2020 Census

National Urban League Update

March 29, 2022
Speakers

HOST
Michael C. Cook, Sr.,
Chief, Public Information Office,
U.S. Census Bureau

Albert E. Fontenot, Jr.,
Associate Director for
Decennial Census Programs,
U.S. Census Bureau

Eric Jensen,
Senior Technical Expert for
Demographic Analysis,
Population Division

Timothy Kennel,
Assistant Division Chief for Statistical Methods, Decennial Statistical Studies Division, U.S. Census Bureau

Karen Battle,
Chief, Population Division,
U.S. Census Bureau
Overview

Recap of Previous National Urban League Briefings
• July 6, 2021 – Status updates, Post Data Collection Processing, Disclosure Avoidance Systems
• October 15, 2021 – Status updates, detailed review of three separate data quality releases.

Today’s Presentation
• Additional data points measuring the quality of the 2020 Census:
  – Post-Enumeration Survey (PES) results
  – Demographic Analysis (DA) estimates of net coverage error for the 2020 Census
• Future areas of study and research regarding Population Estimates

Today’s Speakers
• Eric Jensen – Senior Technical Expert for Demographic Analysis, Population Division
• Tim Kennel – Assistant Division Chief for Statistical Methods, Decennial Statistical Studies Division
• Karen Battle – Division Chief, Population Division
Demographic Analysis Estimates of Net Coverage Error for the 2020 Census

Eric Jensen, Ph.D.
Senior Technical Expert for Demographic Analysis,
Population Division, U.S. Census Bureau

March 29, 2022
What is Demographic Analysis (DA)?

• DA is a method that the Census Bureau uses to evaluate the quality of the decennial census.

• We produced national estimates of the population as of April 1, 2020, by age, sex, DA race categories, and Hispanic origin.

• Estimates are developed using current and historical vital records, data on international migration, and Medicare records.

• The COVID-19 pandemic had a limited impact on the DA population estimates.
Demographic Analysis Method

Population = Births – Deaths + Immigration – Emigration

- Birth records.  
  - The foundation of the DA estimates.
- Death records.
- Data on international migration.
- Medicare enrollment records.
Demographic Analysis Method (continued)

Net Coverage Error = \frac{(\text{Census Count} - \text{DA Estimate})}{\text{DA Estimate}} \times 100

- The DA population estimates are treated as the benchmark when calculating the DA net coverage error estimates.
DA releases:

Currently we have released:

• 2020 DA population estimates (December 15, 2020).
• Net coverage error estimates for total population (April 26, 2021).
• Net coverage error estimates for redistricting results (November 9, 2021).
• Net coverage error estimates by detailed age and sex (March 10, 2022).

Later we will release:

• Estimates by race and Hispanic origin.
  – Modified Race File.
• Experimental estimates.
  – More race and Hispanic origin detail.
  – State and county estimates for the population ages 0 to 4.
Demographic Analysis Estimates of Net Coverage Error for the 2020 Census

Summary of Findings From DA

• Young children were undercounted in the 2020 Census.
• The population ages 18 to 24 were overcounted in the 2020 Census.
• The working-age population (ages 25 to 54) was undercounted.
  – This undercount was higher for males.
  – Females in these ages had coverage errors close to 0.
• Retirement ages and the oldest cohorts showed large overcounts relative to the low and middle DA series, and an undercount relative to the high DA series.
2020 Census Coverage Results by Demographic Groups From the Post-Enumeration Survey

Timothy Kennel
Assistant Division Chief for Statistical Methods,
Decennial Statistical Studies Division

The data in this presentation have been cleared for release under DRB Numbers: CBDRB-FY22-136 and CBDRB-FY22-137.

March 29, 2022
Outline

1. Overview of the Post-Enumeration Survey.
2. Net coverage error.
3. Components of coverage.
4. Overcoming challenges.
2020 Census Coverage Results by Demographic Groups From the Post-Enumeration Survey

Overview of the Post-Enumeration Survey

March 29, 2022
What is the Post-Enumeration Survey (PES)?

**Goal**
- To measure coverage of people and housing units in the decennial census.
- To measure net coverage error and components of coverage.
- No intent to adjust the census counts.

**How are the data used?**
- To assess the success of the current census.
- To provide information to improve the coverage of future censuses.

**How is coverage estimated?**
- Conduct a survey in sample blocks—indепendently of the census.
- Match people in the PES independent survey with enumerations in the census to determine who was missed or counted in error.

**History**
- Used in the U.S. census with different designs and formats since 1950.
## Universe for Person Estimates

| Includes household population | Yes | Yes |
| Includes people living in group quarters (such as college dorms, nursing homes, prisons, ...) | Yes | No |
| Includes people living in Remote Alaska areas | Yes | No |
| Census count | 331,400,000 | 323,200,000 |
| Estimated population size | 332,600,000 | 323,900,000 |

Totals rounded to the nearest 100,000.
2020 Census Coverage Results by Demographic Groups From the Post-Enumeration Survey

Net Coverage Error

March 29, 2022
Estimated Net Coverage Error Rate

Estimated Net Coverage Error = \[
\frac{\text{Census Count} - \text{PES Estimate}}{\text{PES Estimate}} \times 100
\]

- The PES population estimates are treated as the benchmark when calculating the PES net coverage error estimates.

Percent Net Coverage Error for People by Tenure: 1990 to 2020

*Net coverage error is statistically significantly different from 0.
Summary of Net Coverage Error

• At the national level, net coverage error was not statistically significant from 0.
  – The magnitude of the percent net coverage error for 2020 was estimated to be -0.24%.
  – At the national level, we estimated a net coverage error of -782,000 people in the census.

• Many demographic groups that were undercounted (or overcounted) in the 2010 Census were also undercounted (or overcounted) in the 2020 Census.

• The 2020 Census continued to undercount some race and ethnic groups while overcounting others.

• The 2020 Census also undercounted children, especially young children.

• The census continued to undercount renters.

2010 and 2020 Census Omission Rates: Race (Alone or in Combination) and Hispanic Origin
2010 and 2020 Census Omission Rates: Owners and Renters

Owner
- 2010: 3.7%
- 2020: 4.2%

Renter
- 2010: 8.5%
- 2020: 8.8%
Post-Enumeration Survey Summer Releases

• Coverage estimates (undercounts and overcounts) for each state and the District of Columbia (not broken down by demographic characteristics or geographic areas within the state).

• National components of coverage estimates for people by census operation.
  – Correct or erroneous enumeration and whole-person imputation by internet responses, nonresponse follow-up responses, administrative record enumerations, proxy responses, and householder responses.

• All housing unit coverage estimates.
  – Undercount and overcount rates for housing units for example by occupancy (occupied and vacant units).
  – Correct or erroneous enumeration for housing units.

• Coverage estimates for Puerto Rico.
2020 Census Coverage Results by Demographic Groups From the Post-Enumeration Survey

Overcoming Challenges

March 29, 2022
Post-Enumeration Survey Challenges

• Global pandemic.
• Delays to field work.
  – Matching people who might not accurately report their census residence status.
• Migration of many college students and others.
• Some respondents did not respond to questions needed to match the PES to the 2020 Census.
  – Matching people to the census with increased item nonresponse.
## Post-Enumeration Survey Person Interview Response Rates for Occupied Housing Units (Unweighted)

Population Estimates Research

• The Population Estimates Program annually disseminates official measures of population and housing units between decennial censuses.

• We are researching the feasibility of taking coverage measures into account in the development of the population estimates.

• We have established a technical research team within the Population Division.

• We will keep stakeholders updated on our research progress and timing.
Q&A

Nicholas A Jones,
Director and Senior Advisor of Race and Ethnic Research and Outreach, Population Division, U.S. Census Bureau

Deborah Stempowski,
Assistant Director for Decennial Programs, U.S. Census Bureau

Roberto R. Ramirez,
Assistant Division Chief, Special Population Statistics, U.S. Census Bureau
