcerated on April 1, 2010.¹¹¹ The data included residential addresses prior to incarceration for each inmate including the legal residence address, address at the time of arrest, and addresses of parents, spouses and nearest relative.¹¹² The legal residence address was presented in four address fields: street, city, county and state.¹¹³

c. Voting Rights Act Preclearance

Because Part XX constituted a change to voting laws and procedures, New York had to submit the law to the United States Department of Justice (DOJ) for “preclearance” under Section 5 of the Voting Rights Act. Because of past discrimination against language minorities, Bronx, Kings and New York counties were “covered jurisdictions” under Section 5 required to seek DOJ approval before implementing any changes to their voting laws or procedures.¹¹⁴

The New York Attorney General submitted the law for preclearance on March 8, 2011. The preclearance submission explained that Part XX would “directly benefit” minority voters protected by Section 5 because those incarcerated in New York state prisons “originate predominantly from urban districts . . . subject to § 5, and are incarcerated in non-covered jurisdictions.”¹¹⁵ The submission

concluded that Part XX would “appropriately adjust the weight of the vote of members of protected classes in New York’s three § 5 counties” The DOJ granted preclearance on May 9, 2011, finding that the state had carried its burden of establishing that the reform law was free of any discriminatory effect or intent, and allowing New York to move forward with implementing the new law in time for the 2011 redistricting cycle.¹¹⁶

d. Geocoding and Reallocation

Part XX specifically directed LATFOR to reallocate incarcerated individuals back to their prior residential addresses for redistricting purposes; so unlike in Maryland, there was no question about which agency was in charge of implementing the new law. Nevertheless, because of the political nature of LATFOR and its composition consisting of members of the legislature, legislative staff and agency staff representing both political parties, there was some delay in coordinating implementation. New York State Assembly staff took the initial steps to analyze the data and implement the new law.

The first step in the adjustment process was to “subtract” the prison population from the districts where the prisons were located. There were 68 DOCCS facilities in operation on April 1, 2010 in addition to two federal correctional facilities.¹¹⁷ The Census Bureau had assigned state and federal prisons to a total of 75 blocks in New York State.¹¹⁸ LATFOR staff used the addresses of DOCCS facilities and the two federal facilities to identify the correctional facilities on the 75 blocks identified by the Census Bureau.¹¹⁹ Staff then used the DOCCS dataset, which enumerated 58,237 inmates and the name of the facility in which each inmate was incarcerated, to calculate the total number of people incarcerated in each correctional facility on each census block.¹²⁰ The Task Force identified 2,471 inmates incarcerated in federal prisons located in New York on April 1, 2010, bringing the total prison population to 60,708.¹²¹ The total inmate population was then deducted from the total group quarters adult correction population to arrive at the adjusted population totals for these census blocks.¹²²

Next LATFOR staff sorted the DOCCS data to separate records with unambiguously identifiable legal residence addresses (32,276 records), those with out-of-state residences (2,433 records) and those with no usable address (1,276 records).¹²³ Records in these last categories, out-of-state and unusable addresses, were deleted from the dataset, leaving a balance of 22,252 records that required some correction or clarification.¹²⁴ Within this balance of 22,252 records,

staff identified 14,154 records that were easily corrected by fixing obvious spelling and spacing errors and replacing abbreviations with complete proper names.¹²⁵

The remaining 8,098 legal residence addresses were incomplete or absent, prompting staff to supplement the legal residence address with information from the additional five addresses provided by DOCCS.¹²⁶ Staff developed strict protocols for clarifying the addresses provided.

FIRST PROTOCOL: Record all edits.¹²⁷ LATFOR staff preserved the original dataset in the form it was received from DOCCS. Staff created a copy of the dataset and all modifications were made in the copy, not in the original. This allowed for a clear comparison between the original data and the data that included changes.

SECOND PROTOCOL: Create numeric codes to capture the nature of each change.¹²⁸ The DOCCS data included a number of abbreviations, but the geocoding software required the full and correct spelling of all streets, directional prefixes, cities and states. Numeric codes were created to capture the complete and exact dimensions of these changes. For example, code (1) indicated a change to abbreviation and spelling and code (2) indicated a change in spacing.¹²⁹ A total of ten codes were developed to represent the different types of alterations made to any of the fields comprising the legal residence address.

THIRD PROTOCOL: Create a set of alphabetical codes to identify sources of supplemental information.¹³⁰ When the information included in the Legal Residence Address field was incomplete, LATFOR staff examined information provided in the other five addresses to determine if there was information that could be used to complete the Legal Residence Address. If the supplemental information was used to construct a “final” legal residence address, a code was assigned to indicate from which field the supplemental information was used. For example, code A indicated that information came from the “address at arrest” field; code B indicated that the information came from the “father’s address” field.¹³¹

Once LATFOR staff completed its work correcting and clarifying the inmate address records, each record was assigned latitude and longitude coordinates by the geocoding software MapMarker.¹³² On the first pass, 30,932 addresses were matched.¹³³ For the records that were not matched, the geocoding software produced an explanation describing the error.

Next, LATFOR staff initiated the second phase, using Google Maps to enhance and clarify the ungeocoded addresses in order to provide additional information to allow geocoding with a higher level of certainty.¹³⁴ Examples of errors that were fixed in this phase include a misspelled city or street name, incorrect identification of the street type (“avenue” instead of “street”), or an incorrect or absent directional prefix. Following its previous model, staff created a new set of protocols and codes, ensuring that all edits were carefully noted and the source clearly identified.

Once these corrections were made, the data were once again passed through the geocoding software. The software was able to assign geographic coordinates for the addresses of 46,003 incarcerated individuals who could then be properly allocated back to their home communities.¹³⁵ The remainder of the addresses were for people who resided in other states (whom the statute required to be removed from the redistricting data), or individuals for whom the information on file wasn’t sufficiently detailed to allow them to be reallocated. New York State’s reallocation, while imperfect, was a marked step forward compared to the previous decade when all incarcerated people were allocated to the correctional facility where they were incarcerated on April 1 of the census year.

e. Adjustment

To adjust the census data, LATFOR staff created three statewide block-level files, which included the necessary demographic categories to accommodate the adjusted data and to make the DOCCS data compatible with the PL 94-171 census redistricting data. The first file included all of the geocoded prisoner home address and racial/ethnic information from DOCCS.¹³⁶ The second file included the block-level prison population and aggregated racial and ethnic information.¹³⁷ The third file included federal prisons using the census Advanced Group Quarters data.¹³⁸

Using these files, the adjusted redistricting data were created by taking the total census redistricting data for the state, adding the geocoded home addresses for people in prison, then subtracting the total state and federal prison populations.¹³⁹ As required by the statute, any incarcerated individual whose home address was not geocodable, or was unknown, was not included in the redistricting data.¹⁴⁰

The final adjusted population files, along with a detailed memorandum explaining the adjustment process, were made available to the public and local redistricting bodies through LATFOR’s website. There was no additional outreach or public education.

New York Timeline

August 11, 2010	Part XX signed into law
December 1, 2011	<i>Little v. LATFOR</i> dismissed; New York Supreme Court upholds Part XX
March 23, 2011	Census 2010 Redistricting population counts (P.L. 94-171) received from U.S. Census Bureau
May 9, 2011	Part XX precleared by U.S. Department of Justice
January 4, 2012	LATFOR released final prison population files adjusted per Part XX
January 26, 2012	LATFOR released proposed Senate and Assembly districts
March 11, 2012	LATFOR introduced bill including final Senate and Assembly districts
March 15, 2012	State legislature passed new state legislative districts; signed into law by governor
March 19, 2012	Final congressional districts ordered by United States District Court
April 27, 2012	Senate districts precleared by U.S. Department of Justice
May 18, 2012	Assembly districts precleared by U.S. Department of Justice

III. RECOMMENDATIONS

Passing and implementing Maryland's No Population without Representation Act and New York's Part XX involved multiple agencies and actors, including legislators and their staff, government agencies, the Attorneys General's offices, private software companies and consultants, and outside advocacy organizations. The combined experiences of these various actors in implementing this reform revealed some common recommendations for implementing reforms.

1. Change the Census

The most effective way to correct the inequity caused by prison gerrymandering laws is for the census to count people in prison as residents of their home communities rather than their prison cells. There is widespread support for this change among advocates, scholars, redistricting experts, members of congress, editorial boards, state legislators and the administrative agencies tasked with drawing legislative districts.¹⁴¹ Those involved with implementing the new laws in Maryland and New York agreed that the prisoner reallocation would be streamlined if the Census Bureau tabulated incarcerated persons at their home addresses.¹⁴²

Specifically, the Census Bureau should:

- Update the interpretation of the Usual Residency rule to ensure that incarcerated persons are allocated to their home residence rather than at the location of a correctional facility. The Bureau should consult with stakeholders, including redistricting experts, elections officials, corrections officials, criminal justice advocates, and others to develop the best strategies and data choices for meeting this goal.
- Consider using "self-enumeration" data wherever possible to tabulate incarcerated people. Allowing incarcerated individuals to complete and submit their own census forms would allow them to identify their race and ethnicity as well as enable them to directly list their current home address.
 - Conduct a self-enumeration pilot study in select correctional facilities to develop protocols and test the utility of inmate-completed forms, as suggested

- by the Bureau's 2013 Ethnographic Study.
- Where administrative records are to be used to tabulate incarcerated people, rely on agency-level administrative records collected by the Federal Bureau of Prisons and state correctional agencies—as suggested by the Bureau's 2013 Ethnographic Study—rather than collecting this data on the individual facility level.
 - Consult with the Bureau of Justice Statistics to identify best practices for designing effective systems for collecting accurate and reliable state corrections data.¹⁴³
 - Assure that state correctional agencies are aware of the Office of Management and Budget's (OMB) Standards for the Classification of Federal Data on Race and Ethnicity, and advise state correctional agencies on how data systems can be structured to facilitate data collection consistent with these standards. Encouraging states to use the OMB standards would eliminate inconsistencies in how race and ethnicity data are recorded.¹⁴⁴
 - Conduct experiments using existing state corrections data to evaluate how these administrative records, in their current form, would impact Census Bureau workflow and quality standards, as well as to develop protocols for addresses that cannot be successfully geocoded.
 - Consider how to allocate persons in the limited circumstances where an individual's home address is unknown or nonexistent. For example, the Bureau may have to tabulate a limited number of people at the correctional facility where there is insufficient home address information.
 - Explore whether the recommendation of the 2013 *Ethnographic Study of the Group Quarters Population in the 2010 census: Jails and Prisons* to establish “correctional specialists” to coordinate the Bureau's enumeration of people confined in correctional facilities will improve efficiency and standardization.¹⁴⁵

2. Change State Laws

The effects of prison gerrymandering can also be addressed at the state level, as it was in Maryland and New York. As with any legislative change, these reforms require careful research and planning, and building a broad coalition of support. But in addition to general legislative strategy, there are some specific recommendations based on the experiences of successful reform in New York and Maryland.

a. Bill Drafting

Drafting legislation to address prison gerrymandering can be complicated, because the legislation often has to include changes to the election law, the corrections law and sometimes the executive law. Because of these inherent complexities, it can be tempting to draft legislation that is short and simple as a way to make it easy to understand. But it is important not to omit key details and processes. For example, the Maryland legislation did not name the implementing agency. Maryland solved this problem smoothly because the same state agency had both census and redistricting experience and a data staff that could perform the required geocoding, but in other states it may be important for the legislation to identify the implementing entity.

In both New York and Maryland, staff members who implemented the reform laws identified places where the law could have provided more information to properly inform the decisions and judgments they had to make. For example, Both MDP and DPSCS identified the phrase “last known residence” to be too vague and provide insufficient guidance on which address should be used. There was also some ambiguity about who was intended to be included in the category “prisoner”—whether it included pretrial detainees, residents of half-way houses and/or juvenile facilities. Similarly, in New York, LATFOR staff explained that the phrase “residential address prior to incarceration” did not provide enough guidance to decide between the various address fields provided by the DOCCS data. Including a definitions section and providing more specific wording would eliminate some of the guess work and allow for a smoother implementation.

It is also important to remember that prison gerrymandering reforms often have the greatest impact at the local government level in municipal and county districts. To assure that the new law has the most comprehensive effect, the legislation should require localities to use the adjusted data when drawing their local districts.

The Prison Policy Initiative has a model bill with sample language that provides helpful guidance to bill drafters on all of these issues.¹⁴⁶

b. Stakeholders

Early consultation with the technical staff that will be charged with implementing the reform law can help avoid gaps, inconsistencies and unrealistic expectations in the final law. Bill drafters should speak with the technical staff to get a good understanding of what the implementing agency will need to know, and ensure that those who understand the geocoding and adjustment process can share information that will create a thorough and legally sound bill. As part of this early outreach, bill drafters should also contact the correctional agency to discuss its data collection practices and the content and structure of its database. Legislation could require the corrections agency to collect additional data, or maintain its data in a particular format in order to ease implementation later on.

c. Corrections Data

Correctional facilities should strive to collect data that would be useful to the Census Bureau and redistricting officials. This data should include home residence information down to the street level (and, wherever possible, avoiding non-geographic addresses like post office boxes and rural route addresses). Standardized street dictionaries or master address files can be used to make sure street names, city names, and zip codes are all valid. Similarly, correctional facilities should collect race and ethnicity data on their population in a way that is consistent with the Office of Management and Budget's "Standards for the Classification of Federal Data on Race and Ethnicity" and therefore also consistent with the Census Bureau's redistricting data.¹⁴⁷ In all cases, correctional facilities should strive to have accurate, current, and complete data.

3. Plan for Implementation

Implementation of these reforms involves various administrative agencies, and many states impose strict deadlines for finalizing legislative districts. Consequently, agencies and policymakers should allow plenty of time to plan and execute the implementation stages. Identifying redistricting deadlines far in advance and planning accordingly can help assure a smooth implementation.

a. Timing

Creating, obtaining, adjusting and checking data can take significant amounts of time that must be expended in a specific order. Officials in both Maryland and New York advised others to start as early as possible.¹⁴⁸ Planning should begin long before Census

Day (at least two years in advance), and adjusting the corrections data should begin as soon as the census is taken, allowing nine to twelve months to understand and prepare the corrections data, and several additional months between the Census Bureau's publication of the redistricting data and an individual state's formal start of line drawing.

Implementing agencies should be aware that localities often have redistricting deadlines that are earlier than the state deadline. Consultation with local redistricting bodies and elected officials will help ensure that the adjusted data is available in time to be helpful to as many localities as possible. For example, Maryland accelerated the release of its adjusted data so that it could be used in Baltimore City's municipal redistricting. On the other hand, the New York legislation did not give a specific deadline for LATFOR to produce the adjusted dataset, which had the unintentional effect of some localities proceeding to redistrict before the adjusted data was available.

b. Transparency

As with any democratic reform, creating a transparent implementation process will allow greater public participation and engagement. This is particularly important in redistricting; legislative lines can have a dramatic impact on local communities, so public participation is especially critical to creating fair and accurate districts.

There are various ways to assure transparency when implementing prison gerrymandering reforms. For example, drafting regulations allows an opportunity for public comment and provides a clear process for how the new laws will be implemented. MDP found it very helpful to draft regulations to implement the Maryland law. The regulations provided consistent guidance throughout the various stages of implementation, particularly in providing specific definitions of terms in the law, and the steps the department must take to correct any missing or incorrect address data. The regulations proved to have additional utility when the implementation was challenged in court. In upholding the law, the court cited the regulations as evidence that MDP followed a careful and consistent process in adjusting the census data. Maryland also published reports on how the new law was implemented. Sharing this information allowed the public, as well as policymakers and legislatures, to understand the impact of the new law and its effect on local districts. Both New York and Maryland published the adjusted data on their websites, so that local redistricting bodies as well as policymakers, researchers, and members of the public could access and examine it.¹⁴⁹

c. Inter-Agency Collaboration

Reforming prison gerrymandering requires agencies that do not usually work together to collaborate and communicate. The agencies may not be familiar with each other's policies, or share a common vocabulary. One of the biggest challenges identified in both Maryland and New York was the implementing agency's lack of familiarity with the structure of the corrections system, the different types of facilities, why those differences were significant, or how the facilities created and maintained data. To alleviate this confusion, the redistricting and corrections agencies should form an integrated team at the earliest stage of implementation to share information and educate each other about relevant policies and procedures as well as data standards, and to create a common understanding and language. Legal counsel should be included in these conversations to assist with statutory and regulatory interpretation.

CONCLUSION

Officials in Maryland and New York were the first in the country to take on the challenge of correcting the distortions of democracy caused by prison gerrymandering. Their combined experiences demonstrate how diverse state and local agencies can work together to successfully implement new and important policy reforms, and provide a valuable resource for policymakers and advocates across the country seeking to implement similar reforms. Today there is renewed attention to addressing the injustice created by prison gerrymandering. The Census Bureau, in keeping with its goal of producing the most accurate census count possible, should continue re-evaluating its policy of how it enumerates the prison population, and ultimately issue new guidance for tabulating incarcerated persons at their home addresses. Meanwhile, states across the country should implement their own solutions for reallocating individuals back to their home communities, in order to create more equitable and representative districts. These reforms, together, will realize the principle of one person-one vote, and ensure that prison gerrymandering no longer distorts our democracy. ■

**Summary of Comments Received in Response to the “2020 Decennial Census Residence Rule and Residence Situations; Notice and Request for Comment,”
80 Federal Register 28950 (May 20, 2015)**

Overview

The U.S. Census Bureau is currently reviewing the 2010 Census residence rule and situations to determine if clarifications, revisions, or changes are needed to the rule or situations for the 2020 Census. On May 20, 2015, the Census Bureau published a notice in the *Federal Register* asking for public comment on the 2010 residence rule and situations, and suggestions for changes to be made for the 2020 Census. The Census Bureau received 252 submission letters containing 262 comments to the notice during the 60-day comment period that ended on July 20, 2015. (Some submission letters included multiple comments.)

Summary of Comments

Of the 262 comments received, 162 pertain to where we count prisoners¹ and 87 pertain to where we count military personnel overseas. We also received two comments on people in group homes for juveniles, two comments on people in residential treatment centers for juveniles, and one comment on students in boarding schools. We also received one comment on the residence rule itself and one comment on each of four other residence situations: visitors on census day, people who live in more than one place, people without a usual residence, and nonrelatives of the householder. Finally, we received three comments that covered broader issues: one pertaining to how the residence rule and situations are communicated, one pertaining to how field staff are trained on the residence rule and situations, and one on how alternative addresses are collected from certain types of group quarters (GQs). Table 1 summarizes all the comments received.

¹ The majority of comments received on this topic used the terms ‘prisoner,’ ‘incarcerated,’ or ‘inmate.’ Although the terminology is not exactly what the Census Bureau uses in the residence rule documentation, the Census Bureau believes the context of the comments suggests the comments apply to people in Federal and State Prisons, local jails and other municipal confinement facilities, and possibly Federal detention centers. References in this document to “prisons” or “prisoners” should be interpreted as referring to all of these Group Quarters types.

	Number	Percent of All Comments
Total	262	100%
Prisoners	162	61.8%
Military Deployed Overseas	87	33.2%
Group Homes for Juveniles	2	0.8%
Residential Treatment Centers for Juveniles	2	0.8%
Boarding School Students	1	0.4%
Residence Rule	1	0.4%
Visitors on Census Day	1	0.4%
People Who Live in More Than One Place	1	0.4%
People Without a Usual Residence	1	0.4%
Nonrelatives of the Householder	1	0.4%
Issues other than Residence Rule or Situations	3	1.1%

Summary of Comments on Prisoners

Of the 162 comments pertaining to prisoners, 155 stated that prisoners should be counted at their home or pre-incarceration address (See Table 2). They stated that counting prisoners at the prison inaccurately represents the prisoners' home communities, inflates the political power of the area where the prison is located, and deflates the political power in the prisoners' home communities. These commenters suggested that this distorts the redistricting process. A number of these commenters also specifically commented that counting prisoners away from their home address goes against the principle of equal representation, and some further noted that the current residence rule for prisoners is inconsistent with their state laws regarding residency for elections.

One of these comments focused only on inmates in local jails awaiting trial, noting that as they are presumed innocent, they should be counted at their usual residence.

A number of commenters argued that the “usual residence” concept itself should change as it relates to incarcerated persons, arguing that the tremendous increase in the number of incarcerated people in the last 30 years and the Supreme Court’s support of equal representation warranted a change in the interpretation of the concept of “usual residence.”

Additional arguments cited were that prisoners do not interact or participate in the civic life of the community where they are incarcerated, are there involuntarily, and generally do not plan to remain in that community upon their release.

Six comments were in support of the 2010 practice of counting prisoners at the prison, arguing that adjusting prisoners’ locations would be difficult, expensive, add unneeded complexity, and would be prone to inaccuracy. Of the six comments in support of counting prisoners at the prison, one mentioned a concern that adjusting the prisoners’ locations could disenfranchise minorities in rural areas, and two argued that changing the current practice could open the door to future Census population count adjustments motivated by political gain.

We also received a comment suggesting the Census Bureau establish an exact time on Census Day to record where people are, and use that to determine where to count people who may be in transit to/from/between prison facilities.

	Number	Percent
Total	162	100%
Support changing guidance and counting at some other address	155	96.0%
Support current situational guidance (count at prison)	6	3.4%
Suggest Census Bureau establish exact time on Census Day to record people	1	0.6%

Summary of Comments on the Military Overseas

Of the 87 comments we received pertaining to the military overseas, all argued for counting military service members overseas on short-term deployments at their home base or port (See Table 3). Some of the comments also added that deployed military with spouses should be counted with their families. The commenters also suggested that the Census Bureau work with

military bases to locate more accurate administrative records for counting deployed military and use administrative records to also provide socioeconomic information on the deployed military.

There are two issues referenced in these comments. First of all, the comments generally refer to military personnel *deployed* overseas, making a distinction from military personnel *stationed* overseas. (In censuses prior to 2010 where the military overseas were counted, deployed and stationed personnel were treated the same.) Second, the comments indicate that not only do they want military personnel deployed overseas to be counted at their “usual residence,” “last duty station,” or “home base or port,” (which we are inferring to mean the same thing), they want these personnel counted in the resident population rather than the overseas population (which is used for apportionment purposes only). Some comments explicitly state this, but for many it is implied. For example, many comments referred to the need for counting deployed military in the communities where they usually reside, because doing otherwise “produces flawed data that harms funding and planning in military communities.” Another comment referred to ensuring “communities have the needed resources to support these soldiers and their families.” These and other comments seem to refer to local level planning and funding that is normally determined using the Census resident population data (available down to the tabulation block level) and not the apportionment counts, which are only available at the state level.

One of the 87 comments drew a connection between how the Census Bureau counts deployed military overseas and how we count U.S. military personnel on U.S. military vessels with a U.S. homeport, to support his argument. The *Residence Rule and Residence Situations for the 2010 Census* document states that the latter are “counted at the onshore U.S. residence where they live and sleep most of the time. If they have no onshore U.S. residence, they are counted at their vessel’s homeport.” The commenter argued that this is inconsistent with how we have counted deployed military with a U.S. land base or post, and asked that all branches of service be treated the same and counted at their residence or home base/port.

	Number	Percent
Total	87	100.0%
Support counting in resident population at person's home base or port	87	100.0%

Summary of Comments on Group Homes for Juveniles and Residential Treatment Centers for Juveniles

We received two comments on group homes for juveniles and two comments on residential treatment centers for juveniles. All four of the comments supported counting the juveniles in these situations at their “household residence.” One of the comments on the group homes and

one of the comments on the residential treatment centers further stated that the juveniles should only be counted at their household residence if it is in the same state as the facility. If the residence is not in the same state, they should be counted at the facility. All four comments argued that counting juveniles at the facility inflates the political power of the area where the facility is located and dilutes the representation of the juveniles' home communities.

Summary of the Comment on Boarding Schools

We received one comment pertaining to boarding schools. The commenter suggested applying the current guidance for students attending college to students attending boarding schools. The commenter noted that for foreign students attending boarding school, the school is their usual residence most of the year, and their parents live overseas. Therefore, these students likely were not counted under the 2010 guidance, even though they reside in the United States most of the year, because they do not have a parental home in the United States.

Summary of Comments on the Residence Rule, Visitors on Census Day, People Who Live in More Than One Place, People Without a Usual Residence and Nonrelatives of the Householder

We received a letter from the National Lesbian, Gay, Bisexual, Transgender and Queer (LGBTQ) Task Force that included five comments, one on the residence rule itself and one comment on each of the following four situations: visitors on census day, people who live in more than one place, people without a usual residence, and nonrelatives of the householder. The letter commented on the “unique ways in which lesbian, gay, bisexual, transgender, and queer (LGBTQ) people often experience homelessness” and cited an argument that LGBTQ people are “disproportionately likely to experience homelessness” The writer argued that LGBTQ people experiencing homelessness are more likely to avoid shelters and instead “couch-surf,” “trade sex for shelter,” or “stay with friends or family.” Therefore, the writer argues,

“LGBTQ people may be less likely to be regarded as ‘residents’ by those with whom they are staying. Census respondents might assume that such people have another residence where they spend more time or might otherwise dismiss counting them as part of their residence.”

The comment pertaining to the “Visitors on Census Day” situation was to eliminate it as a separate situation and merge it into the “People Away From Their Usual Residence on Census Day” situation. The comments on the residence rule and the other three situations were to add specific wording to provide clearer guidance so that people experiencing homelessness might recognize that these situations apply to them.

Other Comments

We received three comments that were unique in that they did not address the residence rule directly, nor did they address any particular situation. One comment argued for the importance of “an easily-interpreted and logically consistent residence rule for each type of residence situation,” including “how respondents should interpret the often-used Residence Rule phrase ‘most of the time.’” The commenter went on to argue for applying and communicating the rules consistently across the country and cited the need for sound training for 2020 Census field workers, clear communication to 2020 Census partners and the public, and a “designated point-of-contact for residence determination.”

A second comment encouraged the Census Bureau to produce summary file tabulations based on the answers to the “Does Person [X] sometimes live or stay somewhere else?” question, arguing that it would “help facilitate the best interpretation and use of decennial census data at the state and local level.”

Finally, we received one comment asking the Census Bureau to revisit the 2010 Individual Census Report (ICR) questions related to collecting information about where else the respondent might live or stay, and making it more consistent with the household Census questionnaire.

Parker at RulemakingEAs@ee.doe.gov or by telephone at (240) 562-1645. The draft environmental assessment also is available for viewing in the Golden Public Reading Room at:

www.energy.gov/node/1840021.

SUPPLEMENTARY INFORMATION: DOE has published a notice of proposed rulemaking in the *Federal Register* pertaining to energy efficiency for manufactured housing. 81 FR 39756 (June 17, 2016). Pursuant to the National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), DOE EERE has prepared a draft environmental assessment (EA) to evaluate the environmental impacts of this proposed action. DOE is seeking public comment on the environmental issues addressed in the EA. In conjunction with issuance of this draft EA for public review and comment, DOE is issuing a request for information that will help it analyze potential impacts on indoor air quality (IAQ) from the proposed energy conservation standards, in particular sealing manufactured homes tighter.

Statutory Authority: National Environmental Policy Act (NEPA) (42 U.S.C. 4321 *et seq.*).

Issued in Golden, CO, on June 21, 2016.

Robin L. Sweeney,

Director, Environment, Safety and Health Office, Office of Energy Efficiency and Renewable Energy.

[Docket Number 160526465-6465-01]

Proposed 2020 Census Residence Criteria and Residence Situations

AGENCY: Bureau of the Census, Department of Commerce.

ACTION: Proposed criteria and request for comment.

SUMMARY: The Bureau of the Census (U.S. Census Bureau) is providing notification and requesting comment on the proposed "2020 Census Residence Rule and Residence Situations." In addition, this document contains a summary of comments received in response to the May 20, 2015, *Federal Register* document, as well as the Census Bureau's responses to those comments. The residence criteria are used to determine where people are counted during each decennial census. Specific residence situations are

included with the criteria to illustrate how the criteria are applied.

DATES: To ensure consideration, comments must be received by August 1, 2016.

ADDRESSES: Direct all written comments regarding the proposed "2020 Census Residence Rule and Residence Situations" to Karen Humes, Chief, Population Division, U.S. Census Bureau, Room 6H174, Washington, DC 20233; or Email [POP.2020.Residence.Rule@census.gov].

FOR FURTHER INFORMATION CONTACT: Population and Housing Programs Branch, U.S. Census Bureau, 6H185, Washington, DC 20233, telephone (301) 763-2381; or Email [POP.2020.Residence.Rule@census.gov].

SUPPLEMENTARY INFORMATION:

A. Background

The U.S. Census Bureau is committed to counting every person in the 2020 Census once, only once, and in the right place. The fundamental reason that the decennial census is conducted is to fulfill the Constitutional requirement (Article I, Section 2) to apportion the seats in the U.S. House of Representatives among the states. Thus, for a fair and equitable apportionment, it is crucial that the Census Bureau counts everyone in the right place during the decennial census.

The residence criteria are used to determine where people are counted during each decennial census. Specific residence situations are included with the criteria to illustrate how the criteria are applied.

1. The Concept of Usual Residence

The Census Act of 1790 established the concept of "usual residence" as the main principle in determining where people were to be counted, and this concept has been followed in all subsequent censuses. "Usual residence" has been defined as the place where a person lives and sleeps most of the time. This place is not necessarily the same as a person's voting residence or legal residence.

Determining usual residence is straightforward for most people. However, given our nation's wide diversity in types of living arrangements, the concept of usual residence has a variety of applications. Some examples include people experiencing homelessness, people with a seasonal/second residence, people in prisons, people in the process of moving, people in hospitals, children in shared custody arrangements, college students, live-in employees, military

personnel, and people who live in workers' dormitories.

Applying the usual residence concept to real living situations means that people will not always be counted at the place where they happen to be staying on Census Day (April 1, 2020) or at the time they complete their census questionnaire. For example, some of the ways that the Census Bureau applies the concept of usual residence include the following:

- People who are away from their usual residence while on vacation or on a business trip on Census Day are counted at their usual residence.
- People who live at more than one residence during the week, month, or year are counted at the place where they live most of the time.
- People without a usual residence are counted where they are staying on Census Day.
- People in certain types of group facilities¹ on Census Day are counted at the group facility.

2. Reviewing the "2020 Census Residence Rule and Residence Situations"

Every decade, the Census Bureau undertakes a review of the "Residence Rule and Residence Situations" to ensure that the concept of usual residence is interpreted and applied as intended in the decennial census, and that these interpretations are consistent with the intent of the Census Act of 1790, which was authored by a Congress that included many of the framers of the U.S. Constitution and directed that people were to be counted at their usual residence. This review also serves as an opportunity to identify new or changing living situations resulting from societal change, and to create or revise the guidance regarding those situations in a way that is consistent with the concept of usual residence.

This decade, as part of the review, the Census Bureau requested public comment on the "2010 Census Residence Rule and Residence Situations" through the *Federal Register* (80 FR 28950) on May 20, 2015, to allow the public to recommend any changes they would like to be considered for the 2020 Census. The Census Bureau received 252 comment submission letters or emails that contained 262 total comments. (Some comment submissions included comments or suggestions on more than

¹ In this document, "group facilities" (referred to also as "group quarters" (GQ)) are defined as places where people live or stay in group living arrangements, which are owned or managed by an entity or organization providing housing and/or services for the residents.

one residence situation.) A summary of these comments and the Census Bureau's responses are included in section B of this document.

In addition to the Census Bureau's responses to comments that are described in section B of this document, section C provides a summary of each of the proposed changes to where people would be counted in the 2020 Census compared to the 2010 Census. These proposed changes are based on the consideration of public comments received, as well as an internal review of the criteria and situations.

The Census Bureau is requesting public comment on the proposed "2020 Census Residence Rule and Residence Situations", as listed in section D of this document. The Census Bureau is requesting public comment on the proposed "2020 Census Residence Rule and Residence Situations," as listed in section D of this document. The Census Bureau anticipates publishing the final "2020 Census Residence Rule and Residence Situations" by the end of 2016. At that time, the Census Bureau will also respond to the comments received regarding the proposed "2020 Census Residence Rule and Residence Situations."

B. Summary of Comments Received in Response to a Review of the "2010 Census Residence Rule and Residence Situations"

On May 20, 2015, the Census Bureau published a document in the Federal Register asking for public comment on the "2010 Census Residence Rule and Residence Situations." Of the 262 comments received, 162 pertained to where prisoners² are counted, and 87 pertained to where military personnel overseas are counted. Two comments pertained to people in group homes for juveniles, two comments to people in residential treatment centers for juveniles, and one comment to students in boarding schools. Also, one comment pertained to the residence criteria, and one comment to each of four other residence situations: Visitors on Census Day, people who live in more than one place, people without a usual residence, and nonrelatives of the householder. Finally, three comments covered

²The majority of comments received on this topic used the terms "prisoner," "incarcerated," or "inmate." Although the terminology is not exactly what is used in the residence rule documentation, the context of the comments suggests that they apply to people in federal and state prisons (GQ type 102 and 103), local jails and other municipal confinement facilities (GQ type 104), and possibly federal detention centers (GQ type 101). References in this document to "prisons," or "prisoners," should be interpreted as referring to all of these GQ types.

broader issues: One pertaining to how the residence criteria and situations are communicated, one pertaining to how field staff is trained on the residence criteria and situations, and one on how alternative addresses are collected from certain types of group facilities.

1. Comments on Prisoners

Of the 162 comments pertaining to prisoners, 156 suggested that prisoners should be counted at their home or pre-incarceration address. The rationales included in these comments were as follows:

- Counting prisoners at the prison inaccurately represents the prisoners' home communities, inflates the political power of the area where the prison is located, and deflates the political power in the prisoners' home communities. This distorts the redistricting process.
- Counting prisoners away from their home address goes against the principle of equal representation.
- The current residence criteria for prisoners is inconsistent with some states' laws regarding residency for elections.
- The "usual residence" concept itself should change, as it relates to incarcerated persons, because the tremendous increase in the number of incarcerated people in the last 30 years, and the Supreme Court's support of equal representation, warrants a change in the interpretation of the concept of "usual residence."
- Prisoners do not interact or participate in the civic life of the community where they are incarcerated, are there involuntarily, and generally do not plan to remain in that community upon their release.
- One comment stated that inmates in local jails who are awaiting trial are presumed innocent, and therefore should not be counted at the jail.

Six comments were in support of the 2010 practice of counting prisoners at the prison, stating that adjusting prisoners' locations would be difficult, expensive, add unneeded complexity, and would be prone to inaccuracy. Of the six comments in support of counting prisoners at the prison, one mentioned a concern that adjusting the prisoners' locations could disenfranchise minorities in rural areas, and four said that changing the current practice could open the door to future census population count adjustments motivated by political gain.

Census Bureau Response: The Census Bureau has determined that the practice of counting prisoners at the correctional facility for the 2020 Census would be consistent with the concept of usual residence, as established by the Census

Act of 1790. As noted in section A.1 of this document, "usual residence" is defined as the place where a person lives and sleeps most of the time, which is not always the same as their legal residence, voting residence, or where they prefer to be counted. Therefore, counting prisoners anywhere other than the facility would violate the concept of usual residence, since the majority of people in prisons live and sleep most of the time at the prison.

States are responsible for legislative redistricting. The Census Bureau works closely with the states and recognizes that some states have decided, or may decide in the future, to 'move' their prisoner population back to the prisoners' pre-incarceration addresses for redistricting and other purposes. Therefore, following the 2020 Census, the Census Bureau plans to offer a product that states can request, in order to assist them in their goals of reallocating their own prisoner population counts. Any state that requests this product will be required to submit a data file (indicating where each prisoner was incarcerated on Census Day, as well as their pre-incarceration address) in a specified format. The Census Bureau will review the submitted file and, if it includes the necessary data, provide a product that contains supplemental information the state can use to construct alternative within-state tabulations for its own purposes. However, the Census Bureau will not use the information in this product to make any changes to the official decennial census counts.

The Census Bureau also plans to provide group quarters data after the 2020 Census sooner than it was provided after the 2010 Census. For the 2010 Census, the Census Bureau released the *Advance Group Quarters Summary File* showing the seven major types of group quarters, including correctional facilities for adults and juvenile facilities. This early³ release of data on the group quarters population was beneficial to many data users, including those in the redistricting community who must consider whether to include or exclude certain populations when redrawing boundaries as a result of state legislation. The Census Bureau is planning to incorporate similar group quarters

³The *Advance Group Quarters Summary File* was released on April 20, 2011, which was earlier than when that GQ data was originally planned to be released in the *Summary File 1* that was released on June 16–August 25, 2011. The earlier release made it easier to use these GQ data in conjunction with the *Redistricting Data (Pub. L. 94-171) Summary File*, which was released on February 3–March 24, 2011.

information in the standard *Redistricting Data (Pub. L. 94-171) Summary File* for 2020.

2. Comments on the Military Overseas

Of the 87 comments received pertaining to the military overseas, all suggested that the Census Bureau treat military personnel who are temporarily deployed overseas on a short-term basis differently than military personnel who are stationed overseas on a more long-term basis. More specifically, these comments suggested that military personnel who are deployed overseas should be counted at their home base or port. The commenters also suggested that the Census Bureau work with military bases to locate more accurate administrative records for counting deployed military and use administrative records to provide socioeconomic information on the deployed military.

In the 2010 Census, the Census Bureau counted all military personnel deployed or stationed overseas in their 'home of record' state for apportionment purposes only. Their home of record was provided by the Department of Defense (DOD),⁴ and those state counts were added to the state population counts that were used to calculate the apportionment of seats for each state in the U.S. House of Representatives.

The commenters not only indicated that they want military personnel deployed overseas to be counted at their "usual residence," "last duty station," or "home base or port," (which are inferred to mean the same thing), but also that they want the Census Bureau to collect all decennial census demographic data on these personnel and include them in the local community-level resident population counts, rather than only using a basic population count of them for determining the state-level apportionment counts. For example, many comments referred to the need for counting deployed military in the communities where they usually reside, because doing otherwise "produces flawed data that harms funding and planning in military communities." Another comment referred to ensuring "communities have the needed resources to support these soldiers and their families." These and other

⁴ Home of record is generally the permanent home of the person at the time of entry or enlistment into the Armed Forces, as included on personnel files. If home of record information was not available for a person, the DOD used the person's "legal residence" (the residence a member declares for state income tax withholding purposes), or thirdly, "last duty station," to assign a home state.

comments may refer to local-level planning and funding that is normally determined using the Census resident population data (available down to the block level) and not the apportionment counts, which are only available at the state level.

To support the argument for counting deployed military overseas at their usual residence in the United States, one of the 87 commenters compared how the Census Bureau counts U.S. military personnel deployed to a land-based location overseas versus U.S. military personnel on U.S. military vessels with a U.S. homeport. The "2010 Census Residence Rule and Residence Situations" stated that the latter are "counted at the onshore U.S. residence where they live and sleep most of the time. If they have no onshore U.S. residence, they are counted at their vessel's homeport." The commenter argued that this is inconsistent with how the Census Bureau has counted military personnel who are deployed to a land-based location overseas (while stationed at a location in the United States), and asked that all branches of service be treated the same and counted at their residence or home base/port.

Census Bureau Response: The Census Bureau has determined that there is a distinction between personnel who are deployed overseas and those who are stationed or assigned overseas. Deployments are typically short in duration, and the deployed personnel will be returning to their usual residence where they are stationed or assigned in the United States after their temporary deployment ends. Personnel stationed or assigned overseas generally remain overseas for longer periods of time, and often do not return to the previous stateside location from which they left. Therefore, counting deployed personnel at their usual residence in the United States follows the standard interpretation of the residence criteria to count people at their usual residence if they are temporarily away for work purposes. This change would provide consistency with how the Census Bureau counts U.S. military personnel on U.S. military vessels.

Based on the considerations described in the previous paragraph, for the 2020 Census, the Census Bureau proposes using administrative data from the DOD to count deployed personnel at their usual residence in the United States.⁵ The Census Bureau would continue to

⁵ The ability to successfully integrate the DOD data on deployed personnel into the resident population counts must be evaluated and confirmed prior to the 2020 Census.

count military and civilian employees of the U.S. Government who are stationed or assigned outside the United States, and their dependents living with them, in their home state, for apportionment purposes only, using administrative data provided by the DOD and the other federal agencies that employ them.

3. Comments on Group Homes for Juveniles and Residential Treatment Centers for Juveniles

Two comments pertained to group homes for juveniles and two comments to residential treatment centers for juveniles. All four of the comments supported counting the juveniles in these situations at their "household residence." One of the commenters on the group homes and one of the commenters on the residential treatment centers further stated that the juveniles should only be counted at their household residence if it is in the same state as the facility. If the residence is not in the same state, these two commenters stated that the juvenile should be counted at the facility. All four commenters argued that counting juveniles at the facility inflates the political power of the area where the facility is located and dilutes the representation of the juveniles' home communities.

Census Bureau Response: The Census Bureau reviewed where juveniles in these types of facilities are counted, based on the concept of usual residence. Most juveniles living in group homes are there for long periods of time and do not have a usual home elsewhere. The group home is where they live and sleep most of the time, so that is their usual residence. Conversely, most people in residential treatment centers for juveniles only stay at the facility temporarily and often have a usual home elsewhere that they return to after treatment is completed.

Based on the considerations described in the previous paragraph, the Census Bureau has determined that the practice of counting people in group homes for juveniles at the facility is consistent with the concept of usual residence. However, for the 2020 Census, the Census Bureau proposes to count people in residential treatment centers for juveniles at the residence where they live and sleep most of the time. If they do not have a usual home elsewhere, they would be counted at the facility.

4. Comment on Boarding Schools

One of the comments received was related to boarding schools. The commenter suggested applying the current guidance for students attending college to students attending boarding

schools. In the past, students at boarding schools were counted at their parental home, while college students living away from their parental home while attending school were counted at the on-campus or off-campus residence where they lived and slept most of the time. The commenter noted that for foreign students attending boarding school, the school is their usual residence most of the year, and their parents live overseas. Therefore, these students likely were not counted under the 2010 guidance, even though they reside in the United States most of the year, because they do not have a parental home in the United States.

Census Bureau Response: The Census Bureau has historically counted boarding school students at their parental home, and has determined that it will continue doing so because of the students' age and dependency on their parents, and the likelihood that they would return to their parents' residence when they are not attending their boarding school (e.g., weekends, summer/winter breaks, and when they stop attending the school).

5. Comments on Specific Wording of the "Residence Rule and Residence Situations"

One letter commented on the specific wording of the residence criteria and four residence situations. The letter focused on people who experience homelessness in nontraditional ways, avoid shelters, and instead stay with family, friends, or acquaintances.

(a) Residence Criteria

The comment was to add a fourth bullet (in addition to the three bullets that we already use to present the three main principles of the residence criteria, as shown in section D of this document) with language to make it clear where people experiencing homelessness, who are not in a shelter or facility, are counted.

Census Bureau Response: The Census Bureau has determined that the current wording of the residence criteria will be retained, because they are purposely written to broadly encapsulate all residence situations in a succinct way, and it is consistent with the requirement to count people at their usual residence, as originally prescribed by the Census Act of 1790. However, in section B.5.d of this document, the Census Bureau proposes an addition to the residence situations in order to provide more clarity on where people who are experiencing homelessness are counted.

(b) Visitors on Census Day

The commenter suggested eliminating the "Visitors on Census Day" residence situation and merging it into the "People Away From Their Usual Residence on Census Day" situation. The commenter was concerned that the way the situation was described in the 2010 documentation implied that "visitors" had another home to return to, which is not the case for visitors who are experiencing homelessness.

Census Bureau Response: The Census Bureau has determined that it will retain the separate "Visitors on Census Day" situation, but proposes removing the phrase "who will return to their usual residence" from the description. Additionally, the following sentence would be added to the end of the situation wording to further clarify that not all visitors have another home to return to: "If they do not have a usual residence to return to, they are counted where they are staying on Census Day."

(c) People Who Live in More Than One Place

This commenter also suggested changing the 2010 wording for the category title "People Who Live in More Than One Place" to "People With Multiple Residences." The examples in this category were not intended to address people experiencing homelessness. However, the commenter noted that people experiencing homelessness might stay in a different place from night to night, and therefore could also be interpreted as "People Who Live in More Than One Place."

Census Bureau Response: The Census Bureau was concerned that the commenter's suggested category title of "People with Multiple Residences," might also wrongly be interpreted as applying only to people who own multiple residences. Therefore, the Census Bureau proposes to change the category title to "People Who Live or Stay in More Than One Place."

(d) People Without a Usual Residence

The commenter also suggested adding a residence situation for "couch-surfers, youth experiencing homelessness, or other people staying in your residence for short or indefinite periods of time" to the "People Without a Usual Residence" category. The commenter believed that the examples included in this category in 2010 only addressed the more typical conception of homelessness (e.g., people at soup kitchens or at non-sheltered outdoor locations), which does not align with how many other people experience homelessness in less recognized ways.

Census Bureau Response: The Census Bureau proposes to add a residence situation description to a new category called "People in Shelters and People Experiencing Homelessness," which clarifies where people are counted if they are experiencing homelessness and staying with friends or other people for short or indefinite periods of time (see section D.21.f of this document for exact wording).

(e) Nonrelatives of the Householder

Finally, the commenter suggested adding the same new situation, "couch-surfers, youth experiencing homelessness, or other people staying in your residence for short or indefinite periods of time" to the "Nonrelatives of the Householder" category.

Census Bureau Response: The Census Bureau proposes to address this comment by adding a situation for "Other nonrelatives, such as friends" to this category. Additionally, the Census Bureau proposes changing the title of this category from "Nonrelatives of the Householder" to "Relatives and Nonrelatives" and adding some situations that address relatives frequently missed or counted in the wrong place during the Census.

6. Other Comments

Three of the comments received did not address the residence criteria directly, nor did they address any particular residence situation.

(a) Clear Communication on the Residence Criteria and Residence Situations

One commenter suggested applying and communicating the residence criteria consistently across the country and cited the need for sound training for 2020 Census field workers, clear communication to 2020 Census partners and the public, and a "designated point-of-contact for residence determination."

Census Bureau Response: The Census Bureau is proposing many changes to the language and organization of the residence criteria and residence situations documentation to assist people in interpreting the criteria. However, issues related to training staff and the structure of specific 2020 Census operations are out of scope for this document.

(b) Questionnaire Content and Tabulations

One comment requested that the Census Bureau revisit the 2010 Individual Census Report (ICR) questions related to collecting information about where else the respondent might live or stay, and

making it more consistent with the household Census questionnaire. A second comment encouraged the Census Bureau to produce summary file tabulations based on the answers to the "Does Person [X] sometimes live or stay somewhere else?" question, arguing that it would "help facilitate the best interpretation and use of decennial census data at the state and local level."

Census Bureau Response: These comments are out of scope for this document.

C. Proposed Changes to the "2020 Census Residence Rule and Residence Situations"

Most of the provisions regarding where people are counted, which are described in the proposed "2020 Census Residence Rule and Residence Situations" (section D of this document), would remain unchanged from those that were used for the 2010 Census. Therefore, this section C of this document will help the reader by providing a brief description of each of the proposed changes to where people are counted. All other changes to the proposed wording and/or presentation of the residence criteria and residence situations, as compared to how they were written for the 2010 Census, would be made in order to provide more clarity or to document provisions that were not explicitly stated in the past. (In other words, any differences between the 2010 and proposed 2020 Census residence criteria and situations documents that are not explained in section C of this document are only clarifications, rather than actual changes to the residence criteria or to where people would be counted in the decennial census.)

1. Federally Affiliated Overseas

(a) Military and Civilian Employees of the U.S. Government Who Are Deployed Overseas

For the 2010 Census, military and civilian employees of the U.S. Government who were deployed or stationed/assigned outside the United States (and their dependents living with them outside the United States) were counted (using administrative data) in their home state for apportionment purposes only. For the 2020 Census, there would be no change to how the Census Bureau counts the military and civilian Federal employees who are stationed or assigned outside the United States. However, there would be a change for deployed personnel, such that military and civilian employees of the U.S. Government who are deployed outside the United States (while

stationed or assigned in the United States) would be counted at their usual residence in the United States and included in all 2020 Census data products (rather than only the apportionment counts). This change seeks to count deployed personnel in a way that is more consistent with the concept of usual residence, based on the short duration of most deployments and the fact that the personnel will return to their usual residence where they are stationed or assigned in the United States after their temporary deployment ends. More details about the considerations for this change can be found in section B of this document.

(b) Military and Civilian Employees of the U.S. Government Who Are Non-Citizens and Are Deployed or Stationed/Assigned Overseas

The "2010 Census Residence Rule and Residence Situations" were not clearly consistent regarding whether citizenship was a criterion for being included in the federally affiliated overseas population. The wording of the residence situation for military personnel overseas did not specify any citizenship criteria. However, the wording for Federal civilian employees overseas did specifically refer to U.S. citizens only, and the operational plan for the 2010 Census Federally Affiliated Overseas Count specified that both military and civilian employees of the U.S. Government who were non-citizens were excluded from the overseas counts, despite the fact that non-citizens were included in the stateside population.

After the 2010 Census, the operational assessment report for the Federally Affiliated Overseas Count recommended that the "2020 Census Residence Rule and Residence Situations" should make the guidance regarding citizenship clear and consistent not only across both military and civilian employees overseas, but also across the overseas and stateside populations. When considering such a change, the Census Bureau concluded that the rationales that are used for including the federally affiliated overseas population in the decennial census (e.g., that they are temporarily away in service to our country's government) are equally applicable to citizens and non-citizens alike. Therefore, for the 2020 Census, military and civilian employees of the U.S. Government who are deployed or stationed/assigned overseas and are not U.S. citizens (but must be legal U.S. residents to meet the requirements for federal employment) would be included in the Federally Affiliated Overseas Count (which would follow the guidelines for deployed and stationed/

assigned military personnel that are described in section C.1.a of this document).

2. Crews of U.S. Flag Maritime/Merchant Vessels

For the 2010 Census, crews of U.S. flag maritime/merchant vessels were counted based on where the vessel was located on Census Day. If the vessel was docked in a U.S. port or sailing from one U.S. port to another U.S. port, then the crewmembers were counted at their onshore usual residence in the United States. (Or if they had no onshore usual residence, they were counted at the vessel's U.S. port of departure.) Otherwise, the crewmembers were not counted in the census if the vessel was sailing from a U.S. port to a foreign port, sailing from a foreign port to a U.S. port, sailing from one foreign port to another foreign port, or docked in a foreign port.

For the 2020 Census, there would be no change to how the Census Bureau counts crews of U.S. flag maritime/merchant vessels that are docked in a U.S. port, sailing from one U.S. port to another U.S. port, sailing from one foreign port to another foreign port, or docked in foreign port. However, there would be a change for crews of U.S. flag maritime/merchant vessels that are sailing from a U.S. port to a foreign port or sailing from a foreign port to a U.S. port, such that the crewmembers of these vessels would be counted at their onshore usual residence in the United States. (Or if they have no onshore usual residence, they would be counted at the U.S. port that the vessel is sailing to or from.) This change seeks to count crews of U.S. flag maritime/merchant vessels in a way that is more consistent with the concept of usual residence, based on the fact that mariners sailing between U.S. and foreign ports typically have the same pattern of usual residence as mariners sailing between two U.S. ports (i.e., they retain an onshore residence in the United States where they live and sleep most of the time).

3. Residential Treatment Centers for Juveniles

For the 2010 Census, all juveniles staying in residential treatment centers for juveniles on Census Day were counted at the facility. For the 2020 Census, juveniles staying in this type of facility would be counted at a usual home elsewhere if they have one (where they live and sleep most of the time around Census Day) and they report a useable address for that usual home elsewhere. If they do not have a usual home elsewhere, then they would be counted at the facility. This change seeks to count juveniles staying in

residential treatment centers for juveniles in a way that is more consistent with the concept of usual residence, based on the short average length of stay at this facility type, and the fact that juveniles often retain a usual home elsewhere while staying at this facility type. More details about the considerations for this change can be found in section B of this document.

4. Religious Group Quarters

For the 2010 Census, people staying in religious group quarters were counted at a usual home elsewhere if they had one (where they lived and slept most of the time around Census Day) and they reported a useable address for that usual home elsewhere. If they did not have a usual home elsewhere, then they were counted at the facility. For the 2020 Census, all people staying in religious group quarters on Census Day would be counted at the facility.

D. The Proposed "2020 Census Residence Rule and Residence Situations"

The Residence Rule is used to determine where people are counted during the 2020 Census. The Rule says:

- Count people at their usual residence, which is the place where they live and sleep most of the time.
- People in certain types of group facilities on Census Day are counted at the group facility.
- People who do not have a usual residence, or who cannot determine a usual residence, are counted where they are on Census Day.

The following sections describe how the Residence Rule applies to certain living situations for which people commonly request clarification.

1. PEOPLE AWAY FROM THEIR USUAL RESIDENCE ON CENSUS DAY

(a) *People away from their usual residence on Census Day, such as on a vacation or a business trip, visiting, traveling outside the U.S., or working elsewhere without a usual residence there (for example, as a truck driver or traveling salesperson)*—Counted at the residence where they live and sleep most of the time.

2. VISITORS ON CENSUS DAY

(a) *Visitors on Census Day*—Counted at the residence where they live and sleep most of the time. If they do not have a usual residence to return to, they are counted where they are staying on Census Day.

3. FOREIGN CITIZENS IN THE U.S.

(a) *Citizens of foreign countries living in the U.S.*—Counted at the U.S.

residence where they live and sleep most of the time.

(b) *Citizens of foreign countries living in the U.S. who are members of the diplomatic community*—Counted at the embassy, consulate, United Nations' facility, or other residences where diplomats live.

(c) *Citizens of foreign countries visiting the U.S., such as on a vacation or business trip*—Not counted in the census.

4. PEOPLE LIVING OUTSIDE THE U.S.

(a) *People deployed outside the U.S.⁶ on Census Day (while stationed or assigned in the U.S.) who are military or civilian employees of the U.S. Government*—Counted at the U.S. residence where they live and sleep most of the time, using administrative data provided by federal agencies.⁷

(b) *People stationed or assigned outside the U.S. on Census Day who are military or civilian employees of the U.S. Government, as well as their dependents living with them outside the U.S.*—Counted as part of the U.S. federally affiliated overseas population, using administrative data provided by federal agencies.

(c) *People living outside the U.S. on Census Day who are not military or civilian employees of the U.S. Government and are not dependents living with military or civilian employees of the U.S. Government*—Not counted in the stateside census.

5. PEOPLE WHO LIVE OR STAY IN MORE THAN ONE PLACE

(a) *People living away most of the time while working, such as people who live at a residence close to where they work and return regularly to another residence*—

⁶In this document, "Outside the U.S." and "foreign port" are defined as being anywhere outside the geographical area of the 50 United States and the District of Columbia. Therefore, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, the Pacific Island Areas (American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands), and all foreign countries are considered to be "outside the U.S." Conversely, "stateside," "U.S. homeport," and "U.S. port" are defined as being anywhere in the 50 United States and the District of Columbia.

⁷Military and civilian employees of the U.S. Government who are deployed or stationed/assigned outside the U.S. (and their dependents living with them outside the U.S.) are counted using administrative data provided by the Department of Defense and the other Federal agencies that employ them. If they are deployed outside the U.S. (while stationed/assigned in the U.S.), the administrative data are used to count them at their usual residence in the U.S. Otherwise, if they are stationed/assigned outside the U.S., the administrative data are used to count them (and their dependents living with them outside the U.S.) in their home state for apportionment purposes only.

Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

(b) *People who live or stay at two or more residences (during the week, month, or year), such as people who travel seasonally between residences (for example, snowbirds)*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

(c) *Children in shared custody or other arrangements who live at more than one residence*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

6. PEOPLE MOVING INTO OR OUT OF A RESIDENCE AROUND CENSUS DAY

(a) *People who move into a new residence on or before Census Day*—Counted at the new residence where they are living on Census Day.

(b) *People who move out of a residence on Census Day and do not move into a new residence until after Census Day*—Counted at the old residence where they were living on Census Day.

(c) *People who move out of a residence before Census Day and do not move into a new residence until after Census Day*—Counted at the residence where they are staying on Census Day.

7. PEOPLE WHO ARE BORN OR WHO DIE AROUND CENSUS DAY

(a) *Babies born on or before Census Day*—Counted at the residence where they will live and sleep most of the time, even if they are still in a hospital on Census Day.

(b) *Babies born after Census Day*—Not counted in the census.

(c) *People who die before Census Day*—Not counted in the census.

(d) *People who die on or after Census Day*—Counted at the residence where they were living and sleeping most of the time as of Census Day.

8. RELATIVES AND NONRELATIVES

(a) *Babies and children of all ages, including biological, step, and adopted children, as well as grandchildren*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they

are staying on Census Day. (Only count babies born on or before Census Day.)

(b) *Foster children*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

(c) *Spouses and close relatives, such as parents or siblings*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

(d) *Extended relatives, such as grandparents, nieces/nephews, aunts/uncles, cousins, or in-laws*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

(e) *Unmarried partners*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

(f) *Housemates or roommates*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

(g) *Roomers or boarders*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

(h) *Live-in employees, such as caregivers or domestic workers*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

(i) *Other nonrelatives, such as friends*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

9. PEOPLE IN RESIDENTIAL SCHOOL-RELATED FACILITIES

(a) *Boarding school students living away from their parents' or guardians' home while attending boarding school below the college level, including Bureau of Indian Affairs boarding schools*—Counted at their parents' or guardians' home.

(b) *Students in residential schools for people with disabilities on Census Day*—Counted at the school.

(c) *Staff members living at boarding schools or residential schools for people with disabilities on Census Day*—Counted at the residence where they live and sleep most of the time. If they do not have a usual home elsewhere, they are counted at the school.

10. COLLEGE STUDENTS (and Staff Living in College Housing)

(a) *College students living at their parents' or guardians' home while attending college in the U.S.*—Counted at their parents' or guardians' home.

(b) *College students living away from their parents' or guardians' home while attending college in the U.S. (living either on-campus or off-campus)*—Counted at the on-campus or off-campus residence where they live and sleep most of the time. If they are living in college/university student housing (such as dormitories or residence halls) on Census Day, they are counted at the college/university student housing.

(c) *College students living away from their parents' or guardians' home while attending college in the U.S. (living either on-campus or off-campus) but staying at their parents' or guardians' home on break or vacation*—Counted at the on-campus or off-campus residence where they live and sleep most of the time. If they are living in college/university student housing (such as dormitories or residence halls) on Census Day, they are counted at the college/university student housing.

(d) *College students who are U.S. citizens living outside the U.S. while attending college outside the U.S.*—Not counted in the stateside census.

(e) *College students who are foreign citizens living in the U.S. while attending college in the U.S. (living either on-campus or off-campus)*—Counted at the on-campus or off-campus U.S. residence where they live and sleep most of the time. If they are living in college/university student housing (such as dormitories or residence halls) on Census Day, they are counted at the college/university student housing.

(f) *Staff members living in college/university student housing (such as dormitories or residence halls) on Census Day*—Counted at the residence where they live and sleep most of the time. If they do not have a usual home elsewhere, they are counted at the college/university student housing.

11. PEOPLE IN HEALTH CARE FACILITIES

(a) *People in general or Veterans Affairs hospitals (except psychiatric units) on Census Day, including newborn babies still in the hospital on Census Day*—Counted at the residence where they live and sleep most of the time. Newborn babies are counted at the residence where they will live and sleep most of the time. If patients or staff members do not have a usual home elsewhere, they are counted at the hospital.

(b) *People in mental (psychiatric) hospitals and psychiatric units in other hospitals (where the primary function is for long-term non-acute care) on Census Day*—Patients are counted at the facility. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the facility.

(c) *People in assisted living facilities⁸ where care is provided for individuals who need help with the activities of daily living but do not need the skilled medical care that is provided in a nursing home*—Residents and staff members are counted at the residence where they live and sleep most of the time.

(d) *People in nursing facilities/skilled-nursing facilities (which provide long-term non-acute care) on Census Day*—Patients are counted at the facility. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the facility.

(e) *People staying at in-patient hospice facilities on Census Day*—Counted at the residence where they live and sleep most of the time. If patients or staff members do not have a usual home elsewhere, they are counted at the facility.

12. PEOPLE IN HOUSING FOR OLDER ADULTS

(a) *People in housing intended for older adults, such as active adult communities, independent living, senior apartments, or retirement*

⁸ Nursing facilities/skilled-nursing facilities, in-patient hospice facilities, assisted living facilities, and housing intended for older adults may coexist within the same entity or organization in some cases. For example, an assisted living facility may have a skilled-nursing floor or wing that meets the nursing facility criteria, which means that specific floor or wing is counted according to the guidelines for nursing facilities/skilled-nursing facilities, while the rest of the living quarters in that facility are counted according to the guidelines for assisted living facilities.

communities—Residents and staff members are counted at the residence where they live and sleep most of the time.

13. U.S. MILITARY PERSONNEL

(a) *U.S. military personnel assigned to military barracks/dormitories in the U.S. on Census Day*—Counted at the military barracks/dormitories.

(b) *U.S. military personnel (and dependents living with them) living in the U.S. (living either on base or off base) who are not assigned to barracks/dormitories on Census Day*—Counted at the residence where they live and sleep most of the time.

(c) *U.S. military personnel assigned to U.S. military vessels with a U.S. homeport on Census Day*—Counted at the onshore U.S. residence where they live and sleep most of the time. If they have no onshore U.S. residence, they are counted at their vessel's homeport.

(d) *People who are active duty patients assigned to a military treatment facility in the U.S. on Census Day*—Patients are counted at the facility. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the facility.

(e) *People in military disciplinary barracks and jails in the U.S. on Census Day*—Prisoners are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the facility.

(f) *U.S. military personnel who are deployed outside the U.S. (while stationed in the U.S.) and are living on or off a military installation outside the U.S. on Census Day*—Counted at the U.S. residence where they live and sleep most of the time, using administrative data provided by the Department of Defense.

(g) *U.S. military personnel who are stationed outside the U.S. and are living on or off a military installation outside the U.S. on Census Day, as well as their dependents living with them outside the U.S.*—Counted as part of the U.S. federally affiliated overseas population, using administrative data provided by the Department of Defense.

(h) *U.S. military personnel assigned to U.S. military vessels with a homeport outside the U.S. on Census Day*—Counted as part of the U.S. federally affiliated overseas population, using administrative data provided by the Department of Defense.

14. MERCHANT MARINE PERSONNEL ON U.S. FLAG MARITIME/ MERCHANT VESSELS

(a) *Crews of U.S. flag maritime/merchant vessels docked in a U.S. port, sailing from one U.S. port to another U.S. port, sailing from a U.S. port to a foreign port, or sailing from a foreign port to a U.S. port on Census Day*—Counted at the onshore U.S. residence where they live and sleep most of the time. If they have no onshore U.S. residence, they are counted at their vessel. If the vessel is docked in a U.S. port, sailing from a U.S. port to a foreign port, or sailing from a foreign port to a U.S. port, crewmembers with no onshore U.S. residence are counted at the U.S. port. If the vessel is sailing from one U.S. port to another U.S. port, crewmembers with no onshore U.S. residence are counted at the port of departure.

(b) *Crews of U.S. flag maritime/merchant vessels engaged in U.S. inland waterway transportation on Census Day*—Counted at the onshore U.S. residence where they live and sleep most of the time.

(c) *Crews of U.S. flag maritime/merchant vessels docked in a foreign port or sailing from one foreign port to another foreign port on Census Day*—Not counted in the stateside census.

15. PEOPLE IN CORRECTIONAL FACILITIES FOR ADULTS

(a) *People in federal and state prisons on Census Day*—Prisoners are counted at the facility. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the facility.

(b) *People in local jails and other municipal confinement facilities on Census Day*—Prisoners are counted at the facility. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the facility.

(c) *People in federal detention centers on Census Day, such as Metropolitan Correctional Centers, Metropolitan Detention Centers, Bureau of Indian Affairs Detention Centers, Immigration and Customs Enforcement (ICE) Service Processing Centers, and ICE contract detention facilities*—Prisoners are counted at the facility. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the facility.

(d) *People in correctional residential facilities on Census Day, such as halfway houses, restitution centers, and prerelease, work release, and study centers*—Residents are counted at the facility. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the facility.

16. PEOPLE IN GROUP HOMES AND RESIDENTIAL TREATMENT CENTERS FOR ADULTS

(a) *People in group homes intended for adults (non-correctional) on Census Day*—Residents are counted at the facility. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the facility.

(b) *People in residential treatment centers for adults (non-correctional) on Census Day*—Counted at the residence where they live and sleep most of the time. If residents or staff members do not have a usual home elsewhere, they are counted at the facility.

17. PEOPLE IN JUVENILE FACILITIES

(a) *People in correctional facilities intended for juveniles on Census Day*—Juvenile residents are counted at the facility. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the facility.

(b) *People in group homes for juveniles (non-correctional) on Census Day*—Juvenile residents are counted at the facility. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the facility.

(c) *People in residential treatment centers for juveniles (non-correctional) on Census Day*—Counted at the residence where they live and sleep most of the time. If juvenile residents or staff members do not have a usual home elsewhere, they are counted at the facility.

18. PEOPLE IN TRANSITORY LOCATIONS

(a) *People at transitory locations such as recreational vehicle (RV) parks, campgrounds, hotels and motels (including those on military sites), hostels, marinas, racetracks, circuses, or carnivals*—Anyone, including staff members, staying at the

transitory location are counted at the residence where they live and sleep most of the time. If they do not have a usual home elsewhere, or they cannot determine a place where they live most of the time, they are counted at the transitory location.

19. PEOPLE IN WORKERS' RESIDENTIAL FACILITIES

(a) *People in workers' group living quarters and Job Corps Centers on Census Day*—Counted at the residence where they live and sleep most of the time. If residents or staff members do not have a usual home elsewhere, they are counted at the facility.

20. PEOPLE IN RELIGIOUS-RELATED RESIDENTIAL FACILITIES

(a) *People in religious group quarters, such as convents and monasteries, on Census Day*—Counted at the facility.

21. PEOPLE IN SHELTERS AND PEOPLE EXPERIENCING HOMELESSNESS

(a) *People in domestic violence shelters on Census Day*—People staying at the shelter (who are not staff) are counted at the shelter. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the shelter.

(b) *People who, on Census Day, are in temporary group living quarters established for victims of natural disasters*—Anyone, including staff members, staying at the facility are counted at the residence where they live and sleep most of the time. If they do not have a usual home elsewhere, they are counted at the facility.

(c) *People who, on Census Day, are in emergency and transitional shelters with sleeping facilities for people experiencing homelessness*—People staying at the shelter (who are not staff) are counted at the shelter. Staff members are counted at the residence where they live and sleep most of the time. If staff members do not have a usual home elsewhere, they are counted at the shelter.

(d) *People who, on Census Day, are at soup kitchens and regularly scheduled mobile food vans that provide food to people experiencing homelessness*—Counted at the residence where they live and sleep most of the time. If they do not have a usual home elsewhere, they are counted at the soup kitchen or mobile food van location where they are on Census Day.

(e) *People who, on Census Day, are at targeted non-sheltered outdoor*

locations where people experiencing homelessness stay without paying—Counted at the outdoor location where they are on Census Day.

(f) *People who, on Census Day, are temporarily displaced or experiencing homelessness and are staying in a residence for a short or indefinite period of time*—Counted at the residence where they live and sleep most of the time. If they cannot determine a place where they live most of the time, they are counted where they are staying on Census Day.

Dated: June 23, 2016.

John H. Thompson.

Director, Bureau of the Census.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 177

[Docket No. FDA-2016-F-1805]

Society of the Plastics Industry, Inc.; Filing of Food Additive Petition

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of petition.

SUMMARY: The Food and Drug Administration (FDA or we) is announcing that we have filed a petition, submitted by Keller and Heckman LLP on behalf of the Society of the Plastics Industry, Inc. (Petitioner or SPI), requesting that we amend our food additive regulations to no longer provide for the use of potassium perchlorate as an additive in closure-sealing gaskets for food containers because this use has been abandoned. **DATES:** The food additive petition was filed on May 11, 2016. Submit either electronic or written comments by August 29, 2016.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <http://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any

confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2016-F-1805 for "Filing of Food Additive Petition: Society of the Plastics Industry, Inc." Received comments will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- *Confidential Submissions:* To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be

these technologies, YPG needs to use the existing airspace and ground infrastructure at Laguna Army Airfield. Use of the Airfield is limited to "official business only" with "prior permission required." Therefore, hazardous testing could be conducted safely within proposed R-2306F without impacting non-participating aircraft.

The Proposal

The FAA is proposing an amendment to 14 CFR part 73 to establish a new restricted area, R-2306F, extending from the surface to 1,700 feet MSL, in the vicinity of Laguna Army Airfield at Yuma Proving Ground, AZ. The proposed area would be used for the testing of various hazardous systems including non-eye-safe lasers, high energy radars and the development of experimental weapons. Testing would include the operation of these systems from various aircraft platforms. Restricted airspace is required to effectively test these complex integrated systems without posing a hazard to non-participating aircraft and/or ground personnel. Proposed R-2306F would be completely contained over YPG-owned land. No supersonic flights would be conducted within the proposed airspace.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under Department of Transportation (DOT) Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subjected to an environmental analysis in accordance with FAA Order 1050.1F, "Environmental Impacts: Policies and Procedures," prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 73

Airspace, Prohibited areas, Restricted areas.

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 73 as follows:

PART 73—SPECIAL USE AIRSPACE

■ 1. The authority citation for part 73 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 0565, 3 CFR, 1959-1963 Comp., p. 389.

§ 73.23 Arizona [Amended]

■ 2. § 73.23 is amended as follows:

Bureau of the Census

15 CFR Chapter I

[Docket Number 160526465-6618-02]

Proposed 2020 Census Residence Criteria and Residence Situations; Extension of Comment Period

AGENCY: Bureau of the Census, Department of Commerce.

ACTION: Proposed Criteria; Extension of Comment Period.

SUMMARY: The Bureau of the Census (Census Bureau) is issuing this document to extend the comment period on the Proposed 2020 Census Residence Criteria and Residence Situations, which was published in the Federal Register on June 30, 2016. The comment period for the proposed criteria, which would have ended on August 1, 2016, is now extended until September 1, 2016.

DATES: Comments on the proposed criteria published on June 30, 2016 (81 FR 42577), must be received by September 1, 2016.

ADDRESSES: Direct all written comments regarding the Proposed 2020 Census Residence Criteria and Residence Situations to Karen Humes, Chief, Population Division, U.S. Census Bureau, Room 6H174, Washington, DC 20233; or Email [POP.2020.Residence.Rule@census.gov].

FOR FURTHER INFORMATION CONTACT: Population and Housing Programs Branch, U.S. Census Bureau, 6H185, Washington, DC 20233, telephone (301) 763-2381; or Email [POP.2020.Residence.Rule@census.gov].

SUPPLEMENTARY INFORMATION:

Background

The U.S. Census Bureau is committed to counting every person in the 2020 Census once, only once, and in the right place. The fundamental reason that the decennial census is conducted is to fulfill the Constitutional requirement (Article I, Section 2) to apportion the seats in the U.S. House of Representatives among the states. Thus, for a fair and equitable apportionment, it is crucial that the Census Bureau counts everyone in the right place during the decennial census.

The residence criteria are used to determine where people are counted during each decennial census. For more information on the Proposed 2020 Census Residence Criteria and Residence Situations (also referred to as the proposed "2020 Census Residence Rule and Residence Situations" in the text of the earlier document), please see the original document of proposed criteria and request for comment published in the Federal Register on June 30, 2016 (81 FR 42577).

Because of the scope of the proposed criteria, and in response to individuals and organizations who have requested more time to review the proposed criteria, the Census Bureau has decided to extend the comment period for an additional 31 days. This document announces the extension of the public comment period to September 1, 2016.

Dated: July 19, 2016.
 Nancy A. Potok,
 Deputy Director, Bureau of the Census.

RIN 2506-AC29

Continuum of Care Program: Solicitation of Comment on Continuum of Care Formula

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice; request for comments.

SUMMARY: On July 31, 2012, HUD published an interim rule, for public comment, entitled "Homeless Emergency Assistance and Rapid Transition to Housing: Continuum of Care Program," a program designed to address the critical problem of homelessness through a coordinated community-based process of identifying needs and building a system of housing and services to address those needs. HUD received 551 public comments on the interim rule. Approximately 42 of the public comments addressed the Continuum of Care formula, with the majority of these commenters seeking changes to the formula. With the interim rule now in place for 3 years, HUD seeks additional comment on the Continuum of Care formula.

Comment Due Date: September 23, 2016.

ADDRESSES: Interested persons are invited to submit comments regarding this rule to the Regulations Division, Office of General Counsel, 451 7th Street SW., Room 10276, Department of Housing and Urban Development, Washington, DC 20410-0500. Communications must refer to the above docket number and title. There are two methods for submitting public comments. All submissions must refer to the above docket number and title.

1. **Submission of Comments by Mail.** Comments may be submitted by mail to the Regulations Division, Office of General Counsel, Department of Housing and Urban Development, 451 7th Street SW., Room 10276, Washington, DC 20410-0500.

2. **Electronic Submission of Comments.** Interested persons may submit comments electronically through

the Federal eRulemaking Portal at www.regulations.gov. HUD strongly encourages commenters to submit comments electronically. Electronic submission of comments allows the commenter maximum time to prepare and submit a comment, ensures timely receipt by HUD, and enables HUD to make them immediately available to the public. Comments submitted electronically through the www.regulations.gov Web site can be viewed by other commenters and interested members of the public. Commenters should follow the instructions provided on that site to submit comments electronically.

Note: To receive consideration as public comments, comments must be submitted through one of the two methods specified above. Again, all submissions must refer to the docket number and title of the document.

No Facsimile Comments. Facsimile (fax) comments are not acceptable.

Public Inspection of Public Comments. All properly submitted comments and communications submitted to HUD will be available for public inspection and copying between 8 a.m. and 5 p.m. weekdays at the above address. Due to security measures at the HUD Headquarters building, an advance appointment to review the public comments must be scheduled by calling the Regulations Division at 202-708-3055 (this is not a toll-free number). Individuals with speech or hearing impairments may access this number through TTY by calling the Federal Relay Service at 800-877-8339. Copies of all comments submitted are available for inspection and downloading at www.regulations.gov.

FOR FURTHER INFORMATION CONTACT: Norm Suchar, Director, Office of Special Needs Assistance Programs, Office of Community Planning and Development, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410-7000; telephone number 202-708-4300 (this is not a toll-free number). Hearing- and speech-impaired persons may access this number through TTY by calling the Federal Relay Service at 800-877-8339 (this is a toll-free number).

SUPPLEMENTARY INFORMATION:

I. Background

Continuum of Care (CoC) Interim Rule

On July 31, 2012, at 77 FR 45422, HUD published in the Federal Register an interim rule to implement the CoC authorized amendments to the McKinney-Vento Homeless Assistance Act in the Homeless Emergency Assistance and Rapid Transition to

Housing Act of 2009 (HEARTH Act). The purpose of the CoC program is to promote communitywide commitment to the goal of ending homelessness; provide funding for efforts by nonprofit providers, and State and local governments to quickly rehouse homeless individuals and families while minimizing the trauma and dislocation caused to homeless individuals, families, and communities by homelessness; promote access to and effective utilization of mainstream programs by homeless individuals and families; and optimize self-sufficiency among individuals and families experiencing homelessness.

Section 427 of the McKinney Vento Act, as amended by the HEARTH Act, directs the Secretary to establish, by regulation, a funding formula that is based upon factors that are appropriate to allocate funds to meet the goals and objectives of the CoC program. As part of the interim rule, HUD codified the formula for establishing a CoC's Preliminary Pro Rata Need (PPRN formula) that had been used for many years prior to the interim rule to establish a CoC's PPRN. The PPRN formula is a combination of the formula used to award Emergency Solutions Grants (ESG) Program grant funds and Community Development Block Grant (CDBG) funds. Under the current PPRN formula, after a .2 percent set-aside for U.S. territories and insular areas, 75 percent of the total CoC allocation is distributed to ESG entitlement communities, generally comprised of large metropolitan cities and urban counties where homelessness is more concentrated, according to the CDBG formula. The remaining 25 percent of the CoC allocation is distributed to ESG non-entitlement communities according to the CDBG formula. Within this framework, the current CDBG formula is structured as a "dual formula" system. As set forth below, Formula A allocates funds to communities based on the following weighted factors: population, poverty, and overcrowding. Formula B assigns a different weighting scheme to an alternative menu of factors: population growth lag,¹ poverty, and pre-1940s housing.² Specifically, the existing CDBG formulas³ are weighted as follows.

¹ Population growth lag identifies slower growing communities or communities experiencing population loss as potential indicators of communities in decline and in need of development assistance.

² The share of housing units built before 1940 reflects the age of a community's housing stock, a potential indicator of blight.

³ For non-entitlement communities, Formula B uses population instead of population growth lag.

Full-Text Log of Comment Submissions on 2016 FRN on Residence Rule & Residence Situations (comment period = July 1-September 1, 2016)

Comment Submission #	Full Text of Comment Submission
c00001	<p>The Census Bureau's plan to count incarcerated persons as residents of prison, rather than of their home communities, defies the one person, one vote requirement. This plan gives districts that contain prisons a bloated count and disproportionate say in elections and public policy while undermining and diminishing the vote and voice of urban and poor communities.</p> <p>This practice has gone on far too long. Now, combining this practice with the precision mapping and data mining that enable precise gerrymandering of legislative districts, informed citizens can no longer permit this distortion of democracy.</p> <p>It would be far more cost effective to count inmates properly than to wait and face the onslaught of legal challenges that will confront the Bureau if this issue is not addressed. Recent lawsuits are just a hint of the tidal wave to come.</p> <p>I am writing this as a citizen with standing in this issue, since my own electoral districts lose representation through prison-based gerrymandering.</p> <p>I am also writing this as _____ of a statewide organization, Fair Districts PA, deeply concerned about this illegal and unconstitutional practice and determined to see reform, not just in Pennsylvania, but throughout the country.</p> <p>Please reconsider this proposal and count incarcerated persons as residents of their home communities.</p>
c00002	<p>Thank you for the changes to the proposed 2020 Census Residence Rule and Residence Situations regarding "a distinction between personnel who are deployed overseas and those who are stationed or assigned overseas." I am pleased that "for the 2020 Census, the Census Bureau proposes using administrative data from the DOD to count deployed personnel at their usual residence in the United States." This method provides a more accurate accounting of populations residing in communities surrounding U.S. military bases, and it will allow those communities to better assist our nation's service members.</p>
c00003	<p>I completely support the proposed rule to the 2020 Census Residence Rule and Residence Situations regarding the military overseas. For local cities, counties, and states who are honored to be the home of a military installation, having an accurate population count for these personnel is of utmost importance. Therefore, it is very appropriate to count those military personnel who are deployed in the census of their home base or port since these local communities must plan on providing services to these personnel. If a large number of personnel happen to be deployed overseas on April 1, when the census is conducted, a lower count is reflected in the count for these local cities, counties, and states than would be the case if these personnel were back at their usual base or port before and after deployment.</p>

	<p>The rule also makes the counting consistent with how other personnel are counted who are stationed or assigned overseas. Additionally, federal and state funding to local cities, counties, and states that are based on population would be more accurate by including those deployed personnel at their home base or port.</p> <p>Thank you for considering this much-needed rule change.</p>
c00004	<p>As a retired 27-year Navy veteran, I urge you to leave in place the method of determining a service member's state of residence as being the state from which he or she enlisted (home of record). During any career, service members are reassigned to a number of different duty stations. But, in general, a service member considers their home of record as where they have the strongest ties.</p>
c00005, c00010- c00013, c00017, c00020- c00021, c00048, c00093- c00097, c00100, c00160, c00865, c77957	<p>I am writing to provide comment and support for U.S. Census Bureau's proposed "2020 Census Residence Rule and Residence Situations." On behalf of the Christian County community, I show my support of the proposed new guidelines for counting of deployed military personnel in the upcoming 2020 Census. Under the proposal, U.S. military personnel who are deployed outside the U.S. on Census Day would be counted at the U.S. residence where they live and sleep most of the time. Counting deployed service members via this method will ensure that they are counted in the most advantageous and beneficial means for all communities.</p> <p>Military service members and their families are vital to the fabric of the communities in which they are stationed. Often, the communities surrounding a military installation work tirelessly to provide the best options, partnerships, and opportunities for their military neighbors. Our community here in Christian County, Kentucky, is no exception to that standard of excellence in service. In so many ways, Christian County has maintained a steadfast relationship--and partnership--with the Army, working to ensure our community is in tune with the quality of life needs and wishes of our soldiers and their families.</p> <p>The proposed method of counting service members who are deployed at the time of the 2020 Census will accurately show the economic impact that these service members have on the communities in which they work, play, and reside. Appropriate federal dollar funding can now be made available to these very communities, so that they may continue to provide quality of life services and opportunities.</p> <p>I pledge my continued support for economic prosperity and opportunities for the region in which Fort Campbell gains tremendous support. I thank you for your consideration of enacting what is best for our country's military personnel, their families, and the communities that they call home.</p>
c00006	<p>I am writing to beg you to NOT count the residency of incarcerated persons as the address of their prison. They should be counted as residing at the place they lived before they were imprisoned. Our prisons populations do not demographically match the people in the prison locale. This gives an inaccurate picture of the needs of the prison locale and the community they were removed from AND WILL RETURN TO. It results in the misallocation of government funds and unfair elections.</p>
c00007	<p>Great idea! About time! Thanks for all you do!!! Keep it up!</p>
c00008	<p>I am writing this letter to respond to the proposed "2020 Census Residence Rule and Residence Situations." that is open for public comment. I believe that there is a serious problem with the proposal to continue to count prisoners at the prison location.</p> <p>I am disappointed to see that this rule remains unchanged despite the thoroughly documented distortions it creates in our redistricting data.</p>

I share my experiences from the 1990, 2000 and 2010 redistricting cycles here in the hope that you will reconsider your decision. Although my State has already taken great steps toward ending prison gerrymandering, only the Census Bureau can offer us a complete solution.

I have lived, since the late 1990's, in _____ County, New York, a rural county that has a large prison population. Prisoners are not residents of our community as they originate outside of our community; they have no interaction with our community and immediately leave the community when their sentences expire or when the Department of Corrections chooses to transfer them elsewhere. Enumerating these populations as part of our community forces our community to choose between either: (1) rejecting your counts, or (2) using census data that dilutes the votes of most of our community's residents to the benefit of the few who live immediately adjacent to the prison.

I have been concerned about the implications of your "residence rule" for democracy within rural communities since the Census when I was a resident of another upstate New York county which similarly hosted a large correctional facility. Many of my _____ County neighbors and I were concerned and raised public awareness that relying on your counts resulted in county apportionment that diluted the votes of residents who did not live near the prisons.

In the late 1990's, I moved to _____ County and was again involved as a citizen activist in redistricting. There, I was pleasantly surprised to learn that I would not need to organize a post-2000 lawsuit against _____ County because my county was already committed to modifying your Census data to remove the prison populations and avoid what is now commonly called "prison gerrymandering."

However, a controversy that erupted in the neighboring county of _____ over prison counting after the 2000 Census led me to discover that the rejection of Census Bureau prison counts in rural communities was the rule, not the exception. In summary, _____ County had, after the 1990 Census, traditionally rejected your prison counts, but for "outcome determinative" reasons decided to include the prison populations in the post-2000 districts. The public objected, with thousands of county residents signing a petition requesting the redistricting plan be put on the ballot. The county leadership rejected the petition and in response the public defeated the political party responsible for the prison gerrymandering in the next election.

Around this time, an upstate newspaper contacted other counties in the state to see how they were currently handling the prison populations, and I surveyed several counties that this newspaper missed. This survey work inspired the Prison Policy Initiative to do a more formal survey analysis which they published as "Phantom constituents in the Empire State: How outdated Census Bureau methodology burdens New York counties." The authors concluded that the majority of New York State counties with large prisons rejected prison gerrymandering.

What should be obvious from my letter is that I, along with the elected leaders of my county, was concerned that including the prison population where the Census Bureau counted it but where those people--10% of our county's Census population--do not actually reside would have a vote dilutive impact on the other parts of our county. We simply did not want to draw county legislative districts that had a

	<p>preponderance of incarcerated people. Such districts would have given every county resident living near the prisons much more voting power than the other residents of the county.</p> <p>Having considered the effects of "prison gerrymandering" on rural counties that host prisons, many of my neighbors and I came to the obvious conclusion that the Census Bureau's counts are inaccurate insofar as the Bureau counted incarcerated people as residents of the prison locations. As a result, we removed the prison populations from the one set of legislative districts that we could control--our county districts.</p> <p>And here I feel I need to clarify our approach, given some statements from plaintiffs in the recent Texas case (<i>Evenwel v. Abbott</i>) about excluding some non-voting populations from redistricting counts.</p> <p>For us, in _____ County, the decision was not <i>whether</i> to count incarcerated people, but <i>where</i> they should rightly be counted, which we think is at their home of record. We had no right to count prisoners as local constituents because they relied on the representative services of their home legislators, and there is nothing that one of our county legislators could do for them. Removing the prison population was the best we could do because we lacked authority over the redistricting bodies of the New York City Council, the Albany City Council and the other home locations of the incarcerated people. As I, along with two neighbors, wrote to you in our July 9, 2004 comment letter: "We know of no complaints from prisoners as a result, as they no doubt look to the New York City Council for the local issues of interest to them."</p> <p>Thankfully, New York State took things one step further with the passage of Part XX (ending prison gerrymandering at the state and local levels) which made sure that all state prisoners are counted in the appropriate locations. This is legislation that I and many of my neighbors supported. And, while I support Part XX, and the Bureau's new proposed data services that my state might be able to take advantage of, I must note that the law and your proposal has one shortcoming that only the Census Bureau can fix: New York did not reallocate federal prisoners to their homes; it simply removed them from the count.</p> <p>The Census Bureau is the only entity which can provide a complete solution to the redistricting confusion caused by the way the current residence rule is applied to prisoners. I urge you to adjust this policy and count all prisoners at their homes of record in 2020.</p>
c00009	Greetings. Please ensure that laws are changed such that incarcerated adults are counted as "living" within their last known home communities. This will help to ensure a more fair representation of an area's voting population.
c00010	Same content as comment c00005

c00013	Same content as comment c00005
c00014	Regarding item #10 re: where to count college students: I agree with the proposed rule. It probably provides greater assurance that the student is, in fact, counted if you do so via the school. I can

	see that a student might be omitted from the count if they were not listed at their legal residence because they're "not here" and then not counted at school. A full count, it seems, is more likely if student is counted at school.
c00015	<p>North Carolina was deprived of a US Representative and various apportioned tax dollars because the 2010 census counted deployed military personnel as residing in their home states.</p> <p>We support the military members locally while they are deployed as well as their families who remain here in the county.</p> <p>I support the proposed changes.</p>
c00016	In the interest of accuracy, I suggest that all deployed military are counted as a resident of the county and state in which they reside. Some military deployments are for a few months and others for longer periods of time. None the less, the military person returns home to their place of residence. Thus, the great state of North Carolina, housing many federal military bases, needs to have these military numbers totaled in to the population count for the purpose of accurate representation in Congress and number of electoral votes.
c00017	Same content as comment c00005
c00018	I believe that all Military residing in a state should be counted as residents of that state. They are using the state's services, schools, roads and other provided amenities. They are truly residents.
c00019	<p>I write in regards to the Census Bureau's Proposed Criteria and Request for Comment on the 2020 Decennial Census Residence Rule and Residence Situations (Docket No: 160526465-6465-01) published in the federal Register on June 30, 2016, to propose certain changes to the residence criteria used to determine where people are counted during each decennial census. I would like to offer support for the proposed changes specifically Rule 13(f) regarding the counting of deployed service members "at the U.S. residence where they live and sleep most of the time." This change will insure that my constituents are accurately in the upcoming 2020 Census.</p> <p>The results of the 2010 Census displayed an anomaly that misrepresented the counting of deployed service members for overseas contingency operations. These service members, despite not having a change in their permanent duty station, and who return to their duty station upon completion of their deployment, were counted in accordance with Rule 9(f) of the 2010 Census Residence Rule and Residence Situations:</p> <p style="padding-left: 40px;">(f) U.S. military personnel living on or off a military installation outside of the U.S. including dependents living with them – Count as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire</p> <p>The Census Bureau attributes U.S. overseas population to the state on an individual's home-of-record. This practice may have worked well for members of the Department of State or other government agencies operating outside of the United States, but the Department of Defense fails to properly, and, accurately, maintain their records. According to the "2010 Census Federally Affiliated Overseas Count Operation Assessment Report," dated March 19, 2012, "only 59 percent of the 2010 Department of Defense Records contained a home of record."</p>

	<p>As a result of using inaccurate and missing records for the tabulation of deployed service members, the surrounding military communities, which support the families of those service members, were calculated to have a lower population than what should be attributed to the community.</p> <p>My constituents residing in the region around Fort Campbell, Kentucky, experienced this first-hand following the 2010 census. Despite record home sales, increased public school enrollment, and other economic indicators supporting population growth, the calculated population remained relatively unchanged from the 2000 Census. The only explanation for the discrepancy is the deployment of service members from Fort Campbell to Afghanistan.</p> <p>Starting in late 2009 and continuing through 2010, members of the 1st, 2nd, 3rd, and 4th Brigade Combat teams of the 101st, the 101st Sustainment Brigade, the 159th and 101st Combat Aviation brigades were all deployed to sustain the military "surge" in Afghanistan. It is estimated that at least 10,000 service members were deployed at the collection time of the 2010 Census. Those service members then returned to Fort Campbell at the end of their deployment.</p> <p>I request that the Census Bureau maintain and implement the proposed changes to the "2020 Residence Rule and Residence Situations" as drafted. This will create one consistent and logical method for counting deployed service members. By counting deployed service members according to where they actually live, the Bureau will receive more accurate reports of population and ensure communities have the needed resources to support these soldiers and their families.</p> <p>Thank you for your time and thoughtful consideration of these proposed changes.</p>
c00020	Same content as comment c00005
c00021	Same content as comment c00005
c00022	North Carolina should receive full credit for the troops and their families that reside here. Undercounting troops due to deployment when North Carolina is their usual residence is unfair and costs North Carolina and Craven County Federal funds for education, infrastructure and other Federal Programs. The service members and their families deserve to be counted as residents of North Carolina.
c00023	Black lives count. All lives count. Census counting officials, use this opportunity correctly. I appeal to the better angels of your nature.
c00024	<p>I understand that present rules define prison inmates and residents of that county. If this is in fact correct, then hopefully it will be corrected before the next Census.</p> <p>Population, as you well know, is a factor in determining many federal distributions as well as representation. I spent three years incarcerated and was moved from prison to prison six times. This is done by the Texas Department of Corrections to game the Government's requirements for prisons.</p>
c00025	I am writing to urge you to count prisoners at their home residence rather than the location of their incarceration. By counting them at the prison location the Census Bureau is falsely representing the prison community populations. In most state constitutions and statutes, it explicitly states that incarceration does not change a residence. Including the incarcerated people in the population of the area they are

	<p>confined leads to an imbalance of district population. Looking through the lens of State Democracy, districts with prisons receive enhanced representation and districts without prisons state representation is diminished.</p> <p>The Census Bureau's decision to count incarcerated people in their area of confinement interferes with equal representation in virtually every state.</p> <p>To date, over 200 communities have discovered and addressed this problem and to ensure equal representation, they have drawn districts that exclude prison populations. I urge the Census Bureau to adopt this fair and democratic approach to avoid further misrepresentation.</p>
c00026	<p>I do not understand why the Census Bureau is proposing to continue to count prisoners as residents of the place where they are incarcerated rather than as residents of the place that was their home before they were incarcerated. Overwhelming objective evidence shows that this distorts the demographic count as well as the political process. Speaking personally as a former prisoner, I certainly had no thought of staying at any of the places where I was incarcerated (I was transferred a few times) after release. And of all the prisoners and ex-prisoners I have known over the years up to this day, I cannot think of one who decided to live at their place of confinement after release unless, as occurs occasionally, their place of confinement happened to be the same as their home residence. I know that there are political forces at work here, and I sincerely hope that you are not giving in to political pressure in promulgating this residence rule. In any case I implore you to please reconsider.</p>
c00027	<p>My name is _____ and I am the _____ of Community Alliance on Prisons, a community initiative promoting smart justice policies in Hawaii for almost two decades. This testimony is respectfully offered on behalf of the 6,000 Hawaii individuals living behind bars or under the “care and custody” of the Department of Public Safety. <u>We are always mindful that approximately 1,400 of Hawaii’s imprisoned people are serving their sentences abroad - thousands of miles away from their loved ones, their homes and, for the disproportionate number of incarcerated Native Hawaiians, far from their ancestral lands.</u></p> <p>Community Alliance on Prisons is saddened that the U.S. Census Bureau has ignored the overwhelming comments in support of changing how incarcerated persons are counted and instead has determined that the practice of counting prisoners at the correctional facility for the 2020 Census would be consistent with the concept of usual residence.</p> <p><i>“When the Census began in 1790, uses for the data were limited. Population statistics were rarely used for planning purposes until the 20th century. It was not until the 1960s that state legislatures were required to periodically redraw legislative district lines to comply with the “One Person One Vote” rule of equal numbers of people in each legislative district. In 1790, the Census’ sole role was to count the number of people in each state to determine their relative populations for purposes of Congressional reapportionment. It didn’t matter — for purposes of comparing Nevada’ population to Utah’s — whether an incarcerated person was counted at home or in the Nevada State Prison, as long as they were counted in the right state. Census data is used very differently today than it was in 1790, and our society has changed radically, but the Census’ method of counting prisoners has unfortunately remained the same.” [1]</i></p> <p>We are, therefore, profoundly disappointed by the Census Bureau proposal to again count nearly 2 million people in the wrong place on Census day. Continuing this outdated practice will ensure an inaccurate 2020 Census and another decade of prison gerrymandering. Leaving the current practice in place defies the very concept of democracy and promotes even more inequality.</p>

Hawaii has been banishing a significant portion of our prison population to corporate prisons on the continental United States for twenty-one years. This failed social experiment has wrought much anguish to our people and communities, the families of those banished, and our over-burdened taxpayers. Our people have not moved to these locations, they were sent involuntarily and will return to their homes and families in Hawaii after serving their sentences. Hawaii is their home.

We are well aware of how the corporate prison industry has “gamed” the system by building their dungeons in small towns, enticing public officials who can then benefit from increased federal appropriations to their towns.

Prisons have become a growth industry for rural America with a new prison opening in a small town every fifteen days over the last decade. [2] Now a \$60 billion industry, [3] prisons have developed the economic muscle to bend state priorities to their needs. There are now so many people in prison that legislators who have prisons in their districts are able to short-circuit the democratic process that would otherwise govern the prison industry.

The importance of accuracy in counting citizens to determine voting districts has long been recognized as vital to a thriving democracy. In the 1960’s, the Supreme Court struck down state legislative district plans that gave some citizens more access to government than others, declaring the “One Person One Vote” rule and the principle that “legislators represent people, not trees or acres. Legislators are elected by voters, not farms or cities or economic interests.” [4]

There is a basic unfairness in the decision to count incarcerated people in the facility to which they have been involuntarily sent when the Census Bureau has determined that there is a distinction between military personnel who are deployed overseas and those who are stationed or assigned overseas. Deployments are typically short in duration, and **the deployed personnel will be returning to their usual residence** where they are stationed or assigned in the United States after their temporary deployment ends.

How is military deployment different from those involuntarily banished outside their homeland when our incarcerated people will return to Hawaii upon the completion of their sentences? When *“counting deployed personnel at their usual residence in the United States follows the standard interpretation of the residence criteria to count people at their usual residence if they are temporarily away for work purposes”*, we fail to see the difference when counting people who are temporarily sentenced to prisons outside of Hawaii.

Justin Levitt, professor of constitutional law and the law of democracy at Loyola Law School, as well as a practitioner and litigator in the area of political participation encouraged the Census Bureau to count incarcerated individuals at their last known address before incarceration as a means to further equal representation in the democratic process. Professor Levitt bases his comments on the structure of representation and the effects of various voting systems and districting plans.

He explains that the Census counts most people at their “home.” Those whose “usual residence” is different from their “home” are typically in a new location for work or education, “and they are generally intertwined with the communities where they are laying their

	<p>heads most often” by interacting with their new neighbors, following community rules and regulations, and enjoying the benefits of local services and activities. However, <u>this is not the case for the 2.2 million people in the United States who are incarcerated. Professor Levitt points to the fact that incarcerated individuals have little in common with the residents in the communities surrounding their correctional facilities.</u></p> <p>Incarcerated individuals do not interact with the local community, and “most Village Township residents will not likely consider them ‘neighbors’”. Elected officials themselves do not always consider incarcerated people to be their constituents. As Professor Levitt recounts:</p> <p style="text-align: center;"><i>[I]n 2002, a New York state legislator representing a district housing thousands of incarcerated individuals said that given a choice between the district’s cows and the district’s prisoners, he would “take his chances” with the cows, because “[t]hey would be more likely to vote for me.”</i></p> <p><u>Indeed, according to Professor Levitt, 28 states have explicitly provided that incarcerated persons do not lose their residence in their home communities when they are incarcerated.</u></p> <p>The <u>New York Times</u> has written nine editorials highlighting how the prisoner miscount harms democracy, and has been joined by the editorial boards of papers as diverse as the <u>Milwaukee Journal-Standard</u>, the <u>Flint Journal</u> (Michigan) and the rural <u>Jackson City Patriot</u> (Jackson City, Michigan).</p> <p>Please help us correct this problem and get back to the ‘One Person One Vote’ ideal. This is sacred to our democracy. Please help us to achieve fair and equal representation to all the citizens by revising the Residence Rule or Residence Situations to count incarcerated people at their home in the Census. PLEASE PROMOTE DEMOCRACY!</p> <p>[1] New research on Nevada, Montana, and Idaho: How the census is watering down the voting power of some communities, by Peter Wagner, February 7, 2005. http://www.prisonersofthecensus.org/news/2005/02/07/wpp/</p> <p>[2] <i>Building a Prison Economy in Rural America</i>, Tracy Huling in <i>Invisible Punishment: The Collateral Consequences of Mass Incarceration</i>, Mark Maurer and Med Chesney-Lind, eds. (New York, The New Press, 2002).</p> <p>[3] Bureau of Justice Statistics, Justice Expenditure and Employment in the United States, 2003, Table 3.</p> <p>[4] <i>Reynolds v Sims</i>, 377 U.S. 533 (1964), at 562.</p>
c00028	<p>As a public servant who formally worked for the _____ legislature and now for the _____ state legislature, I want to urge you to end the practice of counting people in the wrong place (prison gerrymandering). It is critical that we have an accurate, fair, and truly representative 2020 Census.</p> <p>Please be on the right side of history on this seemingly minor but ultimately very impactful decision.</p>
c00029	<p>I am writing regarding the continued practice of counting prison population at the place of incarceration rather than the home residence where they lived upon committing the crime that created their reason for temporary confinement at what is referred to as the "Grey-Bar</p>

	<p>Motel." This practice places an unbalanced voting power to districts containing prisons. Having served as _____ for the Metropolitan Government of _____, I have seen this impact first hand.</p> <p>As _____, the "population" of the prison impacted the ability to keep neighborhoods together during redistricting. From a voting rights standpoint, in a district of only 16,000 to 18,000, when 2000 of those are incarcerated, temporary, and generally unable to participate in the community or voting, it gives the actual residents an 11% to 12.5% voting advantage over other districts. This should be corrected.</p> <p>I ask that future Census efforts avoid this practice.</p>
c00030	<p>I am writing in regards to the federal register notice on <i>Residence Rule and Residence Situations</i>, 81 FR 42577 (June 30, 2016). I urge you adjust the Usual Residence rule to count incarcerated people at their home address, not where they happen to be located on Census Day.</p> <p>The Census Bureau is an honest agency and an extraordinary source of information. I am a professional researcher and I use Census data regularly. I'm disappointed that the Bureau continues to use the old rule, now that the problems have become so clear.</p> <p>As you know, the median time served in most prisons is roughly four years, far less than the decennial census. As you may also know, people move around regularly within the system, staying in any particular prison for only part of their terms.</p> <p>(People are moved to adjust capacity, as some facilities become crowded while others have extra space; they are moved to accommodate protection orders, as co-defendants or witnesses enter or exit the system, and individuals must be confined separately from each other; and they are moved to accommodate medical needs, court dates, parole hearings or any number of other internal administrative events.)</p> <p>The Census Bureau can not and should not try to track movements in this way. The Bureau should enumerate people who are temporarily confined in the location they consider their homes, and in the neighborhood to which they will return long before the next census. It is most accurate and most fair.</p> <p>Thank you for your time and attention. You can do better.</p>
c00031	<p>My name is _____ and I am _____ of the _____ County Council. This testimony is respectfully offered on behalf of the 6,000 Hawaii individuals living behind bars or under the "care and custody" of the Department of Public Safety. <u>We are always mindful that approximately 1,400 of Hawaii's imprisoned people are serving their sentences abroad - thousands of miles away from their loved ones, their homes and, for the disproportionate number of incarcerated Native Hawaiians, far from their ancestral lands.</u></p> <p>I am disappointed that the U.S. Census Bureau has ignored the overwhelming comments in support of changing how incarcerated persons are counted and instead has determined that the practice of counting prisoners at the correctional facility for the 2020 Census would be consistent with the concept of usual residence.</p>

“When the Census began in 1790, uses for the data were limited. Population statistics were rarely used for planning purposes until the 20th century. It was not until the 1960s that state legislatures were required to periodically redraw legislative district lines to comply with the “One Person One Vote” rule of equal numbers of people in each legislative district. In 1790, the Census’ sole role was to count the number of people in each state to determine their relative populations for purposes of Congressional reapportionment. It didn’t matter — for purposes of comparing Nevada’ population to Utah’s — whether an incarcerated person was counted at home or in the Nevada State Prison, as long as they were counted in the right state. Census data is used very differently today than it was in 1790, and our society has changed radically, but the Census’ method of counting prisoners has unfortunately remained the same.” [1]

We are, therefore, profoundly disappointed by the Census Bureau proposal to again count nearly 2 million people in the wrong place on Census day. Continuing this outdated practice will ensure an inaccurate 2020 Census and another decade of prison gerrymandering. Leaving the current practice in place defies the very concept of democracy and promotes even more inequality.

Hawaii has been banishing a significant portion of our prison population to corporate prisons on the continental United States for twenty-one years. This failed social experiment has wrought much anguish to our people and communities, the families of those banished, and our over-burdened taxpayers. Our people have not moved to these locations, they were sent involuntarily and will return to their homes and families in Hawaii after serving their sentences. Hawaii is their home.

We are well aware of how the corporate prison industry has “gamed” the system by building their dungeons in small towns, enticing public officials who can then benefit from increased federal appropriations to their towns.

Prisons have become a growth industry for rural America with a new prison opening in a small town every fifteen days over the last decade. [2] Now a \$60 billion industry,[3] prisons have developed the economic muscle to bend state priorities to their needs. There are now so many people in prison that legislators who have prisons in their districts are able to short-circuit the democratic process that would otherwise govern the prison industry.

The importance of accuracy in counting citizens to determine voting districts has long been recognized as vital to a thriving democracy. In the 1960’s, the Supreme Court struck down state legislative district plans that gave some citizens more access to government than others, declaring the “One Person One Vote” rule and the principle that “legislators represent people, not trees or acres. Legislators are elected by voters, not farms or cities or economic interests. [4]

There is a basic unfairness in the decision to count incarcerated people in the facility to which they have been involuntarily sent when the Census Bureau has determined that there is a distinction between military personnel who are deployed overseas and those who are stationed or assigned overseas. Deployments are typically short in duration, and **the deployed personnel will be returning to their usual residence** where they are stationed or assigned in the United States after their temporary deployment ends.

How is military deployment different from those involuntarily banished outside their homeland when our incarcerated people will return to Hawaii upon the completion of their sentences? When “*counting deployed personnel at their usual residence in the United States follows the standard interpretation of the residence criteria to count people at their usual residence if they are temporarily away for work purposes*”, we fail to see the difference when counting people who are temporarily sentenced to prisons outside of Hawaii.

Justin Levitt, professor of constitutional law and the law of democracy at Loyola Law School, as well as a practitioner and litigator in the area of political participation encouraged the Census Bureau to count incarcerated individuals at their last known address before incarceration as a means to further equal representation in the democratic process. Professor Levitt bases his comments on the structure of representation and the effects of various voting systems and districting plans.

He explains that the Census counts most people at their “home.” Those whose “usual residence” is different from their “home” are typically in a new location for work or education, “and they are generally intertwined with the communities where they are laying their heads most often” by interacting with their new neighbors, following community rules and regulations, and enjoying the benefits of local services and activities. However, this is not the case for the 2.2 million people in the United States who are incarcerated. Professor Levitt points to the fact that incarcerated individuals have little in common with the residents in the communities surrounding their correctional facilities.

Incarcerated individuals do not interact with the local community, and “most Village Township residents will not likely consider them ‘neighbors’”. Elected officials themselves do not always consider incarcerated people to be their constituents. As Professor Levitt recounts:

[I]n 2002, a New York state legislator representing a district housing thousands of incarcerated individuals said that given a choice between the district’s cows and the district’s prisoners, he would “take his chances” with the cows, because “[t]hey would be more likely to vote for me.”

Indeed, according to Professor Levitt, 28 states have explicitly provided that incarcerated persons do not lose their residence in their home communities when they are incarcerated.

The New York Times has written nine editorials highlighting how the prisoner miscount harms democracy, and has been joined by the editorial boards of papers as diverse as the Milwaukee Journal-Standard, the Flint Journal (Michigan) and the rural Jackson City Patriot (Jackson City, Michigan).

Please help us correct this problem and get back to the ‘One Person One Vote’ ideal. This is sacred to our democracy. Please help us to achieve fair and equal representation to all the citizens by revising the Residence Rule or Residence Situations to count incarcerated people at their home in the Census. PLEASE PROMOTE DEMOCRACY!

c00032	<p>I am writing to ask you to reconsider your decision to count prisoners as citizens of the prison they are in instead of their home address. In Florida, where most prisons are located in rural areas, this leads to over-representation of their rural counties and under-representation in their home counties.</p>
c00033	<p>Justice for Families (J4F) submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau’s proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census day ignores the transient and temporary nature of incarceration. If made final, this proposal will mean another decade of decisions based on a Census that counts incarcerated people in the wrong place.</p> <p>J4F is a national organization that was created by families, for families that have been impacted by the criminal justice system and incarceration. We have nearly 3000 families in 38 states and the District of Columbia. As families that remain behind when our loved ones are incarcerated, we understand and live with the consequences of unequal representation in the Census data. The majority of our families live in poor communities of color that have little to no say in their local and state government, thus making an already vulnerable community even more vulnerable. Our families’ experiences have proven time and again that the best solutions to community problems come from the impacted community. When the community is denied accurate representation in the Census data, their solutions and voices go unheard while the voices of those who have no stake and little understanding of the community are given greater value and power.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time,” but fails to follow that rule when counting incarcerated people. The majority of people incarcerated in Rhode Island, for example, spend less than 100 days in the state’s correctional facilities. If the same people were instead spending 100 days in their summer residence, the Bureau would count them at their regular home address. Even students in boarding schools get counted at their home address whether or not they eat and sleep there most of the time. The Census Bureau continues to carve out an unexplained exception for incarcerated people in order to count them in the wrong place.</p> <p>The Bureau’s failure to update its rules regarding incarcerated persons is particularly troubling given that the Bureau decided that other populations – deployed overseas military, and juveniles staying in residential treatment centers – should be counted in their home location even if they are sleeping elsewhere on Census Day. It made these changes even though there were far fewer public comments identifying these issues as causing the magnitude of problems that the public commentary on the prison miscount highlighted.</p> <p>The Census Bureau should honor the overwhelming consensus urging a change in the Census count for incarcerated persons. When the Bureau asked for public comment on its residence rules last year, 96% of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address. This level of consensus</p>

	<p>among stakeholders, which is based on a thorough understanding of the realities of modern incarceration, deserves far more consideration than it was given.</p> <p>As you know, American demographics and living situations have changed drastically in the two centuries since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation.</p> <p>The Census Bureau's practice of counting incarcerated people in the wrong place had relatively little impact on the overall accuracy of the Census while prison populations remained relatively low, but the growth in the prison population over the last few decades urgently requires the Census to update its methodology. The incarcerated population has more than quadrupled since the 1970's, and the manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just a few thousand Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, it artificially inflates the political power of the areas where the prisons are located and dilutes the political power of all other urban and rural areas without large prisons. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>Acknowledging the need to correct its own data to avoid prison gerrymandering, the Bureau has proposed to help states with the population adjustment. But this ad hoc approach is neither efficient nor universally implementable. Massachusetts legislators, for example, have already expressed concerns about that state's ability to use alternative data in their 2015 comment to the Bureau (comment numbered c0161).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. My organization believes that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00034	<p>I am writing to express my opposition to the inaccurate and outdated practice of counting incarcerated people as "residents" of the prison location instead of their home communities in your proposed 2020 Census residence rules.</p> <p>The Census Bureau is wrong to consider incarcerated people as residents of the correctional facility. Incarcerated people do not take up residency in prison, as if anyone chooses to "move" to prison. Incarcerated people are people with rights who deserve to have a say in their democracy both in and out of prison, and we should be working to ensure that all incarcerated people have those rights, not putting up more barriers for them.</p>

	<p>By counting people in the wrong place, the Bureau is also ensuring an inaccurate 2020 Census. By counting incarcerated people as if they were residents of a prison makes the Census less accurate for everyone, a particularly important issue in Michigan where our legislative districts are already heavily gerrymandered.</p>
c00035	<p>This rule change will help end prison gerrymandering and is consistent with some of the greatest Supreme Court opinions of the 20th century -- Baker v. Carr and Reynolds v. Sims -- that enshrined the principle that our legislators must represent the same number of people. Counting the incarcerated, especially in our era of mass incarceration, as residents of the prison communities where they can not vote instead of as residents of their actual home communities distorts our legislatures by draining the appropriate political influence from the communities where prisoners are from and enhancing the political influence of those who represent prison communities.</p> <p>That isn't fair. It isn't right.</p> <p>And I hope you can change it.</p> <p>Thank you for the opportunity to provide comment.</p>
c00036	<p>As a tax paying U.S. citizen, I am EXTREAMLY disturbed, and OFFENDED that the Census Bureau has totally ignored the comments of 96% of the people who took the trouble to write to you last year regarding counting people who are incarcerated in prison rather than at their home address. I was one of those people who wrote to you.</p> <p>I have to ask: If the 2020 Census Residence Rule Supporting the Counting of Incarcerated People at Their Home Address is not applied – then why bother taking a census at all in 2020?</p> <p>We know right now that the Census methodology as it stands will be inaccurate, so the whole Census is going to be skewed. What a waste of my taxpayer money. So why bother; just cancel the 2020 Census and put the funding into early childhood education where we know the money won't be a waste.</p> <p>The planned inaccurate counting will perpetuate the false perception of democracy that results from padding the population counts of communities with prisons. When state and local officials use the Census Bureau's prison count data attributing "residence" to the prison, they give extra representation to the communities that host the prisons and dilute the representation of everyone else. This is harmful to rural communities that contain large prisons, because it seriously distorts redistricting at the local level of county commissions, city councils, and school boards.</p> <p>And more if the incarcerated people in these areas were actually represented by the politicians who have prisons and jails in their catchment areas, it would at least be a hint of democratic representation. But they don't. In my 20 years plus of visiting a person close to our family in various facilities in the U.S. I NEVER once ever heard of a local elected representative coming in to talk to his/her constituents behind the walls.</p>

c00037	<p>I am writing to say that I think that the "usual residence" for the incarcerated should be their home address. An exception might be made for those at Maximum Security Prisons, as the expectation would be that those at such institutions have either life or very long sentences, whereas most of those incarcerated at other prisons are released and return to their home area within the decade after a census.</p>
c00038	<p>One would think that a good response – over 90% – would suffice the Bureau's request for 'public comment' regarding <u>rules for incarcerated persons at their home address.</u></p> <p><u>Not so!</u> You've found a way to circumvent the process by proposing rules for the 2020 census that will allow you to continue this discredited practice. Since it doesn't come out of your pocket ... or cost the bureau a single penny ... it's an expense that taxpayers will be burdened with and unfortunately, <u>one more way of wasting taxpayers' money!</u></p> <p>As a resident of New York, we found that seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents.</p> <p>For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes. And then, in the appeals process, a U.S. Federal Court recognized that legislators were drawing electoral lines by counting inmates ... giving themselves additional powers in their own districts! The Court acknowledged in their decision that “gerrymandering was a threat to electoral fairness” and ruled against its continued practice!</p> <p>Your own Census Bureau was made aware of this problem a decade ago, when a report (*) it commissioned from the National Research Council found that its method for counting inmates distorted the political process and raised “legitimate concerns” about “equity and fairness in the census.” (*) <u>Another waste of taxpayers' money!</u></p> <p>Until the Census Bureau changes the way it counts prisons, the principle of one person one vote will continue to suffer.</p> <p><u>It's no wonder the public is frustrated with government ... there is no accountability for what taxpayers' money is paying for!</u></p>
c00039	<p><i>Aloha. Accuracy in counting citizens to determine voting districts is vital to a democracy, and I am very concerned about restoring and preserving democracy. I see great unfairness in the decision to count incarcerated people in the facility to which they have been involuntarily sent. Hawaii has been sending a significant portion of our prison population to corporate prisons on the continental United States for twenty-one years. This has created great suffering for our people and the families of those banished. <u>Our people have not moved to these locations, they were sent involuntarily and will return to their homes and families in Hawaii after serving their sentences. Hawaii is their home.</u></i></p> <p><i>How is military deployment different from those involuntarily banished outside their homeland when our incarcerated people will return to Hawaii upon the completion of their sentences?</i></p>

The Census Bureau has determined that there is a distinction between military personnel who are deployed overseas and those who are stationed or assigned overseas. Deployments are typically short in duration, and the deployed personnel will be returning to their usual residence where they are stationed or assigned in the United States after their temporary deployment ends.

Leaving the current practice in place opposes democracy and promotes more inequality and prison gerrymandering. I am sadly aware of how the corporate prison industry has “gamed” the system by building in small towns, enticing public officials who can then benefit from increased federal appropriations to their towns. [1]

Prisons have become a growth industry for rural America, with a new prison opening in a small town every fifteen days over the last decade. [2] Now a \$60 billion industry,[3] prisons have the economic power to bend state priorities to their needs. There are now so many people in prison that legislators who have prisons in their districts are able to short-circuit the democratic process that would otherwise govern the prison industry.

The importance of accuracy in counting citizens to determine voting districts is well recognized as vital to democracy. In the 1960’s, the Supreme Court struck down state legislative district plans that gave some citizens more access to government than others, declaring the “One Person One Vote” rule and the principle that “legislators represent people, not trees or acres. Legislators are elected by voters, not farms or cities or economic interests. [4]

Justin Levitt, professor of constitutional law and the law of democracy at Loyola Law School, as well as a practitioner and litigator in the area of political participation encouraged the Census Bureau to count incarcerated individuals at their last known address before incarceration as a means to further equal representation in the democratic process. Professor Levitt bases his comments on the structure of representation and the effects of various voting systems and districting plans.

He explains that the Census counts most people at their “home.” Those whose “usual residence” is different from their “home” are typically in a new location for work or education, “and they are generally intertwined with the communities where they are laying their heads most often” by interacting with their new neighbors, following community rules and regulations, and enjoying the benefits of local services and activities. However, this is not the case for the 2.2 million people in the United States who are incarcerated. Professor Levitt points to the fact that incarcerated individuals have little in common with the residents in the communities surrounding their correctional facilities.

Incarcerated individuals do not interact with the local community, and “most Village Township residents will not likely consider them ‘neighbors.’” Elected officials themselves do not always consider incarcerated people to be their constituents. As Professor Levitt recounts:

[I]n 2002, a New York state legislator representing a district housing thousands of incarcerated individuals said that given a choice between the district’s cows and the district’s prisoners, he would “take his chances” with the cows, because

	<p style="text-align: center;"><i>“[t]hey would be more likely to vote for me.”</i></p> <p><i>According to Professor Levitt, 28 states have explicitly provided that incarcerated persons do not lose their residence in their home communities when they are incarcerated.</i></p> <p><i>The <u>New York Times</u> has written nine editorials highlighting how the prisoner miscount harms democracy, and has been joined by the editorial boards of papers as diverse as the <u>Milwaukee Journal-Standard</u>, the <u>Flint Journal</u> (Michigan) and the rural <u>Jackson City Patriot</u> (Jackson City, Michigan).</i></p> <p><i>‘One Person One Vote’ is a foundation of our ideal of democracy. Please contribute to achieving fair and equal representation to all the citizens by revising the Residence Rule or Residence Situations to count incarcerated people at their home in the Census. Mahalo nui loa. ~Thank you very much.</i></p> <hr/> <p><small>[1] <i>New research on Nevada, Montana, and Idaho: How the census is watering down the voting power of some communities, by Peter Wagner, February 7, 2005. http://www.prisonersofthecensus.org/news/2005/02/07/wpp/</i></small></p> <p><small>[2] <i>Building a Prison Economy in Rural America, Tracy Huling in Invisible Punishment: The Collateral Consequences of Mass Incarceration, Mark Mauer and Med Chesney-Lind, eds. c00040	<p>Since the US has more people in prison than any country in the world, it seems logical that they need to be counted in a census. The question is where do they reside. If you count them as "residence" of where they are incarcerated, then you have the following problems: 1. Most prisoners are black and male. 2. Prisoners can be moved from facility to facility. 3. A prisoners real "home" is removed from conscienceness. 4. Prison locations can be influenced by politics, thus an incentive to increase prison populations.</p> <p>I recommend that you use their last know street address as their place of residence. If the prison system is really about rehabilitation, that's where they are most likely to go when they are released.</p>
c00041	<p>Prisons are located in gerrymandered districts to enhance a state's popular political party. It takes away the voting power of the people and places it in the hands of the government. Please undo this. Count prisoners as located in the area from which they came. Yes, it will be very convenient for the Census bureau to count them where they are found and any prison controlled issuance of the inmate's address might be falsified by the guards, but in total with the mass number of inmates, it is worth the effort to ensure fairness. The statistics the Census could derive noting the source location of inmates might be well worth it to the DOJ. It might highlight overzealous police or the need for jobs and education in those areas. Government (Federal agencies) should not support another government entity (State political parties) in the denial of citizen's rights.</p>
c00042	<p>As a county jail administrator for the last three decades, I am not in favor of using prisons and jails to determine an individual's residency for census purposes.</p> <p>First, and probably most significant for the purpose of gathering accurate data, many jail inmates will be counted twice - once through the monitored collection of census data in the facility, and they will usually still be added to the census by the individual completing the form</p>

	<p>at their permanent residence. This problem may be less likely with the longer-lasting temporary housing in prisons, but it is still a potential barrier to obtaining the best data possible with the system currently in place.</p> <p>Bad data leads to errors in decision making, whether it is for the purpose of drawing political boundaries, determining the demographics of a zip code or outlining school districts. Whether or not an inmate can vote should have no bearing on whether or not they are counted accurately; many inmates in jails can and do vote.</p> <p>Additionally, using prison inmates to draw political districts has created what is quite frankly, shenanigans, when it comes to determining demographics of specific areas. Here are some articles illustrating the type of issues that should concern any citizen, incarcerated or not, who cares about a fair distribution of services and representation:</p> <p>http://www.miamiherald.com/news/state/florida/article31489022.html</p> <p>https://aclufl.org/2016/03/21/federal-court-declares-prison-gerrymandering-in-jefferson-county-florida- unconstitutional/</p> <p>http://thinkprogress.org/politics/2015/09/24/3705270/florida-prison-gerrymandering/</p> <p>These articles are but a sampling of the issues the state I reside in has had to further legislate and litigate that grow from the practice of the US Census. At the very least, the adult incarcerated population should be treated, census-wise, as is the population of detained juveniles.</p> <p>Please reconsider the determination to keep the process the same. I would prefer we get and use the most accurate data we can, especially when that data correlates to real live human beings. Surely there is a way to count one as a temporary residence or other method to prevent the problems described previously. Thank you for your consideration.</p>
c00043	<p>I strongly disagree with the decision to count prisoners as "residents" of a district. It distorts the census because the prisoners do not have civil rights and cannot vote in elections.</p> <p>I strongly urge you to follow the results of the study on this issue which correctly states that it is a distortion of the democratic process.</p>
c00044	<p>You must count these people from where they come from, not their prison address. To do otherwise grossly distorts the counts.</p> <p>As the New York Times states in a recent editorial,</p> <p>'The federal courts have recently begun to see this gerrymandering as a threat to electoral fairness. In May, for example, a United States District Court held that the city of Cranston, R.I., had violated the principle of one person one vote by deeming inmates at a correctional facility "residents" for the drawing of district lines for the City Council and the local school committee.'</p>

	<p>Your position smacks of partisanship, not to mention willful ignorance of election laws and judicial decisions on the same. Please change your decision and count fairly.</p>
<p>c00045</p>	<p>The Voting Rights and Civic Participation Project (VRCPP) at New York Law School submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). We urge the Bureau to change the “usual residency” rule to count incarcerated people at their home address, rather than at the correctional facility where they are located at on Census Day.</p> <p>The VRCPP seeks to address the numerous barriers that prevent poor and minority communities from having an equal voice, and an equal vote, in our country’s democratic institutions. The VRCPP coordinates with advocates in the voting rights and civil rights community to protect the right to vote and to challenge recent restrictions on voting rights in states across the country, as well as to address long-term challenges to civic participation, including the Census, redistricting and jury service.</p> <p>The proposed Residence Rule will continue to count people in prison as residents of their prison cells rather than their home communities. Based on this census data, incarcerated individuals are grouped with non-incarcerated individuals living in the surrounding community to form legislative districts. However, the vast majority of people in prison cannot vote and they have no ties to the local community beyond being sent there by the Department of Corrections.¹ Consequently, people in prison become “ghost constituents” to whom the legislator from the district has no connection or accountability, but whose presence in the prison allows the legislator’s district to exist. The voting strength of the actual constituents who live adjacent to the prison is unfairly inflated simply because of their proximity to a correctional facility. Indeed, the U.S. District Court for the District of Rhode Island recently allowed a challenge to that state’s prison districts to proceed, holding that that local prison inmates “lack a ‘representational nexus’ with the [local] City Council and School Committee.”²</p> <p>The inverse to this skew in the prison districts is the erosion of voting strength in the home communities – often located many miles away – to which most incarcerated individuals return.³ Every person counted in prison on Census Day is one fewer resident counted in the home community. The result is fewer voices and fewer votes to demand accountability and representation by local officials. As the prison districts artificially inflate, the representation of home communities diminishes and declines. A similar imbalance occurs between neighboring districts. A district that contains a prison will have inflated voting strength compared to a neighboring district without a prison, creating inequalities between residents of neighboring communities.</p> <p>The home communities that are disproportionately impacted by the current usual residency rule are largely urban communities of color. Aggressive policing tactics in recent decades have targeted minority neighborhoods across the country. Because of high incarceration rates, these neighborhoods lose significantly more residents than other neighboring districts, the impact of which is felt for decades. Losing residents means losing political power. ⁴</p> <p>In 2010, New York and Maryland were the first states in the country to pass laws to correct the skew caused by the Bureau’s current “usual residency” rule. Under the 2010 laws, officials in New York and Maryland undertook the process to remove each individual who was</p>

incarcerated in state prison on April 1, 2010 from their prison district and reallocate that person back to his home address for purposes of drawing new legislative districts.

I have studied how Maryland and New York implemented their new laws and my analysis explains in detail the process each state undertook to reallocate each incarcerated person back to his or her home community, and provides detailed information about the specific steps each state took to implement these new laws.⁵ My report details the challenges each state faced, including legal disputes and data deficiencies, and the steps taken to meet and overcome those challenges.

While Maryland and New York were successful in correcting the imbalance caused by the current policy, doing so required significant effort, hours and dollars. Passing and implementing the Maryland and New York laws involved multiple agencies and actors, including legislators and their staff, government agencies, the Attorneys General's offices, private software companies and consultants, and outside advocacy organizations. In researching this process, including interviews with dozens of officials in each state, it became clear that there was widespread consensus among officials in both states that the most effective way to correct the imbalance caused by the current practice is for the Bureau to change its usual residence rule to count people in prison as residents of their home communities rather than their prison cells.

My analysis resulted in the following specific recommendations for the Bureau:

1. Update the interpretation of the Usual Residency rule to ensure that incarcerated persons are allocated to their home residence rather than at the location of a correctional facility. The Bureau should consult with stakeholders, including redistricting experts, elections officials, corrections officials, criminal justice advocates, and others to develop the best strategies and data choices for meeting this goal.
2. Consider using "self-enumeration" data wherever possible to tabulate incarcerated people. Allowing incarcerated individuals to complete and submit their own Census forms would allow them to identify their race and ethnicity as well as enable them to directly list their current home address.
 - Conduct a self-enumeration pilot study in select correctional facilities to develop protocols and test the utility of inmate-completed forms, as suggested by the Bureau's 2013 Ethnographic Study.
 - Where administrative records are to be used to tabulate incarcerated people, rely on agency-level administrative records collected by the Federal Bureau of Prisons and state correctional agencies – as suggested by the Bureau's 2013 Ethnographic Study – rather than collecting this data on the individual facility level.
 - Consult with the Bureau of Justice Statistics to identify best practices for designing effective systems for collecting accurate and reliable state corrections data.⁶
 - Assure that state correctional agencies are aware of the Office of Management and Budget's (OMB) Standards for the Classification of Federal Data on Race and Ethnicity, and advise state correctional agencies on how data systems can be structured to facilitate data collection consistent with these standards. Encouraging states to use the OMB standards would eliminate inconsistencies in how race and ethnicity data are recorded.⁷

3. Conduct experiments using existing state corrections data to evaluate how these administrative records, in their current form, would impact Census Bureau workflow and quality standards, as well as to develop protocols for addresses that cannot be successfully geocoded.
4. Consider how to allocate persons in the limited circumstances where an individual's home address is unknown or nonexistent. For example, the Bureau may have to tabulate a limited number of people at the correctional facility where there is insufficient home address information.
5. Explore whether the recommendation of the 2013 *Ethnographic Study of the Group Quarters Population in the 2010 Census: Jails and Prisons*⁸ to establish "correctional specialists" to coordinate the Bureau's enumeration of people confined in correctional facilities will improve efficiency and standardization.

As long as the Bureau continues to count incarcerated individuals as residents of their prison cells, the demographic data of their home communities will continue to be skewed and incomplete, resulting in long-term disenfranchisement and disempowerment. To correct this injustice, we urge the Bureau to amend its usual residency rule to count incarcerated individuals as residents of their home communities.

¹ Only Maine and Vermont allow people to vote while in prison. See Erika Wood, Brennan Center for Justice, *Restoring the Right to Vote* 3 (May 11, 2009), available at <http://www.brennancenter.org/publication/restoring-right-vote>. In those two states, incarcerated people maintain residency in their home communities for voting purposes and vote in their home district by absentee ballot; they do not vote in the district where they are incarcerated. See Vt. Stat. Ann. tit. 17, § 2122(a); Me. Rev. Stat. Ann. tit. 21-A, § 112(14).

² *Davidson v. City of Cranston*, No. 14-91L, 2016 WL 3008194 *5 (D.R.I. May 24, 2016) (quoting *Calvin v. Jefferson County Board of Commissioners*, No. 4:15CV131, 2016 WL 1122884 *8 (N.D. Fla. March 19, 2016)).

³ See *Fletcher v. Lamone*, No. 1:11-cv-03220, at 18 (D. Md. Dec. 23, 2011), *aff'd* 133 S. Ct. 29 (2012) (mem.) (citing Nancy G. La Vigne *et al.*, *A Portrait of Prisoner Reentry in Maryland* 33 (Urban Institute 2003) available at http://www.urban.org/UploadedPDF/410655_MDPorraitReentry.pdf which found that most Maryland prisoners returned to Baltimore after their release from prison).

⁴ See Erika L. Wood, *One Significant Step: How Reforms to Prison Districts Begin to Address Political Inequality*, 49 U. MICH. J. LAW REF. 101 (2015).

⁵ See Erika L. Wood, *Implementing Reform: How Maryland and New York Ended Prison Gerrymandering* (Demos 2014), available at <http://www.demos.org/publication/implementing-reform-how-maryland-new-york-ended-prison-gerrymandering>.

⁶ The Bureau of Justice Statistics conducted a survey of state correctional data systems in 1998, finding that the majority of state prison systems had mostly complete electronic records of home addresses. See Bureau of Justice Statistics *et al.*, *State and Federal Corrections Information Systems: An Inventory of Data Elements and an Assessment of Reporting Capabilities*, Bureau of Justice Statistics (Aug. 1998), available at <http://www.bjs.gov/content/pub/pdf/sfcisq.pdf>. The Census Bureau should determine how these data collections have improved in the last sixteen years, and consider how the Bureau can help these systems continue to improve as 2020 approaches. Further, the Census Bureau may wish to explore the state of data collection in the nation's largest jail systems; the fifty largest jail systems in the U.S. hold more than a third of the nation's jail population.

⁷ The OMB standards provide a common language to promote uniformity and comparability for data on race and ethnicity and were developed in cooperation with federal agencies, including the Census Bureau, to provide consistent data on race and ethnicity throughout the federal government. For an explanation of OMB standards, see Office of Mgmt. & Budget, *Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity* (Oct. 30, 1997), available at http://www.whitehouse.gov/omb/fedreg_1997standards/.

c00046	<p>The New Jersey Association on Correction submits this comment in response to the Census Bureau 's Federal Register notice regarding the Residence Rules and Residence Situation 81FR 42577(June 30, 2016). The Association urges you to count incarcerated people at their home address rather than the particular facility that they happen to be located on Census day. If we count juveniles in residential programs, students in Boarding Schools and military personnel with overseas assignments in their home addresses we should do the same for those incarcerated.</p> <p>We currently incarcerate more than 2,000,000 individuals in the US. By designating a prison cell as a residence in the 2010 census, the Census Bureau concentrated a population that is disproportionately male, urban, and African American or Latino into just 5393 Census Blocks that are located far from the actual homes of the incarcerated people. When this data is used for redistricting, prisons inflate the political power of those who live near them. This also serves to make the Census less accurate.</p> <p>When this issue was opened for comment in 2015, 96% of the comments received by the Census Bureau supported the idea of counting individuals at their home not at the prison cell they currently occupied. I was hopeful that this kind of support would result in a positive response from the Bureau. I was disappointed to learn otherwise.</p> <p>Thank you for the opportunity to comment on the Bureau's efforts to count everyone in the right place. The Association believes in a population count that is accurate. We urge you to count the incarcerated as residents of their home addresses and not the prison community they happen to be in on Census day.</p>
c00047	<p><i>This comment submission contains graphics that cannot be displayed in this table. It is available as Appendix Attachment c00047.</i></p> <p>As the _____ for AIDS Alabama, I wish to express my opposition for the proposed 2020 census criteria regarding incarcerated adults which designates that their residency be counted based on the jail, prison, or detention facility in which they are incarcerated. This guideline will not only result in a less accurate census count, but will contribute to redistricting which dilutes political representation, especially for already marginalized communities. Establishing the residency of incarcerated adults as based on their legal residence - instead of their place of incarceration - will ensure that the 2020 census can more accurately depict local populations and safeguards against possible misrepresentation as a result of redistricting.</p> <p>Prisons, jails, and other detention facilities are predominately located in rural or suburban counties. A 2014 analysis by the Vera Institute of Justice found that 62% of the U.S. jail population was incarcerated in mid-sized or small counties, with nearly half (44%) in counties of under 250,000 non-incarcerated residents. There are also large racial disparities in the demographic breakdown of those incarcerated. Numerous studies (including the 2014 Vera Institute analysis and a 2016 report by The Sentencing Project entitled <i>The Color of Justice: Racial and Ethnic Disparities in State Prisons</i>) have demonstrated that people of color in this country are far likelier than whites to be arrested and incarcerated. The incarceration rate of African Americans, for example, is over 5 times that of whites, and Latinos are incarcerated at a rate 1.4 times that of whites. Racial disparities in some states are even worse, such as my state of Alabama, where over</p>

	<p>half the prison population is black. Lastly, it is important to note that in only two states Maine and Vermont can prisoners vote while incarcerated.</p> <p>In light of this evidence, it can be seen how the decision to count incarcerated persons as residents of the county in which their facility is located during the Census would contribute to misrepresentation on a number levels. For residents of rural and small counties housing a large jail, prison, or detention center, local redistricting would be skewed towards the detention facility, despite the fact those prisoners are most likely unable to vote and have permanent legal residence somewhere else. This dilutes the power of local residents in political decisions that directly impact their lives. Meanwhile, those same counties will have a disproportionate say in state and federal matters at the expense of the urban areas from which many of those incarcerated individuals have permanent legal residence. For those who are incarcerated for short periods, this may result in them spending the majority of the year in another locale than that in which they were counted for the Census.</p> <p>The impact this policy would have on racial inequities is also gravely important to consider. Since people of color are over represented in detention facilities, criteria counting incarcerated adults as residing in the counties in which they are detained would skew data obtained by the Census. As a result, demographic research and analysis carried out to inform policies would likewise be inaccurate, hampering the ability of local, state, and federal officials to see and address disparities. For example, a rural or suburban county housing a large prison facility may appear in the data as more diverse and having a lower average income than in reality, masking geographic disparities. In addition to erroneous data on racial inequities, the proposed criteria also reduces the political power of communities of color. Rural, predominately white counties that are more likely to contain detention facilities would be over represented at state and federal levels due to the mechanisms described above, essentially weighting their political input greater than that of communities of color, which are predominately urban. Whats more, those incarcerated individuals who are subsequently released would return home to find they have less local government representation, and thus reduced input on policy decision directly impacting their lives.</p> <p>In summary, by counting incarcerated adults as residents of the county housing their detention facility, the proposed criteria for the 2020 U.S. Census would invariably contribute to inaccurate demographic data and political misrepresentation at various levels of government. For this reason, I strongly suggest that the U.S. Census Bureau revise the proposed criteria to instead count incarcerated adults according to their home address. I have included supporting documents with this submission for further review, if you so wish. Thank you for your time, and I hope the U.S. Census Bureau will take these points into serious consideration going forward.</p>
c00048	<p>I am writing to provide comment and support for U.S. Census Bureau’s proposed “2020 Census Residence Rule and Residence Situations”.</p> <p>On behalf of the Christian County community, I show my support of the proposed new guidelines for counting of deployed military personnel in the upcoming 2020 Census. Under the proposal, U.S. military personnel who are deployed outside the U.S. on Census Day would be counted at the U.S. residence where they live and sleep most of the time. Counting deployed service members via this method will ensure that they are counted in the most advantageous and beneficial means for all communities.</p>

	<p>Military service members and their families are vital to the fabric of the communities in which they are stationed. Often, the communities surrounding a military installation work tirelessly to provide the best options, partnerships, and opportunities for their military neighbors. Our community here in Christian County, Kentucky, is no exception to that standard of excellence in service. In so many ways, Christian County has maintained a steadfast relationship—and partnership—with the Army, working to ensure our community is in tune with the quality of life needs and wishes of our soldiers and their families.</p> <p>The proposed method of counting service members who are deployed at the time of the 2020 Census will accurately show the economic impact that these service members have on the communities in which they work, play, and reside. Appropriate federal dollar funding can now be made available to these very communities, so that they may continue to provide quality of life services and opportunities.</p> <p>I pledge my continued support for economic prosperity and opportunities for the region in which Fort Campbell gains tremendous support. I thank you for your consideration of enacting what is best for our country’s military personnel, their families, and the communities that they call home.</p>
c00049	<p>I represent _____, state of Oklahoma and submit this comment in response to the Census Bureau's Federal Register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census Day ignores the reality of incarceration: prisons are not a "usual residence."</p> <p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. Equal representation, in turn, rests on an accurate count of the nation's population.</p> <p>The reality is that when my constituents are incarcerated, they are often sent to prisons outside _____, but they still rely on me for representation. Over the course of their incarceration, the prison administration may move them between different prisons, located in many of my colleagues' districts, but they remain my constituents. Their home in my district remains their only stable, permanent, "usual" residence. Counting them as if they were residents of the facility where they happen to be held on Census day doesn't reflect the modern lived reality of our communities.</p> <p>I note that your proposed method of counting the incarcerated populations inconsistent with how you count other groups that eat and sleep in a location that is not their usual residence. For example, I note that your proposed rules will count boarding school students at their home address even if they spend most of their time at the school. The same approach should be taken when counting incarcerated people.</p> <p>I am also concerned about the impact of your resident rules on racial justice in my state. Our state disproportionately incarcerates disproportionately African-American or Latino people so when you count them in the wrong location, and that data is used for redistricting it further undermines the political power of minority communities.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives</p>

	<p>to follow the residence rule to count everyone in the right place. I believe that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00050	<p>Thank you for this opportunity to respond to the Census Bureau’s Notice seeking comments on the Bureau’s proposed 2020 Census Residence Rule and Residence Situations (81 FR 42577, June 30, 2016). The League of Women Voters of Virginia urges the Bureau to change the method it uses to count the prison population due to the impact it has on voter representation and on the League’s mission to protect voting rights, ensure fair and equal representation, and promote accurate redistricting.</p> <p>In 2015, in response to the Census Bureau’s request for comments on its interpretation of its “usual residence” rule, the Bureau received 156 comments, asking the Bureau to change its interpretation of how the residence rule applies to prisoners and to count them at their home or pre-incarceration addresses. Six comments opposed changing the rule. It is difficult to understand why the great weight of those comments in favor of changing the rule did not persuade the Bureau to change its approach with respect to prisoner counts.</p> <p>The Bureau created the “usual residence” rule through administrative interpretation of the Census Act of 1790. While a few changes have been made to those rules since that time in order to keep up with the changing demographics of America, the rule to count prisoners where they are incarcerated, not at their home residences, has remained unchanged over the last centuries.</p> <p>Doubtless in 1790 when citizens were less mobile, these terms in the statute, “usual place of abode,” “settled place of residence ...in any family,” and “every person occasionally absent at the time of the enumeration, as belonging to that place in which he usually resides in the United States,” meant one’s home location. Back in 1790, this rule made sense because there were few prisoners and they were imprisoned and punished in their home locations. Since 1980, however, the prison population has quadrupled and, prisoners are now typically incarcerated in rural areas far from home. This change in circumstances and failure to change the residence rule in the context of today’s imprisonment practices results in prison gerrymandering, granting greater representation to rural areas that contain prisons and, hence, unequal representation for residents in districts that contain no prisons (both urban and rural). It is time for the Census Bureau to update its interpretation of the people in prison on Census day.</p> <p>In this proposed rule, when the Bureau does make a change in its interpretation of the “usual residence” rules, it appears to lean heavily on how long individuals are away from home. For example, military now <i>deployed</i> overseas will be counted at their home addresses. Other military <i>stationed or assigned</i> overseas will be counted as previously in their “home of record” state for apportionment purposes only. Residents of juvenile group homes are counted at the group home location because they are there for long periods of time while juveniles in residential treatment centers will be counted at their home locations because the Census Bureau believes individual stays are relatively short.</p> <p>A factual survey about prisoner time served at each prison nationwide might reveal that vast numbers of prisoners serve two years or less. In Virginia, the median time served in state prison for someone released in 2014 was 19.5 months. But even while they were in state custody they were likely to have been moved between different facilities, making the time spent at any given facility much shorter. We don’t have that data available for Virginia, but in New York, for example, the median length of stay in any given facility is about seven</p>

months and in Rhode Island it is under 100 days. Length of stay does not appear to support the Bureau's reasoning for continuing to count prisoners at their prison locations where typical prisoner time served can be shorter than deployments overseas.

Also of concern in this proposed rule is that the Census Bureau leaves it up to the states individually to decide whether to include their own prisoner population counts when they redistrict. If states decide they want to exclude prisoner counts when they redistrict, states must either do the calculations themselves or submit a data file to the Census Bureau (indicating where each prisoner is incarcerated on Census Day and their pre-incarceration address) in a specified format. The Census Bureau will review the submitted file and then, if it includes the necessary data, provide a product that contains supplemental information the state can use to construct alternative, within-state tabulations for its own purposes. But even with this proposed solution states still cannot, as a practical matter, account for all of their residents who may be in other states' prisons or in a federal facility. It is not clear why the Census Bureau does not use its statutory authority (to collect accurate census data) to ask states simply to do that.

Some localities in Virginia at town, city, and county levels have chosen to exclude their prisoner counts on occasion when making redistricting decisions. Six counties have adjusted their Census data and did not include prisoner counts when drawing their supervisors' districts. Eighteen other counties in Virginia used Census data and included prison populations when drawing their supervisors' districts. Such individual decision-making only adds to a lack of uniformity within states and among states, leading to inaccuracy in the way prisoners are treated for redistricting purposes.

This is a problem in rural communities that contain large prisons because it seriously distorts redistricting at the local level (county commissions, city councils, and school boards). The Constitutional principle of one person, one vote should not be a county by county or state by state issue. It is a federal issue about representational equality.

Already four states (Maryland, New York, California and Delaware) now count prisoners at their home locations for redistricting purposes; other states do not. Two recent court decisions in Rhode Island and Florida have held that counting prisoners at prisons in districts for local redistricting purposes as if those prisoners are eligible voters violates the Constitution's one person, one vote principle. Here are links to the two decisions: http://www.prisonersofthecensus.org/Calvin_v_Jefferson-Order.pdf; <http://riaclu.org/images/uploads/Davidson.v.Cranston.decision.pdf>. Cranston is now on appeal. These cases make it more likely that other challenges to using Census data will follow if the Bureau does not change the way it counts incarcerated people. The Bureau's proposed rules lead to greater uncertainty as states redistrict in 2021.

Under its statutory authority to collect accurate census data, the Census Bureau can ask states and the federal Bureau of Prisons to submit a data file, indicating where each prisoner is incarcerated on Census Day and prisoner's pre-incarceration address. We ask the Census Bureau to exercise that authority in order to conduct an accurate Census.

Continuing to count prisoners at their places of incarceration makes it more likely than not that states will continue to count prisoners in districts where they should not be counted, resulting in impermissibly unequal representation in districts that do not contain prisons.

	<p>Failing to interpret “usual residence” to reflect today’s vastly changed circumstances promotes the likelihood that more federal courts will hold that the Bureau’s failure to update its residence rules results in state redistricting plans that violate the Constitution.</p> <p>Therefore, the League urges the Census Bureau to change the “usual residence” rules for the 2020 Census so that prisoners are counted at their pre-arrest home jurisdiction. Fairness in voting power will result and will prevent constitutional violations of the one person, one vote requirement.</p>
c00051	<p>Based on the following criteria for Foreign Citizens in the U.S., it is not clear whether foreign "snowbirds" - those who are foreign citizens but stay in the U.S. for 4 to 5 months every year - would be considered to be "living" in the U.S. under (a) or "visiting" under (c) below. Suggest a clarification to differentiate between "living" and "visiting," perhaps expand (a) to state "...living or staying in the U.S. for an extended period of time exceeding _____ months." For local government jurisdictions with high percentages of Foreign Citizen "snowbirds," this is an important distinction. As an example, our jurisdiction has an official population of approximately 6,700. However, for almost half of the year the actual population is closer to 20,000 due to snowbirds, many of whom are Canadian or European citizens. These snowbirds do not come for only a couple of weeks, but stay for several months. This places a different burden on the local governing jurisdiction than short-term vacationers would place. Therefore, it would seem justified to provide a clarification in the criteria below in order to more accurately reflect the Foreign snowbird impact on local jurisdictions.</p> <p>3. FOREIGN CITIZENS IN THE U.S.</p> <p>(a) Citizens of foreign countries living in the U.S. Counted at the U.S. residence where they live and sleep most of the time. (b) Citizens of foreign countries living in the U.S. who are members of the diplomatic community counted at the embassy, consulate, United Nations' facility, or other residences where diplomats live. (c) Citizens of foreign countries visiting the U.S., such as on a vacation or business trip Not counted in the census.</p>
c00052	<p><i>This comment submission contains graphics that cannot be displayed in this table. It is available as Appendix Attachment c00052.</i></p> <p>I am writing to comment on the proposed rules and to share some valuable insight. I have followed the Prison Gerrymandering Project with much interest - since they hyper focus on where prisoners should be counted - and not in their cells - but completely ignore other populations that have a similar minimal if any connection to their community. That population I speak of is the extensive number of undocumented individuals particularly those in gateway communities.</p> <p>By way of background, I was _____ the Village of Port Chester on the Voting Rights case brought by the Federal Government. Our case resulted in implementation of a cumulative voting scheme to replace an at large system that the Federal Government opposed. As demonstrated by the attached expert report of Clark Benson, Port Chester demonstrated that a serious problem occurred in a redistricting plan that sought to create a minority Hispanic district to resolve a determined Section 2 violation. The plan seriously devalued the vote of everyone else in the community by basing districting in part on individuals that were unable to participate as voters in the community - much like prison gerrymandering.</p>

	<p>Interestingly, from the Prison Gerrymandering site, the Court in the Cranston Rhode Island case highlighted the fact that the average stay of a prisoner in that case was not significant. What do you think is the average stay of one passing through an immigrant gateway community?</p> <p>The most important part of your work would be to clearly identify the CVAP within each of the census areas, to the smallest zone fiscally possible. This will allow for a CVAP analysis to be performed, included, utilized and adopted as a requirement to redistricting efforts to correct disparities created by redistricting solely on the basis of total population - particularly at a local level. The elimination of rotten boroughs would result which can only be viewed as a positive for our democracy.</p> <p>Certainly, identifying areas of low CVAP will also be helpful for government bureaucrats that need to determine where aid to individuals needs to be disbursed, helping to ensure that the neediest amongst us - regardless of the immigration status, can be assisted.</p> <p>I thank you for the opportunity to submit these comments and the attached report to you.</p>
c00053	<p>I represent Michigan's _____ and submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at the particular facility they are located at on Census Day ignores the reality of incarceration: prisons are not a "usual residence." As an elected representative, I am keenly aware that democracy, at its core rests on equal representation. Equal representation, in turn, rests on an accurate count of the nation's population. The reality is that when my constituents are incarcerated, they are often sent to prisons outside my district, but they still rely on me for representation. Over the course of their incarceration, prison administrators may move them between different prisons, located throughout many of my colleagues' districts, but they continue to be my constituents. Their home in my district remains their only stable and permanent residence. Counting them as residents of the facility where they are held on Census day does not reflect the modern reality of our communities.</p> <p>I note that your proposed method of counting the incarcerated population is inconsistent with how you count other groups that temporarily reside in a location other than their usual residence. For example, one proposed rule will count boarding school students at their home addresses even if they spend most of their time at school. The same approach should be taken when counting our nation's incarcerated individuals.</p> <p>I am also concerned about the impact of your residence rules on racial justice in my state. The State of Michigan disproportionately incarcerates African-American and Latino populations, so when counted in the wrong locations and legislative districts are drawn accordingly, it further undermines the political power of minority communities.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place. I believe that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00054	<p>Common Cause Delaware (CCDE) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people</p>

at the particular facility that they happen to be located at on Census day ignores the transient and temporary nature of incarceration. If made final, this proposal will mean another decade of decisions based on a Census that counts incarcerated people in the wrong place.

Ensuring that redistricting is impartial and that legislative lines are drawn in a fair and transparent way is part of the core mission of CCDE to promote civic engagement and accountability in government, as is ensuring that every eligible American's vote is counted fairly. Counting incarcerated persons as residents of the district in which they are temporarily held has the effect of unfairly enhancing the political power of those who live and vote in the prison district, while unfairly diluting the votes of those in districts without prisons. Legislators with a prison in their district should not get a bonus for keeping the prison full. This dynamic hurts our democracy, and it hurts the communities from which these incarcerated persons hail.

The Census Bureau should honor the overwhelming consensus urging a change in the Census count for incarcerated persons. When the Bureau asked for public comment on its residence rules last year, 96% of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address. This level of consensus among stakeholders, which is based on a thorough understanding of the realities of modern incarceration, deserves far more consideration than it was given.

As you know, American demographics and living situations have changed drastically in the two centuries since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. The country's exploding prison population requires the Bureau to adapt once again.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just a few thousand Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, it artificially inflates the political power of the areas where the prisons are located and dilutes the political power of all other urban and rural areas without large prisons.

Currently, four states including our own (California, Delaware, Maryland, and New York) and over 200 individual counties and municipalities adjust Census population data to avoid prison gerrymandering when drawing their districts. Acknowledging the need to correct its own data to avoid prison gerrymandering, the Bureau has proposed to help states with the population adjustment. But this ad hoc approach is neither efficient nor universally implementable.

For example, in 2010, when Delaware became the second state to pass a law to end prison-based gerrymandering, the Department of Corrections collected and transmitted the address information but, unfortunately, the state was unable to arrange for the geocoding of this address data in time for the legislature's deadline on making their proposals public and had to, reluctantly, postpone full implementation until 2021. A change in the residence rule for incarcerated people by the Census Bureau would meet the state's needs in a much more streamlined fashion.

	<p>We're proud Delaware took the first step towards undoing prison-based gerrymandering, but it hasn't been a smooth process, and there is a better way. This ad hoc approach in a few states is neither efficient nor universality implementable. If the Census Bureau would change its practice of counting incarcerated individuals at their home address rather than at the prison location, it would significantly alleviate the burden on state and local agencies and provide an efficient solution to greatly improve the fairness of apportionment and representation for millions of Americans. As you well know, states across the country look to the Census Bureau as the nation's foremost expert on national demographics and data, and more often than not count incarcerated persons the way the Bureau does. Once the Bureau leads the way with an update to a now outdated practice, states are sure to follow.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau to follow the residence rule to count everyone in the right place. My organization believes that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00055	<p>I have reviewed the Proposed 2020 Residency Rule published in the Federal register on June 30, 2016, and I am writing to provide feedback that I think will be useful during the process of finalizing the rule. There are three aspects of the rule that I will be commenting on. Those are the place to count prisoners, where to count residents of boarding schools, and how those in transitory locations are counted.</p> <p>The proposed rule indicates that Census will continue with the long-standing practice of counting prisoners in the facility in which they are located at the time of the enumeration. I fully support this aspect of the rule as it maintains fidelity to the principle of counting persons where they stay and sleep most of the time. Persons in correctional facilities stay and sleep in the prison, in most cases, all of the time that they are incarcerated and therefore should be counted at that location. The argument to count the prisoners at their residence prior to incarceration goes against the principle of counting persons at their usual residence.</p> <p>The proposed rule indicates that students in residential school facilities that are enrolled at less than the college level should be counted at their parent or guardians' home. This portion of the rule is misguided. This rule moves residents who spend nine or more months at a location back to a location where they do not spend most of their time. Students in boarding schools often partake in the activities of the communities in which their schools are located and share in consuming the resources, physical, environmental, and social, that the community has to offer. I understand that boarding school students present a potential problem with double counting, once by the parents and once by the school, but there should be a procedural or instructional mechanism in place to account for this rather than going against the principle of counting people where they spend most of their time. The logic of this portion of the rule is doubly confounding when viewed from the vantage point of how college students are counted. These students are often just as financially dependent on their parents as their younger peers are, yet they will be counted at the school rather than with their parents. For the internal consistency of the rule, boarding school students should be counted at the place where they spend the majority of their time.</p> <p>The final portion of the rule that needs comment is the section dealing with those in transitory locations. My concern is not with the logic of this portion of the rule, rather I have concerns about its implementation. My concern is specifically with those found in facilities that cater to recreational vehicles (RV). Through conversation with Census staff, my understanding is that during the count of transitory locations persons found in RV parks are asked if it is their usual location. If they respond in the negative then they are not counted as it is</p>

	<p>assumed they will return to their usual place of residence and be counted as part of the normal enumeration. This is logically consistent with the rest of the rule, but not practically consistent. The fact is that many persons whom enumerators will find in RV parks spend a majority of their time in RV parks, just not the same one. Someone may winter in, for example, Florida for three or four months and then relocate to the north, for example, to Michigan for the warmer months of the year. The primary issue here is that these people will not be counted in their usual place as they will not be counted at all. If, as in my examples, someone spends four months in Florida and tells the enumerator that they do not spend most of their time in Florida, but spends eight months in Michigan, in another RV park, during the warmer months, they will not be counted at all, as they would have missed the enumeration of transitory locations in Michigan. The solution to this is to add a simple second step to the enumeration of transitory locations that would ask if the person spends most of their time in a combination of transitory locations. If the respondent indicates that they are usual residents of multiple transitory locations then they should be counted at one of these locations. My concern is less, referring again to the example locations, whether they are counted in Florida or Michigan, but that they are counted somewhere.</p> <p>Thank you for this opportunity to comment on the proposed residency rule. I believe that the majority of the rule is sound and will ensure that people are counted once and in the right place. Please do not hesitate to contact me if you would like clarification on any point that I have raised.</p>
c00056	<p>As their duly elected representative to _____, I submit this comment on behalf of the residents of New York's _____ in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census day ignores the transient and temporary nature of incarceration. If made final, this proposal will guarantee an inaccurate 2020 Census, and another decade of decisions based on distorted data that misrepresents our demographic composition.</p> <p>The Census Bureau's proposal to continue to count incarcerated individuals as residents of the correctional facility in which they are located at the time of the census is an arbitrary rejection of both accuracy and public consensus. When the Bureau asked for public comment on its residence rules in 2015 96 percent of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address.¹ This level of consensus amongst stakeholders is rare, and deserved more consideration than it appears to have been given.</p> <p>Historically, a relatively low prison population in the United States ensured that this inaccurate methodology had relatively little impact on the overall accuracy of the Census, but the growth in the prison population over the last few decades urgently requires the Census Bureau to update its methodology, and stop counting prisoners as residents of the cells in which they are temporarily incarcerated instead of their home address.² American demographics and living situations have changed drastically in the two centuries since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. The designation of a prison cell as a residence concentrates the inmate population, which is disproportionately male, urban, and African-American or Latino, into just a few thousand Census blocks that are located far from their actual residences. ³ The erroneous manner in which this population is counted degrades the accuracy of census, and must be corrected.</p>

The impact of this flawed methodology is well documented in New York State, where, in 2007, thirteen rural counties chose to correct the Census count and remove their prison population prior to redistricting to avoid vote dilution in their districts.⁴ The 2000 Census miscounted 43,740 New York City residents in upstate prison cells.⁵ In addition seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes.⁶ Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.⁷

While the Census Bureau arbitrarily disregarded the overwhelming public consensus regarding inmate populations, it decided that other populations - deployed overseas military, and juveniles staying in residential treatment centers - should be counted in their home location even if they are sleeping elsewhere on Census Day.⁸ The Bureau made these changes even though there were far fewer public comments identifying potential concerns from miscounting these populations.

The Bureau's failure to update its residence rules is particularly disturbing because federal courts have started to recognize that the Bureau's prison count can result in constitutional violations of one person, one vote requirements.⁹ Counting incarcerated people at the location of the facility condones violations of equal representation and ensures legal challenges to the constitutionality of redistricting plans at the state and local level. There have already been successful constitutional challenges to prison gerrymandering in Jefferson County Florida and Cranston Rhode Island.¹⁰ In Florida, the Court ruled the Jefferson County School District's redistricting plan, which counted the inmates of the local state correctional facility as residents of one school board district, unconstitutionally diluted the voting power of voters in the other districts, violating the "one person one vote" principle of the Equal Protection Clause of the 14th Amendment. The Bureau's current refusal to change the way it counts incarcerated populations will ensure that these constitutional challenges continue into the coming decades.

The Bureau's proposal to allow States to request individualized Census counts that reallocate incarcerated populations at their home addresses is a tacit admission of the inefficacy of its current counting rules. Only four states, (CA, DE, MD and NY) would be able to reallocate their populations according to these individualized counts. The remaining State's face another decade of potential legal challenges to redistricting plans. In order to fairly serve its data users in state and local governments, the Census Bureau must change how it counts prisoners.

c00057	<p>We write to resubmit our comments in response to the Census Bureau's federal register notice regarding the Proposed 2020 Census Residence Criteria and Residence Situations (FR Doc. 2016-15372 Filed 6-29-16). The fact that the Census Bureau plans to offer a product to assist states to reallocate their own prisoner population counts is perhaps a step in the right direction but we question why this method will not be used for the official decennial census count.</p> <p>In our letter to you dated July 8, 2015 we wrote: "The most expedient and streamlined avenue for changing the method for counting prison populations lies with the Census Bureau changing their prisoner residence rule procedure. This would provide a systematic and consistent tabulation approach for calculating Congressional re-apportionment and one that is uniform for redistricting in all 50 states. Such a change on the federal level will rectify the perceived inequalities in counting prisoners and eliminate costly litigation for states to defend redistricting plans based on adjusting local prison populations."</p> <p>It remains our belief that prisoners should be counted at their last place of residence so the official count is consistent nationwide and costly litigation avoided due to local methodologies adopted to meet this result.</p> <p>Therefore, we again urge you to change Census Bureau policy to count incarcerated people as residents of their home address, rather than at the place of their incarceration.</p>
c00058	<p>I am writing about my opposition to the recent proposal on how to implement residence guidelines for the 2020 Census. I believe the Census Bureau is wrong to consider incarcerated people as residents of the correctional facility, rather than at their home address. The current method of counting has proven to be inaccurate and outdated. As a state senator, representing a predominately urban area, I am requesting a more fair and equitable representation of all people and communities.</p> <p>The Bureau has chosen to continue counting people in the wrong place, ensuring an inaccurate 2020 Census. With the next census just four years away, planning is already underway. For this reason, I urge the Bureau to make the necessary steps to ensure, at this early point in the planning process, that the 2020 census can count incarcerated people at their home addresses.</p> <p>As you know, the Census Bureau's current "residence rules" instruct the Bureau to tabulate incarcerated people as residents of the prison location, even though incarcerated people are not considered residents of the prison location for other purposes. At the time of the nation's first census, the question of where incarcerated people were counted was of little importance because very few people were behind bars. Today, nearly 1 percent of the U.S. adult population is incarcerated. By designating a prison cell as a residence, the Census Bureau</p>

	<p>concentrates a population that is disproportionately male, urban, and African-American or Latino in approximately 1,500 federal and state prisons that are far from their home communities.</p> <p>I recognize that the Census Bureau seeks to conduct the fairest, most accurate, and most efficient census possible, and I also understand that this undertaking requires decade-long preparations. I therefore urge you, in your research and planning for the 2020 census, to make it a priority to develop a methodology to tabulate incarcerated people at their home addresses.</p> <p>I thank you for your careful consideration of this issue.</p>
c00059	<p>As a resident of Pennsylvania, I am against the counting of inmates in prisons and halfway houses as being residents where they are incarcerated. Pennsylvania law states: for the purpose of determining residence, an inmate in a penal institution is deemed to reside where the individual was last registered to vote before being confined in the penal institution; or if the inmate was not registered to vote prior to confinement, the individual is deemed to reside at the last known address before confinement; or a new residence established while confined (for example, if the inmate's spouse establishes a new residence in which the inmate intends to reside upon his/her release from confinement).</p> <p>Counting inmates as residents of prisons and detention centers violates Pennsylvania law, which states: A penal institution (including a halfway house) cannot be a residence address for registering to vote. It also violates the one person, one vote requirement of the U.S. Constitution's Fourteenth Amendment as was made clear this year by U.S. District Judge Mark E. Walker in Calvin et al. v. Jefferson County and by U.S. District Judge Ronald Lagueux in Davidson vs. City of Cranston.</p> <p>The proposed census residence criteria as they relate to prisoners has the unintended consequence of swelling the populations of those areas containing prisons. This, in turn, gives more influence to politicians who view prisons in their home areas as job generators, and push programs to increase the prison population.</p> <p>I urge this provision be modified for purposes of the U.S. Census.</p>
c00060	<p>Please count deployed service members according to where they actually live. Then the Bureau will receive more accurate reports of population and ensure communities have the needed resources to support these soldiers and their families.</p> <p>Thank you and God Bless.</p>
c00061	<p>I want to thank the Honorable Kentucky Senator Rand Paul for giving proper attention to the matter of the 2020 Decennial Census Residence Rule & Residence Situation. Also, thanks to the Honorable John H. Thompson and the Census Bureau for indicating they will make this common sense proposal a reality.</p> <p>A proper accounting for all military personnel and their Usual Residence will give each community consistency for their citizens. Being a Kentuckian, I'm interested in making certain my fellow Kentuckian's and all those who defend this great nation are credited with the proper residence designation.</p>

c00062	<p>Counting inmates as residents of prisons and detention centers violates Pennsylvania law, which states: A penal institution (including a halfway house) cannot be a residence address for registering to vote.</p> <p>It also violates the one person, one vote requirement of the U.S. Constitutions Fourteenth Amendment as was made clear this year by U.S. District Judge Mark E. Walker in Calvin et al. v. Jefferson County and by U.S. District Judge Ronald Lagueux in Davidson vs. City of Cranston.</p> <p>Miscounting of urban prisoners in the rural districts where most PA prisons are located swells the population base of those districts. It enhances the political clout of politicians who have strong incentive to support prison expansion and to enact policies that ensure continued mass incarceration. The practice distorts our democratic process and undermines government of, by and for the people.</p>
c00063	<p>As a resident of the state of Kentucky, I was appalled to learn that our Military who are serving overseas on assignment are not counted in the Census of bases such as Fort Campbell. Many leave family and homes behind who long for their return and maintain the residence. Our Military both active and reserve who are called up to duty away from their homes MUST be included in the Census count.</p>
c00064	<p>Counting inmates as residents of prisons and detention centers violates Pennsylvania law, which states: A penal institution (including a halfway house) cannot be a residence address for registering to vote.</p> <p>It also violates the one person, one vote requirement of the U.S. Constitutions Fourteenth Amendment as was made clear this year by U.S. District Judge Mark E. Walker in Calvin et al. v. Jefferson County and by U.S. District Judge Ronald Lagueux in Davidson vs. City of Cranston.</p> <p>Miscounting of urban prisoners in the rural districts where most PA prisons are located swells the population base of those districts. It enhances the political clout of politicians who have strong incentive to support prison expansion and to enact policies that ensure continued mass incarceration. The practice distorts our democratic process and undermines government of, by and for the people.</p>
c00065	<p>Prisoners should not be counted as permanent residents of the district where the prison is located. Most of them are serving limited sentences. Most prisons are in rural areas; many prisoners come from urban areas. Rural and urban area's needs are often district. Not allowing prisoners' votes to reflect their area's needs weakens the power of the prisoner's vote and violates the spirit of the one man, one vote decision.</p>
c00066	<p>I am highly opposed to designating a prisoner as a resident of his prison instead of as a resident of his previous address. Such a practice inflates the population and clout of the prison political area and therefore encourages the building of prisons. It also removes the prisoner from any contact with his home politics if and when he is free to take part in them.</p>
c00067	<p>I think it's ridiculous that the Census Bureau once again plans to count prison/detention facility inmates as residents of the location the prison/detention facility is located at. If the incarcerated individuals made the choice themselves to live in that location, as college students choose to live away from their homes, that would be a different story. But incarcerated individuals had no say in where they are housed.</p> <p>I fully support all the comments already made and listed in your "Proposed 2020 Census Residence Criteria and Residence Situations" report section B 1. Especially the fact that counting incarcerated individuals as you do violates the state of Pennsylvania laws.</p>

c00068	<p>I beg you to revise the current rule for counting prisoners. Prisoners should be counted in their home regions--NOT in that of the prison, where the representatives often profit from their incarceration. This is a clear conflict of interest and a violation of the constitution's 14th amendment, which guarantees "one person one vote." To count prisoners with those who profit from their incarceration is analogous to allowing slaveholders to claim representation according to the number of slaves they owned. That a disproportionate number of prisoners are black, while the prisons are often housed in white, rural districts, only makes the analogy more clear. Mass incarceration is not a problem that can be solved by the Census, but at the very least, the Census should not be used to further entrench it. I thank you in advance for considering my comment.</p>
c00069	<p>To support equal representation in the democratic process and prisoner rehabilitation and re-entry to their communities, I ask you to revise the Residence Rule to count incarcerated people as residents of their last home address before incarceration.</p> <p>Currently 1400 Hawaii prisoners are being counted as Arizona residents, affecting resources and voting district calculations for our communities. These Hawaii prisoners are in another state not by their own choice. When they've served their terms and return to Hawaii, their communities need to be equipped to serve them. Please revise the Residence Rule.</p>
c00070	<p>As a longtime residents of the Aloha State of Hawaii, we am concerned and dismayed to learn that prisoners who are from Hawaii but are forced to serve their sentences in for-profit prisoners on the mainland, will not be counted as part of their Hawaiian communities in the upcoming census.</p> <p>We implore you to revise the Residence Rule to include people who are incarcerated while conducting the census. These are the communities that they will return to after completing their sentences and we need to give the communities the resources and support they need to help our people reintegrate successfully.</p> <p>Thank you for your consideration of this not only quantitative matter but also one of moral and human rights imperatives to treat prisoners like human beings of worth and dignity in their communities, not just a throw-away population!</p>
c00071	<p>Current census practice counts 1400 Hawaii prisoners as Arizona residents affecting resources and voting district calculations for communities.</p> <p>These prisoners did not choose to go to another state and will return to Hawaii after their terms have been served. Their communities need to be equipped to serve them.</p> <p>To be fair, to support equal representation and to support prisoner re-entry into their communities, I ask you to Revise the Residence Rule to count incarcerated people as residents of their last home address prior to their incarceration.</p>
c00072	<p><i>This comment submission contains graphics that cannot be displayed in this table. It is available as Appendix Attachment c00072.</i></p>

	<p>Enclosed please find a resolution unanimously adopted by the Board of Supervisors of Prince George County, Virginia supporting the Census Bureau 's proposed 2020 Census Residence Rule 15 that counts incarcerated people as residents of the correctional facility where they have been assigned (Attachment A).</p> <p>Prince George County is located just south of the James River approximately 30 miles southeast of the City of Richmond metropolitan area. The County is a political subdivision of the Commonwealth of Virginia with no incorporated cities or towns within Prince George. Prince George provides a full-range of municipal services to its residents. Our population as of 2015 was estimated at 37,862 persons (Attachment B).</p> <p>There are two correctional facilities located entirely within Prince George County: the Federal Correctional Institution, Petersburg, which houses approximately 2,827 low- and medium-security convicted felons; and the Riverside Regional Jail, which houses approximately 1,552 persons, that includes misdemeanants from Prince George County and six other nearby localities as well as state inmates awaiting transit to state prisons. Many of the inmates at the federal facility have been sentenced to relatively long periods of incarceration. Counting these prisoners as part of Prince George County is logical, because the County is responsible for providing or assisting emergency response services for both facilities and has certain law enforcement responsibilities at the jail performed by our police department and Sheriff 's office. Moreover, family visitors to either facility travel on local roads and use local commercial services such as hotels and restaurants. Any other approach to counting inmates is likely to result in a national undercount because of the difficulty in tracking inmates in transit.</p> <p>For these reasons, the Prince George County Board of Supervisors has voiced its unanimous support for the proposed "2020 Census Residence Rule and Residence Situations" Rules 15(a) and 15 (b) for counting prisoners in both prisons and jails at the facilities in which they are incarcerated. By this letter, the County endorses these proposed Census rules and encourages the U.S. Census Bureau to adopt them as written.</p> <p>Thank you for your consideration of the County's position in this matter.</p>
c00073	<p>I disagree with the proposed changes to the census. It seems that the residence qualifications will be misrepresentative of the actual population distribution. Someone who is incarcerated should be counted with the community that they are from not where the prison is. These people should also not be counted toward redistricting since they are not allowed to vote.</p>
c00074	<p>I am writing in response to your June 30 federal register notice regarding the Residence Rule and Residence Situations.</p> <p>A lot of people from my community end up in prison, and it's not fair that they get counted as if they were residents of the prison town instead of at home with us. Giving our political power to people who want to lock up more of our community members just doesn't make sense.</p> <p>I am disappointed that you propose to conduct yet another inaccurate Census.</p>

	<p>Because I believe in a population count that accurately represents my community, I urge you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p>
c00075	<p>I am submitting this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census day ignores the transient and temporary nature of incarceration. If made final, this proposal will mean another decade of decisions based on a Census that counts incarcerated people in the wrong place.</p> <p>I am _____ the _____ School of Medicine in Chicago, Illinois. I have studied criminal justice issues for over twenty-five years. The question of <i>prison gerrymander</i> is critically important. The resolution of this issue will reflect directly on the state of democracy in the United States.</p> <p>The Census Bureau defines "usual residence" as the place where a person "eats and sleeps most of the time", but fails to follow that rule when counting incarcerated people. The majority of people incarcerated in Rhode Island, for example, spend less than 100 days in the state's correctional facilities. If the same people were instead spending 100 days in their summer residence, the Bureau would count them at their regular home address. Even students in boarding schools get counted at their home address whether or not they eat and sleep there most of the time. The Census Bureau continues to carve out an unexplained exception for incarcerated people in order to count them in the wrong place.</p> <p>The Bureau's failure to update its rules regarding incarcerated persons is particularly troubling given that the Bureau decided that other populations - deployed overseas military, and juveniles staying in residential treatment centers - should be counted in their home location even if they are sleeping elsewhere on Census Day. It made these changes even though there were far fewer public comments identifying these issues as causing the magnitude of problems that the public commentary on the prison miscount highlighted.</p> <p>The Census Bureau should honor the overwhelming consensus urging a change in the Census count for incarcerated persons. When the Bureau asked for public comment on its residence rules last year, 96% of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address. This level of consensus among stakeholders, which is based on a thorough understanding of the realities of modern incarceration, deserves far more consideration than it was given.</p> <p>As you know, American demographics and living situations have changed drastically in the two centuries since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation.</p> <p>The Census Bureau's practice of counting incarcerated people in the wrong place had relatively little impact on the overall accuracy of the Census while prison populations remained relatively low, but the growth in the prison population over the last few decades urgently requires the Census to update its methodology. The incarcerated population has more than quadrupled since the 1970's, and the manner in which this population is counted now has huge implications for the accuracy of the Census.</p>

	<p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just a few thousand Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, it artificially inflates the political power of the areas where the prisons are located and dilutes the political power of all other urban and rural areas without large prisons. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.</p> <p>Acknowledging the need to correct its own data to avoid prison gerrymandering, the Bureau has proposed to help states with the population adjustment. But this ad hoc approach is neither efficient nor universally implementable. Massachusetts legislators, for example, have already expressed concerns about that state's ability to use alternative data in their 2015 comment to the Bureau (comment numbered cl61).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. My organization believes that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00076	<p>Last month, the Federal Census Bureau failed to end prison-based gerrymandering.</p> <p>Prison-based gerrymandering threatens our democracy's commitment to fair representation and leads to certain districts becoming largely composed of voiceless individuals, since prisoners cannot vote in most states. As a result, the voters in these districts receive inflated representation, while the districts where the incarcerated people truly reside are underrepresented.</p> <p>According to Florida Common Cause State Board Chair Peter Butzin, in Florida's 4th District, 48% are incarcerated at the Calhoun Correctional Institution. As a result, Butzin stated, "the actual residents of District 4 are given almost twice as much political clout as people elsewhere in the county."</p> <p>Incarcerated people do not reside in these districts in any meaningful way. Recent research has also indicated that in states like Rhode Island, people stay incarcerated for an average of 100 days, which would otherwise not be considered a change in residency, but for the individual's imprisonment this is a double standard.</p> <p>The Census Bureau's rules concentrate a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people.</p>

	<p>This flawed demographic makeup disproportionately affects minorities. Prisons are typically located in rural, white districts, whereas incarcerated populations are disproportionately African American or Hispanic from urban areas - a reflection generally of disparities in the correction system's treatment between whites and people of color. For incarcerated peoples, this means that voters in their current districts do not reflect their demographics or interests.</p> <p>While many states believe prison-based gerrymandering is a very important issue and have taken measures to stop it, it is challenging without the assistance of the Federal Census Bureau. New York, for example, implemented a law to stop prison-based gerrymandering but faced numerous technical challenges, partisan opposition, and extreme delays in receiving data. Massachusetts tried to implement similar reforms, but found that they were prohibited from creating rules that were inconsistent with those of the Federal Bureau by their state constitution.</p> <p>As Allegra Chapman, Common Cause's Director of Voting and Elections, commented, "The reality is that most states adopt the Bureau's definition of "residence" when allocating individuals for redistricting purposes. An ad-hoc approach on how to apportion incarcerated persons is neither efficient nor fair; votes across districts, and across the country, should hold the same weight."</p> <p>Ending prison-based gerrymandering is vital to our democracy.</p>
c00077	<p>Please stop counting prison inmates as residents of the locality in which they are incarcerated.</p> <p>According to Pennsylvania law:</p> <p>for the purpose of determining residence, an inmate in a penal institution is deemed to reside where the individual was last registered to vote before being confined in the penal institution; or If the inmate was not registered to vote prior to confinement, the individual is deemed to reside at the last known address before confinement; or A new residence established while confined (for example, if the inmate's spouse establishes a new residence in which the inmate intends to reside upon his/her release from confinement).</p> <p>Counting inmates as residents of prisons and detention centers violates Pennsylvania law, which states: A penal institution (including a halfway house) cannot be a residence address for registering to vote.</p> <p>It also violates the one person, one vote requirement of the U.S. Constitution's Fourteenth Amendment as was made clear this year by U.S. District Judge Mark E. Walker in Calvin et al. v. Jefferson County and by U.S. District Judge Ronald Lagueux in Davidson vs. City of Cranston.</p> <p>Miscounting of urban prisoners in the rural districts where most PA prisons are located swells the population base of those districts. It</p>

	enhances the political clout of politicians who have strong incentive to support prison expansion and to enact policies that ensure continued mass incarceration. The practice distorts our democratic process and undermines government of, by and for the people.
c00078	<p>I am writing to provide comment and support for U.S. Census Bureau’s proposed “2020 Census Residence Rule and Residence Situations”.</p> <p>On behalf of the Christian County community, I show my support of the proposed new guidelines for counting of deployed military personnel in the upcoming 2020 Census. Under the proposal, U.S. military personnel who are deployed outside the U.S. on Census Day would be counted at the U.S. residence where they live and sleep most of the time. Counting deployed service members via this method will ensure that they are counted in the most advantageous and beneficial means for all communities.</p> <p>Military service members and their families are vital to the fabric of the communities in which they are stationed. Often, the communities surrounding a military installation work tirelessly to provide the best options, partnerships, and opportunities for their military neighbors. Our community here in Christian County, Kentucky, is no exception to that standard of excellence in service. In so many ways, Christian County has maintained a steadfast relationship—and partnership—with the Army, working to ensure our community is in tune with the quality of life needs and wishes of our soldiers and their families.</p> <p>The proposed method of counting service members who are deployed at the time of the 2020 Census will accurately show the economic impact that these service members have on the communities in which they work, play, and reside. Appropriate federal dollar funding can now be made available to these very communities, so that they may continue to provide quality of life services and opportunities.</p> <p>I pledge my continued support for economic prosperity and opportunities for the region in which Fort Campbell gains tremendous support. I thank you for your consideration of enacting what is best for our country’s military personnel, their families, and the communities that they call home.</p>
c00079	I urge the Census Bureau to reconsider the ruling about counting incarcerated persons as residents of their prison locations rather than of their home communities. PA law states, "the individual is deemed to reside at the last known address before confinement."
c00080	I understand that the U.S. Census Bureau has decided that it will continue to count prison inmates as residents of particular prison locations, rather than residents of the communities where they'd be living if they weren't in prison. While this may *sound* commonsensical, it has serious problems. Generally, prisoners don't live in a prison *forever*, and prison isn't a *home* in any meaningful sense of the word, so calling a prisoner a "resident" of a prison is much different than, say, calling college students residents of the town in which they're attending school. Also, two U.S. district judges have lately ruled that counting prisoners in this manner violates the 14th Amendment of the U.S. Constitution, because it forces folks from one Congressional district into another, and thus unfairly dilutes those districts' (and thus their citizens') political power. In states where felons can't vote, of course, this method of counting makes the problem even worse. On balance I disapprove of initiatives that heap additional punishments upon citizens, when their sentences are supposed to be their punishments, and I believe counting prisoners in this manner does that. Thank you for your time and attention.
c00081	I represent the _____ of Georgia and submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at

	<p>the particular facility that they happen to be located at on Census Day ignores the reality of incarceration: prisons are not a "usual residence".</p> <p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation's population.</p> <p>The reality is that when my constituents are incarcerated, they are often sent to prisons outside my district, but they still rely on me for representation. Over the course of their incarceration, the prison administration may move them between different prisons, located in many of the colleagues' districts, but they remain my constituents. Their home in my district remains their only stable, permanent, "usual" residence. Counting them as if they were residents of the facility where they happen to be held on Census day doesn't reflect the modern lived reality of our communities.</p> <p>I note that your proposed method of counting the incarcerated population is inconsistent with how you count other groups that eat and sleep in a location that is not their usual residence. For example, I note that your proposed rules will count boarding school students at their home address even if they spend most of their time at school. The same approach should be taken when counting incarcerated people.</p> <p>I am also concerned about the impact of your residence rules on racial justice in my state. Our state disproportionately incarcerates African-American or Latino people so when you count them in the wrong location, and that data is used for redistricting, it further undermines the political power of minority communities.</p> <p>Thank you for this opportunity to comment of the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. I believe that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00082	<p>I wish to submit the following comment on the US Census Bureau's Residence Rule:</p> <p>The Census Bureau is wrong to consider incarcerated people as residents of the correctional facility because the effect of this policy is to strengthen the representative power of the locality in which the prison is located and decrease the representation of the home communities of those incarcerated. Since a disproportionate share of the prison population consists of people of color, this perpetuates a system of disenfranchisement of people of color. It artificially decreases the counted population of the home communities and shifts power away from these areas to the (usually rural, more white) areas where correctional facilities are often located. The effect is racist and plainly wrong.</p>
c00083	<p>Californians United for a Responsible Budget submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census day ignores the transient and temporary nature of incarceration. If made final, this proposal will mean another decade of decisions based on a Census that counts incarcerated people in the wrong place.</p>

	<p>CURB is a statewide coalition of more than 70 grassroots organizations working to stop prison and jail expansion, decrease incarceration, and invest in the social safety net in California. As advocates for decarceration, state spending on prisons and jails, and uplifting those affected by incarceration, we oppose prison gerrymandering.</p> <p>Counting incarcerated people as if they were residents of the facility where they happen to be located on Census day doesn't reflect the lived reality of our communities. The Bureau already counts students in boarding schools at their home address even if they spend most of their time at the school. The same approach should be taken when counting incarcerated people.</p> <p>The Census Bureau should honor the overwhelming consensus urging a change in the Census count for incarcerated persons. When the Bureau asked for public comment on its residence rules last year, 96 percent of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address. This level of consensus among stakeholders, which is based on a thorough understanding of the realities of modern incarceration, deserves far more consideration than it was given.</p> <p>As you know, American demographics and living situations have changed drastically in the two centuries since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. The country's exploding prison population requires the Bureau to adapt once again.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just a few thousand Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, it artificially inflates the political power of the areas where the prisons are located and dilutes the political power of all other urban and rural areas without large prisons.</p> <p>Four states and over 200 individual counties and municipalities adjust Census population data to avoid prison gerrymandering when drawing their districts. Acknowledging the need to correct its own data to avoid prison gerrymandering, the Bureau has proposed to help states with the population adjustment. But this ad hoc approach is neither efficient nor universally implementable. Massachusetts legislators, for example, have already expressed concerns about that state's ability to use alternative data in their 2015 comment to the Bureau (comment numbered c0161).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. CURB believes that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00084	<p>The Campaign Legal Center and the Voting Rights Institute welcome the opportunity to submit this comment in response to the Census Bureau's federal register notice regarding the proposed 2020 Census Residence Rule and Residence Situations, 81 Fed. Reg. 42577 (June 30, 2016). The Campaign Legal Center and the Voting Rights Institute are disappointed that the Census Bureau has proposed to continue counting incarcerated people at the particular facility they happen to be located on Census Day, despite overwhelming consensus among</p>

public comments urging the Census Bureau to change course and count incarcerated people in their home communities. The proposed rule, if made final, discredits the Census as an accurate snapshot of our nation and limits its functionality as a tool to assess local demographics. Most importantly, it perpetuates distortions in our representative democracy, inflates the voting power of the few at the expense of the many, and imposes disproportionate representational harms on minority communities. The Campaign Legal Center and Voting Rights Institute urge the Census Bureau to reverse course, rescind the proposed rule, and count incarcerated people where they resided prior to their incarceration.

The Campaign Legal Center is a nonpartisan, nonprofit legal organization committed to improving our representative democracy and protecting the fundamental right of all Americans to participate in the political process. Through its redistricting and voting rights programs, CLC participates in state and federal litigation to ensure that all communities, and particularly minority communities, are afforded equal access to our democratic system. The Voting Rights Institute is a project of the American Constitution Society, Campaign Legal Center, and Georgetown University Law Center. It was founded in 2013 to protect the fundamental right to vote by training the next generation of voting rights attorneys and experts. Since 2013, it has held trainings in over a dozen cities nationwide for over 700 attorneys and law students. It also maintains a website that contains information about protecting the right to vote and a database of legal documents for approved voting rights attorneys.

At the center of the missions of both the Campaign Legal Center and the Voting Rights Institute is the right of all Americans to equal representation. The Supreme Court has long recognized this central premise of our democracy through its one-person, one-vote doctrine, which mandates that electoral districts have roughly equal population. The current proposal by the Census Bureau to count incarcerated people as artificial residents in the prison facility where they happen to be incarcerated on Census day rather in their home communities flies in the face of these basic democratic principles that our Constitution envisions.

1. The proposed rule erodes equality of representation for prisoners and other residents alike and allots unfair influence to a random assortment of constituents that live adjacent to prison facilities.

Every decade, state and local governments redraw thousands of state and local legislative districts in order to ensure that each legislative district contains the same total population and thus affords each member of the community equal representation. States almost exclusively rely on Census data in order to perform this vital democratic task.^{1/} For that reason and others, as the Census Bureau itself has explained, “it is crucial that people are counted in the right place.”^{2/} As the Supreme Court recently reaffirmed, this task of equalizing districts seeks to protect voters from unfair dilution of their vote *and* ensure equality of representation.^{3/} However, the Census Bureau’s practice of counting prisoners in the facility where they happen to be incarcerated on Census Day, rather than where they resided immediately prior to their incarceration, impedes both of these goals.

Since prisoners are ordinarily barred from voting^{4/}—and where they are permitted to vote do so in their home communities^{5/}—counting large prison populations in their adjacent districts, which are often in rural areas,^{6/} greatly inflates the power of the relatively small number eligible voters in those districts at the expense of *all other voters* in the state. The consequences are particularly stark at the local level

where districts are small and the incarcerated population sometimes accounts for more than half of the total population.^{7/} For example, after the 2000 Census, Lake County, Tennessee, drew a district “where 88% of the population [of the district] was not local residents, but incarcerated people” and therefore “every group of 3 residents in [the district had] as much say in county affairs as 25 residents in other districts.”^{8/} This simply does not accord with basic principles of fairness, equality of representation, or the constitutional demand of one-person, one-vote.

Prisoners are simply not members of the residential communities surrounding the facilities where they happened to be incarcerated on Census day. They are physically prohibited from interacting with the community, using the community’s public transportation, parks, libraries, and other public spaces and services, voting or even participating in public debates and forums. They are ordinarily not affected by local regulations or changes in policy. They do not choose to live in that community, build no enduring ties to the community and, in fact, can and often do move from facility to facility at the discretion of prison officials during their term of confinement. Members of the relevant communities do not consider the prisoners confined in adjacent facilities to be their “neighbors.” Unsurprisingly, for all of these reasons, officials representing these communities do not substantively represent these temporary visitors in their districts. When an Iowa city councilman, representing a district whose population was 96% inmates, was asked whether he considered those incarcerated individuals to be his constituents, he answered, “not really.”^{9/}

But this does not mean that prisoners do not have any community whatsoever. As a former Census Bureau Director Kenneth Prewitt has explained, the current policy of counting prisoners in the facilities they happen to be assigned to on Census Day “ignore[s] the reality of prison life. Incarcerated people have virtually no contact with the community surrounding the prison. Upon release the vast majority return to the community in which they lived prior to incarceration.”^{10/} Prisoners continue to be meaningful members of their home communities and are entitled to equal representation there. They have children, spouses, families, and homes where they resided prior to their confinement and where they are almost certain to return after their confinement. Recognizing this reality, nearly every state has a constitutional provision or statute providing that an individual’s legal residence does not change as a result of incarceration.^{11/} Prisoners who are eligible to vote do so in their home communities.^{12/} Even as nonvoters, they “have an important stake in many policy debates”^{13/} in their home communities and counting them there will ensure their “equitable and effective representation.”^{14/} Counting them elsewhere deprives them individually and their communities of adequate representation.

2. The proposed rule’s democratic harms fall heavily and unevenly on minority communities.

While the distortions of prison gerrymandering were relatively minor when our prison population was small, drastic changes in the incarceration population in the United States in the past forty years have severely magnified the democratic harms it imposes. Over that time period, the incarceration population has increased by 500%.^{15/} Today, there are 2.2 million people in our nation’s prisons and jails.^{16/}

Moreover, the drastic increase in incarceration is not evenly distributed across our communities. Our prison and jail population is overwhelmingly black and brown. While people of color make up only 37% of our nation’s population, they comprise 67% of our prison

population.^{17/} Black men are six times more likely to be incarcerated as white men and Hispanic men are more than twice as likely to be incarcerated as non-Hispanic white men.^{18/} As a result of these disparities, the home communities of prisoners are typically urban minority communities.^{19/} However, prisons are disproportionately located in rural, primarily white, communities.^{20/} In 2010, by counting prisoners as residents of their prison cells, the Census displaced a population that is disproportionately male, urban, and Black or Latino and concentrated them into just 5,393 census blocks far from their homes, both physically and demographically.^{21/} For example, in Illinois, sixty percent of incarcerated people are from Chicago but 99% of those individuals were counted outside of Cook County (Chicago).^{22/} This pattern holds throughout much of the nation. The upshot is that the Census Bureau's rule of counting prisoners where they are confined on Census day systematically diminishes the political representation of urban minority communities and unjustifiably shifts that political power to rural white communities.^{23/}

3. The proposed rule diminishes the Census's usefulness as a demographic tool.

The Census provides some of the most reliable demographic data about our nation available. Researchers, policy makers, and analysts rely on this data to provide easily accessible and accurate information about our states and localities. But the Census's continued choice to count prisoners in the wrong place distorts its data and provides an inaccurate picture of many of our communities. It suggests that many otherwise homogenous counties and localities with a prison facility are far more racially and ethnically diverse than they actually are. In 2010, there were 161 counties where incarcerated Black individuals outnumbered non-incarcerated Black individuals.^{24/} The distorted picture created by counting prisoners in the wrong places causes an informational harm that is unnecessary and problematic for all those who seek to rely on Census data to understand local community dynamics.

4. The concept of "usual residence" does not demand this illogical and unjust rule.

In response to the Census Bureau's request for public comment on its residence rules last year, 96 percent of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address for all of the reasons stated above. Nonetheless, the proposed rule is to maintain the Bureau's misguided practice of counting prisoners in the wrong place on the basis of the concept of "usual residence." The Bureau's response states: "[U]sual residence is defined as the place where a person lives and sleeps most of the time, which is not always the same as their legal residence, voting residence, or where they prefer to be counted. Therefore, counting prisoners anywhere other than the facility would violate the concept of usual residence, since the majority of people in prisons live and sleep most of the time at the prison."^{25/}

However, it is simply not true that the amorphous concept of "usual residence" requires this harmful result. First, there is nothing "usual" about the inherently time-limited period an incarcerated individual spends confined in a government facility. Except for the fact of their incarceration, which disrupts their "usual" lives, most prisoners live and sleep in their home communities.

The Census Bureau's determination that the prison facility an individual is confined in on Census day best represents where incarcerated individuals live and sleep "most of the time" ignores many key considerations. First, the rule broadly covers short and long-term

incarcerated individuals alike. The rule covers local jails where the average length of stay nationwide is well under thirty days^{26/} and many in the confinement population stay less than forty-eight hours. Even for those in state and federal prisons, the median length of stay in prison is approximately sixteen months,^{27/} far less than the ten years that the Census will count that individual as being away from his home. Of course, many prisoners only spend a few months in prison and yet will be miscounted for the rest of the decade. In Rhode Island, for example, the majority of prisoners spend less than 100 days in a correctional facility. If these prisoners were spending this time at a summer residence rather than a correctional facility, they would be counted at their regular home address. There is no reason why the Census should treat them unequally because they happen to be in prison. Second, even for those prisoners who spend long periods of time in correctional facilities, there is no guarantee those prisoners will live in any particular facility throughout that time period. Many prisoners will be moved among facilities throughout their period of confinement. Therefore, the only stable long-term address where prisoners will definitely spend most of their time living and sleeping is their home address where they will live and sleep before and after their period of confinement (which will ordinarily be shorter than the decennial census period).

Finally, the Census Bureau has also deviated from the “usual residence” rule in other circumstances where it does not appropriately reflect an individual’s community. Most notably, the Census already counts boarding school students living away from their parental home while attending boarding school below college level at their parental home rather than their boarding school. Boarding school students interact with their surrounding community at boarding school far more than prisoners interact with the surrounding community of their confinement facility. Boarding school students are also likely to reside at the same school for far longer than the average prisoner at any given correctional facility. Yet the Census counts students at their parental home because of “the likelihood that they would return to their parents’ residence when they are not attending their boarding school (*e.g.*, weekends, summer/winter breaks, and when they stop attending the school.)”^{28/} The reasons for this departure in the boarding school context apply with far greater force in the prisoner context, especially given the democratic and equality costs the current rule exacts. Therefore, to the extent that counting prisoners at their homes occasionally requires a departure from the “usual residence” rule, the precedent of the Census’s counting of boarding school students allows for such a minor departure in order to more accurately reflect the location of prisoners’ community ties and long-term residential patterns.

5. The Census Bureau’s alternative proposal to provide states and localities with alternative data is insufficient to remedy these harms.

Rather than simply counting prisoners in their home communities, the Census Bureau has proposed that it will provide the necessary data to states that wish “to ‘move’ their prisoner population back to the prisoners’ pre-incarceration addresses for redistricting and other purposes.”^{29/} However, this proposal is insufficient to remedy the democratic harms the current proposed rule imposes.

First, the Census Bureau’s decision to continue counting prisoners in the facility they are confined in on Census Day suggests to states and localities that this is a proper accounting of those prisoners’ residences, when it assuredly is not. Given the close tie between the Census, apportionment, and redistricting, the proposed rule undoubtedly reinforces the false perception that it is proper and acceptable to count prisoners in this manner for the purposes of redistricting despite the violence it does to the one-person, one-vote principle and the

fundamental concept of equal representation. This not only perpetuates the democratic harms described above; it also exposes states and localities to potential legal liability. There have already been successful Equal Protection challenges to prison gerrymandering in federal district courts in Jefferson County, Florida and Cranston, Rhode Island.^{30/}

The suggestion that some states might want “to ‘move’ their prison population” and the Census Bureau will aid them in doing so itself suggests that states and localities counting prisoners in their home communities are the outlier actors. And indeed, they are. While four states and more than 200 localities have taken the commendable affirmative step of ensuring that prisoners are counted in the right place,^{31/} most states and localities do not. Moreover, some states legally cannot make these changes without a change to the underlying flawed Census data. The State of Massachusetts has informed the Census Bureau that its state constitution does not allow it to adjust the Census data in order to count prisoners in the right place and thus urged the Census to make this commonsense change.^{32/} Finally, the proposed rule also unnecessarily places additional burdens on states seeking to count prisoners in the right place. This burden is exacerbated in those states whose laws require them to redistrict in odd-numbered years and therefore must redistrict immediately after the Census is released. The burden, in any event, should be on the Census Bureau to provide accurate data in the first instance about the nation’s residents.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations. As the Bureau strives to count everyone in the right place, it must afford prisoners the same right to be counted in their communities as it does other individuals who happen to be away from their homes on Census Day. In order to ensure a just and accurate 2020 Census, the Campaign Legal Center and the Voting Rights Institute strongly urge you to reverse course and count incarcerated people at home.

c00085	<p>As _____ the City of Jacksonville, North Carolina, I am writing to support the proposed rule change regarding the census count of military personnel who are deployed. The City of Jacksonville is the home of Camp Lejeune and New River Air Station with an active duty military population of over 50,000 personnel. As you can appreciate, troops are deployed in various numbers and for various lengths of service.</p> <p>The proposed rule of interest is relative to counting of these deployed military personnel. It states:</p>

	<p>U.S. Military personnel who are deployed outside the U.S. (while stationed in the U.S.) and are living on or off a military installation outside the U.S. on Census Day shall be counted at the U.S. residence where they live and sleep most of the time, using administrative data provided by the Department of Defense.</p> <p>The City of Jacksonville supports this proposed rule change. Undercounting military personnel due to deployment has resulted in the loss of substantial revenue from federal and state sources to the City of Jacksonville. I believe that this proposed rule will correct that error.</p> <p>Thank you for your consideration.</p>
c00086	<p>Commenting in response to the Census Bureau’s Federal Register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016).</p> <p>The Bureau’s proposal to continue counting incarcerated people at the facility in which they are housed on Census Day ignores the transient and temporary nature of incarceration. It also is inconsistent with other changes included in the same set of proposed residence criteria for the 2020 Census. If made final, this proposal will lead to another decade of vital policy decisions based on a census that counts incarcerated people in the wrong place. Therefore, I urge you to count incarcerated people as members of the community from which they come and not as members of the community in which they are incarcerated on Census Day.</p> <p>American demographics and living situations have changed dramatically over the more than two centuries since the first census in 1790. Census methods and operations have evolved in response to many of these changes, in order to continue to provide an accurate portrait of the nation, its people, and its communities. But despite significant changes in the location and composition of the incarcerated population, especially over the last several decades, the policy governing the enumeration of incarcerated persons has not similarly evolved to reflect these consequential shifts in the relationship between the location of incarcerated persons on Census Day and their “usual residence.”</p> <p>The Census Bureau’s decision to maintain the status quo ignores overwhelming public comments in favor of an updated policy that recognizes the temporal nature of most incarcerations. Moreover, the proposed method of counting the incarcerated population is inconsistent with how the Census Bureau counts other groups that eat and sleep in a location that is not their usual residence. Finally, the policy that the Census Bureau is proposing to retain will result in census counts that skew the distribution of political representation and our very understanding of the composition and well-being of communities across America, for an entire decade following the census.</p> <p>The Census Bureau’s Proposal is against the Weight of Public Consensus</p> <p>The Census Bureau blatantly ignored the overwhelming consensus urging a change in the census count for incarcerated persons. When the Bureau asked for public comment on its residence rules last year, 96 percent of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address. This level of consensus among stakeholders, which is based on a thorough understanding of the realities of an incarceration system that regularly shuffles incarcerated people between facilities, deserves far more consideration than it was given.</p>

The Census Bureau's Proposal Treats Similarly-Situated Populations Inconsistently and Fails to Recognize the Range of Factors that Often Influence the Criteria Governing Different Situations

It is important to recognize and acknowledge that the concept of "usual residence" established by the Census Act of 1790 has not been consistently applied, through time and across living situations. While the Census Bureau notes in its proposed 2020 Census Residence Criteria that usual residence "is not necessarily the same as a person's voting residence or legal residence," former Census Director John G. Keane, in testimony before Congress in 1988, added that it is also not necessarily "where a person is found on Census Day" (emphasis added).^{I/}

Equally important is the concept of "enduring ties," which the U.S. Supreme Court referenced in its opinion in *Franklin v. Massachusetts II/*, a case that unsuccessfully challenged the Census Bureau's decision to count military personnel serving overseas in the 1990 Census for purposes of congressional apportionment. The majority opinion in *Franklin* noted that the concept of usual residence "has been used broadly enough to include some element of allegiance or enduring tie to a place."

The Census Bureau's decision with respect to incarcerated persons is especially troubling in light of its concurrent decision to change the rule governing where it will count deployed military personnel who are stationed or assigned to a U.S. base. Under the Bureau's proposal, deployed service members will be counted at their home address (usual residence) in the U.S., even if they live and sleep elsewhere for most of the time at the time the census is conducted. Like most incarcerated persons, these service members are away from their homes temporarily; the average length of deployments can vary greatly from decade to decade, depending on U.S. engagement in theaters of military conflict overseas. In its summary of comments on the proposed Residence Criteria for the military overseas, the Census Bureau cites concerns about the need for accurate data to support funding, planning, and services in military communities, but is dismissive of similar arguments regarding an accurate portrait of communities that most incarcerated persons consider to be their usual home and to which most will return following their temporary confinement.

Changing one policy, but not the other, illuminates a glaring inconsistency in the proposed 2020 Census Residence Rules that the Census Bureau has not adequately explained.

The Census Bureau's Proposal Will Reduce the Accuracy of Data and Result in Vote Dilution

Failure to count incarcerated persons at their home address preserves an unacceptably discriminatory census result that deprives underserved urban neighborhoods of fair representation, while shifting political power to communities that do not represent the interests of incarcerated persons or their families. Because African-Americans and Latinos are disproportionately incarcerated, ^{III/} counting

	<p>incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. Thus, predominantly African American and Latino communities will continue to be hit especially hard by an outdated policy that renders so many of their young men invisible for all statistical purposes.</p> <p>The proposed counting rules will perpetuate the distortion of democracy that results from padding the population counts of communities with prisons. When state and local officials use the Census Bureau’s prison count data attributing “residence” to the prison, they give extra representation to the communities that host the prisons and dilute the representation of everyone else. This vote dilution is particularly extreme for urban communities and communities of color that have disproportionately high rates of incarceration.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place, to reflect enormous demographic shifts, changes in the prison infrastructure, and the urgent needs of communities.</p> <hr/> <p>I/ Testimony of Dr. John G. Keane, Director, Bureau of the Census, before the House Subcommittee on Census and Population, “Census Residence Rules: Military Personnel Abroad,” April 18, 1988 (Serial No. 100-49). II/ 505 U.S. 788 (1992). III/ According to Prison Policy Initiative’s analysis of 2010 Census data, Blacks are incarcerated at 5 times the rate of non-Hispanic Whites, and Latinos are incarcerated at a rate almost two times higher than non-Hispanic Whites. Comments of Prison Policy Initiative, regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015), dated July 20, 2015.</p>
c00087	<p>Introduction</p> <p>During the 2010 Census deployed military were counted at their home of record rather than from the bases and host communities where they lived. Family members were to be counted at their homes on or in the communities around the bases, but many families incorrectly assumed the guidance applied also to them, and did not complete Census documents reflecting their status.</p> <p>For the State of North Carolina, thousands of service members were enumerated at locations that had little to do with them, and for the host communities around the bases, the loss of an accurate count resulted in perceptions of a poor economy, reduced revenues based on population and a much reduced base count on which a decade of estimates are now based.</p> <p>The City participated in discussions with Census officials, worked with the State Census Liaison and let others know of the impact to the City. On June 30, 2016, a notice of proposed rulemaking was issued with a request for comments that would count deployed military at their usual US residence.</p> <p>The City of Jacksonville welcomes this proposed rule and applauds those involved with the proposal. The impact could return thousands of troops to the count and will allow the host communities to be more accurately represented in the Census.</p> <p>However, because of the confusion by family members and their status, the City believes that Census outreach should help inform family members of those deployed about the count, and that they should complete Census forms when presented to them.</p>

Proposed Rule of Interest to Our Community

The City of Jacksonville is particularly interested in the proposed rule below:

(f) U.S. military personnel who are deployed outside the U.S. (while stationed in the U.S.) and are living on or off a military installation outside the U.S. on Census Day—Counted at the U.S. residence where they live and sleep most of the time, using administrative data provided by the Department of Defense.

<http://www.federalregister.gov/a/2016-15372/p-127>

Response

The 2010 Census did not count persons deployed as being within the communities where their families were. The City of Jacksonville believes the proposed rule will largely solve this problem. Officials who have worked with the Department of Defense data in the past

have indicated to the City that this task can be accomplished in a fashion that will match the regular count of troops assigned aboard the bases around Jacksonville.

We believe that this rule is consistent with the application of the “business traveler” rule as the military are still assigned to bases, but are temporarily working in another area.

Concern

While the City praises this action, we ask that the Census outreach programs around communities that have deployed military, include specific instructions to family members about their count in the Census. During 2010, the Complete Count Committee heard many family members indicate they believed their guidance to not count their deployed member, applied to them. Further, they were even more confused believing that completing the Census document would affect a residency status that they used for their tax status. Many military service members maintain a residency through the Sailors and Soldiers act that they use to select the state to which they want to pay taxes.

During the 2010 Census, the City helped to pay for billboards and publications that targeted family members to ask them to fill out the Census forms. This specific population is difficult to communicate with outside of the official military commands and our efforts were not as effective as we desired. In that the proposed rule would engage administrators within the Department of Defense, persons who were counted using this provision could have communication made to their families that they should fill out their own Census documents. For the Marine Corps, some of the most effective communication to this group is through the Family Readiness Officers who work with the families of deployed persons.

Thank You

The City of Jacksonville applauds this proposed rule and encourages its adoption.

c00088	<p>I represent the residents of _____ in the New York State _____ and submit this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 81FR 42577 (June 30, 2016). The Bureau’s proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census Day ignores the reality of incarceration: prisons are not a “usual residence”.</p> <p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation’s population. I hope that the Census Bureau will reconsider its proposal and give consideration to the comments that were submitted, including mine, in response to your federal register notice about the 2010 Census residence rule and situations last year.</p> <p>The reality is that when my constituents are incarcerated, they are often sent to prisons outside my district, but they still rely on me for representation. Over the course of their incarceration, the prison administration may move them between different prisons, located in many of my colleagues’ districts, but they remain my constituents. Their home in my district remains their only stable, permanent, “usual” residence. Counting them as if they were residents of the facility where they happen to be held on Census day doesn’t reflect the modern lived reality of our communities.</p> <p>Fortunately, in 2010 we passed the New York Prison Gerrymandering Bill which allows for the use of Department of Corrections data to identify the home addresses of incarcerated people to correct Census data and requires state and county governments to count incarcerated people at their home addresses when drawing legislature districts. While I am proud to be part of the handful of states leading the way to end prison gerrymandering, I also understand that it is still necessary to change the way the Census Bureau counts incarcerated individuals. We currently must take extra measures to ensure fair political representation in our state and it would be helpful if the Bureau counted incarcerated people at their homes to begin with.</p> <p>I note that your proposed method of counting the incarcerated population is inconsistent with how you count other groups that eat and sleep in a location that is not their usual residence. For example, I note that your proposed rules will count boarding school students at their home address even if they spend most of their time at the school. The same approach should be taken when counting incarcerated people.</p> <p>I am also concerned about the impact of your residence rules on racial justice in my state. Our state disproportionately incarcerates African-American or Latino people so when you count them in the wrong location, and that data is used for redistricting, it further undermines the political power of minority communities.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. I believe that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00089	<p>American Friends Service Committee- Arizona (AFSC Arizona) respectfully submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). This proposal to continue to</p>

incorrectly count all incarcerated people as permanent residents of a correctional facility is not only discriminatory but also creates unequal representation.

AFSC Arizona, a non-profit organization working for justice and human rights, has been central to promoting a reconciliation and healing approach to criminal justice issues. The leading organization in Arizona on criminal justice issues, AFSC combines advocacy for incarcerated people and their families with statewide policy change to document and improve prison conditions while working to reduce the number of people incarcerated in Arizona. In short, because of our strong commitment to change conditions for incarcerated people, their families, and their communities, we stand in strong opposition to the Bureau's proposal.

AFSC Arizona believes the proposal is discriminatory.

According to the definition of "usual residence," the Census Bureau claims a person resides where he/she "eats and sleeps most of the time." The average length of stay for an inmate in Arizona is 25 months¹. Twenty-five months does not necessarily equal a permanent residence. In those same 25 months, a student might be eating and sleeping at an out-of-state university. A member of the military could also be eating and sleeping on a military base. A young person participating in civil service projects might be eating and sleeping in various states throughout the country. However, these specific situations allow for certain persons to claim their home as their "usual residence" for the Census.

We believe a person in a correctional facility should also be allowed to follow that rule. If the purpose of a Census is to collect accurate data, we must allow *everyone* to use their regular home address, regardless of where they are staying, on Census Day.

This proposal is also discriminatory because it reduces the accuracy of the data about communities of color. As of 2010, the majority of all prisoners in Arizona's correctional facilities are Latino² and African-Americans make up the majority of persons in all areas of the criminal justice system in Arizona³. Statistics show that African-American and Latinos are disproportionately incarcerated, so inaccurately counting them at a correctional facility as their "usual residence," is a disservice to African-American and Latino communities.

AFSC Arizona believes the proposal creates unequal representation.

Arizona has the 6th highest incarceration rate in the nation. Here, the majority of correctional facilities, 13 of 16, are located in rural communities. However, 60 percent of people admitted to prison in Arizona live in the Phoenix-Mesa area⁴. Rural communities suffer under the current counting rules because local districting plans were distorted by incarcerated populations that have no real nexus to the locations where they are counted as residents.

	<p>This, in effect, is population distortion and prison-based gerrymandering. While the practice of political gerrymandering is frowned upon because of its possible violations of the Constitution and, to a lesser extent, the Voting Rights Act, the practice of prison based gerrymandering is often overlooked. An equal representation of population is one of the criterion state use to draw their political boundaries. However, for those districts with an unusually high prison population, this process does not allow for equal representation of thousands of citizens who are inaccurately counted.</p> <p>Prison-based gerrymandering allows for a misrepresentation of a state or local government’s true constituency. The principle of “one person, one vote” is severely skewed when states and municipalities are forced to use census data. We diminish our ideal of representative democracy when we count thousands of mostly urban, minority people in correctional facilities that is not their primary residence.</p> <p>Both of these issues are prevalent in one Arizona county where the majority of correctional facilities exist: Pinal County. A largely rural county south of the Phoenix metro area and north of the Tucson metro area, Pinal County has become a haven for both state and federal, public and private institutions. According to the Census Bureau, Pinal County’s population as of July 1, 2015 was 375,770⁵. With 6.7% of that population categorized as “population in correctional facilities for adults⁵.”</p> <p>¹ https://csgjusticecenter.org/wp-content/uploads/2012/12/Arizona_1-pager_v4.pdf ² http://www.prisonpolicy.org/profiles/AZ.html ³ http://www.prisonpolicy.org/profiles/AZ.html ⁴ https://csgjusticecenter.org/wp-content/uploads/2012/12/Arizona_1-pager_v4.pdf ⁵ http://www.census.gov/quickfacts/table/PST045215/04021 ⁶ http://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=DEC_10_SF2_PCO3&prodType=table</p>
c00090	<p>Current census practice counts 1400 Hawaii prisoners as Arizona residents affecting resources and voting district calculations for our communities.</p> <p>These Hawaii prisoners are in another state not at all of their own choosing. When their terms have been served, these people will return to Hawaii, where their communities need to be equipped to serve them.</p> <p>To be fair, to support equal representation in the democratic process, and to support prisoner rehabilitation and re-entry to their communities, I sincerely ask you to Revise the Residence Rule to count incarcerated people as residents of their last home address before incarceration.</p> <p>I trust you to do the right thing - not just the easiest thing.</p>
c00091	<p>Legal Services for Prisoners with Children submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (J u ne 30, 2016). We strongly oppose the decision to count incarcerated people in the prison town instead of their home towns. The census is not just an accounting of people with no purpose or use for those numbers; academics, policy makers, the government, business owners, community organizers and others use these numbers as proxies to</p>

determine how many resources to allocate to certain areas, the types of development needed, and the economic viability of certain enterprises to be used. By counting people who can not leave the prison and who continue to rely on the resources and support of their families in their home cities, as being in the prison-town, the census will be inaccurate for the actual goals it seeks to meet. This failure has racial and economic implications for low income communities of color that disproportionately support incarcerated family members without the added resources or recognition from the census upon which the government allocations of money and electoral **power are based.**

Founded in 1978, LSPC enjoys a long history advocating for the civil and human rights of people in prison, their loved ones, and the broader community. We believe that the escalation of tough-on-crime policies over the past three decades has not made us safer. We believe that in order to build truly safe and healthy communities we must ensure that all people have access to adequate housing, quality health care and education, healthy food, meaningful work, and the ability to fully participate in the democratic process, regard less of their involvement with the criminal justice system.

Incarcerated people are not isolated individuals. They come from families-- they are mothers, fathers, sons and daughters. They have sisters and brothers. Their incarceration impacts their families. These relationships influence their lives while inside as well as their success upon release. Maintaining strong family relationships during incarceration benefits everyone. When a person is incarcerated, the family pays for the additional care and support that the incarcerated person needs. They buy the stamps, extra paper, and care packages in their communities to be mailed to the prison. Just like parents of a child in boarding school or the family of a deployed soldier. The economic benefits; use of governmental resources such as schools, libraries, or roads; and community connections are all in that person's home town, not in the prison-town.

The town where the prison is does not supply those resources. Incarcerated people are not driving on the roads, going to the movies, or using local services or programs. They are trapped in a prison 24 hours a day. They are not a part of that community. Counting people away from their families because of prison makes the same amount of sense as counting people away from their families because of military deployment: none.

Counting incarcerated people as if they were residents of the facility where they happen to be located on Census day doesn't reflect the lived reality of our communities. The vast majority of prisons in California are in rural, primarily white areas of the state; however, most incarcerated people are from diverse, coastal, urban areas of the state. Their families remain in those cities. Their families' support and efforts to care for them remain in those cities. The economic and civic engagement that the census counts only happens in the home communities, not in the prison **town.**

The Bureau already counts students in boarding schools at their home address even if they spend most of their time at the school. The same approach should be taken when counting incarcerated people. The Census Bureau should honor the overwhelming consensus urging a change in the Census count for incarcerated persons. When the Bureau asked for public comment on its residence rules last year, 96% of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address,

	<p>which is almost always their legal address. This level of consensus among stakeholders, which is based on a thorough understanding of the realities of modern incarceration, deserves far more consideration than it was given.</p> <p>As you know, American demographics and living situations have changed drastically in the two centuries since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. The country's exploding prison population requires the Bureau to adapt once again, because while this was a small problem before, it is now a much larger problem with much wider implications.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just a few thousand Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting or governmental allocations, it artificially inflates the electoral power of the areas where the prisons are located and dilutes that of all other urban and rural areas without large prisons, particularly those communities where people are disproportionately .</p> <p>Four states and over 200 individual counties and municipalities adjust Census population data to avoid prison gerrymandering when drawing their districts. Acknowledging the need to correct its own data to avoid prison gerrymandering, the Bureau has proposed to help states with the population adjustment. But this ad hoc approach is neither efficient nor universally implementable. Massachusetts legislators, for example, have already expressed concerns about that state's ability to use alternative data in their 2015 comment to the Bureau (comment numbered c0161).</p> <p>The Bureau's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census day ignores the transient and temporary nature of incarceration. If made final, this proposal will mean another decade of decisions based on a Census that counts incarcerated people in the wrong place.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. LSPC believes that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00092	<p>The Southern Center for Human Rights (SCHR) submits this comment in response to the Census Bureau's Federal Register Notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016).</p> <p>The Southern Center for Human Rights (SCHR) is a nonprofit law firm based in Atlanta, Georgia, dedicated to providing legal representation to people facing the death penalty, challenging human rights violations in prisons and jails, seeking through litigation and advocacy to improve legal representation for poor people accused of crimes, and advocating for criminal justice reform on behalf of those affected by the system in the Southern United States.</p>

	<p>In the course of carrying out our work, it has become increasingly clear that it is imperative to end prison gerrymandering so that we may ensure equal representation throughout Georgia. SCHR urges you to count incarcerated people at their home address, rather than at the particular facility that they happen to be located at on Census day.</p> <p>According to the Georgia Department of Corrections, the average person in the state prison system has been transferred 4 times and the median time they spent at the current facility is just 9 months.¹ The data makes it clear that the most prison populations are transient. After being shuffled throughout a number of facilities over the course of their incarceration, people return to the communities where they have enduring ties, and that's where they should be counted--at home.</p> <p>The Bureau's failure to update its rules regarding incarcerated persons is particularly troubling given that the Bureau has decided that other populations--deployed overseas military and juveniles staying in residential treatment centers -- should be counted in their home location. Georgia has one of the highest incarceration rates in the United States, currently imprisoning more than 1 person for each group of 200 people. Counting them in the wrong place is not an error that can be overlooked. There are significant differences between the places that most incarcerated individuals come from and the places where they are imprisoned. For example, an analysis by the Department of Corrections found more people in Georgia prisons come from Atlanta zip code 30318 than any other of the 965 zip codes in state. The Census refusal to count our residents at home negatively impacts our communities.</p> <p>Thank you for this opportunity to comment on the proposed Residence Rule and Residence Situations. We urge the Bureau to acknowledge the transient nature of modern incarceration and to count incarcerated people as residents of their home address.</p> <p>¹ <i>Inmate Statistical Profile</i>, pages 35 and 39, Georgia Department of Corrections, (July 1, 2016), available at http://www.dcor.state.ga.us/sites/all/themes/gdc/pdf/Profile_all_inmates_2016_06.pdf</p>

c00098	<p>The National Community Development Association (NCDA) is pleased to submit comments on the above referenced document. NCDA represents over 400 local governments consisting of a wide range of communities – small, mid-sized, and large jurisdictions – which administer federal community development, economic development, and affordable housing programs, most important among them, the Community Development Block Grant (CDBG) Program which relies on a fair and sound Census count to ensure an accurate population total. Population is one of the key formula factors used by HUD to allocate CDBG funding nationally, so it is crucial that the 2020 Census count <i>all</i> people. For the low-income people served by the CDBG program, it is important that where people are counted aligns with where they will need to receive services so that resources can be targeted to where the service impacts will occur.</p>

	<p>With that being said, NCDA agrees with the definition of “usual residence” outlined in the Residence Rule as the place where a person lives and sleeps most of the time. We also agree with how the Census Bureau has applied the Residence Rule to the 19 designated categories listed in Section D of the above referenced document. We also agree with the decision in the Resident Rule that people who do not have a usual residence, or who cannot determine a usual residence, are counted where they are on Census Day and further concur that people in certain types of group facilities on Census Day are counted at the group facility.</p> <p>Along with a clear definition of the Residence Rule and residence situations, it is of utmost importance for the Census Bureau to ensure a full count of the Nation’s population. While this may be beyond the scope of the purpose of the above referenced document, NCDA and its members urge the Census Bureau to take the necessary steps to develop a robust Census that captures everyone and to design a campaign that focuses additional outreach efforts on non-English speaking neighborhoods and communities. Some suggestions include working with local government and community leaders to reach these populations, mounting a strong advertising effort using local non-English speaking media outlets, and hiring additional Census workers to canvass these neighborhoods (working in conjunction with local community organizations, religious institutions, and leaders). NCDA would be happy to work with the Census Bureau to develop efforts to reach non-English speaking populations.</p> <p>Thank you for the opportunity to comment on this document.</p>
c00099	<p>Franciscan Action Network (FAN) submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). Your proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census day ignores the overwhelming public input on the need to change how incarcerated persons will be counted. If made final, this proposal will mean another decade of decisions based on a Census that counts incarcerated people in the wrong place.</p> <p>FAN is very devoted to racial and ethnic justice. During the 2010 Census, the policy of counting incarcerated people at prison facilities disproportionately concentrated African-American and Latino urban men into just 5,393 Census blocks located far from their actual residences simply because of their incarcerated status on a single date of the year.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time”, but fails to follow that rule when counting incarcerated people. The majority of people incarcerated in Rhode Island, for example, spend less than 100 days in the state’s correctional facilities. If the same people were instead spending 100 days in their summer residence, the Bureau would count them at their regular home address. Even students in boarding schools get counted at their home address whether or not they eat and sleep there most of the time. The Census Bureau continues to carve out an unexplained exception for incarcerated people in order to count them in the wrong place.</p> <p>The Bureau’s failure to update its rules regarding incarcerated persons is particularly misguided given that the Bureau decided that other populations – deployed overseas military, and juveniles staying in residential treatment centers – should be counted in their home location</p>

even if they are sleeping elsewhere on Census Day. It made these changes even though there were far fewer public comments identifying these issues as causing the magnitude of problems that the public commentary on the prison miscount highlighted.

The Census Bureau blatantly ignored the overwhelming consensus urging a change in the Census count for incarcerated persons. When the Bureau asked for public comment on its residence rules last year, 96% of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address. The Census Bureau has simply disregarded the public input through its proposal to count incarcerated people as if they were residents of correctional facilities.

As you know, American demographics and living situations have changed drastically in the two centuries since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation.

The Census Bureau's practice of counting incarcerated people in the wrong place had relatively little impact on the overall accuracy of the Census while prison populations remained relatively low, but the growth in the prison population over the last few decades urgently requires the Census to update its methodology. The incarcerated population has more than quadrupled since the 1970's, and the manner in which this population is counted now has huge implications for the accuracy of the Census.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just a few thousand Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, it artificially inflates the political power of the areas where the prisons are located and dilutes the political power of all other urban and rural areas without large prisons. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.

Acknowledging the need to correct its own data to avoid prison gerrymandering, the Bureau has proposed to help states with the population adjustment. But this ad hoc approach is neither efficient nor universally implementable. Massachusetts legislators, for example, have already expressed concerns about that state's ability to use alternative data in their 2015 comment to the Bureau (comment numbered c0161).

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. My organization believes that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.

c00101	<p>International Citizens United for Rehabilitation of Errants (CURE) and its state and issue chapters submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). We find the Bureau 's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census day at odds with the transient and temporary nature of incarceration. We write to share some of our experiences as an organization that has both incarcerated and formerly incarcerated members to better illustrate how incorrect it is to conclude that an incarcerated person resides at the facility they happen to be at on Census day.</p> <p>International CURE is a grassroots organization dedicated to the reduction of crime through the reform of the criminal justice system (especially prison reform). Although we are now an international organization, we were founded in Texas in 1972 and our U.S. National and state chapters remain at the core of our mission. We've been doing prison organizing for over 40 years, and as part of that work we send out two mailings a year. And every time we get a lot of the letters back as undeliverable--the person has been moved since the last mailing.</p> <p>Every single one of these letters is tangible proof of the unpredictable and constant shuffle that incarcerated people experience at the mercy of the prison administrators. You see, a prison is much like Grand Central Station. Sure, at any given time there are a lot of people there, but every single one of them has just pulled in or is on their way home.</p> <p>While people on the outside may move from time to time, they tend to stay long enough in a place to put down some roots and call it home. But when someone goes to prison, there isn't really a specific facility that becomes someone's new home. Your home is always the place you left and will soon return to. Your home remains the place where your family, your friends, and your community are. To say that someone resides at the facility where they happen to be located on Census day flagrantly ignores the realities of prison life.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place. We write to you in earnest on behalf of and in conjunction with our chapters because we are concerned about the U.S. Census Bureau 's role, however unintentional it might be, in tilting the U.S. electoral system in favor of those who support mass incarceration and against those who seek a just criminal justice system. We urge you to count incarcerated people as residents of their home address in the decennial census.</p>
c00102	<p>Thank you for this opportunity to respond to the Census Bureau's Notice seeking comments on the Bureau's proposed 2020 Census Residence Rule and Residence Situations (81 FR 42577, June 30, 2016). I urge the Bureau to change the method it uses to count the prison population due to the impact it has on voter representation and on the mission to protect voting rights, ensure fair and equal representation, and promote accurate redistricting.</p> <p>In 2015, in response to the Census Bureau's request for comments on its interpretation of its "usual residence" rule, the Bureau received 156 comments, asking the Bureau to change its interpretation of how the residence rule applies to prisoners and to count them at their home or pre-incarceration</p>

addresses. Six comments opposed changing the rule. It is difficult to understand why the great weight of those comments in favor of changing the rule did not persuade the Bureau to change its approach with respect to prisoner counts.

The Bureau created the “usual residence” rule through administrative interpretation of the Census Act of 1790. While a few changes have been made to those rules since that time in order to keep up with the changing demographics of America, the rule to count prisoners where they are incarcerated, not at their home residences, has remained unchanged over the last centuries.

Doubtless in 1790 when citizens were less mobile, these terms in the statute, “usual place of abode,” “settled place of residence ...in any family,” and “every person occasionally absent at the time of the enumeration, as belonging to that place in which he usually resides in the United States,” meant one’s home location. Back in 1790, this rule made sense because there were few prisoners and they were imprisoned and punished in their home locations. Since 1980, however, the prison population has quadrupled and, prisoners are now typically incarcerated in rural areas far from home. This change in circumstances and failure to change the residence rule in the context of today’s imprisonment practices results in prison gerrymandering, granting greater representation to rural areas that contain prisons and, hence, unequal representation for residents in districts that contain no prisons (both urban and rural). It is time for the Census Bureau to update its interpretation of the people in prison on Census day.

In this proposed rule, when the Bureau does make a change in its interpretation of the “usual residence” rules, it appears to lean heavily on how long individuals are away from home. For example, military now *deployed* overseas will be counted at their home addresses. Other military *stationed or assigned* overseas will be counted as previously in their “home of record” state for apportionment purposes only. Residents of juvenile group homes are counted at the group home location because they are there for long periods of time while juveniles in residential treatment centers will be counted at their home locations because the Census Bureau believes individual stays are relatively short.

A factual survey about prisoner time served at each prison nationwide might reveal that vast numbers of prisoners serve two years or less. In Virginia, the median time served in state prison for someone released in 2014 was 19.5 months. But even while they were in state custody they were likely to have been moved between different facilities, making the time spent at any given facility much shorter. We don’t have that data available for Virginia, but in New York, for example, the median length of stay in any given facility is about seven months and in Rhode Island it is under 100 days. Length of stay does not appear to support the Bureau’s reasoning for continuing to count prisoners at their prison locations where typical prisoner time served can be shorter than deployments overseas.

Also of concern in this proposed rule is that the Census Bureau leaves it up to the states individually to decide whether to include their own prisoner population counts when they redistrict. If states decide they want to exclude prisoner counts when they redistrict, states must either do the calculations themselves or submit a data file to the Census Bureau (indicating where each prisoner is incarcerated on Census Day and their pre-incarceration address) in a specified format. The Census Bureau will review the submitted file and then, if it includes the necessary data, provide a product that contains supplemental information the state can use to construct alternative, within-state tabulations for its own purposes. But even with this proposed solution states still cannot, as a practical matter, account for all of their residents who may be in other states' prisons or in a federal facility. It is not clear why the Census Bureau does not use its statutory authority (to collect accurate census data) to ask states simply to do that.

Some localities in Virginia at town, city, and county levels have chosen to exclude their prisoner counts on occasion when making redistricting decisions. Six counties have adjusted their Census data and did not include prisoner counts when drawing their supervisors' districts. Eighteen other counties in Virginia used Census data and included prison populations when drawing their supervisors' districts. Such individual decision-making only adds to a lack of uniformity within states and among states, leading to inaccuracy in the way prisoners are treated for redistricting purposes.

This is a problem in rural communities that contain large prisons because it seriously distorts redistricting at the local level (county commissions, city councils, and school boards). The Constitutional principle of one person, one vote should not be a county by county or state by state issue. It is a federal issue about representational equality.

Already four states (Maryland, New York, California and Delaware) now count prisoners at their home locations for redistricting purposes; other states do not. Two recent court decisions in Rhode Island and Florida have held that counting prisoners at prisons in districts for local redistricting purposes as if those prisoners are eligible voters violates the Constitution's one person, one vote principle. Here are links to the two decisions: http://www.prisonersofthecensus.org/Calvin_v_Jefferson-Order.pdf; <http://riaclu.org/images/uploads/Davidson.v.Cranston.decision.pdf>. Cranston is now on appeal. These cases make it more likely that other challenges to using Census data will follow if the Bureau does not change the way it counts incarcerated people. The Bureau's proposed rules lead to greater uncertainty as states redistrict in 2021.

Under its statutory authority to collect accurate census data, the Census Bureau can ask states and the

	<p>federal Bureau of Prisons to submit a data file, indicating where each prisoner is incarcerated on Census Day and prisoner’s pre-incarceration address. I ask the Census Bureau to exercise that authority in order to conduct an accurate Census.</p> <p>Continuing to count prisoners at their places of incarceration makes it more likely than not that states will continue to count prisoners in districts where they should not be counted, resulting in impermissibly unequal representation in districts that do not contain prisons. Failing to interpret “usual residence” to reflect today’s vastly changed circumstances promotes the likelihood that more federal courts will hold that the Bureau’s failure to update its residence rules results in state redistricting plans that violate the Constitution.</p> <p>Therefore, I urge the Census Bureau to change the “usual residence” rules for the 2020 Census so that prisoners are counted at their pre-arrest home jurisdiction. Fairness in voting power will result and will prevent constitutional violations of the one person, one vote requirement.</p>
c00103	<p>I believe it is inaccurate to count prison inmates as residents of the community where the prison is located. The prison towns that support many of the prisons should not be given undue power by means of artificially increasing their populations by counting prisoners. This skews the apportionment of House of Representative seats so that tiny communities are overrepresented.</p>
c00104	<p>Section D.15, D.16 and D.17 should be changed so that in some or all cases people in correctional institutions and halfway houses be counted as at their residence outside of those facilities. This prevents prison gerrymandering, is logical, is the international standard and is more fair.</p> <p>OECD guidelines recommend that people in correctional institutions be counted at the facility only if they are scheduled to be there for a long duration, which is defined as at least 12 months. See: http://www.oecd.org/statistics/OECD-Guidelines-for-Micro-Statistics-on-Household-Wealth-AnnexE.pdf . Canada, opting for a shorter deadline, chooses six months: http://www.census.gc.ca/ccr16g/ccr16g_000-eng.html . Choosing an international standard would help with comparisons with other countries.</p> <p>Someone who spends two days in jail, because they can't post bail, and 363 days at home should not be counted at the jail for census purposes. Such a reading is arbitrary and capricious, and disproportionately affects people with low income and low access to and knowledge of the criminal justice system, which also means it disproportionately affects minorities, which could be a violation of civil rights legislation including the Civil Rights Act of 1964 and the Voting Rights Act of 1965. Highland Springs, Virginia has about 3 black adult men for every 5 adult women because such a large portion of the black male population is serving short sentences in jails outside the area.</p>
c00105	<p>The proposal to count incarcerated people in the district of their incarceration, and not their original district of residency, is profoundly unjust. This counting location would multiply the social, economic, and political inequalities of the US criminal justice system and violate the principle of equal representation.</p>

	<p>Incarcerated people leave a gaping economic and social void in the community from which they are taken, often leaving behind family members and other dependents, as well as the marginal municipal and county costs of infrastructure that do not decline when individuals vanish. Conversely, the district to which the incarcerated person is transferred does not incur any marginal costs, and in fact often enjoys (and lobbies for) the payroll, vendor, and other revenues associated with prisons. Transferring the effective, Census-counted location of an incarcerated person exacerbates this economic and social injustice.</p> <p>Moreover, the political preferences and interests of the districts with the highest rate of arrest and incarceration are often diametrically opposed to those of districts with prisons. Therefore, counting the incarcerated persons in the prison's district unjustly transfers political power to the latter district. The injustice is magnified by the inability of the incarcerated person to actually vote, an arrangement that recalls the sordid original counting arrangements of American democracy, in which non-voters could be counted for the political benefit of their owners.</p>
c00106	<p>The Maryland State Conference of NAACP Branches, the Somerset County Branch of the NAACP (together, “the NAACP”) and the American Civil Liberties Union of Maryland (“the ACLU-MD”) submit this comment in response to the Census Bureau’s Federal Register notice regarding the Residence Rule and Specific Residence Situations, 81 FR 42577 (June 30, 2016). We reiterate our concerns, first expressed last year in a July 17, 2015 submission, over the Census Bureau’s proposal to continue counting people at their place of incarceration instead of their last place of residence.</p> <p>Counting incarcerated people at the facility where they happen to be imprisoned on Census day ignores the temporary nature of incarceration. Every year, approximately 636,000 inmates leave prison and 11 million inmates leaves jails to return to their homes to become ordinary citizens of their communities.^{1/} Moreover, with the recent focus by states on prison reform, new legislation will likely lead to even shorter incarceration periods. For example, in Maryland, the passage of the Justice Reinvestment Act eliminates mandatory minimum sentences for many offenses and limits the incarceration periods for many technical violations.^{2/} In light of the temporary nature of incarceration, the Census Bureau’s proposed rule fails to follow the definition of “usual residence” as the place where a person “eats and sleeps most of the time.” Children at boarding school, soldiers deployed overseas, and juveniles in treatment centers are all counted at their permanent addresses, not the place that they are located on Census day. There is no reason why prison inmates should be the exception to this general rule and the existence of such an exception without an explanation is extremely troubling.</p> <p>Our experience with this issue in Maryland is a testament to the detrimental effect that the current proposed rule can have in undermining equal representation for minority residents. The NAACP and the ACLU-MD are committed to preserving all citizens’ right to be equally represented in the electoral system, and we have worked to make that promise a reality in our own state. Somerset County, on Maryland’s Eastern Shore, has long been one of the state’s most racially-divided communities, with a sad history that includes lynchings, formal opposition to school integration through the 1960s, and court-ordered reforms to racially discriminatory election and employment practices into the 1980s and 1990s.^{3/}</p>

At the time of the last U.S. Census, Somerset County was 42 percent African American—the highest ratio of blacks to whites in any Eastern Shore County.^{4/} Yet, despite Somerset’s demographic diversity, blacks have historically been left virtually unrepresented in County government.^{5/} Indeed, until 2010, no black person had ever been elected or appointed—in all of the County’s 350-year history—to any top County office, including County Commissioner, County Administrator, Sheriff, Detention Center Warden, Judge, State’s Attorney, State Delegate, County Treasurer, County Finance Director, County Attorney, County Personnel Director, County Planning Director, County Fire Marshall, County Emergency Management Director or County Elections Administrator, among others.^{6/} The situation persisted even though the historically black University of Maryland, Eastern Shore (“UMES”), located within the county, graduates many candidates qualified for government jobs and offices.

In 2008 and 2009, the NAACP and ACLU-MD began to understand that part of the reason African Americans had remained shut out of Somerset government for so long related to what is now known as “prison-based gerrymandering.” Because the County is rural and relatively sparsely populated, the inclusion for redistricting purposes of the large prison population temporarily at Eastern Correctional Institution (“ECI”) severely undermined the racial fairness of the local election system.

Due to a Voting Rights Act challenge to the County’s at-large election system in the mid-1980s, the County switched to a system of five single-member districts to elect its County Commission. The County planned one district as a remedial district with a majority black population, but by the time that district was established, ECI had opened. ECI’s mostly minority inmates were counted as residents of the so-called remedial district, even though they were ineligible to vote in Somerset elections. The prison’s inclusion distorted the district’s voting power, because only a small share of those counted in the district were actually eligible to vote, and an even smaller share of those eligible to vote were African American. As such, the district could not and did not function as a true remedial district, and for two decades consistently elected white officials to represent the “minority” district. Moreover, because inmates significantly outnumbered other district residents, their inclusion in the redistricting database led to over-representation of non-prison residents within that district, as compared to residents in other districts that did not include a prison.

In 2009 and 2010, the NAACP and ACLU-MD partnered with community leaders to challenge this system. Together, they advocated with local Somerset officials, the Maryland Attorney General, and the Maryland General Assembly for exclusion of the prison population from the redistricting database. In 2010, as a result of this advocacy, the Maryland legislature became the first in the nation to adopt a law mandating that prisoners be counted at their place of last residence, rather than their place of incarceration.^{7/} This simple change finally gave meaning to the voting rights remedy put in place by Somerset County in 1986 and paved the way for greater participation by minorities in Somerset County’s local government. In fact, the County’s first black County Commissioner, Rev. Craig Mathies, was elected shortly after the law was enacted. Furthermore, Somerset’s 2012 redistricting plan includes two districts with majority minority populations, better reflecting the demographics of the community and enhancing minority electoral opportunities within the County.

The story of Somerset County illustrates one adverse collateral consequence that can follow from the dramatic growth of our nation’s prison population over the past few decades: a reduction in the suitability of current Census counts for use in redistricting. As recently as

the 1980s, the incarcerated population in the U.S. totaled less than half a million.^{8/} But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars.^{9/} This change implicates a need for corresponding change in application of the Census’s “usual residence” rule with respect to incarcerated persons, to ensure that redistricting decisions and remedies count populations accurately and promote electoral fairness for all.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people.^{10/} Although Maryland (along with California, Delaware, New York, and over 200 counties and municipalities) has approved a measure to adjust the Census’ population totals to count incarcerated people at home, this *ad hoc* approach is neither efficient nor universally feasible. For example, the Massachusetts state legislature concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses.^{11/}

Thank you for this opportunity to comment on the Residence Rule and Specific Residence Situations. Given that prison is merely a temporary form of shelter, and from our experiences in Somerset County, the Maryland State Conference of NAACP Branches, the Somerset County Branch of the NAACP and the ACLU of Maryland reiterate our deep concern about the proposed regulation and urge the U.S. Census Bureau to count incarcerated people as residents of their last home addresses in order to produce a fair and accurate 2020 Census.

	<p>10/ See Prisoners of the Census, "Detailed demographics of correctional populations now available for nation" (Sept. 13, 2011), available at http://www.prisonersofthecensus.org/news/2011/09/13/sf1/.</p> <p>11/ See The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).</p>
c00107	<p>I disagree with this proposed residence rule. These people will tell you first hand that prison is not their home! These inmates are transported from prison to prison. I myself was incarcerated for 10 months and moved to 2 prisons within that time. This is injustice at it's greatest. The American government is pure foolishness!</p>
c00108	<p>Legally, counting inmates as residents of prisons and detention centers violates the one person, one vote requirement of the U.S. Constitution's Fourteenth Amendment as was made clear this year by U.S. District Judge Mark E. Walker in Calvin et al. v. Jefferson County (United States District Court for the Northern District of Florida) and by U.S. District Judge Ronald Lagueux in Davidson vs. City of Cranston (United States District Court for the District of Rhode Island).</p> <p>Practically, in Pennsylvania approximately 50% of the state prisoner population is from Philadelphia County, while almost all of the 25 state prisons are located in rural counties. Many of those prisons were located in those rural counties due to efforts by local politicians to create jobs for their constituents. Counting those prisoners in the rural districts where most Pennsylvania prisons are located swells the population base of those districts. It enhances the political clout of politicians who have strong incentive to support prison expansion and to enact policies that ensure continued mass incarceration.</p> <p>Prisoners should be counted as residents of their home communities, not where they are imprisoned.</p>
c00109	<p>I was shocked and horrified to learn that states have counted incarcerated individuals as residents in their current locations when drawing district lines for state and congressional representation.</p> <p>This practice violates common sense, basic fairness, and Pennsylvania state law. PA law states that jail inmates are required to vote in their home districts - not in districts in which they are currently being held.</p> <p>PA law also states that incarcerated individuals "shall be deemed to reside at the last known address before confinement." (Pennsylvania Election Code (25 Pa.C.S. §1302(3)))</p> <p>Counting inmates in districts where they are incarcerated gives disproportionate political power to rural, under-populated, areas, where prisons are located, at the expense of urban, densely populated areas, where the majority of prisoners formerly resided.</p> <p>The concept of equal protection of the laws is enshrined in the U.S. Constitution in the 14th amendment. The concept of "one person one vote" has been consistently upheld by the U.S. Supreme Court. The practice of prison gerrymandering is anathema to the equitable exercise of the franchise - a citizen's most basic right.</p> <p>The Census Bureau has the opportunity to right this wrong in 2020. In the name of the American values of justice and equality, I</p>

	urge the Bureau to end prison gerrymandering.
c00110	<p>Miscounting prisoners distorts democracy. Counting inmates as residents of prisons and detention centers violates Pennsylvania law, which states: A penal institution (including a halfway house) cannot be a residence address for registering to vote.</p> <p>It also violates the one person, one vote requirement of the U.S. Constitution's Fourteenth Amendment as was made clear this year by U.S. District Judge Mark E. Walker in Calvin et al. v. Jefferson County and by U.S. District Judge Ronald Lagueux in Davidson vs. City of Cranston.</p> <p>Miscounting of urban prisoners in the rural districts where most PA prisons are located swells the population base of those districts. It enhances the political clout of politicians who have strong incentive to support prison expansion and to enact policies that ensure continued mass incarceration. The practice distorts our democratic process and undermines government of, by and for the people. Even providing alternative information to states allows the party in power to ignore this alternative information and use the main census data to their advantage.</p>
c00111	<p>PA is so unfairly gerrymandered that more Pennsylvanians voted for Obama 2012 than Romney, yet we sent an twice as many Republicans than Democratic ones as U.S. representatives to Congress. What's wrong with this picture?</p> <p>Rural districts have far too much power over urban districts. This is just one immoral expression of our ugly racist legacy.</p> <p>One problem is the way we count prisoners. Since many prisons are in rural areas, the prisoners inside them are counted as rural citizens, yet, because of our unjust system that puts away more people of color than white people, the prisoners are from urban areas.</p> <p>This is injustice on top of injustice. Besides, prisoners don't even vote, do they?</p>
c00112	I am writing with concern and regard to Jacksonville, NC's population count. It appears we are not counting all of our locally stationed Marines/Service Members and their dependents. Do you have more information and/or can we get this changed to properly reflect our true population numbers?
c00113	Counting inmates housed at a correctional facility is insane. They don't have voting privileges to begin with and with the federal system, that I retired from, most inmates don't stay at the same facility for over 5 years. The other reason this is wrong at this time, the Bureau of Prisons release policy states "Inmates must be released to the same district they were sentenced in". Which is another aspect that should be changed; because we're sending these felons back to the same place they committed their crimes, same environment.
c00114	I request you do count those incarcerated as being prison residents. These are human beings who had lives at their

	last known address. Use that address for census purposes. They being warehoused is just temporary.
c00115	<ul style="list-style-type: none"> • The Census Bureau is wrong to consider incarcerated people as residents of the correctional facility because these rules punish a prisoner for all time. When a prisoner has done their time and leaves the prison which is not their home, it will be stated in the census for all time that they (lived) in prison. This is punitive forever punishment. • My husband is in prison in a rural part of Washington state. There are 2500 other prisoners in this prison. The census will incorrectly put them as residents. They are not willingly there. They do not live there. They are transient. Mass incarceration will make the census incorrect as it has been for many decades. This needs to stop. Our democracy demands it. • Thank you for your time on this matter.
c00116	<p>I would like to make the following suggestion re the 2020 US Census population rule-count: As a former prisoner of the federal BOP from 1990-to-2010, I was incarcerated in over a dozen different prisons in seven different states. All of these sites were chosen by the prison system, not myself. They were always determined by the prison AND THE LOCAL COMMUNITIES as temporary residences.</p> <p>By my own intention as well as the determination of the prison administration, my prison file always contained a MANDATORY LISTING OF MY HOME ADDRESS (from which I was initially incarcerated and to which I was expected to return). In fact, that home address determines how far a prisoner can be incarcerated from his/her home.</p> <p>Even if I wished to relocate to the communities in which I am incarcerated, they virtually all have local ordinances forbidding a prisoner remain more than a set limit--say, 2-hrs--from which we are required to depart under penalty of arrest and prosecution.</p> <p>I have always been an active political individual in my local community affairs. Counting me as a residence in another Congressional District both improperly enhances representation in that temporary area and DEPRIVES MY HOME AREA OF ITS PROPER REPRESENTATION.</p> <p>Please count prisoners, like out-of-area students and other travelers, from their home residence, NOT THEIR TEMPORARY ONE. Thank you for your consideration.</p>
c00117	In regards to proposed 2020 census rules, I am writing in hopes that you'll consider my concerns as a resident of the state of South Carolina. As you may know, South Carolina does not prohibit prison gerrymandering specifically, although several counties do. I work for a municipal courthouse and I see how the effects of political decisions hurt some of the most impoverished members of our community. The ability for incarcerated persons to be accurately represented by their home district (preincarceration

	address) is paramount. As a voter, resident, and judicial employee, I would strongly support that residents of my county, who are currently incarcerated and temporarily housed elsewhere in the state, be counted in my voting district as residents. This upholds the sanctity of one-person one-vote, which is crucial to the strength of our democracy. Thanks for taking the time to hear my thoughts, please feel free to contact me at any time.
c00118	<p>The Census Bureau cited the importance of using one’s “usual residence” in their decision to continue to count prisoners in the cells they currently serve their time when the 2020 Census is administered. Yet, if the Census Bureau is truly interested in recording inmates at their "usual residence" (defined as where they "live and sleep most of the time") prisons, and certainly jails, are NOT where prisoners spend most of their time (time being the 10 years for which their body count in the Census affects policy). Although “the average length of time served by federal inmates more than doubled from 1988 to 2012, rising from 17.9 to 37.5 months” that still means that the average felon served only slightly over three years in prison (less than a third of the time that the Census, with its decade long influence, would have inmates counting the prison as their usual residence). “Prison Time Surges for Federal Inmates November, 18 2015 Public Safety Performance project PEW Charitable Trusts http://www.pewtrusts.org/en/research-and-analysis/issue-briefs/2015/11/prison-time-surges-for-federal-inmates And ALL jailed inmates serve <i>less an a year</i> (that is less than a tenth of the time the Census would record them living their if they choose to continue counting prisoners as residents of the communities outside the prison walls which prisoners have no stake in). I hope that this comment and others like it will have a real impact on the Census Bureau's decision. Although, I am skeptical, considering that the Census Bureau elected to disregard the vast majority of comments on the 2010 Census’s recording methods regarding prisoners who argued for their residencies to be marked in their home communities. “Of the 162 comments pertaining to prisoners, 156 suggested that prisoners should be counted at their home or pre-incarceration address,” leaving only 6 individuals who disagreed. Ironically, it is this very disproportionate sway of the few over the many which counting prisoners as residents of the jails and prisons they temporarily reside in ensures. For instance, because the state of Rhode Island had only one prison located in Cranston's Ward 6, “Every seven voters in Ward 6 [Cranston, RI] had the same political power as 10 voters in the city’s other wards.” “The Wrong Way to count Prisoners” 7/15/16 NY Times http://www.nytimes.com/2016/07/16/opinion/the-wrong-way-to-count-prisoners.html?_r=2 This violates the US constitutional commitment to one person, one vote for which we fought a Revolution! It is not, as opposition argued, giving undue advantage to correctly count prisoners in the place they have the greatest stake and will likely spend the most time in the ten years for which the Census holds influence it is in fact the other way around, counting prisoners as residents of communities they can not participate in and do not likely have family living in gives undue political power to those communities that house prisons.</p>
c00119	<p>Don't count prisoners in prisons, count them in their real homes! Rural areas have far too much power in our government already, and it's subverting our democracy!!</p>
c00120	<p>Pennsylvania is already badly gerrymandered. We're 52% Democrat with a heavily Republican legislature on account of the gerrymandering. Counting prisoners in the rural Republican districts of the prison rather than their natural addresses worsens a bad situation. Please consider counting prisoners at their home addresses where they are actually likely to be registered to vote.</p>
c00121	<p>I am disgusted and embarrassed that Pennsylvania is one of the most gerrymandered states in the country! Counting inmates in prisons only exacerbates the problem! DON'T LET THIS PRACTICE CONTINUE!</p>
c00122	<p>Counting inmates as residents of prisons and detention centers violates Pennsylvania law, which states: A penal institution (including a halfway house) cannot be a residence address for registering to vote.</p>

	<p>It also violates the one person, one vote requirement of the U.S. Constitution's Fourteenth Amendment as was made clear this year by U.S. District Judge Mark E. Walker in Calvin et al. v. Jefferson County and by U.S. District Judge Ronald Lagueux in Davidson vs. City of Cranston.</p> <p>Miscounting of urban prisoners in the rural districts where most PA prisons are located swells the population base of those districts. It enhances the political clout of politicians who have strong incentive to support prison expansion and to enact policies that ensure continued mass incarceration. The practice distorts our democratic process and undermines government of, by and for the people.</p>
c00123	<p>I just wanted to add my voice to those calling for prisoners to be counted at their voting address for the census rather than at the location where they are incarcerated. It's inconsistent to say they live at the prison for the purposes of creating voting districts, but not for the purposes of actually voting. Either change the law to allow them to vote at their prison address, or count them as voters in the district where they are actually eligible to vote.</p> <p>Thank you for your time.</p>
c00124	<p>If the courts have stated that prisoners cannot be counted for the county their prison is in or not counted at all while they are in prison, abide by their rules because that is what the constitution states.</p>
c00125	<p>If prisoners are counted where they are, they should have the right to vote where they are. All people paroled or on probation should have the right to vote, not under state law, but under federal law.</p>
c00126	<p>I write to express my firm opposition to counting incarcerated people as residents of the place where they are incarcerated. The most basic definition of residency hinges on an intent to be someplace. No prisoner intends to be where they are incarcerated. They intend to be where they're from. It's why they leave when they're released. They have NEVER intended to reside at a facility they were assigned to without volition or input.</p> <p>I wish we lived in a society where this was a tiny insignificant rounding error. But it's not. It's millions of displaced people further traumatized and disempowered by counting their voices as supporting their captors.</p> <p>Prison gerrymandering is offensive precisely because it expropriates the power of the most voiceless and defenseless in our society, and arrogates that power to their captors.</p> <p>That's just fundamentally un-American.</p>
c00127	<p>My PhD and advocacy work around prison politics leads me to conclude that prisoners should not be counted based on imprisonment. It is not uncommon for prisoners to be transferred multiple times without knowledge to the Census Bureau. This leads to inaccurate counting of prisoners. What's more, prison privatization often results in prisoners being transferred out of their original residential state for a temporary period of time. These prisoners remain residents of the state from which they were transferred from and should be counted as residents of that state—not the state to which they are temporarily transferred. Counting prisoners as residents in prisons produces inaccurate data, and in turn, ineffective</p>

	<p>policy and practices.</p>
c00128	<p>I am writing to persuade you and the Bureau of the Census to change its current practice and reconsider the ways and means by which incarcerated citizens are counted in the 2020 census.</p> <p>As your own mission statement declares:</p> <p style="padding-left: 40px;">“The Census Bureau's <i>mission</i> is to serve as the leading source of quality data about the nation's people and economy. We honor privacy, protect confidentiality, share our expertise globally, and conduct our work openly.”</p> <p>To support my request I strongly suggest that it is incorrect to count people as residents of the prison in which they are incarcerated. Neither these individuals nor their families regard their cell or the facility as their home. They are there because of a conviction and sentencing, but they have not elected it as their residence. Incarcerated citizens counted as such, is not quality data.</p> <p>Why is this important? The incorrect allocation of their residence has a very tangible impact upon all of the resources that rely on the accuracy of the census to determine a host of allocations. This data, as you well understand, has an impact upon the lives of many. To eliminate these citizens from the more accurate placement of their residence shifts the power dynamics of all forms of representation.</p> <p>I am asking that you count the incarcerated at their home address, which is almost always their legal address. To count the incarcerated otherwise is falsely increasing the population counts of all those communities with prisons. This practice benefits some but it distorts the greater picture and this lens, once inaccurate in its true measure, reverberates with less than beneficial consequence to the majority.</p> <p>I applaud your decision to extend the deadline for residence rule comments and hope that common sense prevails in reaching your decision to sustain a process that will provide quality data in the 2020 census. I strongly urge you to not count the incarcerated as residents of the community in which they have been imprisoned.</p> <p>Thank you for your consideration.</p>
c00129	<p>Jacksonville, N.C., is home to one of the largest Marine Corps Installation in the world. Moreover, it houses detachments from other military branches. In all, there are nearly 50,000 military personnel, not counting associated contract personnel from out-of-area locations, transiting to and from Jacksonville throughout the year.</p> <p>Though the base has substantial housing, hundreds of military personnel and their family members live off base. Consequently, all the military personnel and their families, both on and off base, are living and moving about the city of Jacksonville on a daily basis - year around. This constitutes a total of over 175,000 people living and working in Onslow County not being counted in the census.</p>

	<p>This, quite obviously, taxes the city's municipal resources; such as the need for more police and fire protection, street repair, utilities and utilities maintenance, trash collection, etc.</p> <p>While the base is self-sustaining with federal funds, the city of Jacksonville receives little or no outside funding to offset the base's impact on the city and county. Consequently, the burden of the costs are on the shoulders of the "permanent" residents.</p> <p>Therefore, it is believed the Rule of Interest is both fair and equitable.</p>
c00130	<p>Please change the current residence rule that specifies that prisoners should be counted as residents of the prison in which they find themselves, however far that is from their home.</p> <p>Since prisoners are not allowed to vote it seems obvious they should not be counted in the town in which the prison lies. Any town with a prison in it gets an unfair census advantage, and gives the residents of that town more power at the ballot box.</p> <p>I hope that you will correct this undemocratic practice for the 2020 census,</p>
c00131	<p>I submit this comment on the Census Bureaus' proposed rule for the 2020 Census which would continue the practice of counting incarcerated individuals as residents of the municipality/district where they reside while incarcerated, rather than their home community.</p> <p>When the prison population was small, this practice created little real world impact. Today, however, U.S. Census data counts more than <i>2 million people</i> as though they were residents of places where they have no community ties. Not inconsequentially, the locales where they are so-called "legal residents" have no ties to them, other than benefiting from the additional political clout their incarceration provides.</p> <p>In 2014, with pending legislation in the state of New Jersey, the Unitarian Universalist Legislative Ministry of NJ developed a Fact Sheet for its members and allies. It's Task Force on Criminal Justice Reform looked at a real world example of how this Census Bureau practice unfairly advantages districts where prisons exist, and disadvantages the districts which the majority of those inmates call home.</p> <p>Maurice River Township (Cumberland County) is home to Southern State Prison. The Township 2010 Census population was 7,976. However, 2,040 of these individuals are inmates of the prison-- representing 25% of the Township's population. Only 63 of Southern's inmates are actually residents of Cumberland County, while the remaining 1,977 come from other NJ counties (half come from just five counties- Atlantic, Camden, Essex, Hudson and Union). Maurice River Township's.</p>

	<p>If one looks at urban, heavily minority counties in NJ, such as Mercer (Trenton), Essex (Newark), and Camden (Camden City), the situation is reversed. Essex County is considered to be "home" for approximately 2,360 male offenders in the state. However, only 490 of these offenders are incarcerated in Essex County (Northern State Prison). This results in a loss of some 1,870 individuals who are counted as residents of the counties where they are incarcerated, rather than Essex County.</p> <p>These artificially deflated population counts hold true for all of the urban counties in the state. For example, 100% of Camden County's male offenders are incarcerated in counties other than Camden because Camden County does not have any State correctional facilities. This results in a population loss, for purposes of representation at the state and federal level, of close to 1,700 citizens.</p> <p>Prison-based gerrymandering:</p> <ul style="list-style-type: none"> ▪ artificially inflates the population of areas where prisons are located; artificially deflates the population of the communities that are the inmates' true "home;" ▪ increases political representation in communities where prison populations lead to additional voting districts (this despite the fact that those very inmates cannot vote while they are "residing" in prison); decreases political representation in the communities that inmates called "home" prior to their incarceration, thus effectively disenfranchising these largely lower-income, urban communities of color. ▪ overstates key indicators of "need" -- e.g., poverty-- in communities where prisons are located, giving them an artificial advantage in accessing need-based state and federal resources; understates those very same indicators of need in the inmates' home communities, thus artificially reducing their ability to access those same resources; <p>The Census Bureau's practice of counting incarcerated individuals as residents of the area in which the prison is located as long been a tool for unfair advantage to certain communities, and unfair disadvantage to (primarily) urban areas. It is way past time to end this practice, and count incarcerated individuals as residents of the municipality where they had their last legal address prior to incarceration.</p>
c00132	<p>Please consider the following arguments in making this decision:</p> <ul style="list-style-type: none"> • The Census Bureau is wrong to consider incarcerated people as residents of the correctional facility because this constitutes gerrymandering and further disenfranchises poor voters. In Oregon, incarcerated individuals cannot vote and

	<p>are concentrated into 15 facilities in 12 legislative districts. This non-voting population artificially inflates the relative strength of people living near the prison, while decreasing the relative strength of their community of origin.</p> <ul style="list-style-type: none"> • The Census Bureau has chosen to continue counting people in the wrong place, ensuring an inaccurate 2020 Census. This practice weakens the vote of people from districts where the inmates have been subtracted from the count. When added to the fact the inmates are not allowed to vote this issue of gerrymandering is compounded. <p>Please put a stop to this corrupt political practice.</p>
c00133	i dont agree that you count inmates as residents of where they reside when they cannot vote and it is just so they politicians in that area can gain from the count.
c00134	I dont agree with counting inmates as residence of the area in which they are HOUSED some are sent to different areas all the time and some dont live where they were incarcerated so how can you count them as residences. It makes no sense only that people use these figures to their advantage.
c00135	Every citizen needs to be counted!
c00136	Counting ex-prisoners as residents of the prison locale rather than their current place of residence is pure gerrymandering. Its as bad as the N.C. legislature's (visiting us from the 18th century) gerrymandering of districts in order to ensure that only Republicans were elected and that their party held sway in the legislature. A Federal Judge held held that it was wrong, as is counting ex-inmates as if they were still incarcerated.
c00137	Prisoners should not be counted in the place of their incarceration, they should be counted in their homes. Counting them at the prisons gives to much voting power to underpopulated prison towns. The prisoners interest is not represnted by the town that has no connection to them. They do not take part in town functions, schools, commerce etc. Even their use of roads are limited. Prisons get separate funding from the state to support the prison itself, and then in many places are unequally given additional support from the state because ti seems that they are larger not to mention they have unbalanced power int he legislature. IT also sends a message to people in prison, most of whom will be released before the next census, that the country only considers them as prisoners, without any autonomy, without any future. Feeling empowered is a huge part of successful rehabilitation and to not even allow someone to identify their home, regardless of where they have to live is sad. They have futures in their homes, not in the prisons and they should be allowed to assert that- even if it werent for the effects of vote dilution on the rest of us. Please reconsider this rule and count prisoners where we all belong, in their true homes.
c00138	Penal institutions should not be counted as prisoner residences. It distorts the meaningful residential information gained from these counts.
c00139	<p>Please change the practice of counting prisoners in the census based on where they are imprisoned. this is unfair both to their home districts and to the communities where prisons have been built.</p> <p>nb:</p>

	<p>In the past 30 years many new prisons were built in rural areas of the country and those prisons have been identified, in past censuses as the “home” of the people imprisoned there. For example, a total of 3,500 women are currently incarcerated in Vandalia and Chillicothe MO. An additional 26,500 men are imprisoned in a variety of MO rural prisons including Bonne Terre, Pacific MO, etc.</p> <p>Representation in the House of Representatives is based on the census numbers. In terms of gerrymandering, this means that those rural areas are allotted more representation in the MO House of Representatives than they deserve and the major cities (St. Louis, Kansas City, Springfield, etc.) where a large percentage of those men and women actually live are allotted less representation than they deserve.</p> <p>Another problem with designating a prison, instead of an actual home, as a person’s residence is that it makes it impossible for researchers to understand the demographics of local communities. So subsequent policies, usually based on research, are inadequate.</p>
c00140	<p>Thanks for the opportunity, for the 2020 census, to suggest changes in the designated residence of people who are incarcerated. It is important that prisons and other detention facilities are not identified as the “home” or “residence” of men, women and children who are incarcerated there.</p> <p>Approximately 3,500 women are incarcerated in Vandalia MO and Chillicothe MO. About 26,500 men are incarcerated in rural area prisons in other parts of MO. To designate these rural areas as their homes inflates the number of representatives in Congress that these rural areas are allotted and deflates the number of representatives allotted to the major cities in MO where the majority of the prisoners live.</p> <p>Additionally, it distorts the demographics collected by researchers, thus negatively influencing city and state policies and practices.</p>
c00141	<p>This is in regard to the 2020 Population Census and Prison population. As an example, Chillicothe has 3500 inmates many from Kansas City and Saint Louis.</p> <p>There is an unfair distribution as those rural areas are allotted more representation in the MO House of Representatives than they deserve and the major cities (St. Louis, Kansas City, Springfield, etc.) where a large percentage of those men and women actually live are allotted less representation than they deserve.</p> <p>Another problem with designating a prison, instead of an actual home, as a person’s residence is that it distorts and makes it impossible for researchers to understand the demographics of local communities. So subsequent policies, usually based on research, are inadequate.</p> <p>Please take these issues into consideration in preparing for the 2020 census.</p>
c00142	<p>I am suggesting a change in census 2020 which will designate the real home – not a prison – as the residence of men and women who are incarcerated.</p>

	<p>In the past 30 years many new prisons were built in rural areas of the country and those prisons have been identified, in past censuses as the “home” of the people imprisoned there. For example, a total of 3,500 women are currently incarcerated in Vandalia and Chillicothe MO. An additional 26,500 men are imprisoned in a variety of MO rural prisons including Bonne Terre, Pacific MO, etc.</p> <p>Representation in the House of Representatives is based on the census numbers. This means that those rural areas are allotted more representation in the MO House of Representatives than they deserve and the major cities (St. Louis, Kansas City, Springfield, etc.) where a large percentage of those men and women actually live are allotted less representation than they deserve.</p> <p>Another problem with designating a prison, instead of an actual home, as a person’s residence is that it distorts and makes it impossible for researchers to understand the demographics of local communities. So subsequent policies, usually based on research, are inadequate.</p>
c00143	<p>I believe that incarcerated individuals should not be counted in the census as residents of a prison facility. Prisoners have no choice of where they are placed, and they can also be involuntarily transferred at any time, so their prison location does not represent their residence. In addition, it is not right for a Congressional district or other jurisdiction to benefit from the population increase of their presence, and the prisoner him/herself is also not benefitting from the resultant representation; moreover, with the exception of Maine, Vermont and Puerto Rico, the prisoner has no ability to elect the political representatives and the politician cannot be held responsible by these disenfranchised “residents” of their jurisdiction. (If incarcerated people did not lose their right to vote, then it could make some sense to count them in the census as a resident of a prison facility).</p> <p>Prisoners could be counted in the census as living at their last address in the community, where many of them may have family still living, even though they themselves are no longer located there. Or there should be a special census category of incarcerated individuals. I don’t know if there is a special census category for Americans living outside the country, but it would make sense to have such a category both for them and for people who are living in a prison facility.</p>
c00144	<p>As the _____ of the Havelock Chamber of Commerce in North Carolina, I am writing to support the proposed rule change regarding the census count of deployed military personnel. We in Havelock are honored to be the home of Marine Corps Air Station Cherry Point, with an active duty military population of over 9,000 personnel. While these Marines and Sailors are deployed during various times, accurately counting their population is vital to the public and economic needs of our community.</p> <p>We support the Proposed 2020 Census Residency Rule and Residency Situation:</p> <p><i>"U.S. military personnel who are deployed outside the U.S. (while stationed in the U.S.) and are living on or off a Military installation outside the U.S. on Census Day shall be counted at the U.S. residence where they live sleep most of the time, using administrative data provided by the Department of Defense"</i></p>

	<p>The Havelock Chamber of Commerce supports this proposed rule change and thanks the U.S. Census Bureau for conducting an efficient review. Undercounting military personnel due to deployment has resulted in a loss of revenue from federal and state sources. This proposed rule change will improve the quality of life for those who serve and support our nation.</p>
c00145	<p>To whom it may concern: it is a matter of Justice that people be counted where they are from rather than where they are incarcerated! Not counting people where they live gives more weight to the vote of those who live in the municipality where the prison, jail or other type facility is located. Very often the demographics of the municipality where the prison is located doesn't reflect the demographics of those who are imprisoned there! A person who is incarcerated, his or her family and friends are represented by the elected officials where he or she from! Accordingly, when the census is taken he or she should be counted as a member of their hometown community. Please end the distortion of the democratic principle of one man one vote. COUNT PEOPLE WHERE THEY ARE FROM!!!!</p>
c00146	<p>Accurate Census data is vital to the public and economic needs of all communities in the nation. We appreciate the dedication and effort the U.S. Census Bureau has invested in publically reviewing its residency rules for the 2020 Census.</p> <p>Our staff and I have read the Proposed 2020 Census Residency Criteria and Residency Situations Federal Register notice of June 30, 2016. I commend the Census Bureau staff for meeting with our staff and representatives of the military communities in North Carolina, reviewing processes and investigating our recommendations for counting deployed military at their usual place of residence.</p> <p>North Carolina is honored to be the home of several of our nation's significant military bases including Fort Bragg with a population of over 238,000 (the largest military base by population in the world) and Camp Lejeune, the US Marine Corps' Home of Expeditionary Forces in Readiness, with a population over 131,000. Accurately counting these populations at their usual residence in the Census is vital to serving and supporting those who serve our nation. North Carolina is committed to supporting that purpose.</p> <p>We agree with the Census Bureau's assessment that there is a residence difference between military personnel deployed to overseas installations for extended assignments and those detailed for short-term roles. The deployed military personnel usually reside in their military communities. The proposed change is consistent with Census procedures that count persons who are away from their usual place of residence on Census Day such as individuals who are on vacation, on business trips as well as truck drivers or traveling salespeople. We support the following Proposed 2020 Census Residency Rule and Residency Situation:</p> <p>13. U.S. MILITARY PERSONNEL</p> <p>(f) U.S. military personnel who are deployed outside the U.S. (while stationed in the U.S.) and are living on or off a military installation outside the U.S. on Census Day - Counted at the U.S. residence where they live and sleep most of the time, using administrative data provided by the Department of Defense.</p> <p>The proposed change is consistent with Census Bureau policies, provides a more accurate Census count of the usual population of military communities, and better informs planning, services, and funding tied to Census data.</p>

	<p>The existing and proposed Census residency rules for counting deployed military personnel use administrative data provided by the U.S. Department of Defense. The proposed residency rules do not specify whether the administrative data source for the existing residency rules is to be used for the proposed residency rules, or whether a new data source would be used. We look forward to clarification of which Department of Defense administrative data source will be used and would be pleased to work with the Census Bureau to test and verify the quality of the administrative data.</p> <p>We thank the Census Bureau for the efficient and transparent way it conducted this review and we encourage the implementation of Proposed Residency Rule 13(f). Reliable Census Bureau data is essential to our service to the people of North Carolina. We remain committed to working with the Census Bureau to improve the quality of this invaluable process.</p>
c00147	<p>I am prompted to write in response to the news that the Census Bureau recently announced it may continue counting incarcerated people inaccurately as “<i>residents</i>” of prisons locations for the 2020 Census.</p> <p>This is WRONG. One example: People who live in New York City can end up incarcerated in Dannemora, New York State. I was one such person. From your Census count of 2010, as you now count it, we know Dannemora had 3,936 residents. But, at least 2,800 of those ‘<i>residents</i>’ were incarcerated men in the Clinton Correctional Facility in Dannemora.</p> <p>This is a count inaccuracy of over 70%.</p> <p>Which means the areas where we incarcerated individuals lived before we were incarcerated have been deprived of that political representation. - And I am sure the people living in catchment areas neighboring Clinton C.F. were not too happy either.</p> <p>I offer one tiny example of how this skewing of the count looks in reality.</p> <p>My spouse lived, voted, and paid her taxes in New York City when I was incarcerated in Dannemora in the Clinton Correctional Facility.</p> <p>One weekend when visiting me, she was walking back from the facility to her overnight accommodation. She put some candy wrapper she had in a garbage can and walked on. She heard someone shouting, but thought nothing of it. The shouting continued and continued. She finally looked about and realized the shouting was indeed directed at her. It was a prison guard on duty in the high tower on the prison wall. He told her to take her garbage out of the garbage bin because it was a private garbage bin and not for public use. My wife excused herself and did so, and then asked the man where she might find a public garbage bin. The</p>

	<p>man said there were no garbage bins for public use in Dannemora. She asked what she should do with her used candy wrapper as she had come NYC for the weekend. The prison officer thought for a moment, and then he replied <i>'Take it back to New York City with you'</i>.</p> <p>My access to political representation or public services while I was incarcerated in Dannemora did not reach to include the availability of one garbage bin on the street for use by my loved ones when they were visiting me in what you inaccurately describe as my <i>'residence'</i> in Dannemora.</p> <p>Ms.Humes, every weekend at least 100 people from NYC alone visit loved ones in Dannamora. The economy of Dannemora and surrounds receives millions yearly as a result us being incarcerated there. Yet neither myself, nor any of my peers who had previously lived elsewhere in the U.S. ever felt we were democratically represented by political representatives from that region.</p> <p>Most respectfully, one does not need to be a social nor political scientist to see this is not fair representation.</p> <p>P.S. Ms. Humes, would you accept in your office, information from other U.S. goverment agencies, where the information contained inaccuracies of up to 70%?</p>
c00148	<p>Partnership for Safety and Justice (PSJ) submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). We would strongly recommend that incarcerated people be recorded by the Bureau as residing in their home communities – not as residents of the locations where they are imprisoned. If made final, the Bureau's current proposal will mean another decade of decisions based on Census results that count incarcerated people in the wrong place and in a manner that negatively impacts crime victims, people convicted of crime, and the families and communities of both.</p> <p>As an organization, in large part, dedicated to supporting services and programs for victims of crime, we find the current proposal to be problematic for at least two reasons. First, we are very concerned that individuals and communities with high crime rates are being doubly victimized (a) by the person who harmed them and (b) by the current census methodology, which fails to include individuals, frequently from their own community, who are sent to another location to serve a term of incarceration.</p> <p>Second, as an organization likewise dedicated to ensuring the ability of formerly incarcerated people to be fully counted in and participate in civic and economic life, PSJ also believes that people held accountable for crime should be tallied in their home communities. Counting incarcerated people as residing where their prison is located, rather than their home communities, skews the census result by failing to count residents who were transported involuntarily from their home community and, in the majority of instances, will return to that home</p>

	<p>community long before the next census. The current method also dilutes the local census in terms of accurately counting residents who are people of color – a population disparately removed from their home communities and placed in state and federal prison.</p> <p>Crime victims and people who commit crimes almost invariably come from the same communities. Undercounting the residents of these communities – and, worse, inaccurately counting them as the residents of communities where they are imprisoned – harms crime victims, people convicted of crime, their families and community alike. We urge the Bureau to count people as residing in their home communities, not where they are incarcerated.</p> <p>Thank you for this opportunity to comment on the proposed Residence Rule and Residence Situations.</p>
c00149	<p>I understand that in 2020 the U.S. Census Bureau will once again consider counting people who are incarcerated in prison as ‘residents’ in that prison rather than as residents of the place they lived before they were incarcerated.</p> <p>May I say most respectfully, that is not good.</p> <p>My son _____ spent 24 years, four months and five days in prison for a crime he did not commit. Before he was incarcerated he lived in upper Manhattan. I tried to get help to clear his name from all the elected officials in his area. But as you know elected public representatives have enough to do without trying to help people they do not represent. And because the U.S. Census did not count my son as living in Manhattan he was no longer one of their constituents. And what of support from elected representatives in all the different catchment areas where my son was incarcerated? The truth is, they are not there for us. From what I could see, prisons in their areas meant they got more money for schools and roads, and so on, so they looked very good indeed. But I regret to say, from my experience, the elected officials in those areas did not really want to have anything to do with the problems of the people incarcerated in the prisons there.</p> <p>This is one of many reasons, that people in prison should NOT be counted as residing in prison on the U.S. Census, but as residing at the addresses they lived in before they went to prison.</p>
c00150	<p>Gerrymandering has long been a controversial activity, which continues to create difficult situations for common citizens and lucrative means for the politicians who promote it.</p> <p>For this reason the Census Bureau is wrong to consider incarcerated people as residents of any correctional facility, because they are not <i>willing</i> to be there and do not consider themselves residents. Additionally, many are not allowed to vote by the reasoning that they are not really citizens. Counting them as such continues to make a farce of the democracy we claim to uphold.</p>

	Gerrymandering is not about fairness or equity. Please do not consider this a viable means for counting the prison populations in any census.
c00151	<p>I am writing to you to ask that the U.S. Census count incarcerated people in the districts they consider home, rather than in the arbitrary location where they are incarcerated. I have read a lot about prison gerrymandering and understand that by counting incarcerated people as residents where they are incarcerated, despite their inability to vote in these districts, we are taking away representation from the districts where the incarcerated people lived prior to incarceration - and thus, the communities studies have demonstrated they will most likely return to. The communities most hurt by this policy tend to be black, Hispanic, and poor, meaning their ability to advocate for their needs is already severely hampered; we make it worse by taking away members of their community and the proportional representation those members would have added.</p> <p>Please change the way the Census counts incarcerated people this year - to one of self-designation or the incarcerated person's last known address.</p>
c00152	<p>As a coalition of groups involved with the 2011 Massachusetts Redistricting process, we submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census day ignores the transient and temporary nature of incarceration. If made final, this proposal will mean another decade of decisions based on a Census that counts incarcerated people in the wrong place.</p> <p>The need for change in the "usual residence" rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census and for the voting strength of certain communities.</p> <p>By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks, which are located far from the actual homes of incarcerated people. Just two examples of specific impacts in Massachusetts include:</p> <ul style="list-style-type: none"> • Without using prison populations as padding, 5 Massachusetts House districts drawn after the 2000 Census did not meet constitutional population requirements. For example, while each House district in Massachusetts should have had 39,682 residents, the 3rd Suffolk District, which claimed the population of the Suffolk County House of Corrections, had only 36,428 actual residents. This means that the actual population of the district was 8.2% smaller than the average district in the state. • When the city of Gardner last updated their districts in 2001, they were faced with the prospect of giving the residents on the eastern side of the city, near the state prison, extra influence over city affairs, or rejecting the flawed Census counts. The City Council ruled to reject the Census counts because doing otherwise would have given each group of 8 people who live near the prison as much say over city affairs as every group of 10 residents elsewhere in the city.

	<p>In 2011, advocates like us asked the Massachusetts Joint Committee on Redistricting to reverse the “usual residence” policy like Gardner did and to count persons at their legal address prior to incarceration, rather than in prison for state districts. The Committee agreed with us that the way prisoners are counted does a disservice to the state and should be changed. However, the Committee and legal counsel thought that the Massachusetts state Constitution, which dictates that the federal census be the basis for determining the representative, senatorial, and councillor districts, would prevent Massachusetts from unilaterally changing this rule for these districts. Instead, the Committee recommended to the General Court that it adopt a resolution calling for such a change to send to Congress and to the Census Bureau. Such a resolution was passed on August 14, 2014 (attached).</p> <p>In fact, currently four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census’ population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts. But as we have seen, this is not an approach that is unilaterally applicable.</p> <p>For these reasons, we urge you to change Census Bureau policy to count incarcerated people as residents of their home address, rather than at the place of their incarceration. Thank you for this opportunity to comment on the Residence Rule and Residence Situations.</p>
c00153	<p>As a Pennsylvania State Legislator, I am concerned that the Census Bureau has decided to continue to consider incarcerated people as residents of the correctional facility in which they are imprisoned. This practice is in violation of Pennsylvania rules <u>Pennnsylvania Brochure for Incarcerated Persons</u> which state that a prison cannot be used as a voting address. Prisoners are instructed to use a pre-incarceration home address, their last registered address or even a new residence in which the prisoner may plan to live in once outside of the correctional facility.</p> <p>A correctional facility does not qualify as a residence because it is involuntary and temporary.</p> <p>If the Census Bureau continues to count people in the wrong place – the correctional facility – we will again have an inaccurate 2020 Census. In Pennsylvania, roughly 40% of the state’s prisoners are from urban Philadelphia while many of our state correctional institutions are in rural areas. The impact in our communities is that we are drawing congressional districts based on inaccurate census data. This is a problem in a state that is included in every article decrying congressional gerrymandering. With Pennsylvania congressional districts as pterodactyls and other strangely shaped districts, we need to a better job. To do that we need accurate census data.</p> <p>Thank you for your consideration of my comments as you move forward to finalize the 2020 Census Residency Rules.</p>
c00154	<p>I represent _____ in the State of Texas and submit this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census Day ignores the reality of incarceration: prisons are not a "usual residence."</p>

	<p>As an elected representative, I am keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation's population. Dallas County alone has over 16,500 incarcerated inmates in the Texas Prison system.</p> <p>The reality is that when my constituents are incarcerated, they are sent to prisons outside my district, but they and just as importantly, their families, still rely on me for representation. Over the course of their incarceration, the prison administration may move them between different prisons, located in many of my colleagues' districts, but they remain my constituents. Their home in my district remains their only stable, permanent, "usual" residence. Counting them as if they were residents of the facility where they happen to be held on Census day doesn't reflect the modern lived reality of our communities. Further when released they are sent back here for reintegration.</p> <p>I note that your proposed method of counting the incarcerated population is inconsistent with how you count other groups that eat and sleep in a location that is not their usual residence. For example, I note that your proposed rules will count boarding school students at their home address even if they spend most of their time at the school. The same approach should be taken when counting incarcerated people.</p> <p>I am also concerned about the impact of your residence rules on racial justice in my state. Our state disproportionately incarcerates African-American and Latino people so when you count them in the wrong location, and that data is used for redistricting, it further undermines the political power of minority communities.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. I believe that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00155	<p>I am writing to provide comments on the Proposal 2020 Census Residence Rule, as outlined in the Federal Register on June 30, 2016.</p> <ol style="list-style-type: none"> 1. I agree with the Census Bureau's decision to count prisoners at the facilities where they live and sleep most of the time. I am familiar with the arguments to the contrary. I'd like to make the following points: <ol style="list-style-type: none"> a. Residence is residence. Incarcerated persons clearly live at the facility in which they are incarcerated. b. It would be an unreasonable burden on the census process to collect putative "home addresses" for the incarcerated population. It would consume considerable time both on the part of the census enumerators who collect data from the facilities and on the facility administrators who would have to research and provide the information. c. It is not the bureau's responsibility to facilitate states' redistricting activities beyond the activities already proposed, including the redistricting data summary file itself, the identification of group quarters counts at the block level on that file, and the proposed option to geocode prisoner home addresses if provided by the states to the bureau. 2. I do not support the decision to count deployed military and government civilian population at their "home" addresses. Doing so

	<p>weakens the argument made by advocates of enumerating prisoners at “home.” The only difference is procedural, in that the bureau can use a single file provided by the DOD, rather than many files provided by the states, to geocode this population. The bureau needs to make a better case for distinguishing between these two large populations.</p> <p>3. I have no problem with the proposed changes for crews of maritime/merchant vessels, residential treatment centers for juveniles, or religious group quarters.</p> <p>4. The proposed rule does not provide sufficient clarity for people with multiple residences. The problem here, especially relevant for Michigan, is <i>snowbirds</i> – people whose permanent residence is in one place but who live part of the year in a clearly designated housing unit – one that appears on the MAF and will receive a census form – in another place. What is the plan for instruction to these respondents, to provide guidance on how they shall be counted once, only once, and in the right place? I suggest that better criteria for these situations be included in the Residence Rule.</p> <p>I hope that this response is helpful. I am happy to answer any questions or to discuss this further as appropriate.</p>
c00156	<p>Thank you for the opportunity to comment.</p> <p>We believe that the residency rules should also specifically address people living in memory care centers (aka Alzheimer’s care or Dementia care centers). Because of the nature of Alzheimer’s disease and Dementia we believe that the use of administrative records may be required to get accurate responses on the 2020 census questionnaire.</p> <p>At times the definition of a memory care facility may appear to overlap with nursing facilities, but they are most often distinct with different staffing and treatment requirements. Without calling out memory care centers here and in future federal registers related to group quarters, there may be the expectation that those who reside there answer their own census forms, and could be incorrectly counted at a residence from the individual’s past. Nursing facilities/skilled-nursing facilities are specifically called out in section 11d. We feel that memory care centers should be added to this section as well as to footnote number 8.</p>
c00157	<p>Papa Ola Lokahi (POL) thanks the U.S. Census Bureau for an opportunity to provide comments regarding the Residence Rule for consideration and decision-making toward the 2020 Census process.</p> <p>1. Federally Affiliated Overseas (a) Military and Civilian Employees of the U.S. Government Who Are Deployed Overseas</p> <p>Census Bureau proposed 2020 change: ... seeks to count deployed personnel in a way that is more consistent with the concept of usual residence, based on the short duration of most deployments and the fact that the personnel will return to their usual residence where they are stationed or assigned in the U.S. after their temporary deployment ends.</p>

POL comment: POL agrees with the proposed change and rationale. All branches of the U.S. military occupy lands, bases, residential units, and training facilities within Hawaii's coastal borders. It is essential that military personnel that are assigned to any military branch and based in Hawaii, whether personnel or family members are within base quarters or off-base in residential units, be counted in Hawaii.

With Hawaii's estimated population at 1,431,603 (source: U .S. Census Bureau, ACS 2015 1 year, QuickFacts), compared to the Active Duty Military (all branches) population at 40,034 in Hawaii as recent as May 31, 2016 (source: [http : www.governing.com/gov-data/military-civilian-active-duty-employee-workforce-numbers-by-state.html](http://www.governing.com/gov-data/military-civilian-active-duty-employee-workforce-numbers-by-state.html)), not counting Reserve Forces Military in Hawaii at an additional 9,313 (ibid); it is clear that the military population in Hawaii contributes to its population diversity, local fabric, and economic factors. Hawaii ranks #8 among all states in Total Active Duty (ibid) population, compared to CA #1, TX, NC, VA, GA FL, and #7 WA. Hawaii depends on federal funding based on its decennial census response rate to provide the infrastructure and maintenance for public infrastructure.

Hawaii Revised Statutes, §HRS 1 1-13(6) that states: *No member of the armed forces of the United States, the member's spouse or the member's dependent is a resident of this State solely by reason of being stationed in the State.*

The purpose of the decennial census is to count people in place, in time, legal or illegal, without proof of address, citizenship, occupation or loyalty. It is consistent to count all Military personnel who are based in Hawaii and plan to return to Hawaii after deployment.

Infrastructure and services that are provided through funding mechanisms based on census data need to be in place upon return to Hawaii.

(b) Military and Civilian Employees of the U.S. government Who Are Non-Citizens and Are Deployed or Stationed/Assigned Overseas
Census Bureau proposed change:

... military and civilian employees of the U.S. Government who are deployed or stationed/assigned overseas and are not U.S. Citizens (but must be legal U.S. residents to meet the requirements for federal employment) would be included in the Federally Affiliated Overseas County (which would follow the guidelines for deployed and stationed/assigned military personnel that are described in section C.1.a. of this document).

POL comment: POL supports the proposed change in language consistent with rationales used for the federally affiliated overseas population in the decennial census. That military and civilian employees of the U.S. Government should be included in the Federally Affiliated Overseas Count, by virtue of qualifying for and meeting the requirements of federal employment, having pledged by oath loyalty and other sustaining virtues to serve our country.

POL also applies Hawaii Revised Statutes, §HRS 11-13(5) states that: A person does not gain or lose a residence solely by reason of the person 's presence or absence while employed in the service of the United States or of this State, or while a student of an institution of learning, or while kept in an institution or asylum, or while confined in a prison.

We further recognize that citizenship is not a requirement to determine residency in Hawaii.

2. Crews of U.S. Flag Maritime/Merchant Vessels

No change to 2020 Census how the Census Bureau counts crews of U.S. flag maritime/merchant vessels that are docked in a U.S. port, sailing from one U.S. port to another U.S. port, sailing from one foreign port to another foreign port, or docked in foreign port.

POL comment: POL supports the current language (without change) to the paragraph above and agrees with the Census Bureau.

Census Bureau proposed change:

...seeks to count crews of U.S. flag maritime/merchant vessels in a way that is more consistent with the concept of usual residence, based on the fact that mariners sailing between U.S. and foreign ports typically have the same pattern of usual residence as mariners sailing between two U.S. ports (i.e., they retain an onshore residence in the United States where they live and sleep most of the time).

POL comment: POL supports the proposed change based on a more consistent concept of usual residence. POL cites Hawaii Revised Statutes, §HRS 11-13(1) that states that: *The residence of a person is that place in which the person's habitation is fixed, and to which, whenever the person is absent, the person has the intention to return.* In other words, a person has the intention to return (home) where the person maintains an address and sleeps.

3. Residential Treatment Centers for Juveniles

The Census Bureau proposes to count people in residential treatment centers for juveniles at the residence where they live and sleep most of the time.

Juvenile residential treatment centers allow for several unique situations, whereas, in the case where weekend passes are allowed and the juvenile returns home, or a place where the juvenile is preparing to return to, should be able to be counted at their "usual residence" with family members or foster home and not at the treatment center because that residence is not "usual" nor permanent.

POL comment: POL recommends the application of §HRS 11-13(5) states that: *A person does not gain or lose a residence solely by reason of the person's presence or absence while employed in the service of the United States or of this State, or while a student of an institution of learning, or while kept in an institution or asylum, or while confined in a prison*

4. Religious Group Quarters

The 2020 Census proposal is to count all people staying in religious group quarters at the facility on Census Day.

POL comments: Agrees with the change for 2020 Census to count people at religious group quarters at the facility. Most religious group quarters are longer term residence where the "usual residence" is an accurate description.

POL provides comments for the following "2020 Census Residence Rule and Residence Situations":

1. People Away from Their Usual Residence on Census Day - a. Agree
2. Visitors on Census Day - a. Agree
3. Foreign Citizens In The U.S. - a. Agree; b. Agree; c. Agree
4. People Living Outside The U.S. - a. Agree; b. Agree; c. Agree
5. People Who Live Or Stay In More Than One Place - a. Agree; b. Agree; c. Agree
6. People Moving Into Or Out Of A Residence Around Census Day - a. Agree; b. Agree; c. Agree
7. People Who Are Born Or Who Die Around Census Day - a. Agree; b. Agree; c. Agree; d. Agree
8. Relatives and Nonrelatives - a. Agree; b. Agree; c. Agree; d. Agree; e. Agree; f. Agree; g. Agree; h. Agree; i. Agree.
9. People in Residential School-Related Facilities - a. Agree, especially important to count tribal school children at the residence of their parents or guardians if they board away from home; b. Agree; c. Agree.
10. College Students (and Staff Living in College Housing) - a. Agree; b. Agree; c. Agree; . Agree.
11. People In Health Care Facilities - a. Agree; b. Agree; c. Agree; d. Agree; e. Agree.
12. People In Housing For Older Adults - a. Agree.
13. U.S. Military Personnel - a. Agree; b. Agree; c. Agree; d. Agree; e. Agree; f. Agree; g. Agree; h. Agree.
14. Merchant Marin Personnel on U.S. Flag Maritime/Merchant Vessels - a. Agree; b. Agree; c. Agree.
15. People In Correctional Facilities For Adults - a. Disagree as the rule is applied to prisoners only and cite Hawaii Revised Statutes §HRS 11-13(5) states that: *A person does not gain or lose a residence solely by reason of the person's presence or absence while employed in the service of the United States or of this State, or while a student of an institution of learning, or while kept in an institution or asylum, or while confined in a prison;* b. disagree as the rule applies to prisoners only and cite Hawaii Revised Statutes §HRS 11-13(5); c. disagree as the rule is applied to prisoners only and cite Hawaii Revised Statutes §HRS 11-13(5); d. disagree as the rule is applied to prisoners only and cite Hawaii Revised Statutes §HRS 11-13(5).

	<p>16. People in Group Homes and Residential Treatment Centers for Adults - a. Disagree as it relates to the patients only at the facility and cite Hawaii Revised Statutes §HRS 11-13(5); b. disagree as the rule is applied to people in residential treatment centers for adults (non-correctional) and cites Hawaii Revised Statutes §HRS 11-13(5).</p> <p>17. People In Juvenile Facilities - a. Disagree as it relates to the juveniles in correctional facilities and cite Hawaii Revised Statutes §HRS 11-13(5); b. disagree as it relates to juveniles in group homes and cite Hawaii Revised Statutes §HRS 11-13(5); c. Disagree as it relates to juveniles in treatment centers and cite Hawaii Revised Statutes §HRS 11-13(5).</p> <p>18. People In Transitory Locations - a. Agree.</p> <p>19. People In Workers' Residential Facilities - a. Agree.</p> <p>20. People In Religious-Related Residential Facilities - a. Agree.</p> <p>21. People In Shelters and People Experiencing Homelessness - a. Disagree as it relates to people (clients) in domestic violence shelters on Census Day and cite the temporary nature of such a stay and the confidentiality of that location, therefore, they should be allowed to use the last residence address prior to the shelter, where they slept; b. Agree; c. Agree; d. Agree; e. Agree; f. Agree.</p>
c00158	<p>As _____ the City of Goldsboro, North Carolina, I am writing in support of the proposed rule change regarding the census count of military personnel who are deployed. The City of Goldsboro is the home of Seymour Johnson Air Force Base with an active duty military population of over 4,500 personnel. As you can appreciate, airmen are deployed in various numbers and for various lengths of time.</p> <p>The proposed rule of interest is relative to counting of these deployed military personnel. Rule 13 (f) states:</p> <p style="padding-left: 40px;">U.S. Military personnel who are deployed outside the U.S. (while stationed in the U.S.) and are living on or off a military installation outside the U.S. on Census Day-- shall be counted at the U.S. residence where they live and sleep most of the time, using administrative data provided by the Department of Defense.</p> <p>The City of Goldsboro supports this proposed rule change. Undercounting military personnel due to deployment has resulted in the loss of substantial revenue from federal and state sources to the City of Goldsboro. I believe that this proposed rule will correct that error. Thank you for your consideration.</p>
c00159	<p>I am submitting this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census day ignores the transient and temporary nature of incarceration. If made final, this proposal will mean another decade of decisions based on a Census that counts incarcerated people in the wrong place.</p>

I am _____ the _____ School of Medicine in Chicago, Illinois. I have studied criminal justice issues for over twenty-five years. The question of prison gerrymander is critically important. The resolution of this issue will reflect directly on the state of democracy in the United States.

The Census Bureau defines "usual residence" as the place where a person "eats and sleeps most of the time", but fails to follow that rule when counting incarcerated people. The majority of people incarcerated in Rhode Island, for example, spend less than 100 days in the state's correctional facilities. If the same people were instead spending 100 days in their summer residence, the Bureau would count them at their regular home address. Even students in boarding schools get counted at their home address whether or not they eat and sleep there most of the time. The Census Bureau continues to carve out an unexplained exception for incarcerated people in order to count them in the wrong place.

The Bureau's failure to update its rules regarding incarcerated persons is particularly troubling given that the Bureau decided that other populations -- deployed overseas military, and juveniles staying in residential treatment centers -- should be counted in their home location even if they are sleeping elsewhere on Census Day. It made these changes even though there were far fewer public comments identifying these issues as causing the magnitude of problems that the public commentary on the prison miscount highlighted.

The Census Bureau should honor the overwhelming consensus urging a change in the Census count for incarcerated persons. When the Bureau asked for public comment on its residence rules last year, 96% of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address. This level of consensus among stakeholders, which is based on a thorough understanding of the realities of modern incarceration, deserves far more consideration than it was given. As you know, American demographics and living situations have changed drastically in the two centuries since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation.

The Census Bureau's practice of counting incarcerated people in the wrong place had relatively little impact on the overall accuracy of the Census while prison populations remained relatively low, but the growth in the prison population over the last few decades urgently requires the Census to update its methodology. The incarcerated population has more than quadrupled since the 1970's, and the manner in which this population is counted now has huge implications for the accuracy of the Census.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just a few thousand Census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, it artificially inflates the political power of the areas where the prisons are located and dilutes the political power of all other urban and rural areas without large prisons. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.

	<p>Acknowledging the need to correct its own data to avoid prison gerrymandering, the Bureau has proposed to help states with the population adjustment. But this ad hoc approach is neither efficient nor universally implementable. Massachusetts legislators, for example, have already expressed concerns about that state's ability to use alternative data in their 2015 comment to the Bureau (comment numbered cl61).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. My organization believes that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00160	Same content as comment c00005
c00161	<p>I would hope the upcoming census would include inmates in prison and jails. There are thousands (10's of 1000's) of inmates that could affect the services to the City, County, State in which they are going to be release.</p> <p>It would be easy to identify their original home or conviction zip code. Dept. of Corrections in every State has that information.</p>
c00162	<p>In June the US Census Bureau released proposed rules for the 2020 Census. Despite significant public input asking for change, the Bureau announced it would continue past practice of counting incarcerated persons as residents of prison locations rather than of their home communities.</p> <p>Counting inmates as residents of prisons and detention centers violates Pennsylvania law, which states: A penal institution (including a halfway house) cannot be a residence address for registering to vote.</p> <p>It also violates the one person, one vote requirement of the U.S. Constitutions Fourteenth Amendment as was made clear this year by U.S. District Judge Mark E. Walker in Calvin et al. v. Jefferson County and by U.S. District Judge Ronald Lagueux in Davidson vs. City of Cranston.</p> <p>Miscounting of urban prisoners in the rural districts where most PA prisons are located swells the population base of those districts. It enhances the political clout of politicians who have strong incentive to support prison expansion and to enact policies that ensure continued mass incarceration. The practice distorts our democratic process and undermines government of, by and for the people.</p>
c00163	Stop the political gerrymandering! Incarcerated citizens need to be counted in their home communities. The prison is not their home, it is where they are now. This practice takes away the power of their vote-even incarcerated people deserve representation in the United States of America!
c00164	Please stop the practice of counting incarcerated citizens of The United States in the places of incarceration rather than their permanent home address. This creates a bias in the election and representation Systems that is unequal, inaccurate and is flawed with contempt, prejudice and corruption.

	<p>Stop years of a flawed document process and Do The Right Thing and stop lying to The American People, You know....Us the ones who pay your salary.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00165	<p>This is about people being counted by the census at a temporary address, rather than at a permanent address.</p> <p>My understanding is that you want to identify people's permanent address for census purposes, not where they happen to be on April 1st.</p> <p>You don't census motorists based on being on the road.</p> <p>You don't census people based on what hotel room they are in for their vacations, or business trips.</p> <p>You ask on the forms for the person's permanent address.</p> <p>I urge you to make this consistent. Prisons are not permanent addresses; they are temporary.</p> <p>Census prisoners based on their permanent address, not their temporary location.</p>
c00166	<p>If they can't vote you should not count them as residents of where the prisons are</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00167	<p>All of these people are citizens of this country and should, therefore, have the inalienable right to vote from prison....Just as is allowed in Europe, where its more sane .</p>
c00168	<p>Prison gerrymandering robs communitites, especially the most vulnerable ones, of vital political energy. Please end the practice.</p>
c00169	<p>I strongly urge the Census Bureau to change its ruling so that incarcerated people will be allowed to vote in elections from their permanent place of residence rather then from the prison address where they are temporarily housed but otherwise have no civic connection as a US citizen. By the same token, if I were recovering from a serious injury housed in a medical facility considerably distant from my place of residence, I would want to participate in an important election, but using an absentee ballot from my permanent place of residence, not from another part of the country where I have no connection. Absentee balloting has long been an important privilege for US citizens. I was not aware that incarcerated people were denied that privilege.</p>

c00170	Counting prisoners as living in the census tracts where they're imprisoned injects a systemic error of about 1% into the Census's results. By my reading this violates at least the spirit of Article 1 section 2 and Amendment 14 section 2 of the US Constitution. Your attention to the matter is appreciated.
c00171	Addressing the U.S Census Bureau regarding the Census count of prisoners— I urge you to change the practice of counting prisoners as "residents" at the prison location, rather than at their local, permanent addresses. It is unfair to the original "home" communities of the prisoners to leave the prison population out of the home communities' census. It leads to an inflated census in largely rural areas and decreased census in more urban areas, thus affecting proportional representation. Thank you for your consideration of this important census issue.
c00172	This seems ridiculously simple - prison isn't "home", and for most prisoners isn't permanent. This is a case of 'use your common sense' - or corruption. How you decide will tell us which of those two options you are operating under. As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.
c00173	Regardless of where they are held, prisoners retain important connections to their original communities, and it furthers the interests of both to preserve these connections. It is here that they must live when discharged; it is here that they can best hope for rehabilitation; and it is this environment in which they have the best chance of finding the support and motivation essential to making the transition that faces them. Further, displacing them unfairly penalizes these communities of the political representation entitled by that relationship. Rebalancing that relationship is ultimately positive for both the original communities and those housing the incarcerated. All parties stand to benefit from this re-apportionment of prison representation.
c00174	Please change the way you count prisoners and count them in their home districts. It is important to safeguard realistic proportional representation in these communities.
c00175	A whole generation has been lost due to the failed war on drugs. Violent chronic offenders need to be in prison, but nonviolent ones will be released and should be integrated into society.
c00176	I'm writing today to express displeasure with the practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address. The practice of gerrymandering to occur in any place when possible is being used with this census tool. This should not be a tool that is allowed. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration ends. I urge you to reconsider the method of calculation used to record incarcerated people.

c00177	<p>I am writing today to express disapproval of the practice of counting incarcerated people where they are confined at the time of the census, rather than their permanent address. This statistical sleight-of-hand undermines democratic representation by inflating population counts in areas in which prisoners have no connection to the community in which they are. Instead, they should be counted at their permanent address, in the community they will return to after their period of incarceration ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their incarceration are they often moved to multiple facilities. Thus, the reality of where people are and will be for the period between census counts becomes distorted.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people.</p>
c00178	<p>"Prison gerrymandering," i.e., counting prisoners as residents of the communities where prisons are located, gives undue representation to those communities and under-representation to places where prisoners come from and to which they will return.</p> <p>It's like counting all New Yorkers as residents of Rhode Island, thereby handing over all of NY's congressional seats and Federal assistance to RI.</p> <p>It's also inadvertently racist. For example, since blacks and Latinos are jailed for crack cocaine exponentially more often than whites are for cocaine, minority communities are far more likely to lose representation than are white communities.</p> <p>Please adjust your methods before the next Census.</p>
c00179	<p>In the past 30 years many new prisons were built in rural areas of the country and those prisons have been identified, in past censuses as the "home" of the people imprisoned there.</p> <p>Representation in the House of Representatives is based on the census numbers, therefore, those rural areas are allotted more representation in the House of Representatives than they deserve and major cities where a large percentage of those men and women actually live are allotted less representation than they deserve.</p> <p>Another problem with designating a prison, instead of an actual home, as a person's residence is that it makes it impossible for researchers to understand the demographics of local communities. So subsequent policies, usually based on research, are inadequate.</p> <p>I urge you to work towards changing the Census for 2020 so that a home, not a prison, is designated as the residence of</p>

	women and men who are incarcerated.
c00180	<p>I feel strongly that incarcerated people should be counted in the decennial census at their permanent address.</p> <p>Counting prison inmates as local residents in the community where the prison they didn't choose is located deprives them of their preferred address, and privileges prison counties for census-related funds and other benefits.</p> <p>Since incarcerated people are disproportionately people of color and poor people, the prison districts effectively acquire representation which is taken away from already marginalized communities.</p> <p>Please do the right thing.</p>
c00181	<p>Current practices that count prisoners at incarceration facilities is inaccurate and damaging. State and local officials should not be able to use the Census Bureau's prison count to manipulate funding & voting districts.</p> <p>For example, because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities.</p> <p>This practice is also harmful to rural communities containing large prisons, because it seriously distorts redistricting at the local level of county commissions, city councils, and school boards.</p> <p>Please adjust your methods before the next Census in the interest of accurate representation.</p>
c00182	<p>This is about democracy, not funding. States are acting against this practice and are adopting, have adopted, or attempted to adopt legislation across the country--including New York, Maryland, Delaware and California.</p> <p>Counting incarcerated people at the location of the facility reduces the accuracy of the data about communities of color and undercuts the representation of these real communities. For example, because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. The communities they will return to face underrepresentation because of this misguided count.</p>

	<p>This practice is also harmful to rural communities that contain large prisons, because it seriously distorts redistricting at the local level of county commissions, city councils, and school boards.</p> <p>Please adjust your methods before the next Census.</p>
c00183	<p>As you consider the 2020 Census, I express my concern regarding how those incarcerated are accounted for. When they are considered "residence" of the prison where they presently reside, it gives an imbalance number of representatives for particular areas, and an overwhelming unfair calculation for areas that do not house prisoners. I believe these individuals should be counted in the area where they resided prior to going to prison. I request that you take this into serious consideration when you prepare the 2020 Census.</p>
c00184	<p>We have to begin to treat people that are serving time in a manner that encourages them to be a part of their communities when they are released. If a person feel like they can make a difference, even in some small way, it gives them a start in making changes in bigger ways.</p> <p>Counting prisoners at incarceration facilities pads the population counts of those communities with prisons. Many folks serving time have wives, husbands, children, parents or friends that have burning issues in their own communities. Unless someone is serving life without parole, the census should count them as living in the district they are from.. the same district they will be a part of when released. When state and local officials use the Census Bureau's prison count data attributing "residence" to the prison, they give extra representation to the communities that host the prisons and dilute the representation of everyone else.</p> <p>Counting incarcerated people at the location of the facility reduces the accuracy of the data about communities of color and undercuts the representation of these real communities. For example, because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. The communities they will return to face underrepresentation because of this misguided count.</p> <p>This practice is also harmful to rural communities that contain large prisons, because it seriously distorts redistricting at the local level of county commissions, city councils, and school boards.</p> <p>Please adjust your methods before the next Census.</p>
c00185	<p>I taught at _____ many years ago. I became aware of too many policies and Executive Orders which ran the gamut from silly to shockingly inhumane. Counting incarcerated people in the facility of detainment at the time of the Census creates an inaccurate data set for the ten years between census and therefore distorts democracy and representation.</p>

	<p>Most of the federal prisoners serve less than five years. In states across the country, most prisoners serve short sentences--averaging three years--and are moved around often during that time. In Rhode Island, the average is 100 days. In Georgia, the average prisoner is transferred four times. In New York, the median average for time in a facility is seven months.</p> <p>By counting incarcerated people in any of these temporary facilities instead of their permanent addresses, the Census is providing an inaccurate count that will have longstanding implications for the communities being misrepresented.</p> <p>I urge you to reconsider data collection methods and count incarcerated people at their permanent address which is often required by correctional facilities.</p>
c00186	<p>Do I understand correctly that for purposes of determining Congressional representation and similar purposes, incarcerated prisoners are counted as residing where the state has chosen to house them? And, therefore, the district of the prison gets "credit" for them as residents... even though almost certainly they can't vote?</p> <p>If so: stunning and atrocious. Count them where THEY consider their permanent residence to be, not where the state has housed them.</p>
c00187	<p>I was deeply disappointed to learn that the Census Bureau plans to count incarcerated people in the wrong place again in 2020. Despite public input to the contrary and that supported a change in how incarcerated people are counted by the Census, the Bureau will maintain its outdated and inaccurate practice--what a shame.</p> <p>This will mean that nearly 2 million people will be counted in the wrong place on Census day. This will mean another decade of prison gerrymandering.</p> <p>This miscount not only hurts incarcerated people, their families, and communities, it also hurts researchers, policy makers, and government officials trying their best to draw districts that ensure a sound democratic process.</p> <p>Additionally, in an era where States are doing their part to decrease prison populations and are rolling back draconian criminal justice policies like mandatory minimum sentencing, it seems even more nonsensical to incentivize incarceration by padding out the districts of legislators with large prisons.</p> <p>I hope you my concerns and those of many others to heart.</p> <p>Please count incarcerated people in their home district.</p>
c00188	<p>On June 30, 2016, the U.S. Census Bureau provided notification and requested comment on the proposed "2020 Census Residence Rule and Residence Situations."</p>

	<p>As _____ Surf City, North Carolina, I am writing in support of the proposed rule change regarding the census count of military personnel who are deployed. The Town of Surf City is very close to Camp Lejeune and New River Air Station that has a very large active military population of which there are various number of troops deployed for various length of time. Many military families and active duty personnel call the Town of Surf City home and should be counted as such in the Census.</p> <p>The residence situation for deployed military and how the criteria are applied is specified in Section 13 (f) as follows:</p> <p>"U.S. military personnel who are deployed outside the U.S. (while stationed in the U.S.) and are living on or off a military installation outside the U.S. on Census Day-Counted at the U.S. residence where they live and sleep most of the time, using administrative data provided by the Department of Defense."</p> <p>The Town of Surf City, its elected officials and I _____ support the "2020 Census Residence Rule and Residence Situations" rule change. Undercounting military personnel during deployments has and could in the future result in loss of federal and state revenues. The changes proposed in these rules can help correct this problem.</p>
c00189	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c00190	<p>I am shocked that the Census Bureau plans to continue the practice of counting incarcerated persons as "residents" of the prison location instead of their home communities, even after hearing from American's more on this issue than any other. Please listen to the citizens of this country, not politicians and private prison industries and do what is right.</p> <p>Prison gerrymandering is bad politics and a government agency should be above that. The results of this practice are a further silencing of marginalized communities, that quite frankly I didn't think we could possibly marginalize any further. The fact that American citizens who are stripped of their right to vote are also then counted towards the population of the very people that profit off of their incarceration is just appalling.</p> <p>Eliminate prison gerrymandering and stand up for the people you so dutifully count.</p>
c00191	<p>I do not agree with the Census Bureau's proposed residence rule for incarcerated people.</p>

	<p>Adding the number of inmates to a given locale's population count is willful distortion of the census numbers. This dishonest manipulation of numbers benefits usually rural locales over urban locales. It's wrong and should be abolished.</p>
c00192	<p>Thank you for the opportunity to submit written comments in response to the United States Census Bureau's Federal Register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016).</p> <p>Common Cause Hawaii, a chapter of the national Common Cause organization, is made up of citizens who value government that serves the common good, who encourage public participation in government, and who promote fair, honest, and transparent elections. We note that process-related issues and improvements have broad impacts, including impacts on our social and economic lives.</p> <p>The Supreme Court of the United States has recognized the right to vote as a "fundamental" right, and has recognized that, once that right "is granted to the electorate, lines may not be drawn which are inconsistent with the Equal Protection Clause of the Fourteenth Amendment." <i>Bush v. Gore</i>, 531 U.S. 98, 104-05, 121 S. Ct. 525, 530 (2000) (quoting <i>Harper v. Va. Bd. of Elections</i>, 383 U.S. 663, 665, 86 S. Ct. 1079, 1081 (1966)).</p> <p>The Census Bureau's practice of tabulating prisoners based on where they are temporarily incarcerated rather than on where they actually reside has significant negative consequences for voters' rights, for the democratic process, and for voter confidence—concerns frequently raised with the Bureau. Use of the Census Bureau's prison-related data by state and local government effectively exaggerates representation for communities that host prisons, and dilutes representation for other communities.</p> <p>Hawaii is among the majority of states that explicitly provide that a person does not lose state residency upon incarceration: "A person does not gain or lose a residence solely by reason of the person's presence or absence . . . while confined in a prison." (Hawaii Revised Statutes § 11-13(5)). We appreciate the good work of the United States Census Bureau, and we trust that the Bureau will correct the distortion identified, to more accurately represent our communities by affirming the legal residency of incarcerated persons at their home address.</p>
c00193	<p>In the 2020 census, please identify incarcerated men, women and juveniles as residents of the city which, prior to imprisonment, they called home. This is important for districting and research.</p>
c00194	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census</p>

	<p>Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable. If the incarcerated can not vote why count them at all. Depending on the State they may not be able to vote when they get out. Until they can vote again they should not be counted.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00195	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable.</p> <p>Incarcerated people care about the communities where they are from and where they will return. Even if they cannot vote, make their existence count for true representation!</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00196	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census</p>

	<p>Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable. Since the residence of the inmates is their home; the prison is an involuntary, usually temporary address; they should be counted at their home address.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00197	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>A person's temporary place (hotel room, prison cell, student dorm) is not a residence! prisoners should be counted in the census as being from their homes, not their cells.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00198	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they</p>

	<p>are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable.</p> <p>It is utterly impossible for an incarcerated individual to vote!!!</p> <p>Kindly reverse this decision immediately.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00199	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable.</p> <p>Either allow prisoners to cast an absentee ballot in their districts, or remove them from the in-residence count. Districts must not get the benefit of population that does not have a voice.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00200	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p>

	<p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable. It may be necessary to collect data from the prisons, but the data should include the last place of residence of the prisoners so that their numbers can be allocated properly to their home districts. The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00201	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable. It's hard to understand how this transparent misrepresentation gets started, but it surely need not persist!</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00202	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p>

	<p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable. Please stop counting incarcerated people as living at prison for elections. Thankyou</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00203	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau is contributing to unfairness in the redistricting process. This is unacceptable. Please end this practice.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00204	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering." By designating a prison cell as a residence, the Census Bureau ensures that</p>

	<p>unfairness will define the redistricting process. This is unacceptable. The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison. The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00205	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable. This is especially important in places like Baltimore!</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00206	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is not right. The Bureau now has the chance to correct this situation and thereby</p>

	<p>restore the sense of community that exists in the hearts and minds of the incarcerated. As someone who has studied the effects of policies surrounding incarceration, I can tell you that connection with one's home community is key to rehabilitation. On the other hand, depleting the communities of large numbers of minority residents skews the make-up of the communities to their detriment. This cannot be a good thing. Counting the incarcerated as being in the communities from which they come therefore corrects a number of imbalances affecting both the incarcerated as individuals and the communities from which they come.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00207	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable. It is critical that these individuals be counted where they live, outside of the prison, not where the prison is located.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00208	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p>

	<p>Until incarcerated citizens can VOTE, use their HOME ADDRESS! Period. By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00209	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable.</p> <p>It is another form of gerrymandering.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00210	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>This practice of treating cells as residences gives rural communities that have by virtue of state siting of prisons or development of a private prison industry greater power than other communities. Also, it creates</p>

	<p>incentives to increase the size of the private prison industry at a time when more and more people recognize the need to reduce prison populations..</p> <p>This is not acceptable.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00211	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>When will you stop screwing the public and America's voters? By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00212	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable. As a former federal inmate, I can assure you that none of the places where I was held were near my home or near anywhere I will ever</p>

	<p>call home.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00213	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable.</p> <p>This manipulation of the voting process is being overturned in states like North Carolina. It is important for a country representing the people to avoid misrepresenting the democratic process.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00214	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable. The Census needs to account for incarcerated individuals who are unable to vote.</p>

	<p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00215	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>I am appalled that that the Census Bureau is proposing to designate a prison cell as a residence, this is flatly NOT acceptable. By doing this the Census Bureau ensures that unfairness, discrimination and imbalance will define the redistricting process. I am also urging the President, my State's Senators and my Congressman to do whatever they can to oppose and overturn this proposal.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00216	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable.</p> <p>Please end this practice now. So long as incarcerated persons are not allowed to vote in elections, then these very same people shouldn't be</p>

	<p>counted for election purposes. That just makes no sense at all.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00217	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>With all due respect,</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable and Census Bureau must immediately eliminate this policy and stop its practice!</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00218	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau seems to be defeating virtually all the reasons a census is taken in that it fails to define the characteristics of an area, particularly when a prison sentence is short relative to the length of a census cycle. Not only does it distort the nature of an area with regard to the voter redistricting</p>

	<p>process but it would detach an inmate from his home district making any attempt to use the census to study imprisonment in an area impossible. I can think of no way in which it would make a census more meaningful.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00219	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>If the Census Bureau is a partisan organization that wants to increase rural representation in a sneaky and unethical fashion, then by all means, you should ignore this letter and continue your current practice. But please don't pretend that the current practice of designating a prison cell as a residence is anything other than unfair, illogical, and unacceptable.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00220	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable and yet another example of the "white privilege" that seems to be all around us.</p>

	<p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00221	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable. These people aren't legally entitled to vote. It should be illegal to pad the ballot box, if it isn't already. Another attempt by the Republicans to sway the election in their favor. Up to their usual shenanigans.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00222	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>

	<p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00223	<p>I am contacting you to express concern for the nationwide manipulation of elections in the United States that is made possible under the Census Bureau rules proposal related to "prison-based gerrymandering."</p> <p>The new proposal to continue this longstanding practice allows officials to count incarcerated persons as "residents" of the districts where they are imprisoned, though they are not allowed to actually vote while in prison.</p> <p>By designating a prison cell as a residence, the Census Bureau ensures that unfairness will define the redistricting process. This is unacceptable.</p> <p>This is not the only petition I've signed for this cause. We already have to deal with redistricting and unnecessary voter fraud laws. The international community has more diverse and functional elections than the United States. It will take some time to fix all of these problems, but this is a good place to start. Please count incarcerated people at their permanent addresses.</p> <p>The Census Bureau needs to update their rules to empower, not hurt minority communities unfairly over-represented in U.S. prisons.</p>
c00224	<p>Counting incarcerated people as "residents" of the correctional facility they are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>Prisoners should be counted in their home communities To which they will return.</p>
c00225	<p>I know this is being sponsored by a group active in many ways political. Still, there is something wrong with moving prisoners around for political body counts. If a person is serving a life term, he/she deservedly should be counted as being in that district. If, however, a person is serving a seven year term and has only a year left, he/she will be counted as living in that district for a protracted period of time, even though released to a home in another district.</p>

	<p>It seems to me that the Census Bureau has the authority to right some wrongs. I urge that it do so. Bureau of the United States of America—</p> <p>Counting incarcerated people as “residents” of the correctional facility the are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00226	<p>Counting incarcerated people as “residents” of the correctional facility the are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p> <p>They way in which people are counted also then not only takes away from the communities that formerly incarcerated people will be actually returning to and living in, but enhances the communities where the prisons are, which already get an awful lot of perks for the prison staff and surrounding areas - where prison staff spend their money.</p> <p>This way of counting disenfranchises people who are at risk even further and distorts democracy by not having an accurate count. Gerrymandering must stop.</p>
c00227	<p>Counting incarcerated people as “residents” of the correctional facility the are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p> <p>There are many incarcerated that are not guilty of the offense of which they are incarcerated. They are citizens who should have a voice in the democratic process,</p>

c00228	<p>Counting incarcerated people as “residents” of the correctional facility the are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00229	<p>Counting incarcerated people as “residents” of the correctional facility that are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities, unless serving a life sentence, to ensure democratic, proportional representation.</p>
c00230	<p>Counting incarcerated people as “residents” of the correctional facility the are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p> <p>I'm tired of all the tricks being used to ensure that African Americans are under represented in the electoral process. Let's end ALL of these roadblocks and distortions once and for all!</p>
c00231	<p>Counting incarcerated people as “residents” of the correctional facility the are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation. people should be counted in their homes not the jails.</p>
c00232	<p>I am writing to try to end prison gerrymandering. Counting incarcerated people as “residents” of the correctional facility they are housed in at the time of the Census makes the Census less accurate for everyone.</p>

	<p>I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00233	<p>Counting incarcerated people as “residents” of the correctional facility the are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00234	<p>Counting incarcerated people as “residents” of the correctional facility the are housed in at the time of the Census makes the Census less accurate for everyone. This includes:</p> <ul style="list-style-type: none"> - rural and urban communities; - incarcerated people and their families; - governmental authorities trying to draw accurate redistricting plans; and - researchers trying to understand the demographics of local communities. <p>I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00235	<p>Counting incarcerated people as “residents” of the correctional facility the are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation. Our country is so corrupt and people suffer. Gerrymandering is awful and whoever is doing this needs to be penalized.</p>
c00236	<p>Counting incarcerated people as “residents” of the correctional facility the are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a voter who has had the right to vote taken from me, I understand entirely how other people feel when it happens to them. If prisoners have the right to vote, they should not have their votes diluted or removed by gerrymandering Republicans.</p>

	<p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00237	<p>Counting incarcerated people as “residents” of the correctional facility they are housed in at the time of the Census makes the Census less accurate for everyone: When redistricting, the prisoners are counted as living there and yet they can not vote. The Census should count the prisoners at their home address. At the same time, when redistricting is done, the home addresses should be used.</p> <p>Please reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00238	<p>PLEASE DO NOT WASTE MY TAX! FEDERAL, STATE AND LOCAL MONIES ARE ALLOCATED PROPERLY ONLY WITH THE USE OF AN ACCURATE CENSUS! OTHERWISE MONIES ARE WASTED AND PROGRAMS FAIL! IT ALSO DENIES "ONE MAN, ONE VOTE!" REGISTER PRISONERS AT THEIR PERMANENT ADDRESS!!!</p> <p>Counting incarcerated people as “residents” of the correctional facility they are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00239	<p>Counting incarcerated people as “residents” of the correctional facility they are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation. This needs to be corrected immediately, with an election only weeks away.</p>
c00240	<p>Counting incarcerated people as “residents” of the correctional facility they are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>

	<p>My husband and I work through our church with incarcerated people. From our personal experience, we have seen prisoners moved without notice within a short time for various reasons (as the stressed system tries to deal with overcrowding). It makes much more sense to count each person once in his/her home community, especially as that is where the person will need services once released.</p>
c00241	<p>Counting incarcerated people as “residents” of the correctional facility the are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p> <p>Gerrymandering of all kinds is causing our electoral system to be unconstitutional and besides, many states--especially Florida--are preventing hundreds of thousands if not more than a million ex-felons from their right--not privilege--of voting.</p>
c00242	<p>The provision that authorizes and directs the Census Bureau to count prisoners as "residents" of the correctional facility the are housed in at the time of the Census is deceptive and unjust.</p> <p>It is deceptive, unethical, unjust and criminal to count a population that has no constitutional right to vote, a population that is being forcibly housed in an facility that they did not self-select -- i.e., prisoners -- as "residents" of a community they are not free to roam, participate in, become gainfully employed in -- a community where they are not free to access all the resources that community has to offer precisely because they are prisoners. Prisoners are an unfree population -- an unfree community onto itself. Not "residents" of the area in which they are forcibly housed.</p> <p>Counting prisoners as "residents" makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00243	<p>We must take steps now to address the needs of convicted individuals who return to their communities. Concrete methods, such as counting these people as residents of the homes they come back to, is a step towards justice.</p>

	<p>Counting incarcerated people as “residents” of the correctional facility they are housed in at the time of the Census makes the Census less accurate for everyone: rural and urban communities; incarcerated people and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>As a concerned citizen I urge you to reconsider your counting methods around prisoners and instead count them in their home communities to ensure democratic, proportional representation.</p>
c00244	<p>Counting prisoners at incarceration facilities will distort democracy by padding the population counts of communities with prisons. When state and local officials use the Census Bureau’s prison count data attributing “residence” to the prison, they give extra representation to the communities that host the prisons and dilute the representation of everyone else.</p> <p>Counting incarcerated people at the location of the facility reduces the accuracy of the data about communities of color and undercuts the representation of these real communities. For example, because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities, especially.</p> <p>Please adjust your methods before the next Census.</p>
c00245	<p>Counting prisoners at incarceration facilities will distort democracy by padding the population counts of communities with prisons. When state and local officials use the Census Bureau’s prison count data attributing “residence” to the prison, they give extra representation to the communities that host the prisons and dilute the representation of everyone else.</p> <p>Counting incarcerated people at the location of the facility reduces the accuracy of the data about communities of color and undercuts the representation of these real communities. For example, because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. The communities they will return to face underrepresentation because of this misguided count.</p> <p>This is harmful to rural communities that contain large prisons, because it seriously distorts redistricting at the local level of county commissions, city councils, and school boards.</p> <p>Please adjust your methods before the next Census.</p>

	<p>Thank you for your consideration on this important matter.</p>
c00246	<p>Counting prisoners at incarceration facilities will distort democracy by padding the population counts of communities with prisons. When state and local officials use the Census Bureau's prison count data attributing "residence" to the prison, they give extra representation to the communities that host the "non-participating" prisons and dilute the representation of everyone else.</p> <p>Counting incarcerated people at the location of the facility reduces the accuracy of the data about communities of color and undercuts the representation of these real communities. For example, because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. The communities they will return to face under-representation because of this misguided count.</p> <p>This is harmful to rural communities that contain large prisons, because it seriously distorts redistricting at the local level of county commissions, city councils, and school boards.</p> <p>Please adjust your methods before the next Census.</p>
c00247	<p>Counting prisoners at incarceration facilities will distort democracy by padding the population counts of communities with prisons. When state and local officials use the Census Bureau's prison count data attributing "residence" to the prison, they give extra representation to the communities that host the prisons and dilute the representation of everyone else.</p> <p>Counting incarcerated people at the location of the facility reduces the accuracy of the data about communities of color and undercuts the representation of these real communities. For example, because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. c00262	<p>I'm writing today to express displeasure with the practice of counting incarcerated people where</p>

	<p>they confined at the time of the census, rather than their permanent address.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they counted are in. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people.</p>
c00263	<p>I'm writing today to express displeasure with the practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they are counted in. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts.</p> <p>If the Census Bureau proposes to count incarcerated people in the wrong place once again in the 2020 Census, it will continue to distort democracy.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people.</p>
c00264	<p>I'm writing about the flawed practice of counting incarcerated people where they are confined at the time of the census, rather than their permanent address.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they are counted are in. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their</p>

	<p>incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts. And as a result, program funding based on census counts is distorted.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people.</p>
c00265	<p>I'm writing today to express displeasure with the practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address. This is may not be illegal but it is totally unethical.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they counted are in. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people.</p> <p>This borders on being illegal.</p>
c00266	<p>I am a retired professor of sociology and know quite a bit about the U.S. Census and redistricting as well as incarceration. I am writing today to express displeasure with the practice of counting incarcerated people where confined at the time of the census rather than their permanent addresses.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community in which they are they are counted. They should be counted at their permanent addresses in the communities they will return to upon release. If this location is unclear, then their last permanent address should be used.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts.</p> <p>I understand that Census counts are also used for distribution of federal funds. However, funds</p>

	<p>for jails and prisons usually are separate budgets based on prison populations. The founding fathers instituted census counts primarily for the proper redistricting and fair representation. Ideally, the census attains truly equal representation. In these times of efforts to suppress votes and radically gerrymander districts, special care should be taken with issues of representation.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people.</p>
c00267	<p>I'm writing today to express displeasure with the practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address. You are fabricating the truth.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they counted are in. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people.</p>
c00268	<p>Census numbers are the bases for an unlimited number of vital research issues that end up affecting individual lives in countless ways. Census numbers must be accurate if our democracy is to function properly and at its best as a result of all this research.</p> <p>The method of counting incarcerated people by their location of incarcerated at the time of census rather than their permanent residence as is done for students, military, non-citizens, etc. distorts research results and thus incorrect decision making.</p> <p>This method or practice is unconstitutional and must stop be adjusted before the next census count so that the incarcerated are counted in the same manner as any other population group census count is done.</p>
c00269	<p>I'm writing today to express displeasure with the practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they counted are in. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration</p>

	<p>ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts.</p> <p>The United States incarcerates a higher percentage of citizens than any other nation, and particularly those in poor and Black neighborhoods, and counting them as prison residents distorts that representation of entire communities.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people.</p>
c00270	<p>I'm writing today to express displeasure with the practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they counted are in. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people. It's the only way to make representation fair.</p>
c00271	<p>This is an important issue that should not be ignored! I'm writing today to express displeasure with the practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they counted are in. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their incarceration are often moved to multiple facilities. These facts create a real distortion of where</p>

	<p>people are and will be for the period between census counts.</p> <p>I strongly urge you to reconsider the method of calculation used to record incarcerated people. Everyone is part of the process and should be counted as such even if they are temporarily incarcerated.</p>
c00272	<p>I'm writing today to express displeasure with the practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they counted are in. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people.</p> <p>It is the smart choice and the right thing to do. We already have to deal with redistricting and unnecessary voter fraud laws. It is depressing to know that the international community has more diverse and functional elections than the United States. It will take some time to fix all of these problems, but this is a good place to start. Please count incarcerated people at their permanent addresses.</p>
c00273	<p>I'm writing today to express displeasure with the practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they counted are in. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts.</p>

	<p>The inflation of the count where the prisons are located also gives disproportionate power to those who support private for-profit prisons, which is problematic in itself, as the incentive will be to increase prison population regardless of whether that benefits any other part of our society.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people.</p>
c00274	<p>The practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address, is clearly unfair.</p> <p>It is interesting that no similar position is taken with regard to college students (less likely to be poor, and less likely to be people of color).</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they counted are in. These inflated counts result in overrepresentation in Congress and state houses of districts that house prisons, and underrepresentation of poor and minority districts.</p> <p>Why should the Census bureau become a party to the toxic effects of mass incarceration on our communities and our democracy? Prisoners should be counted at their permanent address in the community they will return to after their period of incarceration ends.</p> <p>Such a count would also be more accurate. Most prisoners serve terms shorter than the duration of the census, and during their incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people.</p>
c00275	<p>I am appalled that "gerrymandering" exists to disenfranchise inmates from their community and voting rights.</p> <p>I'm writing today to express displeasure with the practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they counted are in. Instead, they should be counted at their permanent address in the community they will return to after their period of incarceration ends.</p> <p>Most prisoners serve terms shorter than the duration of the census, and during their</p>

	<p>incarceration are often moved to multiple facilities. These facts create a real distortion of where people are and will be for the period between census counts.</p> <p>I urge you to reconsider the method of calculation used to record incarcerated people. The current method has a devastating effect in terms of resources not allocated to the permanent home districts of the former inmates.</p>
c00276	<p>I'm writing today to express displeasure with the practice of counting incarcerated people where they confined at the time of the census, rather than their permanent address.</p> <p>This practice distorts our democracy by inflating population counts in areas where prisoners have no connection to the community they counted are in. Are college students counted as permanent residents of that college? No? Then why is it any different?</p>
c00298	<p>I am concerned about the way that incarcerated citizens are counted in the decadal Census. These citizens are often moved frequently during their incarceration and therefore should be counted at their "home" address--the address they will return to when they are released.</p> <p>Counting incarcerated people in the facility of detainment at the time of the Census creates an inaccurate data set for the ten years between census and therefore distorts democracy and</p>

	<p>representation.</p> <p>According to the United States Sentencing Commission, more than 50% of federal prisoners serve less than five years. In states across the country, most prisoners serve short sentences--averaging three years--and are moved around often during that time. In Rhode Island, the average is 100 days. In Georgia, the average prisoner is transferred four times. In New York, the median average for time in a facility is seven months.</p> <p>By counting incarcerated people in any of these temporary facilities instead of their permanent addresses, the Census is providing an inaccurate count that will have longstanding implications for the communities being misrepresented.</p> <p>I urge you to reconsider data collection methods and count incarcerated people at their permanent address which is often required by correctional facilities.</p>
c00299	<p>Counting people in prison as locals during the Census count creates an inaccurate and misleading data set for the following ten years. This practice completely distorts democracy and representation.</p> <p>Across the country, most prisoners serve short sentences--averaging three years--and are moved around often during that time. According to the US Sentencing Commission, over 50% of federal prisoners serve less than five years. In Rhode Island, the average is 100 days. In Georgia, the average prisoner is transferred four times. In New York, the median (average?) for time in a facility is seven months.</p> <p>By counting temporarily incarcerated people as resident in prison instead of at their permanent addresses, the Census, the basic statistic describing any country, provides an inaccurate count that has longstanding implications for the communities being misrepresented - positive for those purporting to be bigger than they are and negative for those needing all the population they actually have to benefit from population-based allocation formulas both federal and state.</p> <p>Please! Reconsider data collection methods. Count incarcerated people at their permanent address, typically known and required by correctional facilities.</p>
c00300	<p>Counting incarcerated people as "residents" during the Census creates inaccurate data for the ten years between each census.</p> <p>This practice distorts democracy and representation.</p>

	<p>According to the United States Sentencing Commission, over 50% of federal prisoners serve LESS than five years. Across the country, most prisoners serve short sentences--averaging three years--and are moved around often during that time.</p> <p>For examples, an average sentence is 100 days in Rhode Island. In Georgia, the average prisoner is transferred four times. In New York, the median average for time in a facility is only seven months.</p> <p>By counting incarcerated people in these temporary facilities instead of their permanent addresses, the Census provides an inaccurate count that will have longstanding implications for the communities misrepresented.</p> <p>We strongly urge you to please reconsider data collection methods and count incarcerated people at their permanent address which is often required by correctional facilities.</p>
c00301	<p>Please consider counting incarcerated people at their permanent home address, rather than in the facility of detainment at the time of the Census. The current system creates an inaccurate data set for the ten years between census and therefore distorts democracy and representation.</p> <p>According to the United States Sentencing Commission, more than 50% of federal prisoners serve less than five years. In states across the country, most prisoners serve short sentences--averaging three years--and are moved around often during that time. In Rhode Island, the average is 100 days. c00308	<p>The accuracy of the Census is of paramount importance in so many regards in American policies and particularly significant in determining the number of people in a particular voting district. Counting prisoners at the location of the prison instead of their home address is definitely skewing the accuracy of the number of people in voting districts. The census data is used by business and government for 10 years which further distorts it's value and accuracy since many sentences are for much shorter times. Please reconsider counting the prison population as residents of the area in which the prison facility is located, and use the prisoner's actual address. To do otherwise skews the data and via gerrymandering, skews (skewers) democracy. I only learn of these things when I am 72!!! How long has this been policy?</p> <p>Counting incarcerated people in the facility of detainment at the time of the Census creates an inaccurate data set for the ten years between census and therefore distorts democracy and representation.</p> <p>According to the United States Sentencing Commission, more than 50% of federal prisoners serve less than five years. In Georgia, the average prisoner is transferred four times. In New York, the median average for time in a facility is seven months.</p> <p>By counting incarcerated people in any of these temporary facilities instead of their permanent addresses, the Census is providing an inaccurate count that will have longstanding implications for the communities being misrepresented.</p> <p>I urge you to reconsider data collection methods and count incarcerated people at their permanent address which is often required by correctional facilities.</p> <p>1) Once an individual serves their sentence and is released, they deserve to once again receive the privilege to vote.</p> <p>2) An incarcerated individual MUST be counted on the census, at their PERMANENT residence on record prior to their incarceration, for the census to be TRUE and ACCURATE.</p> <p>Thank you for your attention to this grossly inaccurate policy.</p>
c00313	<p>Counting incarcerated people in the facility of detainment at the time of the Census creates an inaccurate data set for the ten years between census and therefore distorts democracy and representation.</p> <p>According to the United States Sentencing Commission, more than 50% of federal prisoners serve less than five years. In states across the country, most prisoners serve short sentences--averaging three years--and are moved around often during that time. In Rhode Island, the average is 100 days. In Georgia, the average prisoner is transferred four times. In New York, the median average for time in a facility is seven months.</p> <p>By counting incarcerated people in any of these temporary facilities instead of their permanent addresses, the Census is providing an inaccurate count that will have longstanding implications for the communities being misrepresented.</p> <p>I urge you to reconsider data collection methods and count incarcerated people at their permanent address which is often required by correctional facilities.</p>
c00314	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location</p>

	<p>rather than the area the are at the time of the Census. People should be counted as to their domicile and not where they are temporarily residing such as a traveler who spends one night at a hotel when the census is taking place. Same goes to people in jail.</p> <p>Requiring incarcerated people to be counted in their temporary detainment center skew representational data used to determine Congressional districts and shifts populations from the communities they actually interact with and will return to.</p> <p>Please change your methodology.</p>
c00315	<p>Because this makes sense I agree with the following:</p> <p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area the are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary detainment center skew representational data used to determine Congressional districts and shifts populations from the communities they actually interact with and will return to.</p> <p>Please change your methodology.</p>
c00316	<p>I am a _____. I often work in other countries - once I worked in Bolivia for 5 years, spending upwards of 6-9 months per year in that country. But hen the census ws taken, I was counted as a resident of _____NJ, where my home is located. Why would you count incarcerated people differently - they have hope of going home and should be counted along with their other faily members in the home in which they resided before having to go to prison. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area the are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary detainment center skew representational data used to determine Congressional districts and shifts populations from the communities they actually interact with and will return to. It contributes to gerrymandering.</p> <p>Please change your methodology.</p>
c00317	<p>I'm writing to voice an opinion about how the Census Bureau counts incarcerated people.</p>

	<p>Please count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary detainment center skew representational data used to determine Congressional districts and shifts populations from the communities they actually interact with and will return to.</p> <p>Please change your methodology.</p>
c00318	<p>When an incarcerated person is denied the right to vote, it should only mean that the person is denied the right to choose his/her representative. It SHOULD NOT mean that the person's voting district should be denied resources usually accorded on the basis of population, as that hurts everyone in the given community. Please reconsider the methodology.</p>
c00319	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary detainment center skew representational data used to determine Congressional districts and shifts populations from the communities they actually interact with and will return to.</p> <p>To deviate from the well known practice of counting adult prisoners differently than you do juvenile prisoners is inconsistent. Just as juveniles come from a "home place" so do adult prisoners. Why is this political?</p> <p>Please change your methodology.</p>
c00320	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary detainment center skew representational data used to determine Congressional districts and shifts populations from the communities they actually interact with and will return to.</p>

	<p>A beloved and responsible member of our cooperative household, a recovering alcoholic and addict, has spent many years of incarceration because of his addiction. That has meant that, in Wisconsin, he has not been recorded as a resident of Madison, although our city has been his only real residence for many years. This was not fair to Madison, and it is even less fair when large numbers of an inner city, such as that of Milwaukee, are not counted as the residents they really are.</p> <p>Please change your methodology.</p>
c00321	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>This is truly unfair and unruly prejudicial to our minority communities across America.</p> <p>Requiring incarcerated people to be counted in their temporary detainment center skew representational data used to determine Congressional districts and shifts populations from the communities they actually interact with and will return to.</p> <p>Please change your methodology.</p>
c00322	<p>Regarding how the Census Bureau counts incarcerated people.</p> <p>Inmates who are not allowed to vote must not be counted in such a way that they become the nucleus of gerrymandered voting districts.</p> <p>I urge that you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary detainment center skew representational data used to determine Congressional districts and shifts populations from the communities they actually interact with and will return to.</p> <p>It is urgent that you change your methodology.</p>
c00323	<p>It's important to have a correct counting of the population so our elected officials can represent the population of their district. You must change the way the prison population is recorded so</p>

	<p>that their home district, not the prison district, is in the count to make sure that the census is not distorted.</p> <p>It's time to put an end to the gerrymandering.</p> <p>Thank you for considering my comment.</p>
c00324	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary place of confinement skew representational data used to determine electoral districts and shifts populations from the communities they actually interact with and will return to.</p> <p>Please change your methodology.</p>
c00325	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. It's about political power, folks, not funding! I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers, and others who are counted at their home location rather than the area where they are at the time of the Census.</p> <p>Your current practice, by manipulating representational data used to determine electoral districts, shifts populations away from the communities where they actually interact and to which they will return. You're giving illegitimate power to people who use it for political purposes.</p> <p>Please change your methodology!</p>
c00326	<p>If a prisoner has completed its term and now living as normal person, he/she should be given equal rights to live a normal person including votes. When God forgives our faults why we not?</p> <p>Please change your methodology.</p>
c00327	<p>This is my comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area the are at the time of the Census.</p>

	<p>Requiring incarcerated people to be counted in their temporary place of confinement skews representational data used to determine electoral districts and shifts populations from the communities they actually interact with and will return to when they are released.</p> <p>Please change your methodology.</p>
c00328	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary place of confinement skew representational data used to determine electoral districts and shifts populations from the communities they actually interact with and will return to.</p> <p>Counting inmates as residents where they are incarcerated but not allowed to vote stinks of the notorious 3/5ths compromise that allowed Southern states to count slaves as 3/5ths of a person for federal representation and tax purposes. It is clearly based on the same kind of corrupt reasoning that sees the incarcerated as units to use politically rather than as human beings with natural civil rights.</p> <p>Please change your methodology.</p>
c00329	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary place of confinement skew representational data used to determine electoral districts and shifts populations from the communities they actually interact with and will return to. Prisoners are often moved around and most prisoners serve short sentences, so they need to be counted at their permanent residence.</p> <p>Please change your methodology.</p>
c00330	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p>

	<p>Prison gerrymandering robs home districts, typically urban centers, and neighborhoods with a large population of people of color, of vital representation and gives areas where prisons are housed, typically rural and white, disproportionate representation. See the case of Anamosa, Iowa, New York state, and Wyoming for some of the most egregious examples.</p> <p>Please change your methodology.</p>
c00331	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary place of confinement skew representational data used to determine electoral districts and shifts populations from the communities they actually interact with and will return to.</p> <p>Please take the time and effort to enact a fair and accurate methodology.</p>
c00332	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary place of confinement skew representational data used to determine electoral districts and shifts populations from the communities they actually interact with and will return to.</p> <p>Please change your methodology. This is embarrassing to our country.</p>
c00333	<p>This is especially important because: 1) Republicans have used it to pad their voting districts on this ruse, and 2) the reasons given below: I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary place of confinement skew</p>

	<p>representational data used to determine electoral districts and shifts populations from the communities they actually interact with and will return to.</p> <p>Please change your methodology.</p>
c00334	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary place of confinement skew representational data used to determine electoral districts and shifts populations from the communities they actually interact with and will return to.</p> <p>It has been well-documented that people of color are far more likely to be jailed than white people who have committed the exact same crime - and also that they are far more likely to be wrongly jailed for no crime at all. For this reason, your current methods regarding jailed citizens can and should be regarded as racial gerrymandering, and gerrymandering in any and all forms must be heartily rejected by any democracy of good conscience.</p> <p>Please change your methodology.</p>
c00335	<p>I'm submitting a comment regarding how the Census Bureau counts incarcerated people. I urge you count prisoners like other populations--military deployed overseas, juveniles in treatment centers, temporary residents, vacationers and others who are counted at their home location rather than the area they are at the time of the Census.</p> <p>Requiring incarcerated people to be counted in their temporary place of confinement skew representational data used to determine electoral districts and shifts populations from the communities they actually interact with and will return to.</p> <p>Please change your methodology. There is a large amount of data used for fact based upon the census. If the census does not accurately reflect the actual make up of our communities there can not be sound decision making made within our country leadership.</p> <p>This leads to areas that are poverty stricken, areas that are over enriched, and civil unrest that we see in our streets. It is time to balance the scales with a accurate census count.</p>
c00336	<p>Incarcerated people come from homes, too! Thank you.</p>

	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census.</p>
c00337	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address. It is unethical and unconscionable, and frankly dishonest.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census.</p>
c00338	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>The Census Bureau must count all people in the U.S.--including non-citizens, children, temporary residents, deployed military, students and non-voters. Most everyone is counted at</p>

	<p>their permanent residence--incarcerated people are an exception. The Census Bureau cannot ignore prisoners because they must count everyone, and formerly incarcerated people will return home to their community upon release. Therefore, they should be counted there.</p> <p>Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted.</p> <p>This is about democracy, not funding. States are funded through block grants--typically not distributed by population. When prisons are built in an area, they are built with a specific population maximum. Infrastructure planning for such facilities is done based on the maximum size of the prison. School funding is allocated based on the number of students--not prisoners. Opponents of reversing the current counting mechanism often use this argument and it's a false flag.</p> <p>States are acting against this practice and are adopting, have adopted, or attempted to adopt legislation across the country--including Massachusetts and North Carolina. Florida's plan for prison gerrymandering was ruled unconstitutional.</p> <p>Prior to the mass incarceration phenomenon, this was not a question of concern for the Census Bureau because it was rare and affected a small number of people. They began inquiring about incarceration in 1990--when the prison population exploded from 137 per 100,000 during the great depression to 470 per 100,000 in 2001 because of the war on drugs and increased tough on crime policing.</p> <p>Please revise your rules before the next Census.</p>
c00339	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p>

	<p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census. Every citizen has the right to vote.</p>
c00340	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census.</p> <p>I know that people of color are disproportionately arrested and charged with crimes, often for minor drug offenses, and prison gerrymandering causes unfair voter districts leading to lousy representation.</p> <p>Recent court rulings have cited unfair voting laws that specifically target the poor and people of color, who are more likely to vote Democratic, in order to get more Republicans elected. This is grossly unfair and is unconstitutional. In our country, we're supposed to have a one person, one vote system, but the reality is, thanks to gerrymandering of all kinds, the GOP has an unfair advantage. Even when more Democrats vote, more GOP get elected. That means the Democratic vote is being "diluted" in effect, and the GOP vote is being "expanded" in effect. This is obviously unfair and unconstitutional. We need to put our country and the spirit of our law system ahead of party loyalties, and do what is right. Thank you.</p>
c00341	<p>New York State should be used as an example. Upstate NY, where most of our prisons are located were counting prisoners in their census count instead of having the permanent residences of New York City counted as their addresses. The NYS legislators corrected this injustice and now prisoners are counted in the census at their permanent homes. This is the fair and just way to do it.</p>

	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census.</p>
c00342	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in. This is not only logical, it is a simple way to address this problem.</p> <p>I am quite sure it was not your intention to create this gerrymandering and the resulting voting imbalances and dilutions. Please revise your rules before the next Census.</p>
c00343	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Seriously?! This is so stupid to consider the prison their place of residence! We need to do right and consider their real residence; in the least the last place of residence. The potential for</p>

	<p>gerrymandering is so blatant and should be criminal with those perpetrating this themselves incarcerated! To borrow the crazed TRUMP MOB chant: "Lock them up!"</p> <p>Please revise your rules before the next Census.</p>
c00344	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>Not only does this result in districts being misrepresented, but I believe Federal agencies use district sizes gleaned from your data to proportionally distribute funds. This leaves places that often need the most help shorted inequitably. That perpetuates problems of poverty and harms the country as a whole.</p> <p>Please revise your rules before the next Census.</p>
c00345	<p>This is just one more action to limit real representation. It lets representatives "pick their voters" in stead of " voters picking their representatives."</p> <p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census.</p>
c00346	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p>

	<p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>This amounts to abridgment of First Amendment Rights, and the guarantee that each person has a right to vote. Please revise your rules before the next Census.</p>
c00347	<p>As a concerned citizen and a resident of a county in Texas with two prisons, one federal and one state, and a bi-state county jail that serves an Arkansas and a Texas county, I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census.</p>
c00348	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>When I was in the Air Force, my residence was still my home town, not my military base. It should be exactly the same for prisoners!</p> <p>Please revise your rules before the next Census.</p>
c00349	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at</p>

	<p>the address they will return to, rather than the community they are being incarcerated in. Please revise your rules before the next Census. It is the only way to get true and accurate numbers. Thanks.</p>
c00350	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census. It's a violation of equal representation, and a problem in Rhode Island.</p>
c00351	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census.</p> <p>P.S. AS a related matter I'm truly outraged by the fact that convicts and those in prison are deprived of the vote. They are still citizens; many are innocent of the charges that put them behind bars; many may indeed be guilty but their crimes do not alter the fact that they are citizens. And I can see no clear or logical connection between committing a crime and being qualified to vote. It took a long time to get the vote for American Indians, blacks, and women, and now the process seems to be going in REVERSE; at every turn policies are cropping up to deprive, both DE FACTO AND DE JURE, indirectly and directly, more and more people of the vote.</p>

c00352	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities. The only exception, people sentenced for life.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>Counting prisoners at the prison address is like counting hotel guests at the hotel address. Neither are logical. Neither represent a permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census.</p>
c00353	<p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>People who are in prison are still part of a family, a son, a father, etc. The family continues to support this person and his ties are to his home not to prison. No one calls prison home.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census.</p>
c00354	<p>Accurate representation is a critical to attempt to meet the needs of ALL Florida communities.</p> <p>As a concerned citizen I urge you to count incarcerated people at their permanent address, instead of at detention facilities.</p> <p>As the Census Bureau is required to count everyone in the U.S. it is a misrepresentation to inflate Census numbers around prisons and count people outside of their permanent address.</p> <p>States across the country are taking steps to prevent redistricting based on incarcerated</p>

	<p>populations. The Census Bureau can contribute to this growing movement by counting people at the address they will return to, rather than the community they are being incarcerated in.</p> <p>Please revise your rules before the next Census.</p>
c00355	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. This practice must stop!</p> <p>The impact of the Census is too great to continue using outdated and inaccurate methods for counting. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00356	<p>Addressing the U.S Census Bureau regarding the Census count of prisoners--</p> <p>Incarcerated people should be counted at their permanent address and the communities they will return to after their sentence has been served.</p> <p>The practice of counting prison inmates as local residents in the prison area dilutes the clout of voters in other districts without prisons. And, given the demographics of incarcerated populations which are disproportionately heavy with people of color these prison-gerrymandered districts remove proportional representation from already marginalized communities of color. Instead, shifting representation to communities that are not connected to or reflective of the prison population.</p> <p>Much like the opportunity to disenfranchise by gerrymandering neighborhoods, this gerrymandering makes voters pawns for politicians. This bastardizes American democracy by once more treating prisoners like chattel and not human beings. Offenders remain people who have made a mistake. States should be ashamed that they exploit such vulnerabilities.</p>

c00357	<p>Addressing the U.S Census Bureau regarding the Census count of prisoners--some members of my family, friends are among this population. I have worked within the criminal justice system, the political arena, with the mentally ill and those trying very hard to resume the right path to having a good and prosperous life. Politicians have been using this loophole for there own gain. We want to take back control of our country b/c we have been taken advantage of and our wishes have not been taken seriously. DO THE RIGHT THING FOR ALL OUR SAKES. CHANGE CAN START WITH YOU.</p> <p>Incarcerated people should be counted at their permanent address and the communities they will return to after their sentence has been served.</p> <p>The practice of counting prison inmates as local residents in the prison area dilutes the clout of voters in other districts without prisons. And, given the demographics of incarcerated populations which are disproportionately heavy with people of color these prison-gerrymandered districts remove proportional representation from already marginalized communities of color. Instead, shifting representation to communities that are not connected to or reflective of the prison population.</p>
c00358	<p>Addressing the U.S Census Bureau regarding the Census count of prisoners--</p> <p>Incarcerated people should be counted at their permanent address and the communities they will return to after their sentence has been served. This would be their legal address.</p> <p>The practice of counting prison inmates as local residents in the prison area dilutes the influence of voters in other districts without prisons. And, given the demographics of incarcerated populations which are disproportionately heavy with people of color these prison-gerrymandered districts remove proportional representation from already marginalized communities of color. Instead, shifting representation to communities that are not connected to or reflective of the prison population.</p>
c00359	<p>Addressing the U.S Census Bureau regarding the Census count of prisoners--</p> <p>Incarcerated people should be counted at their permanent address and the communities they will return to after their sentence has been served.</p> <p>The practice of counting prison inmates as local residents in the prison area dilutes the clout of voters in other districts without prisons. Instead, shifting representation to communities that are not connected to or reflective of the prison population.</p>

c00362

Voice of the Experienced (VOTE) is a grassroots organization engaged in a local, state, and national movement to reverse the negative impacts mass incarceration has had on our communities. We were initially formed in the Louisiana State Penitentiary (the Angola Special Civics Project). VOTE has grown immensely over the past decade, and contributed to major campaigns such as Ban the Box, ending public housing discrimination, and reducing the size of the local jail. We are currently the lead plaintiff in *VOTE v. Louisiana*, a class action suit to restore voting rights to people living in our community and paying taxes while on probation or parole.

We are deeply disturbed by the Census Bureau's proposed decision to continue counting caged people as residents of the towns where they have been imprisoned. The constitutional purpose of the Census is to count people for political representation. Your course of action, long since brought to your attention, is a perversion of that purpose. America is the global leader of incarcerating its own citizens and aspires (rightly so) to be the global leader in democracy. While the most fundamental right of citizenship is voting, less than 1% of people incarcerated in state or federal prisons (those in Maine and Vermont) maintain that basic connection to the democratic process. We have 1.6 million people taken against their will, stripped of political power, and internally displaced throughout the nation in state and federal prisons. These people are then tabulated where they are being held against their will.

Our 1.6 million family members are being held within a network of prison towns. Sadly, many of these towns have only a few local employers, and the prison industry becomes paramount to their survival. I encourage you to view many of the great stories on the problem of prison towns, such as the documentary film "Up The Ridge," or the recent *Mother Jones* journalism series by Shane Bauer, who worked in Winn Correctional Facility in Winnfield, Louisiana. Both portrayals underscore the challenges America faces in post-manufacturing America- where the local commodity is either on Walmart shelves or humans in cages. More humans, more cages, more people paid to watch the cages. And more cages, under the Census Bureau's policy, means more political power for that prison felon disenfranchisement case in America, *Farrakhan v. Gregoire*, a case that was ultimately lost because the racial discrimination was not intentional.

The challenge we put to you, the Census Bureau, is what do you do when you know the policies are racially skewed? Although nobody currently at the Census Bureau created the policies, you are intentionally continuing them. You are intentionally taking a group of people that is majority people of Color (primarily Black and Latino) and counting them in districts that are majority-

White. You are exacerbating the problem.

In Louisiana, incarcerated people are two-thirds Black in a state that is two-thirds White. The number of people sentenced in prison is the size of a state House district. In our largest city of New Orleans, over 13,000 people will be counted in other parts of the state and throughout the federal prison system. This is one example of the three perversions of democracy by the Census Bureau:

First, the metropolitan areas will need larger geographic districts than they should have to account for all the people not being counted in their homes. Political representatives will be dealing with constituents who have fractured homes, with family members sent to the prison towns. To gain enough households to be “equal” in size, the representative will need to walk additional streets and speak with additional schools and meet with additional residents than they should need to. Political representatives in these gutted districts will not even have authority over their own residents who have been shipped off into the state prison system. Their safety, health, rehabilitation, reentry, and family needs will be within the power of another district. By contrast, deployed military people and off-to-school college students (a) have contact with their politicians, (b) are part of politically protected groups, and (c) will likely be back in the district often during the ten years. These “feeder” districts have the highest rates of Black and Latino people in any state.

Second, the prison districts will have smaller geographic areas because they have dozens of high-rises bulging with people transported into the district against their will. To shrink the district down so it will be “equal” in size, political representatives will have the luxury of walking fewer streets and deal with fewer schools and fewer everything. This “receiver” district is a prison town, a majority-White ‘free resident’ district, and representatives *do not* consult their incarcerated residents. In fact, the economic survival of the town is tied to a failed government program, a program using cages to address mental illness, substance use, homelessness, unemployment, and violence. Further distorting this is that, in New Orleans, for instance, even people awaiting trial can be shipped into far-off districts. If the Census were tomorrow, several hundred New Orleans residents currently awaiting trial will be counted the farthest corner of the state. Certainly in some parts of America, a district could be drawn that is all prison guards and prisoners. The state legislature would always have at least one advocate for increasing the use of prisons to solve our community problems, and would likely accept all possible state and financial support for incarceration. Prison guards are disproportionately White, and their political interests will be represented in a district that could easily be a Majority-Minority district.

	<p>Third, it is the gutted feeder districts who actually represent the interests of the internally displaced people, living far away in cages. Those areas must deal with the impacts of mass incarceration, including disrupted parenting, educational barriers, unemployment, housing needs, mental health treatment, substance abuse, and myriad other counterproductive policies town.</p> <p>The demographics of the criminal justice system have repeatedly been revealed to be racially discriminatory at every level and every point of discretion. The Equal Employment Opportunity Commission said as much in their 2012 guidance on background checks in such as the 389 different employment barriers in Louisiana I, and the current policy of the Census Bureau that affirmatively furthers racial disparities. That feeder district must deal with the family that is left behind, and prepare for the person who will be home- typically before the next Census is taken.</p> <p>Louisiana has a tortured history regarding race and political representation. There is no one culprit for that past, but all of us including the Census Bureau must take responsibility for the present and the future. The Census Bureau’s support of internal displacement and shifting political power is simply wrong, and reinforces the theft of our bodies for political and economic gain. The current Census Bureau leadership has the opportunity to do its part to end this overt racial inequity. To do otherwise is to intentionally allow a discriminatory system to continue in America.</p> <p>We call on you to NOT count people where they are incarcerated and unrepresented. We call on you to count them where their homes and families are.</p>
c00363	<p>The N.J. Integrated Justice Alliance submits this comment in response to the Census Bureau's Federal Register Notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau 's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census Day, ignores the transient and temporary nature of incarceration. If made final, this proposal would mean another decade of decisions based on a Census that tallies incarcerated people in the wrong place.</p> <p>The IJA is a coalition of organizations and individuals working to improve public policies regarding prisoner reentry, and penal and criminal justice reform.</p> <p>Counting incarcerated people as if they were residents of the facility where they happen to be located on Census Day doesn't reflect the lived reality of our communities. The Bureau already tallies students in boarding schools at their home address even if they spend most of their time at the school. The same approach should be taken when computing incarcerated individuals.</p>

	<p>The Census Bureau should honor the overwhelming consensus urging a change in the Census count for incarcerated persons. When the Bureau asked for public comment on its residence rules last year, 96% of the comments regarding residence rules for incarcerated people urged the Bureau to count incarcerated individuals at their home address, which is almost always their legal address. This level of consensus among stakeholders, which is based on a thorough understanding of the realities of modern incarceration, deserves far more consideration than it was given.</p> <p>American demographics and living situations have changed drastically in the two centuries since the first Census, and the Census itself has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. The country's enormous prison population mandates the bureau to adapt once again.</p> <p>By designating a lock up facility as a residence in the 2010 Census, the Bureau concentrated a population that is disproportionately male, urban, and minority in to just a few thousand Census blocks that are located far from the actual homes of incarcerated persons. When this data is used for redistricting, it artificially inflates the political power of the areas where the jails are situated and dilutes the political power of all other urban and rural areas without large prisons.</p> <p>Four states and over 200 individual counties and municipalities adjust Census population figures to avoid prison gerrymandering when drawing their districts. Acknowledging the need to correct its own data to keep clear of prison gerrymandering, the Bureau has proposed helping states with the population adjustment. However, this ad hoc approach is neither efficient nor universally implementable. Massachusetts legislators, by way of example, have already expressed concerns about that state's ability to use alternative data in their 2015 comment to the Bureau (comment numbered c 161).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to adopt the residence rule that identifies everyone in the correct place. My coalition believes that in order to produce an accurate 2020 Census, the Bureau must count incarcerated individuals at home.</p>
c00364	<p>Latino Justice PRLDEF submits this Comment in response to the Census Bureau 's Federal Register Notice regarding the 2020 Decennial Residence Rule and Residence Situations, 81 Fed. Reg. 42,577 (proposed June 30, 2016).1/ We write to urge the U.S. Census Bureau to count and enumerate incarcerated people at their home address, rather than at the particular facility where they happen to be located on Census day.</p> <p>Latino Justice PRLDEF, originally established as the Puerto Rican Legal Defense and Education Fund (PRLDEF) in 1972, is one of the country's leading nonprofit civil rights public interest law organizations. We work to advance, promote and protect the legal rights of Latinas and Latinos2/ throughout the nation. Our work is focused on addressing systemic discrimination and ensuring equal access to justice in the advancement of voting rights, housing rights, educational equity, immigrant rights, language access rights, employment rights and workplace justice, seeking to address all forms of discriminatory bias that adversely impact Latinas and Latinos. In this vein, Latino Justice PRLDEF has invested significant resources in combatting the discriminatory effects of a broken and racialized criminal justice system, particularly as it further marginalizes Latino residents in the United States.</p>

As a civil rights organization, we are directly concerned with how Latinas, Latinos, and other communities of color may be impacted by current Census Residence Rules and Residence Situations, particularly where population counts based on Census Residence Rules are employed by elected and appointed officials in redistricting schemes. Our organization has litigated in support of New York's state law ending prison gerrymandering in *Little v. LATFOR*.^{3/} We believe that ensuring equal representation is imperative to the health of the nation, because it allows for a just democratic system and avoids any racially discriminatory effects of prison gerrymandering—that is, the practice of diluting the political power of Black and Latino neighborhoods by counting incarcerated Black and Latino persons as residents of the legislative districts of the prisons where they are temporarily detained.

In our 2015 Comment in response to 80 FR 28950 (Released May 20, 2015), we outlined three critical reasons why the Bureau should change its current practice of counting incarcerated people's "usual residence" in state prison facilities and instead count them at their true usual residence in their home communities: (1) The current method does not yield an accurate count of the population ; (2) The current method may contribute to possible unlawful gerrymandering in violation of the Equal Protection Clause under the Fourteenth Amendment, as well as potential vote dilution; and (3) Over 200 counties and municipalities in a majority of states do not count or consider prisons as a "usual residence" in redistricting. ^{4/}

Today, we write to reiterate our concerns about the high risk of vote dilution and to urge the Bureau to recognize that interpreting the "usual residence" rule to mean that incarcerated people should be counted where they are detained instead of at their home residences is both illogical and inconsistent. This interpretation of the "usual residence" rule is illogical because most incarcerated people do not live and sleep "most of the time"^{5/} at the facilities where they happen to be located on Census day. Moreover, this application is inconsistent with the Bureau's treatment of various other populations, including deployed military personnel, boarding school students, and members of Congress. The inconsistency is particularly troubling given the well-documented racial and economic inequities of the criminal justice system.^{6/} At least with respect to boarding school students and members of Congress, the Bureau should be conscious of its apparent tendency to treat racially and economically privileged populations differently from the urban, low-income communities of color that are harmed by prison gerrymandering, especially since—unlike incarcerated people—boarding school students and members of Congress live away from their usual residences by *choice*.

I. Counting incarcerated people where they are detained is illogical because most of them do not live and sleep "most of the time" in the facilities where they happen to be located on Census day.

The Bureau 's current practice is to count incarcerated people wherever they happen to be detained on Census day because, presumably, that is where they live and sleep "most of the time."^{7/} But this is simply not true. People in the prison system are frequently transferred and usually do not remain at any particular facility for even a year.

In New York, for example, in January, 2008, the median time that an incarcerated individual remained at a particular facility was only 7.1 months.^{8/} In Georgia, the average person in the state prison system has been transferred four times, and the median time each individual has served at his or her current facility is only nine months.^{9/}

When people are moving from facility to facility at such predictably irregular and frequent rates, it does not make logical sense to count their "usual residence" as the place where they happen to be located on one particular day. Most incarcerated people are serving short sentences and will return to their home communities.^{10/} It makes sense to count them where they have family and community ties and where they *live*, and of course, where they will return permanently to eat and sleep, not where they are temporarily imprisoned.

II. The Bureau's application of the "usual residence" concept is factually inconsistent.

The Bureau claims that "counting prisoners anywhere other than the facility would violate the concept of usual residence, since the majority of people in prisons live and sleep most of the time at the prison."^{11/} But there are numerous examples of populations who are not counted where they "live and sleep most of the time." These groups include boarding school students, members of Congress, deployed military personnel, visitors who have close ties to the place they are visiting yet are still counted at home, babies born on or before Census day who are counted where they *will* eat and sleep, and truck drivers who sleep away from home most nights.^{12/} This letter focuses specifically on the inconsistency of the application of the usual residence concept to boarding school students and members of Congress versus incarcerated people.

A. Boarding school students are counted at their home addresses, even though they live and sleep most of the time at school, and even though most of them will not return home.

There are about 290 schools in the United States that offer a boarding option,^{13/} with at least fifteen schools boarding more than 400 students.^{14/} One of the Bureau's justifications for counting boarding school students at home is the "likelihood" that they will return home when they stop attending school.^{15/} But most United States boarding schools have very high college attendance rates upon graduation. In fact, every one of the fifteen schools that board more than 400 students reports a college attendance rate upon graduation of either 99% or 100%.^{16/} Such high college attendance rates are completely inconsistent with the Bureau's reasoning of the "likelihood" that these students will return home after attending boarding school. Instead they live and sleep most of the time at boarding school and then move on to college where they do the same. Thus, they are far less likely to return home than people who happen to be temporarily incarcerated.

B. Members of Congress are able to choose to be counted in their home states, even though they live and sleep most of the time in Washington, D.C.

Members of Congress fall under the definition of "commuter workers," a population of "persons with one residence where they [stay] on weekends and another residence where they [stay] during the week while working"; hence, the rules . . . count the weekday residence as

the usual residence since it [is] the place where the greatest amount of time [is] spent in a given week."^{17/} Members have the privilege of choosing whether they are counted at home or in Washington, D.C., even if they do in fact stay in Washington, D.C., most of the time.^{18/} Like incarcerated people, Congress members are serving a time-limited term, and are likely to return home where they have the most family and community ties. No one doubts that a Congress member's usual residence is in his or her home district; incarcerated people should be afforded the same presumption, as they are just as likely to return home to where they have the most family and community ties.

We cite these examples to illustrate that the guideline of counting people where they live and sleep most of the time is a flexible one; the Bureau can and does take into account the unique factual circumstances of various groups of people when determining the meaning of "usual residence." The same logical consideration of the facts should apply to the question of where to count people who are incarcerated, and the inevitable conclusion is that they should be counted in their home communities, where they have the most family and community ties, and to which they will return. Indeed, not doing so for some of these populations raises troubling concerns about the role of race and class in the Bureau's considerations, as described below.

III. The inconsistency of the Bureau's application of the "usual residence" to incarcerated people raises troubling concerns about the role of race and class in the Bureau's considerations.

Boarding schools present a particularly stark example of the race- and class-based disparities that result from the Bureau's inconsistent application of the usual residence rule. Racial and ethnic demographic information is available through the National Center for Education Statistics for eight of the fifteen schools that board more than 400 students.^{19/}

Boarding School	% White	% Asian	% Black	% Hispanic
Choate Rosemary Hall (Wallingford, CT)	52%	25%	9%	7%
Culver Academies (Culver, IN)	69%	13%	3%	11%
The Hotchkiss School (Lakeville, CT)	58%	19%	10%	3%
Kent School (Kent, CT)	84%	7%	3%	3%
The Lawrenceville School (Lawrenceville, NJ)	55%	21%	10%	6%
Phillips Exeter Academy (Exeter, NH)	56%	23%	11%	9%
St. Paul's School (Concord, NH)	91%	5%	0.4%	5%
Episcopal High School (Alexandria, VA)	73%	10%	10%	4%
Average:	67%	15%	7%	6%

On average, these eight schools--which, again, represent the largest enrollments of boarding school students for which racial demographics are available--are only 7% Black and 6% Hispanic. These percentages are comparatively low, given that Black and Hispanic representation in the general population is 13% and 16% respectively.^{20/} Moreover, the cost of tuition for full-time boarders at these schools averages

around \$53,000, and only about one-third of the students receive financial aid.^{21/} Clearly, boarding school students also tend to come from economically privileged families.

Members of Congress are obviously also overwhelmingly white and wealthy. The 114th Congress (2015-2016) is about 80% non-Hispanic white,^{22/} though white people compose only about 64% of the total United States population.^{23/} The base salary for rank-and-file Congress members in 2015 was \$174,000,^{24/} well above the 2014 national median income of \$53,657.25.

Meanwhile, in 2010, Black Americans and Latinos made up less than one-third of the general United States population but composed almost 60% of the incarcerated population.^{26/} Non-Hispanic whites--again, around 64% of the total population--make up only 39% of the prison population.^{27/} And a 2014 report by the Prison Policy Initiative found that "incarcerated people had a median annual income of \$19,185 prior to their incarceration, which is 41% less than non-incarcerated people of similar ages."^{28/} Latino Justice PRLDEF has grave concerns about the racial and class implications of interpreting the usual residence rule to mean one thing for wealthy, white communities and quite another for poor, Black and Latino communities.

IV. Counting incarcerated people where they are detained instead of at their home addresses may contribute to unlawful gerrymandering and vote dilution.

The use of the prison location as a "usual residence" for Census population counts is not only misleading, as noted above, but results in inaccurate conclusions with potentially discriminatory results for redistricting purposes.^{29/} In 2000, some counties were reported to be growing, but in fact just had expanded prison populations counted there by the Census Bureau.^{30/} Many counties may report a large number of Latino residents because there is a large Latino population incarcerated within county boundaries, which means that the Latino population is overrepresented in counties where they do not reside by choice.^{31/} In turn, they are underrepresented in their actual place of usual residence and communities of origin.^{32/} This creates inaccuracies and increases the risk of a distinctively racially-discriminatory impact on the representation of Black and Latino communities.^{33/}

These outcomes do not appear to comport with the Supreme Court's Fourteenth Amendment equal protection jurisprudence "one person one vote" standard.^{34/} In *Gray v. Sanders*, the Supreme Court held that Georgia's county-unit system was in violation of the Equal Protection Clause because the method of counting votes diluted a person's vote as the county population increased, causing rural votes to weigh far more than urban votes.^{35/} Given that state and local governments use Census data to redistrict for voting purposes, the current method of counting prisons as a "usual residence" may contribute to the potential violation of the equipopulous "one person, one vote"^{36/} standard, which may also lead to unlawful vote dilution.^{37/}

Unlawful vote dilution occurs whenever a State minimizes or cancels out the true voting strength of a racial or language minority under the Federal Voting Rights Act of 1965. What triggers the protections of the Act is the existence of disproportionality in the execution of what may otherwise be race-neutral policies. The combination of the Census Bureau's usual residence rule as proposed in the initial order,^{38/} when combined with, and where it imports documented statistics regarding the racially-skewed outcomes present in our criminal justice

systems in the United States, may similarly result in reducing the collective voting strength of Latino and Black communities. On a national scale, 1 out of every 15 Black men and 1 out of every 36 Latino men in the United States is incarcerated.^{39/} Compared to the ratio of 1 of every 106 white men incarcerated,^{40/} the outcomes of the criminal justice system exacerbate the loss of concomitant political power in communities of color, and in doing so, may dilute their voting strength.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African American or Latino into just 5,393 Census blocks that are removed far from the actual homes of incarcerated people.^{41/} In Illinois, for example, 60% of incarcerated people's home residences were in Cook County, yet the Bureau counted 99% of them as if they resided outside Cook County.^{42/} When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. The consequences of the Bureau's decision to count incarcerated people in the city or town where a prison facility is located carries long-lasting effects, both in the communities where detained people come from and return to, as well as the communities in which detained people are temporarily held, where they are both physically and socially segregated from the rest of the population in those communities and barred from any meaningful participation in public life.^{43/}

The Bureau's current proposed usual residence rule limits the freedom to be counted where one calls home and has the most family and community ties, *and appears to limit this freedom specifically for incarcerated people--* a population that is disproportionately Black, Latino, poor, and detained far from home against their will. At the same time, boarding school students and members of Congress-- significantly whiter and wealthier populations-- have actually chosen to reside away from home. When populations differ so dramatically along the lines of race and class, it is essential to remain critical of seemingly-neutral treatments that result in adverse effects for the communities that remain the most marginalized and the least privileged.

Here, we do not doubt the Bureau's integrity or view its motives with suspicion, but we do implore you to review the glaring inconsistencies in the application of the usual residence rule with a critical awareness of the skewed racial and economic privileges of those who have the freedom to be counted in their home communities, despite the logical similarities they share with incarcerated people. These similarities include the time-limited terms they serve in communities unlike their own, and the likelihood they are to return home.

It appears that the only major difference in the Bureau's methodology in determining usual residence between truck drivers, military personnel, boarding school students, members of Congress, when compared to the Bureau's methodology in determining the usual residence of incarcerated people, *is the difference in the relative weight and value accorded by the Census Bureau to their family and community ties.* Quite simply, there is no principled reason to value the family and community ties of the home districts of prisoners any less than the other populations we have identified here.

V. Proposed residence rules would not only create an inaccurate Census but also further contribute to systemic racial inequity.

In a time when many underprivileged and underserved people who have been unjustly marginalized are forced to keep reiterating that their lives matter, importing the myriad problems and statistically-proven racial discrimination of the criminal justice system into the calculus of political power and representation is simply an untenable proposition for the American people in 2020.

By discounting disproportionately Black and Latino populations who may be incarcerated far away from their strongest family and community ties, and far away from the homes to which they will return, the U.S. Census Bureau will only further entrench systemic racial inequity. This would be a grave disservice to the American people. Entire families and communities should not be punished or treated as less important simply because a person who calls that family or community their home is temporarily serving their term elsewhere.

We strongly urge you to reconsider your initial decision and count incarcerated persons at home, where they have lived and resided, where they will return to live and reside after they serve their time-limited terms, and where they have the strongest family and community ties.

c00365	<p>"Usual residence" for deployed military is an aberration of the way military are accounted for. North Carolina's electoral votes are affected. The state residence of record for all other purposes should be used here too. There is no reason for creating a separate category.</p>
c00366	<p>I am writing to express concern about the proposed "2020 Census Residence Rule and Residence Situations." It is my understanding that the Census Bureau plans to count incarcerated persons where they are confined, rather than their permanent address. Doing so would lead to an inaccurate 2020 Census -- distorting democracy and hindering equal representation.</p> <p>I urge you to count incarcerated persons at their permanent address rather than their place of confinement at the time of the Census.</p>
c00367	<p>I am writing to express concern about the proposed "2020 Census Residence Rule and Residence Situations." No doubt you have received many copies of the text, so there's no need to include it again. I've read it, understand it, and agree with it.</p>

c00368	<p>I am writing to express concern about the proposed "2020 Census Residence Rule and Residence Situations." It is my understanding that the Census Bureau plans to count incarcerated persons where they are confined, rather than their permanent address. Doing so would lead to an inaccurate 2020 Census -- distorting democracy and hindering equal representation.</p> <p>This is very strange. They can't vote, so how can they be counted?</p>
c00369	<p>I am writing to express concern about the proposed "2020 Census Residence Rule and Residence Situations." It is my understanding that the Census Bureau plans to count incarcerated persons where they are confined, rather than their permanent address. Doing so would lead to an inaccurate 2020 Census -- distorting democracy and hindering equal representation.</p> <p>Many incarcerated persons move from facility to facility while they are serving time. Counting them in a district where they may only be for a few months of the year is at odds with how you count other similarly situated persons, such as someone who spends the summer at a vacation home and lives elsewhere full-time.</p> <p>I urge you to count incarcerated persons at their permanent address rather than their place of confinement at the time of the Census. I'm sure your duty required you to act fairly and competently. Please put forth the truth of this matter. Thanks.</p>
c00370	<p>Gerrymandering as we usually think of it presents a number of problems, but learning that jail and prison inmates are counted in many states as part of the facility location, makes me even more against it. It is unjust on several accounts, most notably to the actual areas that are home addresses of the inmates (their permanent residence) that often lack a just representation. The flipside of this is, of course, that the locations of jails/prisons are giving those areas overrepresentation. Race figures into this equation, also of course, especially for non-whites living in urban areas. None of this is rocket science and can easily be understood and corrected to bring justice on all sides. Therefore, I am writing to express concern about the proposed "2020 Census Residence Rule and Residence Situations." It is my understanding that the Census Bureau plans to count incarcerated persons where they are confined, rather than their permanent address. Doing so would lead to an inaccurate 2020 Census -- distorting democracy and hindering equal representation.</p> <p>Many incarcerated persons move from facility to facility while they are serving time. Counting them in a district where they may only be for a few months of the year is at odds with how you</p>

	<p>count other similarly situated persons, such as someone who spends the summer at a vacation home and lives elsewhere full-time.</p> <p>I urge you to count incarcerated persons at their permanent address rather than their place of confinement at the time of the Census.</p>
c00371	<p>I am writing to express concern about the proposed "2020 Census Residence Rule and Residence Situations." It is my understanding that the Census Bureau plans to count incarcerated persons where they are confined, rather than their permanent address. Doing so would lead to an inaccurate 2020 Census -- distorting democracy and hindering equal representation.</p> <p>Many incarcerated persons move from facility to facility while they are serving time. 	<p>Please help make our country better for all our people and our future.</p>
c00381	<p>I am worried by the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the notion that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c00382	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently. Whatever the basis for any gerrymandering, it is a form of cheating. Thank you for your consideration.</p>
c00383	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>

The now privately owned Prison system seemed to begin when mass incarcerations, often for minimal infractions committed by persons of color, exploded into very large numbers of people. This has caused a perpetual cycle of entrenched poverty in the prisoner's normal home area, as well as generations now of kids who have one or two parents in prison, and often cannot even come to visit owing to where they are held. And that leads to more prisoners as these children grow up without a significant parent, or with one parent working two jobs just to survive, such that the children end up committing minor violations themselves. Clearly, to me, someone saw an opportunity in this to unbalance the census and therefore democracy, creating neighborhoods entrenched not only in poverty but crime as well, and these days some of that crime is deadly. These neighborhoods are doomed if gerrymandered. Thus, a future of crime is to be expected.

My only child's father was Native American, a full blood Lakota and at one point did 9 years of prison for a minor crime in South Dakota. That length of time destroys a person, though it did not destroy his spirit, it did destroy his chances at a decent life, making a decent living.

I live in Berkeley, CA, between Oakland and Richmond, two well known crime/murder areas. My 21 year old grandson has lost 5 friends with whom he went to school, just recently-all within a couple of months. All these kids were black. Most were from the neighborhood were I live. They were all children raised by grandparents as their parents were incarcerated, or dead. I would be classified as white. Many of these boys, and there are more, I knew since they were babies and full of hope. These For-Profit prisons are destroying the young and the neighborhoods in which they grow up. Gerrymandering explains a lot. Clearly, this is or should be illegal and I'm pleased my state is coming around to recognizing that. But, in order to be a true democracy, this must be equal all over the US. If it was equal and not skewed for political gain, the very neighborhoods that still perpetuate the most crimes would stand a chance at being more hopeful, better education, better nutrition, better everything. Then, the children could grow up with some hope and support, as well as the feeling that they are as not separated from the rest of the country and local communities as they feel. One child I knew, was arrested at age 11 for stealing a cooked chicken in the grocery store. He was a brown kid who was very hungry. He knew it was wrong, but he was so hungry. His father was in prison. There was not enough food at home to go around.

If gerrymandering of For Profit distant prisons was illegal, dangerous neighborhoods would stand a chance at improvement, including nutritious foods, safer environments, safer parks, and better education. In addition, For Profit prisons should not exist. It is too tempting to some to exploit for their own profit, and against democracy.

c00384

I am concerned with the Census Bureau's proposed residence rule for incarcerated people.

	<p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p> <p>If a person cannot vote if incarcerated they should not be counted as voting citizens.</p>
c00385	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people. Prisoners are moved around constantly within the prison system and should be counted at their permanent home address.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c00386	<p>I believe that prisoners should be counted at their last place of residence, not the prison where they have been sent to by the local judiciary. This practice artificially inflates the population counts of some places while disenfranchising them from their place of residence. Many prisoners are sent many miles from the scene of their crime or the place that they have lived in before the prison system entangled their lives.</p> <p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken</p>

	<p>steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c00387	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Felons cannot vote and are not even from the districts they happen to be detained in. This ought to be simple to fix, please do so.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c00388	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. c00389	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p>

	<p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities. Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently. Stop the corruption by the GOP Party NOW!!!***</p>
c00390	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>I was a teacher in a California men's prison for 25 years. Many/most of my students had never voted. and would not be eligible to vote in California until they were off parole. However, they have opinions and should have representation. The prison is in a rural county and is one of the biggest employers in the county. The inmates live in the county while they are in prison, but when they get out, they usually go back to where they came from. A number of them, while still under the jurisdiction of the prison, are sent out to "fire camps" to live for anywhere from a few months to a few years. These camps are all over California from Sacramento to the southern border with Mexico. The census data from the prisons is provided by prison authorities rather than from the individual inmates. Political representation based on inmate population is skewed because inmates aren't allowed to vote. The census count of approximately 4,000 inmates gives our county a lot more political representation than it would otherwise have and those 4,000 people are missing from the census count in their home areas.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c00391	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Permanent residency should be the basis for counting the population. Prison is generally a temporary situation, and persons in prison are not a constituency for that locale (and may not even be able to vote). They do not draw on local services or contribute to the local economy in</p>

	<p>the usual sense.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c00392	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p> <p>The United States prides itself on being the most powerful and forward thinking country in the world. Let's take this step forward to add some credence to that belief.</p>
c00393	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>

	<p>Please note these facts: Here are some of the important facts about this issue:</p> <p>The Census Bureau must count all people in the U.S.--including non-citizens, children, temporary residents, deployed military, students and non-voters. Most everyone is counted at their permanent residence--incarcerated people are an exception.</p> <p>The Census Bureau cannot ignore prisoners because they must count everyone, and formerly incarcerated people will return home to their community upon release. Therefore, they should be counted there.</p> <p>Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted.</p> <p>This is about democracy, not funding. Most government funding formulas are too smart to be fooled by the Census Bureau's prison miscount. When prisons are built in an area, they are built with a specific population maximum. Infrastructure planning for such facilities is done based on the maximum size of the prison. School funding is allocated based on the number of students--not prisoners. Opponents of reversing the current counting mechanism often use this argument and it's a false flag.</p> <p>States are acting against this practice and are adopting, have adopted, or attempted to adopt legislation across the country--including New York, Maryland, Delaware and California. Florida's plan for prison gerrymandering was ruled unconstitutional.</p> <p>Prior to the mass incarceration phenomenon, this was not a question of concern for the Census Bureau because it was rare and affected a small number of people. They began inquiring about incarceration in 1990--when the prison population exploded from 137 per 100,000 during the great depression to 470 per 100,000 in 2001 because of the war on drugs and increased tough on crime policing.</p>
c00394	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people. I'm so sorry the GOP can't win an election without cheating, but maybe if you weren't a bunch of racist haters you wouldn't have to do this. Using prison population to rigged the system just shows how awful your party really is. And the fact that you call your party the Family value Party just shows how sick you all really are. When you all die and stand before God he's going to say he never knew any of you haters!</p>

	<p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c00395	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people. Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities, but more importantly... away from the communities that know them and care about them -- to communities who don't know or care about them.</p> <p>Like college students, they should be counted in the district containing their permanent residence... where they will most likely return after their incarceration.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c00396	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people. This has a significant effect on my own community. We house two prisons and a large county jail in a predominately rural part of the county. The majority of prisoners are from other parts of the state as our crime rate is quite low. Most of these prisoners are not, nor ever will be, residents.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>

c00397	<p>Arizona stopped this outrageous policy for the 2010 census. It seems a surprise to have Arizona ahead of ANY other entity, but looks like it is in this case. Please stop counting prisoners at their confinement facilities for the purpose of census data. It does not reflect their home area. Census Bureau:</p> <p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00398	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>Bottom Line: gerrymandering is wrong--AND AGAINST THE LAW! Using gerrymandering to curry political points is a violation of voter rights!</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00399	<p>Isa 5:20-23 [NIV] Woe to those who call evil good and good evil, who put darkness for light and light for darkness who are wise in their own eyes who acquit the guilty for a bribe, but deny justice to the innocent.</p> <p>Isa 9:14-16 [NIV] So the Lord will cut off both head and tail, both palm branch and reed in a single day; the elders and prominent men are the head, the prophets who teach lies are the tail. Those who guide this people mislead them, and those who are guided are led astray.</p>

	<p>Isa 10:1-3 [NIV] Woe to those who make unjust laws who issue oppressive decrees, to deprive the poor of their rights and withhold justice from the oppressed of my people, making widows their prey and robbing the fatherless. What will U do on the day of reckoning, when disaster comes ? To whom will U run for help? Where will U leave your riches?</p> <p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. How this population is counted has enormous implications for representational government.</p>

	<p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00407	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address.</p> <p>This practice is likely distortive in its benefit to locations with prisons and to the detriment of the prisoners actual residence, the place they intend to return, after their forced imprisonment. No prison is a "residence" as no one intends it to be the place they intend to return.</p> <p>I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00408	<p>WOW!! I had no idea this was going on. What a racket. ONE WO/MAN ONE VOTE is the basis of this society. The mass incarceration of black men, many on drug charges, has been shown to be powered by racism and the fear of those same men being able to cast a vote. The thought that placement and filling of jails is at all related to gerrymandering seems like an added unspoken punishment. If this is in place then the sentences should be reduced so they can get back to their communities and vote.</p> <p>So, this message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p>

	<p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00409	<p>I am writing in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address for the purpose of Census data. I believe this method distorts the Census data and thus, congressional districts are also distorted. My request is this practice not be applied to the 2020 Census.</p> <p>With consideration of the fact that the prison population in this country has more than quadrupled since the 1980s, the way this population is counted has undeniable and significant implications for representational government. There are now over two million individuals incarcerated. Since the great majority of them will ultimately return to their home communities, many may be erroneously counted in the place where they served their prison sentence. Such a practice would appear to be a cynical method to gerrymander the voting districts if this proposal is adopted.</p> <p>I hope the Census Bureau changes the proposed plan, and instead adopts a model that better serves democracy.</p>
c00410	<p>This message is in regard to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U. S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they are incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves toward a model that better serves communities.</p>
c00411	<p>As a private citizen, _____ the League of Women Voters of Lawrence Township, and _____ the New Jersey Integrated Justice Alliance, I am submitting this comment in response to the Census Bureau's Federal Register Notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016).</p> <p>I strongly oppose the Census Bureau's proposal to continue counting incarcerated people as "residents" of prison locations, rather than at their home address (which is almost always their legal address) in their home community. If made final, this proposed rule would mean another decade of public decision-making ostensibly for the public good based on inaccurate and misleading Census Bureau figures.</p>

	<p>American demographics and living situations have changed drastically in the two centuries since the first Census, and the Census itself has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. The country's enormous prison population mandates that the bureau adapt once again. Counting incarcerated people as if they were residents of the facility where they happen to be located on Census Day ignores the transient and temporary nature of present-day incarceration.</p> <p>By designating a prison facility as a residence in the 2010 Census, the Bureau concentrated a population that is disproportionately male, urban, and minority to just a few thousand Census blocks that are located far from the actual homes of incarcerated persons. When this data is used for redistricting, it artificially inflates the political power of the areas where the jails are situated and dilutes the political power of all other urban and rural areas without large prisons.</p> <p>Furthermore, in 2015, when the Bureau asked for public comment on its proposed Residence Rules, the overwhelming majority of public comments regarding incarcerated people urged the Bureau to count incarcerated individuals at their home address. This level of consensus among stakeholders, based on a thorough understanding of the realities of modern incarceration, deserves far more consideration than it has thus far been given.</p> <p>Please re-write your Bureau's 2020 Residence Rule to count prisoners at their home addresses!</p>
c00412	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>Prison for profit is immoral. I want to see it end.</p>
c00413	<p>Can we have you quit with the shenanigans and administer justice in a fair and evenhanded way. Let us leave off with the political agendas and have institutions that manage our governmental affairs for the betterment of our society. It is my understanding that the Census Bureau plans to count incarcerated persons where they are confined, rather than their permanent address. Doing so would lead to an inaccurate 2020 Census -- distorting democracy and hindering equal representation.</p> <p>Many incarcerated persons move from facility to facility while they are serving time. Counting them in a district where they may only be for a few months of the year is at odds with how you count other similarly situated persons, such as someone who spends the summer at a vacation</p>

	<p>home and lives elsewhere full-time.</p> <p>I urge you to count incarcerated persons at their permanent address rather than their place of confinement at the time of the Census.</p>
c00414	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist and does a disservice to citizens across the country.</p> <p>Counting inmates where they are incarcerated reduces is racist and skews the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African- American and Latino communities towards white, rural communities. As a proud American I believe the significance of the Census is too great and the impact is too great to continue using outdated and inaccurate methods for counting. Please eliminate prison- based gerrymandering for the 2020 Census and beyond.</p>
c00415	<p>I most strongly urge the Census Bureau to change the proposed plan to continue prison-based gerrymandering and move towards a model that better serves communities and the country as well.</p>
c00416	<p>Please reconsider using inmates as voters.</p> <p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p>
c00417	<p>With many prisons being located in areas classified as rural, the Census Bureau's practice of including prisoners as residents of the area in which they (hopefully) temporarily reside, given the chances that a great number of prisoners were residents of metropolitan areas before incarceration, raises several questions, such as: are prisoners as individuals considered local residents, subject to local laws? Highly doubtful. Are prisoners (felons) allowed to vote while incarcerated (or ever)? Are prisoners encouraged to remain in the local area upon release? Again, very unlikely.</p> <p>As a resident until recently of an area with several Washington State prisons (Clearwater, Olympic Peninsula), I am aware of several facts that are not in dispute:</p> <ol style="list-style-type: none"> 1. released prisoners are always transported out of the area. 2. while sometimes family members move to a town near the prison, they tend to locate in transient accommodations (i.e. trailer parks or low rent apartments) and leave upon the family member's release. 3. staff do not live at the prisons. Many commute considerable distances in the case of these prisons.

	<p>So in what sense is it accurate to count prisoners as local residents for census, electoral and tax purposes? Given the wide ranges of pre-detention addresses of prisoners, common practice of relocations within state systems, etc., counting prisoners as local residents causes a profound distortion of small town and rural population statistics. Prisons should be considered as industrial institutions and as such for census purposes prisoners should not be considered "residents."</p> <p>Staff (guards, medical, etc.) would be certainly counted at their place of residence, often not in the nearest community.</p> <p>In the case of prisoners this creates a statistical problem: would you count them at their address previous to incarceration? Not really accurate. Nor is counting them as residents in the area of the prison, when one considers nature of their location and the distorting effect this has on elections, a major concern of the Federal census.</p> <p>This practice greatly magnifies the electoral district's "free" voters' influence on elections due to the presence of imprisoned non-voters who, of course would be non-participants in any elections).</p> <p>There must be an equitable solution which does not constitute the present distorting practice of considering prisoners as local residents.</p>
c00418	<p>This message is with regard to the Census Bureau's proposed plan to count inmates at their confinement facility rather than at their permanent address.</p> <p>This practice is indistinguishable from other American gerrymandering.</p> <p>How this population is counted has enormous implications for representational government. It is dishonest.</p>
c00419	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>You've seen the "form letter" that has been dispersed for people to email in regarding this issue. So, you know the issues that exist with the proposed residence rule regarding incarcerated individuals.</p> <p>As a 2010 Census Team Leader, I know the emphasis was stressed that the address submitted must be the individual's "permanent residence" as of April 1, 2010. The purpose for this was to ensure proper representation of people's home location. People on business trips and military personnel (who are often away from their home location for months or even years at a time) reported their permanent addresses, not their temporary to long-term deployment locations. The same should be reported for incarcerated individuals.</p>
c00420	<p>Prison is not "home". It is not a "residence". Please do NOT count inmates as being residents of the district in which they are confined, if it is different from their permanent address. The proposal to do so is contrary to common sense, and serves only to distort the Census. Please abandon this destructive plan for the 2020 census. Prison-based gerrymandering is offensive and cynical and is not appropriate for America.</p>

c00421	<p>As a long-time resident of Louisiana, I recommend NOT counting prison and penitentiary inmates as residents for purposes of the Census and for voting population counts.</p> <p>We have way too many non-violent offenders locked up in our state. These unfortunate people are generally unable to vote. Don't include them as ordinary residents in census districts.</p>
c00422	<p>The Census Bureau just released guidelines for the 2020 census that harm people of color and exacerbate the suffering of the communities most devastated by America's broken criminal justice system.^{1/}</p> <p>Despite massive public opposition, the Census Bureau wants to continue its widely discredited practice of "prison-based gerrymandering." Prison-based gerrymandering counts incarcerated people as "residents" of the place they happen to be on Census Day. That means instead of being counted as residents of their home communities, they are counted as residents of the community where they are imprisoned.</p> <p>Treating incarcerated people as "residents" of prisons is outdated, inaccurate, and unfair. When government officials use census data with these padded population numbers, they're shifting representation – and therefore shifting political influence – from home communities to prison communities. This primarily harms communities of color, particularly African-American and Latinx communities that bear the brunt of disproportionate incarceration rates and a broken criminal justice system.^{2/,3/}</p> <p>The Census Bureau should end its antiquated, inaccurate, and unfair method of counting incarcerated people.</p> <p>The Census Bureau defines "usual residence" as the place where a person "eats and sleeps most of the time,"^{4/} but fails to follow that rule when counting incarcerated people. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address, but the Census Bureau continues to carve out an unexplained exception for incarcerated people in order to count them in the wrong place. And they are not just counting people spending long terms in prison. Many prison stays are for less than a year and many people who are incarcerated have not even been found guilty.</p> <p>Prison-based gerrymandering creates districts with "phantom" constituents – where inmates, many of whom have been stripped of their right to vote – make up the bulk of the population. This distorts how legislative districts are drawn and violates the fundamental principle of one person, one vote. If the Bureau continues this practice, 2 million people will be counted in the wrong place in 2020, ensuring an inaccurate census and another decade of prison gerrymandering.^{5/} Continuing to count incarcerated people in the wrong place is not only misguided, it ignores overwhelming calls for change. Last year, when the Census Bureau solicited public comments on how to implement residence guidelines for the 2020 census, the majority of comments were about how incarcerated people are counted, and more than 95 percent of those expressed clear opposition to prison-based gerrymandering. But the recently released draft guidelines for 2020 keep</p>

	<p>it in effect. The Census Bureau’s failure to take those public comments from groups like the NAACP Legal Defense and Educational Fund and the ACLU into account is especially disappointing given that the Bureau is proposing different rules for other people who are elsewhere on Census Day: military deployed overseas and boarding school students, for example, are counted as residents of their homes.</p> <p>In the face of the Census Bureau’s inaccurate practice, some states – including California, Delaware, Maryland and New York – have adopted legislation to undo its effect. But it shouldn’t be left up to states to fix this problem. The Census Bureau should do the right thing.</p> <p>Bring an end to this practice of prison-based gerrymandering. Ensure an accurate 2020 Census by counting incarcerated people at their home, not prison addresses.</p> <p>Thank you for the opportunity to bring these remarks to your attention.</p> <p>1/ The Census Bureau, “Proposed 2020 Census Residence Criteria and Residence Situations,” Federal Register, June 30, 2016. 2/ Tanisha Love Ramirez and Zeba Blay, “Why People Are Using The Term ‘Latinx’, Huffington Post, July 5, 2016. 3/ The Editorial Board, “The Wrong Way To Count Prisoners,” The New York Times, July 16, 2016. 4/ “Census Bureau proposes to count incarcerated people in the wrong place once again in 2020 Census, continues to distort democracy,” Prison Policy Institute, DEMOS, June 30, 2016. 5/ <i>ibid.</i></p>
c00423	<p>I am submitting this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). I urge you to count incarcerated people at their home address, rather than the Bureau's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census Day ignoring the reality of incarceration: prisons are not a "usual residence".</p> <p>Since my days in the Wisconsin State Senate, I have attempted to end the gerrymandering of prisoners in order to ensure equal representation. The Wisconsin Legislature did not accept my motion to change how prisoners were counted in the Census. In Wisconsin, prisoners do not remain in the communities in which they were incarcerated, but rather, they return to their home communities. The growth in the prison population over the past decades necessitates the Census Bureau to update its methodology, as it relates to incarcerated persons.</p> <p>As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million and now the number of incarcerated people has more than quadrupled, to over two million people behind bars. This longstanding flaw in the Census counts incarcerated people as residents of the prison location, even though they cannot vote and are not part of the surrounding community. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p>

	<p>The reality is that when my constituents are incarcerated, they are often sent to prisons outside my district, but they still rely on me for <i>representation</i> and remain my constituents. Their home in my district remains their only stable, permanent, "usual" residence. Counting them as if they were residents of the facility where they happen to be held on Census day doesn't reflect the modern day reality of our communities. Further, the designation of a prison cell as a residence in the 2010 Census concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated individuals.</p> <p>In Wisconsin for instance, Milwaukee County contains 18% of the state population but the state's prison population is made up of 42% of Milwaukee County residents. Virtually all of the state's prison cells are located outside of the county. In effect, each group of 9 residents in one particular district has as much political power as 10 residents elsewhere in the state. Wisconsin has historically drawn legislative districts so that their population-sizes are within 2% of the average. However, with the way incarcerated individuals are counted, Wisconsin awards greater political representation to districts with prisons than to those without them.</p> <p>On a final note, your proposed method of counting the incarcerated population is inconsistent with how you count other groups that eat and sleep in a location that is not their usual residence. For example, I noticed that your proposed rules will count boarding school students at their home address even if they spend most of their time at the school. The same approach should be taken when counting incarcerated people.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Census Bureau strives to count everyone in the right place in keeping with changes in society and population realities. I believe that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people as residents of their home address.</p>
c00424	<p>I am writing in regards to the proposed residency rules for the 2020 census. I believe that the Bureau is wrong to consider incarcerated people as residents of the correctional facility they are housed in on Census Day.</p> <p>According to Illinois correctional data, as of June 30, 2015, the percent of prisoners who committed their crime(s) in my county _____ County) was 3.0 percent, or 1,422 out of 47,165 prisoners in the state of Illinois. The only prison in the county is _____ and it reported a population of 3,553. This means that while only accounting for 3 percent of the prison population, the county is housing 7.5 percent of the state's prisoners.</p> <p>In contrast, Cook County, where Chicago is located, accounted for 50.2 percent of the location of committed crimes of prisoners, or 23,678 out of 47,165 in the state. While Cook County does have a jail facility, it does not have a prison, and thus many prisoners from the county are shipped out to facilities like the one near my home, Stateville.</p> <p>This means that _____, like other facilities around the state, are forced to house prisoners far from their homes, communities, and families. While most prisoners are sentenced to terms of only several years and will go back to</p>

	<p>their homes and communities, the proposed residency rules for the 2020 census fail to address a problem plaguing our country: prison gerrymandering. With the majority of prisoners in Illinois being Black (57 percent) and 50 percent of the crimes being committed in Cook County and Chicago, it is clear that under this rule of counting prisoners as a residents of the facility and not their home, communities have to pay extra for the mistakes and decisions of others. When redistricting occurs based on flawed census numbers, as in the case of what would happen if this rule is accepted and continued, the communities that need the most political power may very well be left behind as they lose seats in the State Assembly and United States House of Representatives. The damage ends up being less power for those that need it most and citizens and communities that feel they are not as important as rural and suburban parts of the state. While I am only talking about Illinois, I know this is a problem impacting communities and people around the country.</p> <p>The issue of criminal justice reform has clearly emerged as a top issue across the nation. Like with most issues and reforms, they are complex and have many aspects to address. In the case of the Census Bureau's proposed residency rules for the 2020 census, this is an issue that can be addressed rather easily and can have a substantial impact on our system of government at all levels while at the same time showing our most vulnerable citizens that they have as much political power as everybody else no matter where they live. The rule change would add on to the excellent strides we have seen regarding federal policy towards using private prisons and President Obama's clemency efforts. I hope that the Census Bureau will join those decisions and change its proposed residency rule when it comes to counting prisoners.</p> <p>Thank you for your time and I appreciate all the hard work that the Bureau does!</p>
c00425	<p>I am writing in response to your federal register notice regarding the 2020 Census Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016).</p> <p>I wrote to you in May 2015 to inform you that I support counting incarcerated people at their home address rather than the location of the prison/jail in which they are incarcerated.</p> <p>Now my support for counting prisoners in their hometowns has grown even stronger because I have researched the topic even more. I authored an oped on the topic for the _____ newspaper on _____.</p> <p>My personal experience is a perfect example of how counting prisoners as residents of the facilities in which they reside corrupts our democracy.</p> <p>I was incarcerated at _____ in _____, Connecticut from _____ to _____, 2014. Knowing my convictions remained on appeal and were, therefore, legally stayed, the local registrar of voters in my hometown of _____, Connecticut never removed my name from the town's list of registered voters.</p>

	<p>Because of the current residence rule, during the 2010 Census I was counted as if I were a resident of _____, the town containing the prison where I was incarcerated, despite the fact that I was actively registered to vote in another town: _____, Connecticut. This was not fair to my community, nor to any community in Connecticut that didn't have a prison in it.</p> <p>It is inconceivable to me that the Census Bureau would consider continuing to conduct the Census in this way after a Federal District Court Judge in Florida, in a case captioned Calvin v. Jefferson, held that counting inmates in a way that violates the "one person, one vote" principle in our democracy was patently unconstitutional. Certainly the Census Bureau isn't seeking to violate the United States Constitution. Yet, by maintaining your current counting practices, the Census Bureau is doing exactly that.</p> <p>I urge the Census Bureau to rethink its decision on how to count prisoners on Census Day.</p> <p>Thank you for your attention to this letter.</p>
c00426	<p>I believe that those incarcerated should be counted in their home residency rather than the facilities they are held in since doing so only contributes to prison gerrymandering and weakens the accuracy of the communities that house incarceration facilities; giving unfair advantages to certain areas. Please use the home addresses of those incarcerated.</p>
c00427	<p>I am writing to voice my concern with the current proposal's continued practice of counting incarcerated people as "residents" of prison locations instead of their home address. It is unjust that prisoners are counted in a place where they cannot exercise their right to vote and therefore cannot hold public officials who are elected in their name accountable. Not only is this practice unjust, it makes the Census less accurate for everyone. It harms all of us to not have incarcerated individuals counted in their home address location. Individuals returning from prisons to their homes cannot be expected to exit prison as productive members of society, if they do not feel like a stakeholder in their own community. Being counted as a resident of their home community is a more accurate and just policy for the census to follow.</p>
c00428	<p>Prison Gerrymandering is a real problem for true and accurate representation when it comes to voting districts. Please reconsider and count these prisoners where they resided prior to their current location which is the prison.</p>
c00429	<p>I strongly support a rule recognizing that imprisoned people remain residents of their home community, not the community where the prison is located for the following four reasons:</p> <ol style="list-style-type: none"> 1. They have no relationship to the community where the prison is located, and few plan to remain there after their incarceration ends. 2. Generally, residence is deemed proper in the state where people intend a permanent residence, not where they happen to be. That principle applies even more strongly here.

	<p>3. The effect of using the prison as the residence is racially discriminatory -- giving disproportionately more voting power to rural white communities where prisons are located rather than black urban communities.</p> <p>4. In those instances in which voting rights are not lost during imprisonment, would the local communities really want prisoners voting for school board, etc., in their community? No, because the site of the prison is not their community.</p> <p>Prisoners are not "residents" of the prison's locality, and should not be counted as such.</p>
c00430	<p>The Census Bureau should change its practice of considering incarcerated people as residents of a correctional facility where they are held. The Bureau has chosen to continue counting people in the wrong place, ensuring an inaccurate 2020 Census.</p> <p>This hurts urban areas, and especially communities of color because by counting incarcerated people as if they were "residents" of the correctional facility, it makes the Census less accurate for everyone: rural and urban communities; incarcerated persons and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p>
c00431	<p>The Census Bureau is wrong to consider incarcerated people as residents of the correctional facility because there is a difference between where you live and where you reside. Reside has an understanding that the person is at a place within a certain time frame. At the same time, the majority of incarcerated individuals are not residing at their current correctional facility permanently. The case may very well be that in 1-6 months they may be back home where they live or at another place. For this reason it is not correct or accurate to count these individuals as living in the correctional facilities.</p>
c00432	<p>I write you in reference to the 2020 Census Residence Rule and Residence Situations.</p> <p>The Census Bureau is wrong to consider incarcerated people as residents of the correctional facility because incarcerated individuals do not typically "live" in the prison, which they are detained. In many instances, people who are incarcerated originally live in urban areas far from their homes.</p> <p>Many federally funded programs, benefits, and services use Census population estimates to determine funding levels. Thus, this misguided policy essentially misplaces vital funds that should be allocated to communities where prisoners originally live. It is my hopes that the Rule reflects the most accurate and equitable outcome going forward--- that the Census population estimates reflect prisoners home of origin and not the location of the correctional facility.</p>
c00433	<p>The Census Bureau is wrong to consider incarcerated people as residents of the correctional facility because they are not members of the community at large. They are held in a facility subject to rules starkly different from those of ordinary citizens. They are temporary visitors to a geographic area, intending to leave as soon as the law allows.</p> <p>The Bureau has chosen to continue counting people in the wrong place, ensuring an inaccurate 2020 Census. Our Census is a</p>

	necessary part of understanding the demographics of a community to ensure accurate representation. People who live and work in the community and participate in the economy deserve fair representation, and counting prison inmates as part of the census count does a disservice both to those inmates and the members of the community surrounding a prison. Please do not consider incarcerated people "residents" of a correctional facility.
c00434	I would like to see you set rules that treat prisoners' residence at what would be their home address had they not been incarcerated on the day of the census. This will limit the effects of "prisoner gerrymandering" and make the census more accurate and fair for all involved.
c00435	Bad enough they are in prison away from home. Count them where they last lived and are likely to return. It is sinful to do otherwise.
c00436	<p>Treating incarcerated people as regular constituents of the districts in which they are incarcerated, instead of in their actual home districts, is harmful in many ways. It distorts my vote as a citizen of the United States. It restricts the rights of incarcerated people. And it means that the Census represents inaccurate information about the people of the United States.</p> <p>I am concerned about the harm that this practice poses to democracy:</p> <p>"Because prisons are disproportionately built in rural areas but most incarcerated people call urban areas home, counting prisoners in the wrong place results in a systematic transfer of population and political clout from urban to rural areas." (prisonersofthecensus.org).</p> <p>The Census Bureau is wrong to consider incarcerated people as residents of the correctional facility because the town where a prison is located is not the same as the home town of a prisoner.</p> <p>The Bureau has chosen to continue counting people in the wrong place, ensuring an inaccurate 2020 Census. Counting incarcerated people as if they were "residents" of the correctional facility makes the Census less accurate for everyone: rural and urban communities; incarcerated persons and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities.</p> <p>According to research collected by the Prison Policy Initiative, "When the Bureau asked for public comment on its residence rules last year, 96% of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address."</p> <p>As a citizen of the United States interested in equity and accuracy in the Census and in our democracy, I am concerned by this disregard for public opinion. I urge the Census Bureau to reconsider the practice of counting prisoners as residents of the prison instead of the residents of their actual home town.</p>
c00437	Currently all persons in all correctional facility (jails, prisons, etc.) are counted at that facility, no matter what the reason or duration is of their detention.

	<p>My comments revolves around the moment the usual place of residence changes after somebody is taken into custody for an alleged offence or for any other reason.</p> <p>One can think of 4 options that could trigger that change in place of usual residence:</p> <ul style="list-style-type: none"> - the moment of arrest, - the moment charges are filed, - the moment somebody is convicted and sentenced or - the moment somebody starts to fulfill their sentence. <p>Under the current residence rules the moment of arrest is triggering a change in usual place of residence, but I would suggest to make the moment they start with fulfilling their sentence as the trigger point. That would mean that up to that point in time, any jail or detention time would be considered as “being away from their usual place of residence” just like somebody who is in a hospital or is temporary staying somewhere else to work.</p> <p>Motivation for this change:</p> <ul style="list-style-type: none"> - Not every arrest results in charges filed, why count them in the jail? - The group of people in pretrial detention can roughly be split in two parts: those that are held for safety reasons and those that cannot pay bail. Especially the last group creates a bias as the group that is counted in a detention center could not post bail and those that might have been charged with the same offence, but posted bail are counted in their household. - We live in a country where one is presumed innocence until proven guilty. I think that triggering a change in usual place of residence can only be applied to those that are convicted and sentenced. - Preventing double counting as many of the people that were sent home after being in jail on April 1 would not count that as their place of residence; either because they didn’t anticipate it when they filled out their form before that date, or that stay was temporary and one would not regard it is their usual place of residence on Census Day.
c00438	<p>Counting incarcerated people as if they were residents of prison locations leads to a dramatic distortion of representation at local and state levels, enhancing the weight of votes cast in districts that contain prisons and diluting the voting power of everyone else. This "prison gerrymandering" also creates an inaccurate picture of community populations for research and planning purposes.</p>
c00439	<p>I support counting people who are incarcerated, at the place they called home before being involuntarily removed from it. It is not fair to their home communities, whose vote is weakened, while strengthening the vote of the citizens living in the town that contains the prison. The legislators representing the prison towns do not represent the prisoner's interests. In fact they have a vested interest in increasing the numbers of people living in their prisons. I believe in Justice and this way of taking the census does not serve justice in any way.</p>
c00440	<p>I am concerned to learn that you propose to count inmates of prisons, jails, and the like as residents of the</p>

	<p>area where the facility is located. This is hugely distorting and fails to get an accurate count of the communities where these people actually live when not incarcerated. Considering especially the high number of people in prisons in the U.S., your 'count' as proposed would show large numbers of residents in specific rural areas like upstate New York that are decidedly unrepresentative of the actual geographic area.</p> <p>How can you arrive at accurate counts of many inner city locations without including the young people in prison at a given moment who will be back in the inner city in relatively short order? We're talking about many thousands of people. And you certainly cannot get an accurate picture of ethnicities, incomes, and the like by excluding the temporary prison population from a city - these people come back - why? because they live in those communities. They need to be counted where they live.</p> <p>Our incarceration rate is 716 persons per 100,000 of population. Using the actual U.S. population, compute how many you would be inaccurately counting! Please. Use common sense and up-to-date methodology to justify your outcomes.</p>
c00441	<p><i>This comment submission contains graphics that cannot be displayed in this table. It is available as Appendix Attachment c00441.</i></p> <p>This comment letter is written in response to the Census Bureau's federal register notice regarding proposed changes to the Residence Rule and Residence Situations as outlined in 81 FR 42577 (June 30, 2016).</p> <p>The Census Bureau's decision to consider incarcerated individuals as residents of their current place of incarceration, rather than at the place of their permanent residence has profound consequences for racial equality in voting. Because this decision amounts to racial gerrymandering it could also be considered illegal.</p> <p>Racial gerrymandering has been defined as "the deliberate and arbitrary distortion of district boundaries for racial purposes" [DeWitt v. Wilson, 856 F. Supp. 1409, 1412 (D. Cal. 1994)]. The supreme court has repeatedly ruled that districting decisions which knowingly dilute the impact of certain races are illegal. Based on statistical analysis, I will show that the Census Bureau's Residence Rule produces such an unconstitutional result.</p> <p>I am an Economist with a degree from London School of Economics and professional statistician. In 2016, I worked together with the Prison Policy Initiative to assess just how dramatically the Census Bureau's Residence Rule distorts racial demographics by geography. The resulting report, "The Racial Geography of Mass Incarceration", contains our findings.</p>

The Report provides statistics showing how the combination of a disproportionately Black and Latino incarcerated population and the location of prison facilities in majority White areas leads to massive shifts in Black and Latino representation to areas where the Black and Latino populations are very small. We found that there are 208 counties in which there are ten times more Blacks incarcerated in the county than there are Blacks that are not incarcerated. This phenomenon is not isolated to just a few states. 34 states contain a county with a ratio of over ten to one incarcerated Blacks versus non incarcerated Blacks. The table below, taken from the report demonstrates details our findings.

See Appendix for Chart 1.

The Census Bureau's Residence Rule similarly transfers the representation of Latino people to counties where there are very few non-incarcerated Latinos.

See Appendix for Chart 2.

The decision to count incarcerated individual as residing in their facility leads to the perverse situation in which counties with almost no Black non-incarcerated permanent residents are receiving the benefits of having hundreds of Black citizens. For example, in Martin County Kentucky, Census data show that while there are only 12 non incarcerated Black people in the county, there are 884 incarcerated Blacks. Counting these 884 Blacks as residents of Martin County, and the transfer of power to which this leads, is in clear violation of the equal protection clause of the 14th Amendment.

My research with the Prison Policy Initiative is not the only study to find the distorting racial demographics effects of where people are incarcerated. Lew Blank, a student at the University of Wisconsin, found that of the 56 places in the state of Wisconsin with a large concentration of Black people, 31 of them were jails or prisons. These jails and prisons are generally located in areas where the population outside of the jail or prison is not predominantly Black. This is more evidence that counting people in their place of incarceration transfers power away from people of color.

Counting inmates as residents of their facility has a profound consequences for racial justice in this country. I hope the Census Bureau will come to the decision to count incarcerated people at their home address, and not allow this discriminatory practice to continue.

	Thank you for taking the time to read my comment letter.
c00442	Count the prisoners as residents of their own state and treat them like citizens of the US.
c00443	<p>I hope and pray that all is well in your world.</p> <p>In my view, it is absolutely wrong for the Census Bureau to deem incarcerated people as residents of the correctional facility because inmates' interests are not considered by the lawmakers of those districts. Rather lawmakers' agendas totally disregard the best interests of the inmates and focuses on how to increase revenues for the district which usually means getting more inmates, confining them for longer periods of time and failing to allocate adequate funds for mental health, physical health, education and vocational training.</p> <p>Moreover, the infrastructure and resources needed in the home communities to accommodate returning citizens will be inadequate to non-existent because based on the Census the rural areas where most prisons are located will have disproportionate political power and influence to channel the resources to their district. This is a scam that's being going on far too long and needs to stop immediately!</p> <p>My work includes going into prisons to train staff to train inmates as Certified Peer Specialists and Wellness Recovery Action Plan (WRAP) Facilitators to provide "peer support to their fellow and sister inmates who have mental health challenges, co-occurring challenges and substance use challenges. In the _____ we have 7,000 trained peer specialists, the vast majority in the urban centers and the work is being done.</p> <p>More needs to be done and will only get done if the Census Bureau count inmates in their home district or the district they plan to be released to.</p> <p>Thanks for your kind consideration in this matter!</p>
c00444	<p>My name is _____ and I am a nurse that specializes in data management. I am writing to let you know that I think counting incarcerated prisoners as 'residents' of the area they are housed in, is an inaccurate accounting and detrimental to them and their true residential location. The census is used to allocate resources in many cases and by counting people that have no say in where they live or are moved to, it skews the numbers in an inappropriate way. Rarely have I seen the prisoners actually GET any benefit that is given to the community; for example, school/programming options are ridiculously limited and usually impossible to access from jail/prison so why give the county or township money for this purpose? The prisoners do not benefit. Please consider counting them from the residence they had when arrested-at least the funding will then support services in communities they will be returned to. If you REALLY want to make things better, count them as a separate population and drive resources to them as a specialized population, that is the way to leverage the most improvement to a population that needs it the most.</p> <p>Thank you for your consideration.</p>
c00445	Inmates may be in prison for a reason, even innocent ones, however a lot of them still

	<p>care who leads the U.S. They should be allowed to vote. I know, I speak for one who'd love to vote AND who happens to be innocent of the crime he was put there for. But that's another fight he and I are doing.</p>
c00446	<p>I strongly urge you to push for adoption of a revised approach to counting individuals who are incarcerated. As the nation struggles to recover from its long addiction to over-incarceration, a recovery led in significant part by President Obama and the Department of Justice, we need to re-think all of the harmful aspects of incarceration. One of those is the broad range of political and economic incentives that encourage elected officials and communities to build and advocate for oversized prisons and jails in their communities, which in turn leads to harmful impacts on those unnecessarily incarcerated and ultimately leading to less safe and stable communities. One of those perverse incentives is the local political and economic value that accrues by counting prisoners as residents of the districts in which they are incarcerated. Those communities should not be the recipients of federal formula funds or enhanced representative strength. It is precisely the districts from which incarcerated people come—their true home districts—that need and are due those funds and that representation.</p> <p>On the other side of the ledger, I cannot think of any valid reason for considering a prisoner a resident of the district in which he or she is imprisoned.</p> <p>Thank you for your consideration.</p>
c00447	<p>Thank you for the opportunity to submit comments on the proposed residence rule with regard to the 2020 Census.</p> <p>I urge the Census Bureau to change its proposed intent to continue to count incarcerated people where they are temporarily located while in prison. Prisoners clearly gain no benefit from whatever community the prison is located in precisely because they are locked-up. Meanwhile, the distribution of per-capita resources, per the Census count, in home communities of prisoners are skewed lower. As the public is well-aware, there is a bias in the criminal system that disproportionately impacts minority populations. Potentially helpful social services (based on Census numbers) are underfunded in some minority communities that could have helped prevent unnecessary incarceration. The fact that the United States has such a high level of imprisonment is sad and it is critical that the Census process not contribute inadvertently to sustaining this national problem. Further, today's prisoners are tomorrow's neighbors. We want needed social services in the community that prisoners will return to so they can return to being contributing members of the community.</p> <p>I noticed that another comment to the Census Bureau on the proposed residence rule mentioned that the Census Bureau does have a policy of counting the home location of other</p>

	<p>populations that are temporarily located elsewhere - namely Members of Congress and boarding school residents. Therefore, it should be easy to extend this policy to incarcerated people who clearly do not consider prison to be there home.</p> <p>Thank you for considering my comment.</p>
c00448	<p>I am writing to oppose the current proposal to count prisoners as residents of their prisons instead of the communities from which they hail. I think you know why people think you should count prisoners as part of their home communities, and you just don't care. I think that because of this post that Director Robert Graves during the 2010 Census. Since then, we have learned that states overwhelmingly do not use your supplementary materials (i.e., early-release prisoner manifests) the way you hoped they would, so that solution should not be considered again.</p> <p>In that post, you call yourselves a "nonpartisan scientific organization." So I was surprised to read "There are... conceptual issues... [such as d]efining 'usual residence' outside the prison," because it presents a routine task of social science (operationalizing a variable) as an insurmountable obstacle. We all know that isn't true, including you.</p> <p>In that post, you list five possible ways to operationalize that variable. Pick the best one. Don't know what the best one is? Run a pilot survey with a representative group of prisoners to see which they would pick, and go with that one. Don't have enough money to do that? Tell us that so we can demand change from our lawmakers. Don't think we'll listen? Lobby for change yourselves. It's not "partisan" to request the resources you need to do a scientifically robust census. In fact, it's borderline unethical for you to release a census you know is bad, then release an appendix and expect someone else to combine them for you (the 2010 method).</p> <p>It took me five minutes to come up with these solutions, but to my mind they're no more flawed than your current methodology is. The only reason to keep the 2020 policy the same as 2010's is because you simply don't care about the growing mountain of evidence and public opinion against that outdated methodology.</p> <p>So here's my message to you: I hope you change the rules. But if you don't, understand that your game is becoming more and more obvious all the time. It's obviously hard to do the census the way the people you work for (American citizens) want you to do it, but that doesn't make it acceptable or ethical for you to do it some other way instead. As a scientific organization, consider this letter-writing push your peer review. You have not passed through. We're sending the policy back for revision.</p>
c00449	<p>Fair Districts PA, a coalition of individuals and organizations committed to redistricting reform in Pennsylvania, submits this comment in response to the Census Bureau's Federal Register notice regarding the Residence Rule and Residence Situations, 81 Fed. Reg. 42,577 (June 30, 2016); see also 81 Fed. Reg. 48,365 (July 25, 2016) (extending the deadline for public comments).</p> <p>Fair Districts PA requests that the United States Census Bureau take necessary steps to count incarcerated persons as residents of home communities rather than as residents of their places of incarceration.</p>

According to guidelines based on Pennsylvania statutes:

“for the purpose of determining residence,
an inmate in a penal institution is deemed to reside where the individual was last registered to vote before being confined in the
penal institution; or

If the inmate was not registered to vote prior to confinement, the individual is deemed to reside at the last known address before
confinement; or

A new residence established while confined (for example, if the inmate's spouse establishes a new residence in which the inmate
intends to reside upon his/her release from confinement).”

Counting inmates as residents of prisons and detention centers violates these guidelines, which state: “A penal institution (including a
halfway house) cannot be a residence address for registering to vote.”

The practice also violates the one person, one vote requirement of the U.S. Constitution’s Fourteenth Amendment as was made clear this
year by U.S. District Judge Mark E. Walker in *Calvin et al. v. Jefferson County* and by U.S. District Judge Ronald Lagueux in *Davidson
vs. City of Cranston*.

The Bureau’s proposal to continue counting incarcerated people at the particular facility where they happen to be held on Census Day
gives undue weight to districts where prisons are located while reducing the voice of minority populations.

The districts that benefit by counting incarcerated persons in their populations are primarily rural, while the inmates are almost entirely
from urban areas. 35.7% of Pennsylvania’s state prison population comes from just two counties: Philadelphia County and Allegheny
County (the core of the greater Pittsburgh area.)

When unadjusted Census data are used for redistricting, the resulting maps illegally inflate the political power of the areas where the
prisons are located and dilute the political power of all other urban, suburban, and rural areas without large prisons. In Pennsylvania,
Hispanic and black residents make up 61% of the total incarcerated population, but only 17% of the statewide population. Inversely, white
residents make up 79% of the total Pennsylvania population but account for only 39% of the incarcerated population.

In three state House districts—House Districts 69, 76, and 123— over 6.5% of the population consists of inmates in state and federal
prisons, virtually all of whom are disenfranchised. Congressional District 5, a rural district containing nine prisons with a prison population
of almost 16,000, in effect captures the benefit of those votes from Pennsylvania’s urban populations.

	<p>Census Bureau Advisory Committees have repeatedly requested that incarcerated persons be properly tabulated as residents of their home communities. Legislative bodies, advocacy organizations and research institutions have documented the distortion to democracy when primarily urban prisoners are used to swell the population base and political clout of politicians who have strong incentive to support prison expansion and policies that ensure continued mass incarceration.</p> <p>We believe that counting inmates as part of prison districts undermines government of, by and for the people. We urge the Census Bureau to reconsider the recent proposal and correct this distortion of American democracy.</p> <p>Thank you for the opportunity to submit comment.</p>
c00450	<p>We, the Members of the New York State Black, Puerto Rican, Hispanic, and Asian Legislative Caucus, submit this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). We strongly urge that the Bureau reverse its proposal to continue counting incarcerated people at the particular facility where they happen to be located on Census Day.</p> <p>As a body of legislators representing fifty-five Assembly and Senate districts, we are profoundly conscious of the fact that true democracy requires equal representation. In order to fulfill the Constitutional requirements established by our nation’s founders, it is crucial that people are counted, and counted correctly. For this to occur, each person must be counted in the correct location.</p> <p>Across the nation, on both the federal and local level, there are growing and bi-partisan efforts to reverse the effects of the era of mass incarceration. Over the span of more than three decades, the surge in the population at State and Federal prisons has resulted in the displacement of millions from permanent residences to temporary and involuntary residences. And causes and motivations aside, the reality is that there has been a disparate impact on Black and Latino men and women. As these men and women more often than not come from cities, the relocation of inmates to prisons in suburban and rural districts has the effect of enhancing the weight of a vote in those districts, and diminishing the vote in the districts where these men and women call home. The result is a reduction of the voice of family members, local businesses, and all other constituents that must continue on with their burdens in the district.</p> <p>Through the leadership of our Caucus, New York State was one of a few states in the nation to implement the practice of counting prisoners from their permanent home address rather than the prison address in time for the 2010-2013 state and local legislative redistricting. Subsequently, California—among other locations—has passed similar laws to be effective in 2020. A federal Census Bureau policy and practice for this prisoner count obviates the need for a tedious and inequitable state-by-state approval process.</p> <p>By reversing this policy, the Bureau would be taking a more consistent approach towards counting populations not in their usual residence on Census Day. Much like the home districts of boarding school students that eat, sleep, and spend the majority of their time outside the district, the home districts of inmates should not be subjected to a decline in democratic representation. Further, by establishing the home district of these inmates as their usual residence, it will avoid skewed census data that suggests population shifts as a result of inmates being moved from one prison to another.</p>

	<p>The Members of the Caucus thank you for the opportunity to comment on this rule. It is imperative that we strive to improve our democracy at every opportunity. By counting incarcerated people at home—rather than their temporary location on Census Day—our nation will take a step in the direction of righting previous wrongs, providing equity amongst communities, and strengthening our democratic union.</p>
c00451	<p>On behalf of the 880 members of the Jacksonville Onslow Chamber of Commerce, I am sending this letter of support for the Proposed 2020 Census Residency Criteria and Residency Situations Federal Register notice of 30 June, 2016. The data collected is vital to the public and economic needs of all communities in the nation, and we appreciate the dedication and effort the U.S. Census Bureau invested in publically reviewing its residency rules for the 2020 Census.</p> <p>We commend the Census Bureau staff for meeting with representatives of the military communities in North Carolina, reviewing processes, and investigating recommendations for counting deployed military at their usual place of residence. Jacksonville (Onslow County) North Carolina is honored to be the home of Camp Lejeune, the US Marine Corps' Home of Expeditionary Forces in Readiness, with a population of over 131,000. Accurately counting these populations at their usual residence in the Census is vital to serving and supporting those who serve our nation.</p> <p>We agree with the Census Bureau assessment that there is a residence difference between military personnel assigned to overseas installations for extended assignments and those deployed for short-term roles. The deployed military usually reside in their military communities, and the proposed change is consistent with Census procedures to count persons who are away from their usual place of residence on Census Day such as people on vacation, on business trips, truck drivers, or traveling salespeople. We also believe this rule will help avoid confusion about the spouses counted in a different place and we ask that special attention be paid during the Census outreach that, while the military member may be counted, family members need to fill out their own Census forms.</p> <p>We support the following Proposed 2020 Census Residency Rule and Residency Situation:</p> <p>13. U.S. MILITARY PERSONNEL... (f) U.S. military personnel who are deployed outside the U.S. (while stationed in the U.S.) and are living on or off a military installation outside the U.S. on Census Day - Counted at the U.S. residence where they live and sleep most of the time, using administrative data provided by the Department of Defense.</p> <p>The proposed change is consistent with Census Bureau policies, provides a more accurate Census count of the usual population of military communities, and better informs planning, services, and funding tied to Census data and is supported by the Jacksonville Onslow Chamber of Commerce Board of Directors and its members.</p>

c00452	<p>The Washington Association of Criminal Defense Lawyers (WACDL) submits this comment in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The bureau’s proposal to continue counting incarcerated people at the particular facility that they happen to be located at on census day ignores the transient and temporary nature of incarceration. If made final, this proposal will mean another decade of decisions based on a census that counts incarcerated people in the wrong place.</p> <p>Counting incarcerated people as if they were residents of the facility where they happen to be located on census day doesn’t reflect the lived reality of our communities. The bureau already counts students in boarding schools at their home address even if they spend most of their time at the school. The same approach should be taken when counting incarcerated people.</p> <p>The Census Bureau should honor the overwhelming consensus urging a change in the census count for incarcerated persons. When the bureau asked for public comment on its residence rules last year, 96% of the comments regarding residence rules for incarcerated persons urged the bureau to count incarcerated persons at their home address, which is almost always their legal address. This level of consensus among stakeholders, which is based on a thorough understanding of the realities of modern incarceration, deserves far more consideration than it was given.</p> <p>By designating a prison cell as a residence in the 2010 census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just a few thousand census blocks that are located far from the actual homes of incarcerated people. When this data is used for redistricting, it artificially inflates the political power of the areas where the prisons are located and dilutes the political power of all other urban and rural areas without large prisons.</p> <p>Four states and over 200 individual counties and municipalities adjust census population data to avoid prison gerrymandering when drawing their districts. Acknowledging the need to correct its own data to avoid prison gerrymandering, the bureau has proposed to help states with the population adjustment. But this ad hoc approach is neither efficient nor universally implementable. Massachusetts legislators, for example, have already expressed concerns about that state’s ability to use alternative data in their 2015 comment to the bureau (comment numbered c0161).</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the bureau strives to follow the residence rule to count everyone in the right place. My organization believes that in order to produce an accurate 2020 census, the bureau must count incarcerated people at home.</p>
c00453	<p>The Census Bureau must change the way it counts incarcerated people. People do not live in prisons; they bide their time there – often miles or hundreds of miles from where they actually live, where their family unit is, and all of the other associated information that the Census and the American Community Survey collects. Counting prisoners as individuals living in prisons distorts the Census’ picture of the American population and the political districting that relies on Census data. It perversely perpetuates incentives to build more prisons, especially in rural areas far from the prisoners actual communities, which increases the isolation and dysfunction of the criminal justice system. The Census should count people where they live, not where they are detained.</p>

c00454

The City of Fayetteville, Cumberland County, and the Greater Fayetteville Chamber work collaboratively to engage with the federal government and pursue funding assistance for strategic focus areas identified in a collectively established agenda. These efforts, which are critical to the growth and strength of our community, help protect and preserve essential assets and resources, allowing all areas of the community and surrounding areas to thrive.

One of our federal agenda goals has been to further advance the issues associated with the current process used by the Census Bureau for counting deployed soldiers. In pursuit of this goal, we have monitored and participated in your review of the 2010 Census Residence Rule and Residence Situations. We understand that you have been reviewing the 2010 Residence Rule and Residence Situations in order to determine if changes should be made to the Rule and/or if the situations should be updated for the 2020 Census. In a letter dated July 16, 2015, we submitted comments and suggestions for the 2020 Census.

In this letter, we offer comments on the proposed "2020 Census Residence Rule and Residence Situations." In a Federal Register Notice published on June 30, 2016, you requested comments on these items. Thank you for this opportunity to again submit comments.

As noted in our July 16, 2015, letter (see attached), the City of Fayetteville is located in Cumberland County, NC. Cumberland County is the home of Fort Bragg, the largest Army installation in the United States. Because of its size, Fort Bragg influences the population of the City of Fayetteville, Cumberland County, and the surrounding region. In 2008, the North Carolina **General Assembly annexed most of the Cumberland County** part of Fort Bragg into the City of Fayetteville; the General Assembly annexed the remaining Cumberland County part of Fort Bragg into the Town of Spring Lake.

We Support the Proposed 2020 Census Residence Rule

Section D of the June 30, 2016, Federal Register Notice says that the proposed Residence Rule will be used to determine where people are counted during the 2020 Census. As set forth in Section D, the proposed rule will consist of three parts:

- Count people at their usual residence which is the place where they live and sleep most of the time.
- People in certain types of group facilities on Census Day are counted at the group facility.
- People who do not have a usual residence, or who cannot determine a usual residence, are counted where they are on Census Day.

Our Response: We have compared the proposed rule to the rule used in the 2010 Census. In both cases, the rule is based on the concept of "usual residence." We support that concept. The only difference we see is that some wording has been eliminated from the second bullet. We support this minor change.

We Support the Application of the Proposed 2020 Census Residence Rule to the Situation of U.S. Military Personnel Overseas

In recent censuses, we believe that the Census Bureau has applied the Residence Rule very rigidly to the situation of U.S. military personnel overseas. For example, in the 2010 Census, only one residence situation was recognized. It was Situation 9(f). It said: "U.S. military personnel living on or off a military installation outside the U.S., including dependents living with them-To be counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire." This rigid application of the rule meant that all military personnel overseas were simply counted as part of the U.S. overseas population, without regard to the amount of time that the military personnel were overseas.

For the 2020 Census, the Census Bureau proposes to apply the Residence Rule in a more nuanced and flexible way to the situation of U.S. military personnel overseas. As explained in more detail in the next section, the Census Bureau proposes to recognize two residence situations for U.S. military personnel overseas: those deployed on a short-term basis, and those permanently stationed overseas.

Our Response: We are very pleased that the Census Bureau has proposed this more nuanced and flexible application of the Residence Rule for the 2020 Census. For military members deployed on a short-time basis, their "usual residence" -- the place where they live and sleep most of the time -- is back in the U.S. at the military base from which they were deployed. Therefore, this is where they should be counted -- back at the military base from which they were deployed. This application is even more appropriate for the future, since it is our understanding that for members of the Army subject to short-term deployments, the Army's goal is for deployments to be shorter.

For military members stationed permanently overseas, the place where they live and sleep most of the time is at their location overseas, so it is appropriate for them to be counted as part of the overseas population of the U.S.

In summary, for the 2020 Census, we believe the Census Bureau proposes to apply and interpret the concept of "usual residence" correctly by proposing two categories of U.S. military personnel overseas. We believe the Census Bureau has identified new or changing living situations (such as the Army's goal of shorter deployments) that need to be recognized. We believe the Census Bureau has revised the guidance appropriately.

We Support Two Residence Situations in Section D-Number 13-Regarding U.S. Military Personnel Overseas

Section D of the June 30, 2016, Federal Register Notice provides an overall list of 21 residence situations proposed for use in the 2020 Census. Residence Situation Number 13 pertains to U.S. military personnel. A total of eight situations are listed. We will focus on the two pertaining to U.S. military personnel overseas.

Residence Situation 13(f)-This situation deals with U.S. military personnel who are deployed outside the U.S. (while stationed in the U.S.) and are living on or off a military installation outside the U.S. on Census Day. According to the notice published on June 30, 2016, military personnel in this situation will be "counted at the U.S. residence where they live and sleep most of the time, using administrative

data provided by the Department of Defense." We assume that the last mailing address can be used to determine the "usual residence" of temporarily deployed personnel.

Residence Situation 13(g)-This situation deals with U.S. military personnel who are stationed outside the U.S. and are living on or off a military installation outside the U.S. on Census Day, as well as their dependents living with them outside the U.S. According to the notice published on June 30, 2016, military personnel in this situation (and their dependents) will be "counted as part of the U.S. federal affiliated overseas population, using administrative data provided by the Department of Defense."

Our Response: We support these two residence situations for the reasons outlined below:

- These two situations, when viewed together, make a very important distinction between military personnel stationed in the U.S. but deployed for a short time and military personnel who are stationed overseas for a long time. These two situations are very similar to the two categories that we suggested in our letter dated July 16, 2015. (See Suggestion 1 in attached letter.) They enable the impacts of these populations to be more fairly allocated.
- We believe these two residence situations represent a proper application of the concept of "usual residence," which is the underlying principle of the Residence Rule.
 - Military personnel in Situation 13(f) will be counted at their U.S. residence, because that is where they live and sleep most of the time. This is similar to saying that military personnel in Situation 13(f) will be considered as temporarily away from home for work purposes. We assume that the last mailing address can be used to determine the "usual residence" of temporarily deployed personnel.
 - Military personnel in Situation 13(g) will be counted as part of the U.S. federal affiliated overseas population, because overseas is where they live and sleep most of the time. Military personnel in Situation 13(g) will be counted only for apportionment purposes at the state level only.
- If these two situations are used in the 2020 Census, we believe they will help prevent an undercount of population in communities impacted by deployments of military personnel. As noted in Appendix 1 of our letter dated July 16, 2015 (see attached), when the 2010 Census was conducted, officials with the state of North Carolina estimated that around 40,000 troops were deployed from military bases in North Carolina, including Fort Bragg. Because of the deployment, and because of the way that the Census Bureau counted deployed troops in the 2010 Census, we believe that the populations of the state of North Carolina, Cumberland County, and the City of Fayetteville were undercounted in the 2010 Census. The implementation of these two new residence situations should help prevent an undercount in the 2020 Census. Preventing an undercount is important for at least two reasons:

- Federal and state governments use Census population data to allocate federal and state dollars to local governments. According to an article published on October 3, 2010, in The Fayetteville Observer, "more than \$478 billion in federal grants were awarded last year to counties and cities across the country based on population formulas. That kind of aid amounted to more than \$1,500 per person." If the Census population data are low because of an undercount, local governments will not receive as much federal and state money.
- Local governments use Census population data for planning. If the Census population data are low because of an undercount, local governments will not have accurate data to use in planning for the future.
- If these two situations are used in the 2020 Census, they will help ensure that the population stationed at a military base in the U.S. (but temporarily deployed overseas) will be counted in **both** the **apportionment** population at the state level and in the **resident** population at the state, county, and municipal level.
 - Preventing an undercount of population is very important to state governments. As noted in Appendix 1 of our letter dated July 16, 2015, if North Carolina's apportionment population had been 15,000 higher, the state would have been eligible for an extra congressional seat.

We Are Concerned Over the Need for Future Research (Mentioned in Footnote 5 in Section B)

Section B of the June 30, 2016, Federal Register Notice provides a summary of comments received in response to a review of the "2010 Census Residence Rule and Residence Situations." Item 2 summarizes "Comments received on the Military Overseas." Footnote 5 of Section B, says: "The ability to successfully integrate the DOD data on deployed personnel into the resident population counts must be evaluated and confirmed prior to the 2020 Census."

Our Response: The words, "must be evaluated and confirmed" suggests that future evaluation research will need to be conducted before this DOD data integration can occur. We are very concerned about the need for future research based on the reasons outlined below:

- We are concerned that if this evaluation research is not done in time, then the proposed changes, which are so important to North Carolina and local governments with high military populations, will not occur. We note that Section A of the Federal Register Notice states: "The Census Bureau anticipates publishing the final '2020 Census Residence Rule and Residence Situations' by the end of 2016."
- We do not believe that future research is needed. We believe the Department of Defense has adequate information readily available on each military person who is deployed temporarily.

- o The Census Bureau already uses data from the Defense Manpower Data Center (DMDC) in preparing annual population estimates at the national, state, and county levels. (Source: Methodology for the United States Population Estimates: Vintage 2015. Nation, States, Counties, and Puerto Rico-April 1, 2010 to July 1, 2015.) Since the Census Bureau is already using data from the DMDC in preparing annual population estimates, it does not seem necessary to do further research on using DMDC data for the 2020 decennial census.

Additional Recommendation Regarding Annual Population Estimates—In addition to the decennial census, the Census Bureau is also responsible for preparing annual population estimates for states, counties, and cities for the years between the decennial censuses. If these two residence situations proposed in 13(f) and 13(g) are in fact used in the 2020 decennial Census, **we recommend** that the Population Estimates Branch of the Census Bureau revise its methodology for preparing annual population estimates.

In summary, we support the proposed 2020 Residence Rule and its application to the situation of U.S. military personnel. We are very much in favor of the two residence situations proposed in 13(f) and 13(g). We believe these two residence situations represent a proper application of the “usual residence” concept. We believe that if these two situations are in fact used in the 2020 Census, military communities from which military personnel have been deployed will not experience an undercount of population. We are concerned over the need for future research mentioned in Footnote 5. We are worried that if the research is not done in time, the proposed changes will not occur. We do not believe that such research is needed. Finally, we have offered an additional recommendation on annual population estimates.

Please note that Fayetteville and Cumberland County are widely recognized for their high level of support for their military families. Having these members of the military counted among our population would strengthen the community’s ability to provide the support and services they deserve.

Again, thank you for this opportunity to submit comments regarding the Proposed 2020 Census Residence Rule and Residence Situations. If you have any comments, feel free to contact us through the City’s Senior Planner, _____, at _____.

Note: The remainder of this comment was previously submitted on July 16, 2015 in response to the 2020 Decennial Census Residence Rule and Residence Situations; Notice and Request for Comment, 80 Federal Register 28950 (May 20, 15).

Attachment letter dated July 16, 2015:

The City of Fayetteville, Cumberland County and the Fayetteville Regional Chamber formed a partnership that works collaboratively to engage with the federal government and pursue funding assistance for strategic focus areas identified in an annual, collectively established agenda. The partnership's combined efforts are critical to the growth and strength of our community. These efforts ensure protection and preservation of essential community assets and resources, allowing all areas of the community and surrounding metropolitan and unincorporated areas to thrive.

We would like to thank you for the opportunity to submit comments regarding the Census Bureau's Residence Rule and Residence Situations. One of our community federal agenda goals is to further advance the issues associated with the current process utilized by the US Census Bureau for counting deployed soldiers. The partnership would like to request that the Census Bureau undertake a review of the decades-old policy to prevent further undercounting in the garrison communities.

It is our understanding that you are currently reviewing the 2010 Residence Rule and Residence Situations in order to determine if changes should be made to the Rule and/or if the situations should be updated for the 2020 decennial Census. As shown below, we believe that the Rule should be applied to the situation of military personnel who are temporarily deployed overseas to a conflict zone. We are also suggesting several updates to Situation 9(f) for the 2020 Census.

Please note that the City of Fayetteville is located in Cumberland County, NC. Cumberland County is the home of Fort Bragg, the largest Army installation in the United States. Because of its size, Fort Bragg influences the population of our City, our County, and the surrounding region. Also, please note that in 2008, the North Carolina General Assembly annexed most of the Cumberland County part of Fort Bragg into the City of Fayetteville; the remainder was annexed into the Town of Spring Lake.

In the comments that follow, we refer to the Rule and Situations as outlined in the Federal Register notice published on May 20, 2015.

Comments Regarding the Residence Rule

As we understand it, the Residence Rule is based on the basic idea that people should be counted at their usual residence, which is the place where they live and sleep most of the time. We agree with this Rule, and we believe that this Rule should be applied to the situation of military personnel who are temporarily deployed overseas to a conflict zone. This would result in these temporarily deployed persons being counted as part of the resident population of the military community from which they were deployed.

Comments Regarding Situation 9(f)

Situation 9(f) pertains to "U.S. military personnel living on or off a military installation outside the U.S., including dependents living with them." According to the Federal Register Notice, these people are currently "counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire."

We think that this current situation is not fair for cities and counties that are located near military installations which are subject to large troop deployments. (Appendix 1 explains how the Census Bureau's current procedures for counting deployed military members have negatively impacted North Carolina and its military communities. Appendix 1 provides information on the impacts at the state level, the military county level, the Fort Bragg annexation area level, and the City of Fayetteville level.)

We would like to offer the following suggestions for updates to Situation 9(f):

Suggestion 1: The Census Bureau should revise Situation 9(f) so that it reflects at least the following two categories of U.S. overseas military populations:

Category 1-- Military Members Temporarily Deployed Overseas to a Conflict Zone--For these members, the deployment will hopefully consist of a "there and back" experience. These members might find themselves in places such as Iraq and Afghanistan, but they intend to return to the military installation from which they were temporarily deployed. Members are expected to return to the location from where they deployed, rather than reporting to their next rotational duty assignment. But for being deployed, these members would be back at their last duty station. Although these members might be deployed for 6 to 9 months, we would argue that this is a "temporary" deployment, when considered in light of the overall amount of time these members are assigned to a stateside military base. It is assumed that these members would not likely have dependents living with them while temporarily deployed overseas to a conflict zone.

Category 2--Military Members Assigned Overseas Outside of a Conflict Zone--For these members, the experience of being assigned overseas is part of their career rotation. These members might find themselves assigned to places such as Germany and Japan. For these members, their next rotational duty assignment will very likely be somewhere different from their previous location. It is assumed that these members might have dependents living with them while stationed overseas outside of a conflict zone.

Suggestion 2: The Census Bureau should revise its method of counting overseas military population. In the Federal Register Notice, there is no information on how U.S. military personnel in Situation 9(f) are to be counted, except that these persons are to be counted "as part of the overseas population." We understand that under current procedures, overseas military personnel are counted through administrative records rather than a census questionnaire. We understand that these administrative records are maintained by the Defense Manpower Data Center (DMDC). We also understand that under current procedures, the Census Bureau currently counts these people as part of the apportionment population, but not part of the U.S. resident population. We understand that the Census Bureau allocates these people to a state's apportionment population based on a hierarchy of information that is shown in a person's file maintained by the DMDC. This hierarchy currently starts with the person's home of record, then the person's legal residence, and finally, the person's last duty station. We understand that the Census Bureau has used this hierarchy for the past several decennial censuses.

Suggestion 2(a): The Census Bureau should revise its method of counting overseas military by reversing the hierarchy of information that it currently uses to allocate people to a state's apportionment population. The reversed hierarchy should start with the person's last duty station, then the person's legal residence, and finally, the person's home of record. This suggestion of reversing the hierarchy is intended to be applied to both Category 1 and Category 2 of the overseas population suggested above; this would ensure that both categories are treated the same way. However, if the Census Bureau is not able to treat both categories in the same way, then we would encourage the Census Bureau to apply the reversed hierarchy to at least Category 1. After all, people in Category 1 are the ones who intend to return to their last duty station. They are the ones most likely to return to their last duty station after their deployment ends; this last duty station is also likely where their immediate families are living.

Suggestion 3: Assuming that the Census Bureau is willing to use the reversed hierarchy for at least the people in Category 1, the Census Bureau should count the people in Category 1 as part of a state's resident population, as well as part of a state's apportionment population. As noted above, the people in Category 1 intend to return to their last duty station and they are most likely to return to their last duty station, after their deployment ends.

Suggestion 4: Assuming that the Census Bureau is willing to count the people in Category 1 as part of a state's resident population, the Census Bureau should use the actual address of a person in Category 1 and allocate the person to the census block in which they resided before being deployed. This would ensure that the person is properly counted in the correct jurisdiction (city and county) in which the person resided before being deployed. We assume that the person's actual address would be in the administrative (DMDC) record for the person, because if the person were injured while being deployed, the military would need to be able to notify the person's family members of the injury. We assume that demographic characteristics (e.g., age, sex, and race) about the person in Category 1 would also be available in the administrative record for the person.

Suggestion 5: Consider adding a new question to the Census form. This question would ask: "Is a member of this household currently temporarily deployed overseas to a conflict zone?" A follow-up question would ask: "If yes, please provide the person's name (and age, sex, and race)." This information would then be matched against the administrative record for the Category 1 deployed person.

Suggestion 6: Clarify the Census instructions provided to military families. Local experience has suggested that families of deployed spouses were confused by Census instructions and did not complete their Census form. This increased the undercount of population in military communities. The instructions need to state that if a family member is temporarily deployed overseas to a conflict zone, the person filling out the form should list the deployed family member on the Census form. The instructions should also clearly state that all members of the family should be listed on the form, if a person from the family is temporarily deployed overseas to a conflict zone.

In summary, if the Census Bureau would adopt these suggestions, people in Category 1 (military members temporarily deployed overseas to a conflict zone) would be counted as part of the resident population of the community from which they were deployed. This would correct the undercount problem that has existed in military communities. If the Census Bureau would adopt these suggestions, people in Category 1 would be treated like the people in Situation 1 (people away from their usual residence on Census Day). They would be counted at the residence where they live and sleep most of the time, but for being deployed.

Again, thank you for the opportunity to make these suggestions. If you have any questions, feel free to contact us through the City of Fayetteville's Demographic Planner, David Nash, at 910- 433-1995, or by way of email at dnash@ci.fay.nc.us.

Appendix 1

How the Census Bureau's Current Procedures for Counting Deployed Military Members Have Negatively Impacted North Carolina and its Military Communities

Introduction and Purpose of This Appendix 1

In the letter preceding this Appendix 1, The City of Fayetteville, Cumberland County and the Fayetteville Regional Chamber Partnership, has made several suggestions to the Census Bureau regarding the Census Bureau's current procedures for counting deployed military members. These procedures are based on the 2010 Census residence rule and situation 9(f). The purpose of this Appendix 1 is to show that the current procedures have negatively impacted North Carolina and its military communities. This Appendix 1 provides data in support of the partnership's suggestions for changing the Census Bureau's current procedures.

Background on the Census Bureau's Current Procedures

Prior to the 2010 Census, state and local leaders in North Carolina asked the Census Bureau to revise procedures for counting military members who are deployed overseas. Under the current procedures for the decennial census, in effect from prior censuses, the Census Bureau counted deployed military members as part of the overseas population. For the apportionment counts, the Census Bureau allocated deployed military members to a state's overseas population. The Census Bureau first used the home of record. If home or record was not available, the Census Bureau used the legal residence. If neither home or record or legal residence were available, the Census Bureau used the last duty station.

State and local leaders in North Carolina were concerned that the Census Bureau's current procedures would harm North Carolina, especially if a large number of military members stationed in North Carolina were temporarily deployed while the 2010 census was conducted. Officials from the Census Bureau told the state that there was not time to change the methods for the 2010 census. (Census Bureau officials suggested that they would consider changes before the 2020 census.)

On April 1, 2010, the 2010 Census was conducted.

When the US Census Bureau conducted the 2010 Census, many military personnel stationed at military installations in North Carolina were temporarily deployed overseas. State officials estimate that more than 40,000 military members were deployed from military bases in North Carolina around the time of the 2010 Census (April 1, 2010). (Fayetteville Observer, 3/30/11, p. 1A.)

On December 21, 2010, the Census Bureau released the first counts from the 2010 Census. These counts were known as the apportionment counts. These counts were used to apportion the seats in the U.S. House of Representatives to the 50 states. The apportionment population for a state consisted of two numbers: the resident population of the state and the U.S. overseas population allocated to the state, based on home of record information.

Table 1 below shows the apportionment populations for the U.S. and North Carolina, based on the 2010 Census.

Table 1
Apportionment Populations for the U.S. and North Carolina, Based on 2010 Census

Geographic	Number of representatives	Apportionment population		
		Total	Resident population	U.S. overseas population
United States	435	309,183,463*	308,745,538	1,042,523
North Carolina	13	9,565,781	9,535,483	30,298

Notes: *The total apportionment population of the US includes the resident population for the 50 states, as ascertained by the Twenty-Third Decennia I Census under Title 13, United States Code, and counts of overseas U.S. military and federal civilian employees (and their dependents living with them) allocated to their home state, as reported by the employing federal agencies. The apportionment population excludes the resident and overseas population of the District of Columbia.

Source: U.S. Census Bureau. 2010 Census. Population and Housing Unit Counts. United States Summary. Table A.- "Apportionment of U.S. House of Representatives and Apportionment Population Based on 2010 Census."

As shown in Table 1 above, the total U.S. overseas population was 1,042,523, and the North Carolina overseas population was 30,298.

Data on the components of the U.S. overseas population are shown below in the left half of Table 2. As shown, there were 410,696 persons classified as in the Armed Forces and living overseas in the 2010 Census. The City staff assumes that detailed records are available on each of these deployed members of the military. The staff assumes that the military could break this figure down by the number who are deployed temporarily to conflict zones (such as Afghanistan and Iraq), and the number who are assigned to long term duty stations outside of a conflict zone (such as Germany and Japan). (These distinctions are referred to as Category 1 and Category 2 in the partnership's letter.)

Unfortunately, it has not been possible to locate any data sources showing the components of the North Carolina overseas population. (On July 15, 2015, City staff was told that the North Carolina data were not published and cannot be released at this time.)

Therefore, the City staff has estimated the components of the North Carolina overseas population, based on the U.S. percentages. These estimates are shown below in the right half of Table 2.

Table 2
Details on the U.S. Overseas Population and Estimates for North Carolina

2010-United States

2010 North Carolina (Estimated)

	Number	Percent*	Number	Percent
Total	1,042,523	100.00%	30,298	100.00%
Federal Employees	434,382	41.67%	12,624	41.67%
Armed Forces	410,696	39.39%	11,936	39.39%
Fed Civilian Employees	23,686	2.27%	688	2.27%
Dependents of Fed Employees	608,141	58.33%	17,674	58.33%
Armed Forces Dependents	592,153	56.80%	17,209	56.80%
Fed Civilian Dependents	15,988	1.53%	465	1.53%
Total Armed Forces and Dependents	1,002,849	96.19%	29,145	96.19%
Total Fed Civ Empl and Dependents	39,674	3.81%	1,153	3.81%

Sources: US data based on report entitled, 2010 Census Federally Affiliated Overseas Count Operation Assessment Report. Data were in an unnumbered table on page 2 of the report. NC data calculated, based on US percentages.

Note: *Published percentages were rounded and did not show any decimal places. Percentages shown above are shown to 2 decimal places.

As shown above in Table 2, City staff has estimated that 29,145 people in the North Carolina overseas population were members of the Armed Forces and their dependents. Out of this, 11,936 were estimated to be members of the Armed Forces, while 17,209 were estimated to be dependents of the Armed Forces members.

If the Census Bureau would adopt the suggestions in the partnership's letter [e.g., if the Census Bureau would distinguish between Category 1(temporarily deployed overseas) and Category 2 (assigned overseas for a longer term), and if the Census Bureau would use the last duty station criteria in allocating overseas military members to states,], the City staff believes the numbers for North Carolina shown in Table 2 above would be very different.

Assessment of the Impacts of the Current Procedure

As pointed out in Table 2 of the preceding section, the Census Bureau reported that the North Carolina overseas population was 30,298. Overseas military members made up a large part of this number, but it has not been possible to determine the actual number. However, state officials estimated that more than 40,000 military members were deployed from military bases in North Carolina around the time of the 2010 Census (Fayetteville Observer, 3/30/11,p. IA).

City staff has tried to locate studies documenting the impacts of the current procedure on North Carolina. City staff has also performed its own analysis, using Census Bureau data. These studies and analysis efforts are discussed below.

Study of Defense Department Data. This is the most important study that City staff has been able to identify. Although City staff has not been able to locate a copy of this study, it was mentioned in a major story in The Fayetteville Observer published on March 30, 2011. This story was entitled, "Deployment Costly for State in Census." This story was based on a staff and wire report. The story referred to a study of Defense Department data that was provided to the Associated Press.

One of the main findings from the study was: "North Carolina officials estimate more than 40,000 troops were deployed from the state's military bases around the time of the census one year ago. But only 12,200 of the nation's overseas military personnel listed North Carolina as their home state, according to Department of Defense data provided to AP." This created a gap of around 28,000 troops, which was costly to the state. For example, had the apportionment population of the state been only 15,000 higher, the state would have been eligible for an extra congressional seat. This gap also likely resulted in considerable federal funding losses, which are often distributed based on population. (Fayetteville Observer, 3/30/11, p. 1A)

City Staff's Analysis Based on Census Bureau Data - City staff has used the data released as part of the 2010 Census to analyze the extent to which deployments have affected populations in North Carolina. This included using the Advanced Group Quarters Data, which was released on April 20, 2011, via the Census Bureau's FTP site. (It is believed that this data was later incorporated into the 2010 Census Summary File 1 dataset.) The term, "group quarters," refers to living quarters other than traditional housing units. Examples of group quarters are: nursing homes, college dormitories, and military quarters, i.e., military barracks.

The release of the Advance Group Quarters data made it possible for the first time to approximate the number of group quarters military personnel who were deployed from North Carolina. The general approach was to compare the number of people living in military quarters in the 2010 Census against the same number from the 2000 Census. It is assumed that military quarters population is a good indicator of the overall military population of an area.

The City staff has used Census Bureau data at four different scales: the state level, the military county level, Fort Bragg annexation area level, and the City of Fayetteville level. Each is discussed below.

Analysis at the State Level - Table 3 below shows the number of persons living in military quarters (i.e., barracks) in North Carolina in 2000 and 2010.

Table 3
Number of Persons Living in Military Quarters in North Carolina in 2000 and 2010

Geographic Area	2000 Census	2010 Census	Absolute Change, 2000-2010	Percent Change, 2000-2010
North Carolina	37,022	26,326	-10,696	-28.89%

The data in Table 3 show that the military quarters population decreased by 10,696 between 2000 and 2010. It seems reasonable to conclude that at least part of this decrease was due to the Census Bureau's procedures for counting deployed military personnel from the various military bases in North Carolina.

However, other factors could have affected this decrease. For example, the decrease could be a function of modernization programs at military bases in North Carolina. For example, a base might have torn down some barracks between 2000 and 2010; in this situation, it is assumed the base would have provided opportunities for the displaced military personnel to live off base.

Analysis at the Military County Level - "Military County" refers to any county with people living in military quarters. Table 4 below shows the number of persons living in military quarters in North Carolina by county in 2000 and 2010. The counties are ranked in the order of their military quarters population in 2000.

Table 4
Number of Persons Living in Military Quarters in North Carolina, by County,
in 2000 and 2010

Geographic Area	2000 Census	2010 Census	Absolute Change, 2000-2010	Percent Change, 2000-2010
Onslow Co	18,491	16,697	- 1,794	- 9.70%
Cumberland Co	13,857	5,949	- 7,908	-57.07%
Craven Co	3,420	2,986	- 434	-12.69%
Wayne Co	563	594	31	5.51%
Richmond Co	374	0	- 374	-100.00%
Brunswick Co	222	4	- 218	- 98.20%
Pasquotank Co	33	41	8	24.24%
Dare Co	27	6	- 21	- 77.78%
New Hanover	22	29	7	31.82%
Carteret Co	13	15	2	15.38%
Pamlico Co	0	4	4	
Mecklenburg	0	1	1	
Total-NC	37,022	26,326	-10,696	- 28.89%

As shown above, Cumberland County (the home of Fort Bragg) experienced the largest absolute decrease in military quarters population of any county in North Carolina between 2000 and 2010.

It is assumed that this decrease is significantly related to deployment of troops from Fort Bragg around the time of the 2010 Census, and to the Census Bureau's procedures for counting deployed military members.

According to The Fayetteville Observer, Fort Bragg officials estimate that 13,000 soldiers returned to Fort Bragg in 2010 after being deployed to Afghanistan, Iraq, and Haiti. It was estimated that many of these returning troops returned after the date of the 2010 Census (April 1, 2010). (Fayetteville Observer, 3/30/11, p. 1A.)

Annexation at the Fort Bragg Annexation Area Level - A large part of Fort Bragg was annexed into the City of Fayetteville on September 1, 2008. Since the date of annexation, the military quarters population of this part of Fort Bragg has declined significantly. This decrease in the military quarters population definitely impacted the population of the City of Fayetteville, as reflected in the population estimates prepared by the State Demographer.

Table 5 shows data for the part of Fort Bragg annexed into the City of Fayetteville for four time periods (as of the 2000 Census, as of July 1, 2008, as of July 1, 2009, and as of the 2010 Census).

Table 5
Data for the Part of Fort Bragg Annexed into the City of Fayetteville Effective 9/1/08

Population Components	As of 2000 Census (1)	As of July 1, 2008 (2)	As of July 1, 2009 (2)	As of 2010 Census (3)
Total Number Housing Units	4,142	4,338	4,338	4,185
# Vacant Housing Units	103	500	500	379
# Occupied Housing Units	4,039	3,838	3,838	3,806
Average Household Size	3.7096	3.6201	3.6201	3.1742
Household Population	14,983	13,894	13,894	12,081
Group Quarters Population	13,132	12,053	11,028	5,116

Total Population	28,115	25,947	24,922	17,197
---------------------	--------	--------	--------	--------

Sources:

1. The data as of the 2000 Census are based on a tabulation of 2000 census blocks that were completely within the boundaries of the area annexed in 2008. When 2000 census blocks straddled the annexation boundary, City staff worked with a staff member from Fort Bragg in allocating housing units and population to the part of the block included within the annexation boundary. The City had to submit these estimates, based on 2000 Census data, to the US Justice Department for preclearance of the annexation of Fort Bragg.
2. The housing count data and the household population data for July 1, 2008 and for July 1, 2009 are from information provided by Fort Bragg officials to the City for submission to the State Demographer. The group quarters population data for July 1, 2008 and for July 1, 2009 are from information provided by Fort Bragg officials to the State Demographer. The State Demographer used all of this information in preparing her "standard" estimate of population for the City of Fayetteville.
3. The data as of the 2010 Census are based on a tabulation of 2010 census blocks that were completely within the boundaries of the area annexed in 2008. This involved using GIS to join block-level group quarters data, by facility type, to the shape file of census blocks.

The information in Table 5 above shows that there was a gradual decrease in the group quarters population in the Fort Bragg annex area between the 2000 Census and July 1, 2009. This might have been a function of the demolition of old barracks and the provision of opportunities for barracks residents to move off-post.

The information in Table 5 above also shows that there was a very sharp decrease in the group quarters population in the Fort Bragg annex area between July 1, 2009 and the 2010 Census. This was very likely due to the deployment of troops living in barracks on Fort Bragg, and to the Census Bureau's procedures for counting deployed military members.

The information in Table 5 above also suggests that the impact of deployments can be detected in the Fort Bragg annex area, in terms of a decrease in household population between July 1, 2009 and the 2010 Census. (It should be noted that in addition to barracks, many people on Fort Bragg live in traditional family units. These units are typically single-family detached units.) For example, while the number of occupied housing units declined slightly, the average household size decreased significantly. This might be because of the deployment of one adult from the household. Under this scenario, another adult would have been left in the household, along with any children from the household.

Analysis at the City of Fayetteville Level - The decrease in the military quarters population within the part of Fort Bragg that was annexed into the City of Fayetteville in 2008 has definitely impacted the overall population of the City of Fayetteville.

For example, the overall population of the City according to the 2010 Census was only 200,564. Prior to the release of the 2010 Census data for Fayetteville, the North Carolina State Demographer had estimated that the City's population was approximately 208,000.

	<p>It should be noted that this analysis of deployment impacts has not included a study of neighborhoods located off-post from Fort Bragg but within the City of Fayetteville. It is possible that if such a study were done, it would reveal that average household size was suppressed by the absence of an adult from the household who was deployed at the time of the 2010 Census.</p> <p>Officials from another military community in North Carolina, Jacksonville, have reported that there was an undercount of household population in the Jacksonville area. It is believed that the undercount resulted in part from confusing instructions on how to fill out the Census form. A study of this problem has not been done in the Fayetteville area.</p> <p>Summary of the Impacts of the Current Procedure</p> <p>The study of Defense Department data outlined above, along with the City staff's analysis of Census Bureau data at several geographic scales, suggest that the 2010 Census populations of military base communities in North Carolina were significantly impacted by the Census Bureaus' procedures for counting military members who were temporarily deployed overseas to a conflict zone. It is unfortunate that many of these deployed members of the military were apparently deployed just prior to the 2010 Census. This meant that under the current procedures of the Census Bureau, they were not counted in state, county, and city resident population counts. However, if the Census Bureau will adopt the suggestions outlined in the partnership's letter, this situation will likely not happen again.</p>
c00455	<p>I encourage you to eliminate the rule that counts incarcerated people as residents of the community where the prison is located, rather than their home community. This "prison gerrymandering" tends to enhance the political power of rural white communities at the expense of urban communities of color, and is out of touch with reality -- most prisoners do not intend permanent residence in the place where the prison is located, and probably would not be overly welcome there.</p> <p>If prisoners were allowed to vote, would their "local" community really want them helping decide who is on their school board? Since prisoners generally cannot vote, this is a contemporary equivalent of the Constitution's original "three-fifths" rule, counting enslaved blacks as equivalent to three-fifths of white people for purposes of allocating voting power.</p>
c00456	<p>Please stop trying to alter the spread of lies that using the prisons to alter the actual demographics of humanity across the nation by using prison inmates to manipulate gerrymandering. You stood up to the president during WWII by not allowing access to citizens information, now it's time to stand up once again, for the sake of honesty and to show your integrity once again.</p>
c00457	<p>This comment is with regards to the Census Bureau's proposal to continue to count incarcerated persons as residents of the correctional facility. Incarcerated people should be counted at their home communities in the next census in 2020. A prison is not a residence. A prison is a prison, a place where someone is forced to be for some period of time before likely returning to the city or area where they made their home before entering the correctional system. Counting incarcerated persons as the Census Bureau did at the last census inaccurately represents both the person's home community and the prison's host community. This inflates the political power of the area where the prison is located and deflates the political power of the person's home community. This distorts the redistricting</p>

	<p>process.</p> <p>Thank you for considering my comments, and please change the policy.</p>
c00458	<p>As a teacher for ten years in a large county correctional facility in _____, I was able to learn the stories of many of the inmates who were in my classes. While some of them resided in the Congressional district where the facility was located, many more came from other parts of _____ or other states entirely.</p> <p>Many of my students were arrested while visiting relatives. During a drug raid, everyone in the house at the time would be swept up, and unable to make bail, these visitors would be incarcerated only until their cases were resolved. They clearly were not local residents.</p> <p>In fact, a large portion of the population at this facility was pretrial, meaning that their stay was temporary. After trial, they could be released—and would return to their homes—or they could be sentenced to state or federal prisons.</p> <p>It is ludicrous, then, that such individuals would be counted in the Census for this district, just because they happened to be there at that time.</p> <p>Counting incarcerated people as residents is not only unfair, it is unconstitutional. The U.S. Census Bureau has the power to right this wrong. I urge you to reconsider the residence rules for the 2020 Census.</p>
c00459	<p>The undersigned philanthropy leaders appreciate the opportunity to submit these comments in response to the Census Bureau’s <i>Federal Register</i> notice regarding the 2020 Residence Criteria and Residence Situations, 81 FR 42577 (June 30, 2016) and the extension on the comment period announced on July 25, 2016.</p> <p>The census is enshrined in the first Article of the U.S. Constitution as an essential element of our democracy. Beyond the fact that the census is the basis for apportioning seats in the U.S. House of Representatives, the data are used to draw congressional and state districts; distribute billions of dollars in federal funds to states and localities; provide evidence in litigation, such as cases dealing with civil rights and election-related issues; determine community-based service needs such as programs supporting children and low-income families; assess the implementation of laws addressing equity in education, housing, the workplace, and criminal justice; guide companies in locating businesses and hiring employees; and much more.</p> <p>Our institutions and our grantees are heavily dependent on census data in the philanthropic work we undertake. Therefore, we are committed to preserving and enhancing the integrity and accuracy of the census and improving the count of those segments of the population that historically and persistently have been missed in prior censuses, including communities of color, immigrants, young children, and rural and low-income populations. In fact, many of us are funding activities that support the Census Bureau’s mission for an accurate 2020 census.</p>

We share the Bureau’s goal of a fair and accurate census. However, counting every person is not enough; they must be counted in the right location to ensure a truly accurate result. Accordingly, we are very concerned that the proposal for 2020 residence criteria continues to count people who are incarcerated on Census Day in the prison facility rather than their pre- and post-incarceration home.

The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time,” but fails to follow that principle when counting incarcerated people, who are regularly moved between facilities while incarcerated. Such people are “usual residents” of the home (and community) in which they lived before the government moved them involuntarily to a temporary prison setting. The expectation is that the incarcerated individual will again return home once the period of detention has been served.

When the Bureau sought comments last year on its residence rules for 2020, 96 percent of the submissions regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address. This level of consensus among stakeholders and experts, which is based on a thorough understanding of the realities of modern incarceration, is extraordinary and deserves far more consideration than it was given.

Moreover, the Bureau’s proposed method of counting the incarcerated population is inconsistent with its proposal for counting other groups that eat and sleep in a location that is not their usual residence. For example, the Bureau decided that other populations, such as military personnel deployed overseas, should be counted at their home address despite lengthy absences from their usual residences during the time of the census. It revised the criteria for deployed military personnel even though there were far fewer comments related to this subject than on the prison miscount. This calls into question the utility of the public comment process.

Additionally, the proposed rules will count boarding school students at their home address, even if they spend most of their time at the school. The proposed residence criteria would also count juveniles in residential treatment centers at their home because “most people in residential treatment centers for juveniles only stay at the facility temporarily and often have a usual home elsewhere that they return to after treatment is completed.” These cases are identical to the situation for incarcerated people: It is a temporary stay, and they have a usual home elsewhere to which they will return to once the sentence is served.

Accordingly, we are disappointed that the Census Bureau continues to carve out an unexplained and unsupported exception for incarcerated people that counts them in the wrong place, creating unwelcome and damaging distortions to our democracy.

American demographics and living situations have changed dramatically in the two centuries since the first census, and the census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Those changes, however, have not extended to counting incarcerated people in the right place. This reduces the accuracy of the census data for communities of color, in particular, with significant results. For example, because African Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is especially detrimental to ensuring proper political representation of these communities.

	<p>In conclusion, we believe that in order to produce an accurate 2020 census, the Bureau should count incarcerated people at their home address, not at the prison facility where they happen to be located on Census Day. We hope the Bureau’s final 2020 Census Residence Criteria reflects this change for the 2020 census.</p> <p>Thank you for this opportunity to comment on the 2020 Residence Criteria and Residence Situations.</p>
c00460	<p>The League of Women Voters of Connecticut appreciates the opportunity to comment on the Census Bureau’s practice of counting incarcerated persons as residents of the communities where they are detained on Census Day.</p> <p>The League of Women Voters of Connecticut opposes the practice of prison gerrymandering. It has a direct and, we believe, negative impact on redistricting for legislative districts.</p> <p>The League believes that for districting purposes, incarcerated persons should be counted in their hometown populations, not in the communities where they are incarcerated. We believe that it is vital that legislative districts reflect the diversity of the populace they represent and serve, especially with regard to racial and ethnic diversity. In the state of Connecticut most corrections facilities are located in rural, predominately white communities while the prison populations are disproportionately persons of color. Towns where corrections facilities are located appear to have more racial and ethnic diversity than they actually do.</p> <p>In addition to skewing the picture of a community’s racial and ethnic diversity, prison gerrymandering leads to increased representation for communities housing prisons, while denying full representation to the communities the inmates call home and are most likely to return to upon their release. Prison gerrymandering increases the representation of some communities while diminishing the representation of all others.</p> <p>The League of Women Voters of Connecticut encourages the Census Bureau to bring an end to the practice of counting prisoners where they are incarcerated in the 2020 Census.</p>
c00461	<p>As former Directors of the U.S. Census Bureau, we write respectfully to encourage your consideration of a different Residence Criteria governing where incarcerated persons are counted in the decennial census than the one proposed in the <i>Federal Register</i>, 2020 Census Residence Criteria and Residence Situations, FR Doc. 2016-15372 Filed 6-29-16. For the reasons set forth below, we believe the Census Bureau should reverse its current policy and count incarcerated persons at their home address, instead of at the facility where they are housed on Census Day.</p> <p>The census residence rules are grounded in the Census Act of 1790, which established <i>usual place of residence</i> as the guidepost for determining where to place people who are counted in the census, whether in a household or group facility. The Census Bureau further defined this concept as “where a person lives and sleeps most of the time.”</p> <p>The Census Bureau fully understands, of course, that it cannot easily apply this seemingly simple description to millions of people who maintain more than one residence, or who are temporarily away from home during the census, with a “one size fits all” approach. As</p>

another former director, John G. Keane, noted in testimony before the House Subcommittee on Census and Population in 1988, “Usual residence is not necessarily the same as legal residence, voting residence, or the place where a person is found on Census Day” (Testimony of Dr. John G. Keane, Director, Bureau of the Census, before the House Subcommittee on Census and Population, “Census Residence Rules: Military Personnel Abroad,” April 18, 1988, Serial No. 100-49). We commend the bureau for its careful consideration of a myriad of living situations for which *usual residence* is not easily established. Equally important, the bureau has recognized that demographic and normative changes warrant frequent reevaluation of the residence criteria, to ensure that the decennial census produces the most accurate profile possible of our nation’s population and communities.

An illustrative example is the Census Bureau’s decision to reverse a century-old rule governing where to count students attending college (and living away from home) for the 1950 Census. Prior to 1950, most college students were counted at their parents’ home, in accordance with the first formal residence rules established in 1850. As the Committee on National Statistics documented in its seminal report on census residence rules, “*Once, Only Once, and in the Right Place*,” several factors influenced the Census Bureau’s decision to change course with respect to counting college students (National Research Council of the National Academies, “*Once, Only Once, and in the Right Place: Residence Rules in the Decennial Census*,” 2006). The bureau concluded at the time that “most students live in college communities for as much as nine months of the year, so the college is their usual residence,” making the new rule to count students at their college or university living quarters more consistent with the concept of usual residence. Notably, however, the changing demography of college campuses, propelled by the return of soldiers from World War II who took advantage of educational opportunities under the GI Bill, was another significant consideration. Finally, the bureau highlighted the importance of accuracy as a factor that supported a policy change, noting that the 1850 rule often led to misreporting (omissions and duplications) both by parents inclined to count their collegiate children as part of the household and by college students who received census forms at their academic year residence.

The evolution of the residence rule pertaining to college students demonstrates that a range of variables rightly bears on decisions that determine where people are counted in the census, especially for mobile population groups. We believe significant trends in the nation’s criminal justice system over the past 30+ years similarly warrant close examination and, ultimately, a reversal of the current rule that places incarcerated persons at the facility where they are housed on Census Day, rather than at their home address. We highlight three notable developments for your consideration:

- The prison population has increased from roughly 300,000 in 1980 to more than 2.2 million today; the proportion of the U.S. population that is incarcerated has increased four-fold in that time period. Therefore, the consequences of the Residence Criteria for census accuracy are far greater.
- Prisons are now more likely to be located in largely White (non-Hispanic) rural areas, while a majority of prisoners come from urban, often underserved, communities whose populations are disproportionately people of color. It is the latter communities to which incarcerated persons will likely return after serving their sentences and to which they maintain family and social ties. This factor is significant: the U.S. Supreme Court recognized in *Franklin v. Massachusetts* (505 U.S. 788, 1992) that the concept of usual residence in the census incorporated some element of “enduring ties” and “allegiance” to a community.

	<ul style="list-style-type: none"> ○ There is considerable turnover within the prison system itself, with large number of inmates leaving the system each year after completing their sentences (or being released pre-trial after being held in local jails for mere days) and many others being transferred frequently between facilities. Therefore, many incarcerated persons will <i>not</i> spend long periods of time at the facility where they are housed on Census Day. <p>In summary, a new rule that places incarcerated persons in their home communities would recognize the temporal nature of most incarcerations and produce census data that more accurately reflect the true demographic, social, and economic conditions both of communities that are the “usual residence” for most incarcerated persons <i>and</i> communities to which these individuals have virtually no ties beyond the siting of a prison facility. Stated another way, counting prisoners at their home address would improve the <i>distributional accuracy</i> of the census — an important goal in light of the census’ primary role as the basis for our representational system of government and the broader use of census data as a guide star for the prudent allocation of public and private resources.</p> <p>Thank you for your consideration of our views on this important issue.</p>
c00462	<p>The Interfaith Alliance of NYS; Inc. (TIANYS) along with "hundreds of allies around the country, are profoundly disappointed by the Census Bureau proposal to again count nearly 2 million people in the wrong place on Census day. Continuing this outdated practice will ensure an inaccurate 2020 Census and another decade of prison gerrymandering.'</p> <p>We stand by Prisoners of the Census Executive Director, Peter Wagner's following letter. TIANYS is concerned about the impact of the Bureau's decision to continue to count incarcerated persons as "residents" of the prison location instead of their home communities for several reasons which are highlighted further in Mr. Wagner’s letter.</p> <p>The reasoning is this: "The Census Bureau blatantly ignored the 96% overwhelming consensus urging a change in the Census count for incarcerated persons. This policy perpetuates the distortion of democracy that results from padding the population counts of communities with prisons. It seriously distorts redistricting at the local level of county commissions, city councils, and school boards. It also harms urban communities by not crediting them with the incarcerated population whose legal residence never changed. It creates legislative problems resulting in constitutional violations of one person, one vote requirements. And most disappointing, because it so clearly harms communities of colour by reducing the accuracy of Census data about communities of colour. Due to the fact that "African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly had for proper representation of African-American and Latino communities.”</p> <p>This on-going practice is not only morally wrong, but a true social injustice because it denies home communities of the resources needed to improve their already failing infrastructure. As people of many worldviews, we still know what injustice looks like, and will stand with and support those who are targeted by these policies.</p>
c00463	<p>Thank you for this opportunity to respond to the notice seeking comments on the Bureau’s proposed 2020 Census Residence Rule and Residence Situations (Document 81 FR 42577, June 30, 2016). The League of Women Voters of the United States (LWVUS) is</p>

disappointed by the proposal's recommendation to continue counting nearly two million people – incarcerated citizens -- in the wrong place.

The Census Bureau's decision to continue use of the "usual residence" rule when counting incarcerated citizens damages our democracy. Counting prisoners at their place of incarceration improperly inflates the population of that location and undercounts the population where a prisoner truly resides. Counting prisoners as if they are residents of the prison location unfairly gives greater representation to those voters who happen to live in districts that contain prisons. And it robs the prisoners' home districts of their rightful representation.

The Bureau's rationale for continued use of this outmoded system misunderstands the basic purpose of the Census. Article I, Section 2 of the Constitution created the Census for the purpose of ensuring fair representation. It provided the population information necessary for the apportionment of congressional seats. Since that time, the federal, constitutional interest in fair representation has been vastly expanded – through constitutional amendment and Supreme Court action – so it is simply misleading to characterize redistricting based on the Census as only a state matter, as the Bureau suggests. The federal interest in congressional redistricting and redistricting of states and municipalities cannot be ignored. The Constitutional interest in fair and equal representation should be recognized by the Bureau, rather than being dismissed.

Moreover, the Bureau's plan to leave the residence for prisoners question up to the states will undoubtedly lead to different standards for congressional, state and municipal elections around the country – contrary to the "one person, one vote" principle. Not only does such inconsistency not make sense, it leaves federal redistricting and state and local apportionment and redistricting decision open for political manipulation.

At the very least, federal prisoners incarcerated by the U.S. Government away from their state of residence must be counted as residing in their home state. Otherwise, the federal apportionment of congressional seats under the Constitution will be flawed. Having the federal government affect the apportionment count through its incarceration policies and locations is wrong.

Continued failure to update a rule that has gone unchanged in 225 years while the affected population has quadrupled in size is short-sighted and misguided. Choosing to disregard more than two centuries of change in our country, our laws, and our criminal justice system is unacceptable. The Census Bureau should count incarcerated citizens at their home addresses, where they expect to return, engage with community members and participate in the civic process. It is time for the Census Bureau to update its interpretation of this rule. The Census Bureau's insistence on counting incarcerated citizens only in prisons leads to inaccuracies in counts of rural and urban communities and disenfranchises large blocks of African American and Latino voters while undermining the redistricting process in states across the country. The distortion of state and federal legislative districts upsets the balance of power and disproportionately underrepresents minority populations in communities across the country. The League believes in a population count that accurately represents communities and citizens that live within them. The Census should ensure that every man, woman and child can have equal representation in our democracy. Counting incarcerated citizens at their home addresses is one of the fairest ways to protect our democracy and the true accuracy of the Census.

	<p>Thank you for the opportunity to comment on the proposed 2020 Census Residence Rule and Residence Situations.</p>
<p>c00464</p>	<p>The Asian American Legal Defense and Education Fund (AALDEF) submits this comment in response to the Census Bureau’s Federal Register Notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016).</p> <p>AALDEF, founded in 1974, is a New York-based national organization that protects and promotes the civil rights of Asian Americans through litigation, advocacy, education, and organizing. Voter access and political empowerment are at the center of AALDEF’s mission. For every major election since 1988, AALDEF has deployed poll monitors and volunteers to conduct the nation’s largest nonpartisan survey of Asian American voters, which records voters’ candidate preferences, issue priorities, and problems and obstacles that they encountered at the polls. We have also led redistricting efforts in New York City and numerous other jurisdictions across the country, contributing research and advocating for the creation of district maps that more accurately reflect the changing demographics of these jurisdictions and protect the voting rights of Blacks, Latinos, and Asian Americans.</p> <p>As a civil rights organization that has done extensive voting rights work, we write to advocate for census residence criteria that are consistent with the demands of equal protection and fair representation. Accordingly, we urge the U.S. Census Bureau to count incarcerated people at their home address, rather than at the particular facility where they happen to be located on Census day.</p> <p>It is an understatement to say that the American criminal justice system looks vastly different today as compared to 1790, when the planners of the first census established the concept of “usual residence.” With a five-fold increase in prison population over the last 40 years and more than two million people currently jailed, the United States is today’s world leader in incarceration.^{1/}</p> <p>While all racial groups have seen their incarceration rates increase, minority groups have starkly higher incarceration rates than white Americans. Whites are underrepresented in prisons, while Blacks, Hispanics, Asian Americans, and other minority groups are heavily overrepresented. Although Whites (non-Hispanic) are 64% of the U.S. population and 39% of the prison system,^{2/}</p> <ul style="list-style-type: none"> □ Blacks are 13% of the U.S. population, and 40% of the prison system; □ Hispanics are 16% of the U.S. population, and 19% of the prison system; and □ Asian Americans are 6% of the U.S. population, and 9% of the prison system.^{3/} <p>Blacks are incarcerated five times more than Whites are, and Hispanics are twice as likely to be incarcerated as Whites.</p> <p>These changes in the scope and the demographic of the American criminal justice system create new perspectives and amplify existing challenges when evaluating the implications and consequences of the census residence criteria. Currently, as a result of the U.S. Census Bureau’s policy of counting people in prison as residents of the prison, incarcerated individuals are grouped together with non-incarcerated individuals living in the surrounding community to form legislative districts in all states, except for New York, Maryland, Delaware, and California. These four states have passed laws to use other data for redistricting purposes, in direct response to the U.S. Census Bureau’s reluctance to move away from rules largely outdated and unjust as it pertains to incarcerated individuals.</p>

Indeed, the sheer size of the U.S. prison population, especially as simultaneously considered with the racial breakdown of incarcerated (and consequently, in many cases, disenfranchised) Americans and the rural or suburban location of most state and federal prisons, is cause for concern about the implications of this policy for voting rights, fair representation, and redistricting.

Given the data above, along with a formidable pool of academic and governmental research corroborating this summary, we believe that the U.S. Census Bureau's current residence criteria for people in prison have unjust consequences that may violate the Equal Protection Clause of the Fourteenth Amendment to the U.S. Constitution. At the federal, state, and local levels, prison gerrymandering (as many characterize the effects of the current census residence criteria) has inverse consequences for residents of prison-containing districts and residents of non-prison containing districts. District maps drawn according to the census data mean that:

Residents of prison-containing districts:

- Gain more impact per vote cast against their counterparts in non-prison-containing districts, since their district population contains incarcerated individuals, many of whom are not permitted to vote, but whose presence allows for the existence of the district as is

- Enjoy an increase in the representative-constituent ratio since politicians often do not consider themselves accountable to their incarcerated "constituents." Both practically and theoretically, this means that their concerns are given more representation in federal, state, and local legislatures, as compared with the concerns of their counterparts in non-prison-containing Districts.

Residents on non-prison-containing districts:

- Have less impact per vote cast than their counterparts in prison-containing districts.

- Suffer decreased power that their concerns and issues have in federal, state, and local legislatures against their counterparts in prison-containing districts who are effectively receiving more representation per person.

These considerations against the 2020 census residence criteria are even more compelling in light of the racial disparities between prisoner-sending communities and prisoner-receiving communities. Prisoner-sending and/or non-prisoner-receiving communities, the ones losing out on voting power and representation, are more likely to form urban districts of significant minority populations than prisoner-receiving communities. Meanwhile, most prisoner-receiving communities, the ones gaining in voting power and representation, are more likely to form rural, majority white districts.

In New York, 91% of prisoners are housed in facilities located in upstate New York, even though 66% come from and ultimately return downstate to New York City.^{4/} In 2002, before the state adopted legislation counting incarcerated people in their home communities for redistricting purposes, residents of the prison-containing, mostly-rural, and majority-white Wyoming County enjoyed significantly increased voting power and representation in the state legislature against the interests of the residents of the urban, heavily-immigrant, majority-minority Queens County, which contained the most over-populated districts in the State.^{5/} Indeed, if prisoners had been counted at their home residence, no fewer than seven State Senate districts would have been more than five 5% too small to constitute a district.^{6/} Similarly, at the federal level, seven congressional districts in the state would not have qualified as districts at all.^{7/}

Conclusion

“One person, one vote” and fair representation are sacred principles that are enshrined in the founding documents and philosophy of American democracy. Drastic changes in the scope and the demographics of the American criminal justice system have exacerbated the potentially unconstitutional implications that counting prisoners at their facilities has had against these principles. In light of the considerations above, AALDEF, as a civil rights organization concerned with protecting voting rights for all, urges the U.S. Census Bureau to amend its residence criteria to count incarcerated people at their home residence instead of the particular facility in which they are residing on Census Day.

We thank you in advance for your serious consideration of these comments, and appreciate this opportunity to submit a comment regarding the Census Residence Criteria and Residence Situations to the U.S. Census Bureau. Any questions relating to this comment should be directed to _____, Director, Democracy Program, at _____.

The Community Service Society of New York ("CSS") submits these Comments in response to the Census Bureau's ("Census") Federal Register Notice regarding the 2020 Census Residence Rule and Residence Situations, 81 Fed. Reg. 42577 (proposed June 30, 2016). Census has proposed to continue counting incarcerated people at the correctional facility where they are detained on Census Day. **We write to urge Census to reconsider its proposal and instead to count incarcerated people at their home address.**

CSS is an independent, not-for-profit organization that has addressed the root causes of economic disparity in New York for over 170 years. CSS utilizes research, advocacy, litigation and innovative program models that strengthen our city and benefit all New Yorkers. CSS's Legal Department works to end discrimination faced by individuals who have criminal conviction histories. The Legal Department develops and litigates cases on behalf of individuals and groups of persons with criminal conviction histories, and works toward legislative and policy solutions to the entrenched problems and barriers that they face.

The Legal Department's work to alleviate post-conviction discrimination and barriers to reentry has highlighted for us how important it is for communities impacted by mass incarceration - which are largely communities of color and low-income communities - to have access to the resources needed to help formerly incarcerated community members build stable and prosperous lives for themselves, their families and their communities. In order for these communities to effectively advocate for themselves, they must have equal access to representation and an equal opportunity to participate in the democratic process. Census's proposal to continue counting incarcerated people where they are detained will instead deny equal representation for communities impacted by mass incarceration by contributing to vote dilution.

CSS urges that Census recognize the following important concerns:

- Prisons are not a "usual residence" because incarcerated people generally maintain family and community ties to their home communities, not to the communities in which prisons are located: Census is wrong to consider incarcerated people as residents of the communities where they are detained because prisons are not a "usual residence." There is no opportunity for an individual detained behind prison walls to interact with the community where the prison is situated or to develop anything like normal "community ties." Prisoners do not engage in political, volunteer, school, employment or recreational activities outside the walls. They are not directly affected by what goes on in the local community. Instead, incarcerated people generally maintain family ties to their home community and usually return there when released. It is in these home communities - not in the communities where prisons are located - that incarcerated people access the support, stability and resources needed to successfully move on with life after returning home from prison. Counting prisons as their "usual residence" is an artificial construct that denies the reality of the situation and leads to unjust results.
- Census's decision to continue counting incarcerated people where they are detained undermines principles of equal representation and impacts incarcerated people's home communities by diluting the political representation available to those communities: Counting incarcerated people where they are detained has the effect increasing the political power and representation for the communities where they are detained (who do not bear any costs of this incarceration - these costs are paid by the state and federal governments) at the expense of incarcerated people's home communities. A disproportionate number of incarcerated people come from - and return to - communities of color and low-income communities that have been ravaged by mass incarceration and underinvestment. These communities are entitled to fair, proportionate representation as part of our democracy. This can be achieved if people are properly counted in the communities they call home, not the communities where they reside at

	<p>sufferance. Otherwise, census data may show that a given district is growing by virtue of the fact that its <i>prison population</i> is increasing – a perverse, inherently unfair and intellectually dishonest result.</p> <ul style="list-style-type: none"> • <u>Although New York and other states have addressed prison gerrymandering at the state level, Census must fix this problem at the national level:</u> In 2010, New York passed the New York Prison Gerrymandering Law which requires state and county governments to count incarcerated people at their home addresses when drawing legislative districts. The fact that New York (and other states) has taken this important step to address the problem of prison gerrymandering is encouraging. But the issue of equal representation and the dilution of representation for communities which have been impacted by mass incarceration is too important to be addressed through a patchwork of state and local measures. A national solution to this issue is needed. <ul style="list-style-type: none"> • <u>Incarcerated people should not be counted differently than other group of people who spend time away from their home communities:</u> Census has recognized that various groups of people - including boarding school students, members of Congress and truck drivers who sleep away from home most nights - should be counted in their home communities even though they spend significant amounts of time away from home. Census's decision to count these groups of people in their home communities recognizes the local connections these groups of people have and the need that they be counted and afforded political representation as part of these communities. Incarcerated people should not be treated any differently. <p>In sum, CSS strongly urges Census to end prison gerrymandering by counting incarcerated people in their home communities. To do otherwise is intellectually dishonest, unfair, and creates perverse results.</p>
c00466	<p>I am writing to request that the U.S. Census Bureau change how incarcerated persons are counted in the Census. The practice of counting incarcerated persons as "residents" of the prison location instead of their home communities is inaccurate, outdated, and completely unfair. Thank you for your attention to this matter.</p>
c00467	<p>The International Community Corrections Association submits this comment in response to the Census Bureau's federal register notice regarding the Residence Criteria and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census day ignores the realities of incarceration and people's connection to their community. The Bureau's proposal would mean another decade of decisions based on counting incarcerated people in the wrong place.</p> <p>The ICCA, as a private, non-profit, membership organization, acts as the representative voice for residential and other community corrections programs. As such, it expects of its members compassion, belief in the dignity and worth of human beings, respect for individual difference and a commitment to quality care for its clients. Given these values, we were disappointed to hear that the Bureau proposed to once again lump all incarcerated people together and count them at the facility where they happen to be located on Census day rather than at counting them where they all individually live.</p>

	<p>Our primary goal is the successful re-integration of the client into the community after their temporary stay in a correctional facility. Our 50 years of experience working toward that goal makes it clear that the way the Bureau counts incarcerated people does not match the realities of incarceration in this country.</p> <p>Counting incarcerated people at the location of the prison they temporarily happen to be in on Census day, instead of at home creates an inaccurate portrait of their home communities (as well as the areas where facilities are located). State, localities, and our member agencies rely on Census data, so when the data is flawed, their policy decisions are based on a distorted reality.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. My organization believes that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00468	<p>The Vera Institute of Justice (Vera) produces ideas, analysis and research that drive change in the systems people rely upon for safety and justice. Much of our work involves close partnership with state and local government and civic leaders. Since 1961, Vera has conducted research on people in jails and prisons across the United States.</p> <p>We write in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016) that proposes to continue counting incarcerated people at the particular facility where they are housed on Census day. Additionally, we understand that the Census Bureau is seeking information on the length of time people stay in prison and jail facilities to help inform this decision.</p> <p>Vera recommends changing the proposed rule to count incarcerated people in their home communities rather than the correctional facilities where they are housed. Because of the transitory nature of prison and jail housing, counting people in prisons or jails does not accurately reflect their residence situation. If you apply a standard on residency that makes provisions for people at boarding schools or on military deployment to be counted in their home communities, we believe that this should be applied in the same fashion for people in prison. Stays at individual prisons are typically less than nine months and often much shorter than total time incarcerated. Prison stays are transitory for a variety of reasons, such as managing crowding and population, providing needed services, or placement in higher or lower security institutions. And while jails have large impacts on people’s lives even if the stay is relatively short, many people are only in jail for a few days before being released.</p> <p>According to our findings detailed below from three different states on Census day, April 1, 2015, the median length of stay for a person at a particular prison facility was 9 months. The estimated national average length of jail stays was only 23 days.</p> <p style="text-align: center;">Median Length of Stay at Prison Facilities</p>

We have calculated information on median length of stay in prison facilities for three states: Washington, Oregon, and Nebraska. There are wide variations in correctional populations and prison and jail usage in the United States, but these states from two different regions of the country provide insight into the issue of residence.^{1/}

Nebraska

The Nebraska Department of Correctional Services has 9 prison or community corrections facilities for men, and 1 prison facility for women. It had an average daily population of just over 5,200 in April 2015. For the 4,891 men in Nebraska prisons, the median length of stay in a particular facility on census day (April 1, 2015), was 197.5 days; 58 percent of men had been in facilities less than 9 months. For the 322 women in Nebraska prisons, the median length of stay in a facility on census day (April 1, 2015), was 188.5 days; 63 percent of women had been in facilities less than 9 months.

Oregon

Oregon Department of Corrections has 13 institutions for men, and 1 institution for women. It had an average daily population of 14,655 in 2015.^{2/} For the 13,633 men in Oregon, the estimated median length of stay in the facility they were housed in on census day (April 1, 2015), was 343 days; 44 percent of men had been in their current facility on April 1, 2015 for less than 9 months. For the 1,300 women in Oregon, the estimated median length of stay in their current facility on census day (April 1, 2015), was 232 days; 55 percent of women had been in their current facility for less than 9 months.

While the median length of stay is closer to a year for men in Oregon facilities, and the highest for state data that we have reviewed, a large number of men—44 percent—still have stays under 9 months.

Washington

Washington Department of Corrections has 10 prison facilities for men, and 2 prison facilities for women, and 16 community corrections or work release facilities. In total, the state had an average daily population of just over 17,400 in 2015. For the 16,287 men in Washington DOC custody, the median length of stay in the facility they were housed in on census day (April 1, 2015), was 266 days; 51 percent of men had been in their current facility on April 1, 2015 for less than 9 months. For the 1,323 women in Washington DOC custody, the median length of stay in their current facility on census day (April 1, 2015), was 224 days; 55 percent of women had been in their current facility for less than 9 months.

Average Jail Stays

In 2013, the estimated national average length of stay in jail was 23 days. However, the distribution of the length of individual stays in jail is highly skewed: a large number of people are released from jail within a couple of days, and very small numbers have long stays, sometimes more than a year awaiting trial, or people who stay in local jails while serving a state prison sentence. Thus, if one used a median length of stay rather than average length of stay it would likely show a very low number, probably along the lines of 2 to 3 days. As far as we know, no one collects national census style data on median length of stay.

Conclusion

Given that our data analysis shows that people frequently serve short lengths of stay in prison and jail facilities of well under nine months, we believe that the Census Bureau should count incarcerated people at their home residence instead of the correctional facility. Furthermore, given that the United States has a very high incarceration rate, this issue could not be more pertinent. The counting of incarcerated individuals has a marked effect on the fairness of political representation. The process of redistricting, which relies on Census data, aims to ensure that each vote is of equal worth. However, the current census counting of incarcerated individuals hampers this effort and provides areas with prison and jail populations with disproportionate and undemocratic voting power. We therefore recommend that the Census Bureau count incarcerated people at their home residence.

Furthermore, given that the United States has a very high incarceration rate, this issue could not be more pertinent. The counting of incarcerated individuals has a marked effect on the fairness of political representation. The process of redistricting, which relies on Census data, aims to ensure that each vote is of equal worth. However, the current census counting of incarcerated individuals hampers this effort and provides areas with prison and jail populations with disproportionate and undemocratic voting power. We therefore recommend that the Census Bureau count incarcerated people at their home residence.

Vera researchers believe that the best way to gather home residence information for people in prison would be to require its inclusion in files maintained by state corrections departments. Requiring prisons and jails to maintain accurate information on home residence and emergency contacts would be consistent with international best practices on maintaining records about people in prison and jail. The United Nations Standard Minimum Rules for the Treatment of Prisoners (the Mandela Rules), adopted in 2015, include two such rules related to maintaining records on people in prison.

We appreciate the opportunity to comment on this important Residence Rule, and we support the Census Bureau's efforts to improve the accuracy of the Census count. Please do not hesitate to contact us if you have any questions regarding our data or analysis.

1/ The findings in this letter are derived from work supported under a set of agreements with the Nebraska Department of Correctional Services, the Oregon Department of Corrections, and the Washington Department of Corrections (the Agencies). The opinions contained herein are those of the authors and do not necessarily represent those of the Agencies.

2/ For Oregon, we have complete information related to movements between facilities for 96 percent of men, and 68 percent of women; we are missing information for 566 men, and 419 women. This adds some uncertainty to the estimate, especially for women. Nevertheless, the results are fairly similar to the other states.

c00469

I am writing to you in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). In the first paragraph below I share experiences that inform my opinion on this issue, and then turn to three reasons I am concerned about the Bureau's proposed decision.

	<p>Background: My first job after graduating from college in _____ was _____ the _____ State Prison for Women. I have spent much of my life since then working in, teaching about, and researching prisons. Currently I am _____ the _____ Women’s Prison, with approximately 15% of the women at the prison enrolled in my program. In addition, I am _____ _____ Correctional Institution, a large state prison in the rural _____ county _____. Finally, over the past 20 years I have frequently testified before various committees of the _____ General Assembly on a variety of issues related to prisons, the criminal justice system, and local government redistricting and have had hundreds of conversations with legislators about these issues.</p> <p>1) People in prison do not regard the institution where they are incarcerated as their home, even for the small number of people who have lived there and/or other prisons for most of their adult lives. If you ask them where “home” is, they will almost always tell you where they lived prior to incarceration or where their parents/children/significant others live now. Never once can I recall an adult who thought of their current prison as their home.</p> <p>2) The specific prison in which any one person is held is usually arbitrary and transient. The average length of stay at the _____ Women’s Prison is 19 months, but the median stay is much shorter. Women are constantly cycling in and out of the prison, usually because their sentences are fairly short, but also because they can be transferred at any time to one of the other two women’s prisons in the state. This transience is experienced even more by men in _____, as they are shuffled among 23 prisons.</p> <p>3) Neither the voters in surrounding electoral districts nor elected officials from those districts consider people imprisoned in their communities to be fellow citizens or constituents and they do not take the interests of those prisoners into account when casting ballots or carrying out their official duties. Counting disenfranchised prisoners as residents of their prison in effect transfers their votes to voters in the surrounding electoral districts (county/city council, legislative, or Congressional). Not only do these voters not take the interests of the prisoners into account, they may be more hostile to people in prison than the average voter in the county or state. (Legislators from upstate New York are an excellent example, but so is my own rural _____ county which houses a major state prison and where I have rarely heard a resident express concern about the needs or interests of men in the prison.) Equally important, elected officials do not see prisoners incarcerated in their electoral districts as their constituents. In a 2003 <u>survey of legislators in _____</u>, not a single legislator said they considered someone incarcerated in their district to be their constituent. By contrast, were people in prison to be counted as residents of their own home districts, the odds that at least some voters and their elected representatives would share the electoral interests of the incarcerated rises dramatically.</p>
c00470	<p>Thank you for the opportunity to share our thoughts concerning the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (August 31, 2016).</p> <p>Daily Kos urges the Bureau to change the method it uses to count incarcerated persons. We strongly recommend that incarcerated people be recorded as located in their home communities and permanent addresses – not as residents of the facilities where they are imprisoned.</p> <p>Many important comments from academics, experts, associations, organizations, politicians, and lawyers have</p>

been submitted, which are publicly available; argue the electoral, moral, and legal logic for counting incarcerated people at their permanent residence.

At Daily Kos, we echo these arguments and sentiments and will add to the conversation by illustrating the public support for this policy with the strength of our community.

Daily Kos is the largest progressive political publication in the country. Our site reaches 12 million unique readers every month. We reach twice as many people more via social media outlets like Facebook and Twitter. We provide a million community members with a platform to report news, connect with each other, and make change in their communities. The Daily Kos community numbers more than 2 million who are contacted daily via email with current news and opportunities to affect change with online campaigns.

Over the last month, Daily Kos has reached hundreds of thousands of people around the country to inform them about the practice of prison gerrymandering. With this information, over 29,000 community members contacted the Census Bureau to express their concern with the current practice and advocate for a change in the way the Census Bureau counts incarcerated people.

Additionally, we are submitting the signatures of 48,314 community members who signed an online petition.

Our Message to the U.S. Census Bureau:

Prison-based gerrymandering is inaccurate, outdated and distorts the democratic process. Four states and hundreds of municipalities have already moved to end this practice. Update the residence guidelines for the 2020 Census to eliminate prison-based gerrymandering nationally.

Below are some of the personal excerpts from our community, speaking to the breadth and depth of the impact of the policy of the Census Bureau's residency criteria and the upcoming census count.

People from all walks of life are aware of the need for a change and felt compelled to comment at the agency. The Daily Kos community urges you to understand the impact of wrongfully counting incarcerated people at prisons during the census count, and change your practice for the upcoming count.

o "As the sister of an incarcerated sibling, she is not and will never be a resident of the state she is incarcerated in. This is forced occupation and she should be counted in the state she calls home."

o "My husband and I work through our church with incarcerated people. From our personal experience, we have seen prisoners moved without notice within a short time for various reasons (as the stressed system tries to deal with overcrowding). It makes much more sense to count each person once in his/her home community, especially as that is where the person will need services once released."

o "As a former addictions counselor in several majority-black areas, I am well aware of the difficulties African American people face in making their voices heard and listened to in our country, as well as the unequal arrest rates and sentencing practices faced by African Americans. Shifting some of their political representation to other places compounds the inequalities they face."

o "As a former Director of Libraries for a state prison, these prisoners are quickly transferred from one place to another, so not using permanent addresses...does indeed skew the system of population count; certainly by county and political divisions."

o "Although legislators represent all the people in their district including non-voters, noncitizens, and children, counting prisoners at their prison instead of in their home community is uniquely problematic. Unlike other categories of non-voters, prisoners do not pay taxes, receive services, work, participate in civic life, or even interact with the general population in the community outside the prison. However, prisoners will participate in these activities in their home communities before incarceration and upon release. For these reasons among others, the Census should not count prisoners at their prison in order to ensure equitable political representation between differing communities in redistricting."

o "My brother was previously in prison for almost 5 years in a different Florida county from his permanent home address and so was not included correctly in the census. It would have made a difference..."

o "The census count is critical for FAIR representation and counting incarcerated people in facilities takes representation away from home communities--especially those of low income or communities of color. I know of a man who has been moved in the state of Florida 4 times, each time to a different voting district. If we really want our elections to be DEMOCRATIC, and all people represented in a FAIR way the census MUST be counted in the HOME place of the prisoner."

o "As a former prison inmate, I know first-hand how gerrymandering skews democracy..."

o "I am a retired sociologist. I have been a professor for decades, and I still use the Census. I have the highest respect for the Census Bureau. As a social scientist, an urban resident and a citizen, I believe that the Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address is outdated and inaccurate. It will affect the integrity of our data and the very core of our democracy's electoral base. I encourage you to not continue this practice for the 2020 Census. How this population is counted has enormous implications for representational government."

o "As a former certified/commissioned law enforcement officer I ask you to please ensure an accurate census by counting incarcerated people at their permanent address. This will ensure a more just democracy and representation for communities."

o "I live in Del Norte Co home of Pelican Bay State Prison. When you count prisoners who cannot vote you almost DOUBLE our small, poor population."

o "The small community I live near has two state prisons that have increased the population census of _____ (with incarcerated individuals) by at least 2000 individuals, maybe more. I am retired from the Department of Corrections system and was employed at the larger of the two facilities."

o "I've seen the consequences of this in Lassen County CA where the town of Susanville is the center of three different types of prisons (two state, one federal). Counting the prison population as part of the area's census makes Susanville appear as a much larger population than actually has access to services and retail outlets. People have lost income due to franchises being available to them even though the population wasn't enough to support the added retail."

o "I'm a clinical psychologist with fifteen years of experience working in a prison setting. If you will read the comments below and act on them, you can have a direct effect on recidivism and reduce the costs associated with prison systems."

o "I teach in an area with my students whose parents are incarcerated. This would greatly help with families and students."

o "As a recent Census worker, it confounded me that it wasn't always done this way! Many of the people in prison are NOT there for 10 years! That adds to the harm to specific communities and gives that representation to the wrong (wholly prison-based cities/towns) areas! This needs to be corrected and the census is coming very soon!"

o "I am deeply concerned because I live in a city that might be unfairly underrepresented due to prison gerrymandering."

o "I am a retired professor of political science. When I taught at the University of Kentucky I specialized in the study of incarceration. I believe the current Census Bureau policy regarding prison populations produces a biased description of the distribution of the population within the states. Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census."

o "As one who conducts genealogical research and relies on the decennial for invaluable information it is inconceivable that incarcerated people aren't allowed to be counted at their permanent address. You might be surprised how many citizens of the United States of America conduct genealogical research and how many of these have members of their families who are incarcerated. Be proactive and set the census correct for eliminating distortion of political representation and helping people conducting genealogical research."

o "I live near _____, Arizona, _____ County, a place that is home not to one but SEVEN prisons. Only one of them, the county lock-up, houses local people. The other six have inmates from as far away as New England..."

How this population is counted has enormous implications for representational government. _____, AZ, is only one small example, albeit a significant one given that _____ is home only to about 26,000 citizen-residents. "

o "I implore the Census Bureau to discontinue prison-based gerrymandering and move towards a model that is more representative of communities that house prisoners and prisoners are counted where they are actually from.

Counting inmates where they are incarcerated, rather than their permanent address implies that they are no longer a part of their home community, and are not likely to be re-integrated into their home community. Having worked for the U.S. Census Bureau for 30 years, I

	<p>understand the rules for institutionalized persons, but those rules are primarily to ensure that all persons are counted SOMEWHERE. It would be more accurate to count incarcerated persons as part of their home communities..."</p> <p>o "As a public health professional I have had the opportunity to delve into census data for various projects. Although I appreciate knowing the number of people incarcerated in jails it prisons in an area, I don't think it is right to count those people as part of the communities' population. It warps numbers for Pitcairn purposes and it also distorts the actual age, sex, and racial makeup of a community. For example, in Frio county Texas, prisoners comprise almost 10% of the population, contributing mostly younger men, making this community appear significantly different from what it would be without the prisoners. I urge you to change your practice of counting incarcerated people at prisons, instead of their home addresses.</p> <p>o "As a mental health counselor for the past 27 years I have worked with many families affected by addiction which resulted in incarceration. These are usually short incarcerations and since we live in a small rural area, those incarcerated are often sent out of state but they return home to their families in our community when they have serve their sentence.</p> <p>Because of this fact, I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day."</p> <p>This is a small sampling of the thousands of unique comments that we're sent to the Census Bureau. We hope that this illustrates how many people, including those in the criminal justice system, their families, and communities, are impacted by the manner in which incarcerated people are counted. Please consider the unprecedented number of public comments as an indicator of how the public feels about this practice.</p>
c00471	<p>I am writing in response to your proposed rules for counting incarcerated people: https://www.federalregister.gov/articles/2016/06/30/2016-15372/proposed-2020-census-residence-criteria-and-residence-situations.</p> <p>I am writing to express the professional opinion that prisoners are more appropriately counted at the residence they had prior to incarceration. First, jail inmates rarely are incarcerated for more than a few months, and their stay in jail is obviously temporary. There is absolutely no justifiable reason except simple convenience for counting them in jail instead of determining their usual residence.</p> <p>Those incarcerated in state or federal prisons are a more complex group, as there are obviously a group of people whose sentences will keep them in prison for decades. However, even these people are often moved between facilities.</p>

	<p>Moreover, many people in state prisons are there for very short stays. I have done a great deal of analysis of older National Corrections Reporting Program data and some analysis of more recent data. I know that different states have had different experiences with sending people to prison, but since the late 1980s, a significant fraction of people incarcerated in state prisons have been sent there on relatively short sentences for crimes that previously would not have resulted in a prison sentence at all. In addition, a growing fraction of people enter prison not on a new sentence, but on a revocation for violating the terms of parole. These people are often reincarcerated for relatively short periods and cycle in and out of prison. To claim that their “usual” place of residence is the prison is entirely unreasonable.</p> <p>Although I have not had the opportunity to do a detailed study of the matter, I ran a few tables from the new release of the National Corrections Reporting Program data to investigate how long state prisoners have been in prison. In one analysis, I examined the time between admission and release for that who had been released. Using the public release of NCRP for 2000-2014, I ran the table for time in prison for those who have been incarcerated at any time 2000-2014; 56% of prisoners had been in prison less than 1 year at the time of release. Another snapshot comes from the “in prison” public file, using the variable “time served at year end:” 34% of the inmates had been in state prison less than a year at the end of the year. To reiterate, although some prisoners are prisons for decades, for a majority, the time in prison is short.</p> <p>Further, when they get out of prison, they go back to the communities they were in at the time of arrest, not to the community that happens to be where the prison is. In all meaningful senses, the majority of prisoners “belong” to the communities they came from, not to the communities where they are imprisoned. Most prisoners have family members who spend money for telephone calls and visits and contributions to commissary accounts to support their incarcerated relatives.</p> <p>Counting prisoners where they are incarcerated has perverse and damaging social consequences. It gives unfair political representation to rural communities that house prisons. It underestimates the sizes of poor Black urban populations and produces distorted statistical pictures of rural places. As I noted in my comment on this subject last year, I calculate that there are seven Wisconsin counties in which incarcerated people are 3.2%-6.4% of the county’s total enumerated population, and there are 10 (of 72) counties in which a majority of the county’s enumerated Black population is incarcerated and another six where 25-50% of enumerated Blacks are incarcerated.</p> <p>Because all the weight of reason and evidence is on the side of enumerating prisoners at their usual residence, not where they are incarcerated, I am assuming that the major considerations in changing the rule are precedent, comparability with prior enumerations, convenience and cost. Providing a supplemental report of group quarters residences whose usual residence is deemed to be elsewhere would seem a preferable response to the problem of backward compatibility with prior censuses than to continue what is manifestly an unreasonable practice on all other grounds.</p>
c00472	<p>I am writing to urge the Census Bureau to revise its residence rules in order to count incarcerated individuals as residents of their home communities, not of the communities where prisons are located. I have worked in criminal justice for 10 years and have been an advocate for policies that reduce over-incarceration while supporting public safety, and resolutely believe that accurately counting incarcerated individuals is good public and social policy.</p>

	<p>The Census Bureau is wrong to consider incarcerated people as residents of the correctional facility because it results in extra representation to the communities that host the prisons. It is extremely harmful to urban communities by not crediting them with the incarcerated population whose legal residence never changed. It particularly reduces the accuracy of Census data about communities of color, whose members are disproportionately incarcerated. This is harmful to the schools, social services, and other resources in urban communities - particularly like the neighborhoods of Oakland, CA, where I live. Additionally, since 95% of incarcerated people will return to the communities they came from, it contributes to leaving these communities under-resourced to assist returning citizens in their reentry to society. This is bad for public safety and promotes the intergenerational cycle of incarceration.</p> <p>Thank you for your time.</p>
c00473	<p>I am a Board-Certified public health physician _____ the Centers for Disease Control and Prevention (CDC) _____. I was a commissioned officer in the United States Public Health Service _____ the HIV/AIDS Division from _____. Since 1987, I have focused on the HIV/AIDS, viral hepatitis, drug overdose issues related to injection drug use. That special interest has led to extensive work with prisons and jails.</p> <p>I believe the Census Bureau is making a significant error counting incarcerated people as residents of the prison or jail in which they are incarcerated oh Census Day.</p> <p>I urge the Census Bureau, in the 2020 Census, to update your interpretation of the usual residence rule and count people in jails and prisons as living at their home addresses.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right location.</p>
c00474	<p>I am writing to submit comments responding to the Census Bureau's federal register notice regarding the Proposed 2020 Census Residence Criteria and Residence Situations, 81FR 42577 published on June 30, 2016. I strongly urge the Census Bureau to reconsider its decision to continue counting people in correctional facilities on Census Day at the facility rather than at their permanent home address for the 2020 Census.</p> <p>As is the case with many states, correctional facilities in Massachusetts are most often situated in areas that are very dissimilar to the incarcerated persons' home communities. This distorts the redistricting process in Massachusetts because the populations of the districts where the facilities are located are artificially increased while at the same time the home districts of the incarcerated persons are essentially penalized by the decrease in population of these districts. I believe that this is inconsistent with the principal of equal representation. Because of this inconsistency, a resolution from the Massachusetts Legislature was submitted to the Census Bureau on August 14, 2014 urging that the 2020 Census "counts incarcerated persons at their residential address rather than the address of the correctional institution where they are temporarily located".</p>

	<p>I understand that following the 2020 Census, the Census Bureau intends to provide a product to the states in order to assist in reallocating prisoner population counts. Although this would potentially be helpful in reallocation efforts, it still does not eliminate the possibility of states being forced to defend their redistricting plans from litigation because of adjustments made to prison populations. As you are aware, Maryland and New York have taken state-wide approaches to reallocate their prison populations for redistricting purposes and both have been challenged in court.</p> <p>I join the Massachusetts' Special Joint Committee on Redistricting in supporting a change to count incarcerated people at their permanent residential home address. I again strongly urge the Census Bureau to reconsider this policy.</p>
c00475	<p>I am a resident of Maui, Hawai`i, and am submitting comments in opposition to the proposed 2020 Census “residence rules” that would continue to count incarcerated people in the wrong place, ensuring an inaccurate 2020 census.</p> <p>As way of introduction, I would like to share contextual information that shapes my testimony. For the past twenty-one years, Hawai`i has transferred incarcerated persons to private-for-profit prisons on the American continent as a “temporary solution” to overcrowding. Our incarcerated brothers (and formerly sisters too) have been transferred to private prisons in Texas, Minnesota, Mississippi, Tennessee, Kentucky, New Mexico, Oklahoma and Arizona.</p> <p>In 2014, Hawaii transferred 1328 prisoners or 24% of its incarcerated population to Saguaro Correctional Facility in Arizona under its contract with Corrections Corporations of America.^{1/} The majority of these men are of Kanaka Maoli^{2/} ancestry, the original inhabitants of the Hawaiian archipelago who have a genealogical relationship the lands and waters of Hawai`i.</p> <p>The men (and formerly women) of Hawai`i who have been transferred to private prisons on the American continent have been exported without their consent. They consider Hawai`i their home, and for many Kanaka Maoli, their ancestral homeland, that has been illegally occupied by the U.S.^{3/}</p> <p>During the past twenty-one years, incarcerated men and women have been transferred from Hawai`i to private prisons in other states, and sometimes, multiple states in any given year.</p> <p>To count Hawai`i’s incarcerated people in a state that they have been forcibly transferred to against their will, and without any intent to domicile, is irrational.</p> <p>In addition to being irrational, the proposed rule promotes risk dilution through gerrymandering, and reinforces institutional racism and discrimination against Native Hawaiians.</p> <p>Native Hawaiians are disproportionately incarcerated in Hawai`i’s criminal justice system, and are transferred to private out-of-state prisons at even higher percentages.^{4/}</p>

	<p>Fortunately, the solution is simple. The U.S. Census should count prisoners at their home addresses, where they have the strongest family and community ties, and NOT where they have been forcibly transferred to and incarcerated, thousands of miles away from their home in private-for-profit prisons.</p> <p>Thank you for the opportunity to comment on the proposed rule.</p> <p><u>1/ E. Ann Carson, Prisoners in 2014, U.S. Department of Justice (September 2015).</u> <u>2/ The United States uses the racialized legal term “native Hawaiian” or “Native Hawaiian.”</u> <u>3/ In 1993, the United States passed a Joint Resolution, known as the “Apology Resolution, acknowledging U.S participation in the overthrow of Queen Lili‘uokalani and the constitutional monarchy. The Resolution also acknowledges that the “indigenous Hawaiian people never directly relinquished their claims to their inherent sovereignty as a people or over their national lands to the United States, either through their monarchy or through a plebiscite or referendum.”</u> <u>4/ According to the Office of Hawaiian Affairs study in 2010, The Disparate Treatment of Native Hawaiians in the Criminal Justice System, 38.4% of Hawaii’s prisoner population is of Hawaiian or part-Hawaiian ancestry, although they only comprise 26% of the general population in Hawai‘i.</u></p>
c00476	<p>My name is _____ and I'm a _____ at _____ School of Law. I have worked primarily in prosecutor's offices and plan to do so after graduation. However, I am troubled by the state of the criminal justice system and the incentives we have created. Among these incentives are the various incentives to certain groups to keep people in prison. The Census Bureau currently allows for prison gerrymandering by allowing inmates to be considered residents of the places they are being incarcerated. This makes little sense because they are not there by choice. Moreover, it has the effect of disempowering communities with high proportions of incarcerated people when it comes to political power and transferring it to communities where there are prisons. I strongly urge you to stop the practice of prison gerrymandering.</p>
c00477	<p>I am writing to you because I would like to see an end to prisoner gerrymandering. I could sit here and list the multitude of reasons that this practice is unacceptable, but I am sure that by now you have all of that data available to you. I feel that one of two things should happen. Either we stop counting people for districts that they are incarcerated in but not residents of, or we allow everyone in prison to vote. I suspect if we gave people their right to vote back, even when they are incarcerated, that our criminal justice reform would kick in very swiftly.</p> <p>People who are incarcerated, the majority of which will someday return to their communities, still deserve to be represented. In the absence of that happening, the very least we could and should do, is give fairness and transparency to our voting and representation processes.</p>
c00478	<p>The Human Rights Defense Center (HRDC) submits this comment to the U.S. Census Bureau (Bureau) concerning the Proposed 2020 Census Residence Criteria and Residence Situations, published in the <i>Federal Register</i> on June 30, 2016.</p> <p>The Bureau has indicated that it will continue to count prisoners at their correctional facilities for residency purposes for the 2020 Census. While we understand the Bureau has taken this position based on the definition of “usual residence,” we raise the following objections.</p>

First, regardless of basing residency criteria on where people live and sleep, it is disingenuous to suggest that prisoners are “residents” of the locales where correctional facilities are located. Comparably, most reasonable people would agree that concentration camp detainees at Dachau, Bergen-Belsen and Auschwitz, located near towns of the same names, were not “residents” of those local communities. Yet that is apparently the position the Bureau has taken.

The Bureau has adopted rules that provide different census treatment for people attending boarding schools, members of Congress and military personnel deployed overseas; yet while prisoners share many of the same characteristics of those groups, the Bureau intends to count them as residents of the communities where they are incarcerated and not where they lived before they were locked up. This is illogical for a number of reasons, including:

- Prisoners’ “residence” at correctional facilities is not voluntary; they have no say where they are held, and such forced residency should not be counted as voluntary residency.
- Prisoners cannot vote and are largely excluded from participation in the local community.
- There is a disparate racial impact when black and Latino prisoners, who are over-represented in our nation’s prison system, are counted as “residents” of the primarily white, rural communities where prisons are often located – for example, the many correctional facilities sited in upstate New York.
- The location of prisoners at any given facility is not static; prisoners are regularly transferred from one prison to another, thus it cannot reasonably be said that a given facility is their “usual residence.”

In the latter regard, speaking from my own empirical experience, I was incarcerated in Washington State prisons for 17 years prior to my release in 2003; during that time I was transferred 7 times. Our associate director, _____ served 10 years in both county jails and state prisons prior to his release in 1999, and during that period served time at 6 different facilities. Following our release we both returned to our homes – our residences – where we had lived before we were incarcerated.

In fact, around 95% of people presently in prison will one day be released. Does the Bureau seriously think they will remain at the prison or the community surrounding the prison upon their release? Or is it more likely that they will return to their pre-incarceration homes, families and children – i.e., the residences where they lived prior to being imprisoned?

Note that upon release, prisoners are typically given a small amount of “gate money” *and* a bus ticket or other means of transportation. Obviously, prison officials recognize that most prisoners will not be staying at or near the prison upon their release, but will return home – thus the prison system provides them the means of getting there. If correctional facilities were truly prisoners’ “residence,” which is the position the Bureau has taken, then bus tickets upon release wouldn’t be necessary. That makes no sense, of course, just as the Bureau’s policy of counting prisoners as residents of the facilities where they are incarcerated makes no sense.

Further, note that city and county jails primarily hold pre-trial detainees who have not been convicted and are awaiting trial. As such, they are eligible to vote to the same extent as other citizens so long as they meet other applicable eligibility requirements. And when pre-trial detainees vote, it is not as residents of the district where the jail is located; rather, they vote via absentee ballot *for the district where they resided before being incarcerated* – i.e., their actual residence.^{1/}

Approximately 2.3 million people are incarcerated in prisons and jails in the United States, and the Bureau's practice of inaccurately reporting the residences of those individuals as being the communities where the facilities are located is as great an error as failing to accurately report the entire state populations of North Dakota (756,927 population), Wyoming (586,107 population) and Vermont (626,042 population), *combined*.^{2/}

While we realize the Bureau has proposed to “incorporate similar group quarters information in the standard Redistricting Data (Pub. L. 94-171) Summary File for 2020,” that simply does not go far enough because the actual Census data will continue to count prisoners as residing where correctional facilities are located, which is not accurate.

In conclusion, the Census Bureau is tasked with conducting a decennial national census pursuant to Article I, Section 2 of the U.S. Constitution. We submit that counting prisoners as residents of the local communities where correctional facilities are located is inaccurate and skews the census results. If the Bureau endeavors to ensure accuracy in its work, that practice must end; the census should be done correctly or not at all if the results are flawed.

Thank you for your time and attention in this regard.

c00479

The Harvard Prison Legal Assistance Project ("PLAP") writes to submit comments in response to the Census Bureau's federal register notice regarding the 2020 Decennial Residence Rule and Residence Situations, 81 Fed. Reg. 42,577 (proposed June 30, 2016). We urge the U.S. Census Bureau to count and enumerate incarcerated people at their last known home address, rather than at the particular facility where they happen to be incarcerated on Census Day.

PLAP is a student practice organization at Harvard Law School. PLAP student attorneys represent Massachusetts state inmates charged with violating prison regulations at their disciplinary hearings. PLAP students also argue before the Massachusetts Parole Board for prisoners facing parole revocation or rescission and second-degree life sentence hearings. In addition, PLAP provides inmates with assistance in matters ranging from civil rights violations to confiscated property.

In each of these roles, PLAP students get to know their clients-the inmates-as people with families, homes, and communities outside their prison walls. The Census Bureau is wrong to consider incarcerated people as residents of the correctional facility because under

	<p>Massachusetts law, a legal residence is the place that people choose to be and do not intend to leave; because prison is not voluntary, it cannot be a residence.^{1/} Moreover, inmates neither develop ties with the communities that surround their facilities nor take advantage of the services and resources that those communities offer. Their intention is to return to and work toward opportunities in their pre-arrest communities. Besides, the average institutional length of stay in a Massachusetts state correctional facility was just over two years (812 days) on January 1, 2015.^{2/} The Census, on the other hand, takes place only every ten years—five times the length of the average prison stay.</p> <p>The Bureau has chosen to continue counting people in the wrong place, ensuring an inaccurate 2020 Census. Counting incarcerated people as if they were residents of their correctional facilities makes the Census less accurate for everyone: Massachusetts cannot draw redistricting plans based on legal residence because it is required by its state constitution to use the federal census as a basis for determining all districts. Therefore, areas where prison facilities are located, which tend to be rural or suburban and largely white, are overrepresented; other areas, which tend to be urban and more diverse, are underrepresented. A change on the federal level would rectify the inequalities in counting prisoners and promote a definition of residence that is consistent with the experience of the inmates with whom we work.</p> <p>Accordingly, we urge you to reconsider your initial decision and count incarcerated people at their homes—the places where they have lived, plan to live, and have strong ties.</p> <hr/> <p>¹ See <i>Dane v. Board of Registrars of Concord</i>, 374 Mass. 152 (1977) (holding that prisoners are presumptively residents of their home districts and not of the prison district and allowing the Concord registrar to accept registrations only from prisoners who had shown they had willingly established themselves as residents of the town of Concord). See also <i>Paul Ramos v. Board of Registrars of Voters of Norfolk</i>, 374 Mass. 176 (1978) (upholding the Norfolk registrar's refusal to register 619 residents of Norfolk prison as residents of the town because there was no showing of willing residence).</p> <p>² MASSACHUSETTS DEPARTMENT OF CORRECTION, PRISON POPULATION TRENDS 2014 44 (2015), http://www.mass.gov/eopss/docs/doc/research-reports/pop-trends/prisonpoptrends-2014-05042015-final.pdf.</p>
c00480	<p>On behalf of The Leadership Conference on Civil and Human Rights, a coalition charged by its diverse membership of more than 200 national organizations to promote and protect the civil and human rights of all persons in the United States, and the undersigned organizations, we appreciate the opportunity to provide comments in response to the Census Bureau's Federal Register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016).</p> <p>The Bureau's proposal to continue counting incarcerated people at the facility in which they are housed on Census Day ignores the transient and temporary nature of incarceration. It also is inconsistent with other changes included in the same set of proposed residence criteria for the 2020 Census. If made final, this proposal will lead to another decade of vital policy decisions based on a census that counts incarcerated people in the wrong place. Therefore, we urge you to count incarcerated people as members of the community from which they come and not as members of the community in which they are incarcerated on Census Day.</p> <p>American demographics and living situations have changed dramatically over the more than two centuries since the first census in 1790. Census methods and operations have evolved in response to many of these changes, in order to continue to provide an accurate portrait of</p>

the nation, its people, and its communities. But despite significant changes in the location and composition of the incarcerated population, especially over the last several decades, the policy governing the enumeration of incarcerated persons has not similarly evolved to reflect these consequential shifts in the relationship between the location of incarcerated persons on Census Day and their “usual residence.”

The Census Bureau’s decision to maintain the status quo ignores overwhelming public comments in favor of an updated policy that recognizes the temporal nature of most incarcerations. Moreover, the proposed method of counting the incarcerated population is inconsistent with how the Census Bureau counts other groups that eat and sleep in a location that is not their usual residence. Finally, the policy that the Census Bureau is proposing to retain will result in census counts that skew the distribution of political representation and our very understanding of the composition and well-being of communities across America, for an entire decade following the census.

The Census Bureau’s Proposal is against the Weight of Public Consensus

The Census Bureau blatantly ignored the overwhelming consensus urging a change in the census count for incarcerated persons. When the Bureau asked for public comment on its residence rules last year, 96 percent of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address. This level of consensus among stakeholders, which is based on a thorough understanding of the realities of an incarceration system that regularly shuffles incarcerated people between facilities, deserves far more consideration than it was given.

The Census Bureau’s Proposal Treats Similarly-Situated Populations Inconsistently and Fails to Recognize the Range of Factors that Often Influence the Criteria Governing Different Situations

It is important to recognize and acknowledge that the concept of “usual residence” established by the Census Act of 1790 has not been consistently applied, through time and across living situations. While the Census Bureau notes in its proposed 2020 Census Residence Criteria that usual residence “is not necessarily the same as a person’s voting residence or legal residence,” former Census Director John G. Keane, in testimony before Congress in 1988, added that it is also not necessarily “*where a person is found on Census Day*” (emphasis added). *i*/

Equally important is the concept of “enduring ties,” which the U.S. Supreme Court referenced in its opinion in *Franklin v. Massachusetts* *ii*/, a case that unsuccessfully challenged the Census Bureau’s decision to count military personnel serving overseas in the 1990 Census for purposes of congressional apportionment. The majority opinion in *Franklin* noted that the concept of usual residence “has been used broadly enough to include some element of allegiance or enduring tie to a place.”

The Census Bureau’s decision with respect to incarcerated persons is especially troubling in light of its concurrent decision to *change* the rule governing where it will count deployed military personnel who are stationed or assigned to a U.S. base. Under the Bureau’s proposal, deployed service members will be counted at their home address (usual residence) in the U.S., even if they *live and sleep elsewhere for most of the time* at the time the census is conducted. Like most incarcerated persons, these service members are away from their homes

temporarily; the average length of deployments can vary greatly from decade to decade, depending on U.S. engagement in theaters of military conflict overseas. In its summary of comments on the proposed Residence Criteria for the military overseas, the Census Bureau cites concerns about the need for accurate data to support funding, planning, and services in military communities, but is dismissive of similar arguments regarding an accurate portrait of communities that most incarcerated persons consider to be their usual home and to which most will return following their temporary confinement.

Changing one policy, but not the other, illuminates a glaring inconsistency in the proposed 2020 Census Residence Rules that the Census Bureau has not adequately explained.

The Census Bureau’s Proposal Will Reduce the Accuracy of Data and Result in Vote Dilution

Failure to count incarcerated persons at their home address preserves an unacceptably discriminatory census result that deprives underserved urban neighborhoods of fair representation, while shifting political power to communities that do not represent the interests of incarcerated persons or their families. Because African-Americans and Latinos are disproportionately incarcerated, **iii/** counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. Thus, predominantly African American and Latino communities will continue to be hit especially hard by an outdated policy that renders so many of their young men invisible for all statistical purposes.

The proposed counting rules will perpetuate the distortion of democracy that results from padding the population counts of communities with prisons. When state and local officials use the Census Bureau’s prison count data attributing “residence” to the prison, they give extra representation to the communities that host the prisons and dilute the representation of everyone else. This vote dilution is particularly extreme for urban communities and communities of color that have disproportionately high rates of incarceration.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place, to reflect enormous demographic shifts, changes in the prison infrastructure, and the urgent needs of communities.

ii/ 505 U.S. 788 (1992).

iii/ According to Prison Policy Initiative’s analysis of 2010 Census data, Blacks are incarcerated at five times the rate of non-Hispanic Whites, and Latinos are incarcerated at a rate almost two times higher than non-Hispanic Whites. Comments of Prison Policy Initiative, regarding the Residence Rule and Residence Situations, 80 FR 28950 (May 20, 2015), dated July 20, 2015.

c00481

We at Common Cause appreciate the Census Bureau’s invitation to submit comments in response to its federal register notice regarding Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). To ensure that each district in this country fairly captures its residential population, for purposes of voting and fair representation, we urge the Bureau to count incarcerated people at their home addresses, rather than at the prison facilities in which they are temporarily located. Making this change to the residence rules is

fundamental to ensuring that votes from prison districts do not hold more power than those from districts without prisons. It is also essential to avoid inappropriately removing representation from the home districts to which these incarcerated individuals most typically return upon completion of their sentences.

Founded in 1970, Common Cause is a national nonpartisan advocacy organization dedicated to empowering citizens in making their voices heard in the political process and holding government accountable to the people. Ensuring that every eligible citizen has an opportunity to cast a vote, free from discrimination and obstacles, is fundamental to a democracy that aims for and professes representation of all. Every voice counts, and every vote must be counted. To that end, each vote cast must be weighed fairly, in keeping with the principle of “one-person, one-vote” announced by the Supreme Court in *Reynolds v. Sims*. To protect these principles, Common Cause, through its national office and 35 state organizations, advances a number of elections reforms throughout the country, including the elimination of prison-based gerrymandering.

The practice of prison-based gerrymandering is at odds with our principles of democracy. Prisons are typically located in rural – often white-majority districts¹ - and in many instances the incarcerated persons make up a large majority of the district’s population. States engaging in prison-based gerrymandering – by adopting the Bureau’s residence rules and allocating incarcerated persons to prison districts – necessarily inflate the votes of their rural, white voters at the expense of those cast by people of color living in non-prison, often urban, districts. The number of people affected by the practice, moreover, is not insignificant. In 2010, non-Hispanic Black men were incarcerated at a rate seven times higher than non-Hispanic White men²; it is these typically urban, minority-majority communities, to which incarcerated persons most often return upon completion of sentences, whose votes are made – by the practice of prison-based gerrymandering – to matter less than those of mostly white, rural voters.

When the Bureau first began counting Americans in 1790, the issue of where to count prisoners did not hold the same significance, or result in the same disparities, as it does today. As is well known, American demographics and living situations have changed dramatically over the past two centuries, and the Census has appropriately evolved in response to many such changes in order to provide an accurate picture of the nation. Indeed, the Census Bureau recently announced its intention to begin counting military individuals temporarily assigned abroad in their home districts. It is worth noting that the average deployment today is about 9 months long. Yet the Bureau has not made a similar decision when it comes to incarcerated individuals, even though they too are temporarily assigned elsewhere and often for comparable – or shorter – periods of time. In Rhode Island, for example, the majority of incarcerated persons spend fewer than 100 days in correctional facilities. Counting these individuals at a place where they don’t “eat and sleep most of the time” counters the Bureau’s own previous guidelines and contradicts its proposed ones for military. If nothing else, the Bureau must strive for consistency.

While waiting for the Bureau to make this needed change to how incarcerated persons get counted, a number of states have begun to take action on their own. New York State, California, Delaware, and Maryland have all passed legislation to eliminate the state-wide practice of prison-based gerrymandering, and over 200 counties and municipalities individually adjust population data to avoid the practice when drawing their local government districts. A number of others states – including Oregon, Illinois, Rhode Island, and New Jersey – have also

begun considering legislation that would ban the outdated practice of counting incarcerated persons in the prisons where they temporarily remain.

Many states believe prison-based gerrymandering is an important issue and have taken measures to stop it, but such action is challenging without the assistance of the Federal Census Bureau. New York, for example, implemented a law to stop prison-based gerrymandering but faced numerous technical challenges, partisan opposition, and extreme delays in receiving data. Massachusetts tried to implement similar reforms, but found that they were prohibited from creating rules that were inconsistent with those of the Federal Bureau by their state constitution. As evident by these state and local actions, states are not legally required to adopt the Census Bureau's definition of "residence" when allocating individuals for redistricting purposes. However, the reality is that they almost all do – for either practical or state legal purposes. After all, the Bureau provides the "leading source of quality data about the nation's people ...",³ and is best suited to lead the way – and thus guide remaining states – on this important issue. An ad hoc approach on how to apportion incarcerated persons is neither efficient nor fair; votes across districts, and across the country, should hold equal weight.⁴

All states ascribing to the same definition of "residency" for incarcerated persons makes good sense, particularly since all incarcerated persons share the same characteristic of temporary removal from both greater society and their own homes. Indeed, they don't partake of the prison district's roads, parks, or schools; they are confined within that district only temporarily; and, in the vast majority of instances, they return to the districts in which they lived before incarceration. Changing the residence rule to reflect this reality would provide long-awaited guidance to states.

Thank you for this opportunity to comment on your Residence Rule and Residence Situations. We appreciate that the Bureau strives to count all individuals in the right place in keeping with changes in society and population realities. Because Common Cause believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.

¹ For example, 98% of New York's prison cells are located in state senate districts that are disproportionately White; in Connecticut, 75% of the state's prisons are in state house districts that are disproportionately White. See Peter Wagner, 98% of New York's Prison Cells Are in Disproportionately White Senate Districts, Prison Pol'y Initiative (Nov. 17, 2010), <http://www.prisonersofthecensus.org/news/2005/01/17/white-senate-districts/>; see also Ending Prison-Based Gerrymandering Would Aid in African-American and Latino Vote in Connecticut, Prison Pol'y Initiative (Nov. 17, 2010), http://www.prisonersofthecensus.org/factsheets/ct/CT_AfricanAmericans_Latinos.pdf

² U.S. Dept. of Justice, "Prisoners in 2010," avail. at <http://www.bjs.gov/content/pub/pdf/p10.pdf>

³ See Census Bureau website at <http://www.census.gov/about.html>, last visited on July 9, 2015.

⁴ Moreover, Massachusetts cannot easily make such changes to the ways in which it allocates prisoners for redistricting purposes until the Census Bureau issues a change in its residence rules, due to a state constitutional requirement that it follow the Bureau's rules. The Massachusetts legislature sent the Bureau a resolution in 2014 urging it to tabulate incarcerated persons at their home addresses. See The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014).

c00482

Colorado Common Cause submits these comments in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at the particular

	<p>facility that they happen to be located at on Census day ignores the transient and temporary nature of incarceration. If made final, this proposal will mean another decade of decisions based on a Census that counts incarcerated people in the wrong place.</p> <p>Redistricting is a top issue for Colorado Common Cause. We believe districts should fairly represent their communities. When county populations include people incarcerated in area prisons, state legislators use inaccurate information when re-drawing Congressional and legislative districts. The Census Bureau, to which most states – including Colorado – refer when apportioning residents for redistricting purposes, has the power to change this practice.</p> <p>Counting incarcerated people as if they were residents of the facility where they happen to be located on Census day doesn't reflect the lived reality of our communities. For example, fifty percent of the people admitted to prison in Colorado in 2012 were convicted in the urban counties of Denver, Arapahoe, Jefferson, and El Paso, but the great majority of incarcerated people in Colorado were housed in rural counties. Fremont County, Colorado, represents the most egregious example. Only 1.23% of the Colorado Department of Corrections' 2012 public prison population had a home address in Fremont County, but the county's six state prisons are the incarcerated address for 29 percent of the state's 2012 public prison population.</p> <p>Since the African American and Hispanic/Latino populations are disproportionately incarcerated in Colorado, and these populations tend to live in the state's urban areas, these populations are also misrepresented during the census by counting their prison cell as their residence. Votes cast in these prison districts carry more weight than others as a result of the artificial residency number, while the urban districts where the prisoners are from have less; this is a fundamental unfairness we seek to redress.</p> <p>The Census Bureau should honor the overwhelming consensus urging a change in the Census count for incarcerated persons. When the Bureau asked for public comment on its residence rules last year, 96% of the comments regarding residence rules for incarcerated persons urged the Bureau to count incarcerated persons at their home address, which is almost always their legal address. This level of consensus among stakeholders, which is based on a thorough understanding of the realities of modern incarceration, deserves far more consideration than it was given.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. Colorado Common Cause believes that in order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p>
c00483	<p>Please find attached comments from Asian Americans Advancing Justice AAJC in response to the Census Bureau's Federal Register notice regarding the Proposed 2020 Census Residence Criteria and Residence Situations, 81 FR 42566 (June 30, 2016). We believe the Census Bureau's decision to continue counting incarcerated persons at their facility on Census Day is inconsistent with its own definition for usual residence and its application of such definition to similarly situation population groups. As such, we urge the Census Bureau to reconsider how incarcerated persons will be counted for the 2020 Census and change where they will be counted from the particular facility where they</p>

happen to be located on Census Day to their home address.

Attachment:

Asian Americans Advancing Justice | AAJC (Advancing Justice | AAJC) submits this comment in response to the Census Bureau's federal register notice regarding the Proposed 2020 Census Residence Criteria and Residence Situations, 81 FR 42577 (June 30, 2016) and 81 FR 48365 (July 25, 2016) (extending the comment period for the initial request). We are disappointed in the Census Bureau's decision to continue counting incarcerated persons at their facility on Census Day. We urge the Census Bureau to reconsider how incarcerated persons will be counted for the 2020 Census and change where they will be counted from the particular facility where they happen to be located on Census Day to their home address.

Organizational Information

Advancing Justice | AAJC is a national non-profit, non-partisan organization founded in 1991. Advancing Justice | AAJC's mission is to advance the human and civil rights of Asian Americans, and build and promote a fair and equitable society for all. Our wide-ranging efforts include promoting civic engagement, forging strong and safe communities and creating an inclusive society. Advancing Justice | AAJC is part of Asian Americans Advancing Justice (Advancing Justice), a national affiliation of five nonprofit organizations in Los Angeles and San Francisco, CA, Chicago, IL, Atlanta, GA and Washington, D.C. who joined to promote a fair and equitable society for all by working for civil and human rights and empowering Asian Americans and Pacific Islanders and other underserved communities. Additionally, over 150 organizations are involved in Advancing Justice | AAJC's community partners network, serving communities in 31 states and the District of Columbia.

Advancing Justice | AAJC considers the Census, including the American Community Survey (ACS), to be the backbone of its mission to advance the human and civil rights of Asian Americans and build and promote a fair and equitable society for all. Advancing Justice has maintained a permanent census program monitoring census policy, educating policy makers, and conducting community outreach and education to encourage participation in the surveys conducted by the Census Bureau.

Advancing Justice | AAJC has also been extensively involved in improving the current level of political and civic engagement among Asian American communities and increasing Asian American

access to the voting process in conjunction with the Advancing Justice affiliates and community partners. We work on enforcement and protection of the Voting Rights Act and other voting statutes, protection of the vote, and improvement of election administration. During the last redistricting cycle, we worked with the Advancing Justice affiliates and our local partners to ensure Asian American communities had a voice during the redistricting process and were able to work to keep their communities of interest together. Since those efforts, Advancing Justice | AAJC has been engaged in conversations around redistricting reform and ensuring proper representation for all.

Census Bureau's Proposed Rule for Counting Incarcerated Persons Is Inconsistent and Should Be Changed

Definition of Usual Residence Means Incarcerated Persons Should Not Be Counted at Correctional Facility

The Census Bureau's proposed rule for counting incarcerated persons in their facility is inconsistent with the Bureau's definition of "usual residence." In the Federal Register notice, the Census Bureau defines "usual residence" "as the place where a person lives and sleeps most of the time, which is not always the same as their legal residence, voting residence, or where they prefer to be counted." They further note that "counting prisoners anywhere other than the facility would violate the concept of usual residence, since the majority of people in prisons live and sleep most of the time at the prison." This is simply not the case. Many incarcerated people serve relatively short sentences. For example, the majority of people incarcerated in Rhode Island spend less than 100 days in the state's correctional facilities.^{1/} Incarcerated persons are also frequently transferred between facilities, at the discretion of the administration, and usually do not remain at any particular facility for even a year.^{2/} In fact, almost three-fourths of incarcerated people are moved between facilities before they go back home.^{3/} The reality is that incarcerated persons found in a facility on Census Day will not have been in that facility for very long, and will likely leave it soon, and thus the facility is not the usual residence of incarcerated persons.

Incarcerated Persons Should Be Counted at Home Based on Factors Utilized by Census Bureau in Determining How to Count Other Residence Scenarios

In residence situations where the Census Bureau needs to make a determination about the respondents' usual residence, the Census Bureau has looked to community and family ties as an

important factor. The U.S. Supreme Court referenced the concept of “enduring ties” in its opinion in *Franklin v. Massachusetts*, a case that unsuccessfully challenged the Census Bureau’s decision to count military personnel serving overseas in the 1990 Census for purposes of congressional apportionment.^{4/} The majority opinion in *Franklin* noted that the concept of usual residence “has been used broadly enough to include some element of allegiance or enduring tie to a place.”

The reality is that incarcerated persons are not members of the residential communities surrounding the correctional facilities. Not only are they physically prohibited from interacting with the community, whether it is through use of services and amenities of the community to participating in civic engagement such as voting and public debates, the local laws and ordinances of the surrounding communities rarely impact them. Former Census Bureau Director Kenneth Prewitt has noted that the practice of counting incarcerated persons in the facilities they happen to be assigned to on Census Day “ignore[s] the reality of prison life. Incarcerated people have virtually no contact with the community surrounding the prison. Upon release the vast majority return to the community in which they lived prior to incarceration.”^{5/} The surrounding communities do not consider the incarcerated persons to be members of their communities and certainly incarcerated persons, who did not choose to live in that community and who often return home after their sentence, do not establish “enduring ties” or consider themselves to be members of that community. However, this is not to say that there is no community for incarcerated persons. The community that remains meaningful and relevant for incarcerated persons is their home communities. They have family ties, including children, spouses, other relatives, as well as homes where they resided prior to their confinement and where they are likely to return to after their confinement. Thus, incarcerated persons should be counted at their home address and not at the facility to which they are assigned on Census Day.

The Census Bureau’s decision to count incarcerated persons at the facility is even more concerning when compared to how the Bureau plans on counting other similarly-situation population groups in the same proposed 2020 Census residence criteria and residence situations. For example, the Census Bureau is proposing to change how it will count deployed military personnel who are stationed or assigned to a U.S. base. Under the Bureau’s proposal, deployed service members will be counted at their home address (usual residence) in the U.S., even if they live and sleep elsewhere for most of the time at the time the Census is conducted. In making this change, the Census Bureau notes in the Federal Register notice that “deployments are typically short in duration, and the deployed personnel will be returning to their usual residence where they are stationed or assigned in the United States after their temporary

deployment ends.” Additionally, many comments to the Census Bureau referenced the need to count deployed military in their home community for purposes of funding, planning, and ensuring sufficient resources for the soldiers and their families. Similarly, incarcerated persons are temporarily in the facilities for varying, but typically short, durations and incarcerated persons generally return to their usual residence when they are released. As previously noted, the incarcerated populations has no ties to the community of the facility and there is a need to ensure that their home community, where they have family and ties, have the necessary funding, resources and planning needed. Treating these two similarly-situation populations differently, and changing the policy as it pertains to one group but not the other, is a blatant inconsistency in the proposed 2020 Census Residence Criteria and Residence Situations and must be brought into alignment with one another.

The Census Bureau Must Modernize How Incarcerated Persons Are Counted to Avoid Inequity in Representation

The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the nation’s incarcerated population has more than quadrupled to over two million people. The Asian American and Pacific Islander (AAPI) prison population increased by 30 percent from 1999 to 2004 while the white prison population rose by only 2.5 percent. During the prison boom in the 1990s, the AAPI prison population grew 250 percent to the overall prison population’s 77 percent. And a closer look at disaggregated data shows that mass incarceration has increasingly become more of an issue for specific AAPI communities. For example, according to a study by the Office of Hawaiian Affairs in 2010, Native Hawaiians comprised about 39 percent of Hawaii’s state prison population in comparison to the state’s overall Native Hawaiian population of 24 percent.^{6/} In California, a study found that 64.6 percent of the state’s AAPI prisoners were immigrants and refugees. The largest populations among them were Vietnamese (22 percent) and Filipino (19.8 percent), followed by Pacific Islanders (9.9 percent) and Laotians (8.5 percent).^{7/} Thus, the manner in which this population is counted now has huge implications for the accuracy of the Census.

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Illinois, for example, 60% of incarcerated people have their home residences in Cook County (Chicago), yet the Bureau counted 99% of them as if they resided outside Cook County.

When this data is used for redistricting, prisons artificially inflate the political power of the areas where the prisons are located. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the 2010 Census to count incarcerated people at home for redistricting purposes.

New York State is not the only jurisdiction taking action. Three other states (California, Delaware, and Maryland) are taking a similar state-wide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts. But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses.^{8/} It is time for the Census Bureau to modernize the way it counts incarcerated persons by counting them at their home address.

Conclusion

Thank you for this opportunity to comment on the Proposed 2020 Census Residence Criteria and Residence Situations as the Bureau strives to count everyone in the right place while keeping up with changes in society and population realities. Because Advancing Justice | AAJC believes in a population count that accurately represents communities and a consistent application of the residence criteria, we urge you to reconsider and change the Residence Criteria to counting incarcerated people as residents of their home address.

c00484	<p>I was _____ of the last Redistricting Committee here in _____, a rural county in Tennessee, and I am disappointed that we ended up with severe malapportionment because the Census Bureau counted inmates in a prison in the county as if they were residents of that neighborhood. I am now even more disappointed in the Census Bureau, for having heard for the need for change, proposing to once again distort our democracy by counting incarcerated people as if they were residents of the location of prison-hosting counties.</p> <p>As a county in Tennessee, we were basically faced with a classic ‘Catch 22’ and your proposed rules do nothing to help.</p> <p>Our goal was to follow the Constitution and give equal representation to all the citizens of our County. Nashville, however, told us that we had to include the prison population in our count when we did our redistricting because that is what the Census showed, even though that runs counter to the state’s residence law. I realize that the Census’ definition of residence is unlikely to perfectly track the 50 state’s definitions, but let me walk you through the Tennessee’s residence law (as described by the Secretary of State’s “Guidelines for Determining Residency”) to explain why your previous interpretation of the Census Residence Rule and Residence Situations failed to count people where they live:</p> <p>“1. The residence of a person is the place where the person’s habitation is fixed and is where, during periods of absence, the person definitely intends to return.”</p> <p>Now, while I’m sure that a few of our guests at the gray bar hotel will return, (recidivism is a terrible problem in this country), I can pretty much guarantee that there isn’t any one of them that “definitely intends to return” after they get out.</p> <p>“3. A change of residence is made not only by relocation, but also by intent to remain in the new location permanently, and by demonstrating actions consistent with that intention.”</p> <p>These men have no intention of staying in our fair county one second longer than they have to. If not for the barbed wire and armed guards, that place</p>

would empty out faster than the county courthouse at quitting time on a Friday afternoon.

These men all come from outside our county. Upon release they immediately leave our county. They are not buying homes, raising families and putting down roots here. They came here, quite simply because they were forced to at gunpoint and they stay here only because of walls, wire and armed guards.

The 2010 Census put the population of _____ at approximately 22,000. The inmates at the _____ Correctional Facility number approximately 2,400. When we break the county up into 6 districts, we should have 3,667 residents in each district. But whichever district gets the prison block will only have 1,267 actual residents in it and 2,400 prisoners. That adds a lot of weight to the votes cast in that district.

To be exact, we end up with the residents of the district with the prison having 3 times the representation of the residents in the rest of the county.

And the problem has only gotten worse. Previously we had 2 prisons in our county. But one prison was shut down and the other facility was expanded to take in the inmates of the closed unit as well as additional prisoners. This resulted in just one census block containing 10% of our county's population, not one of whom is allowed to vote and not one of whom even considers themselves to be a resident of _____.

It is impossible to count a population bloc like that in our county electoral system and still achieve equal representation among the citizens of this county.

In Reynolds v. Sims the U.S. Supreme Court said, "The weight of a citizen's vote cannot be made to depend on where he lives." Yet that is exactly what we have until now been forced to do because of the Census. We were left with a 3 to 1 disparity in the representation of the residents in the district with the prison over the residents in other _____ districts.

Lucky for us, one of the counties in our state faced drawing a district that would contain no actual residents, only the people incarcerated and counted there by the Census. Recently Nashville agreed, and the legislature passed a bill in May that allows for counties like mine to correct for the Census's prison miscount:

When a reapportionment is made, residents of a correctional institution who cannot by law register in the county as voters may be excluded from any consideration of representation.

	<p>Our state has finally woken up to how incompatible the Census' data is with fair redistricting, but that leaves many more states with many more counties like mine that are left to bear the burden of either correcting the Census' data on their own, or denying their residents fair representation. And while my county can correct our own data with the new tabulations you propose, Memphis or Nashville city councils will be forced to draw their districts missing pockets of their population which you propose to count in counties like mine.</p> <p>As a _____ here in _____ I oppose your proposal to continue counting people in the wrong place, which puts obstacles in our way of getting back to the "One Man, One Vote" ideal. I urge you once again to help us to achieve fair and equal representation for all the citizens of our county, and those across this great nation by revising the Residence Rule or Residence Situations to count incarcerated people at home in the Census.</p>
c00485	<p>The Southern Coalition for Social Justice ("SCSJ") offers this submission in response to the Census Bureau's request for public comment on the proposed Residence Rule and Residence Situations for the 2020 Census, 81 FR 42577 (June 30, 2016). Currently more than 2 million people are incarcerated in the United States and every one of them is outside of their home communities on Census day. Continuing the practice of counting incarcerated persons in the locations where they are incarcerated not only disproportionately harms certain communities, but it also ensures that the 2020 Census will produce inaccurate data that will have long-lasting effects. Therefore, we urge you to count incarcerated people as residents of their home communities, rather than the locations of their correctional facilities.</p> <p>SCSJ's two primary practice areas-voting rights and criminal justice reform-place the organization in a unique position to understand the harm created by the Census Bureau's policy of counting incarcerated persons where they are imprisoned. Throughout the years, SCSJ has been heavily involved in efforts to ensure fair and accurate redistricting policies, and we have witnessed firsthand how counting incarcerated persons as residents of their place of incarceration diminishes the voting strength of their home communities, while unjustifiably enhancing the voting strength of communities located near such facilities. Additionally, SCSJ's criminal justice reform focus area primarily involves work to reduce collateral consequences of incarceration such as obtaining gainful employment, housing, and the right to vote. Through our criminal justice work we have consistently seen that underrepresented communities, such as low income communities and communities of color-from which the prison population is disproportionately drawn due to over policing and racial profiling-lack access to important resources that help formerly incarcerated people reenter their communities. If incarcerated persons were counted in their home communities, those communities would be allocated more federal funding as well as other resources that are frequently tied to census numbers, and would be better able to elect officials to serve their communities.</p> <p>A. Incarcerated Persons Should Be Counted as Residents of Their Home Communities</p>

Because of SCSJ's work and insights on the intersection between voting rights and criminal justice reform, we are opposed to the rule that counts incarcerated persons as residents of their place of incarceration for the following reasons: (i) the rule will lead to less accurate census results, with a number of harms flowing from that reality, particularly in North Carolina and the south; and (ii) it is unnecessary and inconsistent with other rules.

i. The Rule Leads to Less Accurate Census Results

An accurate decennial census enumeration is critical for countless reasons, but it is particularly critical to (1) communities of color, whose members often suffer from disproportionate rates of incarceration—communities that may desperately need more federal funding linked to census counts; and (2) jurisdictions— from small towns up to the state level— who are charged with redistricting and rely upon census data for that task. When incarcerated persons are counted as residents of their place of incarceration, the census data does not accurately reflect the true voting population in the jurisdictions where prisons are located and does not accurately reflect the extent of need in traditionally underserved communities. Importantly, updating the residence rules by counting incarcerated persons as residents of their home communities would increase the accuracy of Census data, and would have a profound impact on representation in communities of color— particularly for African-Americans and Latinos who are stopped, arrested, and incarcerated at disproportionate rates, and often come from neighborhoods and communities that struggle to receive adequate funding to assist residents with meaningful reentry after incarceration. For instance, the high incarceration rate in North Carolina ensures that there are large tangible effects felt by a rule that counts incarcerated persons as residents of their place of incarceration. North Carolina is one of 32 states with an individual rate of incarceration that ranks higher than Turkmenistan, the nation with the second highest incarceration rate in the world after the United States. Specifically, there are approximately 66,000 people incarcerated in some form of facility throughout the state. In North Carolina, African Americans are disproportionately sent to correctional facilities, as opposed to other sentencing options. As a result, African Americans are 55% of the prison population even though they are only 22% of the total state population. By contrast, whites make up only 39% of the prison population, yet are 65% of the total state population. This means that because of the Census Bureau's proposed rule, African-American communities in North Carolina are more likely to have inaccurate census data and less representation than their white counterparts. If communities of color were afforded better, and more accurate, representation, they would have more power to effectuate meaningful change with respect to policies that affect their communities.

It is also important to have accurate census data for purposes of redistricting and complying with the "one person one vote" standard, under the Equal Protection Clause of the Fourteenth Amendment. "One person one vote" requires jurisdictions engaged in redistricting to create districts that are roughly equal in population. Some larger and well-resourced jurisdictions may be capable of adjusting federal census data to account for large non-voting populations in districts containing correctional facilities. However, many jurisdictions do not have that capability and rely on the census data as produced. Thus, they draw districts that, because of non-voting populations, have significantly different voting populations in different districts. These districts are known as "prison gerrymanders." Importantly, this type of gerrymandering causes the votes of residents who live in districts with correctional facilities to have more weight than their fellow citizens who do not live in such districts. For example, suppose that a county commission has 5 districts and each district, properly apportioned, has one thousand voters, with one district having a prison population of 900. In the district with the prison population, there are actually only

100 voters who each cast a vote that is weighted 10 times more heavily than a voter in a different district. This is fundamentally unfair to the voters in the districts with a thousand voters, and is likely unconstitutional.

In North Carolina, we see this phenomenon in effect in several counties. For example, in Granville County, North Carolina the prison population constitutes nearly 55% of only one of the county's seven districts for the Board of County Commissioners - District 3. As of 2010, the prison population in District 3's Federal Correctional Complex was 4,587. With a total population of 57,532 for the county, the ideal size for each of the seven districts would be a little over 8,200 residents each. This means that less than half of the residents in District 3 have the same voting strength as the total populations in the other six districts. In other words, the non- incarcerated residents in District 3 have significantly more voting power than the residents in the other six districts. While the other six district commissioners serve the interests of approximately 8,000 constituents, the commissioner for District 3 only serves approximately 4,000 actual constituents. This lack of balance results from counting incarcerated persons as residents of the facility in District 3 and violates the "one person one vote" requirement.

Additionally, there are similar issues in other counties in North Carolina, such as Anson County and Pamlico County. In Anson County, there are three correctional facilities housed in one district for the Board of County Commissioners - District 6. The total prison population for the three facilities is 2,190. Based on the 2010 Census, Anson County's total population is 26,948. With seven districts, the ideal district size is approximately 3,850. This means more than half of people counted as residents of District 6 are incarcerated, and the other non-incarcerated residents (less than 50%) have the same voting strength as the full population in neighboring districts. Likewise, Pamlico County, North Carolina, has a census population of 13,144 with five districts electing the County Commissioners. The ideal district size is approximately 2,628. The State prison, Pamlico Correctional Institute and also the local facility, Pamlico County Jail, house a combined 619 prisoners and are located in the same district. Therefore, roughly 23% of the population counted within this district is incarcerated. Overall, many North Carolinians will continue to have their votes diluted by the rule that counts incarcerated persons as residents of their places of incarceration. Because voting is a fundamental right that must be enjoyed equally by all citizens, the Census must change this rule.

Giving some residents' votes more weight than others by counting incarcerated persons in this way violates the "one person one vote" requirement. At least one federal court has found such "prison gerrymanders" to be unconstitutional, even when jurisdictions rely on the data produced by the Census Bureau. *See Calvin v. Jefferson Cnty. Bd. of Comm 'rs*, No. 4:15cv131, 2016 U.S. Dist. LEXIS 36121 (N.D. Fla. Mar. 19, 2016). Therefore, continuing to count incarcerated persons as residents of their place of incarceration will expose many local jurisdictions around the country to lawsuits, and the financial burden that results from such litigation.

ii. The Rule is Unnecessary and Inconsistent With Other Similar Rules

The proposed rule is not necessary and is inconsistent with other census rules used by the Bureau. Notably, because of a desire for accurate census data, the Bureau proposed changes to the residency rules for military personnel deployed overseas. The Bureau opted to count relocated military personnel in their home communities since they "will be returning to their usual residence" after their temporary

relocation ends, 81 FR 42579. The Bureau determined that deployed personnel should be counted as residents of their home communities because it is their "usual residence" where they spend most of their time because they are only temporarily removed from their home community and will likely return there once they are able, 81 FR 42579. This Bureau's decision regarding deployed personnel is inconsistent with the current rule regarding incarcerated persons. Just like deployed personnel, incarcerated persons are likely to return to their home communities once they are able. Indeed, this fact is cited in comments c74 (footnote 55), c88 (footnote 2), cl 19 (footnote 7), and c0121 (footnote 23). If the Bureau has the capability to count military personnel in their home communities, they must likewise be capable of counting incarcerated persons in their home communities. Therefore, as in the case of deployed personnel, the Bureau should remain consistent and count incarcerated persons who are temporarily away from their homes as residents of their home communities.

B. Opposition to Other Census Comments

The Census Bureau has received many public comments on the proposed rule that SCSJ believes is erroneous and misplaced. First, the argument made in comment c6 that the Voting Rights Act somehow requires incarcerated people to be counted in the location where they are incarcerated in order to protect rural communities of color is incorrect and does not reflect the reality of the redistricting process. While a heavily minority prison population in a rural county might allow map drawers to create a majority-minority district using that population, such a district would be a non-performing district and would not be compelled by the Voting Rights Act. In fact, voting rights advocates are concerned that districts that are drawn as majority-minority districts using prison populations may be held up as districts that comply with the Voting Rights Act, but on the other hand do not result in African-American voters being able to elect their candidates of choice.¹ Thus, this claim is clearly erroneous. Furthermore, this same comment's proposal that it would be too difficult for the Bureau to establish the residence of prisoners holds no weight considering that the Bureau already has protocol for establishing the residency of those without a permanent address. Also, the implication made in this comment that disparate treatment in counting these individuals is justified because they are "career criminals" does not address the systematic discrimination deeply embedded in our criminal justice system. It also fails to address the disproportionate number of minorities incarcerated for lower level, and some even first-time, offenses.

Second, the support for the proposed rule in comment c5 is not justified and attempts to divert attention away from the discussion of relief for underrepresented communities. The argument laid out in comment c5 that any proposed rule that would change the way incarcerated persons are counted is only "driven by activist groups who seek to gain politically" is unfounded. The claim that prison gerrymandering is an issue being touted for political gain insinuates that communities who have their members disproportionately incarcerated are due no relief from the unequal access to resources that accompany their underrepresentation. That is not the case. The purpose of accurately counting incarcerated people as residents of their home communities is 1) to ensure that the Bureau is providing an accurate population count, so that communities receive adequate federal funding for a host of purposes, including to support successful reentry for those involved in the criminal justice system after they have finished their sentence, 2) so that prison gerrymandering cannot be used as a tool to circumvent fair representation, and 3) so that districts can be fairly drawn in the most equitable way. Also, comment c5 took the position that updating the residency rules to accurately count incarcerated people in their home communities would add a "superfluous complexity" to the process. Again, as described above, the Census Bureau has already established procedures for counting persons in their home location, rather than their temporary location. Furthermore, the goal of the Census Bureau is to "count everyone in the right place" in order

	<p>to create a "fair and equitable apportionment", 81 FR 42577, and any effort to achieve this goal is both necessary and deserved by the communities affected by the Bureau's count.</p> <p>Comment c5 also makes the claim that New York, Maryland, and Delaware "continue to have difficulty accounting for all prisoners accurately" after having adopted the prison adjustment as proposed. This attempt to undermine the legitimacy of the growing movement to accurately account for incarcerated individuals is incorrect. In the past few years New York, Maryland, Delaware, and California passed laws to reallocate people in prison back to their home communities. The law will not be implemented in California and Delaware until after the 2020 census, so the claim that Delaware has had difficulties with the reallocation process is not founded on any actual implementation of the state's law. Both New York and Maryland have had cross-agency collaboration, from government offices to the private sector, in order to implement their new reallocation laws that led to 46,003 incarcerated individuals in New York and 17,140 incarcerated individuals in Maryland being successfully reallocated to their home communities. The number of successful reallocations in Maryland accounts for 77.7% of those incarcerated in Maryland. There were also an additional 6% of the prisoners that were removed from the redistricting dataset after being identified as out-of-state residents, which brought the total percentage of those successfully reallocated in Maryland to 83.7%. Those involved with the successful implementations of Maryland and New York's new laws agree that the best way to streamline reallocation and continue improving the representation in their states would be for the Census Bureau to count incarcerated persons as residents of their home communities.</p> <p style="text-align: center;">C. Conclusion</p> <p>For the foregoing reasons, SCSJ urges you to count incarcerated people as residents of their home addresses. Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to establish census procedures that guarantee accuracy and reflect demographic and societal realities.</p> <p><i>1/ See Ben Peck, "The Census Count and Prisoners: The Problem, The Solutions and What the Census Can Do," Demos, Oct. 26, 2012, http://www.demos.org/publication/census-count-and-prisoners-problem-solutions-and-what-census-can-do; see also "Counting inmates is issue in Miss. Redistricting," Picayune Item (March 1, 2011), available at http://www.picayuneitem.com/2011/03/counting-inmates-is-issue-in-miss-redistricting/.</i></p>
c00486	<p>Please count incarcerated people at their home addresses rather than at their prison addresses. Counting them where they are incarcerated undermines the legitimacy of our electoral system by giving extra political power to the disproportionately white communities that host prisons and diluting the votes of the disproportionately Black and Latino communities that bear the brunt of our incarceration policies.</p>
c00487	<p>As a private citizen in the state of Georgia who is involved with a variety of social justice causes, I submit this comment to the Census Bureau's Federal Register Notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016).</p> <p>I am concerned that the U.S. Census Bureau intends to continue its unfortunate practice of counting prisoners in the locations where they are housed instead of in their communities where they resided before incarceration.</p>

	<p>Georgia has one of the highest incarceration rates in the nation, and most of our prisons are located in rural areas. Additionally, the Georgia Department of Corrections reports that the average prisoner is transferred four times during their incarceration and the average stay at any one facility is nine months.</p> <p>To count a transient prison population in areas where they have no ties and where they have no intention of staying inflates the population of mostly rural districts where prisons are located, and under counts mostly urban areas that the majority of prisoners consider as their home.</p> <p>The practice of counting prisoners is particularly concerning in the area of voting rights. Convicted felons cannot vote while in prison, yet they are counted for redistricting purposes in counties where they are housed at a point in time when the decennial voting districts are being drawn. This practice transfers the voting power of millions of mostly urban black and brown people to overwhelmingly white and rural districts, a shrinking of the political power of prisoner’s home communities.</p> <p>Additionally, individuals being housed in county jails awaiting trial are not convicted and are still eligible to vote. Why would they not be counted for redistricting purposes in their home communities?</p> <p>Under the equal protection clause of the 14th amendment of our constitution, states are required to apportion their congressional districts and state legislative seats according to “one man, one vote”. This precedent was established by US supreme court cases Wesberry v Sanders (1964) and Reynolds v Sims (1964).</p> <p>Just this year, in March, the US district court for the Northern District of Florida ruled that Jefferson County’s practice of prison gerrymandering is unconstitutional. In his summary statement, Judge Mark E Walker wrote, “To treat the inmates the same as actual constituents makes no sense under any theory of one person, one vote, and indeed under any theory of representative democracy.”</p> <p>The process of redistricting is a fundamental building block of fairness in our voting system. I urge the U.S. Census Bureau to recognize the impact that the counting of prisoners has on the drawing of fair voting districts, and to reconsider how prisoners are counted in the Census.</p> <p>Thank you for this opportunity to comment on the proposed Residence Rule.</p>
c00488	<p>The undersigned members of Philadelphia City Council submit this comment in response to the Census Bureau's Federal Register Notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The Bureau's proposal to continue counting incarcerated people at the particular facility where they happen to be located on Census Day ignores the reality of incarceration: prisons are not a "usual residence."</p>

	<p>As elected representatives of communities disproportionately impacted by incarceration, many of our constituents are incarcerated in facilities across the state, and beyond. When our constituents are incarcerated, they are often sent to prisons outside of the City, but they and their children still rely on us for representation.¹</p> <p>Over the course of their incarceration, prison administration may move these citizens between different prisons, but they remain our constituents. Their homes 'in our district remain their only stable, permanent, "usual" residence. Counting them as if they were residents of the facility where they happen to be held on Census Day does not reflect the modern lived reality of our communities.</p> <p>We note that your proposed method of counting the incarcerated population is inconsistent with how you count other groups that eat and sleep in a location that is not their usual residence. For example, your proposed rules will count boarding school students at their home addresses even if they spend most of their time at school. The same approach should be taken when counting incarcerated people.</p> <p>We are also concerned about the impact of the proposed residence rules on racial justice in our City, the Commonwealth, and the nation. Almost a quarter of the people in the state's prison system are from Philadelphia, but almost all are incarcerated outside of our City. Because the prison population is disproportionately Black and Latino, crediting this population to the incorrect - and majority White - parts of the state undermines the political power of our communities.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule to count everyone in the right place. As elected representatives, we are keenly aware that democracy, at its core, rests on equal representation. And equal representation, in turn, rests on an accurate count of the nation's population. In order to produce an accurate 2020 Census, the Bureau must count incarcerated people at home.</p> <p>¹ This duty is even written into statute: "For the purpose of registration and voting, no individual shall be deemed to have gained a residence by reason of presence or lost a residence by <i>reason of absence ... [while] in an institution at public expense.</i>" (25 Pennsylvania Consolidated Statutes §1302(iii).)</p>
c00489	Please count incarcerated persons at home in the 2020 election.
c00490	<p>I'm writing to express my concern over the Census Bureau's proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address. I strongly support changing the Census Bureau's outdated, inaccurate, and unfair practice of counting incarcerated people as residents of the place they happen to be on Census Day. The practice produces bad data, distorts political influence, and harms communities of color. Please bring an end to this practice of prison-based gerrymandering. Ensure an accurate 2020 Census by counting incarcerated people at their homes, not prison addresses.</p> <p>Despite massive public opposition, the Census Bureau has proposed to continue its widely discredited practice of "prison-based gerrymandering." Prison-based gerrymandering counts incarcerated people as "residents" of the place they happen to be on Census Day. That means instead of being counted as residents of their home communities, they are counted as residents of the community where they are imprisoned.</p> <p>Treating incarcerated people as "residents" of prisons is outdated, inaccurate, and unfair. When government officials use census data with</p>

	<p>these padded population numbers, they're shifting representation--and therefore shifting political influence--from home communities to prison communities. This primarily harms communities of color, particularly African-American and Latinx communities that bear the brunt of disproportionate incarceration rates and a broken criminal justice system.</p> <p>Prison-based gerrymandering creates districts with "phantom" constituents--where inmates, many of whom have been stripped of their right to vote--make up the bulk of the population. This distorts how legislative districts are drawn and violates the fundamental principle of one person, one vote. If the Bureau continues this practice, 2 million people will be counted in the wrong place in 2020, ensuring an inaccurate census and another decade of prison gerrymandering.</p> <p>Continuing to count incarcerated people in the wrong place is not only misguided, it ignores overwhelming calls for change. Last year, when the Census Bureau solicited public comments on how to implement residence guidelines for the 2020 census, the majority of comments were about how incarcerated people are counted, and more than 95 percent of those expressed clear opposition to prison-based gerrymandering. But the recently released draft guidelines for 2020 keep it in effect. The Census Bureau's failure to take those public comments from groups like the NAACP Legal Defense and Educational Fund and the ACLU into account is especially disappointing given that the Bureau is proposing different rules for other people who are elsewhere on Census Day: military deployed overseas and boarding school students, for example, are counted as residents of their homes.</p> <p>In the face of the Census Bureau's inaccurate practice, some states--including California, Delaware, Maryland, and New York--have adopted legislation to undo its effect. But it shouldn't be left up to states to fix this problem. Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>Thank you for your consideration of my comments. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources.</p>
c00491	<p>As _____ the Consortium for Citizens with Disabilities Housing and Rights Task Forces (CCD Housing Task Force) we are pleased to provide comments on behalf of the Task Forces to the Notice of Proposed Rule Making, "2020 Census Residence Rule and Residence Situations" (81 Fed. Reg. 42577; Docket No. 160526465-6465-01).</p> <p>The Consortium for Citizens with Disabilities (CCD) is a working coalition of national disability organizations working together to advocate for national public policy that ensures the self-determination, independence, empowerment, integration and inclusion of children and adults with disabilities in all aspects of society.</p> <p>The CCD Housing and Rights Task Forces understand that the fundamental reason for conducting the decennial census is to apportion the seats in the U.S. House of Representatives. Decennial census data are also the basis for other critically important national policies, including required periodic assessments of affordable housing needs conducted by the U.S. Department of Housing and Urban Development (HUD) and submitted to Congress in the form of Worst Case Housing Needs reports (Worst Case Reports). Data from the</p>

Census are also utilized in various statutory formulae related to the distribution of appropriations that fund certain HUD affordable rental housing programs.

Numerous studies document that the lowest income people with disabilities – particularly the approximately 5 million non-elderly adults with the most significant and long term disabilities who receive income from the federal Supplemental Security Income (SSI) program – have the most critical housing needs of any population group.

Every two years, the CCD Housing Task Force and the Technical Assistance Collaborative (TAC) conduct a national study of the relationship between SSI-level income and modest rental housing costs. The latest study – *Priced Out in 2014* – documents that the average annual income of a single adult household with a disability receiving income from the SSI program was \$8,995 – equal to only 20.1 percent of the national one person household median income. In 2014, the average one-bedroom rent – reflected as HUD’s one-bedroom Fair Market Rent – was \$780 per month.

Using federal housing affordability guidelines – which provide that low income households should pay no more than 30 percent of income for housing costs – a person with a disability receiving SSI-level income of \$8,995 annually would need to pay 104 percent of this income to access a one bedroom unit priced at this HUD Fair Market Rent. Simply stated, people with disabilities who must rely on federal SSI payments are completely priced out of the nation’s rental housing market. This fact is highly relevant to the decennial census because when people receiving SSI are unable to find housing they can afford in the community, they basically have two choices: they can become homeless (as many do) or they are forced to choose a “bed” within one of the nation’s Institutional or Non-Institutional Group Quarters settings.

For many years, virtually no attention was paid to the plight of people with disabilities forced to live in Institutional or Non-Institutional Group Quarters settings. Fortunately, that changed in 1999, when the U.S. Supreme Court issued its *Olmstead vs. L.C.* decision which affirmed the rights of people with disabilities to live in the most integrated setting, in accordance with the Americans with Disabilities Act (ADA). Since 1999, states across the country have entered into Settlement Agreements with the U.S. Department of Justice and private plaintiffs to resolve alleged violations of the ADA and the *Olmstead* decision based on their reliance on and funding of Group Quarters settings. Thus, an accurate counting of the number of people with disabilities residing in Group Quarters settings, which has been long sought by the CCD Housing Task Force and other disability advocacy groups – is also a critical policy priority for the Obama Administration.

To obtain as much Census data as possible on the number of people with disabilities living in Group Quarters, TAC and the CCD Housing Task Force requested and received a Special Tabulation of state-level census data on individuals with disabilities living in specific types of Group Quarters settings. We were pleased to work collaboratively with Census Bureau staff on this Special Tabulation, which has provided us with a greater level of detail regarding certain characteristics of people with disabilities living in Group Quarters. Through the Special Tabulation request process, we also developed a much better understanding of how this data is collected and managed by the Census Bureau.

With this knowledge in hand, we are pleased to offer the following comments on the proposed *2020 Census Residence Rule and Residence Situations*:

Recommendation: The concept of Usual Residence and Group Quarters Settings Primarily Occupied by People with Disabilities – 11b and 16a

Many Group Quarters settings – particularly Nursing Homes (11d) and Group Homes (16a) – are intended to be occupied solely by people with disabilities and have been created or licensed by state or local government exclusively for that purpose. Under policies governing these settings developed many years ago, people residing in these settings are treated as permanent residents, even if they would prefer to live in integrated housing in the community, as is their right under the ADA.

Because of *Olmstead*, many states are now beginning to modify their policies regarding the permanency of Nursing Home and Group Home settings and eliminate the once-common presumption that people will continue to reside in these settings on a permanent basis. States have increasingly taken advantage of federal programs designed to promote the transition of individuals with disabilities into their own homes and communities. These programs, such as Money Follows the Person and Medicaid home and community-based services waivers and options, provide federal support and incentives for people who desire to live in a more integrated community setting to do so. We believe that the current language in the proposed rule is not sufficient to capture information that is relevant to people with disabilities residing in these settings who are in the process of transitioning to community living. In other words, the current language creates a strong presumption that the individual with a disability will continue to reside in the Group Quarters setting.

We understand that persons may be counted only once on Census Day, and that the lack of a usual home elsewhere (where they live and sleep most of the time around Census Day) requires that the person be counted at the Group Quarters setting. To do otherwise, would, by definition, mean they would not be counted at all.

However, we urge the Census Bureau to add language to the Group Quarters categories of Nursing Facilities/Skilled-Nursing Facilities and Group Homes for Adults that would permit persons to be counted at a residence which they are actively preparing to transition to, which could be defined by one or more of the following criteria: (1) a discharge date has been set for the person for a specific address; (2) community-based services Long Term Care Services and Supports (LTSS) have been arranged in a community setting to be delivered at a specific address that the person in is the process of transitioning to; (3) the person has a signed lease or rental agreement for a housing unit in the community; the person owns a residence in the community and is in the process of transitioning back to that residence or another residence with a specific address.

Recommendation: People In Health Care Facilities 11(b) mental (psychiatric hospitals) and psychiatric units in other hospitals

The Census Bureau's proposal to count people in mental (psychiatric) hospitals and psychiatric units in other hospitals as residing at the facility misunderstands the functioning of state or private psychiatric hospitals which today provide primarily acute and short term treatment (e.g. less than two weeks in most cases) to people with mental illness. A relatively small number of people in psychiatric facilities do reside there for longer terms, typically under civil or forensic commitments. However, in both instances, these people are likely to have a permanent residence elsewhere. It is critically important for the Census Bureau to make these distinctions when determining the Usual Residence of people in psychiatric facilities.

The CCD Housing Task Force recommends that people living in psychiatric hospitals on Census Day be counted at the residence where they sleep most of the time and not counted at the facility unless they do not have a usual home elsewhere.

Recommendation: Provide More Public Access to Census Data On Other Noninstitutional Facilities within the Group Quarters Category

Currently, the Census Bureau does not provide public access to national or state level data that is specific to one or more of the five subcategories of facilities within the Noninstitutional Facilities category of Group Quarters. These subcategories include:

1. Emergency and Transitional Shelters (with Sleeping Facilities) for People Experiencing Homelessness
2. Group Homes Intended for Adults
3. Residential Treatment Centers for Adults
4. Religious Group Quarters
5. Workers Group Living Quarters and Job Corps Centers

Three of these five subcategories – specifically #1, #2, and #3 above – are highly relevant to the enforcement of *Olmstead* and the need to accurately account for the housing needs of people with disabilities living in these settings in HUD's Worst Case Housing Needs reports to Congress. Because of major deviations in data collection within states and localities that license these facilities, as well as across the states, the Census Bureau is – without question – the most reliable source for this information.

As the CCD Housing Task Force and TAC have suggested in prior written and verbal communications, we urge the Census Bureau to agree to provide Special Tabulations of data on these three subcategories, preferable within each subcategory but if not feasible, then in the aggregate across the three categories. These data are critically important to both housing advocates struggling to accurately assess the full scope of the housing needs of people with disabilities as well as to legal advocates for people with disabilities who are working to enforce the community integration mandates of the ADA.

In closing, thank you for the opportunity to share recommendations by the CCD Housing and Rights Task Forces.

c00492

Grassroots Leadership respectfully submits this comment in response to the Census Bureau's federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016).

	<p>This proposal to continue to incorrectly count all incarcerated people as permanent residents of a correctional facility is not only discriminatory but also creates unequal representation.</p> <p>Grassroots Leadership is an Austin, Texas-based national organization that works to end prison profiteering and reduce reliance on criminalization and detention through direct action, organizing, research, and public education. We stand in strong opposition to the Bureau’s proposal because we believe that it contributes to the exploitation of incarcerated individuals.</p> <p>Prison-based gerrymandering allows for a misrepresentation of a state or local government’s true constituency. The principle of “one person, one vote” is severely skewed when states and municipalities are forced to use census data. In Texas, the majority of prisons are located in rural areas, yet the majority of people inside prisons are from urban centers. We diminish our ideal of representative democracy when we count thousands of mostly urban people of color in correctional facilities that are not their primary residence.</p> <p>In addition, the Census Bureau is wrong to consider incarcerated people residents of the correctional facility because incarcerated individuals do not “live” in prisons. They have homes and residences where over 90 percent return. Furthermore, on average, Texas prisoners are transferred multiple times during their period of incarceration, which means the Texas prison population is quite transient. These individuals should be counted at home, not in whatever prison they happen to be in on Census day.</p> <p>The Bureau’s failure to update its rules regarding incarcerated persons is particularly troubling given that the Bureau has decided that other populations – deployed overseas military and juveniles staying in residential treatment centers – should be counted in their home location.</p> <p>Grassroots Leadership appreciates the opportunity to submit our comments. We believe that in order to produce an accurate Census, the Bureau must count incarcerated people in the right place: at home.</p>
c00493	<p>For almost a century, the League of Women Voters of Pennsylvania (LWVPA) has worked to ensure fair and equitable representation for all people and communities.</p> <p>We are concerned that the Census Bureau’s proposed plan to count incarcerated persons as residents of prison districts rather than in their home communities distorts the redistricting process, giving extra political influence to people who live near prisons while diluting the votes of residents in other legislative districts.</p> <p>This practice skews democracy on both the state and local levels and is especially problematic for county and city governments, where a single prison can easily make up the majority of a district. Failing to count incarcerated people at home for redistricting purposes</p>

	<p>undermines the constitutional guarantee of “one person, one vote”, with critical implications for the health of our democracy. By designating a prison cell as a residence, the Census Bureau concentrates a population that is disproportionately male, urban, and African-American or Latino in approximately 1,500 federal and state prisons that are far from their home communities.</p> <p>In Pennsylvania, Hispanic and black residents make up 61% of the total incarcerated population, but only 17% of the statewide population. 35.7% of Pennsylvania’s state prison population comes from just two counties: Philadelphia County and Allegheny County (the core of the greater Pittsburgh area). Most of those inmates are housed in rural areas of the state demographically distinct from these two cities. The resulting maps inflate the political power of the areas where the prisons are located and dilute the political power of all other urban, suburban, and rural areas without large prisons.</p> <p>We have followed with interest <i>Calvin et al. v. Jefferson County</i> and <i>Davidson vs. City of Cranston</i>. While litigation has afforded relief to communities deprived of political power by the practice of counting inmates in prison districts, the results have disrupted elections as maps are redrawn and citizens wait to find out which districts they will be voting in. Candidate petitioning, voter education, planning of debates and more important functions are thrown into disarray while litigation continues.</p> <p>The proposed rules make clear that the Census Bureau has tools available to count incarcerated persons correctly as members of their home districts. Four states, containing 21 percent of the U.S. population, have already passed legislation to adjust census data on their own. Other states, including Virginia, Colorado, New Jersey, Mississippi, encourage or require local governments to adjust census data to avoid padding districts. As individual counties and municipalities pass similar requirements, fair and equitable administration of elections becomes more and more fractured and confidence in our electoral process continues to diminish.</p> <p>We join with other good government groups and with many of your own advisory committee in urging that you count ALL incarcerated people at their home addresses. Such a change would provide a standardized national solution and would relieve state and local governments from undertaking piecemeal adjustments on their own.</p>
c00494	<p>This is in response to the Census Bureau’s federal register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (June 30, 2016). The League of Women Voters of Delaware urges you to count incarcerated people at their home addresses, rather than at the facility where they happen to be located on Census day.</p> <p>Ensuring that redistricting is impartial and that legislative lines are drawn in a fair and transparent way is part of the core mission of the League of Women Voters, as is ensuring that every eligible American’s vote is counted fairly. Counting incarcerated persons as residents of the district in which they are temporarily held has the effect of unfairly enhancing the political power of those who live and vote in the prison district, while unfairly diluting the votes of those in districts without prisons. Legislators with a prison in their district should not get a bonus for keeping the prison full. This dynamic hurts our democracy, and it hurts the communities from which these incarcerated persons hail.</p> <p>Incarcerated people are generally treated as constituents and resident of their home districts. But when it comes time to redistrict, the lines get drawn based on the Census, which counts incarcerated people as if they were residents of the facility where they happen to be on</p>

	<p>Census day. While the correctional facility may seem a permanent structure, the people inside them are transient and as such should be counted at home; that's where they actually reside – where they eat, sleep, and are a part of the community.</p> <p>As a matter of fact, in Delaware, 23 to 25 % of our male prisoners and 40 percent of female inmates are in pre-trial detention, simply waiting temporarily for a trial. Between April 1 and election day, most of them are back home, so counting those people as residents of the prison is especially egregious!</p> <p>In 2010, Delaware became the second state to pass a law to end prison-based gerrymandering. House Bill 384 required the Department of Correction to collect the home addresses of incarcerated people and required the legislature to draw its districts on the basis of Census Bureau data corrected to count incarcerated people at their home addresses. The Department of Corrections collected and transmitted the address information but, unfortunately, the state was unable to arrange for the geocoding of this address data in time for the legislature's deadline on making their proposals public and had to, reluctantly, postpone full implementation until 2021. The Bureau's current proposal to provide geocoding services as a supplemental product would surely help in our situation, but a change in the residence rule for incarcerated people by the Census Bureau would meet the state's needs in a much more streamlined and reasonable fashion.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations; we appreciate the Bureau's aim to count everyone, including people who are incarcerated on Census day, in the right place. The Unitarian Universalist Delaware Advocacy Network urges you to count incarcerated people as residents of their last-known home addresses.</p>
c00495	<p>As you know the U.S. Census is essential to providing important services and funding to communities all across America. Consequently, it is imperative that the census is administered and collected as accurately as possible because the results affect decision making at all levels of government. Planning for hospitals, nursing homes, clinics and other vital health services are determined to a great extent by the data collected from the census. Therefore all citizens whether they reside in rural communities, urban centers and or sprawling suburban areas deserve an accurate accounting of their populations in order to secure proportional political representation at the state and federal levels as well as adequate infrastructure and social services that will sufficiently support these areas throughout the next decade.</p> <p>When prisoners are housed in correctional facilities they are not and should not be considered residents of the host community for purposes of the census. There are many reasons why prisoners should not be counted residents of these communities first among them is the fact that a prisoner's time in any one prison can change at any moment. Prisoners are routinely transferred from prison to prison around the state and country almost daily. Prisoner's will rarely ever live, work or raise a family in the areas where they were once held in a correctional facility. To the contrary, prisoners generally return to their residence of origins prior to incarceration, which due to the way we incarcerate people in this country tends to be mainly urban areas that are economically disadvantaged with overburden infrastructure and social services.</p> <p>Allowing communities where prisons are located to inflate their U.S. Census numbers turns the fundamental purpose of the census on its head. Additionally, this practice only serves to skew the results of your data and leave communities at risk. In particular, communities of color are disproportionately impacted by this inaccurate data collection practice leaving them vulnerable and without the economic</p>

	<p>supports to finances schools, roads and vital social services. Please consider reevaluated this highly inaccurate and egregious practice. I appreciate your time and consideration in this most important matter.</p>
c00496	<p>The U.S. Census Bureau’s current practice of interpreting its “usual residence” criteria to mean that it counts prisoners at their correctional facilities contravenes both the purpose of the census, and in some cases, the Equal Protection Clause of the Constitution. Article I, Section 2 of the U.S. Constitution expressly states that the decennial census was created to apportion seats for the House of Representatives using total population as the apportionment base.^{1/} Subsequent case law has extended the use of the counting of the total population as a basis for redistricting state and local districts.² The Census Bureau’s proposed residence rule for the 2020 Census would count inmates of correctional institutions at their correctional facilities³ This practice undermines the purpose of the census by ignoring the consequences for representation that result from applying this interpretation. This comment urges the Census Bureau to count those in correctional facilities at their pre-incarceration addresses. Making this change will ensure that the residence rule remains faithful to the purpose of the census and is compliant with the protections of the U.S. Constitution.</p> <p>The Lawyers’ Committee is a nonpartisan, nonprofit organization, formed in 1963 at the request of President John F. Kennedy to enlist the private bar’s leadership and resources in combating racial discrimination and the resulting inequality of opportunity. Our principal mission is to secure equal justice for all through the rule of law, while targeting the inequities confronting African Americans and other racial and ethnic minorities. Today, we continue that vital work by leveraging our unique standing with the private bar to challenge discrimination in its many forms. For more than 50 years, we have been at the forefront of combatting vote dilution and working to ensure the principle of “one person, one vote” is upheld.</p> <p>Counting Prisoners at Correctional Facilities Undermines the Purpose of the Census; Representation in Apportionment of the House of Representatives</p> <p>Representation in the government is an essential element of our democracy. In the Second Constitutional Convention, a delegate debating the function of the census stated “If a fair representation of the people be not secured, the injustice of the government will shake it to its foundations.”⁴ Several decades later, in an early 19th century speech to the Senate about the census, Senator Daniel Webster stated “To apportion, is to distribute by right measure; to set off in just parts; to assign in due and proper proportion⁵ The current residence rule for inmates fails on each of Senator Webster’s aspirations. As discussed further below, recent court decisions have determined that the residence rule’s application has the potential of violating the U.S. Constitution’s Equal Protection Clause.⁶ In the landmark case <i>Wesberry v. Sanders</i>, the U.S. Supreme Court held that “as nearly as is practicable one man’s vote in a congressional election is to be worth as much as another’s.”⁵ Building on its opinion in <i>Wesberry</i>, the Court in <i>Reynolds v. Sims</i> reinforced the principle that “one man’s vote. . . is to be worth as much as another.”⁶ The Reynolds court discussed the impact of weighing one person’s vote over that of another. “ And if a state should provide that the votes of citizens in one part of the state should be given two times, five times or 10 times the weight of votes of citizens in another part of the state, it could hardly be contended that the vote of those residing in the disfavored area had not been</p>

effectively diluted.”⁷ The Census Bureau’s method of counting prisoners not only denies them adequate representation, it potentially removes them from the count, particularly where courts hold that they should not be considered in the count of a particular district.

Apportionment of the House of Representatives and Most Other Offices is Based on Total Population so Prisoners Must be Counted Somewhere.

Recently, in *Evenwel v. Abbott*, Supreme Court reaffirmed the use of total population in deciding the population count when drawing districts.⁸ The Court noted that for the time of the *Reynolds* decision on, it has consistently used total population when evaluating whether a district was malapportioned in violation of the Equal Protection Clause.⁹ Further the Court emphasized that use of total population in apportionment promotes equitable and effective representation.¹⁰ Referring to one of the Framers’ interpretations of the relationship between the population and the representatives who serve them, Justice Ginsburg, writing for the Court, quoted Alexander Hamilton’s statement that “There can be no truer principle than this—that every individual of the community at large has an equal right to the protection of government.”¹³

Prisoners Have More Ties to their Home Community Than Their Prison Community.

The practice of moving prisoners away from their home communities is a relatively recent one. As the U.S. has become a world leader in imprisoning its population,¹⁴ the trend has been to build prisons in rural areas.¹⁵ Although rural communities make up about 20% of the U.S. population, they contain about 40% of prison facilities.¹⁶ And, these rural prisons are often filled with inmates from urban areas.¹⁷ Further, these prisoners are usually people of color as they make up more than 60% of people in prisons, with black men nearly six times more likely to be imprisoned by whites.¹⁸ Particularly, minorities are disproportionately represented in state prisons; in some states more than 10 times that of whites.¹⁹ As a result, urban minority prisoners are currently counted as part of the rural community population that elects representatives with little or no concern for the interests of prisoners.²⁰ This practice of counting prisoners at correction facilities also results in an outsized influence on the election of representatives where the prison is located on the part of the area’s non-incarcerated residents.

The racial disparity within the prison population opens the door for violations of Section 2 of the Voting Rights Act where minority populations are being used as “census persons” as part of a district’s population, but have no real representation.²¹ Section 2 addresses not only the denial of the right to vote, but also diluting the impact of the vote. As the Supreme Court noted in *Allen v. Board of Elections*, “the right to vote can be affected by a dilution of voting power as well as by an absolute prohibition on casting a ballot.”²² The current census

rule can potentially render a significant number of minority populations as non-existent, both for representation purposes, where the prison is located and also at their prior address in violation of both the constitution and the Voting Rights Act.

The 2005 city council election in Anamosa, Iowa dramatically exemplifies the consequences of counting prisoners where they are incarcerated. Anamosa, home of Iowa's largest penitentiary, was divided into four wards, each with a population of approximately 1,400 following the 2000 Census.²³ Ward 2 contained the entire penitentiary—about 1,300 inmates who were unable to vote for their representatives.²⁴ The balance left only 58 non-prisoners in Ward 2.²⁵ Consequently, a councilman won his seat with only two votes. Asked about his representation of most of his constituents, the Councilman responded “Do I consider them my constituents? They don't vote so, I guess, not really.”²⁶ Because inmates can rarely vote²⁷ and typically have few ties to the communities where prisons are located, representatives of districts with prisons have little incentive to serve and represent the interests of the inmates. Such representatives “represent” inmates in name only. As a result, each non-incarcerated constituent of a district with a prison is given a greater effective voice than the constituents of districts without prisons.

Additionally, the constitutional purpose is better served if prisoners are counted not just as bodies in a district, but are counted as persons worthy of representation. That representation is likely to come from officials from their prior address. Prisoners will inevitably have “enduring community ties” in the community they resided in before incarceration.²⁸ Furthermore, if the prisoner seeks any redress regarding the circumstances that lead to their imprisonment, they will likely reach out to officials in the community they lived in before arrest not the officials in the community where the prison is located. Even if the prisoner did reach out to a county official, that official is unlikely to be able to help since most prisons are run by the state not the county in which the prison is located.²⁹

Inmates retain an entitlement to vote in only two states: Maine and Vermont.³⁰ Representatives in those states have incentives to respond and answer to incarcerated voters. However, prisoners in other states are best represented in the districts where they previously lived and will likely return after serving their sentences. Inmates have more social ties to home districts where family and friends live. Furthermore, if an inmate requires assistance from an elected official, any response is likely to be at the behest of a family member or friend who votes. Given the reality of where individuals in prison are likely to have true representation, the Census can best serve them by adopting a rule that allows them to be counted at their previous address.

Courts Are Finding that Counting Prisoners Where Imprisoned Violates the Principle of One Person, One Vote And Have Upheld the Counting of Prisoners in Their Home Communities

Recently, two courts have confronted the impact of districts comprised primarily of a prison population. In *Calvin v. Jefferson Cty. Bd. of Comm'rs*, the court, after extensively detailing the history of the right to vote and discussing the nature of representational equality determined that the challenged district was significantly malapportioned in violation of the Constitution.³¹ The Court came to this conclusion after developing a test to determine whether there was a “meaningful representational nexus” when a legislative district had a population made up of a large number of nonvoters.³² In that case, a state prison's inhabitants made up a significant number of the population of one of Jefferson County's five districts. Observing that those individuals did not have representation solely based on physical

location, the Court determined that it was difficult to see how the representatives of the district in which the prison was located “represent[ed]” inmates in the same way as others who were physically in the District. The Court noted “. . . the scheme gives the non-incarcerated population of [a district with a prison] (whether they vote or not) an increased ability to access and influence their representatives and increased opportunities to reap the benefits of that influence.”³³ Moreover, the Court determined that through its actions, the state implicitly deprived the prisoners in the district in question of their representational rights with respect to units of local government.³⁴

In *Davidson v. City of Cranston*, the Court adopted the *Jefferson County* court’s “representation nexus” test. In *Davidson*, the Court agreed with the plaintiffs’ claim that a redistricting plan that placed the state’s entire prison population in a single ward in Cranston diluted the vote and political influence of residents in the city’s other wards.³⁵ The Court noted that Cranston’s elected officials did not engage or attempt to represent the ward’s prison inmates.³⁶ It also noted that of the 3,433 prisoner inmates in the ward, only about 155 were from Cranston.³⁷ Both courts acknowledged that elected officials of districts where inmates live and sleep most of time typically do not represent the interests of those inmates. The *Davidson* Court ordered that the prisoners be removed from the population count. However, the prisoners must be counted somewhere. By adopting a rule counting prisoners at their previous address, the Census Bureau will avoid the indefensible situation of prisoners removed from the count completely.

The Usual Residence Rule Has Been Defined Differently by the Census Bureau at Different Times

The Census Bureau can and should update its interpretation of the “usual residence” rule, particularly when its rigid application has proven inconsistent with the U.S. Constitution’s Equal Protection Clause.³⁸ This request asks the Census Bureau to act as it has in the past. It has made previous changes to how certain populations are counted for apportionment and representation purposes, and has defined inmates differently over time.³⁹ For several decades starting in 1850, the Census Bureau treated inmates as family members under the head-of-household jailor.⁴⁰ The 1900 Census specifically asked about prisoners’ residences, acknowledging that “[M]any prisoners are incarcerated in a state or county of which they are not permanent residents. In every case, therefore, enter the name of the county and state in which the prisoner is known, or claims to reside.”⁴¹ As recently as Census 2010, Director Robert Groves stated that those in jails awaiting hearings would be counted at their homes.⁴² Yet the proposed residence rule for Census 2020 goes so far as to eliminate even this reasoning by recommending that “People in local jails and other municipal confinement facilities on Census Day . . . are [to be] counted at the facility.”⁴³

Several states have answered the question of where prisoners should be counted by passing laws mandating that prisoners be counted where they lived before incarceration. They include California⁴⁴, Delaware⁴⁵ and Maryland⁴⁶ and New York.⁴⁷ Notably, the New York State legislature cited the violation of the Equal Protection Clause’s one person, one vote principle as a flaw of the current Census residence rule. Maryland’s law was challenged in *Fletcher v. Lamone*.⁴⁸ The plaintiffs claimed that Maryland’s “No Representation Without Population Act” was unconstitutional because only number generated by the Census can be used to determine congressional districts.⁴⁹ The Court rejected this argument and significantly noted that “[a]ccording to the Census Bureau, prisoners are counted where

they are incarcerated for pragmatic and administrative reasons, not legal ones.”⁵⁰ However, as discussed above, this pragmatic approach has significant legal consequences. Prisoners are at risk of not being counted at all.

Conclusion

The Census Bureau can avoid a piecemeal approach to addressing the consequences of its current and proposed rule by adopting a change that ensures representational equality for prisoners. Doing so would fortify the “enduring ties” of prisoners to their communities and prevent the voices of those in jurisdictions surrounding districts with significant prison populations from being diluted.

c00498	<p>As national leaders of civil rights organizations committed to the social and economic empowerment of communities color, we write to express our outrage and strenuous objection to the Proposed 2020 Census Residence Criteria and Residence Situations Rule that the Census Bureau (Bureau) released on June 30, 2016. Once again, the Bureau has inexplicably ignored the need to change the “usual residence” rule to address the incarceration epidemic in this country.</p> <p>The decennial Census—the largest peacetime mobilization operation in the U.S.—is essential in advancing equality of access and opportunity in virtually every social and economic sector. It determines the economic and political empowerment of our communities, and the allotment of federal monies that support our communities. Declining indicators like jobs, housing and asset building demonstrate that this last decade has been very difficult for the population and communities that we advocate for and represent.</p> <p>The goal of the Census Bureau is to provide the best mix of timeliness, relevancy, quality and cost for the data it collects and services it provides. Additionally, the decennial census is supposed to tell us who we are and where we are going as a nation. Therefore, it should be axiomatic that the decennial census would count inmates as part of their home community. The Bureau must reconsider its proposed 2020 Census Residence Criteria and Residence Situations Rule.</p> <p>In 2014, there were nearly 1.6 million Americans in state or federal prison.¹ Of the male population, an estimated 37% were black, 32% white and 22% Hispanic; of the female prison population, 50% were white and 21% black.² The detrimental implications of the Bureau’s proposed “usual residence” rule will once again be devastating to the communities we serve. The practice of counting inmates at their correctional facility mandates that politicians, policymakers and advocates not accurately account for more than a million American residents as they make vital decisions. As a result, policy, politics, economics and demographic trends only give a distorted picture of this nation's economic and social health.</p> <p>It is a well-documented fact that the rate of incarceration in the United States is much higher than that of any other country in the world. The consequences that this mass incarceration has on low-income urban communities are profound. Findings from a 2014 Annual Review of Sociology article regarding incarceration, prisoner reentry, and communities highlighted that,</p> <p>[a]lthough almost all communities are touched to some degree by prisoner reentry, poor urban communities bear a disproportionate share of the burden, both in terms of prison admissions and releases. As a result, the criminal justice system now touches nearly as many people in poor communities as the education system or the labor market. Many former prisoners return to communities to live alongside other former prisoners, which carries implications for competition for scarce resources, criminal opportunities, and the</p>

	<p>effectiveness of formal and informal social control.³</p> <p>Every week America’s state and federal prisons release over 10,000 ex-offenders totaling more than 650,000 annually.⁴ Overwhelmingly, they will return home without any financial or social resources to aid in a successful re-entry. In 2007, Congress recognized the importance of creating opportunities to support the re-entry of ex-offenders by passing the Second Chance Act of 2007 (SCA). SCA provides federal grants for programs and services that work to reduce recidivism and improve offender outcomes. The Bureau’s proposal to count inmates in their prison location rather than their home community ensures that re-entry programs will not have the accurate demographic data they need to succeed.</p> <p>Not only does the Bureau’s proposed rule damage the efficacy of re-entry policies and services, but it also undermines the constitutional guarantee of “one person, one vote” unanimously upheld by the Supreme Court in <i>Evenwel v. Abbott</i>, by diluting the representational equity of a prisoner’s home community. In <i>Evenwel</i>, the Court specifically noted, “nonvoters have an important stake in many policy debates and in receiving constituent services.”⁵ A local governing body cannot represent inmates nor can they affect them with local regulations. Inmates are literally not a part of that community in any manner absent their forced physical location.</p> <p>Two recent U.S. District Courts decisions also affirm that the Census Bureau should change the “usual residence” rule to count inmates as part of their home community and not at the location of the prison. In March 2016, a U.S. District Court judge in Florida ruled against prison gerrymandering finding that by counting inmates who lacked a fundamental and necessary “representational nexus” with the county district, the County violated the “one person, one vote” principle in the Constitution’s Fourteenth Amendment. Similarly, in May 2016, a U.S. District Court judge in Rhode Island, also ruled against prison gerrymandering because of the lack of representational nexus with the local government.</p> <p>We strongly urge the Bureau to change the “usual residence,” rule. The 2020 Census must not disenfranchise almost 1.6 million American residents. An accurate representational count is the only way to ensure that all who use census data will have the requisite statistics to undergird effective public policy.</p> <p>¹ Carson, E, Ann, Ph.D., Bureau of Justice Statistics, Prisoners in 2014, September 17, 2015. c00499	<p>I submit this comment letter in response to the Census Bureau’s federal register notice regarding the Proposed 2020 Census Residence Criteria and Residence Situations, published on June 30, 2016 (81 Fed. Reg. 42577), with time for comment extended on July 25, 2016 (81 Fed. Reg. 48365). I write to urge the Census Bureau to change its policy of counting incarcerated people as residents of their place of incarceration as opposed to residents of their pre-incarceration address. Because many federal funding streams are dependent on census</p>

data to determine allocation levels, by artificially depressing the true population of New York City the Census Bureau is costing New York City residents critical funds that could be put towards their social safety net. This policy hurts all New Yorkers by placing a strain on our already overburdened social services.

As _____ for the City of New York, I am tasked with overseeing the provision of services by City agencies and protecting the rights of New Yorkers. I am a citywide elected official, the _____ to the Mayor, and _____ of the New York City Council. New York City Charter (“City Charter”) §§ 10, 24. The City Charter requires that I monitor, investigate, and review the actions of City agencies. I am also responsible for identifying systemic problems, recommending solutions, and publishing reports concerning my areas of inquiry. *Id.*, at §24.

My office receives an average of 630 complaints and requests for help from New York City residents every month. Those calls reflect complaints about the adequacy of City services. The greatest percentage of calls (32%) concern housing: the need for repairs, the fear of eviction, complaints of harassment, and difficulties encountered navigating the homeless shelter system. The next most common category of complaint (9%) comes from residents needing assistance obtaining cash assistance and medical services for needy families (public assistance and Medicaid).¹

The Census Bureau’s existing definition of residence as place of incarceration could result in undercounting New York City’s population by over 43,000 people. This undercount could have serious repercussions on the funding available for vital programs for New Yorkers, as over \$400 billion in federal funds are distributed based on census population data.² The majority of those funds are in the very areas of need reflected by my constituents’ calls: housing, Medicaid, public assistance, and food stamps.³

Further, incarceration affects the communities from which people come. And, it affects the families of people who are incarcerated, often causing significant financial distress.⁴ When those families live in New York City, it is the City’s agencies to which they will turn for support in housing, shelter in the event that they become homeless, food stamps, cash benefits, and other social services. And, upon release, the City expends numerous resources to help formerly incarcerated people transition back into their pre-incarceration communities. Thus, the fact of incarceration is likely to increase the demand for social services and other resources from the City, even as the resources for the City are proportionately reduced because of the misattribution of the inmate’s residence.

New York City residents who are incarcerated in prisons outside of New York City remain New York City residents by every practical metric. The fact of incarceration imposes additional burdens on New York City’s finite resources. At the same time, counting prisoners in the communities in which they are incarcerated deprives New York City of resources that could be used to fund the critical services that City government is obligated to provide to all of its most vulnerable residents. These distortions of federal funding need to be addressed for the sake of New York City’s residents. I therefore urge the Census Bureau to recognize that a prison is not a place of residence, and that prisoners and detainees should be counted as residents of their last pre-incarceration address.

c00500	<p>MALDEF (the Mexican American Legal Defense and Educational Fund) respectfully submits the comments below in response to proposed changes to the “2020 Census Residence Rules and Residence Situation,” as contemplated by the U.S. Census Bureau (Bureau), published in the June 30, 2016 edition of the Federal Register. MALDEF has serious concerns about the proposal to continue the practice of counting prisoners at the correctional facility where they are detained, rather than at their last known residence, for the purposes of the 2020 Census.</p> <p>Founded in 1968, MALDEF is the nation’s leading Latino legal civil rights organization. Often described as the “law firm of the Latino community,” MALDEF promotes social change through legislative and regulatory advocacy, community education, and high-impact litigation in the areas of education, employment, voting rights, and immigrant rights. Our focus on immigrants’ rights includes advocacy related to the increasing criminalization of immigrants and the direct and collateral consequences of criminal convictions for immigrants.</p> <p>The Bureau solicited comments on the 2010 Census Residence Rule and Residence Situations, and of those comments submitted that related to prisoners, 96 percent advocated for counting of incarcerated individuals at their last known residence. The vast majority of those comments argued that counting prisoners at the facility where they are held negatively affects prisoners’ home communities by inflating the political power of communities where prisons are located and diminishing the political power of communities from which prisoners come and where their families continue to reside. Yet, the Bureau has decided that in spite of overwhelming public comment asking the Bureau to change the residency rule regarding incarcerated individuals for the purposes of the next decennial census, it will maintain the status quo.</p> <p>The Bureau argues that counting incarcerated individuals at the prison facility is consistent with the understanding of “usual residence” under the Census Act of 1790. The rationale provided fails to take into consideration the variances in prison populations and sentences received across the country and even within a state. Prisoners move within a state from facility to facility, while many other individuals receive short sentences and subsequently return home to their communities.¹ In New York State, the median sentence served is no more than 7 months.</p> <p>Counting prisoners at the place of incarceration allows room for political maneuvering, specifically in drawing electoral districts for the purpose of redistricting in each state. Having a clear national rule, with Census data provided in support, would guard against this type of political scheming, and the Bureau has the authority to make the necessary changes to protect the interests of incarcerated individuals.</p>

	<p>The issue is particularly concerning for African American and Latino populations, who are disproportionately represented in the prison population.² According to one study, the 2010 census revealed 20 counties in 10 states where the incarcerated Latino population was greater than the non-incarcerated Latino population.³ This demonstrates the inconsistency in counting individuals in a location where they have no familial or community ties and expecting their interests to be adequately represented. The effect is far reaching when one considers that incarcerated individuals return home to live in communities that are underrepresented, and thus underprepared to provide necessary social services for recently released individuals. That underrepresentation often also translates into communities that are under-resourced and fail to capture their fair share of funding and services.</p> <p>For purposes of drawing electoral districts, prisoners should be counted at their family or previous home because voters in that community, including prisoners' own family members, are far more likely to represent the interests of the prisoners when voting than voters who surround a prison facility—many of whom are dependent on the prison for employment or business and therefore have an interest in maintaining high prison populations. The Census Bureau's current practice represents deliberate indifference to prisoners and the most accurate representation of their long- and short-term interests.</p> <p>Allowing prisoners to vote would be the option most consistent with democratic principles. However, in the absence of such an initiative, ensuring that prisoners count in the communities where they lived or where family members live is the best method of representation for non-voting prisoners. MALDEF strongly urges the Census Bureau to adopt a change in the residence rule for incarcerated persons, in order to produce a more accurate count of communities across the county and ensure adequate representation of non-voting prisoners.</p> <p>Thank you for your time and consideration.</p> <hr/> <p>¹ Kristin D. c00501	<p>The Drug Policy Alliance (DPA) submits this comment in response to the Census Bureau's Federal Register Notice regarding the "2020 Census Residence Rule and Residence Situations." We urge you to count incarcerated individuals at their home address, rather than at the facility they are held at on Census Day. A change in the "usual residence" rule is essential because the policy as currently applied is perpetuating disproportionate harm to communities of color, while simultaneously contributing to an unfair inflation of power within rural, prison districts.</p> <p>DPA is the nation's leading organization promoting drug policies that are grounded in science, compassion, health and human rights. Our supporters are individuals who believe the war on drugs is doing more harm than good. We work to ensure that our nation's drug policies no longer arrest, incarcerate, disenfranchise and</p>

otherwise harm millions – particularly young people and people of color who are disproportionately affected by the war on drugs.

When it was first implemented, the “usual residence” rule, when applied to incarcerated persons, had no significant impact on political power and influence simply due to how small the incarcerated population was relative to the heavily racialized, prison-industrial complex afflicted state we are currently in.

The presidency of Ronald Reagan marked the start of a long period of skyrocketing rates of incarceration, largely thanks to his unprecedented expansion of the drug war. The number of people behind bars for nonviolent drug law offenses increased from 50,000 in 1980 to over 400,000 by 1997. Today, the United States has over 2.2 million individuals within the nation’s prisons and jails, a 500% increase over the last four decades.

In upholding a prison cell as a residence, the Census Bureau inadvertently concentrated a population that is overwhelmingly male, urban, African-American and Latinx, into 5,393 Census blocks that are far from the actual homes and communities of said incarcerated persons. Outside of the sheer increase of the American incarcerated population size, the racialized injustice of the inflation of political power in rural areas, where prisons are disproportionately located, and in turn, the deflation of power within marginalized communities most affected by crime, mass criminalization and incarceration, is troubling. Exemplified in Illinois, 60% of incarcerated people have their home residences in Cook County (Chicago), yet the Bureau counted 99% of them as if they resided outside Cook County.

This inaccurate and misleading data manifests in inequitable distortion of representation at both local and state levels and false pictures of community populations which all affect research, funding, allocation of government grants and voting power. Districts with large prisons send a representative to the state capitol on their behalf without actually meeting the required number of residents, undermining the Supreme Court’s requirement that political power and representation be based on population. In failing to acknowledge that most incarcerated individuals will return to their home community, the unreliable data provided by the Census Bureau directly and indirectly furthers systematic marginalization of the communities that these individuals will inevitably return to.

Though legislative redistricting is a responsibility of the states, the flawed data provided by the Census Bureau has only been rectified in a few states through various ad hoc approaches – approaches that are neither efficient nor universally implementable. In New York after the 2000 Census, for example, seven state senate districts only met population requirements because the Census counted incarcerated people as if they were upstate residents. For this reason, New York State passed legislation to adjust the population data after the

2010 Census to count incarcerated people at home for redistricting purposes. New York State is not the only jurisdiction taking action. Three other states (California, Delaware, and Maryland) are taking a similar statewide approach, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.

However, most state constitutions and statutes explicitly establish that state incarceration does not change an individual's residence. The Massachusetts legislature, for example, concluded that the state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated persons at their home addresses.¹

The Drug Policy Alliance is concerned that the inaccuracies of the Bureau's current method of counting incarcerated people benefits some, but greatly harms others along racial, class, and geographical lines. We share the following two examples of specific inaccuracies flowing from the Bureau's current method of counting incarcerated persons, which both carry consequences that weigh heavily on race and class: Consider a statistic from New York, where the upstate region has steadily been losing population: in the 2000 Census, almost one-third of the persons credited as having "moved" into upstate New York during the previous decade were persons sentenced to prison terms in upstate prisons. Such false migratory patterns can wreak havoc on seemingly sound policy decisions and how government resources are distributed. In Texas, in two legislative districts drawn after 2000, 12% of the population consisted of incarcerated persons.

This phenomenon shifts political clout and resources to prison districts at the expense of the African-American, Latinx, and/or low-income communities that majority of incarcerated people are most likely to return to. The Census Bureau currently elects to count boarding school students, individuals whom studies have shown are less likely to return to their home community because almost all of them attend college upon graduation, and even military personnel deployed overseas as residents of their home communities. We implore you to consider the unfair implications this antiquated method of counting has on the marginalized.

We supported the passage of New York's law ending prison gerrymandering. On the national front, we have also previously called upon the Census Bureau to change its practice in a 2013 letter submitted along with 209 other organizations.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations. The Bureau should strive to count all people accurately and in keeping with changes in society and population realities. We urge you to count incarcerated people as residents of their home address.

¹ See The Massachusetts General Court Resolution "Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of 'One Person, One Vote'" (Adopted by the Senate on July 31,

	2014 and the House of Representatives on August 14, 2014).
c00502	<p data-bbox="373 231 1894 260"><i>This comment submission contains graphics that cannot be displayed in this table. It is available as Appendix Attachment c00502.</i></p> <p data-bbox="373 299 1512 601">These comments are submitted in response to the Public Notice, dated June 30, 2016, regarding proposed criteria to be used to determine the “usual residence” of prisoners in the upcoming 2020 Census.¹ Previously, undersigned counsel provided comments urging the Census Bureau to modify the Residence Rule as it relates to those who are incarcerated (Rule 13) and those in Juvenile Facilities (Rule 16). Despite the fact that 156 of the 162 comments submitted in 2015 urged the Census Bureau to modify the rule to designate the “usual residence” of those that are incarcerated as their home or pre-incarceration address, the Public Notice determined that the “usual residence” of those who are incarcerated should be at the correctional facility. This decision is flawed in two significant ways.</p> <p data-bbox="373 640 1491 1009">First, the Census Bureau incorrectly assumes that “the majority of people in prisons live and sleep most of the time at the prison.”² In reaching this determination, the Census Bureau impermissibly combines inmates of state or federal prisons with inmates of local jails.³ There is a substantial difference between state and federal prisons on one hand, and local jails on the other. As noted in Exhibit A, there were 2,224,400 incarcerated people in 2014, but 744,600 of those that were incarcerated where held in local jails.⁴ Inmates in prisons typically spend more than one year in prison, whereas it is possible that inmates held in local jails end up being incarcerated for less than 24 hours. Moreover, the number of unconvicted jail inmates is more than 150% greater than those jail inmates that have been convicted.⁵ Therefore, there is no reasonable basis for the Census Bureau to determine that “the majority of people in prisons live and sleep most of the time at the prison.”⁶</p> <p data-bbox="373 1048 1507 1350">Second, there is significant churn within prisons and jails. As noted in Exhibit C, there 575,779 admissions in state prisons in 2014, and 50,865 admissions in federal prisons. However, during that same year, there were 581,817 releases from state prisons and 54,529 releases from federal prisons.⁷ The same analysis holds true for jails, where 58.1% of the jail population turns over in one week!⁸ Thus, the Census Bureau’s determination that “the majority of people in prisons [including local jails] live and sleep most of the time at prison” is simply not correct. Instead, both prison and jail inmates are constantly rotating through several stages of incarceration (pre-trial, post-trial, parole, residential reentry centers) which make the proposed one-size-fits-all definition for both prison and jail inmates illogical and legally unsustainable.</p> <p data-bbox="373 1389 1356 1417">Therefore, the tentative conclusion that “counting prisoners anywhere other than the</p>

facility would violate the concept of usual residence” is simply incorrect and most likely is the result of both (i) combining inmates in prisons and in jails into one group; and (ii) failing to consider the enormous churn of inmates in both prisons and jails.

Moreover, there is no difference between inmates being held in local jails (33% of the total inmates incarcerated in 2014) and military personnel who are deployed outside the United States or juveniles in residential treatment centers. The Public Notice tentatively concluded that deployments “are typically short in duration, and the deployed personnel will be returning to their usual residence ...after their temporary deployment ends.”⁹ A similar finding was made with respect to “people in residential treatment centers for juveniles.”¹⁰ Both situations are identical to inmates that (i) are held in jails, (ii) will be released after their short period of incarceration, and (iii) will return to their usual residence after their temporary detention ends.

Finally, incorporated by reference are the arguments previously presented in my July 2015 comments, which are separate justifications for modifying the census criteria.¹¹ In addition to the fundamental problems with the Census Bureau’s proposed definition of inmates discussed herein, there are significant public policy arguments that must be taken into consideration. Adoption of the proposed criteria would provide a perverse incentive for the construction of prisons and jails in rural areas, which will significantly enhance the relative power of that area in the determination of voting districts. Such actions will further exacerbate the very high recidivism rate among inmates, which will significantly impact our society.

In light of all of these factors, the Census Bureau has a rare opportunity to contribute to the growing movement to reform the criminal justice system, and encourage successful reentry of inmates into their local communities by counting these inmates at their legal address, voting residence or where they prefer to be counted.

Thank you this opportunity to provide comments on this very important criminal justice matter.

c00503	<p>The NAACP Legal Defense and Educational Fund, Inc. (“LDF”)¹ submits this comment letter in response to the Census Bureau’s (the “Bureau”) June 30, 2016 Federal Register notice regarding the Residence Rule and Residence Situations, 81 FR 42577 (“Residence Rule”). With the Residence Rule, the Census Bureau proposes to continue its unacceptable practice of counting the “usual residence” of <i>more than two million incarcerated people</i>, who are disproportionately Black and Latino, as the location of the prisons where they are involuntarily confined on Census Day. The Bureau plans to maintain the status quo with respect to the counting of incarcerated individuals despite that:</p> <ul style="list-style-type: none"> • over a year ago, LDF, along with nearly 150 other stakeholders, opposed this approach of counting incarcerated people and urged the Bureau, beginning with the 2020 Census, to accurately count incarcerated people at their last known, pre-arrest home address where, among many other reasons, they often remain residents under state law and maintain “enduring tie[s]” to their home communities;² and • with this Residence Rule, the Bureau proposes to <i>change</i> how it counts deployed military personnel, a largely white groups of individuals, as “residents” of their home communities, under the assumption that that is where they usually eat and sleep “most of the time” even if they do not happen to be at their homes on Census Day. <p>Thus, that the Bureau proposes to treat the deployed military’s largely white population different from the incarcerated population, who are largely Black and Latino, raises significant concerns regarding the racial and other impacts of the Residence Rule.</p> <p>LDF and various stakeholders have made the Bureau aware of the following multiple, fundamental flaws with continuing to count incarcerated people as “residents” of prison facilities where they are detained. We reiterate some of these concerns below.</p> <p>The Bureau’s flawed count of incarcerated people negatively impacts racial minorities.</p>

First, there are more than two million people incarcerated nationwide who would be affected by the proposed Residence Rule. This is nearly equivalent to the entire population of the state of New Mexico.³ Because of the failed “war on drugs,” and other laws, policies, and practices effectuating mass incarceration, Black and Latino individuals are disproportionately represented in the incarcerated population. Nationwide, Black people make up 13.3% of the general population, but 37.7% of the federal and state prison population⁴ And Black men are more than six times as likely as white men to be incarcerated nationwide.⁵

Black and Latino people often are imprisoned in white, rural areas, even though they typically are from urban communities of color.⁶ When imprisoned, incarcerated people do not freely reside there. Rather they are segregated from the people living in the communities where prisons are located. They cannot attend the community’s schools, use the parks and libraries, or freely seek gainful employment in those areas where prisons are located. Most fundamentally, the population incarcerated for or with felony convictions, which is disproportionately Black, cannot vote for the representatives of the areas where prisons are located.⁷ Felon disfranchisement laws collectively prevent 1.5 million Black males from voting, “stripp[ing] one in every 13 black persons of the right to vote—a rate four times that of nonblacks nationally.”⁸ In the few states where imprisoned people can vote while incarcerated, like in Maine and Vermont, they do so by absentee ballot *in their home communities*.⁹

Incarcerated people, thus, have no meaningful way to hold accountable the officials who purportedly represent them as “residents” of prisons and constituents of districts containing prisons. And representatives of the districts with prisons often do not consider themselves accountable to the imprisoned population.¹⁰ Instead, incarcerated individuals are more accurately and fairly represented by leaders in the communities of their pre-arrest home residence, where they are likely to return following incarceration and have meaningful and longstanding ties.¹¹ Thus, in many significant ways, imprisoned people are not “residents” of prison facilities or constituents of the representatives that serve districts with prisons.

The inaccurate Census counting of incarcerated people results in redistricting that diminishes racial minorities’ representational and voting power.

Second, states and local jurisdictions typically rely on the Bureau’s data to redistrict and apportion representatives among districts, although they are not required to do so. While a few states and an increasing number of local jurisdictions have attempted to reallocate incarcerated people to their home communities during redistricting,¹² the overwhelming majority of state and local jurisdictions rely on the Bureau’s flawed count of incarcerated people as “residents” of prisons. Because of the demographics of incarcerated people and the locations of prisons, as discussed above, white rural communities with prisons, but few actual residents, receive the same number of representatives as urban communities of color with more actual residents. Put

another way, the populations of white rural communities are inflated by the bodies of imprisoned people, weakening the voting and representational power of the communities where imprisoned people actually reside.

This practice, known as prison-based gerrymandering, which is made possible and is fostered by flawed Census data, potentially violates the: (1) one-person, one-vote principle, which, in requiring roughly equal numbers of people among legislative districts, ensures representational equality and prohibits vote dilution based on where a person lives;¹³ (2) the Voting Rights Act, which prohibits practices like prison based gerrymandering that dilute the voting strength of the minority communities where incarcerated people are from;¹⁴ and (3) state constitutions, which often provide that people do not lose their residence by virtue of being incarcerated.¹⁵

Given the transient and temporary nature of imprisonment, incarcerated people eat and sleep in their home communities for most of the decennial period.

Third, the Bureau purports to count the “usual residence” of incarcerated people at their prison facilities because that is where they eat and sleep “most of the time.” Contrary to the Bureau’s rationale, it simply is not the case that imprisoned people usually eat and sleep “most of the time” in their prison facilities. The Census Day count has implications over the course of an entire decade, but typically state prison sentences are two to three years and incarcerated people “are frequently shuffled between facilities at the discretion of [prison] administrators.”¹⁶ As of 2008 in New York, for example, the median time that an incarcerated individual remained at a particular facility was only 7.1 months.¹⁷ In Georgia, the average incarcerated individual has been transferred four times and will stay at any one facility, on average, only nine months.¹⁸

The experiences of imprisoned people also demonstrate the transitory nature of prison life. _____, for example, was incarcerated in federal prison for twenty years, and in that time, he “was incarcerated in over a dozen different prisons in seven different states,” and “[a]ll of these sites were chosen by the prison system, not [him]self.”¹⁹ Only one address remained consistent throughout _____ incarceration: his *home* address.²⁰ Given the involuntary and often temporary nature of incarceration, it is not surprising that “[u]pon release the vast majority [of incarcerated people] return to the community in which they lived prior to incarceration” and will eat and sleep there.²¹

The Bureau’s proposed Residence Rule treats the disproportionately Black and Latino incarcerated population differently from other groups of people, who are predominately white.

Like most incarcerated people, deployed military personnel are away from their homes temporarily on Census Day. But, under the proposed Residence Rule, deployed military personnel would receive the benefits of being counted by the Bureau as residents of their home address (rather than their temporary overseas address). Indeed, the Bureau

proposes in this Residence Rule to *change* how it counts military deployed personnel, a majority-white population.²² One of its reasons for doing so is the Bureau’s concern for accurate data to support funding, planning, and services in military communities.²³

Incarcerated people, who are disproportionately Black and Latino, are entitled to similar consideration by the Bureau. Inaccurately counting incarcerated individuals as “residents” of prisons negatively impacts their access to funding, planning, services, and other critical resources and support systems. Representatives of districts with imprisoned populations are incentivized to oppose criminal justice reforms, such as measures to end mass incarceration and felon disfranchisement laws, or the provision of resources for drug treatment or other rehabilitation programs.²⁴

In short, the Bureau’s disparate treatment of deployed military personnel, a largely white population, and of incarcerated people, who are disproportionately racial minorities, even though both populations are temporarily away from their homes on Census Day and share the same need for access to funding, planning, and services, is irrational and unwarranted.²⁵

For these and other reasons that LDF set forth in its June 2015 comment letter, we strongly urge you to interpret the Residence Rule to count incarcerated people as residents of their last known, pre-arrest home address and treat them like other groups of people who may be away from their homes on Census Day, but remain true residents of their communities.

Thank you for this opportunity to comment on the proposed Residence Rule. If you have any questions or concerns, please do not hesitate to contact _____, Senior Counsel, at _____ or me.

¹ LDF—founded over 75 years ago under the direction of Thurgood Marshall—is the nation’s first civil rights and racial justice organization. An integral component of LDF’s mission continues to be the attainment of unfettered participation in political and civic life for all Americans, including Black Americans. As explained in this letter and previous communications with the Bureau, Black Americans’ political participation is impeded by redistricting and other policy decisions that are based on the Census Bureau’s inaccurate count of the “usual residence” of incarcerated people.

² *Franklin v. Massachusetts*, 505 U.S. 788, 804 (1992); *see also*, Letter from Leah C. Aden, Assistant Counsel, LDF, to Karen Humes, Chief, Population Division, U.S. Census Bureau, July 19, 2015, http://www.naacpldf.org/files/case_issue/NAACP%20LDF%20Re%20Residence%20Rule.pdf (LDF incorporates its July 2015 comments herein); Prison Pol’y Initiative, *A sample of the comment letters submitted in 2015 to the Census Bureau calling for an end to prison gerrymandering*, <http://www.prisonersofthecensus.org/letters/FRN2015.html> (last visited Sept. 1, 2016). Notably, the demand that the Bureau change the way that it counts incarcerated people did not begin only a year ago. For many years, LDF and other stakeholders have advocated for a change to the Bureau’s residence criteria for incarcerated people to no avail. *See, e.g.*, Letter from Stakeholders to Thomas Mesenbourg, Acting Director, U.S. Census Bureau, Feb. 14, 2013, <http://www.prisonersofthecensus.org/letters/feb2013.html>.

Maddan, *Enslavement to Imprisonment: How the Usual Residence Rule Resurrects the Three-Fifths Clause and Challenges the Fourteenth Amendment*, 15 Rutgers Race & L. Rev. 310, 326 (2014) (“Since apportionment is also about resources, the repercussions of moving money and power away from the hometown of the prisoner means less resources to foster the societal re-integration that he or she deserves.”)

²⁵ *See supra* n.17. The LJP Letter (at 2-6) adeptly explain various other populations, like boarding students and members of Congress—who are largely white and wealthy—whom the Bureau counts as residents of their home communities, unlike its treatment of incarcerated people, despite that boarding students and Congressional members *choose* to be away from their homes on Census Day. *See also supra* n.21. The Wagner and Wright Letter, in addition to boarding students and Congressional members, critically explains how the Bureau counts visitors, newborn babies, and truck drivers at their homes on Census Day, despite that they, like incarcerated people, happen to be away temporarily on that day.

c00504

I submit this comment in response to the Proposed Census 2020 Rules on Residence Criteria and Situations 81 Fed. Reg. 42,577. In order to adhere to the constitutional purpose of the decennial census and to reduce the adverse consequences the current rule permits, I urge the Census Bureau revise its residence rules to count incarcerated individuals at their homes or previous addresses rather than at their correctional facilities.

I send this comment as a private individual with well over a decade of relevant experience. I _____ the University of Michigan Population Studies Center, where I continue to use decennial census (including PL94-171, demographic profile, summary file 1, and summary file 2 data) and American Community Survey data daily. _____, I _____ a guide to the American Community Survey for the media distributed by the Census Bureau. Currently, I also _____ Georgetown University Law Center in Washington, D.C. Should you have any questions related to this comment, please feel free to contact me at _____.

The Census Bureau's proposed residence rule appears to rely on faulty reasons for its current proposed residence rules vis-à-vis incarcerated individuals. The proposed residence rule intends to count inmates of prisons, jails, and other correctional facilities at their institutions.¹ To explain its reasoning for adopting the rule, the Census Bureau has expressed that it relies on a guide originating from the Census Act of 1790 to count individuals where they "sleep and live most of the time." However, no such text exists in that Act.² As written, the Act places some emphasis on an individual's connection to a family.³ Nothing is prescribed about counting where people sleep. Instead, the guide that the Census Bureau relies on appears to simply be tradition and therefore more flexible to evolve.

In fact, although the Census Bureau has relied on this guide, the residence rules neither follow this guide absolutely nor should they. The proposed residence rules already create exceptions such as for boarding school students and military members on deployment.⁴ Neither would this be the first time the Census Bureau has made minor changes to whom they count and where for the purposes of apportionment and representation. For decades the Census Bureau has varied its rules for the overseas military population.⁵ The Census Bureau should similarly extend such flexibility to the residence rules for the incarcerated population.

Additionally, the Census Bureau has counted the incarcerated population differently in previous censuses. Particularly noteworthy, shortly before Census Day in 2010, Director Groves claimed for Census 2010 that the Census Bureau would count those in local jails awaiting trial at their home addresses as opposed to the jails.⁶ That is not an isolated anomaly. The census has defined inmates differently over time; for several decades starting in 1850, the census treated inmates as family members under the head-of-household jailor.⁷ Recognizing some of the instant arguments, the 1900 Census specifically asked about the prisoners' residences, acknowledging that "[M]any prisoners are incarcerated in a state or county of which they are not permanent residents."⁸ Instructions for enumerators directed that "In every case, therefore, enter the name of the county and state in which the prisoner is known, or claims to reside."⁹

As the Census Bureau has already created exceptions when applying its guide, the question of whether the Census Bureau *can* count the incarcerated population at their homes or previous addresses has been answered. The question remains whether the Census Bureau *should* create an exception to its guide for the incarcerated population. The Census Bureau may favor counting the incarcerated population at the facilities to reduce administrative costs or to increase accuracy – two relevant goals that must be remembered when conducting the decennial effort.

As the Census Bureau already works with several states to provide adjusted data counting the incarcerated population at their homes, the costs do not appear to be prohibitive. Instead, counting the incarcerated population at their homes as the standard would remove redundancies involved with preparing parallel sets of data for those states that request it. The willingness of the Census Bureau to provide an alternative set of data invites a question of whether there really can be two correct location options to count the incarcerated population. Upon some reflection, it seems clear that one of the options aligns much more closely with the purpose of the decennial census. Since the first census of the United States in 1790, the federal government has administered the enumeration with parallel aims. Article I, Section 2 of the U.S. Constitution expressly mandates the decennial census for the purpose of determining representation in Congress.¹⁰ Although, seeing an opportunity to efficiently collect data to better administer government, James Madison urged Congress to include a

question about occupation on the first census.¹¹ Madison stated that the question would aid “know[ing] in what proportion to distribute the benefits resulting from an efficient General Government.”¹² The Census Bureau continues to collect such supplemental data today, and the census remains an invaluable source of social and demographic data beyond serving its constitutional purpose of determining representation. However, even in 1790, Madison highlighted the importance of conducting the census for its constitutional purpose while at the same time dismissing probable complications respondents would encounter answering their occupations.¹³ Madison recognized that accuracy in properly allocating representation should be prioritized well ahead of accuracy in the supplemental content. As the Census Bureau considers the residence rules, it might gain from remembering Madison’s perspective.

The proposed residence rule counting incarcerated persons at their institutions will give an inaccurate count because the constitution mandates the decennial census first for the purpose of establishing representation. Those politicians representing the districts where inmates live and sleep most of time rarely represent the interests of inmates.¹⁴ Meanwhile, inmates retain an entitlement to vote in only two states: Maine and Vermont.¹⁵ Representatives have incentives to respond and answer to voters. Those interests of inmates are often represented best in the districts where inmates previously lived and will frequently return after serving their sentences. Inmates have more social ties to those home districts, where family and friends are more likely to share interests. If an inmate requires assistance from an elected official, any response is likely to be at the behest of a family member or friend who votes.¹⁶ Accordingly, counting inmates at their homes would provide representation more aligned with the interests than under the current rule.

Additionally, those living in districts with prisons benefit from having a greater voice compared to those districts without a prison. As pointed out in by the federal judge in *Calvin v. Jefferson County Board of Commissioners*, “. . . the scheme gives the non-incarcerated population of [a district with a prison] (whether they vote or not) an increased ability to access and influence their representatives and increased opportunities to reap the benefits of that influence.”¹⁷ However, the proposed residence rule would continue this scheme placing non-voting incarcerated populations in districts and magnifying the voice of voters in the district relative to the voice of voters in neighboring districts without prisons.

Consequently, the proposed residence rules fail to adhere to the constitutional purpose for the decennial census. Instead, the proposed census residence rules perpetuate absurd consequences to vote dilution and gerrymandering that have grown more pervasive in recent decades. Other comments responding to the notice will no doubt describe some of these absurd consequences.¹⁸ What remains clear is that counting a densely populated prison population of thousands of disenfranchised individuals within the institution as opposed to at their homes or previous addresses threatens fair and just legislative representation.

These consequences mean that the proposed residence rule, while potentially complying with the traditional interpretation of the “usual residence,” will contravene both the constitutional purpose of the census and likely the Equal Protection Clause of the Fourteenth Amendment to the Constitution. Furthermore, because the proposed residence rule likely violates the Equal Protection Clause and also impacts minorities at much higher rates than whites, the proposed residence rule may also violate the Voting Rights Act of 1965. Although

counting inmates at their facilities may lead to an accurate count for the purposes of supplemental questions, what benefit does such accuracy provide to a count that is clearly wrong?

This comment joins many others urging the Census Bureau to revise the residence rule in order to count inmates at their home or previous address. Making this change will ensure the residence rule remains faithful to the constitutional purpose of the census and remains compliant with the protections afforded under the Constitution.

Thank you for this opportunity to comment on the proposed residence rules. I ask the Census Bureau reconsider the residence rules to count the incarcerated population at their homes and previous addresses.

c00505	<p>Because of the possibility that persons in various areas of the country may be displaced by natural disasters or emergencies such as hurricanes or earthquakes, there should be a category of persons described as "temporarily moved persons due to emergencies." Such persons should be counted as residing, for census purposes, in their normal prior residential locations, if they state the intention to live in that normal location, if possible, following their move for emergency purposes. A reason for counting such temporarily moved persons in their normal prior residence locations is that federal aid for rebuilding or infrastructure restoration may be based upon the number of persons occupying a given location, and the location to which people intend to return and reside should be the place where they are counted for determination of population for which infrastructure or restoration aid should be made. Hurricanes in the South, or earthquakes on the West Coast may cause temporary dislocation of people, but their intended future residence should be allowed to be stated as their residence before displacement by emergency.</p>
c00506	<p>The Pennsylvania Institutional Law Project (the “Project”), by and through its undersigned counsel, submits this comment in response to the Census Bureau’s Federal Register notice regarding the Residence Rule and Residence Situations, 81 Fed. Reg. 42,577 (June 30, 2016); <i>see also</i> 81 Fed. Reg. 48,365 (July 25, 2016) (extending the deadline for public comments).</p> <p>The Project delivers civil legal services to the institutional population of Pennsylvania. The Project was created and designed to meet the needs of low income residents of Pennsylvania’s prisons, jails, state hospitals, and state centers. The goal of the Project is to ensure equal access to justice for indigent institutionalized persons.</p> <p>The Bureau’s proposal to continue counting incarcerated people at the particular facility that they happen to be located at on Census Day ignores the transience of incarceration. If made final, this proposal will mean another decade of decisions in many states based on a Census that counts incarcerated people in the wrong place. The Bureau’s proposal also will jeopardize the right of certain groups to equal participation in our democracy, and will promote distortion of</p>

districts for local, state, and federal elections. And as detailed below, the Bureau's proposal is inconsistent with Pennsylvania laws relating to redistricting and to voting by people incarcerated for misdemeanors or while awaiting trial. For all of these reasons, the Project opposes this proposal and requests that the Census Bureau reconsider its proposed Residence Rule.

An Incarcerated Person's "Usual Residence" Is Not His Cell

The Census Bureau defines "usual residence" as the place where a person "eats and sleeps most of the time," but fails to follow that rule when counting incarcerated people. The proposal's comments explain that "counting prisoners anywhere other than the facility would violate the concept of usual residence, since the majority of people in prisons live and sleep most of the time at the prison." This overlooks the fact that a large percentage of inmates are pretrial detainees or misdemeanants who are incarcerated only for a matter of days or weeks. In Pennsylvania's jails, this category of inmates numbers about 38,000 on any given day, with an expected average length of stay of 67 days.¹ Nationally, the period of incarceration for such inmates is even shorter, averaging just 23 days.² By lumping in these inmates with prisoners serving long sentences, the proposal would unjustifiably treat them differently from "people who travel seasonally between residences (for example, snowbirds)," whom the Bureau will count at their primary residences. The Bureau's failure to update its rules regarding incarcerated persons is particularly misguided given that the Bureau decided that other populations – deployed overseas military and juveniles staying in residential treatment centers – should be counted in their home location even if they are sleeping elsewhere on Census Day.

Even as applied to inmates serving terms longer than a few weeks, counting incarcerated people as if they were residents of the facility where they happen to be located on Census Day does not reflect the reality of our communities. First, such inmates may be frequently and involuntarily transferred from facility to facility, and thus do not have any one prison as their "usual residence." Second, the Bureau already counts students in boarding schools at their home

On a state level, the Bureau's proposal is directly at odds with the Pennsylvania statute regarding the "residence of electors." The statute provides that "no individual who is confined in a penal institution shall be deemed a resident of the election district where the institution is located. The individual shall be deemed to reside where the individual was last registered before being confined in the penal institution, or if there was no registration prior to confinement, the individual shall be deemed to reside at the last known address before confinement." 25 Pa. C.S. § 1302(3). Pennsylvania failed to make adjustments to the 2010 Census data to account for

inmates' residences as part of its most recent decennial redistricting, and if the Bureau makes final its proposed rule, there is a risk that Pennsylvania will again rely on Census data that are incompatible with this state statute. The proposed rule is also incompatible with Pennsylvania's elections laws insofar as Pennsylvanians incarcerated for misdemeanors or while awaiting trial do not lose their right to vote; such inmates must register to vote at their home addresses and vote in elections for their home districts.³

Counting Inmates As Residents Of Their Cells Promotes Illegal Gerrymandering

In addition to creating an inconsistency with Pennsylvania law, the Bureau's failure to update its residence rules is particularly disturbing because federal courts around the country have begun to recognize that the Bureau's prison count can result in constitutional violations of one-person, one-vote requirements. Counting incarcerated people at the location of the facility may violate equal representation requirements, and it will ensure legal challenges to the constitutionality of redistricting plans at the state and local level. There have already been successful federal constitutional challenges to prison gerrymandering in Jefferson County, Florida and Cranston, Rhode Island. *See Calvin v. Jefferson Cnty. Bd. of Comm'rs*, No. 4:15-cv-131, 2016 U.S. Dist. LEXIS 36121 (N.D. Fla. Mar. 19, 2016); *Davidson v. City of Cranston*, No. 14-cv-91, 2016 U.S. Dist. LEXIS 67674 (D.R.I. May 24, 2016). In each case, the court found that a county or city had violated the Fourteenth Amendment by treating inmates as residents of their cells, resulting in a map in which a sizable percentage of the "constituents" of one district consisted of inmates, thus exaggerating the district's overall population in violation of the one-person, one-vote requirement. The Bureau's failure to change the way it counts incarcerated populations will ensure that these constitutional challenges accelerate in the coming decade, burdening taxpayers and injecting uncertainty into the redistricting process.

These challenges are being raised in no small part because the Bureau's 2010 Census practice of designating a prison cell as a residence concentrated a population that is disproportionately male, urban, and black or Latino into just a few thousand Census blocks, which typically are located far from the actual homes of the incarcerated individuals. For example, 35.7% of Pennsylvania's state prison population comes from just two counties: Philadelphia County and Allegheny County (the core of the greater Pittsburgh area),⁴ but these prisoners are nearly all housed in rural areas of the state that are demographically very distinct from these two large cities. When unadjusted Census data are used for redistricting, the resulting maps illegally inflate the political power of the areas where the prisons are located and dilute the political power of all other urban, suburban, and rural areas without large prisons.

American demographics and living situations have changed drastically in the two centuries since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation's population. The country's exploding prison population requires the Bureau to adapt once again. As a result, what made sense in 1790, or even 1950, no longer makes sense. Nationally, the incarcerated population totaled less than 326,000 in 1970 but now is nearly 2 million. Pennsylvania's rate of incarceration has mirrored the national average: the number of state prisoners in Pennsylvania grew from 8,112 in 1980 to 49,914 in 2015, more than a six-fold increase.

Because of this explosion in the incarcerated population, counting incarcerated people at the location of the facility measurably distorts legislative representation on the basis of race and ethnicity. In Pennsylvania, Hispanic and black residents make up 61% of the total incarcerated population, but only 17% of the statewide population. Inversely, white residents make up 79% of the total Pennsylvania population but account for only 39% of the incarcerated population. Furthermore, state prison inmates are 48% black, 41% white, 11% Hispanic, and 1% other.⁵ As a result, the 2020 Census data, if not adjusted to comply with 25 Pa. C.S. § 1302(3), would lead to distorted district maps for Pennsylvania at the federal, state, and local levels. Specifically, such maps would include some rural districts with significantly fewer true residents than some urban districts. This would not only present a classic violation of the one-person, one-vote requirement, as in *Calvin* and *Davidson*, but would also result in racially distorted maps that give overrepresentation to predominantly white constituencies.

Such a post-2020 map would repeat a persistent problem in Pennsylvania. For example, after the 2010 Census, Pennsylvania's Legislative Reapportionment Commission failed to adjust Census data to account for inmates' home addresses when it drew state legislative maps. As a result, there are now three state House districts—House Districts 69, 76, and 123—in which over 6.5% of the population consists of inmates in state and federal prisons, virtually all of whom are disenfranchised. The inflated representation for these districts has come at the expense of representation for residents of other parts of the state, most notably in the Philadelphia and Pittsburgh urban cores.

Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to follow the residence rule and count everyone in the right place. The Project believes that in order to produce an accurate and legally compliant 2020 Census, the Bureau must count incarcerated people at their homes.

c00507	<p>(Apropos Krista Brewer's opinion piece in the Guardian: https://www.theguardian.com/commentisfree/2016/aug/25/prison-gerrymandering-voting-incarceration) (and pertaining to "I. Comments on Prisoners"), I strongly ask the Census to reconsider its policy on counting prisoners as residents in their areas of incarceration as opposed to home communities. A number of people maintain residency in their home states despite living and working elsewhere. I cannot add anything beyond what has already been summarized in the 160+ comments received.</p>
c00508	<p>It is imperative that people in prison not be counted as residents of the location of the prison but rather from the cities and towns in which they lived prior to their incarceration. Otherwise the numbers are inaccurate, skewed and the necessary resources are allotted to the wrong locales. Thank you for understanding this and making the necessary adjustments for this census period.</p>
c00509	<p>Common Cause/PA submits this comment in response to the Census Bureau's federal register notice regarding the Proposed 2020 Census Residence Criteria and Residence Situations, 81 FR 42577 (June 30, 2016). Our organization strongly urges you to begin counting incarcerated individuals at their home addresses, rather than at the particular facility at which they happen to be located on Census Day.</p> <p>For over four decades Common Cause/PA has been working to ensure that every citizen of our state who is entitled to vote has the opportunity to do so – and that every vote is counted as cast. However, voters also must believe their votes are meaningful if they are going to participate in elections, and have the opportunity to hold their elected officials accountable. That means we must have competitive elections and every voter's vote must have nearly equal value. When incarcerated individuals – <i>who cannot vote in Pennsylvania</i> – are counted by the census at their penal facility residence instead of their pre-incarceration home address, that translates into inflated populations for penal institution municipalities, and hence the respective congressional and legislative districts. This skews the redistricting process. To ensure that every citizen's vote carries relatively equal weight when legislative and congressional districts are designed, incarcerated persons must be counted at their pre-sentencing addresses.</p> <p>As you know, American demographics and living situations have changed drastically in the 226 years since the first Census, and the Census has evolved in response to many of these changes in order to continue to provide an accurate picture of the nation. Today, the growth in the prison population requires the Census to update its methodology again.</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing over the last few decades. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million. But since then, the number of incarcerated people has more than quadrupled, to over two million people behind bars. The manner in which this population is counted now has huge implications for the accuracy of the Census, and ultimately on the fairness of redistricting.</p>

By designating a prison cell as a residence in the 2010 Census, the Census Bureau concentrated a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of incarcerated people. In Pennsylvania, this has resulted in significant skewing of legislative and congressional districts – especially in its more rural counties. Pennsylvania has 18 congressional districts with average populations of 710,401 residents. Over 61,000 inmates are incarcerated in 26 state and 8 federal prisons which are dispersed across twelve of those congressional districts (six districts have no state prisons), according to the PA Dept. of Corrections and Federal Bureau of Prisons. Five congressional districts have one state prison; four have two state prisons; two have three state prisons; and the very large rural 5th Congressional District has seven state prisons. The problem becomes even more severe when it is applied to the much smaller state senate and legislative districts which respectively average 254,048 and 62,573 residents.

In June of 2016, research conducted for Common Cause/PA provided the following information about the impact prison populations have on representation in the state legislature and Congress.

8 federal correctional institutions house 12,676 inmates

26 state correction institutions house 48,393 inmates

Average PA Congressional district population is 710,401

Average PA State Senate District population is 254,048

Average PA House District population is 62,573

Smallest Congressional District population is 694,973

Smallest State Senate District population is 243,946

Smallest State House District population is 60,110

Without their prison populations 11 PA State House districts would be smaller than the smallest current district (House districts 8, 19, 50, 63, 84, 87, 117, 123, 146, 159, 175,)

Without their prison populations seven PA State Senate districts would be smaller than the smallest current district (Senate districts 20, 23, 24, 34, 41, 49, 50)

Without their prison populations four Congressional districts would be smaller than the smallest current district (5, 9, 10, 11)

NOTE: These data do not include any information about county or municipal detention centers.

Currently, four states (California, Delaware, Maryland, and New York) are taking a state-wide approach to adjust the Census' population totals to count incarcerated people at home, and over 200 counties and municipalities all individually adjust population data to avoid prison gerrymandering when drawing their local government districts.

But this ad hoc approach is neither efficient nor universally implementable. The Massachusetts legislature concluded that its state constitution did not allow it to pass similar legislation, so it sent the Bureau a resolution in 2014 urging the Bureau to tabulate incarcerated

	<p>persons at their home addresses. <i>See</i> The Massachusetts General Court Resolution “Urging the Census Bureau to Provide Redistricting Data that Counts Prisoners in a Manner Consistent with the Principles of ‘One Person, One Vote’” (Adopted by the Senate on July 31, 2014 and the House of Representatives on August 14, 2014). Pennsylvania Election Code (25 Pa. C.S. §1302(3)), states “[N]o individual who is confined in a penal institution shall be deemed a resident of the election district where the institution is located. The individual shall be deemed to reside where the individual was last registered before being confined in the penal institution, or if there was no registration prior to confinement, the individual shall be deemed to reside at the last known address before confinement.” However, Common Cause/PA was informed that for redistricting purposes inmates are counted at their place of incarceration.</p> <p>Thank you for this opportunity to comment on the Residence Rule and Residence Situations as the Bureau strives to count everyone in the right place in keeping with changes in society and population realities. Because Common Cause/PA believes in a population count that accurately represents communities, we urge you to count incarcerated people as residents of their home address.</p> <p><u>Sources</u> Population Data for Legislative and Senatorial Districts: http://www.redistricting.state.pa.us/Maps/index.cfm Population Data for Congressional Districts: http://www.census.gov/mycd/ Population Data for State Prisons: http://www.cor.pa.gov/About%20Us/Statistics/Documents/current%20monthly%20population.pdf Population Data for Federal Prisons: https://www.bop.gov/locations/list.jsp Legislative and Senatorial District Finder (used for determining the State House and Senate Districts in which certain prisons are located): http://www.legis.state.pa.us/cfdocs/legis/home/findyourlegislator/ Congressional Districts (used for determining Congressional District in which prisons are located): http://www.house.gov/representatives/find/</p>
c00510	<p>Counting incarcerated people as if they were residents of the correctional facility makes the Census less accurate for everyone: rural and urban communities; incarcerated persons and their families; governmental authorities trying to draw accurate redistricting plans; researchers trying to understand the demographics of local communities. The pre-incarceration residence should be used instead.</p>
c00511	<p>This is an outdated and antiquated way to misrepresent the actual census. Prisoners should not be counted in the prisons they are held in. It has disenfranchised minority communities and caused the much needed funding for programs to be decreased.</p> <p>The prisoners play no part or have no political input in the counties of the prisons they are housed and continue to be used as a source of revenue for those towns and states. It is Criminal and unjust for this process to continue.</p>
c00512	<p>People who are incarcerated should be allowed to use their residence prior to incarceration when completing the census. The US census as it now operates is a flawed process. It redirects voting power and resources from the people who need it most; large impoverished cities. Prisons are located miles away from the area where prisoners live and while their addresses are listed as though they reside in these towns they will be returning to those big cities (in most cases) long after the census has been completed. It's an unfair process and needs to be revamped and calculated appropriately to reflect where people live.</p>
c00513	<p>Hello, I believe in the importance of the census and its power as a tool for various agencies.</p>

	<p>That is why I would like to end the practice of counting prison populations as part of the local community and instead count them based on where they come from. In short stop prison gerrymandering.</p>
c00514	<p>On behalf of the NAACP, our nation’s oldest, largest and most widely-recognized grassroots-based civil rights organization, I write to express our deep disappointment in the decision by the U.S. Census Bureau (“the Bureau”), made public on June 30 of this year to count incarcerated people at the particular facility that they happen to be located at on Census day. As I clearly stated in my letter of July 20, 2015, the NAACP strongly supports the Census Bureau’s counting incarcerated people at their most recent residence prior to incarceration.</p> <p>By designating a prison cell as a residence, the Bureau will concentrate a population that is disproportionately male, urban, and African-American or Latino into just 5,393 Census blocks that are located far from the actual homes of the incarcerated people. When this data is used for redistricting and other purposes, prisons artificially inflate the political power of the areas where the prisons are located and deflate the political power, and too often the very real needs, of American communities which are disproportionately urban, low income, and heavily populated by racial and ethnic minorities.</p> <p>The need for change in the “usual residence” rule, as it relates to incarcerated persons, has been growing dramatically as the prison population has ballooned over the last few decades, and the time to update this rule is now. As recently as the 1980s, the incarcerated population in the U.S. totaled less than half a million people. But since then, the nation’s incarcerated population has more than quadrupled to over two million people. The manner in which this population is counted now has huge implications for the accuracy of the Census.</p> <p>The Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time”, but fails to follow that rule when counting incarcerated people. The majority of people incarcerated in Rhode Island, for example, spend less than 100 days in the state’s correctional facilities. If the same people were instead spending 100 days in their summer residence, the Bureau would count them at their regular home address. Even students in boarding schools get counted at their home address whether or not they eat and sleep there most of the time. The Bureau continues to carve out an exception for incarcerated people and count them in the wrong place.</p> <p>The Bureau’s failure to update its rules regarding incarcerated persons is particularly troubling given that the Bureau decided that other populations – deployed overseas military, and juveniles staying in residential treatment centers – should be counted in their home location even if they are sleeping elsewhere on Census Day. It made these changes even though there were far fewer public comments identifying these issues as causing the magnitude of problems that the public commentary on the prison miscount highlighted.</p> <p>As was described in its seminal 2015 report “The Racial Geography of Mass Incarceration,” the Prison Policy Initiative found that stark racial and ethnic disparities exist between incarcerated people and the people in the county outside the prison’s walls.¹ The report found that the transfer of African American and Latino incarcerated people to communities very different than their own is a national problem not confined to select states. As a result, hundreds of counties have a 10-to-1 “ratio of over-representation” between incarcerated African Americans and African Americans in the surrounding county — meaning that the portion of the prison that is African American is at least 10 times larger than the portion of the surrounding county.² The report concludes by saying that “this large-scale transfer of (African American) and Latino people to areas demographically very different than their homes has even larger effects thanks to a unique quirk in</p>

	<p>the federal Census that counts incarcerated people as if they were willing residents of the county that contains the correctional facility for redistricting purposes.³”</p> <p>As the Bureau strives to count everyone in their right place in keeping with changes in society and population realities, it is imperative that the changes proposed to the Residence Rule be updated. Because the NAACP believes in a population count that most accurately represents communities, and because it so acutely impacts the people and we serve and represent, we urge you to count incarcerated people as residents of their most recent home address.</p> <p>Thank you again for the opportunity to comment on the Census Bureau’s Proposed Residence Rule. Should you have any questions or comments on the NAACP position, please feel free to contact me at _____.</p> <p>¹ <i>The Racial Geography of Mass Incarceration</i>, July 2015, by Peter Wagner and Daniel Kopf, Prison Policy Initiative. Found at http://www.prisonpolicy.org/racialgeography/report.html</p> <p>² <i>Ibid</i></p> <p>³ <i>Ibid</i>.</p>
c00515	<p>The Census Bureau is wrong to consider incarcerated people as residents of the correctional facility because prisons are disproportionately built in rural areas while most incarcerated people call urban areas home. Counting prisoners in the wrong place results in a systematic transfer of population and political clout from urban to rural areas.</p> <p>When this data is used to draw legislative districts, the impact is startling: many prison districts have a significant percentage of their "residents" behind bars.</p> <p>Consider:</p> <ul style="list-style-type: none"> -60% of Illinois' prisoners are from Cook County (Chicago), yet 99% of them are counted outside the county. -In Texas, one rural districts population is almost 12% prisoners. Eighty-eight residents from that district, then, are represented in the State House as if they were 100 residents from urban Houston or Dallas. -Prison-based gerrymandering helped the New York State Senate add an extra district in the upstate region. Without using prison populations as padding, seven state senate districts would have to be redrawn, causing line changes throughout the state. <p>This injustice in our democracy cannot stand.</p>
c00516	<p>I write to express my dissent from the U.S. Census Bureau decision to count incarcerated persons at the site of their incarceration and not their home residences. This decision is based on a statute from the year 1790 that does not accurately reflect Americas modern criminal justice system or advances in voting and civil rights over the last two centuries.</p> <p>The rise of mass incarceration over the last three decades has greatly altered the impact this policy decision has on certain communities and populations. Due to the disproportionate rate at which African-American American men are incarcerated, the net result of this decision is that 1 in 15 African American men are counted away from their homes, families, and communities. This impact is particularly evident at</p>

the local level. Here in Illinois, African-Americans represent 15% of the general population but 56% of our prisoners. While 60% of prisoners in our state are from Cook County, 99% of them are counted elsewhere. In the _____ neighborhood in Chicago (where I work), mass incarceration has taken a particularly devastating toll. In 2001, 2,442 _____ residents were sentenced to the Illinois Department of Corrections. This represented 8% of _____ adult population and 12% of the Departments entire prison intake population for that year. The decision to count these incarcerated citizens in a different community has impacted the allocation of public funds for housing, healthcare, educationl, job training, and other public services. If allocated to _____, these public services would benefit prisoners upon their return to the community and reduce the rate at which they return to prison (currently 52%). Instead, this money has been allocated to downstate communities in which the prisons are located. As a result, non-incarcerated residents of communities which host prisons are allocated more dollars per person than non-incarcerated residents in places like Chicago.

Changes by the U.S. Census Bureau have recognized this decision as one which results in unfair gerrymandering of certain populations. For example, the Bureau already recognizes which areas contain quarters such as correctional facilities and make this data available to state and county governments to more effectively guide their local districting and political representation allocations. I applaud this effort to improve the fairness of political representation at the local level. Yet, this action primarily affects communities that are overwhelmingly rural and overwhelmingly white. While these decisions result in a more fair allocation of political power and resources for non-incarcerated residents within the community that hosts the prison, they do nothing to correct the imbalance in counting millions of incarcerated persons there and the subsequent drain of public resources away from their home communities.

The decision to count residents at the location of their incarceration is merely one of a lengthy history of policy decisions made by the United States government (including the drafting of the United States Constitution itself) which have disenfranchised, discounted, and disinvested in Black Americans. The U.S. Census Bureau cites section A.1 of the Census Act of 1790 as the rationale for defining usual residence as the location of incarceration. Much has changed in residency patterns (not to mention civil rights) since 1790. I believe justice requires us to update the Census policy to reflect the current millennium and count incarcerated persons in their true homes, not the site of their incarceration.

c00517

The Brennan Center for Justice is writing to comment on the proposed 2020 Census Residence Criteria and Residence Situations published earlier this summer. We appreciate this opportunity to provide supplemental comments and applaud the Census Bureau for its continued careful consideration of the residence rules. However, we must ask you to reconsider the decision to continue the current practice of counting incarcerated persons at the facility they are located at on Census Day. Rather than continue the current practice, which has a distortive effect on representation, we urge the Bureau to adopt a rule that would count those people at their pre-incarceration addresses. In this regard, we wish to bring to your attention two matters that the Bureau may not have had before it when it drafted the proposed rule.

The Limited Reach of the Proposed Voluntary Census Product

First, the proposed voluntary reallocation of incarcerated persons to their pre-incarceration addresses at the discretion of states will not work for the simple reason that the option is not viable in every state. While the Bureau has offered to provide a data product that would allow states, if they wish, to reallocate incarcerated individuals to their pre-incarcerated addresses, the ability of states to take advantage of

this option is limited in a meaningful number of cases because state constitutions either explicitly require use of Census data during the reapportionment and redistricting or have untested language that may require use of such data.

This reality means that the well-intentioned actions taken by the Bureau to provide datasets to allow states to reallocate prison populations would be for naught in a number of cases. Without a change to the proposed rule, these states, even if they wanted to, would be unable to reallocate individuals to their pre-incarceration addresses, absent going through the process of amending their state constitutions. The Massachusetts constitution, for example, specifically requires the use of Census data in its legislative re-apportionments, providing that:

A11. CXVII. Section I.

The federal census shall be the basis for determining the representative districts for the ten year period beginning with the first Wednesday in the [fifth] January following the taking of said census¹

Section II.

Said federal census shall likewise be the basis for determining the senatorial districts and also the councilor districts for the ten year period beginning with the first Wednesday in the [fifth] January following the taking of such census²

This constitutional limitation is why the Massachusetts House and Senate passed a joint resolution that called on the Census Bureau to change the way incarcerated persons are counted.³

Four other states -Arkansas, Missouri, South Dakota, and West Virginia-have similar constitutional language mandating use of Census data for reapportionment. Six other states- Minnesota, Montana, Nevada, New Mexico, Rhode Island, and Utah-specifically tie reapportionment and redistricting to the conducting of the Census, at least implying a constitutional obligation to use Census data. We have included other state constitutions' restrictive language in the attached appendices.

Given these constitutional restrictions, the interests of consistency also weigh in favor of a change to the rule. As you may be aware, several states have already reallocate their incarcerated population to pre-incarceration addresses, and it is likely that more will plan to do so for the redistricting that will take place after the 2020 Census. To allow for uniform treatment of the nation's prison population, the residence rule should be changed to count incarcerated persons at their pre-incarceration address.

Census Bureau Precedents Supporting a Rule Change

The Bureau's own precedents also support a change to the residence rule as applied to incarcerated persons. Although the Bureau has said in the proposed rule that it believes that people who are incarcerated should be counted at the place where they live and sleep most of the time, we draw the Bureau's attention to its prior position in litigation before the United States Supreme Court.

In a 1992 Supreme Court case, *Franklin v. Massachusetts*, 505 U.S. 788, 795 (1992), the state of Massachusetts challenged the Bureau's decision to treat federal personnel deployed overseas as residents of their "home of record" (*i.e.*, in their home states) during the 1990 census. As a result, over 900,000 overseas federal employees were counted at their "home of record" and led to a loss of a Congressional seat in Massachusetts. The federal district court agreed with Massachusetts' argument that using "home of record" to apportion Congressional seats was arbitrary under the Administrative Procedure Act. However, in the Bureau's appeal to the U.S. Supreme Court, the Court agreed with the Bureau's position and held that using "home of record" information was consistent with the Census Bureau's historic standard and reflected a "more enduring tie of usual residence."⁴ The Court further explained that usual residence, much as we urge here, means more than mere physical presence. It has been used broadly enough to include some component of allegiance or enduring tie to a place. "The first enumeration Act itself provided that 'every person occasionally absent at the time of the enumeration [shall be counted] as belonging to the place in which he usually resides in the United States.'⁵ The Act placed no limit on the duration of the absence."⁶

A change in the residence rule would be consistent with the Bureau's prior position. People in prisons are absent from their homes, in the vast majority of instances, for a comparatively short and temporary amount of time. Depending on the crime committed, many average sentence lengths for federal prisoners can be about the same duration as an overseas deployment for military or U.S. civilian employees.⁷ Overall, offenders released in 2009 spent an average of only 2.9 years in custody.⁸ Their residence, in their mind, similar to military personnel and civilians, is where they have enduring personal and legal ties. States such as Nebraska have been able to capture this sentiment in a comprehensive definition of residence: "residence shall mean that place in which a person is actually domiciled, which is the residence of an individual or family, with which a person has a settled connection for the determination of his or her civil status or other legal purposes because it is actually or legally his or her permanent and principal home, and to which, whenever he or she is absent, he or she has the intention of returning."⁹

As stated in our initial comment, an incarcerated person's pre-incarceration address is considered to be one of the most robust predictors for where people in prison will return to upon release. People who are incarcerated not only have a demonstrated connection to their home communities, but they also have legal ties to their residence. It is for a similar reason that home of record is used to account for military personnel and civilian employees during Census Day, since it is expected that upon return from deployment, these individuals will return to their home address. A similar rationale should be used for people who are incarcerated.

Conclusion

The Census is a complex and immense undertaking and should be consistent across all 50 states. This can be resolved by treating incarcerated individuals the same way the new residence rule would treat juveniles in treatment facilities or U.S. military personnel deployed overseas. Both of these groups will now be counted at their home addresses, recognizing the temporary nature of their location on Census Day. Modifying the residence criteria for incarcerated people will help prevent discrepancies and increase the accuracy in state population data, and address fair and just representation. For these reasons, we ask you to revisit the Bureau's decision about where to

	<p>count incarcerated persons mentioned in the letter and consider adopting a new rule to count incarcerated individuals at their pre-incarceration addresses.</p> <p>¹ MASS CONST. art. c00518	<p><i>This comment submission contains graphics that cannot be displayed in this table. It is available as Appendix Attachment c00518.</i></p> <p>I write to express my dissent from the U.S. Census Bureau decision to count incarcerated persons at the site of their incarceration and not their home residences. This decision is based on a statute from the year 1790 that does not accurately reflect Americas modern criminal justice system or advances in voting and civil rights over the last two centuries.</p> <p>The rise of mass incarceration over the last three decades has greatly altered the impact this policy decision has on certain communities and populations. Due to the disproportionate rate at which African-American American men are incarcerated, the net result of this decision is that 1 in 15 African American men are counted away from their homes, families, and communities. This impact is particularly evident at the local level. Here in Illinois, African-Americans represent 15% of the general population but 56% of our prisoners. While 60% of prisoners in our state are from Cook County, 99% of them are counted elsewhere. In the _____ neighborhood in Chicago (where I work), mass incarceration has taken a particularly devastating toll. In 2001, 2,442 _____ residents were sentenced to the Illinois Department of Corrections. This represented 8% of _____ adult population and 12% of the Departments entire prison intake population for that year. Recent data indicate this has changed little in the last 15 years: From 2005 2009, _____ had a conviction rate of 142 per 1,000 residents, one of the highest in the County.</p> <p>The decision to count these incarcerated citizens in a different community has impacted the allocation of public funds for housing, healthcare, education, job training, and other public services. If allocated to _____, these public services would benefit prisoners upon their return to the community and reduce the rate at which they return to prison (currently 52%). Instead, this money has been allocated to downstate communities in which the prisons are located where they do not directly benefit those currently incarcerated. As a result, non-</p>

incarcerated residents of communities which host prisons are allocated more dollars per person than non-incarcerated residents in places like Chicago.

Changes by the U.S. Census Bureau have recognized this decision as one which results in unfair gerrymandering in some areas. For example, the Bureau already recognizes which areas contain group quarters such as correctional facilities and make these data available to state and county governments to more effectively guide their local districting and political representation allocations. I applaud this effort to improve the fairness of political representation at the local level. Yet, this action primarily affects communities that are overwhelmingly rural and overwhelmingly white. Additionally, while these decisions result in a more fair allocation of political power and resources for residents within the community that hosts the prison, they do not offset the imbalance created by the inaccurate counting of millions of incarcerated persons and the subsequent drain of public resources away from their home communities.

The decision to count residents at the location of their incarceration is merely one of a lengthy history of policy decisions made by the United States government (including the drafting of the United States Constitution itself) which have disenfranchised, discounted, and disinvested in Black Americans. The U.S. Census Bureau cites section A.1 of the Census Act of 1790 as the rationale for defining usual residence as the location of incarceration. Much has changed in residency patterns (not to mention civil rights) since 1790. I believe justice requires us to update the Census policy to reflect the current millennium and count incarcerated persons in their true homes, not the site of their incarceration.

c00519	<p>after reading about the outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities I am very concerned. I'm writing to ask that the Census Bureau end this practice as i feel it robs the communities that the prisoners live in with their fair share of government funding while rewarding the communities where prisons are located with more federal dollars. Dollars that are disproportionately sent to these -often white rural communities- rather than the inmate's often minority urban community.</p> <p>Please end prison gerrymandering</p> <p>It's because we are America.</p>
c00520	<p>My hope is that you'll do what's best for all of your citizens by counting inmates as part of their home communities rather than where they are incarcerated.</p> <p>There should at least be a way for the Census to record how inmates' home communities are affected by their loss to the prison system. These inmates didn't just relocate; they still exist in their communities as absences. There is a vacuum in their place where there once was a father, an income, a caretaker, a son, a friend.</p> <p>It should be the Census's job to track the impact prisons have on these communities.</p> <p>Thank you for reading my letter. Please consider my words.</p>
c00521	<p>This is a response to the call for philanthropy community feedback on the current method of the U.S. Census Department counting people living in jails or prisons as residents of the prison rather than residents of their home communities from which they came and/or will be returning.</p> <p>We greatly object to this methodology because it siphons federal resources away from communities that can least afford disinvestment.</p> <p>Please consider a change to this methodology. Prayers for careful discernment during this process.</p>
c00522	<p>I am concerned about the proposed "2020 Census Residence Rule and Residence Situations." Counting incarcerated persons where they are confined, rather than their permanent address would lead to an inaccurate 2020 Census -- distorting democracy and hindering equal representation.</p>

	<p>Counting prisoners in a district where they may only be for a few months of the year is totally at odds with how you count other similarly situated persons, such as someone who spends the summer at a vacation home and lives elsewhere full-time.</p>
c00523	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c00524	<p>Our democratic voting processes and procedures are slowly being whittled away by nicks and cuts. There is more noise and less signal.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00525	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>The impact of the Census is too great to continue using outdated and inaccurate methods for counting. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>

c00526	<p>Prison inmates are barred from voting in most states, but they are still typically counted as "residents" of the district where they are being imprisoned which artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge you to urge the Census Bureau to count imprisoned persons in their home districts and end prison-based gerrymandering nationally.</p>
c00527	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p> <p>Prisoners are moved from prison to prison while locked up. Please make their permanent address their address not the prison. This does not make our census true.</p>
c00528	<p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00529	<p>As the US has one of the highest per capita prison populations, and that most prisoners move more often than once a year, these citizens, are, I believe, incorrectly counted wherever they happen to be, based on current prison population at a specific day, rather than where they citizens would live out of jail.</p> <p>One serves a sentence in jail, one does not <u>live</u> in jail. Once released, inmates RETURN HOME. Which is where they should be counted.</p>

	<p>After all, the Census Bureau counts soldiers based on their home address, not where they are stationed. And that goes for a wide range of temporarily located citizens.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00530	<p>Please end the inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address--this is where they'll return after incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice. As the policy now stands, you are purposely helping shift power to one party, the GOP in a very unfair manner. Please reverse this policy for the 2020 Census, thank you.</p>
c00531	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00532	<p>I live in Florida and have been made aware of the practice of prison gerrymandering caused by counting prisoners where they are incarcerated instead of where there home is.</p>

	<p>This can misrepresentation can be ensued by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00533	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>Being in prison is a temporary situation and prisoners often move around. The place they happen to be in when the census is done is not the place where they will be even a few months later. However, throughout this process, they have a permanent address -- a place they live and work and vote -- and that is where they should be counted.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c00534	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>We all understand that except for a very few, prisons and jails are not permanent residences. People who are housed in correctional facilities have no autonomy, are often moved between facilities, thus making their stay temporary, not permanent.</p> <p>But incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>I urge you to consider that it is their home residence, not their temporary one, that these incarcerated persons should be counted.</p>
c00535	<p>Prisoners should be counted the way out-of-town visitors are counted.</p>
c00536	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Counting incarcerated people at their temporary location inflates the political power of people who live near prisons. As those counts are used to draw electoral districts, this practice has a</p>

	<p>serious impact on representational democracy.</p> <p>The best data for redistricting requires the Bureau to count incarcerated people at their home addresses.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00537	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00538	<p>The U.S. Census exists to help determine representation in Congress. Continuing to assign the results where the counting takes place is wrong. Counting convicts where they are incarcerated rather than at their permanent address defeats the intent of the Constitution. Please eliminate prison-based gerrymandering this procedure results in.</p>
c00539	<p>I'm very concerned about the proposal to continue inaccurately counting incarcerated people where they are incarcerated rather than each individual's permanent home address.</p> <p>When an incarcerated person's "home" is incorrectly listed as his or her temporary residence in prison, that miscounted person's community loses a political voice which properly belongs in that freely-chosen home community while a community with which they have no actual contact -- where they have never lived, whose citizens they have never interacted with, and with whose community they are completely unfamiliar -- receives credit for their "residence."</p> <p>Please end this inaccurate way of counting prisons as actual residences and allow prisoners to be represented in their home communities, with whose issues they are familiar and about which they care.</p>
c00540	<p>I believe that anyone incarcerated should not be counted at all. They committed a crime and, therefore, are not eligible to vote. This is not racist, for if everyone in prison is not counted, it</p>

	does not discriminate against anyone.
c00541	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>When state and local governments use Census data to draw legislative districts. But if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community, negatively impacts democracy.</p>
c00542	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00543	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>If the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Counting incarcerated persons as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community, negatively impacts democracy.</p>
c00544	The practice of using the place of prisoners' detainment at the time of the census, rather than their permanent address causes a distortion of political representation. It is patently unfair disproportionately to people of color.
c00545	Please revise the proposed residence rules for the 2020 Census in regard to prison inmates.

	<p>It is a clear fact that a person in prison is not their of his/her own choice. It is not in any way his home or permanent residence. It is a temporary, forced residence that could change at any time, as prisoners are often transferred, again, against their will.</p> <p>Just as college students give their actual home as their voting address, not their college dorm address, so should prisoners in jails be allowed to state their true home address, the communities from whence they came, and to which they will return when released.</p> <p>Counting inmates as residents in the legislative district of their current prison falsely inflates the representation in that district, and falsely deflates representation in their true home district.</p> <p>Please make the home residence of prison inmates where they are counted for their true legislative district.</p>
c00546	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00547	<p>From your website “the U.S. Census is important for the purposes of distributing funds to the public. Taking a count of the people in the country helps the Federal government decide what areas of the population are in need of what services such as: welfare, housing projects, parks and other things mandated by the federal government. “</p> <p>Current practice is for Census Bureau to count incarcerated people at the prisons where they reside. This results in a transfer of political power and federal dollars from the parts of the state where the incarcerated people lived before incarceration and where they will live afterwards.</p>

	<p>This overwhelmingly shifts political representation and federal spending from poorer urban communities of color to wealthy rural white areas. The net result of this practice is further urban decline which ultimately leads to more incarceration in the very areas that are discriminated against.</p> <p>The Census Bureau should live up to its federal mandate and constitutional responsibility and change this practice for the 2020 census and beyond.</p>
c00548	<p>Sickened yet again by a deliberate ploy to thwart our democratic laws by counting prisoners where they are incarcerated instead of by where they actually live when not incarcerated. Yes once again our democracy is trampled by men and women with little care for the morality behind our laws, the intent of our laws, the morality behind our laws.</p> <p>This practice is rigged against equal representation. It's skewed to make sure the minority vote is rendered null. This practice is at odds with our constitution. You know it, I know it, lots of people know it. Will it continue? That's up to you and your sense of law, morality and justice. May God be with you.</p>
c00549	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Counting incarcerated people at the location of their temporary incarceration rather than their home addresses distorts representative democracy by inflating the political clout of areas near prisons. As electoral district boundaries are drawn on the basis of census counts, incarcerated non-voter numbers in effect artificially multiply the political power of voters in districts near prisons; there is a converse, political-power-reducing effect on voters in areas that include prisoners' home addresses.</p> <p>To make the vitally important political process fair and representational, incarcerated people should be counted at their permanent home addresses.</p> <p>For our democracy to be strong, population counts should accurately represent all communities. Please count prisoners at the locations of their permanent homes.</p>
c00550	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census. Gerrymandering is just another political tool being abused by those in power. Please do not allow prison gerrymandering to become another political win, that disenfranchises more voters.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional</p>

	<p>facilities do not choose their place of incarceration and have no autonomy. It's also important to note that incarcerated persons are often moved between facilities, making their residencies temporary.</p> <p>It is most likely that once released, these people will return to their communities and that is where they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00551	<p>It's bad enough that our answer to every social problem is more prisons but to use those prison to distort political will through over representation of rural voters is a national joke. Please count prisoners at their legal home address, not at the prison.</p>
c00552	<p>Please count incarcerated people at their permanent address beginning with the 2020 census.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved.</p>
c00553	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice and require the inmate's stated permanent home address be used for their personal census data rather than the address of their prison.</p>
c00554	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as incarcerated people at their temporary location inflates the political power of people who live near prisons</p> <p>Prisoners should be counted in the census as residents of their home communities not at the address of their incarceration.</p> <p>Please correct this unfair practice.</p>
c00555	<p>I urge you to change the way you count incarcerated people and to count them at their permanent addresses, not the prisons where they are temporarily housed.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p>

	<p>By counting incarcerated people at their permanent address, you will give the communities most affected by mass incarceration their proper political representation.</p> <p>Please count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c00556	<p>obama is a war criminal.</p>
c00557	<p>I wish to express my deep concern as a citizen that all our citizens are properly counted at their place of permanent residence. I am told that the current method inaccurately counts incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>This is an extreme falsification of population in the areas of a prison, giving those communities invalid representation over the rest of us.</p> <p>By miscounting people at prisons, political representation is being given to a community that does not represent them or their family.</p> <p>End this inaccurate theft of representation from the rest of us!! We deserve a government that correctly represents our wishes pursuant to the Constitution.</p>
c00558	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>Prisoners ought to be counted at their permanent residence. By counting them at their place of incarceration dilutes the votes of the actual residents of those counties.</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>The impact of the Census is too great to continue using outdated and inaccurate methods for counting. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>

c00559	<p>I am sure you by now have read the arguments for ending gerrymandering due to the process of counting incarcerated people at prisons in the Census, so I will not bother nor annoy you by repeating them now.</p> <p>What I will say is that this is but one more example of our democracy being manipulated by those who man it's levers.</p> <p>It is SHAMEFUL and unbecoming for our beloved Oregon to not root out and compost all such mechanisms of power grabbing.</p> <p>END THIS PRACTICE IMMEDIATELY, and don't stop there!</p>
c00560	<p>I do not understand why a census does not include the residence of incarcerated people. I believe that the USA is a democracy in which all Americans have the right to vote. By disregarding the residence of some Americans, they are being deprived of their constitutional rights. Their vote should count!!!!!!</p>
c00561	<p>It is already sufficient affront to our democracy that incarcerated individuals are denied the fundamental right to vote (to have any voice whatsoever in the government that is imprisoning them).</p> <p>Please do not add to this injustice with the absolute farce of having those ineligible voters counted in the census as "residing" in their place of imprisonment. This entirely distorts our electoral process by falsely adding to the official population tally for municipalities and districts that have prisons (typically rural areas) and under-counting the actual population of the cities and districts those prisoners actually call home (typically urban areas). When those people are released from prison and have their voting rights restored, they will be back in those places they call home, they will most certainly NOT remain in the isolated community where they were imprisoned.</p> <p>Please make sure that all prisoners in all census counts are counted as residing in their actual place of residence (where they lived before they were imprisoned, or where they state an intention to live after their release if that differs), and NOT their place of imprisonment.</p> <p>This is a critically important decision that affects the basic fairness of our democracy (one person, one vote). Please do NOT apply the "proposed residence rule" that will skew the apportionment of local, state, and congressional districts, unfairly giving some Americans more of a voice in government than others.</p>

c00562	<p>I am upset at the Census Bureau's suggested residence rule for incarcerated people.</p> <p>Our representative democracy is ingrained with the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering uses unsubstantiated numbers when counting the entire population & interferes with the basic process. It caused electoral power to move away from urban communities of color & towards rural white communities.</p> <p>Some states - California- & municipalities - Calhoun County, GA - have already taken steps to prohibit this dangerous practice.</p> <p>The Census Bureau should take the required steps to permanently end prison-based gerrymandering & make it the national method of practical procedure.</p>
c00563	<p>I implore the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Why would you count people who can't vote among the population of a representative district? That can't possibly lead to a fair distribution of voting districts. At least think about it.</p>
c00564	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c00565	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p>

	<p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00566	<p>Please count prisoners at their home, not prison, addresses. They are not allowed to vote while in prison, so they should not be counted there, thus artificially increasing the population of counties and states in which the prisons are located. This is reminiscent of counting "3/5s of a man" in the U. S. Constitution, artificially increasing the franchise of states in which slavery was legal. Thanks very much for a more equitable method of counting prisoners.</p>
c00567	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address. It is inaccurate, and it distorts representative democracy.</p> <p>Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community, resonates horribly with slaves counted as partial people, giving more weight to the vote of the land holders.</p>
c00568	<p>I've learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00569	<p>While I have never been in prison and no one who has, I am concerned about social justice. Your proposal voids the interests of primarily low-income and minority communities. I am getting sick and tired of the country being run by and for the wealthy. Stop this please.</p>
c00570	<p>I'm writing to express my disagreement with inaccurately counting of incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p>

	<p>Counting people at prisons, undermines representation.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c00571	<p>Counting prisoners where they are imprisoned is as senseless as counting me as living in my summer-home when I am there. I am NOT a permanent resident there, cannot vote there, and am counted where my permanent home is. The same should hold true with prisoners: count them at their permanent homes, not their prisons.</p>
c00572	<p>Prisoners should be counted as residing at their permanent address, not the prison they are located in. Thier interests lie in their permanent address - not wherever the prison is that they are assigned to.</p>
c00573	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00574	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census. As the rules stand now, they sadly compromise our democracy by counting prisoners as residents of the community where their prisons are located, instead of as resident of the neighborhoods they will return to on their release.</p> <p>Prisons are usually located in sparsely populated rural areas. Counting inmates as residents of these areas artificially inflates their population, and thus their representation. Meanwhile, prisoners' home districts' populations are artificially deprived of representation.</p> <p>Prisoners generally do not vote. But they are counted as voters in the census, filling prison districts with a phantom population of constituents. Therefore, the vote of an American who simply resides next to a prison is proportionally more powerful than the vote of an American who is counting the days until her son, husband or dad returns home from prison. This causes rural</p>

	<p>districts' interests to be disproportionately weighted over the interests of the (largely urban) communities which prisoners call home.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00575	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address. Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c00576	<p>Please be fair. Count all residents in the census. Everyone is of equal value.</p>
c00577	<p>It's a violation of equal representation, plain and simple.</p>
c00578	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c00579	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate. It skews population concentrations into patterns which do not reflect our true population distribution. When I was in the Army (1949-52) it was considered accurate to count we soldiers at our home addresses. That practice should guide the Census count of prisoners only temporarily at prison addresses.</p>
c00580	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p>

	<p>Inmates do not live permanently in prisons and jails. They are housed in correctional facilities against their will and without autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is in those communities, where they are most likely to return after serving time, that they should be counted by census takers. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>The home residences, not temporary jail or prison addresses are where incarcerated persons should be counted.</p> <p>Democracy demands that you count them as residents in their home communities.</p>
c00581	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00582	<p>Mass incarceration - especially in privately owned prisons- has resulted in a torrent of problems. One such problem is the practice of prison gerrymandering. This questionable practice has at its best misrepresented incarcerated citizens and at its worst, has caused citizens to cease to exist for all practical purposes.</p> <p>The census can end this problem by counting prisoners at their permanent home address--</p>

	<p>where they will return after their time is served to live with their families and community.</p> <p>By not counting prisoners at their permanent address, the Census wrongly allows misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00583	<p>I am writing to ask you to change the practice of counting detainees for Census purposes at their prisons. As I understand it, the purpose of the Census is to provide useful data for the purposes of allocating federal money, building roads, hospitals, schools and other infrastructure, and these projects can take many years to complete. During those years, many inmates will have completed their sentences, and returned to their permanent places of residence. It's important that their numbers be counted at the places where they will ultimately live.</p> <p>It is also important because apportionment of representatives will be based on an accurate count of people who actually live there and utilize the governmental entities in place there.</p> <p>With the recent announcement regarding the closing of prisons for hire, it's fair to assume that the areas where these prisons reside (mostly white and rural) will see large decreases in populations very soon, and we will find that these areas have been given a surplus of funds and services based on a body count that is false and fleeting.</p> <p>There is no reason why this cannot be addressed adequately before the 2020 census, and I sincerely hope you will make this change, in the interest of fairness and appropriate apportionment.</p>
c00584	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00585	<p>I would like to express my concern over the illogical practice of counting incarcerated people at their place of incarceration instead of at their permanent home address.</p> <p>This practice removes political representation from the incarcerated person's permanent home community and transfers it to a community they do not represent, interact with, or live in.</p> <p>I urge you to put an end this insane practice . Communities should have accurate representation</p>
c00586	<p>I urge you to count incarcerated persons at their permanent home address, not at their place of incarceration.</p>

c00587	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Counting incarcerated people at their temporary location inflates the political power of people who live near prisons. As those counts are used to draw electoral districts, this practice has a serious impact on representational democracy.</p> <p>The best data for redistricting requires the Bureau to count incarcerated people at their home addresses.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00588	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>The impact of the Census is too great to continue using outdated and inaccurate methods for counting. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00589	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Continuing the current way of counting incarcerated people unfortunately includes people with serious mental illness who are held all too frequently in our prisons and gaols, thus further misrepresenting residency.</p>
c00590	<p>I worked as an enumerator for the 2016 US census and took my job very seriously. I understood the importance of collecting accurate data so that resources could be properly allocated to communities according to need and to assign voting district boundaries. I did not realize that prisoners were counted where they were imprisoned, rather than at their home addresses, as I</p>

	<p>was assigned to collect data in residential areas .</p> <p>Counting prisoners where they will not be voting makes no sense. Counting prisoners where they are incarcerated seems antithetical to the entire purpose of the census. It reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities.</p> <p>I have recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist and makes no sense. Indeed, it invalidates all the data we census workers collected and makes the money spent on the data collection another case of wasted taxpayer dollars.</p> <p>Please remedy this senseless, inaccurate practice. The whole purpose of the census is corrupted by it as is our Democracy!</p>
c00591	<p>Gerrymandering in any form destroys the idea of democracy. When people are not properly counted in their homes, they lose political power and democracy is damaged. People who are in prison must be counted where they live when not in prison. To do otherwise is a form of gerrymandering, and unacceptable to the idea of democracy. Stop prison gerrymandering immediately.</p>
c00592	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00593	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their</p>

	<p>home communities. I'm writing to ask that the Census Bureau end this practice, if for no other reason than counting inmates where they are incarcerated reduces the accuracy of Census data.</p> <p>The impact of the Census is too great to continue an inaccurate method for counting. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00594	<p>I am writing about the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states have already taken steps to outlaw this harmful practice. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p> <p>Democracy and electoral fairness and justice should never be compromised. Thank you for your attention to this important matter,</p>
c00595	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>PRISON IS NOT HOME, WHERE THE PRISONER NEEDS TO BE COUNTED.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p>
c00596	<p>Many years ago when I was just a school boy my teacher told me that the United States was a democratic republic. She said this meant that we have a representative form of government. But how can that be true when I read daily about how districts are gerrymandered and people of color are disenfranchised from voting? Now I learn that there is a whole new way to stack the deck against our citizens.</p> <p>Incarcerated citizens should be counted in the census according to where their interests and their ties are. Not whatever location they find themselves forced to live temporarily.</p> <p>The map found at the link below shows not even Russia, a post-Soviet country known for locking people up and throwing away the key, is in the same league as the U.S. when it comes to its</p>

	<p>incarceration rate. A census that counts those people in an area that profits and finds employment in keeping them locked up rather than in fixing economic issues in the areas they came from helps to perpetuate the problem.</p> <p>http://www.businessinsider.com/world-map-of-incarceration-rates-2014-1</p> <p>Please take this opportunity to help restore real representative government in America.</p>
c00597	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>When state and local governments use Census data to draw legislative districts. But if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community, negatively impacts democracy.</p>
c00598	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00599	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p>

	<p>Incarcerated persons are often moved frequently between facilities, making their stays temporary, not permanent. In fact, many inmates are transferred between facilities several times a year.</p> <p>While an incarcerated person is usually shuffled through a number of facilities during their incarceration, they will likely return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the distinction the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their place of home address.</p>
c00600	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c00601	<p>With few exceptions, incarcerated people identify with the place they came from and intend to return to. They rarely have any ties to the place they happen to be imprisoned at, and should not be counted by the census as living there. Their home, the permanent address that follows them from prison to prison, should be their census home.</p>
c00602	<p>When people are counted for the purpose of allocating congressional seats or other things determined by population then the permanent address of an incarcerated person should be used to determine where the incarcerated person is counted.</p>
c00603	<p>I worked for the 2000 census in _____, CA as _____. I know that in addition to "homeless" other citizens were under-represented. Some eligible voters were over-looked and not included in the 2000 census - especially non- felons.</p>
c00604	<p>Gerrymandering of any kind is anti-democracy and therefore anti-American. The people,</p>

	<p>conservatives and progressives are sick of the crap politicians keep pulling. Gerrymandering is just one of many immoral abuses the parties inflict on the people of this country. The census is used for representation and should be fair and accurate. Therefore, prisoners should be counted in their home towns and to the prison facility. They can't vote in prison and when they get out they will most likely go home where some of them can vote and virtually ALL will need some kind of help to stay out of prison. That help is much cheaper and better for our country than encouraging recidivism.</p> <p>So do the American thing and do the census fairly. Stop prison population gerrymandering.</p>
c00605	<p>I am writing to encourage you to change rules that count prisoners as residing in their place of incarceration for the purposes of assigning representation in our political process. The census serves many purposes and one that is important is the allocation of political representation. Prisons represent large populations of involuntarily displaced persons and some allowance should be made for those who want to be represented in their own home district to retain that privilege. Please change the rules so that prisoners can stay politically connected to their home communities.</p>
c00606	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>Prison-based gerrymandering violates the constitutional principle of "One Person, One Vote." Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community, negatively impacts democracy.</p>
c00607	<p>Please count imprisoned people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>It is only fair to the community they come from.</p>
c00608	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are there against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Furthermore, most incarcerated people are not serving life sentences, or even 10 year sentences, so it makes no sense to count people as residents of districts they may not inhabit for more than a few months.</p> <p>Incarcerated people do have permanent residences where their families and communities</p>

	<p>reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in the temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00609	<p>why is this policy in place? could it have something to do with the privatized prisons? Always follow the money on things as this. Change this to reflect the permanent residence, not those held in prisons.</p>
c00610	<p>Incarcerated people need to be counted at their permanent address, where they will return after their period of temporary incarceration to rejoin their family and community. You don't count people on vacation or away at school as residing in those temporary locations, you ask them for their PERMANENT addresses.</p> <p>The current procedure allows inaccurate representation. The Census Bureau should change this practice.</p>
c00611	<p>How does it make sense to endow locations with prison populations not normally part of the local community with unwarranted representation?</p>
c00612	<p>While prison inmates are barred from voting in most states and even after they are released, they are still typically counted as "residents" of the district where they are being incarcerated. In many states, such as Virginia, prisons are located near very small communities. Counting inmates as residents give those towns so small they don't even have a traffic light as much representation as larger communities. At the same time inmates' home communities are under represented.</p> <p>This practice perpetuates a distribution of political power that does not truly reflect the population of the country.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c00613	<p>Please count prisoners as residents in their home districts, not in the places where they're imprisoned. The reasons are obvious in the realm of representation and electoral fairness.</p>
c00614	<p>Please consider counting prisoners at their permanent address rather than in the district of the prison. The current practice is being used for political purposes to undermine fair elections.</p>
c00615	<p>Prisons and jails are not permanent residences.</p>

	<p>The people who are housed in correctional facilities are done so against their will and with no autonomy.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside.</p> <p>It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00616	<p>I urge the Census Bureau to count incarcerated people at their permanent address rather than at the facility where they are incarcerated on Census day. That is they should be counted as a part of their own communities not as a part of the communities that are imprisoning them.</p> <p>Doing otherwise encourages false arrests and incarcerations. Some communities where prisons are located will encourage prison over community based restitution if it gives them political power. Some communities will support the drug war when they might not otherwise if that will increase their political power. In addition, this decision may also decrease voting in communities where prisons are located. This seems to be the case for communities in Colorado.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their permanent address.</p>
c00617	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are there against their will and with no autonomy. Incarcerated persons are often moved</p>

	<p>between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00618	<p>I believe the practice of counting prisoners at their place of incarceration, rather than the homes to which they will return, to be counterproductive: such a practice yields inaccurate counts for voting districts. I strongly encourage you to discontinue this practice for the 2020 Census.</p> <p>Our prison population in the US has ballooned to over two million people. The vast majority of these will ultimately return to their home communities, which are typically far from where they were incarcerated. How this population is counted has huge implications for representational government - to such an extent that the "gerrymandering" label seems fair.</p> <p>Please change the proposed plan and move towards a model that better serves communities.</p>
c00619	<p>I urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>If the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy. State and local governments use Census data to draw legislative districts.</p> <p>Prison-based gerrymandering violates the constitutional principle of "One Person, One Vote." The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community is wrong.</p>
c00620	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across</p>

	<p>multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted.</p> <p>The Census Bureau should change the prison gerrymandering plan and move towards a model that better serves communities.</p>
c00621	<p>The GOP dominated legislative branch of the US federal and state governments are working overtime on two things and two things only: 1. making women second class citizens and 2. Rigging the electoral process to disenfranchise anyone who might possibly disagree with their shitty agenda.</p> <p>Prisoners should have never been counted as citizens of the communities where they're serving their time. End this ridiculous practice immediately and do right by the communities that will benefit.</p> <p>It has been made very clear that the GOP has no intention of addressing their terrible behavior on their own. So just as POTUS has been forced to use his executive power to help disenfranchised citizens, so must your agency.</p>
c00622	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community. By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c00623	<p>As a psychologist who works with kids in the foster care system, I see firsthand the devastation that is wrought by mass incarceration. This is compounded by the policy of counting prisoners such that they are represented by communities that have a vested interest in keeping them there, rather than by the communities and families they come from that so desperately need support. I implore you to change this unjust policy so that impoverished communities can receive</p>

	<p>the representation they rightfully deserve.</p>
c00624	<p>I'm writing to express my disagreement with the proposal to continue counting incarcerated people at their place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community that does not represent nor interact with them.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c00625	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c00626	<p>It is unfair, particularly to communities of color, to count prisoners outside their homes. Please reform this practice by counting prisoners based on where they are from.</p>
c00627	<p>I write to ask that the Census Bureau consider incarcerated people as counted at their permanent residences, rather than their prison address.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c00628	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Please end prison-based gerrymandering as a practice nationally and permanently.</p>
c00629	<p>I'm writing to express my concern over the proposal to continue inaccurately counting jail and prison populations as part of the district where the prison is located, rather than at the proper residence address of the incarcerated people.</p> <p>This leads to substantial inaccuracy in the counting of district populations, which directly affects the political representation of those districts. It increases massively the districts where the prison is located, and it suppresses the districts of the incarcerated. Prisoners, by very definition, are not a part of the community where they are incarcerated. They do not work there, go to school or</p>

	<p>worship there, participate there. They are not represented by the community outside the walls and they do not represent that community.</p> <p>As you are undoubtedly aware, prison populations are disproportionately composed of minorities. This means that that counting prisoners in the district of the prison instead of at their real, permanent, residence address effectively suppresses the votes of minority communities. This creates, in its turn, a significant civil rights problem.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c00630	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home of record, in the same way you count deployed service members.</p> <p>State and local governments rely upon census data to draw legislative districts, however, should the prisoners be counted as if they resided at their prison location the population data will be incorrect as most inmates will, eventually, be sent back to their home of record. This method of reporting distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community, negatively impacts democracy.</p>
c00631	<p>In 1789, bizarrely, slaves were counted as 3/5 of a person, to artificially inflate the representation of the masters who in no way represented their interests. In 2016, communities of color are systematically stripped of power, which instead inflates the representation of their jailers.</p> <p>As an American, I'm ashamed.</p>
c00632	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The inmates cannot vote, and so counting them at their detention site rather than their actual residences violates the principle of One Person, One Vote!</p>

	<p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00633	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Counting incarcerated people at their temporary location inflates the political power of people who live near prisons. As those counts are used to draw electoral districts, this practice has a serious impact on representational democracy.</p> <p>The best data for redistricting requires the Bureau to count incarcerated people at their home addresses.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00634	<p>I urge the Census Bureau to count incarcerated people in the census as they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00635	<p>This residency rule was wrong from the very beginning and should have been changed a long time ago. Now is that time.</p>
c00636	<p>Current Census practices count incarcerated people at their temporary detainment address, rather than their permanent address.</p>

	<p>I urge the Census Bureau to count incarcerated people at their permanent address. This will enable communities most affected by mass incarceration to have their proper political representation.</p>
c00637	<p>Our son is incarcerated in Ontario, Oregon, about 440 miles from home. When the federal census occurs, he will be counted as a resident there. But he won't be voting there; he won't vote at all until he's completed his sentence (and post-prison years.)</p> <p>This problem inflates the political power of a rural, mostly white Congressional district.</p> <p>We urge the Census Bureau to count incarcerated persons in their home districts. It is right to end prison-based gerrymandering.</p>
c00638	<p>***The proposal to count incarcerated people in the district of their incarceration, and not their original district of residency, is profoundly unjust. This counting location would multiply the social, economic, and political inequalities of the US criminal justice system and violate the principle of equal representation.</p> <p>Incarcerated people leave a gaping economic and social void in the community from which they are taken, often leaving behind family members and other dependents, as well as the marginal municipal and county costs of infrastructure that do not decline when individuals vanish. Conversely, the district to which the incarcerated person is transferred does not incur any marginal costs, and in fact often enjoys (and lobbies for) the payroll, vendor, and other revenues associated with prisons. Transferring the effective, Census-counted location of an incarcerated person exacerbates this economic and social injustice.</p> <p>Moreover, the political preferences and interests of the districts with the highest rate of arrest and incarceration are often diametrically opposed to those of districts with prisons. Therefore, counting the incarcerated persons in the prison's district unjustly transfers political power to the latter district. The injustice is magnified by the inability of the incarcerated person to actually vote, an arrangement that recalls the sordid original counting arrangements of American democracy, in which non-voters could be counted for the political benefit of their owners.***</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass</p>

	<p>incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation. Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c00639	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>I wholeheartedly support Counting incarcerated people at their address where they lived before incarceration.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00640	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>When state and local governments use Census data to draw legislative districts, it's not a fair count of those incarcerated, because they are a part of the community they left. But if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of "One Person, One Vote." The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community, negatively impacts democracy.</p>
c00641	<p>Prison inmates typically are counted as "residents" of the district where they are being incarcerated.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c00642	<p>African Americans comprise a disproportionate percentage of the jail and prison population.</p>

	<p>Often they are incarcerated in correctional facilities that are not located in the communities of their former residence. The permanent residence of incarcerated individuals should be utilized by the Census Bureau during the census instead of the address of the correctional facilities. This is the most accurate approach since many incarcerated individuals will return to their community of permanent residence once released and may spend a relatively short period of time within a particular jail or prison. This change will help correct the political imbalance that results from so many correctional facilities existing in rural or suburban areas when so many of the incarcerated come from impoverished urban districts.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c00643	<p>Incarcerated people cannot vote. Counting them as “voters” in the district in which the prison is located is devious and dishonest. The nation has a serious problem of gerrymandering. This aspect of it should be easy to stop, and I urge you to do so.</p>
c00644	<p>I am writing in response to the Census Bureau’s federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Prison populations are rarely representative of the communities where the prisons are hosted. To give those communities the power to vote for the representatives of prisoners is to create disparities in the principle of one person - one vote. While prisoners must be counted in the census, there is a community better suited to vote on behalf of a prisoner: namely, their permanent home community. Please count prisoners at their permanent home location for purposes of determining representation.</p>
c00645	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00646	<p>Please count incarcerated people as residents of their home address. 350!</p>
c00647	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p>

	<p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities have not made an intentional career or educational move. Also, incarcerated persons are often moved between facilities, reinforcing that the stay is temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not a temporary cell, is where incarcerated persons should be counted.</p>
c00648	<p>Although prison inmates are barred from voting in most states, they are being counted as "residents" of the district where they are incarcerated.</p> <p>This practice artificially inflates the political power of rural white districts and diminishes the power of the urban, Black and Latino districts in which most inmates lived prior to incarceration.</p> <p>I urge the Census Bureau to count incarcerated persons in their home districts and end prisonbased gerrymandering.</p>
c00649	<p>Please end the process of counting incarcerated people at prisons for the 2020 Census. I firmly believe incarcerated people should be counted at their permanent address instead.</p> <p>Permanent address records are maintained for each inmate, and indicate their usual residence. It is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they may not belong to or interact with.</p> <p>Given the disproportionate incarceration rates present in communities of color, the current procedure often results in shifting political representation away from these areas. The Census Bureau should change this practice to ensure the decennial census data is as accurate as possible.</p>
c00650	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Just as soldiers who are away from home can still "vote" in their real home residence, so should incarcerated people be able to do that as well.</p>

	<p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00651	<p>Before we go further, this is NOT a form letter. The following paragraph is part of a form letter and I left it due to being something I would have said any way.</p> <p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>I have to wonder why this was created in the first place. I work as a social worker and have assisted with counting the homeless, people in poor areas who are not very trusting of the government as well as senior citizens.</p> <p>Why would you assume people who are in a local, county, state or federal prison will be there for life? Incarceration in no way shows that a prisoner will stay in that area. In fact, statistics show when released they go to the area they last lived. You also have no idea if a prisoner will leave that afternoon, the next week or a month later.</p> <p>The impact of the Census is too great to continue using outdated and unfair practices that won't help the prisoners or their hometown and only gives an unfair count, as well as funding to prison towns. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00652	<p>I think that counting prisoners in each particular prison that they are incarcerated in would not be a relevant count for the purposes of an accurate census. Evidently that has been agreed upon by several states which are currently working to change this. Representation cannot be correct when the temporarily incarcerated are used to inflate the census of an area that is not their permanent residence. It is time to address this mis-representation and correct our census system to truthfully reflect the populace in each designated zone.</p>
c00653	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p>

	<p>How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00654	<p>It seems absurd for the Census Bureau to count people in jail rather than their permanent residence. The people who are incarcerated may be going home the next day. People often get moved around in the court system. If they are exonerated or complete their time in prison they will return home. They do not vote in prison. Don't continue to punish these people who have paid restitution for their crime. They are free. They are Americans. They should be given rights of citizenship.</p> <p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Restore the rights of these people.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00655	<p>The Census Bureau must count incarcerated persons at their permanent home address. This policy should be changed because it is unconstitutional and undemocratic.</p> <p>State and local governments use Census data to draw legislative districts, but if the Census counts prisoners in the wrong location, then the data used is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of "One Person, One Vote." The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community, negatively impacts democracy.</p> <p>This distorts the count of minority populations and leads to more misrepresentation and racism. This method of census also likely gives white rural districts with the prisons more distorted power and influence even though the prisoners can't vote. Districts drawn must reflect true person counts, and therefore the current policy must be changed immediately.</p>
c00656	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>If the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p>

	<p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, when they cannot participate in the civic responsibilities of that community and when they can’t vote there and aren’t a part of the surrounding community, negatively impacts democracy.</p>
c00657	<p>I am writing in response to the Census Bureau’s federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Counting incarcerated people at their temporary location inflates the political power of people who live near prisons. As those counts are used to draw electoral districts, this practice has a serious impact on representational democracy.</p> <p>The best data for redistricting requires the Bureau to count incarcerated people at their home addresses.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00658	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c00659	<p>I am writing to oppose the proposed plan to count inmates at their confinement facility rather than their permanent address. This is not efficient, given the fluidity of inmate populations, nor is it a fair representation of population, especially in areas with high incarceration rates, which means especially for communities of color.</p> <p>The number of incarcerated individuals in the U.S. has increased dramatically over the past 50</p>

	<p>years, so this isn't a minimal impact. You have on file a permanent address for each inmate, and over 95% will ultimately return to their home communities. This decision has enormous implications for representational government. Given the penchant for gerrymandering, it also creates an undesirable incentive for locating prisons and transferring inmates.</p> <p>Please reconsider the proposed plan to continue prison-based residence assignment.</p>
c00660	<p>This message is about the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. This produces faulty census results by artificially hiking up the population of areas that have lots of prisons. There is no reason for those areas to be over-represented.</p> <p>Please correct the problem by using every inmate's real home address--using their prison address is dehumanizing and inaccurate.</p>
c00661	<p>U.S. Census Bureau: please discontinue the inaccurate practice of counting Prisoners as "residents" of the district where they are in prison. They are not voting there anyway. Counting this way skews the voting districts in unfair and incorrect ways. The results often disempower racial or ethnic communities. The census bureau should act to reduce any semblance of racism in its policies.</p> <p>Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00662	<p>Please count prisoners at their permanent addresses and give communities the representation they deserve. There is no logic at all to counting people in the wrong place.</p>
c00663	<p>I am writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community, and it's transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c00664	<p>I wish to add my voice to this conversation. My father was in the military, I learned love of Country. I went to public schools twas in school I learned Civics - my duty to my country, my state and neighbors. I was very proud to be an American. I am an... Please end the woefully inaccurate process of counting incarcerated people at</p>

	<p>prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c00665	<p>I am concerned about the proposed residence rules for the 2020 Census as they apply to inmates.</p> <p>A prison or jail is not a permanent residence. Inmates housed in correctional facilities are there involuntarily and have no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>But the incarcerated *do* have permanent residences where their families reside, in their communities. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00666	<p>Our country was founded on the idea of representative government. As an agency of the federal government, the Census Bureau has a responsibility</p>
c00667	<p>Our county jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p>

	<p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00668	<p>When it comes to the Census, I strongly believe that one of its core missions is to quantify as precisely as possible the demographic realities that ultimately comprise the societal responsibilities and burdens of each of America's many communities. Inmates, though bad actors, are members of our communities equally with those who are responsible and good, and despite their incarceration in facilities that are often distant from their homes, they are part and parcel of the fabric of the cities and towns in which they resided and to which they are ultimately likely to rejoin once their sentences are completed. Unless you can document otherwise with proof that these inmates are not returning to their prior communities, I urge you to retain their pre-incarceration origins as the appropriate point of census. Thank you.</p>
c00669	<p>I am asking the Census Bureau to change their current practice and henceforth count incarcerated people at their permanent home address. It is clearly unfair to their home districts for these folks to be counted where they temporarily reside. Furthermore this practice gives unfair advantage to the district where the facility is located, giving them inflated population figures and therefore increased , undeserved representation.</p> <p>It is my understanding that many inmates are transferred frequently which would clearly indicate that they are not permanent residents of the district in which they are temporarily incarcerated. These inmates do have a permanent address on record, a home to which they will ultimately return. This community is where they should be counted.</p> <p>The Census makes a significant and unreasonable difference between temporarily incarcerated people and others who are temporarily away from their home communities, such as members of the military stationed overseas and youths in residential treatment centers.</p> <p>I urge you to please change your current practice and count incarcerated people as residents of their home address community.</p>
c00670	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Counting incarcerated people at their temporary location inflates the political power of people who live near prisons (falsely, since those prisoners won't be voting while they're incarcerated). As those counts are used to draw electoral districts, this practice has a serious impact on representational democracy.</p>

	<p>The best data for redistricting requires the Bureau to count incarcerated people at their home addresses.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00671	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. Incarcerated people are being counted in the wrong places--the place of their detainment at the time of the census, rather than their permanent address. This is just one of many injustices caused by the rise in mass incarceration which causes a distortion of political representation.</p> <p>This practice, known as prison gerrymandering is a problem for a number of reasons. Prison gerrymandering robs home districts, typically urban centers, and neighborhoods with a large population of people of color, of vital representation and gives areas where prisons are housed, typically rural and white, disproportionate representation. Please change this discriminatory policy.</p>
c00672	<p>People serving time should be considered residents of their permanent address for the purposes of the 2020 census and beyond.</p> <p>Current methodology unfairly and inaccurately takes political power away from prisoners' sending communities. This often manifests itself as systemic racism where majority communities of color have political power transferred to rural white areas due to the sole fact prisons have been built there.</p>
c00673	<p>The counting of the prison population, as residents of the area where they are imprisoned in is a bad idea.</p> <p>I am very concerned about the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not a places where inmates choose to be. The people who are housed in correctional facilities are done so against their will. They are frequently moved to different facilities, making their stay very temporary.</p> <p>Prisoners do have permanent residences where their families and communities reside. It is there, where they most likely will return to, that they should be counted. Counting inmates as residents in the legislative district they are incarcerated, deprives their home district of proper representation and inflates representation in the jail/prison area.</p>

	<p>Their home residence, and not their prison address, is where inmates should be counted.</p>
c00674	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address.</p> <p>I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice.</p> <p>How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00675	<p>I am fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00676	<p>Incarcerated people should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>The sad truth is that so many millions of people are imprisoned in the US that their numbers greatly skew the census depending on where they are counted.</p> <p>Counting people at their permanent addresses will give communities the much more accurate representation they deserve.</p>
c00677	<p>By counting an incarcerated person as being in their home community, you are penalizing an entire community for the crime of one person, by not allowing them correct representation during an election. You are falsely making a community much larger than it really is. You are denying the people a fair chance to elect the leaders they choose simply by not having the numbers of people present on Election Day.</p>

	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community, negatively impacts democracy.</p>
c00678	<p>I had long wondered about the phenomenon of counting prisoners as residents of their prison location thereby increasing representation in rural regions and yet the inmates are ususally unable to vote. This is not right, it is indeed a kind of gerrymandering that does not reflect reality.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c00679	<p>For the 2020 census, the Census Bureau should count incarcerated individuals based on their permanent address.</p> <p>It genuinely makes no sense since while in prison the inmates generally cannot vote anyway. If they have permanent residence in a state like VA where they can vote after serving their sentence then the should definitely be counted there. Political representation is based on poulation. Skewing to communities with non-voting, artificially large populations that are transient (since inmates move around so much) is counter to the Constitutional ideal of Representation.</p> <p>Additionally, resources determined by population are inaccurately distributed to communities with prisons since their populations are exaggerated by the prison population, which is servwd through prison budgets separate from community. And the communities from which the inmates hail are likewise under represented for purposes of budgets based on population.</p> <p>Buck the politicians who will claim it's wrong to make this change. It's the right thing to do.</p>
c00680	<p>I urge the Census Bureau to count incarcerated people at their permanent home address for the purposes of drawing legislative districts. Counting prison populations, who cannot vote, as residents of the location of the prison artificially inflates the area's population and causes prisonbased gerrymandering, which violates the constitutional principle of “One Person, One Vote.”</p>

c00681	<p>I write to urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities; their stay is temporary, not permanent. Further, many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I deeply question the difference the Census has chosen to make between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. To my mind, it seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address. This is the only fair method.</p>
c00682	<p>I resently leaned about incarcerated people not being counted in their last residence in census bureau numbers. Wow. One more way for those with money and power to take away legislative power from the disadvantage and poor neighborhoods!!!! This is not a fair practice and causes misrepresentation of influence in wealthier neighborhoods vs poor struggling people who are working hard to try and make a better life for their children. Please consider the bill to change this unfair practice.</p>
c00683	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address, where they will return after their time is served to live with their families and community. Doing so will help to represent communities with people that have been incarcerated, especially people of color.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00684	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p>

	<p>Louisiana has the highest incarceration rate in the US. Most of those folks are poor. Depriving poor neighborhoods of resources by skewing the population is racist, classist and shows ignorance to the problems of poverty and crime and lack of resources to help people improve their lives and their socio-economic status.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00685	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Counting incarcerated people at their temporary location is methodologically problematic. It misrepresents the political power of people who live near prisons. As those counts are used to draw electoral districts, this practice has a serious impact on representational democracy.</p> <p>Best practices for redistricting requires the Bureau to count incarcerated people at their home addresses. Further, a more robust definition of "home" for these individuals should be developed and made transparent.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00686	<p>Please note that this is my personal, not an autogenerated message: I am opposed to counting prisoners as "living" in the area of the prison where they are being held at the time of a census. Just as with "absentee" citizens, they should be counted as being from the community they list as their permanent address. They have no say as to which facility they are held in, and are often moved without notice. Count them according to the community they identify as their "permanent address", the prison system requires them to list a "permanent address" so the U.S. Census Bureau should honor that designation.</p> <p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p>

	<p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location. Do not give communities where prisons are located exaggerated representation based on the numbers in the prison: the prisoners receive no representation for that community but for their permanent home communities when they return.</p> <p>Thank you for considering my opinion,</p>
c00687	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district in which they are incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c00688	<p>Those serving sentences are often moved between different prisons. Some prisoners can be moved several times a year. You should count prisoners at their home address at the time of their arrest and incarceration.</p>
c00689	<p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00690	<p>The practice of "prison gerrymandering" deprives communities of the representation that they are entitled to. Please discontinue this practice.</p>
c00691	<p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c00692	<p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>Counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation. Please end this practice and count incarcerated people at their permanent address.</p>
c00693	<p>I do not understand the Census Bureau's federal register choice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Counting incarcerated people at their temporary location improperly inflates the political representation of people who live near prisons. As those counts are used to draw electoral</p>

	<p>districts, this practice has a serious impact on our democracy.</p> <p>It might better represent people if the data for redistricting required the Bureau to count incarcerated people at their home addresses at the time of arrest.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00694	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address. In New York State, most prisoners are from urban areas, but the remoter areas of the prisons get to use their bodies to increase their opportunities for school funding and congressional representation. This is a violation of one man one vote.</p> <p>Thanks for considering my request to fix this injustice.</p>
c00695	<p>One person. One vote. What's the problem?</p> <p>Stop the Shenanigans, folks, really? You can't count properly or employ reasonable logic?</p> <p>Have some respect for voting rights and for the accurate representation of district census information.</p> <p>No one accepts the falsehood.</p> <p>It only serves to cheapen your own sense of integrity.</p>
c00696	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will.</p> <p>Incarcerated people do have permanent residences. Counting inmates as residents in another legislative district deprives their home area of proper representation.</p> <p>Their home residence is their home!</p>
c00697	<p>Please consider the following: that The Census Bureau must count all people in the U.S.-- including non-citizens, children, temporary residents, deployed military, students and non-voters.</p>

Most everyone is counted at their permanent residence--incarcerated people are an exception. You cannot ignore prisoners because you must count everyone, and formerly incarcerated people will go home home to their community upon release. I can't imagine one example of an inmate staying in the city, town, or area where they were imprisoned upon release. Therefore, they should be counted in the place of their permanent residence, since they have had, and always had "an intention to return" to said residence.

Incarcerated people are often moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. Incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted. How in tarnation can you expect to get an accurate census count with the type of temporary moving around that goes on in the penal system?

I worked on the census count in 2010 and know that many of the folks were hard to find and get hold of, but they were still counted as being in that area, unless there was clear evidence they had moved permanently.

This is about democracy, not funding. Most government funding formulas are too smart to be fooled by the Census Bureau's prison miscount. When prisons are built in an area, they are built with a specific population maximum. Infrastructure planning for such facilities is done based on the maximum size of the prison. School funding is allocated based on the number of students--not prisoners. Opponents of reversing the current counting mechanism often use this argument and it's a false flag.

States are acting against this practice and are adopting, have adopted, or attempted to adopt legislation across the country--including New York, Maryland, Delaware and California. Florida's plan for prison gerrymandering was ruled unconstitutional.

Prior to the mass incarceration phenomenon, this was not a question of concern for the Census Bureau because it was rare and affected a small number of people. They began inquiring about incarceration in 1990--when the prison population exploded from 137 per 100,000 during the great depression to 470 per 100,000 in 2001 because of the war on drugs and increased tough on crime policing.

	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00698	<p>Please change the practice of prison gerrymandering. This, along with the ongoing problem of mass incarceration, is an unjust travesty for our society and needs to be addressed and righted.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00699	<p>This message is in regard to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census. I have lived in a rural area with a nearby prison; I am against rural people receiving more House Representatives or local representatives based on these inmates. Inmates need to be counted where they originated. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government. It seems additionally odd to me, that convicted felons cannot vote and therefore have NO representatives, anyway.</p> <p>I hope the Census Bureau changes the proposed plan to continue to over-represent rural people and moves towards a model that better serves communities.</p>

c00700	<p>Please begin counting prison inmates at their permanent addresses. Counting them at the institutions where they are residing at the time of the census disconnects them from representation in their regular communities and leaves their regular communities unprepared for the services they will need after they're released. It also misrepresents the real demographics of the communities in which the prisons are located.</p>
c00701	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Counting incarcerated people at their temporary location inflates the political power of people who live near prisons. Because those counts are used to draw electoral districts, counting prisoners where they are being held instead of at their home addresses has a serious impact on how well different groups in the population are represented in the outcomes of elections. When districts are redrawn, data need to be available on permanent (home) residences. If prisoners are counted where they are imprisoned, then groups that are over-represented among prisoners will be under-represented in democratically elected bodies.</p> <p>The solution is either for the Census Bureau to count prisoners only at their home addresses, or to create a separate field and question and record them at both locations, so that redistricting can be based on home addresses of prisoners rather than their prison addresses.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00702	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>State and local governments use Census data to draw legislative districts. But if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of "One Person, One Vote." The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community, negatively impacts democracy.</p> <p>A prison is not a place of residence. Prisoners should be counted as residents of the State and</p>

	city where they were residing before incarceration or where they state they intend to return to after after their sentence has been served.
c00703	<p>I am writing you to express my dismay about the proposed changes to residence rules for the 2020 Census. The proposed practice of not counting incarcerated prisoners in their home districts would be an egregious misuse of the powers of a federal agency. This practice would guarantee that people of color, who are disproportionately represented in prison populations, would be under-counted in their home districts, thereby causing their home districts to be underrepresented in their legislative districts (the districts where they will return and where their friends and family live), and give the districts where they are housed (and not actually permanent residents) more representation than they are fairly entitled to. This proposed change should be scrapped, so that all will receive fair representation, according to the principles of our democracy.</p>
c00704	<p>I have just been made aware of the census department's practice of prison gerrymandering.</p> <p>Please end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>When you count prisoners at their place of incarceration instead of their permanent address, this influences political power. They are counted, not where they chose to live or where they might vote someday, but instead at an address they didn't choose, and is not their own community. Please end the practice of counting people where they are in jail, and instead, them at their permanent address.</p>
c00705	<p>I have recently read the proposed residence rules for the 2020 Census and was prompted to write to express my concern.</p> <p>I know from my own experience as an _____ for the Census some 25 years ago in northeastern NY that prisons and jails are not permanent residences and should not be counted as such.</p> <p>One of the difficulties we saw then was that incarcerated persons were only housed temporarily at a given facility. These stays were clearly temporary, not permanent. Nothing has changed.</p> <p>The large majority of incarcerated people have permanent residences. These are the places where their families reside. In most cases we know that those are the places to which they are most likely to return after serving their sentences. It is there that they should be counted.</p>

	<p>Counting inmates as residents of other legislative districts is a strange sort of gerrymander. It serves to cut down the representation in their home district and falsely increases it in the temporary area where they happen to be counted.</p> <p>Counting incarcerated persons at their home residence is only logical.</p>
c00706	<p>It is only right and just to count prisoners at their permanent address, not where they are incarcerated. It is a matter of intent. Also, it deliberately distorts the intent of the democratic process.</p>
c00707	<p>I'm concerned about the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By doing this, communities with many imprisoned constituents are being denied political representation and that representation is being transferred to communities prisoners by definition cannot interact or participate in. Prisoners should be able to designate their permanent residence as where they should be counted in the census.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c00708	<p>As a Wisconsin resident, I am urging you to end the process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their families and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to those places where they are temporarily housed.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural areas to the detriment of all involved. This is specially true in Wisconsin, which jails a disproportionate number of people of color. And, since Wisconsin also uses a disproportionate number of for-profit facilities, this creates an even larger possibility of political misconduct. The Census Bureau should change this practice.</p>
c00709	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated individuals.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal</p>

	<p>influence over the legislative process. Prison-based gerrymandering distorts the intended process.</p> <p>Please take the necessary steps to end this racist-based proposal.</p> <p>Thank you for your consideration,</p>
c00710	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>It leads to gerrymandering of congressional districts which is highly suspect.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00711	<p>Please count the prison population as residents of the community they came from and will be returning to, so that their families can accrue benefits based on population count until they return.</p>
c00712	<p>Americans are slowly becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering. I myself have only recently discovered this was happening.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00713	<p>If you were from Virginia you would be personally - extraordinarily -impacted by prison gerrymandering.</p> <p>8 of 11 of our Congressional representatives are from one party - because of gerrymandering. THIS is voting fraud. This is theft. Citizens voices are being stripped away for political purposes. You should act now - in every state - to end this Jim Crow era practice of segregation and disenfranchisement.</p>
c00714	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p>

	<p>State and local governments use Census data to draw legislative districts. But if the Census counts prisoners in a location different from where they primarily live, then the resulting data distort representative democracy.</p> <p>This "prison-based gerrymandering" violates the constitutional principle of "One Person, One Vote." The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community, negatively impacts democracy. Often the locations of prisons are in geographic regions very different in racial, ethnic, class and cultural composition from the home communities of the prison populations. Counting inmates as if they were residents of prison communities and not residents of their home communities unfairly increases the representation of the prison locales and diminishes the representation of their home communities. This injustice deserves to be corrected.</p> <p>I recognize that identifying home communities of inmates would require additional time and resources for the Census Bureau, but this is not a sufficient reason to continue this representational injustice.</p>
c00715	<p>I understand that one of the consequences of incarceration is that an imprisoned person is counted for census purposes as residing at his/her place of incarceration, rather than at the place he/she actually resides when not in prison. This is wrong.</p> <p>There is time to correct this practice before the next Census in 2020. Please do so.</p>
c00716	<p>A lot of Americans are learning about the political issues that are created by mass incarceration, including the practice of using prison populations to impliment gerrymandering</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00717	<p>I am seriously surprised to hear of these proposed residence rules for the 2020 Census.</p> <p>It comes as a shock to me that anyone would consider it a good idea to count incarcerated</p>

	<p>people as permanent residents of a prison or jail. While many convicts can vote, felons in most states are not eligible to vote while in prison. Counting these citizens makes NO sense, because they are ineligible to vote. It is completely non-representative.</p> <p>Rewarding communities who house these jails and prisons is uncalled for and seems spurious, particularly in light of the current questionable for-profit nature of our prison system.</p> <p>Please take these thoughts into consideration while creating the new census regulations.</p>
c00718	<p>With so much in the news about voter fraud, I believe that counting prisoners where they are incarcerated rather than at their home address looks like a form of voter fraud to me.</p> <p>Where people live, but are not counted as such, really distorts the Florida map of where concentrated numbers of Republicans, Democrats and Independents live. And based on that, congressional districts are drawn - but now we know they are incorrectly drawn.</p> <p>Please count Florida residents where they live, not where they are paying their debt to society. Because in most cases, THAT address will only be temporary.</p>
c00719	<p>Now is the time to change the way the you count jailed citizens--they should be counted at their permanent address, but currently are counted in the the prison they are temporarily located in.</p> <p>The Department of Justice will no longer use private prisons. This indicates that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c00720	<p>I am writing to urge you to the way the Census counts incarcerated people. To make the system more fair, I think they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>This is particularly important due to the recent announcement that the Department of Justice will</p>

	<p>no longer use private prisons. The government and society are beginning to look at the problems of mass incarceration in a different light and many prisoners will be moved to federal and state facilities, or in the case of minor drug offenders, out of the prison system altogether.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration. By counting incarcerated people at their permanent address, we can give the communities most affected by mass incarceration their proper level political representation rather than diminishing their populations due to the temporary removal of citizens during the period of incarceration.</p> <p>I urge you to count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c00721	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address and not at the location where they are incarcerated. When state and local governments use Census data to draw legislative districts, the data are incorrect and distort representative democracy.</p> <p>Most people in prison are serving short sentences--many less than 3 years spread across multiple facilities. In New York state, the median time served in a facility is less than 7 months. In Georgia, the average person has been transferred four times, and the median time spent at the current facility is 9 months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted.</p>
c00722	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>State and local governments use Census data to draw legislative districts. If the Census counts prisoners in the wrong location, the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of "One Person, One Vote." The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community, negatively impacts democracy.</p>
c00723	<p>Oh Census Bureau, whatever are you thinking?</p>

	<p>Incarcerated persons should be counted using their permanent non-incarcerated address. This method accurately represents where people choose to live, as opposed to artificially giving weight to localities that host prisons.</p> <p>Crediting incarcerated persons at their prison location would distort the results and lead to faux population-based gerrymandering.</p> <p>C'mon. This one is easy to figure out.</p>
c00724	<p>Many incarcerated people are victims of an unfair and biased criminal justice system. The Census Bureau should not follow the Criminal Justice systems unfair practices. Not counting incarcerated people in their home district is unfair and should not be continued. Give these people a voice in electing their true representatives in government. R</p>
c00725	<p>I am write to urge the Census Bureau to count incarcerated persons at their permanent home address, not at their place of imprisonment.</p> <p>You've received many form/canned letters outlining the reasons for this plea, so I'll not repeat them. Just do it!</p>
c00726	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>Counting inmates at their incarceration facility is the 21st century equivalent of the 18th century practice of depriving slaves of the right to vote but allowing slave holding states to count them for purposes of congressional districting. The major difference is that slave states could appropriate only three-fifths of their slave populations, while the current system allows the appropriation of all five-fifths of incarcerated people. This practice is deplorable and undemocratic.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00727	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not the permanent residence for every inmate. Incarcerated persons are often moved between facilities, making their stay even more temporary.</p>

	<p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00728	<p>I am writing to urge you to revise census practice to count incarcerated individuals at their permanent address.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. In addition, miscounting of prisoners affects their home communities in the allocation of public resources to those communities, many of which are already impoverished as well as socially and economically weakened by the absence of potentially active members of the local economy. This creates a vicious cycle of poverty, political disempowerment, and, in many cases, systemic racism.</p> <p>Please end this practice and count incarcerated people at their permanent address.</p>
c00729	<p>I am concerned about the proposed residence rules for the 2020 Census. Incarcerated people have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time. For Census purposes, these individuals should be counted at their home residence, not their temporary place of confinement.</p>
c00730	<p>I have discovered that in 2020 the Census Bureau plans to count incarcerated people at the facility where they are incarcerated on Census day instead of their home address. These people will eventually return to their homes and if they are not counted based on their residence, the area in which they live may be misrepresented.</p> <p>This does not seem to be an unreasonable request in that deployed military personnel are counted based on the community to which they will eventually return. Every community deserves to receive the proper political representation.</p> <p>Please count incarcerated people as residents of their home address. It is the right thing to do.</p>
c00731	<p>Count inmates from their permanent address, not their prison address.</p>
c00732	<p>I have just learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities.</p>

	<p>I am writing to request that the Census Bureau end this practice. I believe it is inherently racist.</p> <p>Counting inmates where they are incarcerated reduces the accuracy of census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>The impact of the census is too great to continue using outdated and inaccurate methods for counting!</p> <p>Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00733	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rules for 2020. If incarcerated individuals are not counted at their permanent addresses, this gives some districts more representation than is due.</p> <p>A purpose of the census is to provide data that reflects population and demographics that will be used for redistricting. This is a crucial part of a representative democracy, and is therefore imperative that the data accurately reflect the population of a given area. If the Census Bureau refuses to uphold the core principles of our republic and do their part to ensure that citizens are not misrepresented, then it loses legitimacy.</p>
c00734	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated people are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>Democracy dictates that we place a certain emphasis on making the democracy work. Sometimes this means doing things because they are the right things to do.</p>

	<p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>This issue impacts communities of color disproportionately. As such, it should be seen as reinforcing institutional racism. This must stop.</p> <p>Please reconsider and count incarcerated people as residents of their home address.</p>
c00735	<p>It's not fair to gerrymander so that prisoners aren't counted in the communities where they came from and where they will return. This deprives those communities of the resources they need to fix problems and take care of their citizens. It also overinflates the votes of persons living in a community near a prison.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00736	<p>We urge the Census Bureau to count incarcerated people at their home address, not at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities multiple times per year, making their stay temporary, not permanent.</p> <p>Why has the Census made the transient nature of incarcerated persons different than deployed overseas military or juveniles staying in residential treatment centers?</p> <p>Please count incarcerated people as residents of their home address. Stop all the gerrymandering!</p>
c00737	<p>Prison gerrymandering robs home districts, typically urban centers, and neighborhoods with a large population of people of color, of vital representation and gives areas where prisons are housed, typically rural and white, disproportionate representation. longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration</p>

	<p>in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c00738	<p>U.S. Census Bureau 2020 residency rules need an update.</p> <p>I'm writing to express my deep concern and consternation over the proposal to continue inaccurately counting incarcerated persons at their temporary site of incarceration, rather than their permanent home / living address.</p> <p>By inaccurately counting people at prisons, complete political representation is being denied to the incarcerated person's permanent home community. That important representation is then transferred to the community where they are incarcerated - a community they do not represent, interact with, or live in, and a community that will not consider them in it's planning or lawmaking.</p> <p>Please seriously consider ending this inaccurate practice so that incarcerated persons' home communities have accurate representation.</p>
c00739	<p>Please count incarcerated people at their home address, rather than where they are incarcerated on Census day.</p> <p>Shuffled throughout a number of facilities, they will ultimately return home.</p> <p>Transient persons, such as deployed military or juveniles staying in residential centers, and those in prisons, should all be counted by where they call home, not by their location on census day.</p>
c00740	<p>I understand you're preparing the rules for the next census, which not only counts Americans who are at home, but also those living away from home. Since the incarcerated are forced to live in communities most likely not their own, I urge you to count them instead at their domiciles they will return to-- their permanent home address.</p>

	<p>State and local governments use Census data to draw legislative districts, but if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government.</p>
c00741	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. As someone who has worked in prison ministry for a time, I know that inmates/residents consider their home towns as their permanent location. Those who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00742	<p>Americans are finally becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census must end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00743	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p>

	<p>Prisons and jails are not permanent residences, except for those convicted for life imprisonment without parole. The people who are housed in correctional facilities are there against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00744	<p>The Census Bureau should count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day. While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences, where they are part of the community, are where they should be counted.</p> <p>There seems to be a different standard with similarly positioned populations such as deployed overseas military or juveniles staying in residential treatment centers. By counting prisoners at the location of the prison, district maps are effectively gerrymandered and equal protection is violated.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00745	<p>I believe the Census should end the practice that has lead to misrepresentation of incarcerated people in previous years.</p> <p>Count prisoners as residents of their permanent home addresses--where they will return after their time is served to live with their families and communities--not as residents of the area the prison happens to be located in.</p> <p>Please change this inaccurate practice.</p>
c00746	<p>The right to vote is one of our most important rights as American citizens. Any attempt to gerrymander seriously impedes citizens' voice in their governing.</p> <p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p>

	<p>Please count incarcerated people as residents of their home address. Most inmates serve short sentences, thus their prison address is certainly not their permanent address.</p>
c00747	<p>The proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration—rather than their permanent home address—is a clear violation of basic principles of representation.</p> <p>By miscounting imprisoned people, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in. This is a distortion of democracy, and should be ended immediately.</p> <p>Please end this inaccurate, misplaced practice so that these communities can gain the accurate representation they deserve</p>
c00748	<p>I wish to express my concern over the proposed residence rules for the 2020 Census. Counting inmates as residents of their correctional facility's legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Prisons and jails are not permanent residences. People are housed there far from their communities and against their will. Furthermore, incarcerated persons are often moved between facilities, making their stays temporary, rather than permanent.</p> <p>Incarcerated people do have permanent residences where they and their families reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary, and often rural, locale.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00749	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p>

	<p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>Why are people who are imprisoned not counted the same as people who may be working overseas?</p>
c00750	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>In the New York City neighborhood where I worked for many years, one out of four African-American men under age 30 were under some kind of judicial "supervision" including incarceration. Those who are incarcerated are not counted as resident New Yorkers, artificially lowering our city's population. Therefore, the Census is incorrect, wrongly benefitting the rural areas where prisons happen to be located.</p> <p>In 2020 a new Census will take place, and for once and at last, correct counting needs to be done.</p> <p>A correct Census will enable proportionate state and federal representation of places where people actually live and not skew representation towards the sparsely populated areas where many urban citizens are temporarily resident.</p> <p>Prison-based gerrymandering violates the constitutional principle of "One Person, One Vote." The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community, negatively impacts democracy.</p>
c00751	<p>How do political parties benefit from counting prisoners where they are incarcerated rather than their home?</p> <p>Would it not be more fair to them and their neighbors to count them where their home is?</p>
c00752	<p>Despite being barred from voting in most states, most prisoners are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially diminishes the political power of predominately urban districts. As such, the votes of law-abiding citizens of these districts are undercut because of the criminal activity of</p>

	<p>their neighbors. This is most unfortunate, because those who live in criminally active neighborhoods have firsthand experience relating to the nature of crime and are more likely to be directly affected by criminal activity. Under this policy, law-abiding citizens have to work harder to get effective crime prevention legislation passed. A continuation of this policy thus discourages crime reform in the districts that need it most, and encourages the breeding of further criminal activity.</p> <p>As such, I strongly urge the Census Bureau to count incarcerated persons in their home districts and take steps to end prison-based gerrymandering nationally. With your help, we may restore the democratic rights of those most injured by crime, and thereby pave the way for a more just society.</p>
c00753	<p>Prison based gerrymandering is unfair, unconstitutional and creates an illegal bias. Please stop gerrymandering based on prison populations!!!I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p>
c00754	<p>TO WHOM IT MAY CONCERN AT THE U.S. CENSUS BUREAU: IT HAS COME TO MY ATTENTION THAT INCARCERATED PERSONS ARE COUNTED, FOR PURPOSES OF THE CENSUS REPORT, NOT AS LIVING WHERE THEIR HOMES ARE LOCATED BUT AS LIVING WHERE THE PRISON IN WHICH THEY ARE INCARCERATED IS LOCATED. FOR EXAMPLE, I LIVE IN SOUTHERN ILLINOIS, WHICH IS THE HOME OF MANY OF ILLINOIS' PRISONS. AN ENORMOUS NUMBER OF THE PRISONERS INCARCERATED IN THE VARIOUS PRISONS IN SOUTHERN ILLINOIS ARE ACTUALLY FROM CITIES IN THE NORTHERN PART OF THE STATE, PARTICULARLY CHICAGO. SOUTHERN ILLINOIS , WITH THE EXCEPTION OF CARBONDALE WHERE I LIVE, WHICH IS HOME TO THE SOUTHERN ILLINOIS UNIVERSITY CARBONDALE CAMPUS, IS A VERY RURAL, VERY CONSERVATIVE PART OF THE STATE, MUCH LIKE KENTUCKY AND MISSOURI AND, OF COURSE, NOTHING LIKE THE CITY OF CHICAGO . THIS RANKLY DISCRIMINATORY PRACTICE NEEDS TO CEASE AT ONCE, THAT IS, STARTING WITH THE NEXT CENSUS. PRISONERS DO HAVE THE SAME RIGHT OF REPRESENTATION WE ALL ENJOY UNDER OUR NATION'S CONSTITUTION, A RIGHT YOU MUST HONOR.</p>
c00755	<p>I am writing in response to the federal register notice from the Census Bureau regarding the Residence Rule as it applies to incarcerated people.</p> <p>When I learned that incarcerated people are counted by the census at whichever temporary location they happen to be at, I was concerned about the political impact on African Americans who are disproportionately jailed and imprisoned in our country. Given that the census numbers are used to draw electoral districts, counting inmates outside of their permanent communities</p>

	<p>has serious implications for our representational democracy. Gerrymandering is already a significant issue and many voters already feel disenfranchised; this practice only exacerbates these problems.</p> <p>Professionally, I am even more concerned. As a public health professional, I am outraged that the census, on which we depend for critical information to inform our population-level health policies and programs, should be so skewed. It is difficult to target interventions to the appropriate cultural, linguistic and risk groups; this misrepresentation increases the difficulty of my job and reduces the effectiveness of our public health programs.</p> <p>My brother was in a state prison system for less about 18 months. During that time he resided at three different facilities, in different counties and jurisdictions, none of which were near his home. Yet, it was when he returned home that he needed medical and social services.</p> <p>The U.S. has the highest incarceration rates in the world. It is unconscionable for the Census Bureau to continue this outdated counting practice.</p> <p>Please do the right thing for our democracy, those of us who depend upon accurate census data and the future of our communities: count prisoners at their permanent home addresses.</p>
c00756	<p>please change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p>
c00757	<p>I live in Louisiana and had no idea this travesty existed. Why would the prisoners not use their home address ?? Maybe if they are serving life sentences with no parole, that would make sense. But all other offences should use their last permanent address. A prison count is a wasted count !</p>
c00758	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated</p>

	<p>and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>This is an injustice that can not be obscured by any opposing arguments because the fact is that a prison IS NOT a permanent residence and therefore should not be seen as one by the government; to do so undermines the democratic ideal of fair representation for all citizens. It's that simple.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00759	<p>I am a citizen who has voted in every election, local, state, and national, my whole adult life. In my family, voting was not considered optional. It was a civic duty, and I never doubted it.</p> <p>I have worked in numerous voter registration drives here in suburban Detroit, making sure that every person who wants to vote and is qualified can vote. Many who had prison records believed that they had been stripped of their right to vote, which is not true now in Michigan.</p> <p>I have registered many young people who wanted to vote but had not believed it was possible. Their relief and satisfaction was manifest. The same must be done for the people who are registered to vote, but have lost their eligibility due to having been incarcerated and counted in the census as living elsewhere during incarceration. It is an important part of having served one's time and paid one's debt to society that one's vote be restored to him or her once free. Please change the 2020 census rules to allow census takers to ask prisoners where they registered to vote and allow them to maintain their registration in that county.</p> <p>We need your help to restore the faith of Americans who have served prison terms that citizenship has its rights as well as its duties.</p>
c00760	<p>The Census Bureau must count all people in the U.S.--including non-citizens, children, temporary residents, deployed military, students and non-voters. Most everyone is counted at their permanent residence--incarcerated people are an exception.</p> <p>The Census Bureau cannot ignore prisoners because they must count everyone, and formerly incarcerated people will return home to their community upon release. Therefore, they should be</p>

	<p>counted there.</p> <p>Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities.</p> <p>Incarcerated people are being counted in the wrong places--the place of their detainment at the time of the census, rather than their permanent address. This is just one of many injustices caused by the rise in mass incarceration which causes a distortion of political representation.</p> <p>This practice, known as prison gerrymandering is a problem for a number of reasons. Prison gerrymandering robs home districts, typically urban centers, and neighborhoods with a large population of people of color, of vital representation and gives areas where prisons are housed, typically rural and white, disproportionate representation.</p> <p>Prior to the mass incarceration phenomenon, this was not a question of concern for the Census Bureau because it was rare and affected a small number of people. They began inquiring about incarceration in 1990--when the prison population exploded from 137 per 100,000 during the great depression to 470 per 100,000 in 2001 because of the war on drugs and increased toughness in crime policing.</p> <p>When prisons are built in an area, they are built with a specific population maximum. Infrastructure planning for such facilities is done based on the maximum size of the prison.</p> <p>School funding is allocated based on the number of students--not prisoners. Opponents of reversing the current counting mechanism often use this argument and it is a false flag.</p>
c00761	<p>Two issues please.</p> <p>1-I live in a rural area and chose to have my PO Box as my permanent address....I had no mailbox at my home and received no mail at my home . My local census taker said that I would not be counted in the 2010 census because of this. I want to be counted. How do I do that?</p> <p>2-Please count incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p>

c00762	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>When released, incarcerated people will return to their previous communities. Representation in government as well as spending allocations are dependent on accurate census information. How this population is counted has enormous implications for representational government and community resources.</p>
c00763	<p>Unless Texas really is an independent nation, it's time to crack down on anti-American criminals.</p> <p>Time for DOJ to actively pursue and prosecute our domestic terrorists trying to change this nation into a brown shirt fascist nation. Racists are NOT Americans.</p>
c00764	<p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00765	<p>The proposed residence rules for 2020 strike me as another door opening to the possibility of gerrymandering--and we don't need any more of that from either party.</p> <p>In my State, and in most others, prisoners are moved around to facilities across many miles. Just consider how easy it would be for a morally slippery prison official to make some of those moves intentional!</p> <p>Add to this the fact that a majority of prisoners are city residents of hole prisons are typically rural. This policy change exacerbates the already prevalent urban-rural split between progressives and conservatives.</p> <p>I can think of no logical reason for counting people as "residing" in a temporary residence, and hunch is what prison is intended to be. If I were staying in a hotel in Texas for the cold winter months when Minnesota becomes a challenge, would you count me as a Texan? I think not.</p>
c00766	<p>The practice of counting prisoners where they are imprisoned, not where they will live once released (at home), artificially inflates the political power of the districts where prisons have been built. This practice also distorts other areas affected by census, such as disaster relief, support for infrastructure improvements (roads, bridges).</p> <p>Counting prisons as 'home' hurts the very communities that need help the most.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end</p>

	<p>prison-based gerrymandering nationally.</p>
c00767	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not interact with, live in, or have any real connection to.</p> <p>Please end this inaccurate and inherently unfair practice so that communities have accurate representation.</p>
c00768	<p>I urge you to count prisoners at their permanent home location. Our democracy depends on accurately representing all communities.</p>
c00769	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>State and local governments use Census data to draw legislative districts. But if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of "One Person, One Vote." The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community, negatively impacts democracy.</p>
c00770	<p>You have a responsibility to count ALL people in the USA ,including incarcerated people.This is about democracy , NOT funding. Equal voting rights for everyone.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>

	Do the RIGHT thing if you claim to be American.
c00771	<p>Please count prisoners based on their permanent home address.</p> <p>These prisoners and their community need to be supported to help when they are returned to the community and also their community needs support to reduce crime and support education, health care, and job growth. Their communities have the greatest need.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00772	<p>If prisoners are not counted at their permanent addresses the count for congressional districts becomes distorted. Most prisoners return to their home addresses in a relative short time and so should be counted there.</p> <p>Their permanent addresses are always on file. Therefore the Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p>
c00773	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>It is simply bizarre to remove proper representation from people who will be returning home soon. But their existence will still be counted far from home. Just weird thinking.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00774	<p>I live in a district with our state prison. It is the only district in our state that always votes a different party than the rest of the state for our US Representatives and President. The population without the prison is small enough that it should cover a bigger area to make the district represent an equal number of people to the other districts. This is especially true since prison inmates are not allowed to vote. I don't know if it all inmates or only those convicted of a felony, but either way it still changes the votes.</p> <p>Therefore, I'm writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. They are temporary. There is a record of their home residences. Their home residence, which is where they will usually return, is where</p>

	incarcerated persons should be counted.
c00775	<p>I am concerned about the apparent Census practice of counting incarcerated people in the locality of their incarceration rather than their permanent home to which they return after release. I hope yhat you do not leave these residence rules in place for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who live in correctional facilities are not offered autonomy to move where they wish. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p>
c00776	<p>I've recently learned that the Census Bureau plans to continue counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>Counting inmates where they are incarcerated skews data in predominantly white, rural communities.</p> <p>This is an example of systemic racism , in that the money that these people's communities need is diverted to primarily white communities that temporarily house them and also denies their home communities adequate political representation. Stop systemic racism , end this practice</p>
c00777	<p>Counting incarcerated people where they are incarcerated on Census day rather than at their home address is jus wrong! Please count incarcerated people as residents of their home address.</p>
c00778	<p>I sometimes feel as though America's penal system is in part modeled on the Stalinist work camp. I'm referring to mass incarceration and punitively long sentences.</p> <p>One rectification of this divergence from democratic justice could come from counting prisoners at the permanent home address to which they will return after their time is served Please end this practice and count incarcerated people at their permanent address.</p>
c00779	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address. To count prisoners at the incarceration address is the same as counting temporary workers at their work address instead of their home address, and it falsifies the county and state count the same way.</p> <p>State and local governments use Census data to draw legislative districts. But if the Census</p>

	<p>counts prisoners in the wrong location, then the data is falsified and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community, negatively impacts democracy.</p>
c00780	<p>Please end the practice of counting incarcerated people at prisons for the 2020 Census. It seems to me that it is misrepresentative because many people don't consider the place of their confinement to be their permanent addresses.</p> <p>This misrepresentative practice artificially inflates population numbers for the locales of confinement and diminishes the count for locales of permanent addresses. This practice, it seems to me, especially hurts communities of color representation because of disproportionate numbers of inmates from communities of color in the prison system.</p>
c00781	<p>I have just been advised that prisoners are counted by the census as residing in their prisons. This is absurd. Huntsville, Texas, is not a town of 50,000, it is a town of 35,000, with 15,000 temporary residents whose homes are elsewhere. It is preposterous to give Huntsville undue representation in Congress because it hosts prisons.</p> <p>Please end this practice and count incarcerated people at their permanent address.</p>
c00782	<p>I want to express my concern about the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are there against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00783	<p>I am writing in response to the Census Bureau’s federal register notice regarding the Residence Rule as applied to incarcerated persons.</p>

	<p>Counting incarcerated people at their temporary location inflates the political power of people who live near prisons. As those counts are used to draw electoral districts, this practice has a serious impact on representational democracy.</p> <p>The best data for redistricting requires the Bureau to count incarcerated people at their home addresses.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00784	<p>The Census Bureau's ongoing practice effectively disenfranchises a portion of the population that has already suffered from underrepresentation--adding insult to injury. If the Census Bureau wishes to remain relevant and continue to receive funding, it ought to accurately reflect people where they will vote. If the Census Bureau refuses to operate as a reflection of democracy, it is an instrument of tyranny. Please stop gerrymandering based on prison populations.</p>
c00785	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of residence that they will return to after completing their incarceration.</p> <p>I do not agree with this, noting one example for my decision. There are persons who are incarcerated who are homeowners; having a deed listing many as owners of a particular property, taxes being paid and many are registered voters at the stated property. These legal documents should be used to substantiate their legal residence; noting that many incarcerations does not cover the extent of their lives.</p>
c00786	<p>I'm writing to express my opinion as follows: A prisoner "should" vote from address of the prisoner's personal permanent home where voting is done by the local residents of the prisoner's permanent home location.</p> <p>A prisoner "should not" vote from the location where voting is held for those who live in the location of the prison, since "this is not the location of the prisoner's own personal permanent home location."</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>Best,</p>

	<p>Citizens should serve themselves by voting according to their own address. A prisoner “should” vote from location of the prisoner's own personal permanent home where voting is done by the local residents of the prisoner's permanent home location.</p> <p>A prisoner “should not” vote from the location where voting is held for those who live in the location of the prison, since “this is not the location of the prisoner's own personal permanent home location.”</p>
c00787	<p>I urge you to stop the practice of counting prisoners at their place of incarceration, rather than at their permanent home address. This is a distortion of the intent of the Constitution and causes a weird form of gerrymandering.</p>
c00788	<p>I ask you to please end the unconscionable and woefully inaccurate process of counting incarcerated people at their prison for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address or their last address before being incarcerated. This is where they will most likely return after their sentence is completed to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is causing a transfer of political power from the prisoners home community to a community to which they do not belong or have any interaction with. The current procedure frequently results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau must change this practice as a matter of fairness.</p>
c00789	<p>I wish to address the Census Bureau’s federal register notice with regard to the Residence Rule as applied to persons in prison.</p> <p>Counting incarcerated persons at their temporary location increases the political power of other people who live near the prisons involved. As these population counts are used to draw electoral districts, this is a practice which has the effect of skewing representative democracy.</p> <p>The best redistricting data requires the Bureau to count imprisoned persons at their home addresses.</p> <p>A fair and strong democracy relies on counting our population in a manner that accurately represents all communities. I am therefore asking you to count prisoners for redistricting at their</p>

	<p>permanent home location.</p>
c00790	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. Unless an inmate is serving a life sentence without parole, incarcerated people should be counted in the census according to their listed permanent address, and not the address of the prison or jail where they are currently and temporarily residing.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00791	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>The point of the census was to count the people that lived in a region. Falsely padding regions by adding temporary populations is wrong, both legally and morally.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c00792	<p>I encourage you not to continue the practice of counting convicted persons at their place of incarceration for the 2020 Census.</p> <p>I live near _____, Arizona, _____ County, a place that is home not to one but SEVEN prisons. Only one of them, the county lock-up, houses local people. The other six have inmates from as far away as New England.</p> <p>In addition to the State of Vermont, the Federal Justice Department, the U.S. Air Force, Customs and Immigration, the Pascua Yaqui tribal government, and the U.S. Marshall's Service all house prisoners in _____. Federal prisoners in _____, include the infamous _____, who likely never set foot in Arizona before he took up residence in a prison in _____.</p>

	<p>Two of these huge prisons are run by the Arizona Department of Corrections, including the state's death row. The other four are operated by two private prison companies that take in convicts from all over the nation, as well as the world, given that Immigration houses hundreds of foreign citizens awaiting expulsion in one of the prisons. Another is a SuperMax prison, housing some of the most dangerous Federal convicts. You can see how likely it is that only the county facility houses people who should be counted by the Census as being actual residents of _____ County.</p> <p>How this population is counted has enormous implications for representational government. _____, AZ, is only one small example, albeit a significant one given that _____ is home only to about 26,000 citizen-residents.</p> <p>I implore the Census Bureau to discontinue prison-based gerrymandering and move towards a model that is more representative of communities that house prisoners and prisoners are counted where they are actually from.</p>
c00793	<p>The practice of prison gerrymandering is an unacceptable outgrowth of mass incarceration.</p> <p>The census misrepresents incarcerated people when it refuses to count prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c00794	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p>

	<p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c00795	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>This practice is clearly a violation of equal representation.</p> <p>Those who are jailed should not pay unjustly by losing their right to representation in their home state. Their crime should not penalize their neighbors.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c00796	<p>I have recently become aware of an issue regarding the census count of prison inmates. Prisoners are apparently counted in the district where they are incarcerated, rather than being counted as part of their home community. I believe this practice is harmful to our democracy, and I urge you to change this in the 2020 census.</p> <p>Our incarcerated population has skyrocketed in recent years, a fact which I consider shameful. Certain communities are unequally affected by mass incarceration. Undercounting the population in these areas (because so many citizens are in prison far from home) will lead to less funding for important programs to help these communities.</p> <p>Most prisoners are serving short sentences and will return to their home communities. They most certainly are NOT members of the towns and rural areas where they are incarcerated. We live an hour away from Susanville, CA, where there is a large prison. I have seen firsthand that the town is completely separate from the prisoners. Why should they be counted as part of the town? It makes no sense.</p> <p>Many important aspects of our democracy are related to the census. I urge you to count prisoners as part of their home communities and to stop this distortion of democracy.</p>
c00797	<p>American citizens are aware of the problems created by mass incarceration, including the practice of counting prisoners as residents in the state of their incarceration thereby further</p>

	<p>rewarding regions that host prisons. This is wrong.</p> <p>The census bureau must end the miscounting of incarcerated people by counting them at their permanent home address--where their families live and where they will return after their time is served .</p> <p>When prisoners are counted outside of their permanent address, the Census is unfairly allowing misrepresentation to influence political power. Stop this practice now and count incarcerated people at their permanent home address so that their interests as a constituent will be more fairly represented.</p>
c00798	<p>Please count prisoners at there home address. They get moved many times during their prison term making it even harder to get an accurate count/</p> <p>Count where they will be after they are free.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c00799	<p>I urge the Census Bureau to count incarcerated people at their home address, (in particular when the sentence will end before the next ten-year census) rather than at the facility where they are (temporarily) incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay even more temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p>

	Please count incarcerated people as residents of their home address.
c00800	<p>I urge the Census Bureau to use the permanent home address in counting incarcerated persons.</p> <p>State and local governments use Census data to draw legislative districts. But if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community, negatively impacts democracy.</p>
c00801	<p>Stop the gerrymandering of incarcerated persons. You do this in order to help politicians who are in the pockets of the privatized prisons who are only looking to make a buck, and don't care about the people they oversee.</p> <p>Persons who are incarcerated don't "live" in prison. When they serve their time, they go to their real home, which is where they need to be counted.</p>
c00802	<p>Please end the inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they are expected to return to after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c00803	I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address, not the address of jails or prisons to which they have been temporarily, involuntarily transferred.

	<p>State and local governments use Census data to draw legislative districts. But if the Census counts prisoners in the wrong location, then the data is incorrect and distorts representation.</p> <p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of a prison location, even though they can’t vote, are not a part of the surrounding community, and are likely to have been transferred away from their chosen home communities against their will violates the essential democratic principle of one person, one vote.</p> <p>Counting incarcerated persons where they are imprisoned invites locales and political parties to overweight their influence in government by building prisons inside their boundaries and/or redrawing district boundaries to include prisons. It may also influence or have influenced elected representatives to pass harsh and arbitrary laws likely to increase conviction rates and therefore prison populations in order to help them personally increase their own job security - in conflict with their fiduciary responsibilities to their constituents and their Constitutional responsibilities to basic principles of equal justice under the law.</p>
c00804	<p>I'm writing to express my deep concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address. This is not acceptable.</p> <p>When you miscount people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation. We're counting on you to do the right thing! This kind of misrepresentation needs to end!</p>
c00805	<p>We imprison a lot of people in this country. Disproportionately--due in part to racism and in part to poverty--these people are people of color. Presently, the census counts them where they "live" now: in a prison or jail.</p> <p>But that practice belies the reality that they will return to their homes and vote there. Everyone should be counted at their own homes, not at those foisted upon them by the state. Please consider revising this practice.</p>
c00806	<p>I strongly oppose counting Vermont residents incarcerated in other states i.e. Michigan as</p>

	<p>permanent residents. They belong to Vermont and not counting them for Vermont skews our representation, in turn skews democracy which I believe is un-american as is double jeopardy...to punish people twice for the same crime. I will be contacting my Representatives on the matter. I hope you will do the right thing and change this bad practice. Thank you for your consideration on this matter.</p>
c00807	<p>This wouldn't be acceptable in any democracy. It's unconscionable, hard to believe that it's from our Census Bureau!</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c00808	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their prison facility rather than their permanent address. Prisons R typically located in rural areas. This means over 2 million people are misrepresented in districts they have no connection to. I believe this proposal to be outdated and inaccurate and encourage you to revise this practice for the 2020 Census. As you know accurate census numbers affect many important programs, funding, and legislation.</p> <p>The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>Please change the proposed plan continuing prison-based gerrymandering and provide a model that better serves communities.</p>
c00809	<p>I write in response to the Census Bureau's federal register notice about applying the Residence Rule to incarcerated persons.</p> <p>Counting incarcerated people in prison sites inflates the political power of people who live near prisons, many of whom are employed by those prisons. As flawed counts are used to draw electoral districts, this practice seriously distorts fair representation.</p> <p>The best data for redistricting means the Bureau should count incarcerated people at their last known home addresses.</p> <p>Democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home locations, if known.</p>
c00810	<p>I am writing today to express my concern over the proposed residence rules for the 2020</p>

	<p>Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are house there with no choice and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c00811	<p>The census practice of counting prisoners as residents of the prison's region gives more unfair power to certain areas. It's common sense that prisoners' home addresses should be used. The present rules mess up the numbers and voting district lines have to be redrawn.</p> <p>Please change this practice.</p>
c00812	<p>The Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address disenfranchises local communities. I encourage you to not continue this practice for the 2020 Census.</p> <p>The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau moves towards a model that better serves communities.</p>
c00813	<p>As a former _____ police officer and later a high school teacher for 27 years I do have something to say : prisoners don t see prison as their home.</p> <p>Justice demands that they should be respected as to where their domicile really is and counted as such. Their mostly urban homes need to be counted properly as America moves to November Voting.</p> <p>I strongly believe you should end prison-based gerrymandering nationally.</p>
c00814	<p>Please put an end to the practice of Prison Gerrymandering. It misrepresents the communities of people of color.</p>

	<p>It is time for all Americans to have an equal voice.</p>
c00815	<p>I am writing to ask that you end the inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color to rural white areas. This practice is to the detriment of all involved, and it is wrong. The Census Bureau should change its practice.</p> <p>Thank you for considering my appeal.</p>
c00816	<p>The choice to consider incarcerated individuals to be at their place of incarceration and not their normal residence for census purposes is deeply flawed, unfairly enriching those of us who are less likely to be incarcerated due to our race, ethnicity, or income level, by ensuring that our districts get increased political power. This is unfair, racist, and undemocratic, and the United States must change this policy.</p>
c00817	<p>This message is in regards to the Census Bureau's proposed plan to count inmates in the districts where they are imprisoned rather than their home or permanent address.. I think this is wrong and encourage you to not continue this practice for the 2020 Census.</p> <p>We have a huge issue in Florida as many of our prisons are in the northern part of the state and the inmates are disproportionately black and/or Hispanic. This causes certain house districts to be particularly challenging as so many of the "voters" are not registered in that district as they are in jail and not in their home districts.</p> <p>I hope the Census Bureau changes from this unfair prison-based gerrymandering to a plan that better serves communities</p>
c00818	<p>Please end the current inaccurate process of counting incarcerated people at prisons for the 2020 Census, instead of their home addresses.</p> <p>Incarcerated people should be counted at their permanent address. This is their actual address,</p>

	<p>where they will return after their period of temporary incarceration.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. c00819	<p>Why not count correctly ? Do you realize how this throws the entire political process in disarray ? It would seem if this is not immediately corrected you are disenfranchising ? c00820	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>State and local governments use Census data to draw legislative districts., and if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community, negatively impacts democracy.</p>
c00821	<p>I am writing to ask that you stop the practice of gerrymandering based upon prisoners. Every prisoner has a permanent address. That permanent address should be the one at the Census Bureau uses.</p>
c00822	<p>1982-1985, I employed the formerly incarcerated in my bakery, _____, _____, OR. They related to me that voting was problematic for them at that time. But denying their rights and gerrymandering for one political party's benefit, has compounded the injustice!</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated</p>

	<p>people at their permanent address.</p>
c00823	<p>Incarcerated people must always report a permanent address, the place to which the majority of them will return. Yet they are not counted as part of their home district for the purposes of the U.S. Census. This is a distortion of representative government which disproportionately affects communities of color.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model for the 2020 Census that better serves communities. Thank you.</p>
c00824	<p>Please end the woefully inaccurate process of counting people who are incarcerated at prisons for the 2020 Census.</p> <p>People who are incarcerated should be counted at their permanent address where they will most likely return after incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau must change this practice.</p>
c00825	<p>I understand that the comment window on population-based political gerrymandering with prison populations will end in just a few days (September 1st), so I am writing to express my concern over proposed residence rules for the upcoming 2020 Census.</p> <p>The people who are housed in prisons mostly return to their permanent homes when released, since this is where their families are. Also, people in incarceration are often moved between various prisons, which makes, them not permanent residents of the current prison but temporary residents. This needs to be taken into account.</p> <p>Their permanent residences, that is, where they will return to when they are freed, is where they should be counted. Counting prison inmates as residents in another legislative district deprives proper representation to their home districts. This inflates representation in the areas where their temporary prison residence is located.</p> <p>Incarcerated persons should be counted in the place where their home area- their permanent</p>

	<p>residence, is. Please help this political gerrymandering to be alleviated by having an honest representation of the census count of all people in the United States, including all incarcerated persons.</p>
c00826	<p>I am requesting that you end the process of counting incarcerated people as residents of the prison location where they are temporarily serving time.</p> <p>This practice unfairly gives the area where the prison is located a larger population than the actual number of people who live permanently in that area. Likewise it unfairly decreases the reported number of actual residents in the area where they normally live.</p> <p>This practice has very unfair and negative effects on the home town areas of incarcerated persons not only politically, but greatly influences the social services and benefits that would otherwise be available to that area.</p>
c00827	<p>The counting of non-voting , incarcerated citizens as part of the population of the area in which the prison is located is too similar to the counting of non-voting male slaves, albeit as 3/5 of a white male, for comfort. Not only does this artificially inflate the power of the rural areas where prisons are typically located but they also artificially deflate the power of urban areas where too many prisoners call home.</p>
c00828	<p>I'm writing to express my concern over the proposal to continue counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By counting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this practice so that communities have accurate representation.</p>
c00829	<p>I am writing in regard to the Residence Rule as applied to incarcerated persons.</p> <p>Using the prison where people are incarcerated to determine population counts is undemocratic - it inflates the power of those who live near the prison and diminishes the representation of the communities from which the prisoners come. It is far more sensible, and just, to use their home addresses for population data and by extension, electoral maps.</p> <p>A true democracy depends on a population count that accurately represents ALL communities. Please use the prisoners' permanent home locations for Census data.</p>

c00830	<p>I strongly urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are citizens of the United States, irregardless of why they are in prison and are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers - who are ALL citizens of the United States. It seems to be a distinction without a difference. Please, now correct that miscalculation, without hesitation.</p> <p>Please count incarcerated people as residents of their home address.</p>
c00831	<p>The use of a prison address in census counts is a form of official gerrymandering, especialyy as it adds to the population of a locale where the prison is sited, but gives no rights of voting to that segment of the population.</p> <p>Please change the Census Bureau continuation of prison-based gerrymandering or at least set the census to count only life-term prisoners, and not those serving shorter sentences.</p>
c00832	<p>The current practice MIGHT make sense, IF prisoners were voting residents, but NOT if they are barred from voting. Why should prison area benefit from their imprisonment, at the expense of the home districts to which they will eventually return???</p>
c00833	<p>Mass incarceration has many harmful effects in the U.S., including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated</p>

	<p>people at their permanent address.</p>
c00834	<p>This decision should not be complicated. Inmates remain American citizens, and should be counted at their residence in their home district.</p> <p>To do otherwise dilutes the democratic process.</p>
c00835	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Counting incarcerated people at their temporary location distorts the political power of people who live near prisons. As those counts are used to draw electoral districts, this practice has a negative impact on our representational democracy.</p> <p>The best data for redistricting requires the Bureau to count incarcerated people at their home addresses. Surely we now have the technology to do this in a cost-effective way.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00836	<p>There are far better, more democratic, ways to compensate communities who are home to penal institutions, than robbing their actual non-incarceration , home communities reasonable domiciliary representation.</p> <p>Please count inmates according to their domicile prior to incarceration.</p>
c00837	<p>I am writing in response to the Census Bureau's federal register notice regarding the Residence Rule as applied to incarcerated persons.</p> <p>Counting incarcerated people at their temporary location inflates the number of people who live near prisons. As those counts are used to draw electoral districts, this practice has a serious impact on representational democracy.</p> <p>The best data for redistricting requires the Bureau to count temporarily incarcerated people at their home addresses, thus accurately representing political districts by the people who actually (will) live there.</p> <p>A strong democracy depends on a population count that accurately represents all communities. Please count prisoners at their permanent home location.</p>
c00838	<p>I write to ask you to count prisoners home communities as their place of residence. Accurate</p>

	demographics mean city and regional service planning can be set up effectively.
c00839	Please count incarcerated persons at their home residences, not at the places of their incarceration.
c00840	This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. STOP DISTORTING OUR ELECTORAL PROCESS!!!
c00841	It's time to change the way the Census counts incarcerated people-***they should be counted at their permanent address, not the prison they are temporarily located in. *** All people should be counted from the location they lived in prior to incarceration. Most will return to this location to live when they are discharged or paroled. The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration. The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation. Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.
c00842	Re: the Census Bureau's plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you not to continue this practice for the 2020 Census. Over two million people are in prisons across the country. While they have past ties to their permanent address (because they lived there), current ties (because their families and friends are there) and future ties (because they hope to return once they are rehabilitated), they have no ties and know nothing about their incarceration facility and its area/politics. They should be allowed to be counted at their permanent address.
c00843	I am writing to urge the Census Bureau to count incarcerated people at their permanent home addresses, rather than at the facility where they are incarcerated on Census day. People who are hospitalized or who are in treatment centers, military people on deployment, people on vacation or visiting relatives, employees who are sent to job sites for long periods of time, politicians who are sent to state capitals or to Washington D.C.; none of these people are counted as living somewhere other than their permanent home addresses.

	<p>The only reason that incarcerated people would be counted differently is political, and this practice should be stopped immediately. Either treat incarcerated people the same as other transient populations are treated, or count those other transients the same way that incarcerated people are treated.</p>
c00844	<p>Please end the practice of counting prisoners as living in their prisons. Like other displaced people, they should be counted at their home addresses, not where they are temporarily.</p> <p>This form of counting underrepresents areas where the prisoners really are from, and to which they will return, and overrepresents districts which simply house them. They are not part of that community, play no part in its culture and life, and should not be counted there.</p> <p>This practice needs to stop right now.</p>
c00845	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>People of color are incarcerated in greater percentages than whites. But the prisons are often in mostly white areas. Because African-Americans and Latinos are not counted at their home addresses, there is an improper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>The impact of the Census is critical. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00846	<p>It's time for better proportioned voting districts!</p>
c00847	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address.</p> <p>We have, at least, an ideological obligation to an American Democracy. We should not take away or alter voting rights because of incarceration.</p>
c00848	<p>I am writing today to voice my opposition to continuing to count inmates as residents of prisons.</p> <p>Treating incarcerated people as "residents" of correctional facilities is inaccurate and unfair. When government officials use census data with flawed data, they're shifting representation and political influence away from home communities towards prison communities. This primarily harms African-American and Latino communities and benefits white communities.</p>

	<p>Continuing to count incarcerated people in the wrong place is misguided.</p> <p>Please bring an end to this practice of prison-based gerrymandering.</p>
c00849	<p>I understand that the Census Bureau uses an inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of using their permanent home address. I'm writing to ask the Census Bureau to stop this practice. Because the prison population is disproportionately made up of people of color, this method is fundamentally racist.</p> <p>Counting inmates where they are from would increase the accuracy of Census data about communities of color and end the skewed data in predominantly white, rural communities. As long as African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of their communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>Because of the huge impact of the Census, I am asking you to please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00850	<p>I am writing today to voice my opposition to continuing to count inmates as residents of prisons.</p> <p>Treating incarcerated people as "residents" of correctional facilities is inaccurate and unfair. When government officials use census data with flawed data, they're shifting representation and political influence away from home communities towards prison communities. This primarily harms African-American and Latino communities and benefits white communities.</p> <p>Continuing to count incarcerated people in the wrong place is misguided.</p> <p>Please bring an end to this practice of prison-based gerrymandering.</p>
c00851	<p>I am voicing my opposition to continuing to count inmates as residents of prisons.</p> <p>Treating incarcerated people as "residents" of correctional facilities is inaccurate and unfair. When government officials use census data with flawed data, they're shifting representation and political influence away from home communities towards prison communities. This primarily harms African-American and Latino communities and benefits white communities.</p> <p>Continuing to count incarcerated people in the wrong place is misguided.</p>

	Please bring an end to this practice of prison-based gerrymandering.
c00852	<p>I am writing in regards to the proposed "2020 Census Residence Rule and Residence Situations."</p> <p>It is part of our democracy to count people where they declare their permanent residence usually with their families, friends and they fill out census forms or talk to a census worker where they live. However, as a professional licensed social worker I am aware of people who find themselves in detention, hospitals or other prison like settings, including persons with mental illness who are committed to locked -in situations for weeks, and months. Since persons almost always return to the community they know, that is where they vote and know their local representatives. It is extremely important to have persons counted in the census in their last address so that the nation is properly represented in Congress and in allocation for resources. Just because a person is mentally ill or incarcerated they should not be denied this basic right of equal influence over the legislative process.</p> <p>I urge you to count mentally ill or incarcerated persons at their permanent address rather than their place of confinement at the time of the Census.</p>
c00853	<p>For the 2020 Census, please discontinue the illogical practice of counting inmates of prisons as residents in the district where the facility is located.</p> <p>Prisoners whom have registered to vote would do so at the place of their permanent residence, as well as owing taxes and all other civic duties connected to residency there. Their address while incarcerated is temporary and puts a "pause" on their civic participation, including voting. Because prisoners are not allowed to vote while incarcerated, but their families still benefit from accurate representation of the permanent population of their community, it makes no logical sense to count prisoners as residents of the district where the prison is physically located. Only once they are released will they (perhaps) actually participate in and benefit from local programs and assistance, so if they are to be counted, it should be in the district whose local decisions will actually affect them when they resume living in the community.</p> <p>Either that, or prisoners should be listed in a separate category if they did/will not spend the majority of the Census period outside of the prison facility, and not counted towards the population of either location (the prison or their permanent home) for the purposes of programs which depend upon Census data. It invites gerrymandering, particularly for suburban or rural areas with large prison populations whose racial makeup does not match the surrounding area and should not be counted as diversity of potential voters, etc</p>
c00854	I support changing the i practice of counting incarcerated people as residents of the place they

	<p>happen to be on Census Day.</p> <p>This leads to undermining the one man/one vote concept</p>
c00855	<p>The current practice of counting prison inmates as residents of the place that they happen to be on Census Day produces inaccurate data, as well as distorting the capacity of those inmates to assert real political influence.</p> <p>This practice amounts to gerrymandering and, as such, is demonstrably unfair, especially to urban Black and Hispanic communities</p> <p>Ensure an accurate 2020 Census by counting incarcerated people at their real home, as opposed to using their prison addresses.</p>
c00856	<p>Count incarcerated people at their permanent address to ensure a more just democracy and representation for communities.</p>
c00857	<p>The majority of prisoners are African American or Hispanic, and in some states felons are not allowed to vote anyhow.</p> <p>Please ensure an accurate census by counting incarcerated people at their permanent address. This will ensure a more just democracy and representation for communities.</p>
c00858	<p>Prisoners need to be counted and registered at their home address. Prison is not a permanent place for most. They are there for a time-limited period, and in no way does this constitute a fair way of registering Black and Latino populations who are incarcerated at the highest rate. This unfair practice siphons money away from urban populations suffering from poverty and lack of services.</p>
c00859	<p>I am writing in regards to the proposed "2020 Census Residence Rule and Residence Situations."</p> <p>I don't understand why prison/jail inmates are included in the local population of where the prison is located. They should be counted as residents of the community to which they will return upon release, that is, their permanent address.</p> <p>Otherwise, I believe that the current process increases "gerrymandering" , and creates disproportionate population numbers. As you know, this has a negative effect on the communities to which they would return. Plus, since most inmates are persons of color, then the communities to which the inmates would return will suffer from under representation in the political process. In short, this is anti-democratic.</p>

	Therefore, I ask that you count all inmates at their permanent address rather than their place of confinement at the time of the Census.
c00860	<p>Counting incarcerated people as residents of the place they happen to be on Census Day - a prison usually nowhere near their permanent residence - is inaccurate, unfair, and just plain wrong.</p> <p>The practice produces tainted data, distorts political influence, and punishes Black and Latino communities, those most in need of a voice in political decisions.</p> <p>The only way to ensure an accurate and just 2020 Census is to count incarcerated people at their homes, not prison addresses. I implore you to do the right thing.</p>
c00861	<p>Time to enter the 21st century and stop counting incarcerated people as resident at prisons, instead of at their home addresses.</p> <p>This practice is outdated, unfair and discriminatory. Other groups of people in similar situations-- temporary housing-- are allowed to use their permanent address.</p> <p>Further, this practice distorts democracy by shifting population counts from home communities to prison places, typically urban (the former) to rural (the latter).</p> <p>Gotta change this practice before the next Census. Stop using mostly non-white bodies wrenched from cities to shore up the power of mostly white bodies mired in rural-small town America. Please. Thank you.</p>
c00862	It is wrong to list a prison facility as the usual place of residence of inmates who are routinely transferred from place to place not of their own will. You should use their last place of residence before incarceration. They mostly have nothing in common with local residents of the area in which the facility resides, yet their numbers are used to inflate the political representation of these residents, at their representation expense.
c00863	<p>Please do not count people who are incarcerated at prisons here in Texas as living there, instead of at their home addresses. My son was incarcerated for 2 years: 6 months in _____, 1 year in _____, and 6 months here in _____. When he was released, he moved again.</p> <p>People who are in prison should be allowed to use their permanent address when it comes to census counts. After all, when they leave prison, the cost of monitoring them and providing services for them will come from their home community.</p>

	Please change your practice before the next Census.
c00864	<p>Please stop counting the prison population as residents of the place they happen to be on census day.</p> <p>I believe this practice is unfair and and inaccurate and negatively affects poor and minorities communities.</p> <p>Tharms urban Black and Latino communities.</p> <p>Ensure an accurate 2020 Census by counting incarcerated people at their home, not prison addresses.</p>
c00865	Same content as comment c00005
c00866	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c00867	<p>A persons home remains their home whether they are at the time incarcerated, or in the hospital, or in college, or in vacation. Their home doesn't change because they walk out the door. Their families don't disappear because one is in prison. Not to mention the huge number of minority men imprisoned for minor offenses. I'm appalled that we even have to have this conversation.</p> <p>Please stop this unjust practice now- while the US still has a modicum of pride left.</p>
c00868	Stop trying to rig the process.
c00869	<p>Please end prison gerrymandering, which is unconstitutional.</p> <p>Count people at their permanent residences.</p>
c00870	This is clearly an undemocratic and racist way to treat human beings. We supposedly live in a democracy. CHANGE this undemocratic practice
c00871	<p>I am writing in regards to the Census Bureau on the 2020 residency rules:</p> <p>Incarcerated Prisoners are not residents of the districts in which they are incarcerated. This is especially true in a state such as Arizona which has privatized prisons filled to capacity with outof-state individuals. Counting incarcerated people in facilities takes representation away from home communities--mainly rural communities or communities with low income or racial</p>

	<p>minorities.</p> <p>The practice of counting incarcerated individuals in the census skews democratic representation of the people for political rather than funding reasons and should not be allowed. Please ensure an accurate census by counting incarcerated people at their permanent address. This will ensure a more just democracy and representation for all communities in the USA.</p>
c00872	<p>The Census was designed as a tool for identifying community needs, and aiding in resource allocation, community development and political representation.</p> <p>The current practice of counting prison populations as residents is both unfair and duplicitous. For one thing, it unfairly 'pads' population numbers, which brings more resources to an area that often doesn't require them.</p> <p>Along those lines, current statistics show gross inequity in the racial and economic makeup of prison populations - which, taken with my first point, unfairly and increasingly denies both services and representation to low-income communities and people of color.</p> <p>For the Census to truly reflect the makeup of this nation, her people and communities, PRISON GERRYMANDERING and all it's deleterious effects must be changed, must be ENDED. Only then will we begin to create and establish equality for all of us.</p> <p>It's not too late, but we must start NOW!</p>
c00873	<p>Please change your unjust and unfair practice of counting incarcerated people as residents of the place they happen to be on Census Day. Use their permanent address, not their temporary one, to insure a fair voting system and an accurate 2020 census.</p>
c00874	<p>Representation by the people...who live in the communities freely.</p>
c00875	<p>Please stop the inaccurate and unfair practice of counting incarcerated people as residents of the place their place of imprisonment on Census Day.</p> <p>The practice distorts political influence and harms urban Black and Latino communities. This practice dilutes accurate census counting and creates prison gerrymandering.</p> <p>Ensure an accurate 2020 Census by counting incarcerated people at their home address, not their prison addresses.</p>
c00876	<p>This is of particular concern to me so I am writing this in regards to the proposed "2020 Census</p>

	<p>Residence Rule and Residence Situations."</p> <p>Our democracy only works if the people are genuinely and accurately represented. Since the vast majority of people who are jailed don't have life sentences, any project that counts prisoners as part of a "locality" artificially raises that areas numbers, hence also to at least some degree it's political clout. This effectively moves some political clout from minority neighborhoods to white neighborhoods.</p> <p>I find this to be patently un-democratic and would ask that you put an end to this practice. Please count the jailed at their residence of record not the place that they're being warehoused</p> <p>Thank you for your time...</p>
c00877	<p>People who are in prison are rarely incarcerated where they "live" or where they consider home. Additionally, they usually cannot vote while in prison. Thus, they are being incorrectly classified in at least two ways.</p> <p>Please ensure an accurate census by counting incarcerated people at their permanent address. Doing so will ensure a more just democracy and representation for communities with prisons. We should follow the principle of one person one vote as closely as administratively feasible.</p>
c00878	<p>I am writing concerning your proposed residence rule for people who are incarcerated.</p> <p>Given that students living away from home, or people who travel or live in vacation homes for months at a time are allowed to be counted at their permanent addresses, it is inherently unfair to determine that people in prison are permanent residents of the facility in which they are incarcerated. Members of Congress can select their home addresses even though they may be spending the bulk of their time in DC when the census is counted. Why does this exception apply to people who are incarcerated?</p> <p>My concern is using flawed census data to draw electoral lines. And since convicts can't vote anyway, this practice unfairly skews voting districts.</p> <p>Please end what is basically an inaccurate, even unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c00879	<p>Please ensure a realistic and reliable census by counting incarcerated people at their permanent address to ensure a more just democracy and representation for communities.</p>
c00880	<p>This letter is in regards to the Census Bureau's proposed residence rule for incarcerated people. I must remind you about something you undoubtedly know: It does not matter one bit what your</p>

	<p>intentions or excuses for contributing to oppressive and racist results are--- It the RESULT of your behavior that matters. Period.</p> <p>I expect your behavior to be congruent with being opposed to racism and dehumanizing results. You do not need a lecture from me about details or results of the behavior of silence. Make yourself proud and strap on some courage to do the right thing---- This issue demands a few courageous heroes to stand and be counted and others will follow.... Time to go to work please. Your kids and grand kids, friends, family and conscience are watching!</p>
c00881	<p>“Usual residence” is defined by the Census Bureau as the location where a person “eats and sleeps most of the time. Boarding school students, residents in old age homes, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities. They should be counted as belonging to their place of normal residence.</p>
c00882	<p>We the people, need a census count that accurately reflects our populations. By counting people in jails as being 'residents' of those communities, those results are skewed. Most people are in jail for short periods of time; therefore a 10-year census count that shows them 'living' there unfairly impacts their real communities.</p> <p>Young people attending college are counted in their home communities - prisoners should be as well.</p>
c00883	<p>The inaccurate and unfair practice of counting incarcerated people as residents of the place they happen to be on Census Day must be changed.</p> <p>This practice weakens the political influence of urban Black and Latino communities, and as such is discriminatory.</p> <p>Please ensure an accurate and representative 2020 Census by counting incarcerated people at their home addresses, not their prison addresses.</p>
c00884	<p>Counting incarcerated people as residents of the place they happen to be on Census Day produces bad data and distorts political influence.</p> <p>Ensure an accurate 2020 Census by counting incarcerated people at their home addresses, not prison addresses.</p>

c00885	<p>Home addresses is the only valid address to use for census and voting.</p> <p>Please ensure an accurate census by counting incarcerated people at their permanent address. This will ensure a more just democracy and representation for communities.</p>
c00886	<p>Change your out-dated, unfair, and now fraudulent practice of counting incarcerated people as living at prisons, instead of their home addresses.</p> <p>Change your practice before the next Census, as the media can now report this quickly to millions of voters and people wanting a fair and honest democracy. Change with the times or prepare for your unemployment soon.</p>
c00887	<p>The US prison system is badly corrupted, especially because of the lobby power of those who profit by running private prisons and of the gerrymandering that goes on to assure that corrupt prisons can continue to operate. The whole system needs to be reformed.</p>
c00888	<p>The place where they are incarcerated is not where they are from, period</p> <p>The practice is just another method of gerrymandering and does not serve the community that supports the incarcerated people.</p> <p>Please ensure an accurate 2020 Census by counting prisoners at their home, not prison addresses.</p>
c00889	<p>Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c00890	<p>I am writing in regards to the proposed "2020 Census Residence Rule and Residence Situations"</p> <p>Everyone else is counted at their permanent residence. Why are prisoners any different.</p> <p>Please stop this gerrymandering</p>
c00891	<p>Prison gerrymandering does not provide an accurate count of our population, thus it distorts the purpose of collecting the data. Altering the count of incarcerated people where they are on Census Day is inconsistent with the practice of demography. Prisoners should be counted at their home address, not the prison address to ensure reliable data and accurate representation.</p>

c00892	<p>To Whom It May Concern I am writing in regards to the proposed "2020 Census Residence Rule and Residence Situations."</p> <p>I am not favor of counting inmates at their prison location. I feel you use their permanent address.</p>
c00893	<p>I certainly understand the convenience of counting incarcerated persons as "residents" of their places of incarceration come census day; conversely, I imagine tracking down the true home address of every inmate adds to the magnitude of the census count effort.</p> <p>However, since representation is based on residency, this decision is not something to take lightly. It behooves our democracy to do our best to apportion representatives accurately and fairly by counting incarcerated people in the place they typically call home.</p> <p>Please ensure an accurate census by counting incarcerated people at their permanent address. This moves us toward a more just democracy and fairer representation for communities.</p>
c00894	<p>The Republican Party is using the prison population in their gerry-mandering. It is unfair and could cause a highly incorrect vote count.</p> <p>I want to urge you to change this practice before the next census. It is outdated and unfair to the Democratic Party.</p>
c00895	<p>It's time to stop counting inmates at prisons, instead of at their home addresses. Why do you do that? You know that's not where they "live." Would you want to be used to skew census counts in a place where you were staying temporarily? Prison is not a "place of residence."</p> <p>You are disenfranchising people just because they are in prison. Their voting power should be applicable where they live, where they have family and community and political and economic interests to vote on.</p>
c00896	<p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c00897	<p>I wish to comment on the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The current definition of "usual residence" that the Census Bureau uses to count residents should not apply to prisoners. These numbers artificially inflate the population of districts with people who do not use the services and are there literally against their will. This logic is particularly twisted in the case of African-americans. African-americans, due to many factors including poverty and sentencing bias, make up much more than their share of the prison</p>

	<p>population by % citizenry. Since prisoners are often housed in prisons in majority white rural districts, the mere fact of them being in prison is used to support the political clout of a place they would not choose to live in.</p> <p>For this and many other reasons, I believe it is far past time to stop counting prisoners as part of the "usual residence" of a local. Thus, I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p> <p>Thank you for your time and consideration of my concerns.</p>
c00898	<p>Change the existing procedure of not counting incarcerated individuals in the census. Make sure it happens in 2020</p>
c00899	<p>I ask you to stop using prison addresses for incarcerated people at prisons, and count them at their legal home addresses.</p> <p>People who not at their permanent address for various legitimate reasons are allowed to use their permanent address. Prisoners should have the same right.</p> <p>This practice shift counts from home communities to communities built on prisons. Keep our democracy based goverment truly democratic. Change this practice before the next Census.</p>
c00900	<p>The practice of counting incarcerated people at prison addresses rather than their home addresses is unfair and inaccurate!</p> <p>Shifting counts from home communities to communities built on prisons does not accurately reflect the electorate and grossly subverts democracy</p> <p>Please change your practice before the next Census.</p>
c00901	<p>Gerrymandering is inevitably a result of the party or group currently in-power making certain they will stay in power. It stinks, regardless of who perpetrates this anti-representative scheme. We (the People) must protest each time gerrymandering is reverted to and do everything in our power to undo it's in democratic outcomes.</p> <p>YOU, the , U.S. Census Bureau, could & should be a powerful force in the efforts to identify and dismantle results of this odious practice. Please do whatever you can to assure every American citizen is able to vote on the basis of fair & logical districting . . . EVEN PRISONERS!</p>

	Thank you in advance.
c00902	<p>In this era of highly partisan politics, assessing the "temperature" of the entire nation fairly is more important than ever. As you know, the census is the lynch pin in determining legislative representation. Yet, incarcerated people who vote in districts not located in their home states skews the count, potentially misrepresenting the views and aspirations of the constituency wherein their facility is located. Further, it does nothing to help the communities where those incarcerated call home. To me, this is an absentee balloting issue -- easily solved in the same manner as non-incarcerated folks who are eligible to vote. If prisoners are legally registered, it should be in their home communities and they should then be treated as absentee voters whose ballots must be from and counted in their home districts. That way, democracy is served by having more fairly chosen legislators.</p> <p>Thank you for the opportunity to comment.</p>
c00903	<p>I am writing with regard to the proposed "2020 Census Residence Rule and Residence Situations."</p> <p>For census purposes imprisoned persons should be counted at their permanent address rather than at their place of confinement.</p>
c00904	<p>The Census Bureau's proposal to count incarcerated people in an inappropriate place will have the result of distorting fair democratic elections. They must be counted according to their permanent address. That is the only way for their count to be fair.</p> <p>People of color are already at a disadvantage in several ways when it comes to their being able to vote. Incorrect counting of incarcerated people will only exacerbate this problem.</p>
c00905	<p>The census count is vital for representation. counting incarcerated people in facilities takes representation away from home communities--mainly low income and/or communities of color.</p> <p>Please count incarcerated people at their permanent address. This will ensure a more just democracy and fairer representation for communities.</p>
c00906	<p>The census count is critical.</p> <p>I'm against the privatizing of our culture in general. It shouldn't mean that because an institution like a school or a prison if privatized that the humans inside should lose their Constitutional Rights. Every human counts.</p>
c00907	<p>I implore you to amend your outdated practice of counting incarcerated people at prisons, instead of their home addresses.</p> <p>This practice is both archaic and inequitable, given the fact that many other people in similar</p>

	<p>situations--temporary housing-- are allowed to use their permanent address.</p> <p>This miscount distorts our democracy by shifting counts from home communities to communities built on prisons.</p> <p>Please rectify this practice before the next Census.</p>
c00908	<p>Counting those in prison as residents of the prisons they happen to be detained on Census Day grossly misrepresents the facts, runs the risk of generating bad political data, and harms the communities from which they came, undermining their political power and influence.</p> <p>This must not continue, and it's absolutely urgent that the system by which the imprisoned are counted must be corrected before the 2020 Census.</p>
c00909	<p>Census data is vital for a number of reasons in this country. It was never meant to be used to give any political party an edge over another, or be used to bypass our Constitutional right to "one person, one vote" set forth in the 14th Amendment.</p> <p>Unfortunately however, this is how it is being used by redistricting Congressional lines based on prison populations. This not only violates the people's right to a fair distribution of resources, it violates the basic American right of "freedom and justice for all."</p> <p>By using incarcerated human beings - who at the time of their incarceration have no control over where they "live" - to inflate a population of a district or its racial make up makes a mockery of the Constitution and our expectation of democracy as a whole.</p> <p>Please ensure an accurate census by counting incarcerated people at their permanent address. This will ensure a more just democracy and representation for communities.</p>
c00910	<p>The census count is critical for honest, fair congressional representation. Counting incarcerated people in facilities takes representation away from prisoners' home communities--mainly low income or communities of color.</p> <p>Please ensure an accurate census by counting incarcerated people at their permanent address. This will ensure a more just democracy and representation for all communities.</p>
c00911	<p>I am aware of many efforts that the politicians of one of our major parties are making to suppress the vote, to manipulate it, and to render the votes of large groups of citizens much less effectual than the votes of others, primarily voters of color. Counting prison population members as residents of the location of their arbitrary incarceration appears to be another of such schemes.</p> <p>Please reconsider this practice. Each time voters, especially younger voters, hear of this kind of</p>

	<p>unfairness it makes them more cynical and discouraged. We already have a disgracefully low percentage of voters who show up at the polls. Your message to American voters should be that you are striving to make everyone's vote of equal value, rather than telling them implicitly that you are just another part of the cheap gamesmanship that is doing everything it can to render their voting effort meaningless.</p> <p>Thank you and I certainly hope that you will do the right thing,</p>
c00912	<p>There is a skewing of representation that results from the current census rules; because incarcerated individuals are mainly from communities of color or of low income, the result is that those communities are under-represented in legislatures.</p> <p>Counting the prison address as the person's address is illogical for two reasons. First, it is a temporary location, and even under tax and citizenship rules, the place of intended, permanent abode is the place that counts. Second, even if the first point were not overwhelming, it is extremely illogical to choose, instead of one's home, the place where one happens to be incarcerated on a given day. Prisoners are transferred from facility to facility, held temporarily, and moved for convenience; no location is as significant as the designated, actual, permanent address of the incarcerated person; as often as not, that's where the person's family, friends, and place of possible employment are. There is no logic at all to registering the facility as the place of permanent residence or habitual residence. It is a method, unintentional though it may be, of suppressing the representation of the home communities. Please end the practice.</p>
c00913	<p>I am writing in regards to the Census Bureau's proposed rule for which residence will be used for incarcerated people.</p> <p>Given that state and local governments use Census data to redistrict for voting purposes, the current method of counting prisons as "usual residence" seems to contribute to potential violations of the "one person, one vote" standard. Proposed residence rules would not only create inaccurate census but also further contribute to systematic racial inequity.</p> <p>The Census Bureau seems to apply an unexplained exception for which district incarcerated people are applied compared with students or people who reside away from their permanent resident for part of the year.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c00914	<p>Be responsible and stop counting prisons as the normal residence of any citizen, unless you</p>

	<p>want to count only those doing life-time sentences. Unless you want to count only lifers as being in their "normal" residence, the present practice gerrymandering practice is an outright lie.</p> <p>Am I to understand that you have partisan biases in the exercise of your office, or that you are simply ignorant of the effect of the practices that you condone?</p> <p>Please change your practice before the next Census.</p>
c00915	<p>How stupid is the inclusion of prisons in state or federal prisons in a data base to count the number of people for a state or federal congressional district. They cannot vote, they will not be able to vote even when released and home, until their rights are restored. If you include only the populace of an area, not just the voting members of that district, at least those folks could get their citizenship and vote in the future. To have prisons counted in a population is insane. As a man who has voted in almost all elections since Nixon in 1971, I find this abhorrent! Stop the Two Political from manipulating their outcomes with people who are ENSURED NOT TO VOTE!</p>
c00916	<p>I believe that for the sake of accuracy, it is time to change the way incarcerated people are counted in the census. The data collected is skewed, and sound decisions cannot be made on these findings.</p> <p>I support changing the census to count people based upon their home address. The census should reflect where prisoners will return to, and their home communities should be represented accordingly.</p> <p>Thank you for your time and consideration,</p>
c00917	<p>This practice is outdated and unfair, as many other people in similar situations--temporary housing-- are allowed to use their permanent address.</p> <p>This miscount distorts democracom home communities to communities built on prisons.</p> <p>Please change your practice before the next Census.</p>
c00918	<p>I am concerned about the inaccurate and unfair practice of counting incarcerated people as residents of their prison address.</p> <p>The practice produces faulty data, and worse, it distorts political influence.</p> <p>I request that you count incarcerated people at their home address, not their prison address. Make the count accurate and fair.</p>

c00919	<p>I know two men who are currently incarcerated. One lives in another state from his prison, the other lives across state. Neither considers their prison "home," and neither considers himself intentionally "residing" in the prison. To be counted among the prison's neighboring populace for purposes of voting is very artificial, and arouses suspicions of political maneuvering. Please revise the rules to be more realistic and honest. Count prisoners at their permanent address.</p>
c00920	<p>The private prison systems that scourge the nation do not need your help, nor do the politicians who get "considerations" from lobbyists . PLEASE COUNT PEOPLE'S RESIDENCE< CURRENT OR MOST RECENT,since prison is no residence to anyone except perhaps a few employees who may live on premises..</p> <p>Please change your practice before the next Census.</p>
c00921	<p>I believe that our nation should not be counting incarcerated people as residents of the place they happen to be on Census Day.</p> <p>This practice harms rural communities, such as mine in southwest Missouri.</p> <p>Let's have a more accurate 2020 Census by counting incarcerated people at their home address, not their prison address.</p>
c00922	<p>I am profoundly disappointed by the Census Bureau proposal to again count nearly 2 million people in the wrong place on Census day. Continuing this outdated practice will ensure an inaccurate 2020 Census and another decade of prison gerrymandering. Counting incarcerated people as if they were "residents" of the correctional facility makes the Census less accurate for everyone</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c00923	<p>We who know any history find that the 3/5 of a person counting of black slaves was a travesty; an evil thing . Not quite as evil, but still 100% wrong, is the counting as residents of a prison those who are incarcerated outside of their true home precinct .</p>
c00924	<p>The Census Bureau defines "usual residence" as the place where a person "eats and sleeps most of the time, YET this should NOT include jail or prisons!!!</p> <p>Please end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c00925	<p>I request that you change the practice of counting incarcerated citizens as residents of the area</p>

	<p>in which their prison is situated if they happen to be there on Census Day.</p> <p>If Senators and Congresspeople get to count their hometown as their place of residence even though they are regularly there, the privilege should also be extended to those in prison. Since a large proportion are people of color, this would correct the skewing of statistics that make it look like there are fewer of them in their own community and would increase accuracy when district lines are drawn.</p> <p>Please keep the 2020 Census more accurate by counting them as part of the communities to which they will return.</p>
c00926	<p>It is wrong and inaccurate and unfair to count incarcerated people as residents of the place they happen to be in prison.</p> <p>This way of counting people produces inaccurate data - it is their home community that needs the public resources allocated by census counts - and disproportionately harms urban communities of color due to mass incarceration of people of color.</p> <p>An accurate 2020 Census would count incarcerated people at their home address, not prison addresses.</p>
c00927	<p>To Whom it May Concern, The 2020 Census Residence Rule & Situations as proposed are in-Democratic. Prison populations as individuals must be counted based on home location. Gerrymandering in general is a concept from a previous era when we were less knowing. This must no longer be permitted, for the public good.</p>
c00928	<p>I urge you to change your practice of counting incarcerated people at prisons, instead of their home.</p> <p>It make no sense to count someone in prison adding them to a community that they are not a legal resident of . We know that if you're not given a life sentence then there is a good chance you'll be released to your legal resident.</p> <p>Please change your practice before the next Census.</p>
c00929	<p>This gerrymandering of prisoner numbers is quite simply CORRUPTION . So we understand now that the US of A practices deliberate distortion of data.</p> <p>As the US of A has such influence across the world then surely this lack of Democracy should be made known to the world. Every way in which the US of A fails to be democratic should be known to the world.</p>

	<p>This distortion of political influence, and harming of urban Black and Latino communities by the inaccurate and unfair practice of counting incarcerated people as residents of the place they happen to be on Census Day must stop.</p> <p>The US of A needs to operate its own society in a valid way before it acts as a world peacekeeper.</p> <p>Correct the count of incarcerated people or be counted as corrupt in the world's eyes.</p>
c00930	<p>Counting incarcerated people as residents of the place they happen to be on Census Day, in prison, is a form of gerrymandering and consequently distorts vote counts for elections. Given that racial profiling and an unjust legal system results in disproportionate numbers of African Americans in our prisons, these citizens' votes should be counted in their home community. If their votes were included in the vote count for their home community, election results would accurately represent the vote of each community. The current policy is particularly unfair to Black and Latino communities.</p> <p>Please consider changing current policy and make it effective for the 2020 elections.</p>
c00931	<p>Please stop the practice of gerrymandering based on prison populations. It is cheating, and there is no place for this in our Democracy.</p>
c00932	<p>Regarding your proposal to count people in prisons as residents and thus include them in voting district of the prison.</p> <p>This skewed and anti democratic practice is a secondary effect of the practice of mass incarceration.</p> <p>It works so well in gerrymandering votes, one has to wonder if it is a planned consequence to benefit certain voting strategies.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c00933	<p>Gerrymandering based on prison populations is a violation of proper democratic representation.</p> <p>With this in mind, in the census, please attribute incarcerated people to their home address.</p>
c00934	<p>Go back to the 19th century and count the prisoners as 3/5th of a person why don't you? Most convicted felons are not allowed to vote, period. And, to my knowledge, during incarceration there is no voting in any election.</p>

	<p>Great work republinazis because without gerrymandering and/or voter fraud, refer to the 2000 & 2004 national elections, there would be NO republinazi Organized Criminal Syndicate.</p>
c00935	<p>In Oklahoma if you are a minority, Native American for example, you are very rarely counted as a person much less a person of significance. If you happen to be poor then you are not considered at all. Add to that your residence is as an inmate in a prison. Your rights have been striped and then the Census bureau does not count you as being a resident and does not count you since a prison is not considered a viable residence. Please count people in prisons from their former permanent residence.</p> <p>Thank you for your consideration.</p>
c00936	<p>As a combat hardened Marine Nam Vet, I am writing in regards to the proposed "2020 Census Residence Rule and Residence Situations."</p> <p>Eliminate the politics from your pseudo-science Census and help our Democracy THRIVE.</p>
c00937	<p>It is not right to count imprisoned people in the census as members of the community where they are incarcerated. This robs their home communities of the representation our democracy is supposed to guarantee.</p> <p>You need to count incarcerated people at their permanent address. This will ensure a more just democracy and representation for communities.</p>
c00938	<p>I urge you to change your practice of counting incarcerated people at prisons, instead of their home addresses.</p> <p>This practice should NEVER have been. Temporary housing is what it says TEMPORARY. This is the kind of VOTING FRAUD that has to be stopped. This prison gerrymandering is not democracy. It becomes a means to guarantee certain parties to win regardless of the changes in their constituencies.</p> <p>Please change your practice before the next Census.</p>
c00939	<p>Please change your practice for all future Census so that incarcerated persons are counted at home not at the prison site. It is long established precedent that temporary address changes are counted for Census purposes at the permanent or last known address rather than a temporary address.</p> <p>As a solar construction worker, I travel constantly for work. My address for Census and voting is</p>

	<p>still my home address. I want to make sure that applies to everyone, and everyone has the same right.</p> <p>The practice of counting prisoners at the prison site leverages the political power of the community in which the prison is located at the expense of the communities from which the inmates come. This practice is wrong and it must stop.</p> <p>The Census Bureau should only be required to gather correct data. If the politicians want to spin or change it, make them do it.</p>
c00940	<p>Please stop the unfair practice of counting incarcerated people in prison facilities as "residents" of the districts where the prison is located. Members of Congress can choose to be counted in the district they represent, even though they may sleep most days of the year in WASHINGTON, D.C.</p> <p>The counting of prisoners as residents of a voting district where the prison is located takes representation away from home communities--mainly low income or communities of color.</p> <p>Please stop this unfair practice so that low income and communities of color will have the political power and "numbers" to which they are actually entitled.</p> <p>The Census Bureau is being used as a tool of the right-wing to create an unfair voting advantage for the people who already hold most of the economic power.</p> <p>We rely on our government to protect us from unfairness. Please stop this gerrymandering on behalf of the right-wing. It's an undemocratic, unfair practice that must be corrected.</p> <p>Thank you for caring about this important issue. The polarization of the US is not beneficial to the majority of our population.</p> <p>Please ensure an accurate census by counting incarcerated people at their permanent address. This will ensure a more just democracy and representation for communities.</p>
c00941	<p>I strongly disagree with your proposed policy of counting incarcerated people where they are detained instead of at their home addresses and I believe that it may contribute to unlawful gerrymandering and vote dilution. In 2000, some counties were reported to be growing, but in fact had just expanded prison populations. Given that state and local governments use Census data to redistrict for voting purposes, the current method of counting prisons as "usual residence"</p>

	<p>may contribute to potential violations of the "one person, one vote" standard. Proposed residence rules would not only create inaccurate census but also further contribute to systematic racial inequity.</p> <p>I hope that you will reconsider your policy.</p>
c00942	<p>Please ensure an accurate census by counting incarcerated people at their permanent address. This will ensure a more just democracy and representation for communities. Counting incarcerated people at the location of their (many times brief stay) incarceration distorts the voter profile of the district in which the prison is located. Counting them at their home address is the only fair way of profiling a voting district.</p>
c00943	<p>I was just now made aware of the Census Bureau's way of counting those individuals who are incarcerated. It doesn't make sense.</p> <ol style="list-style-type: none"> 1. As one of many who is tracing my genealogy , it puzzles me that the Census Bureau would consider prison facilities as "permanent addresses." Obviously, it's not accurate - and can cast the genealogical record in the wrong direction. 2. Additionally, as noted by LatinoJustice PRLDEF, a leading public interest law organization, the Census Bureau's application of "usual residence" concept is factually inconsistent. It presents the example of Congress: members have the option of choosing to be counted in either D.C. or in their home districts; even though they live and sleep most of the time in D.C. 3. On a restorative justice note, defining prison as someone's home is counter-productive to rehabilitation and reducing recidivism. By reinforcing the concept that prison is home - whether through the Census or other means - we take away an individual's right to strive for something better; to dream of a life beyond prison walls. 4. An accurate census count is critical in order for cities, towns, and neighborhoods to receive equitable representation in addressing social and political issues. By counting incarcerated people in prison (or jail) instead of their home communities, the Census takes representation away from those home communities. <p>All that being said, please change your process and ensure an more accurate count by counting incarcerated people at their permanent address.</p>
c00944	<p>I am writing to encourage you to count permanent residence when you take the proposed "2020 Census Residence Rule and Residence Situations."</p>

	<p>All people should be fairly represented as should all communities. Prison-based gerrymandering compromises this principle and skews representation toward communities that temporarily house citizens from other cities in their jails. It prevents those citizen's home cities from being fairly represented.</p> <p>If we expect former prisoners to enter fully into their home communities on release, don't we owe both them and their communities an equal opportunity to vote freely and fairly?</p> <p>Please count incarcerated persons at their permanent address rather than their place of confinement at the time of the Census.</p>
c00945	<p>How silly for the Census to count prisoners as full-time residents of the city or county the prison is in. These people do not participate in the social or economic life of the community.</p> <p>Even slaves were counted, (at a discounted rate of 3/5, and not that it did them any good) but in their actual homes. Prisoners ought to count in their home towns of record, not in the town the prison is in.</p> <p>Most of these people will be living only a short time of the next ten years in prison, yet they are counted in the area holding the prison, not in the homes towns to which they are most likely to return.</p>
c00946	<p>Please change the inaccurate and unfair practice of counting incarcerated people as residents of the place they happen to be on Census Day.</p> <p>Such practice produces bad data, distorts political influence, and harms our nation: it devastates urban Black and Latino communities.</p> <p>Ensure an accurate 2020 Census by counting incarcerated people at their home, not prison addresses.</p>
c00947	<p>I urge you to change your practice of counting incarcerated people at prisons, instead of their home addresses, or perhaps give them the privilege of voting while in prison as the humans they are, thus making your census areas true to their count.</p> <p>I, as a liberal citizen of this great country, hope every day that politicians will become morally responsible and not reprehensible monsters trying to twist or break every law we have so that their party can have the power and control they crave.</p> <p>Please change your practices before the next Census and start believing in and caring about the</p>

	people you represent.
c00948	<p>The census count is critical for representation, but counting incarcerated people in facilities takes representation away from home communities--mainly low income or communities of color.</p> <p>Please ensure an accurate census by counting incarcerated people at their permanent address. This will ensure a more just democracy and representation for communities.</p>
c00949	<p>Although the Census Bureau defines "usual residence" as the place where a person "eats and sleeps most of the time, students in boarding schools and people who spend months of the year in second vacation homes are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. However, the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities. This makes me wonder what the Census Bureau has to gain from this practice and why there is such inconsistency.</p>
c00950	<p>If prisoners aren't allowed to vote then they should not be counted as "residents." Let them vote and then they can be counted but only in the district within which they reside at the time of the election.</p>
c00951	<p>It is time to change the practice of counting incarcerated people at prisons, instead of their home addresses.</p> <p>This practice is senseless and arbitrary. Most people in similar situations--temporary housing--are allowed to use their permanent address.</p> <p>This gives further incentive to the prison industry to keep people in prisons and short-changes home communities, which surely need the funds for infrastructure, schools, and the like.</p> <p>It's time to enter the 21st century.</p>
c00952	<p>I'm outraged that the U.S. Census Bureau is using prisoners in a way that interferes with citizen voting rights. Incarcerated individuals should be counted using their home addresses - the same as every other citizen.</p> <p>This type of thing should have been stopped years ago, but since you seem to need prodding from the American people, consider this letter a big, push towards getting rid of this practice. Most prisoners are housed away from home temporarily and will go back to living at a permanent</p>

	<p>residence.</p> <p>I insist that you stop this undemocratic, outdated method of census counting as soon as possible. That means changing your system of prisoner counting before the next census.</p> <p>Distorted voter counts is unfair and un-American. As an agency of the federal government, you should do the right thing. All Americans, including prisoners, are depending on you to be fair and impartial in your process.</p>
c00953	<p>I demand that you change your practice of counting incarcerated people at prisons, instead of the addresses of their actual communities.</p> <p>This practice is outdated and unjust. Other people in similar temporary situations, such as college or temporary housing, are allowed to use their permanent address. Why is this different for prisoners?</p> <p>In the end, what ends up happening is a violation of our fundamental right to equal representation. This miscounting contradicts democracy and shifts power and voice away from home communities (often already marginalized in other ways) to communities built on prisons.</p> <p>As a citizen exercising my own right to representation and voice, I ask you to change your practice before the next Census.</p> <p>Searching for liberty and justice for all,</p>
c00954	<p>I am writing in regards to the proposed "2020 Census Residence Rule and Residence Situations."</p> <p>People deserve to be counted where they are originally from (like military servicepeople), and not where they are assigned to involuntarily.</p> <p>Please consider why you are treating military servicepeople differently than incarcerated people.</p>
c00955	<p>Beginning in 2020 please count incarcerated people in their "usual place of residence" rather than where they are being held. The present counting system is unfair to the community whence they came. Struggling communities need adequate representation. Give those communities their due place at the democratic table so that they can be heard.</p>
c00956	<p>I am writing to urge you to change your practice of counting incarcerated people at prisons, instead of at their home addresses.</p>

	<p>This practice is inconsistent with the Bureau's approach to other forms of temporary housing, which allow people to use their permanent addresses for Census purposes. It is also a practice rife with inaccuracies; it is commonplace to move prisoners from facility to facility , sometimes several times a year, so the "permanency" of a prison address is at best transitory.</p> <p>The present practice is also an open invitation to political gerrymandering. Treating a prisoner's current facility as a permanent residence allows state penal systems and private prison contractors substantial leeway to deliberately manipulate Census totals for political ends, not least being the redrawing of legislative districts.</p> <p>This is also an engine of considerable injustice. In America, people of color are imprisoned in disproportionate numbers, often for victimless offenses for which white people are much less likely to receive prison sentences. Treating those prisoners' places of imprisonment as permanent residences compounds the disenfranchisement of the communities from which the prisoners came, effectively depopulating communities of color to rob them of fair representation and access to public resources.</p> <p>Such manipulation is the Census equivalent of "voting the cemetery" and is directly contrary to both the interests of democracy and the statutory purposes of the Census.</p> <p>For these reasons, I strongly urge you to revise your practice prior to the next Census.</p>
c00957	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>The impact of the Census is too great to continue using outdated and inaccurate methods for counting. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>

c00958	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. c00964	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. This doesn't make any sense to me. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>The impact of the Census is too great to continue using outdated and inaccurate methods for counting. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00965	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their</p>

	<p>home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>The impact of the Census is too great to continue using outdated and inaccurate methods for counting. Please eliminate prison-based gerrymandering for the 2020 Census and beyond. The practice also shortchanges the permanent address communities who will have to support these people for purposes of public transit, hospitals, etc., yet who will not receive the commensurate funds because these people were counted elsewhere.</p> <p>Counting prisoners in the communities where the prison is located unfairly benefits those communities twice; once with federal funds to support the prisons and prisoner upkeep, and twice by the community being counted as a larger population than it actually is, since no additional burden is put on the public funding of community services by this sequestered prison population.</p>

Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p> <p>The Census Bureau must count all people in the U.S.--including non-citizens, children, temporary residents, deployed military, students and non-voters. Most everyone is counted at their permanent residence--incarcerated people are an exception.</p> <p>The Census Bureau cannot ignore prisoners because they must count everyone, and formerly incarcerated people will return home to their community upon release. Therefore, they should be counted there.</p> <p>Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across</p>

	<p>multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted.</p>
c00985	<p>Prison gerrymandering distorts our democracy. The Census Bureau must count incarcerated people where they have lived formerly and will be returning to after their time has been served. I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist.</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00988	<p>I've recently learned that the Census Bureau plans to continue the inaccurate, fascist and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently racist and fascist.</p> <p>We need to criminalize greed, JAIL the criminal class of rich people and nationalize ALL of their corrupt and fascist corporations!</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>The impact of the Census is too great to continue using outdated and inaccurate methods for counting. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p> <p>Release all drug offenders!! JAIL the rich!</p>
c00989	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice as it is inherently</p>

	<p>racist.</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>The impact of the Census is too great to continue using outdated and inaccurate methods for counting. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p> <p>This practice skews representation. I worked for the census in 2010 and I don't feel that misrepresentation for political motives honestly occurred to most of us. Why not just take the count and assign them to a separate prison population unattached to any physical location? The prisoner numbers are being used to unethically shift the balance of power.</p>
c00990	<p>I've recently become aware of the Census Bureau's practice of counting incarcerated people as residents of the district where their prison is located rather than as residents of their normal home address. This practice hurts the residents of these home communities by robbing them of their proper representation. I'm writing to request that the Census Bureau end this practice as it is unjust and inherently racist.</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Since African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It not only shifts representation away from urban, African-American and Latino communities towards white, rural communities, but cheats urban children of adequate school funding and the entire community of much needed infrastructure improvements.</p> <p>The impact of the Census is too great to continue using outdated and inaccurate methods for counting. Please eliminate prison-based gerrymandering for the 2020 Census and beyond.</p>
c00991	<p>I've recently learned that the Census Bureau plans to continue the inaccurate and outdated practice of counting incarcerated persons as "residents" of the prison location instead of their home communities. I'm writing to ask that the Census Bureau end this practice. We do not do this with other populations - military deployed overseas, people on vacation, kids at boarding</p>

	<p>school, etc. - so why do it with prisoners?</p> <p>Counting inmates where they are incarcerated reduces the accuracy of Census data about communities of color and skews data in predominantly white, rural communities. Because African-Americans and Latinos are disproportionately incarcerated, counting incarcerated people in the wrong location is particularly bad for proper representation of African-American and Latino communities. It shifts representation away from urban, African-American and Latino communities towards white, rural communities.</p> <p>The impact of the Census is too great to continue using outdated and inaccurate methods for counting. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01032	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p>

	<p>Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way that temporary residents are counted.</p> <p>It's a violation of equal representation, plain and simple.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01033	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p> <p>There is more to where people actually live than where the GOP needs votes.</p>
c01034	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The private prison industry already has a disproportionate sway over our government because they have a lot of money to lobby with.</p>

	<p>Our prison system is a national shame and until we get a representative government it is unlikely to change.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01035	<p>The American people are paying close attention to who's doing what in our Gov. and politics. You CAN'T win fairly so you shouldn't win at all. You're corrupt.</p> <p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people. Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. c01039	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>

	<p>Please do the correct thing and stop this abuse of the system.</p>
c01040	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p> <p>It is very concerning to see a federal agency contribute to gerrymandering on top of all the gerrymandering being done at the state level.</p>
c01041	<p>Census data is used when state and Congressional districts are readjusted. Incarcerated people are citizens of their home districts, not other states where they are housed.</p> <p>You should count them in their own home districts and states. This is the fair and democratic way.</p> <p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01042	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people. As a</p>

	<p>high percentage of people in prison are black, this is clearly racist and must be changed to better reflect our democratic principles.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities. Don't we have enough gerrymandering going on as it is? We are definitely affected by it here in Texas!</p> <p>This is a distortion of our political process at the state and local levels and it is up to the Census Bureau to right this wrong and include those who are incarcerated their limited participation in representative democracy. They are denied the right to vote, so they must have some form of representation in the affairs of the nation or it becomes "governing without representation".</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01043	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Part of tge rationals for determining the sizes of political districts is that representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Another part is that districts should have responsibility for similar numbers of people. Neither of these arguments applies to prisons. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01044	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and</p>

	<p>moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p> <p>I worked as a Census worker in 2010. It would be simple to assign a census worker to each jail and prison to determine the home of record or parole address for each inmate and to report that more accurate information.</p>
c01045	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p> <p>Are they allowed to vote at their places of incarceration? Probably not, as the census is taken every ten years, and most of the prisoners will be out or transferred before the next election. This isn't a logical way to count population.</p>
c01046	<p>The undersigned is a practicing attorney for fifty-three (53) years and have represented all components of our society.</p> <p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken</p>

	<p>steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01047	<p>Don't let cheating 'politicians' rob prisoners of their rights!</p> <p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01048	<p>Please help make voting fair, instead of giving the people in some places more votes than they deserve, while taking votes away from other areas.</p> <p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01049	<p>To Whom It May Concern, this is truly an injustice and misrepresentation. Let us overturn this practice.</p> <p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p>

	<p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01050	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. The practice of counting people based on their location of imprisonment carries with it the risk of officials using incarceration as a method of purposely affecting electoral power.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01051	<p>It's a violation of equal representation to count prisoners where they are being temporarily housed instead of their permanent residence.----Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities.--Over 2 million incarcerated people will be misrepresented in districts they have no connection to. This causes a distortion of political representation.</p> <p>-----</p> <p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken</p>

	<p>steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01052	<p>I am concerned with the Census Bureau's current residence rule for incarcerated people in Texas.</p> <p>Counting prisoners where they are incarcerated, instead of at their permanent addresses, distorts representative democracy and moves electoral power away from urban communities in need towards rural communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, in order to create a dynamic where representation is accurate in all locations. The Census Bureau should take the steps necessary to end this practice nationally and permanently.</p>
c01053	<p>I am concerned with the Census Bureau's proposed residence rule for incarcerated people. Please end the practice of using prison as the permanent residence of those incarcerated. Since incarcerated people has no rights to participate in choosing elected representatives they should not be counted as residents to raise the population of communities where they have not chosen to live. Count incarcerated people from their community of origin or their community of return.</p> <p>Representative democracy is rooted in the idea that equal numbers of people should have equal influence over the legislative process. Prison-based gerrymandering distorts the process and moves electoral power away from urban communities of color towards rural white communities.</p> <p>Some states, such as California, and municipalities like Calhoun County, GA have already taken steps to outlaw this harmful practice, creating an absurd dynamic where equal representation is only extended to those lucky enough to live in certain locations. The Census Bureau should take the steps necessary to end prison-based gerrymandering as a practice nationally and permanently.</p>
c01054	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>Gerrymandering by adjusting precinct lines is bad enough, please do something about this issue of prison population counting. It make little to no sense to count the current lo cation of an inmate</p>

	<p>when statics clearly indicate that this is not their an accurate representation of an inmates permeant address.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c01055	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>If prisoners are not allowed to vote, perhaps we could create a (Hon-Voting) category in the census keeping them from the voting population count altogether while counting them in the population and categories other than for voting purposes.</p> <p>I would like to see gerrymandering done away with as well making districts radiate from dense population areas, keeping the number of people in all districts similar like a dart-board pattern, but perhaps this belongs in a separate issue.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c01056	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to abandon this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population</p>

	<p>is counted has enormous implications for representational government.</p> <p>I sincerely hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities, because it more accurately reflects their numbers.</p>
c01057	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census. It is unjust and inappropriate. It encourages politicians to increase the numbers of prisoners and move them around to win elections, instead of based on what's best for victims of crime, and inmates and their families and the communities they come from.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government. These people won't vote while they are in prison, and there's no reason to count them as part of the population where they're in prison.</p> <p>I hope the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c01058	<p>I am a retired sociologist. I have been a professor for decades, and I still use the Census. I have the highest respect for the Census Bureau. As a social scientist, an urban resident and a citizen, I believe that the Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address is outdated and inaccurate. It will affect the integrity of our data and the very core of our democracy's electoral base. I encourage you to not continue this practice for the 2020 Census. How this population is counted has enormous implications for representational government.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s; it is now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated.</p> <p>I hope the Census Bureau changes the proposed plan, which continues prison-based gerrymandering. We deserve a model that better serves communities and science.</p>
c01059	<p>This message is in regards to the Census Bureau's proposed plan to count inmates at their</p>

	<p>confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I am petitioning the Census Bureau to change from the proposed plan which will continue prisonbased gerrymandering and discrimination toward communities of color, and instead, move toward a model that better serves our communities, from which the prisoners came and will return, since that is the obvious place where resources are needed, and it is most consistent with other similar practices.</p>
c01060	<p>People who have been incarcerated will return to society and we need them to return in the best shape possible to become productive citizens. To complete their rehabilitation we in civil society REQUIRE that they participate fully in their communities and neighborhoods. It is most important that they are able to and entitled to bear the burden of their political rights as an incentive to contribute to society as a whole. For people who have learned hard lessons while incarcerated, the path to responsibility can be steep. We need their wisdom and commitment to safeguard and advance our civil engagement.</p> <p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I demand the Census Bureau change the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c01061	<p>This is regarding the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now</p>

	<p>over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. How this population is counted has enormous implications for representational government.</p> <p>I urge the Census Bureau changes the proposed plan to continue prison-based gerrymandering and moves towards a model that better serves communities.</p>
c01062	<p>This smacks of the abhorrent 3/5' s rule regarding slaves! You know, the one written into our US Constitution ? How disgusting this is. Change this absurd gerrymandering!!</p> <p>This message is in regards to the Census Bureau's proposed plan to count inmates at their confinement facility rather than their permanent address. I believe this proposal to be outdated and inaccurate and encourage you to not continue this practice for the 2020 Census.</p> <p>The incarcerated population in the U.S. has more than quadrupled since the 1980s -- to now over two million people. The vast majority of inmates will ultimately return to their home communities, which are likely nowhere near where they were incarcerated. c01063	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01064	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p>

	<p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>This is not a difficult concept. Change the practice and eliminate unintended, unfair and corrupt gerrymandering across the board in the Census process.</p>
c01065	<p>please stop prison gerrymandering.</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01066	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>They should be counted in their home district</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01067	<p>As a Soldier in the US Army, I served out of my home state and often in foreign countries. I always believed that I was counted in my home state and not Vietnam or Germany or any state I was assigned to a post.</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p>

	<p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01068	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>JUST A BIT OF COMMON SENSE WILL ENHANCE THE USE AND SERVICE THAT CENSUS PROVIDE FOR ALL.</p>
c01069	<p>Regarding the residency rules for prisoners, I see this as a bias on so many levels: besides the gerrymandered effect on districts depriving them of the census numbers, there is the racial discrimination aspect since the USA prisons hold an outrageous percentage of black men and women as opposed to whites, due to the War on Drugs and over-investigation by lawenforcement agencies in their communities. This causes a downturn in their permanent community census numbers and, therefore, in political representation. This is a continuing detriment to those communities even when prisoners are released, thus continuing to distort democracy.</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p>

	<p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01070	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>Gerrymandering is wrong and should be illegal. No matter the reason for the gerrymandering, whether political or financial, it is simply wrong. Make gerrymandering anything illegal.</p>
c01071	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering. This practice setiously negatively impacts my state of New York.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01072	<p>The current practice obviously constitutes "gerrymandering". This is undemocratic and just plain wrong. Let's clean up our government and make it work for all, not just the republican politicians. US Bureau of the Census</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p>

	<p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01073	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>The present practice is nothing less than Voter Fraud perpetrated by the authors of the policy of Prison Gerrymandering.</p>
c01074	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>As I served in the US Army from 1967 to 1970, and was stationed at _____, _____ and _____, when I voted I was voting in the permanent address where I was registered, not where I was living at the time. The census counted me at my permanent residence, not my duty station. I believe counting prisoners as residents of the county where the prison is located is wrong and should not be allowed, as it inflates the population count of said county/district.</p>
c01075	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p>

	<p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>Please listen to the constituents and honor our wishes. People register to vote with a home address and that is the address or domicile that should count for their voting or non-voting status.</p>
c01076	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>Most of them are serving short sentences, an average of 3 years, so they would certainly be home again long before the next census counts them in their home district, and they may be moved around during that time, so that makes it even less appropriate to count them where they are imprisoned instead of in their home districts.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01077	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated</p>

	<p>people at their permanent address.</p> <p>It is time to bring moral and honest behavior back to these United States.</p> <p>The US Census Bureau is a good place to begin the return to moral and honest behavior.</p> <p>Please count incarcerated people at their permanent address.</p>
c01078	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>Due to the disproportionate number of people of color who are incarcerated, there is also a regrettable racial aspect to the misrepresentation.</p> <p>I consider it imperative that we do whatever can be done to preserve the integrity of our democratic process.</p>
c01079	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01080	<p>Gerrymandering is enough of a problem already without being exacerbated by mass incarceration.</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including</p>

	<p>the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01081	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address. To ensure that these UNITED STATES CITIZENS are represented accurately, we must count them at their permanent address; it is far more likely that their associates and family who live near them will more accurately represent their wants and needs than some other random community where they happen to currently be imprisoned. It is only logical that they be counted as a resident of their permanent address, and corrective action should be taken to ensure this is the case and remains so.</p>
c01082	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners who are not serving life sentences without opportunity for parole at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01083	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p>

	<p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>Counting of any Citizen on Temporary assignment, Job, School, whatever distorts our Census. The Census impacts our communities dramatically. Please count those in our Prison system along with all those temporarily living outside of their Communities in that Community. Failure to do so distorts the information.</p>
c01084	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. In our state, this means that areas with high concentrations of people of color are undercounted and the areas with the prisons--which are disproportionately white--are over-counted. Please end this practice and count incarcerated people at their permanent addresses.</p>
c01085	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>

	<p>Gerrymandering in any form has already become a form of political cheating. I am asking the U.S. Census Bureau, for which I have a great deal of respect, to hold itself above the nasty system this leads it into.</p>
c01086	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>Thank you, I've NEVER been in prison, but because I was a temporary resident at a campground, I WAS NOT COUNTED! I even called the office to try to be counted, but got NO HELP! Ps I am also a VOTER!</p>
c01087	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>It is bad enough that we lead the world in this despicable way by being first to incarcerate (so Americans are more crooked than others or are the innocent being put in prison!!). Then to take advantage politically is the height of it!!</p>
c01088	<p>The real point is that people in prisons do not vote. This disrupts the electors in congressional districts and generally means fewer actual voters elect partisan candidates. Communities with prisons elect republicans congressional candidates because folks in their prisons are counted but don't vote. I think if the prisoners vote it should count in the district of their registration card and they should not be counted as electors of these rural prison communities .</p>

	<p>US Bureau of the Census</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01089	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>As a TEXAN, I find this a despicable and totally prejudicial practice that needs to be ended immediately. Texas politics needs to be cleaned up! Please let it begin here!</p>
c01090	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>

	<p>People should be counted in the census where they live, not at a temporary correctional address. Please consider making this important change.</p>
c01091	<p>We must accurately represent the permanent addresses of everyone counted in the census.</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01092	<p>The process of census-taking is flawed by its nature and, presently, not all flaws are fixable; this one is. Prison gerrymandering is fixable.</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01093	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. c01100	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community. Show respect for the individual prisoners by listing them at their permanent address.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01101	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>Here is OK this is especially true for women as we have the greatest number of women incarcerated.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community. Again, accurately report where women will be coming home to their children.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01102	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p>

	<p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>Return democracy to the people and ensure it is enshrined in BOTH principle and practice.</p>
c01103	<p>***The proposal to count incarcerated people in the district of their incarceration, and not their original district of residency, is profoundly unjust. This counting location would multiply the social, economic, and political inequalities of the US criminal justice system and violate the principle of equal representation.</p> <p>Incarcerated people leave a gaping economic and social void in the community from which they are taken, often leaving behind family members and other dependents, as well as the marginal municipal and county costs of infrastructure that do not decline when individuals vanish. Conversely, the district to which the incarcerated person is transferred does not incur any marginal costs, and in fact often enjoys (and lobbies for) the payroll, vendor, and other revenues associated with prisons. Transferring the effective, Census-counted location of an incarcerated person exacerbates this economic and social injustice.</p> <p>Moreover, the political preferences and interests of the districts with the highest rate of arrest and incarceration are often diametrically opposed to those of districts with prisons. Therefore, counting the incarcerated persons in the prison's district unjustly transfers political power to the latter district. The injustice is magnified by the inability of the incarcerated person to actually vote, an arrangement that recalls the sordid original counting arrangements of American democracy, in which non-voters could be counted for the political benefit of their owners.***</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p>

	<p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>

Please end this practice and count incarcerated people at their permanent address.</p> <p>This is just another way of disenfranchising people of color and their communities. Put an end to this practice right away.</p>
c01117	<p>I am a woman of color and have residency in the state of Florida. I fully disagree with how the census is creating this disparity in the African American and Latino communities. All we want is</p>

	<p>fairness.</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01118	<p>I did not compose the message below, but I have read it and completely agree that this is a great injustice which the Census Bureau has within its power to correct.</p> <p>US Bureau of the Census</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01119	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>I do NOT understand this issue at all. I just don't. When I was in college, I registered to vote in the town next to the gown where I was in school--because home was too far away for a day trip just to vote.</p>

	<p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01120	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>Above is a generalized letter from Daily Kos Liberation League. The following is from me. It's very seldom that I'm rendered speechless by what I 'm exposed to. Lately that's an awful lot as is this. What I Do KNOW is we're being watched. Not only by The Lord Almighty but by other countries. As Americans we're supposed to set an example of Upstanding Policies, Democracy, Pride & Honesty. What's happening? My Dad used to tell us to "Straighten up and Fly Right". That applies here as well. Those involved with this aren't stupid and neither are the American people. I'd suggest you take my dad's advise, only consider it from The Father of All Us, God Almighty. He feels All we are doing. Confession doesn't cure darkened souls. This is one of the Seven Deadly Sins,..10 commandments set aside. May God please end All of this.</p>
c01121	<p>The reasoning behind the Daily Kos Liberation League's call for this action seem compelling to me: I agree with them.</p> <p>US Bureau of the Census</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing</p>

	<p>misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01122	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p> <p>All forms of gerrymandering to misrepresent populations is wrong and contrary to the fundamental principals of our country and our constitution. These practices are purely for political gain and must be stopped!</p>
c01123	<p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01124	<p>STOP WORKING FOR REPUBLICAN SCAMMERS ; DO RIGHT!!!!</p> <p>Americans are becoming fully aware of the problems created by mass incarceration, including the practice of prison gerrymandering.</p> <p>The census can end the misrepresentation of incarcerated people by counting prisoners at their permanent home address--where they will return after their time is served to live with their families and community.</p> <p>By counting prisoners outside of their permanent address, the Census is wrongly allowing</p>

	<p>misrepresentation to influence political power. Please end this practice and count incarcerated people at their permanent address.</p>
c01125	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p> <p>This is obviously a pre-fab letter but from the real me "Just cut the crap".</p>
c01126	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p> <p>One additional concern is that incarcerated persons do NOT receive a census form while they are in prison and since they are not home to fill out the form that is sent to their outside residence (which does require their signature), where, when and by whom are they counted? Forms need to be sent to prisoners and they can designate where they consider their outside home to be instead of someone else designating a place for them that they do not even know about.</p>
c01127	<p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison</p>

c01130	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated</p>

	<p>people.</p> <p>Please end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c01131	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p> <p>WTF? Have you no integrity? It's precisely because little or no resources are applied to prisoners' home communities that they're incarcerated in the first place, & you want to divert even more resources away from the communities that desperately need them. SHAME ON YOU!</p> <p>Students are not allowed to be counted in their college's community (an attempt to curb student activism), yet prisoners are counted as residents of the prison where they are incarcerated (to increase resources to the correctional facility's community at the expense of the prisoners' home community). So the rules have no consistency. They are only created to thwart Democracy! Students not counted at colleges while prisoners are counted at prisons? You can't have it both ways! Your practices are shameful to say the least and certainly undemocratic! Get some character & show some integrity! Your inconsistent rules are unacceptable!</p>
c01132	<p>This comment is in regard to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p>

	<p>People who are incarcerated have a permanent address and should be counted as residents at that address. Otherwise, they are disenfranchised, and the one man, one vote principle is violated.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c01133	<p>This comment regards the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities. They should be counted as residents of their last home address. Prison is not a home.</p>
c01134	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people. This sounds so very wrong---if you are incarcerated, you have an address.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c01135	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the</p>

	<p>same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p> <p>People within the "correctional" system face discrimination by: 1) NOT being "CORRECTED", and 2) losing their true "HOME" address. There is little 'correctional' help for the prisoners; some come out worse than when they went in due to the association with other prisoners. Then, they lose the right to their HOME address as they are moved from place to place. Democracy is skewed, distorted, because the Census Bureau counts those incarcerated people in the wrong place. This is still America. We are still entitled to being counted in the place we live. As citizens of these United States of America, inmates of any prison, in any location MUST be treated the same as the rest of us when it comes to the HOME to which they will return. They've lost enough; don't take away their 'Home' status, too.</p>
c01136	<p>Please rectify the current residence rule for incarcerated people to reflect a prisoner's home address unless he or she actually considers that community their "home." Your interpretation of "usual residence" is inconsistent with what actually happens.</p> <p>The Census Bureau defines "usual residence" as the place where a person "eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>Please end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c01137	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>I am writing to urge the Census Bureau to end the practice of counting incarcerated individuals at their correctional facilities instead of their usual homes.</p> <p>The Census Bureau defines "usual residence" as the place where a person "eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the</p>

	<p>same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>Many incarcerated folks come from marginalized and underserved communities. They lose resources when community members are stolen for minor, non-violent offenses. They lose even more resources when the Census Bureau doesn't even count them as members of the communities eagerly awaiting their returns.</p> <p>In 2020, please end this inaccurate practice, and count incarcerated people at their usual homes.</p>
c01138	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, military personnel, members of congress, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of the location where they are incarcerated. They should be counted as residents of their home community, if they have a home community.</p>
c01139	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities. This practice has a direct effect on communities when States allocate funds and services based on population numbers and the needs of certain populations. This practice has very real consequences when those who are incarcerated return to those same</p>

	<p>communities and try to reintegrate based on flawed numbers.</p>
c01140	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Prison gerrymandering robs home districts, typically urban centers. It's a violation of equal representation.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. c01164	<p>Please accept these comments on the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines "usual residence" as the place where a person "eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p> <p>Counting incarcerated people where they are detained is illogical because most of them do not live and sleep "most of the time" in the facilities where they happen to be located on Census Day. People in the prison system are frequently transferred and usually do not remain at any particular facility for even year. In Georgia for example, the average person in the state prison system has been transferred four times and with the median time each individual has served at his or her current facility is only nine months.</p> <p>The Bureau's application of "usual residence" concept is also applied in an inconsistent manner. There are many examples of populations who are not counted where they "live and sleep most of the time." For example, members of Congress have the option of choosing whether they will be counted in D.C. or in their home district even though they live and sleep most of the time in D.C. Like incarcerated people, members of Congress are serving a time-limited term and are likely to return home where they have the most family and community ties.</p> <p>Counting incarcerated people where they are detained instead of at their home addresses may contribute to unlawful gerrymandering and vote dilution. In 2000, some counties were reported to be growing, but in fact had just expanded prison populations. Given that state and local governments use Census data to redistrict for voting purposes, the current method of counting</p>

	<p>prisons as "usual residence" may contribute to potential violations of the "one person, one vote" standard. Proposed residence rules would create inaccurate census counts.</p> <p>Thank you for your time and consideration and the ability to comment.</p>
c01165	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Incarcerated people in our country are currently not allowed to vote, except for people with misdemeanors in facilities where the sheriff allows them to send in absentee ballots, which is pretty unusual. It is wrong to count non-voters in the district where they are incarcerated, because it gives unfair weight to the representation that the prisoners don't actually have. This very much reminds me of the Constitution's rule that slaves could be counted as 3/5 of a person for purposes of allotting representation to states, a rule that kept the institution of slavery going much longer than it would have if only those who can actually vote had been counted.</p> <p>The Census Bureau defines "usual residence" as the place where a person "eats and sleeps most of the time." Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c01166	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines "usual residence" as the place where a person "eats and sleeps most of the time. c01178	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated</p>

	<p>people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p> <p>This practice causes totally inaccurate numbers to be counted in some districts where they really don't live and are only there temporarily and for other districts to not have counted where the people actually live. This is unfair to both of these places. Please correct this rule so that people are accurately counted where they really belong!</p>
c01179	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time”. However, students who stay in school dormitories, or people who spend much of the year in second homes, are allowed to be counted at their permanent address.</p> <p>Similarly, many periods of incarceration are for less than a year, and many prisoners are housed in multiple facilities within the same year. But the Bureau does not allow prisoners to be counted at their permanent addresses. Unfortunately, this leads to a misallocation of political representation, as sparsely populated areas may qualify for a disproportionate share of political representation due to being the location of a prison -- even if the prisoners themselves are prevented from voting for who will represent them.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of the areas where their correctional facilities are located.</p>
c01180	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in</p>

	<p>second vacation homes, counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people which distorts the population count. Since incarcerated people state their permanent place of residence which is a matter of record, they should be counted according to that information. For many incarcerated people, their place of residence is in an urban location rather than the often rural sites where prisons are located.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c01181	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>Prison gerrymandering robs home districts, typically urban centers, and neighborhoods with a large population of people of color, of vital representation and gives areas where prisons are housed, typically rural and white, disproportionate representation.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities.</p>
c01182	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. So we are denied all education and training program which puts us back into the unforgiving Justice system.</p>
c01190	<p>This comment is in regards to the Census Bureau's proposed residence rule for incarcerated</p>

	<p>people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time. Students in boarding schools, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But the Bureau still carves out an unexplained exception for incarcerated people.</p> <p>I urge you to end the inaccurate and unfair practice of counting incarcerated people as residents of correctional facilities. The current practice distorts the actual count of the geographical area where prisoners will return upon their release. This distorts democracy.</p>
c01191	<p>Thank you for your time. This comment is in regards to the Census Bureau's proposed residence rule for incarcerated people.</p> <p>The Census Bureau defines “usual residence” as the place where a person “eats and sleeps most of the time.” Students in boarding schools, members of Congress, or people who spend months of the year in second vacation homes, are allowed to be counted at their permanent address. Many prison stays are for less than a year and many prisoners are housed in multiple facilities within the same year. But incarcerated people are treated as permanent residents of a temporary place, artificially increasing the "population" of towns where prisons are located. Singling out this particular population just doesn't make sense, unless the intent is to create an unfair system.</p> <p>I urge you to end the inaccurate and illogical practice of counting incarcerated people as residents of correctional facilities.</p>
c01192	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p>

	<p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p> <p>Prison gerrymandering is a problem for a number of reasons. Prison gerrymandering robs home districts, typically urban centers, and neighborhoods with a large population of people of color, of vital representation and gives areas where prisons are housed, typically rural and white, disproportionate representation. See the case of Anamosa, Iowa, New York state, and Wyoming for some of the most egregious examples.</p>
c01193	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. Legally, residence is defined as "...A person coming into a place with intention to establish his domicil or permanent residence, and who in consequence actually remains there." The people who are housed in correctional facilities are done so against their will without any intent to remain there, and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>

Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p> <p>There is a strong element of common sense as concerns this issue: let's put it to good use.</p>
c01198	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census. This is similar to the situation experienced by college students whose address is not the institution but at their legal residence. They are not counted as residents of the institution's location.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01199	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p>

	<p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p> <p>I believe that many people are unjustly imprisoned for drug use, something greatly affecting minority communities, therefore making this gerrymandering even more discriminatory.</p>
c01200	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Moreover, because of racially biased arrest, conviction and sentencing practices, and the tendency of minority, often impoverished, individuals to live in large cities, prison gerrymandering inevitably results in a relative transfer of representation from large cities to rural areas. Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01201	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Please do the right and just counting method. Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p>

	<p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01202	<p>WE ARE ALREADY THE MOST GERRYMANDERED STATE IN THE COUNTRY - FIX THAT, PLEASE!</p> <p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01203	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people generally do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p>

	<p>I strongly believe their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01204	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way that temporary residents are counted.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted. It's a violation of equal representation, plain and simple.</p>
c01205	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census. Not only do you make a profit for every person in prison but you use them to skew populations in order to gain votes!!!! This is not a democracy!</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.

Their home residence, not their temporary one, is where incarcerated persons should be counted.

Sincerely,

That any lopsided methods of changing elections, should be corrected to what is nationally acceptable to all American citizens, and this policy now disclosed, needs to be changed to what should become a way of doing this. That since those sent to prison, loose their rights to vote, that perhaps they should not be used at all, for any election considerations, what so ever; however, a significant amount of citizens are sent to prisons, and after confinement, recent legal politics is trying o find a way to get before they are released, to get education and skills into them so that they can successfully compete for jobs, rather than return to crime ... and time will tell if this is successful and at what rate, versus still problem criminals. That generally speaking, people will be good citizens, versus crimianals; however, financial treachery type criminals, such as stock market, bankers, lawyers, there needs more active laws to make their form of criminal opportunism prosec uted, for treason against the best interests of America and its citizens, because all ways of making money should have a "fairness factor assigned by government" so that high interests robbery rates charged, should not be charged, and anyone doing it, should no longer be a party of society, and send them to prison, giving them criminal records too, as a way to clean-up the financial treachery in America. That people and businesses doing tax evasion, should be prosecuted to prison too. All lobbyists, should be prosecuted for wrongfully influencing elected politicians. That elected politicians seeking information from individuals or businesses, should have a formal inquiry means, versus the corrupted by bribery way of buying their votes. That bullshit from any politician, becomes treason, removal and prosecution, and serious consequences, ending their ability to be in any public office, elected or appointed, ending any professional certifications or licensing, making them join the poor class, forever ... and maybe no longer eligible to vote as well, because of treachery while being an elected politician ... same happened to Benedict Arnold ... but the boy escaped, and never came back, dying in poverty. Election processes should be standardized all across America, where federal government actively manages all elections including local, city, county, state, federal elections, and federal government registers all voters. That the IRS be part of this registration as well, because everyone is supposed to report their income to the IRS, and residency and accountability can be more easily documented with a shared data base. That local, city, county, and state can allow

citizens to volunteer; however, they must be vouched for, for credibility, honesty, being part of the community and in good standing, as well as such being filed into local court record on a listing for each election, as well as filed into the local elections office part of local county auditor function. That ONLY THOSE WHO ARE ON THE LIST, be allowed access to do the work of countin ballot votes, to insure that no crimes can occur, and if such voting crimes do happen, that government knows who they are, out of a possible list of those enabled to handle election materials/ballots. Once a released felon has 5 to 10 years, whatever is used, having a job, working to support himself and his family, working to become a good citizens, then any prejudice should be ended, and rights to vote be encouraged. That any second prosecution for crime, that should end voting rights, entirely. But before second or subsequent prosecutions, that there needs to be real good investigation that only that person perpetuated the crime, versus being pushed-into-crime, as a reaction done by lopsided actions done by some other that should be considered a crime too, and insure that what is done, actually is correct ... NO MORE MIKE NYFONG PROSECUTORS, where the new legal ter m "To Be Nyfonged" means that they prosecutor had evidence that would free the accused as innocent, versus prosecuting because the prosecuting lawyer is a criminal who should have instead be prosecuted for failure to produce this evidence at case in court, now, and not withhold criminally. That kind of prosecutor is far, far, far too common, because of the new lawyer integrity movement, that goes back and reviews cases, finding that prosecutors have done criminal wrong doings, and maybe it is time to send those prosecutors to prison, as criminals, and ending their licenses to practice law as lawyers, for the rest of their lives ... because they chose to be criminals ... trust me, when trust was not warranted. And insure that they never vote ever again, also. There are many wrongs and messes in America, that all equally need to be fixed. That this is one area, get it fixed right, and then start getting other things fixed next. In legislatures and congress, they say: bad, bad, bad bitch mom with kids, and not one damned thing about the dead beat daddy. Why do then not demand that the dead beat daddy become a husband, father, and worker who supports his family as a citizen in good standing ... hell, he stuck his pecker in and squirted. So where is this bastard at? And if it is a already married politician, schedule that boy for surgery, to geld his ass, no excuses ... chop, chop. And then remove him forever from politics as well as bar him from any career considered to be professionally certified or licensed. That once this is done several times, consistently, reliably, predictably, maybe politicians would be better than the present set of fuckers!!! That America does deserve politicians who are better behaved, and better at honestly doing things that are in the best interests for America and its citizens ... and do it as honest role models, too. But from top down, or down to top, all American citizens too, must start behaving better and not pushing the limits between complying with laws by behaving themselves, versus breaking laws to be criminal for whatever the reason. That America can be a

	<p>better place to live, but everybody in society needs to behave themselves, do as much self improvements all while they are alive, and teach kids growing up, to be better too. If this is done at a 100% rate, America will become a better place to live. And end present day messes.</p>
c01224	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>While I write as a citizen, I have been a Census taker and a criminal defense attorney representing the incarcerated .</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01225	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. c01227	<p>I am writing today because I am concerned with our country's shift to political polarization. It seems big money influences decisions in our elections at every opportunity. This is why I am expressing my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be</p>

	counted.
c01228	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted. The accuracy of the census is important because many Federal and a State programs are funded and administered taking the most recent Census into account.</p>
c01229	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted. It is of utmost importance that we address this issue prior to our upcoming elections</p>
c01230	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p>

	<p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p> <p>The census is a money game. Shamefully, some of our prison industry is a for-profit enterprise. Sending more government money to places where prisons are located rather than places where families are located empowers the for-profit prison industry and disempowers people. A free nation should not tolerate this creeping threat to liberty.</p>
c01231	<p>Not only is this wrong, but it is glaringly obvious that Republicans need to lie, cheat, and steal in order to win elections!!! HONESTY IS NOT A WORD IN THEIR VOCABULARIES!!!</p> <p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01232	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p>

	<p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area. This could have undesired effects when it comes to requesting Federal aid after a natural disaster, and in the distribution of state funding where based on total population.</p> <p>As with the temporary residents of hotels and hospitals, those who are incarcerated should be enumerated at their home residence, not their temporary location.</p>
c01233	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>I lived on _____, MA where there is a prison. I saw how the prison system works, and know prisoners are eventually going to be released to their home town.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01234	<p>I would like to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of</p>

	<p>proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01235	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>I have been a census taker in both 2000 and 2010. When I lived in Florida (the 2000 Census) we were instructed NOT to count the winter snowbirds as Florida residents, since they would be returning to various cities up north and not eventually voting in--and paying taxes to--Florida. As I understand the prison situation (see following paragraphs), the same holds true for inmates, although I'm not sure when or if their voting rights are ever restored--but they WILL pay taxes (remember Ben Franklin??)</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01236	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. I live near a correctional institution and know that few held there are from the small town or county where the prison is located.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of</p>

	<p>proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01237	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p> <p>Prisons are generally located in rural areas, generally to the benefit of one political party. This skews the numbers in a legislative district and results in an unfair advantage.</p>
c01238	<p>I start this with a mordant bite from G.K. Chesterton: “Big Business and State Socialism are very much alike, especially Big Business.” – G.K.’s Weekly, 4/10/26</p> <p>I am writing today to express my concern over the proposed residence rules for the 2020 Census. Unlike the data for counting votes, census data are only for government interests, not personal individuals'. It is well known that felons do NOT recover their civil franchise rights once they have served their time.</p> <p>At the same instance, however, they are cannon fodder who would use this decennial information for their own Big Business or Big Government purposes. Those who inhabit Foggy Bottom are the ones who benefit, if not profit, from this travesty.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often</p>

	<p>moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area. Ironically, since they cannot vote under the present regime in most states, this is a problem whose time has come to fix.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted. Later, this issue will be revisited when separate state governors, like Virginia's, restore the civil rights to those whose voting status has been taken away.</p>
c01239	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p> <p>It REALLY is that obvious. Please do the RIGHT thing for us all.</p>
c01240	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities</p>

	<p>reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p> <p>Be fair. Treat others as you would want to be treated.</p>
c01241	<p>I am concerned over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted, unless they are allowed to vote where they are imprisoned, and if allowed to vote it would be better in their home residence.</p>
c01242	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted - just like college students!</p>
c01243	<p>I am writing today to express my concern over the proposed residence rules for the 2020</p>

	<p>Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted. This practice extends the racial bias of our judicial system.</p>
c01244	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p> <p>Census Bureau proposals to count incarcerated people in the wrong place once again in 2020 Census, continues to distort democracy.</p>
c01245	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p>

	<p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Further, imprisonment can erode an individual's sense of identity, his or her dignity. Being detached from a sense of home district by our census system in addition to the de-humanizing effects of incarceration by "the state" be it the federal government or a state's undermines an individual prisoner's faith in "the system", in our judiciary, and genuine commitment to democracy.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01246	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. In addition, one of the major reasons for the census is to distribute resources to the local communities to serve their constituents. The local communities that serve the prisons do not provide funding or service to the temporary residents of the prisons. Most individuals incarcerated in our prisons are serving less than 5-years and therefore not permanent residents.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>As a state Senator and a former local elected official, I know that the state and federal government through contracts are funding our prisons and services. We need the census to help their home/returning communities. Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01247	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p>

	<p>As a retired high school educator who has also worked in the juvenile detention system, I am concerned about how inmates are counted for the census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. People housed temporarily in prisons do have permanent residences where their families reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p> <p>Please consider these factors when creating the rules for the 2020 census.</p>
c01248	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area. To keep people from voting rather than to present voters with positive reasons that convince them to cast their ballot for you is cowardly.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01249	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional</p>

	<p>facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p> <p>When will we start to be the democracy we want other countries to be?</p>
c01250	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01251	<p>At first, I thought this was a little thing, but after thinking about it, I realize it truly is significant. So I am writing to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of</p>

	<p>proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01252	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01253	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p> <p>What should also be taken into account is the fact that while they are being counted they are in jail and do not even have the right to vote. I do believe one man, one vote should be considered when drawing these lines.</p>

c01254	<p>To honor both the accuracy and fairness of our census and elections, please count those who are incarcerated from their home addresses.</p> <p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01255	<p>I wish to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01256	<p>Private prisons are what fascist regimes have. They are used to displace people and make money. I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often</p>

	<p>moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01257	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted because that is where the communities need the support.</p>
c01258	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>

	<p>This seems self evident to me.</p>
c01259	<p>I am writing today to express my concern over the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area. This is, in effect, prison gerrymandering.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01260	<p>Please revise the proposed residence rules for the 2020 Census.</p> <p>Prisons and jails are not permanent residences. The people who are housed in correctional facilities are done so against their will and with no autonomy. Incarcerated persons are often moved between facilities, making their stay temporary, not permanent.</p> <p>Incarcerated people do have permanent residences where their families and communities reside. It is there, where they are most likely to return after serving time, that they should be counted. Counting inmates as residents in another legislative district deprives their home area of proper representation and inflates representation in that temporary area.</p> <p>Their home residence, not their temporary one, is where incarcerated persons should be counted.</p>
c01261	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p>

	<p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>This is an important part of keeping our democracy representative.</p>
c01262	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>All other temporary residents are counted in their PERMANENT addresses; please do the same for prison inmates.</p>
c01263	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p>

	<p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Most prisons in Michigan are in rural area of low population.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01264	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>Sorry about poor personalization, however, I clearly and strongly agree with this petition.</p>
c01265	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in. The electoral system has been tainted these last years by gerrymandering and I am living in one of those districts. My district is shaped to keep democrats in on district by TX representatives. My district Congressional is a long ways away. My son is an ex offender living a good life, going to work every day, paying taxes, going to church, having a house to take care of, BUT he cannot vote. The system is not a fair one.</p> <p>_____</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass</p>

	<p>incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation. Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01266	<p>The Census Bureau is supposed to strive for accuracy in its counting. Counting prison inmates using their prison address--rather than their permanent address or address-of-origin skews the count. It amounts to overcounting the rural areas where prisons tend to be located and undercounting everywhere else. Felons have lost a lot of rights--appropriately for the most part--but they shouldn't lose the right to be counted as human beings and citizens, both of which are statuses that they have not relinquished.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01267	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass</p>

	<p>incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>Trying to limit the votes of anyone is just wrong. Can you punish people of color anymore? This needs to stop !</p>
c01268	<p>It's long past time to change the way the Census counts incarcerated people! They should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we learned that the government, together with society, are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can/should be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01269	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the</p>

	<p>injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>Sincerely,</p> <p>PS. I am serious about this. There is no excuse to keep marginalizing a minority group in the 21st century. Please do something!!</p>
c01270	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>Florida continues to do things wrong on so many levels including denying convicted felons the right to vote. We must do better as a state and a country!</p>
c01271	<p>Please do the right thing and stop gerrymandering based on prison population.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p>

	<p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation. Most of these prisoner will return to their communities and need repersentation. Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01272	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Social service appropriations and reimbursements are often based on populations, and social services are more likely to bee needed in the home communities of those in prison than they are in the communities where the prisons are located. The same is true of legislative representation. Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01273	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in. Most sentences being served are less than three years and inmates are often moved several times while they are serving a sentence, so counting them at their permanent address would provide a more valid count.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light. The Census Bureau can be a leader in this societal shift to</p>

	<p>restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation. The majority of prisoners come from low-income, minority communities while most prisons are located in rural areas where most of the population is white and already well represented.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01274	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>The entire issue actually makes no sense because convicted felons cannot vote while incarcerated, and they probably won't have the right to vote once they are released. So,, why should they be counted among the population of the area that surrounds the prison in the first place?</p>
c01275	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p>

	<p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>It is my opinion that convicted criminals are entitled to legislative representation even if incarcerated. Many are tax paying citizens, and their needs as human beings require legislative representation as much or more than free citizens because of their limited ability to directly lobby and petition legislators for redress or pardon.</p>
c01276	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation. Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>My brother was previously in prison for almost 5 years in a different Florida county from his permanent home address and so was not included correctly in the census. It would have made a difference no matter how small in services and benefits for people in county he should have been counted in.</p>
c01277	<p>It's mostly in the pre-written blurb below , but I want you to know this is not just a " click through ". I AM upset with the way the right wingers are abusing the truth . Stretching " truth " , 'till it just doesn't exist at all . If I was on vacation in another state , or , if I was camping in the desert , I wouldn't want that to</p>

	<p>be considered my residence. Prison is no vacation , but neither is it someone's home . We return you now to the pre-written portion of our e-mail</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01278	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>If the Census Bureau counts prisoners as living where the prison is located, census results are unfairly skewed towards the prison locale and against the various locations where the prisoners</p>

	lived prior to incarceration and will most likely return to upon release from prison.
c01279	<p>It's time to change the way the Census refuses to count incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are finally beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation, a constitutional right.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01280	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>Counting prisoners s part of the population where they are imprisoned is a bad distortion of justice. An absolutely disgraceful practice!!</p>
c01281	It's time to change the way the Census counts incarcerated people--they should be counted at

	<p>their permanent address, not the prison they are temporarily located in. Stop cheating the system it is criminal and you know it.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01282	<p>They can't vote in the state of Florida so they should not be included in census. Totally unfair for this practice to continue. End it now!!</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01283	<p>Stop prison gerrymandering! The Census Bureau should count everyone at their permanent residence, including prisoners. Not to do so is a violation of equal representation.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons,</p>

	<p>we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>we demand that you do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01284	<p>Prison gerrymandering must end.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01285	<p>Please do your part to ensure fairness and end this means of gerrymandering. It's unfair to us all.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass</p>

	<p>incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01286	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>I teach in an area with my students whose parents are incarcerated. This would greatly help with families and students.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01287	<p>The Census Bureau is a respected institution that gives our country an important way for citizens and government entities to understand who we are and where we are.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in, a community to which they have no ties.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, I am glad to see that the government and society are beginning to look at the problems of mass</p>

	<p>incarceration in a different light.</p> <p>The Census Bureau should be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please seriously consider this change to count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01288	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>This is particularly egregious in states, such as Arizona, where the vast bulk of the population is located in one or two urban centers. In Arizona neither Phoenix nor Tucson have any major prisons located within their borders, however Pinal County has more than a dozen detention centers of one kind or another and detainees make up some 80% of the "population"!</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01289	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p>

	<p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve. Even the word gerrymandering sounds dishonest. Again it is so hard to believe that it is 240 yrs into our republic and we still say " politics like usual". Let's start really doing the right thing. Also restore all of VRA. The states can't figure out themselves. Some are still very backward. Sorry truth hurts.</p>
c01290	<p>I'm a clinical psychologist with fifteen years of experience working in a prison setting. If you will read the comments below and act on them, you can have a direct effect on recidivism and reduce the costs associated with prison systems.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01291	<p>I fully concur that America's census should reflect the communities from which incarcerated are authentically taken; whereas their plight is contemporaneously inherent to circumstances reflected in said census. Indeed, said census should reflect incarcerated' permanent address, whereas prisons are typically the modal result of said inmates' plight.</p>

	<p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau rightly should lead in reflecting this long-overdue shift of societal America's mindset in addressing societal disparities, e.g., defalcations of 14th Amendment Constitutional rights that result in said notorious rise and profiteering thru said mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing—count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01292	<p>Incarcerated people should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01293	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>The allocation of state and federal resources is based on census tract data, but when prisoners are released they go back home - they do no settle in the often rural areas which depend on prisons for their incomes. When they go home, they need social services, medical services, police protection, libraries, and so on. they may spend only a short time in prison before spending much of the remainder of the census decade at home.</p>

	<p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01294	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>Only a small percentage never leave prison, so it doesn't make sense to count them every 10 years in the census as living in prison. If the census were conducted every year or so it might be different, but the home they'll return to should reflect their census information.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01295	<p>Incarcerated people should be counted at their permanent address, not the prison they are temporarily located in. To do otherwise is a devious distortion of the principle of fair representation, a basically racist scheme to both use people's enforced presence to pad population numbers and to basically rob them of representation in the district where their</p>

	<p>permanent residency is. IT IS TIME FOR THE CENSUS BUREAU TO CHANGE THIS BANANA REPUBLIC PRACTICE!</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01296	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>It's common knowledge that Republican politicians will always try to do with gerrymandering what they cannot accomplish as the ballot box. It's past time to put a stop to this practice of using prison populations to overcome the votes against them.</p>
c01297	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p>

	<p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve. Democracy works when we course correct for integrity.</p>
c01298	<p>This is written and submitted in support of fair and accurate representation for every American citizen and their native communities.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>While this is applaud able, the Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>On the basis of equity and justice, the Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing by counting prisoners at their permanent addresses and give communities the representation they deserve. Posterity will rightly acclaim this decision.</p>
c01299	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their personal manent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons,</p>

	<p>we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01300	<p>Change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau should not distort representation with more for areas where prisons are located while decreasing representation in communities of color, especially.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve. Stop the policies of the new Jim Crow.</p>
c01301	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in. They must be counted in their community of choice - not at the location forced on them by the whim of local, state or federal authorities.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p>

	<p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01302	<p>Incarcerated people should be counted in the communities in which they live, not in their temporary jail. Since the Census also determines where public money will be spent, this gives his practice an unfair financial advantage, besides creating a gerrymandering situation.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political and financial representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01303	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p>

	<p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>Prisons are the tip of the gerrymandering iceberg, but perhaps the easiest to fix. It's time to do that.</p>
c01304	<p>Gerrymandering weakens democracy and faith in representative government. It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01305	<p>THIS IS JUST ANOTHER MANIPULATION OF OUR VOTING LAWS . THE UNITED STATES HAS CEASED TO BE A DEMOCRACY AND THIS IS A HUGE EXAMPLE OF POLITICAL MANIPULATION ESPECIALLY SINCE MOST INMATES ARE PEOPLE OF COLOR. OUR COUNTRY'S MAIN HOPE IS TO SUPPORT A TRUE DEMOCRATIC SYSTEM BY REFUSING TO ALLOW THIS SORT OF OBVIOUS MANIPULATION.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the</p>

	<p>injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01306	<p>Gerrymandering is one of THE biggest problems we have in degrading our democratic system and our federal government should NOT contribute to the problem by misrepresenting where temporarily incarcerated individuals actually live.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01307	<p>Who put you up to this, the cheating republicans?</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p>

	<p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01308	<p>By adhering to this policy you are denying representation of this transient population. Census Bureau</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01309	<p>The purpose of a census is to count people where they voluntarily live...not where they are involuntarily put while in jail. It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in. Counting them where they are incarcerated is a politically motivated action...it's not right, not in the spirit of Democracy AND doesn't even give a true picture of who lives where!</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p>

	<p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01310	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light. Long overdue, but a welcome development nonetheless.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01311	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve. It is time to stop robbing citizens of their rights and their voices.</p>

c01312	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>Frankly, this only makes sense. Doing it any other way would obviously throw the census off for each "home" location. I don't see how a census could really be considered even close to accurate without this being taken into consideration.</p>
c01313	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>Counting people in the wrong address warps democracy by taking representation away from communities with high incarceration rates. Counting people based on their permanent address is necessary to preserve our democracy.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01314	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p>

	<p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light. The Census Bureau must count all people in the U.S.--including non-citizens, children, temporary residents, deployed military, students and non-voters. Most everyone is counted at their permanent residence--incarcerated people are an exception. The Census Bureau cannot ignore prisoners because they must count everyone, and formerly incarcerated people will return home to their community upon release. Therefore, they should be counted there.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01315	<p>It's time to change the way the Census counts incarcerated people in Ohio-- they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01316	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p>

	<p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>Fix it. This is wrong. No good.</p>
c01317	<p>As the sister of an incarcerated sibling, she is not and will never be a resident of the state she is incarcerated in. This is forced occupation and she should be counted in the state she calls home.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01318	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p>

	<p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>We need to have a fair and realistic count of residents and it is not what is being practiced now!</p>
c01319	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>I see this as a slightly complicated issue, but a prisoner is a "guest" in the prison where he is temporarily located. That residence could change at any instance. Perhaps some prisoners will not return to their home address, but that is the only one to which they are attached. There are areas within our state that would be given credit for having a much larger population if prisoners are counted. This does not seem appropriate. I believe their hometown or county is the prisoner's actual place of residence. That's also the place where their tax records will be.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities</p>

	<p>the representation they deserve.</p>
c01320	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>This is another way to participate in the process of giving equal rights to all Americans. Please do your part to effect change.</p>
c01321	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in, for two important reasons.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>There is an additional reason for counting citizens correctly besides the reason that it is not fair</p>

	<p>to prisoners' home district.</p> <p>The census is very important to future generations, and so it is important to identify the correct home address of our population. for instance, my family made important use of early twentieth century census data to find missing relatives.</p>
c01322	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in, unless they are allowed to vote in local and federal elections while housed there.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>Prisoners are human beings and must be treated as such.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01323	<p>Anything that distorts the truth, especially in politics, should not be tolerated by the American people. We have a right to see things as they really are, not a myth perpetrated by manipulation for political gain.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p>

	<p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01324	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their listed permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation. Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01325	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>I agree with the above statements wholeheartedly and would appreciate your efforts to correct</p>

	<p>this anomaly.</p>
c01326	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their PERMANENT ADDRESS to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01327	<p>It's time to stop playing games with the residency of inmates. Do the right thing.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01328	<p>Census Bureau proposes to count incarcerated people in the wrong place once again in 2020 Census, continues to distort democracy</p>

	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01329	<p>It's time to change the way the Census counts incarcerated people. They should be counted at their permanent address, not the prison in which they are temporarily located.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Using the permanent makes sense, and I believe the Census uses it for other transient populations as well. For example, business travellers are counted at their home rather than at a hotel in which they might be staying, even if it is a long stay. If I go to visit friends for a few weeks in another state, I would still be counted as residing in my home. Prisoners should be treated the same way. This is particularly important given the ways and spirit in which Census data is used.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>

c01330	<p>Please change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation. Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01331	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in. Please stop the gerrymandering.... gerrymandering makes the census bureau look more crooked than the criminals and communities themselves.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01332	<p>People living in prison are people too! It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons,</p>

	<p>we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01333	<p>The Census needs to protect Democracy, it must not be allowed to be used as a means of corrupting Democracy.</p> <p>In this time of mass incarceration, it is critical to change the way the Census counts incarcerated people - they should be counted at their "permanent" address, not the prison where they are "temporarily" located.</p> <p>The Census Bureau must count all people in the U.S.--including non-citizens, children, temporary residents, deployed military, students and non-voters. Most everyone is counted at their permanent residence--incarcerated people are an unfair exception.</p> <p>Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted.</p> <p>This is about democracy, not funding. Most government funding formulas are too smart to be fooled by the Census Bureau's prison miscount. When prisons are built in an area, they are built with a specific population maximum. Infrastructure planning for such facilities is done based on the maximum size of the prison. School funding is allocated based on the number of students--not prisoners. Opponents of reversing the current counting mechanism often use this argument and it's a false flag.</p>

	<p>States are acting against this practice and are adopting, have adopted, or attempted to adopt legislation across the country--including New York, Maryland, Delaware and California. Florida's plan for prison gerrymandering was ruled unconstitutional.</p> <p>Prior to the mass incarceration phenomenon, this was not a question of concern for the Census Bureau because it was rare and affected a small number of people. They began inquiring about incarceration in 1990--when the prison population exploded from 137 per 100,000 during the great depression to 470 per 100,000 in 2001 because of the war on drugs and increased tough on crime policing.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities MOST AFFECTED by mass incarceration their just political representation.</p> <p>Please do what is right and proper - count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01334	<p>Please stop treating the people in this state as a bunch of stupid Swamp people. Your way is not the best way nor the right way for the state.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the</p>

	<p>communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01335	<p>It's time to change the way the Census counts incarcerated people. They should be counted at their permanent address, not at the prison where they are temporarily located.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing: count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01336	<p>Change the way the Census counts incarcerated people--they should be counted at their permanent address.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01337	<p>I agree with what is below. Prisoners deserve to be counted from where they are actually from.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at</p>

	<p>their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01338	<p>The standard message is below. But here is my personal two cents: the purpose of representation according to population is a historic and deeply American desire to count each person as one vote to make elections FAIR. It is not to slant or distort the demographics so one party or point of view prevails. This is why prison populations should not be counted as people who "live" in prisons -- they should be counted as people who live where they actually live. It is only fair, and only American. Okay, the rest of the message is the standard one:</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>

c01339	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>As a recent Census worker, it confounded me that it wasn't always done this way! Many Of the people in prison are NOT there for 10 years! That adds to the harm to specific communities and gives that representation to the wrong (wholly prison-based cities/towns) areas! This needs to be corrected and the census is coming very soon!</p>
c01340	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>

	<p>P.S. Everyone is aware of the fiscal mess Illinois is in because of unfunded pensions and a state constitution that doesn't allow lawmakers to change benefit levels. We need all the federal dollars we're entitled to, which makes this issue critical.</p>
c01341	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve -- not to mention better, less expensive and safer facilities.</p>
c01342	<p>I am a genealogist. For my research and to reflect current cultural trends, census records should include two (2) types of addresses:</p> <ol style="list-style-type: none"> 1) "local" or "current" 2) "home" or "permanent" <p>This practice will enable me and my fellow genealogists to find and track our subjects in our research. Coincidentally, it will also allow a more accurate representation for voting districts and prevent insidious and perhaps nefariously intended gerrymandering for prison locales which are typically in rural, less populated districts. Please correct this injustice to the urban areas.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p>

	<p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01343	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>This needs to be done to ensure that all communities are treated as fairly as possible.</p>
c01344	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities</p>

	the representation they deserve. Y
c01345	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in. This is NOT their permanent address. They are living sentient beings! Start treating them like humans - with rights - and not animals! Maybe they'll even start living up to society's standards.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01346	<p>A true democracy requires accurate counting of persons in each area.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01347	It's past time to change the way the Census counts incarcerated people--they should be counted

	<p>at their permanent home address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent home address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01348	<p>One of my brothers was imprisoned for over year a few years ago for a non-violent drug crime. Please do the right thing and make sure people like him are counted correctly based on their actual address.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01349	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in. There are many reasons why this is important. We want inmates when released to become useful productive citizens. They should have as much contact with their neighbors and public officials so that they can play</p>

	<p>a useful part when released. They should not be listed as members of a district whee they ae not known and never will be known.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01350	<p>Cheating is cheating. Set an example for everyone by NOT misrepresenting the residency of our incarcerated citizens.</p> <p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation. Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p>
c01351	<p>It's time to change the way the Census counts incarcerated people--they should be counted at their permanent address, not the prison they are temporarily located in.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons,</p>

	<p>we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau can be a leader in this societal shift to restore the rights and correct the injustices brought on by the rise of mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing--count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>Stop counting prisoners as living in the location of their incarceration. It deprives the citizens who live in the areas of their permanent address of proper representation. This would imply that the areas where prisons are located get over representation.</p>
c01352	<p>I fully concur that America's census should reflect the communities from which incarcerated people are authentically taken, whereas their plight is contemporaneously inherent to local circumstances reflected in said census. Indeed, said census should reflect incarcerated people's permanent address, not those of prisons, whereas prisons are typically the modal societal, political or economic result of said inmates' plight.</p> <p>With the recent announcement that the Department of Justice will no longer use private prisons, we see that the government and society are beginning to look at the problems of mass incarceration in a different light.</p> <p>The Census Bureau rightly should lead in reflecting this long-overdue shift of societal America's mindset in addressing societal disparities, e.g., defalcations of 14th Amendment Constitutional rights that result in said notorious rise and profiteering thru said mass incarceration.</p> <p>The Census Bureau can count incarcerated people at their permanent address to give the communities most affected by mass incarceration their proper political representation.</p> <p>Please do the right thing—count prisoners at their permanent addresses and give communities the representation they deserve.</p> <p>TO LIFE'S GARDEN'S TENDING</p>

	<p>Beleaguering good of every soul are fiends of myriad means; Each with as many a nefarious vice, robed as its friends; Gouging usurious tolls of time's lean purse, vexing age's pains, Bane of all lives' trek's forge to Wholesome's ends.</p> <p>Immortal are villainies and their schemes' seek of boon jolly, That supplants naïf's and sages' gifts of time's seasoned trim With delusions that good's but a jest; of worth, equally folly; That their goal is but a journey for greed—joy at every whim!</p> <p>Thus spins its mockeries' volley: vexing good before it's done, Undoing plies of its why, as a gnat or bee to the aimer's eye; Shaming virtue by evil's buy, ending life's win before it's won: Make it property to all; so owned by none, nor souls who'd fly.</p> <p>Tend well life's garden of Wholesome's deeds: Those who don't sew perfidy, sloth, envy, or vanity's greed—evil's nettling weeds.</p>
c01353	<p>Although often unfair in and of itself, prison inmates are barred from voting in most states, they are however also still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This ill-advised and unjust practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01354	<p>While incarcerated people are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>

c01355	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>Please be accurate, correct, and consistent. Include prisoners in the district of their permanent address only if they are able to vote.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01356	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated. This shocks and troubles me: I cannot really say that I live in a democratic country anymore, now that we have taken to warehousing such huge numbers of human beings for victimless crimes.</p> <p>The practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home. I presume that is its purposes, as it does not fit the logic of any other form of government headcounting I know.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts--they are people with homes, and they are citizens with districts!-- and end prison-based gerrymandering nationally.</p>
c01357	<p>Stop gerrymandering based on prison populations.</p> <p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>Stop gerrymandering based on prison populations.</p>

c01358	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>Additionally, many previously incarcerated people utilize a permanent address but do not actually live there. This is abused more often than not, resulting in broken relationships and destroyed childhoods. The cost of this burden is felt through every aspect of daily life for too many people. Please increase mandatory tracking by requiring frequent updates to their permanent record that properly verify where they really live, not just where they say they live on the census form. They will use anyplace, such as academic gardening nurseries, to avoid reporting their true whereabouts to the census bureau.</p>
c01359	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally. This is the only fair way to count these individuals. In a democratic society we need to insure fairness wherever possible</p>
c01360	<p>Counting prisoners detained in Arizona skews the population figures for setting House of Representative districts. They are domiciled in Arizona not residents. Arizona is the premiere locale of the private prison industrial complex. Do right by the state.</p> <p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>

c01361	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>If a new Congress or the Supreme Court were to invalidate the undemocratic practice of denying the vote to prisoners and felons, small communities where these inmates are imprisoned could find that the prisoners in the local prison can swing elections in unexpected ways.</p>
c01362	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally. All forms of gerrymandering must end. It is subversion of the Democratic process.</p>
c01363	<p>It is important for the census to show the true demographics of our population. Listing the address that is a prison doesn't accurately reflect the truth.</p> <p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01364	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p>

	<p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>There is nothing fair about this practice. Please change it before the election in NOvember.</p>
c01365	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally. Gerrymandering is an insidious attempt to shift political power. It is time to stop.</p>
c01366	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>This is unfair to everyone because the prisoners are not allowed to vote, but they are counted in another district whose representatives do not reflect their needs, concerns whether or not they are incarcerated. And it gives unfair representation to a district that is only too happy to have them as visitors and for whom they will do little. To put it another way, suppose there's a huge cold storage warehouse in the asparagus growing region and it's mostly used to store apples. Does it make sense to give the asparagus farmers more farm subsidies based on apple storage.</p>
c01367	<p>IF YOU CANNOT DO YOUR JOB CORRECTLYYOU NEED TO RESIGN !!! THIS SYSTEM MUST WORK FOR THE PEOPLE.....NOT POLITICIANS !!</p> <p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p>

	I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.
c01368	<p>I am a census enumerator having worked 6 of the 7 phases of the process in 2010. Please fix this travesty. All U. S. citizens should be represented at their permanent address except perpetrator's of a capital crime. Use home addresses for prisoners!</p> <p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01369	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home. I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>thank you for your time and consideration of this matter.</p>
c01370	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>Failure to properly count people is unfair and against your own rules.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01371	Make this right.

	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01372	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>This practice was instigated with the height of hypocrisy and without responsibility or integrity.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>Please act in the best interests of the democratic process.</p>
c01373	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>This practice misrepresents the census of the voting public and distorts democracy!</p>
c01374	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p>

	<p>Strange census practices are, unfortunately, not unique to this situation. Perhaps the most infamous fraction in American history is 3/5. We suffered a devastating civil war to correct this abomination. Correcting the current injustice should be considerably easier.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01375	<p>Residents means permanent residents, not prison domicile.</p> <p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01376	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power and affects statistics regarding income and housing of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts from which most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01377	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally. This is especially impactful because of the extremely large prison population. It affects an area for the ten years until the next census even though any given inmate may be in a particular prison for only a few months. This practice does not make sense.</p>
c01378	<p>While prison inmates are barred from voting in most states, they are still typically counted as</p>

	<p>"residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>There has been much debate about voter fraud, but this seems to be a form of fraud, if nonvoters, living in these districts not of their own choice, are counted to give voting power to the surrounding residents.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01379	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>Prison gerrymandering deprives home districts, typically urban centers, and neighborhoods with a large population of people of color, of vital representation and gives areas where prisons are housed, typically rural and white, disproportionate representation. See the case of Anamosa, Iowa, New York state, and Wyoming for some of the most egregious examples. This is ridiculous.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home. So wrong.</p> <p>Myself and wife strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally. This needs to stop.</p>
c01380	<p>In Wisconsin, the ratio of blacks incarcerated vs whites is tremendously lopsided. Add the fact that they are not counted in their actual is a double punishment they don't count in the place they call home.</p> <p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end</p>

	<p>prison-based gerrymandering nationally.</p>
c01381	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally. It is the RIGHT thing to do, and you know it!!!</p>
c01382	<p>PLEASE COUNT PRISON INMATES IN THEIR HOMES WHEREEVER THOSE HOMES ARE LOCATED; NOT IN THE PRISONS WHERE THEY ARE INCARCERATED. THANK YOU.</p> <p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01383	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This makes no sense whatsoever since felons cannot vote. They are transients whose loyalty and interests are in their home communities. This is really political bullshit.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01384	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>

	<p>This proposal sounds perfectly reasonable to me and I hope you will act upon it soon.</p>
c01385	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to use home addresses for prisoners!</p>
c01386	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally - end the political expediency of incarnation as the only positive benefit of hosting a prison in any area.</p>
c01387	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>Please end this unfair practice.</p>
c01388	<p>This practice is undemocratic.</p> <p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p>

	<p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01389	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>Taking away their voting ability is bad enough don't let their presence in a prison community enable that community to have more census counts than they are truly entitled to. Since the census is only done once every 10 years and may of those incarcerated for crimes will be released during that 10 year period, it allows a misrepresentation of where people reside. Since census information is used to control funding for so many things this can have a major impact.</p> <p>Thank you for considering my opinion.</p>
c01390	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I very strongly urge the Census Bureau to count incarcerated persons in their home districts and to end prison-based gerrymandering nationally.</p>
c01391	<p>The prisoners need to be counted according to their HOME addresses. This is the only way to help communities and do an accurate count. This is an egregious distortion and wrong to count people as residents of the prison district.</p> <p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end</p>

	<p>prison-based gerrymandering nationally.</p>

c01408	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home. This practice fits in neatly into the program of systematic theft of power from people of color by way of every so-called civilizing institution in this nation; including zoning, voting rights, banking, policing and the judiciary, to name but a few.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01409	<p>I am a genealogist. For my research and to reflect current cultural gt tends, census records should include two (2) types of addresses: 1) "local" or "current"</p>

	<p>2) "home" or "permanent"</p> <p>This practice will enable me and my fellow genealogists to find and track our subjects in our research. Coincidentally, it will also allow a more accurate representation for voting districts and prevent insidious and perhaps nefariously intended gerrymandering for prison locals which are typically in rural, less populated districts. Please correct this injustice to the urban areas.</p> <p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01410	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home. The result violates the rule of one person/one vote.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p>
c01411	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>It is vital that you discontinue this practice.</p>
c01412	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and</p>

diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.

I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.

Prison gerrymandering is a violation of equal representation, plain and simple. Most everyone is counted at their permanent residence--incarcerated people are an exception. Formerly incarcerated people will return home to their community upon release. Therefore, they should be counted there.

Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months.

While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted.

This is about democracy, not funding. Most government funding formulas are too smart to be fooled by the Census Bureau's prison miscount. When prisons are built in an area, they are built with a specific population maximum. Infrastructure planning for such facilities is done based on the maximum size of the prison. School funding is allocated based on the number of students--not prisoners. Opponents of reversing the current counting mechanism often use this argument and it's a false flag.

States are acting against this practice and are adopting, have adopted, or attempted to adopt legislation across the country--including New York, Maryland, Delaware and California. Florida's plan for prison gerrymandering was ruled unconstitutional.

Prior to the mass incarceration phenomenon, this was not a question of concern for the Census Bureau because it was rare and affected a small number of people. They began inquiring about incarceration in 1990--when the prison population exploded from 137 per 100,000 during the great depression to 470 per 100,000 in 2001 because of the war on drugs and increased tough on crime policing.

c01413	<p>While prison inmates are barred from voting in most states, they are still typically counted as "residents" of the district where they are being incarcerated.</p> <p>This practice artificially inflates the political power of what are mostly rural white districts and diminishes the power of the mainly urban, Black and Latino districts that most inmates call home.</p> <p>I strongly urge the Census Bureau to count incarcerated persons in their home districts and end prison-based gerrymandering nationally.</p> <p>In 2000 I was a census worker in _____, Montana. We all had specific areas to cover & everyone had to be contacted. If they weren't home, we left a phone number so they could contact us. We had one night where we counted all the homeless people we could find. We also visited a drop in center for those who had mental health problems & interviewed many who had no permanent address. We went to a _____ colony & were given the information we needed to count the entire colony. At no time was anything mentioned about those who were incarcerated & the need to interview & include them in the census count. We have the _____ Prison here & our _____ County jail is seriously overcrowded. None of those people were included in our count so in the whole State of Montana, that excluded hundreds of residents. This issue needs your attention & needs to be addressed so that each State has a more accurate count of its citizens.</p>
c01414	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice. Furthermore we need to close down private prisons immediately, they are in business to make a profit on peoples pain and suffering. We need to rehabilitate prisoners not abuse them.</p>
c01415	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census. Elections at all levels are being skewed by this practice and it MUST stop.</p>

	<p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with. This is a practice that has grown rampant, especially with the enormous expansion of privately run prisons.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01416	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. The Census Bureau should change this practice. Attica and Sing Sing are not NYC.</p>
c01420	<p>I just became aware of this shameful and shady procedure for counting our citizens. I consider myself to be fairly well informed, so I am quite sure that I am not in the minority of Americans as far as this is concerned.</p> <p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the</p>

	<p>prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01421	<p>Counting incarcerated people at prisons for the 2020 Census would perpetuate an imbalance in the US.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01422	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice. This redistricting does not allow any power to the people but sku's the numbers, once again to benefit the political tricksters. God, we're tired of this nonsense!</p>
c01423	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p>

	<p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice. Because Incarcerated people will eventually go home and demand services there, and the census should reflect this necessity.</p>
c01424	<p>I am strongly in support of having incarcerated people counted on the U.S. Census in the homes their permanent residences, not the prisons. Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community. Even when their living situation is tenuous --- and in some cases, it is due to problems associated with their being imprisoned, such as loss of jobs and a lack of services for them for housing, the counting should NOT be at the prison address.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with. I am well aware that prisons are often built in areas that are primarily White, whereas vast numbers of prisoners are people of color. This occurrence spawns instead of strives to rectify the deepseated problems we have in society regarding race segregation and socioeconomic dividing lines.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01425	<p>Please end the inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p>

	<p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01426	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community. It is essential that they be recorded as a member of a community they have ties to, rather than at a prison in a community where they do not. It misrepresents their communities and does not accurately reflect our population, particularly since our prison population has grown so dramatically.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01427	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>This is a form of injustice to the incarcerated person, their community, and to their family .</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01428	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return</p>

	<p>after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p> <p>PLEASE REPAIR THIS POLICY AS QUICKLY AS POSSIBLE AND MAKE SURE ALL PRISONERS ARE COUNTED IN THEIR TRUE HOMES. I WORK WITH THE FORMERLY INCARCERATED. I ALWAYS COUNSEL THEM TO REREGISTER IN THEIR OWN COMMUNITIES WHEN THEY ARE RELEASED, BUT IT'S AN ADDITIONAL BURDEN TO THEIR ALREADY FRACTURED LIVES. DO THE RIGHT THING AND STOP THIS MEANINGLESS CENSUS PRACTICE SO THESE FOLKS ARE COUNTED IN THEIR HOME COMMUNITIES - NOT IN THEIR JAILS.</p>
c01429	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p> <p>P.S. THIS SHOULD END NOW. IT REMINDS ME OF THE DISENFRANCHISEMENT OF OUR SLAVE POPULATION NOT THAT MANY YEARS AGO.</p>
c01447	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>

	<p>It's a violation of equal representation, plain and simple. Click through to the next page to submit your comment now, or read on for more information.</p> <p>Here are some of the important facts about this issue:</p> <p>The Census Bureau must count all people in the U.S.--including non-citizens, children, temporary residents, deployed military, students and non-voters. Most everyone is counted at their permanent residence--incarcerated people are an exception.</p> <p>The Census Bureau cannot ignore prisoners because they must count everyone, and formerly incarcerated people will return home to their community upon release. Therefore, they should be counted there.</p> <p>Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted.</p> <p>This is about democracy, not funding. Most government funding formulas are too smart to be fooled by the Census Bureau's prison miscount. When prisons are built in an area, they are built with a specific population maximum. Infrastructure planning for such facilities is done based on the maximum size of the prison. School funding is allocated based on the number of students--not prisoners. Opponents of reversing the current counting mechanism often use this argument and it's a false flag.</p> <p>States are acting against this practice and are adopting, have adopted, or attempted to adopt legislation across the country--including New York, Maryland, Delaware and California. Florida's plan for prison gerrymandering was ruled unconstitutional.</p> <p>Prior to the mass incarceration phenomenon, this was not a question of concern for the Census Bureau because it was rare and affected a small number of people. They began inquiring about incarceration in 1990--when the prison population exploded from 137 per 100,000 during the great depression to 470 per 100,000 in 2001 because of the war on drugs and increased tough on crime policing.</p>
c01448	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return</p>

	<p>after their period of temporary incarceration to rejoin their family and community. It is also likely to be an area with attitudes more representative of the prisoners' true political leanings than is the area where they are temporarily being house.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01449	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census. Why have a census, when people are arbitrarily counted at addresses, which are not real addresses.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with. This could be regarded as malfeasance.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01450	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice. I'm sure the for-profit prisons benefit from this.</p>
c01451	<p>Our census does not represent the true count because the prison populations does not get</p>

	<p>counted in their home states. Therefore it is not accurate.</p> <p>Therefore, please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community. By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01452	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice. This is significant and important.</p>
c01453	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this</p>

	<p>practice. if these folks are being cheated of their right to vote our democracy is hurt. Let all of us vote.</p>
c01454	<p>Formerly incarcerated people will return home to their communities upon release. Therefore, they should be counted there.</p> <p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01455	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. The Census Bureau should change this practice.</p> <p>Common sense and fair play should dictate the cessation of this grossly unfair practice.</p>
c01456	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p>

	<p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>As one who conducts genealogical research and relies on the decennial for invaluable information it is inconceivable that incarcerated people aren't allowed to be counted at their permanent address. You might be surprised how many citizens of the United States of America conduct genealogical research and how many of these have members of their families who are incarcerated. Be proactive and set the census correct for eliminating distortion of political representation. and helping people conducting genealogical research.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01457	<p>It is time to stop prison gerrymandering, which is nothing more than a means of depriving people of their voice.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01458	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to and cannot interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this</p>

	practice.
c01459	<p>This counting of prisoners as being permanent residents in the facility they are detained at is a travesty designed to minimize the districts where their real homes are and as well to give more influence to rural areas besotted with right wingers where anti-government sentiment is strongest, where most are racist Bible thumpers who don't have the wherewithal to realize much of this hate is equally directed at them to marginalize them.</p> <p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01460	<p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01461	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p>

	<p>The current procedure often results in shifting political representation from communities of color to rural white areas This results in skewed representation. The Census Bureau should change this practice.</p>
c01462	<p>Please end the highly inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01463	<p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p> <p>Since prisoners seldom stay very long in one facility, their home address is a more accurate picture of their community, and those sites wher prisons are built are usually not urban centers where accurate representation for for the needs of our cities is critical.</p>
c01464	<p>This is important to citizens.</p> <p>Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return</p>

	<p>after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01465	<p>I am a retired professor of _____. When I taught at the University of _____ I specialized in the study of incarceration. I believe the current Census Bureau policy regarding prison populations produces a biased description of the distribution of the population within the states. Please end the woefully inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01466	<p>We need an accurate census!</p> <p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01467	<p>Please end the inaccurate process of counting incarcerated people at prisons for the 2020 Census.</p>

	<p>Incarcerated people should be counted at their permanent address. This is where they will return after their period of temporary incarceration to rejoin their family and community.</p> <p>By not counting them there, the Census Bureau is aiding a transfer of political power from the prisoners home community to a community they do not belong to or interact with.</p> <p>The current procedure often results in shifting political representation from communities of color, to rural white areas to the detriment of all involved. The Census Bureau should change this practice.</p>
c01468	<p>FAO - United States Census Bureau:</p> <p>I strongly urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01469	<p>As a citizen concerned that the civil rights of all people be guaranteed, I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their</p>

	<p>incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address. I await your action in this matter of justice, to incarcerated persons and their home districts.</p>
c01470	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p> <p>We have enough gerrymandering.</p>
c01471	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences</p>

	<p>-- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p> <p>Stop an inaccurate process.</p>
c01472	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address. It is ridiculous to inflate the census of States that have high prison populations.</p>
c01473	<p>Although this is a firm letter, I wholeheartedly stand behind its goals and purpose: I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences</p>

	<p>-- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01474	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>Prisons are mostly located in rural communities. This provides a distorted value for population and demographics. Also, some states are allowing former incarcerated people to vote once they have completed their obligations to society.</p> <p>Therefore, I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01475	<p>Counting incarcerated people as residing at the facilities where they are incarcerated, as the Census Bureau does now, can cause gross distortions in voting districts and highly unbalanced representation in local and county districts. This has happened, for instance, in Anamosa, IA, and in Chautauqua, Livingston, Oneida, Madison, and St. Lawrence counties in New York State, and many other examples.</p> <p>There is no need for this, or for the municipalities or counties to attempt to compensate for the Census Bureau's method.</p>

	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>In addition, incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I also question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as military personnel deployed overseas or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01476	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year. They will, however, ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned populations such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01477	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p>

	<p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address. Just as you would any other individual temporarily away from home.</p>
c01478	<p>I urge the Census Bureau to count incarcerated people at their home addresses, rather than at the facilities where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While incarcerated persons are shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population, such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>

	<p>I realize and appreciate that Gov. Paterson already took care of this problem in NYS and hope that it will extend to all states.</p>
c01484	<p>It is critical that each community be fairly represented in the census. This does not occur when the incarcerated are counted in their prison location. It is the community they return to that needs the roads, police, utilities, etc. that the census points to.</p> <p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01485	<p>I urge the Census Bureau to correct their counting method with regard to incarcerated people. To properly represent that prisoner to his neighborhood or home address, rather than at the prison locale where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>Instead of allowing a prisoner's temporary presence in another community to skew that community's political representation, their home community should be credited . After all the majority of prisoners will ultimately return to their families in their home communities. These permanent residences -- where they are part of the community -- are where the resources and solutions should be implemented. Census data is used in social assistance and political representation, each critical to the allocation of governmental resources.</p>

	<p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01486	<p>There are many ways for voting suppression to take place. Gerrymandering based on prison populations is inherently unfair.</p> <p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01487	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated</p>

	<p>persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p> <p>This will require only a simple program in your computers to rectify this serious problem.</p>
c01488	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or college students. This causes a racial bias in the census, due to the overwhelming ratio of people of color among inmates.</p> <p>Census information is used to allocate funding for programs and representation in government, neither of which is relevant to the incarcerated people at their temporary location but which could be critical once they are released.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01489	<p>Please do not let U.S. prisoners be misrepresented. They have lost their voting privileges because they are incarcerated. Most of them will one day regain their right to vote. By counting their prison residency as their home, they have no representation. If they are counted in their home area, their families will be better served.</p> <p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not</p>

	<p>permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01490	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p> <p>WHEN INCARCERATED CITIZENS ARE RELEASED THEY AREN'T STAYING IN THE TOWNS WHERE THEY WERE INCARCERATED - THEY ARE RETURNING TO COMMUNITIES THAT HAVE FEW RESOURCES TO HELP THEM RE-INTEGRATE INTO SOCIETY. THESE UNDERSERVED COMMUNITIES NEED THE RESOURCES THAT CAN ONLY BE PROVIDED IF THEY ARE PROPERLY COUNTED. PLEASE MAKE SURE THAT OUR PREVIOUSLY IMPRISONED CITIZENS ARE GIVEN A FIGHTING CHANCE OF BECOMING GOOD CITIZENS. PLEASE MAKE SURE THESE PEOPLE ARE COUNTED IN</p>

	<p>THE COMMUNITIES WHERE THEY HAVE THEIR PERMANENT ADDRESSES, NOT THEIR PRISON ADDRESSES.</p>
<p>c01491</p>	<p>THIS IS SO STUPID..... WHAT KIND OF GOVERNMENT DO WE HAVE ??? ARE WE A THIRD WORLD NOW ??</p> <p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
<p>c01492</p>	<p>Counting citizens accurately is critical to fair elections and apportionment of government services. Counting prisoners where they are incarcerated distorts these vital government functions.</p> <p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p>

	<p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01493	<p>Too many people are in prison in any case, but counting them as part of the community surrounding the prison is a fraudulent practice. The Census Bureau should count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year. While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences, their homes, is where they should be counted. You have plenty of time to change your methods before the next census in 2020.</p>
c01494	<p>Please consider the people of Kentucky ahead of the corporate donors and lobbyists. We need realistic counts of the citizens.</p> <p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p> <p>There would seem to be no good reason for this practice except the additional funding an area could receive based on these bogus numbers. Please stop this practice so that any financial gains might get to where they really belong.</p>
c01512	<p>Suggestion for a statistical correction to the current method of counting US residents: count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day. The existing method is simply incorrect, and inconsistent with other standards about temporary residences.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p>

	<p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01513	<p>I teach in an urban school district in California that has a high percentage of it's population behind bars. They are still connected to their home- their permanent address. I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01514	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01515	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of</p>

	<p>their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address. Currently, the US Census Bureau is counting incarcerated people incorrectly and the implications for our democracy are huge--over 2 million people misrepresented in districts they have no connection to.</p> <p>Incarcerated people are being counted in the wrong places--the place of their detainment at the time of the census, rather than their permanent address</p> <p>This practice, known as prison gerrymandering is a problem for a number of reasons. Prison gerrymandering robs home districts, typically urban centers, and neighborhoods with a large population of people of color, of vital representation and gives areas where prisons are housed, typically rural and white, disproportionate representation. See the case of Anamosa, Iowa, New York state, and Wyoming for some of the most egregious examples.</p> <p>It's a violation of equal representation, plain and simple.</p>
c01516	<p>As a Florida resident I am particularly concerned with this issue.</p> <p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated</p>

	<p>persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01517	<p>If incarcerated people are going to be counted where they are incarcerated they should be allowed to vote in all elections while they are incarcerated there.</p> <p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01518	<p>Please accurately reflect the population distribution in Colorado.</p> <p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>While an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration, they will ultimately return to their home communities. These permanent residences -- where they are part of the community -- are where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated</p>

	<p>persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Please count incarcerated people as residents of their home address.</p>
c01519	<p>As a mental health counselor for the past 27 years I have worked with many families affected by addiction which resulted in incarceration. These are usually short incarcerations and since we live in a small rural area, those incarcerated are often sent out of state but they return home to their families in our community when they have serve their sentence. Because of this fact, I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>In our U.S. penal system, incarcerated persons are often moved between facilities, making their stay temporary, not permanent. Many inmates are transferred between facilities multiple times a year.</p> <p>Often an incarcerated person is shuffled throughout a number of facilities over the course of their incarceration but they will ultimately return to their families and home communities. These are their permanent residences -- where they are part of the community -- and where they should be counted.</p> <p>I question the difference the Census has made between the transient nature of incarcerated persons and other, similarly positioned population such as deployed overseas military or juveniles staying in residential treatment centers. It seems to be a distinction without a difference.</p> <p>Therefore, I request that the Census Bureau count incarcerated people as residents of their home address. Thank you.</p>
c01520	<p>I urge the Census Bureau to count incarcerated people at their home address, rather than at the facility where they are incarcerated on Census day.</p> <p>Incarcerated persons are often moved between facilities, making their stay temporary, not permanent. 	<p>Please count incarcerated people as residents of their home address.</p>
c01527	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>This a form of gerrymandering and the US Census Bureau's work is too important to be distort by this inaccurate accounting method. By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation. Your work is too important to do otherwise.</p>
c01528	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address. This practice seems to change local populations in ways that alter voting outcomes, and benefits certain groups over others,not a democratic system.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01529	<p>It makes so much sense to count people where they come from, where people are working to send them some money, to maintain a home for them on return, to recover from the damage their crimes did.</p> <p>They are not part of the community where the prison is, and that community is already represented by the citizens that operate and maintain it.</p> <p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the</p>

	<p>incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01530	<p>Prisoners should be counted by their previous resident addresses, just as college students are counted by their permanent resident addresses (not temporary college addresses). I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01531	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in. Typically, prisons are in rural areas, which thereby gain political representation, while urban areas from which many of the prisoners come lose representation. And of course the prisoners cannot, in almost all states, vote while incarcerated, so those who can vote in the prisoner-augmented districts have enhanced political power.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation. Please count prisoners at their permanent address.</p>
c01532	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p>

	<p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>This practice has skewed our elections and the census for far too long and it is past time to end the racially-motivated gerrymandering.</p>
c01533	<p>I'm very concerned over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in. This allows the temporary "home" jurisdiction to count more people than it has on a permanent basis, which seems to be unfair and detrimental to the permanent home jurisdiction.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01534	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>Thank you for understanding the merits of this recommendation.</p>
c01535	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p>

	<p>This all seems to me to be one of the many facets of the systemic racism we find all over the U.S. that echoes all of the older ways of oppressing people of color and of the lower classes, going through time from the Black Laws of the post -civil war South, to Jim Crow segregation, red-lining on home and business loans, and now, racial profiling and white police on black citizen crime. Let's get back to at least making an attempt towards some simulacrum of equality for all. Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01536	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>More details of why current practice is not a good one: The Census Bureau must count all people in the U.S.--including non-citizens, children, temporary residents, deployed military, students and non-voters. Most everyone is counted at their permanent residence--incarcerated people are an exception. The Census Bureau cannot ignore prisoners because they must count everyone, and formerly incarcerated people will return home to their community upon release. Therefore, they should be counted there. Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted. This is about democracy, not funding. Most government funding formulas are too smart to be fooled by the Census Bureau's prison miscount. When prisons are built in an area, they are built with a specific population maximum. Infrastructure planning for such facilities is done based on the maximum size of the prison. School funding is allocated based on the number of students--</p>

	<p>not prisoners. Opponents of reversing the current counting mechanism often use this argument and it's a false flag.</p> <p>States are acting against this practice and are adopting, have adopted, or attempted to adopt legislation across the country--including New York, Maryland, Delaware and California. Florida's plan for prison gerrymandering was ruled unconstitutional.</p> <p>Prior to the mass incarceration phenomenon, this was not a question of concern for the Census Bureau because it was rare and affected a small number of people. They began inquiring about incarceration in 1990--when the prison population exploded from 137 per 100,000 during the great depression to 470 per 100,000 in 2001 because of the war on drugs and increased tough on crime policing.</p>
c01537	<p>We utilize our census information for so many important purposes that it is essential that the count be as accurate as possible.</p> <p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01538	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>If someone was on an extended business trip or vacation and happened to be in a hotel or Airbnb home during the date of the census count would they be counted at that address instead of their permanent one? Those in temporary residence, whether jail, detention centers, or on a business trip should be counted in the census at their permanent home address.</p>

	<p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01539	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>I urge you to count incarcerated persons at their home communities instead of the place of their imprisonment, which evidently changes frequently and fundamentally has no relevance to these persons' lives or to the integrity of the census records and the democratic principles whose purpose you serve.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01540	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in. This practice counts inmates as being members of communities where they have no contacts, no rights, and are not willingly present.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01541	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p>

	<p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>This practice increases inequality and under-representation of people of color whose communities are greatly impacted by mass incarceration.</p>
c01542	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>Deployed military personnel are not counted on ships or in combat zones; why should this be any different.</p>
c01543	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>At present time any person in the military of the United States of America is counted at their permanent address and not where they are stationed. It only make since for incarcerated also be counted at their permanent address. Otherwise, military personnel and their families should be counted where they are stationed.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01544	<p>When it comes to a citizens voting locations the actual permanent address should always be used; as it is when a citizen posts his or her income to the IRS with their permanent home address.</p>

	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01545	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>This practice is unfair and unjust. Along with the other gerrymandering that goes on in our state I feel it's time to set things right.</p>
c01546	<p>It's time to stop gerrymandering the incarcerated in our nation. U.S. Census Bureau 2020 residency rules—</p> <p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate</p>

	<p>representation.</p>
c01547	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address. This is a matter of democracy, not funding.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01548	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>This is reprehensible!!! Why do YOU think that you can just shuffle HUMAN BEINGS, where ever You DAMNED well please!?! KEEP THEM IN THEIR HOME STATES!!! AT LEAST THEY HAVE FAMILY TIES IN THEIR HOME STATE! THIS MAKES IT POSSIBLE FOR THEM TO HAVE FAMILY CONNECTIONS!</p>
c01549	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>

	<p>Government workers are typically lazy and don't take pride in their work. Hire some private contractors to do the important stuff.</p>
c01550	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>This contributes to typically smaller rural communities being over represented.</p>
c01551	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation. If the incarcerated person does not have a home address, use the address of a current family member in the appropriate area/district.</p>
c01552	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>

	<p>Finally, Please help bring back the Democracy and fairness and justice we used to have in this country.</p>
c01553	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation. It just doesn't make sense.</p>
c01554	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>This is especially true in Wisconsin.</p> <p>Do the right thing and please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01555	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>I live in Florida where the state puts up barriers to reinstatement of voting rights to ex-felons.</p>

	<p>Whether those without voting rights should be counted in establishing legislative districts is an additional issue. At least reverse this policy that skews the census.</p>
c01556	<p>So many men are so wrongly jailed-If anyone need vote to its the incarcerated! What harm can it do?</p> <p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01557	<p>Only permanent addresses should be used for the census. people who travel often report their home address even though they may be gone for a month or two at a time so why should a prisoner not claim his permanent home address on the census when he or she will only be in any given prison or jail for less than a year. U.S. Census Bureau 2020 residency rules—</p> <p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01558	<p>if prisoners are allowed to vote it should be at the address from which they were arrested and incarcerated NOT the "assigned residence*" that their prison sentence dictates. Any other voting address is false artificial and should be illegal.</p> <p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p>

	<p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01559	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>I take this issue personally because I am a veteran as well as an ex-felon and spent 34 months in prison in a state far from my home-just as I did in the Army in 1970's. In my opinion even prisoners should be able to vote because by using our draconian drug laws we have disenfranchised an entire generation and this makes it harder for us to get rid of those draconian laws. I'm really insulted that SCOTUS has failed to see the importance of the 9th Amendment as protection from these attempts to legislate morals. Do your part to help return these prisoners to productive membership in our society.</p>
c01560	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address. It isn't fair to continue this practice. It inaccurately represents the American people.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01561	<p>I only makes sense to count the incarcerated at their PERMANENT address.</p> <p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home</p>

	<p>address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01562	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation. Without action the problem only gets worse.</p>
c01563	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in. Surely the right to vote is fundamental to a democracy. This systemic practice deprives many prisoners of that right, and must be changed.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01564	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p>

	<p>Please end this inaccurate and wrong practice so that communities have accurate representation. this is wrong and you know it. Stop</p>
c01565	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>I feel that this form of gerrymandering has a corrosive effect on the trust the American people have with the government. Every community must feel their representatives are more focused on the people than the party.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01566	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>This is so important to end this practice as it infringes on all our freedoms.</p>
c01567	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>Since they actually live in their home addresses, this seems the correct place for them to receive services, etc., and should be counted as their homes.</p> <p>By miscounting people at prisons, political representation is being removed from the</p>

	<p>incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01568	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>Use prisoners actual home address, not a prison address. This practice provided false data for census takers .</p>
c01569	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation in the government.</p>
c01570	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate Representation</p>

	<p>With a small state population like Alaska counting inmates as residing where they are incarcerated skews the census. Please end this practice.</p>
c01571	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>I believe people in prisons and jails are also counted for federal anti-poverty programs, etc. as inhabitants of the places where they are incarcerated. The areas they come from, usually poor, lose these funds they need. The often mostly rural white areas where far too many of U.S. prisons are located get an undeserved windfall.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01572	<p>We have enough problems with the perception of voters that their votes do not count.</p> <p>Please correct this inequity in counting the population in any given district.</p> <p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01573	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not</p>

	<p>represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>Best, hopefully this will be accomplished before the next census.</p>
c01574	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>With very few exceptions, prisoners cannot vote and their opinions and interests are not represented by elected officials in the locations where they are incarcerated. They also receive no municipal services or other government benefits in the places they are imprisoned and artificially inflating the population counts for those locations is misleading and unfairly allocates federal funding.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01575	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address. I feel that this does not present a true picture of the prisoner's lifetime situation, as they will likely return to their hometown</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01576	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p>

	<p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in. This particularly affects people of color, who are grossly overrepresented in jails and prisons as it is.</p> <p>Please end this inaccurate and wrong practice so that all communities have accurate representation.</p>
c01577	<p>I'm writing to express my concern over the proposalIt's time to be fair. If felons can't vote, they shouldn't be counted for purposes of redistricting. to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01578	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation not misrepresentation. Do So NOW!</p>
c01579	<p>Having taken census counts, I feel that the number of people who claim any address as home should be accurately reflected in the count. If I chose to recognize that some people don't count, I would have been misinforming the government, just as anyone who claims that prisoners consider their jail or prison cells to be their homes. All of the people who worked around me, for the census, were informed that people who were out of town or away for any reason, would still count as residents, if that's where they received mail, or had established residency. I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p>

	<p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01580	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation. Why are you fostering voter discrimination? This is a democratic country, I thought. Many states are discriminating against the Afro Americans and the poor. What is wrong with our government.</p>
c01581	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation. It's called fairness....fair play and the present system is corrupt. Do the right thing for the people and not corrupt gerrymandering.</p>
c01582	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p>

	<p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p> <p>This is about democracy, not funding. Please defend our democracy by counting everybody where they live. Political power should not be compromised by counting incarcerated people in the wrong place.</p>
c01583	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address. This is open gerrymandering and is unconscionable and unacceptable.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01584	<p>Right now there is not an honest accounting of incarcerated citizens. This campaign focuses on the addresses they are counted from but the even greater dishonesty is using incarcerated people to gerrymander and disenfranchise people-- way too often--people of color. I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01585	<p>I am concerned about the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p>

	<p>This practice needs to end so that prisoners may vote for their actual homes, and communities have true representation.</p>
c01586	<p>I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>This is like counting people on vacation as residents where they are visiting, instead of where they actually live.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01587	<p>Democracy requires a fair vote based on a true count of the people. I'm writing to express my concern over the proposal to continue inaccurately counting incarcerated people at their temporary place of incarceration, rather than their permanent home address.</p> <p>By miscounting people at prisons, political representation is being removed from the incarcerated person's permanent home community and transferred to a community they do not represent, interact with, or live in.</p> <p>Please end this inaccurate and wrong practice so that communities have accurate representation.</p>
c01588	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>When state and local governments use Census data to draw legislative districts. But if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of "One Person, One Vote." The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community, negatively impacts democracy.</p>

	<p>I, personally, believe those who have been incarcerated, served their time; hopefully have learned a valuable lesson -- freedom comes at a tremendous price. Once released, prisoners should be given the right to full citizenship and able to vote again. That is why it is important that someone's permanent home address is necessary for political line-drawing within the census. I know the lines in my state are gerrymandered. As a result, I, have no voice in my elected representation. I have no record of crime to take away my right to vote, yet gerrymandering has silenced my voice for far too long.</p> <p>To be the nation we all deserve, it is critical that all citizens are treated with, and protected for equal voice and rights. Please give this issue your upmost consideration for the future of all of us. I trust and believe you will be fair and put an end to political games that do not speak to the greatness of this nation as the forefathers envisioned for all its' citizens.</p> <p>Thank you, from the bottom of my heart. I appreciate your difficult task; I will pray for your guidance in your work.</p>
c01589	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>When state and local governments use Census data to draw legislative districts. But if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of "One Person, One Vote." The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can't vote and aren't a part of the surrounding community, negatively impacts democracy.</p> <p>According to the Prison Policy Initiative, "the majority of federal funding is in the form of block grants to states, so it does not matter where in any given state an incarcerated person is counted". Thus, counting them in the district where their permanent address is located will not alter funding for the district the prison was built in.</p>
c01590	<p>Folks, using prison as someone's address is a terrible practice leading to all kinds of antidemocratic chicanery. PUT A STOP TO PRISON GERRYMANDERING !!! IT'S A NOBRAINER.</p>

	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>When state and local governments use Census data to draw legislative districts. Counting incarcerated persons as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community, negatively impacts democracy.</p> <p>Currently, the US Census Bureau is counting incarcerated people incorrectly and the implications for our democracy are huge--over 2 million people misrepresented in districts they have no connection to.</p>

Incarcerated people are being counted in the wrong places--the place of their detainment at the time of the census, rather than their permanent address. This is just one of many injustices caused by the rise in mass incarceration which causes a distortion of political representation.

This practice, known as prison gerrymandering is a problem for a number of reasons. Prison gerrymandering robs home districts, typically urban centers, and neighborhoods with a large population of people of color, of vital representation and gives areas where prisons are housed, typically rural and white, disproportionate representation. See the case of Anamosa, Iowa, New York state, and Wyoming for some of the most egregious examples.

It's a violation of equal representation, plain and simple. Click through to the next page to submit your comment now, or read on for more information.

Here are some of the important facts about this issue:

The Census Bureau must count all people in the U.S.--including non-citizens, children, temporary residents, deployed military, students and non-voters. Most everyone is counted at their permanent residence--incarcerated people are an exception.

The Census Bureau cannot ignore prisoners because they must count everyone, and formerly incarcerated people will return home to their community upon release. Therefore, they should be counted there.

Incarcerated people are often housed in prisons and jails temporarily and moved around often. Most people in prison are serving short sentences--many less than three years spread across multiple facilities. In New York state, the median time served in a facility is less than seven months. In Georgia, the average person has been transferred four times and the median time spent at the current facility is nine months. While their locations change often, incarcerated people are always required to report a permanent address. This is where they should be counted--much the way temporary residents are counted.

This is about democracy, not funding. Most government funding formulas are too smart to be fooled by the Census Bureau's prison miscount. When prisons are built in an area, they are built with a specific population maximum. Infrastructure planning for such facilities is done based on the maximum size of the prison. School funding is allocated based on the number of students--not prisoners. Opponents of reversing the current counting mechanism often use this argument and it's a false flag.

States are acting against this practice and are adopting, have adopted, or attempted to adopt legislation across the country--including New York, Maryland, Delaware and California.

Florida's plan for prison gerrymandering was ruled unconstitutional.

	<p>Prior to the mass incarceration phenomenon, this was not a question of concern for the Census Bureau because it was rare and affected a small number of people. They began inquiring about incarceration in 1990--when the prison population exploded from 137 per 100,000 during the great depression to 470 per 100,000 in 2001 because of the war on drugs and increased tough on crime policing.</p>
c01602	<p>I've been an urban resident for most of my adult life, and I've watched suburban and rural communities perform as financial predators. Please bring the light of day to prison based gerrymandering with the same emphasis as imbalanced school funding.</p> <p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>When state and local governments use Census data to draw legislative districts. 	<p>When state and local governments use Census data to draw legislative districts. But if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community, negatively impacts democracy.</p> <p>It's inaccurate and not the right thing to do so we need to make those corrections.</p>
c01621	<p>I am writing today to urge the Census Bureau to count incarcerated persons at their permanent home address.</p> <p>When state and local governments use Census data to draw legislative districts. But if the Census counts prisoners in the wrong location, then the data is incorrect and it distorts representative democracy.</p> <p>Prison-based gerrymandering violates the constitutional principle of “One Person, One Vote.” The Supreme Court requires districts to be based on equal population in order to give each resident the same access to government. Counting incarcerated persons as residents of the prison location, even though they can’t vote and aren’t a part of the surrounding community, negatively impacts democracy.</p> <p>Do you count college students at the Universities they are attending or from their home State . You guys are screwed up , everything a Republican touches has an Angle. Do you let the prisoners vote ?</p>
