# LexisNexis Virtual Crime Center

Accurint Virtual Crime Center is a next generation policing platform used for COMPSTAT, Analytics, Crime Analysis and Investigations. This solution links billions of public records to agency-provided data in a cross-jurisdictional data exchange to provide law enforcement with unprecedented visibility into crime in their own jurisdiction and around the country. Linking across data types delivers a more comprehensive view into an identity, helping law enforcement to target investigations, identify patterns and predict upcoming events, and deploy resources more efficiently.

## **Criminals have no boundaries.**

Accurint Virtual Crime Center will provide agencies with a view beyond their own jurisdictions into regional and nationwide crime data. Each year, about 12% of the population moves, a statistic that is even higher for young adults. To predict and solve crime patterns, agencies need visibility not just to the jurisdiction next door, but across the country. The ability to view information such as crime incident data, CAD, offender data, crash data and license plate readers in the same place will assist in resolving and preventing crimes in a timely manner.

## **Finding the “who” in an investigation.**

Uncovering and locating key individuals is vastly simplified through Accurint Virtual Crime Center. By adding our proprietary linking technology, LexID®, to agency data, agencies will have crossjurisdictional agency data linked to identity information from over 10,000 sources. This gives your law enforcement agency the ability to disambiguate RMS records, find nonobvious connections, and generate leads with one search.

**Flexible views for all users within an agency.** Accurint Virtual Crime Center allows users to design dashboards for their role within MPDC. Whether a user is a part of a command staff, supervisor, investigator or analyst, they will have the ability to search across all MPDC’s agency data, 500+ other agencies nationwide, and the LexisNexis public records information while using the same predictive policing capabilities from Accurint Crime Analysis. Accurint Virtual Crime Center will replace multiple tools agencies currently use for public records, data analytics and social media, allowing all members of the agency to be more efficient across all cases through strong data analytics.

*Use or disclosure of data contained on this sheet is subject to the restriction on the title page of this proposal.*

# Accurint for Law Enforcement

Accurint for Law Enforcement (ALE) offers cutting-edge investigative technology that expedites the identification of people and their assets, addresses, relatives and business associates by providing instant access to a comprehensive database of public records that would ordinarily take days to collect. As an Internet-based or software product, it was developed by experienced law enforcement professionals to enable agencies to locate suspects, find missing children and quickly solve cases.

With ALE users can:

- Locate people and discover associations
- Investigate businesses
- Uncover assets
- Visualize complex non-obvious relationships
- Verify and uncover derogatory information regarding beneficiaries/recipients and providers

The LexisNexis data repository is the most comprehensive on the market – containing 65 billion records. LexisNexis includes data from more than 10,000 current and historical sources including more than 2.5 million new records every day. Combined, this equates to over 728 million unique identities, or approximately 300% more than any other vendor.

# Accurint for Law Enforcement

This vast data collection will supply responses for MPDC's investigative inquiries. LexisNexis refines, links, and fuses data using high-performance computing technology, patented algorithms, and precise analysis to deliver a single, consolidated view of each unique identity in our database with a 99.9% confidence level.

ALE's powerful reporting feature explores the connections between individuals, relatives, associates and businesses. Short and comprehensive reports are available through ALE. Report types include: assets, address, business, bankruptcy, civil courts, criminal records, death records, liens & judgments, property assessment, property deed, watercraft, summary report, finder report, and comprehensive report. Users may also customize reports to include specific types of information. MPDC can also tap into a variety of news sources via ALE.

Users can access ALE through the desktop client or a user-friendly web application. Users can also choose mobile access and put the power of public records to work in the field too.

**Figure 2: ALE's Advance Person Search Screen.** This examples depicts even if a user has partial or missing information about an individual, researching is easy with ALE form-based searching technology.

## ALE's Advantages

ALE is a powerful investigative tool used by thousands of government agencies across the country, assisting them with enforcing laws and regulations, fighting fraud and providing citizen-centric services. We're proud of our relationship with the MPDC. By extending the MPDC's access to ALE, users won't lose time acclimating to a new solution. Instead, they can focus on their important work for MPDC without interruptions or distractions.

MPDC investigators can perform at their jobs more efficiently and effectively thanks to ALE's advanced data linking technology that instantly gathers and analyzes current, comprehensive and authoritative public records information.

# Accurint Crime Analysis

**Accurint Crime Analysis** is a secure, easy-to-use online investigative solution that leverages strong technology, robust analytics, and mapping and visual tools to identify and predict patterns of crime. Accurint Crime Analysis is an extended capability within Accurint LE that can be accessed through the “Analysis” tab. It provides access to regional and national crime data sharing and analysis for law enforcement agencies.

## Key Features

Accurint Crime Analysis provides analysts with access to a secured environment to map, analyze, and report crime data. The following figures are descriptions of a few commonly used features.

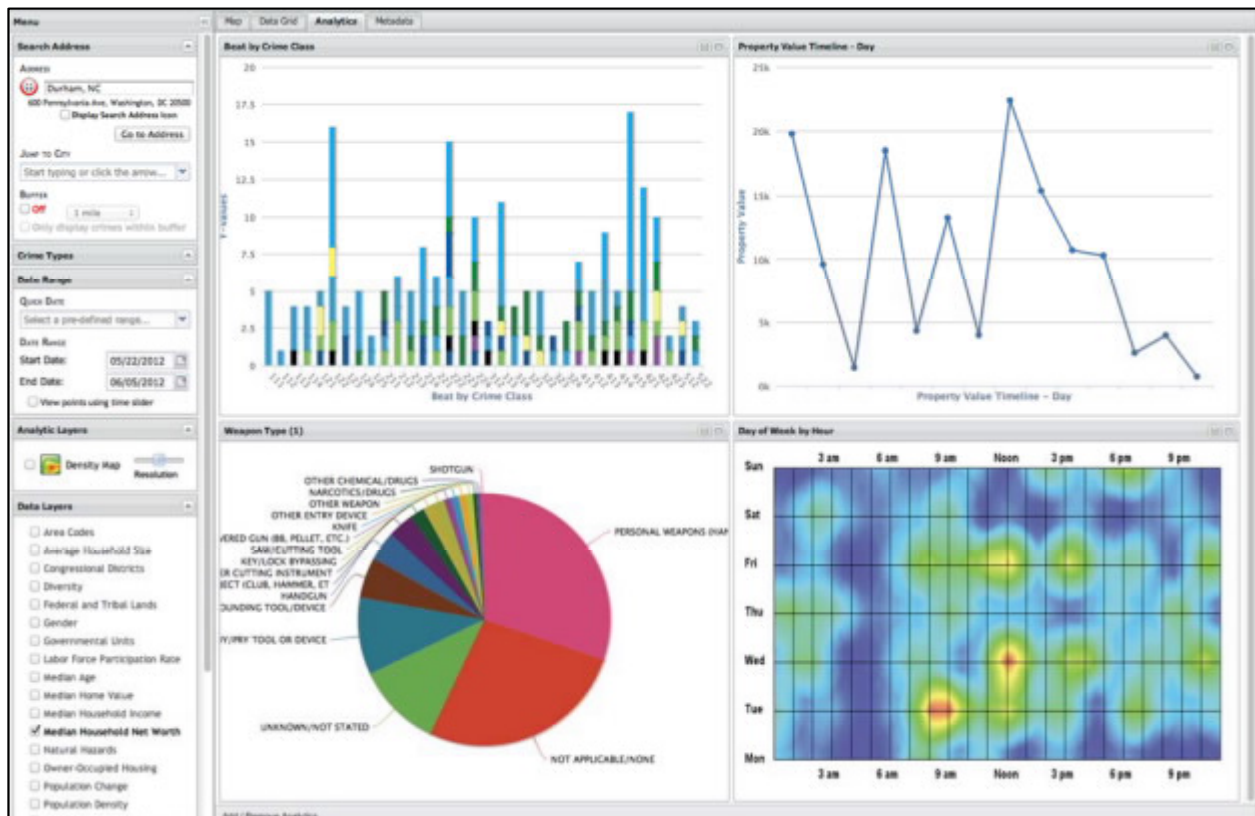

Figure 3: Analysts can view and analyze the data of greatest interest to their investigations.

# Accurint Crime Analysis

## Customized Analytical Dashboards

Meaningful graphs help users visualize crime patterns and trends across jurisdictional lines. Choose from over 200 analytic features that help users analyze nearly every aspect of their agency's data. Each user can have a custom dashboard layout with up to 25 dashboard modules in view at a time. Crime hotspot maps and custom predictive analytics can be created with one click against any data on the map, even data spanning multiple jurisdictions. Users can also download this robust regional data, including narratives, for further analysis.

## Robust Crime & CFS Data

The Accurint Crime Analysis system includes 100+ fields of Modus Operandi, Persons and Vehicle crime data related to each incident, including the incident's narrative. Available data includes:

- Crime Events (homicides, robberies, burglaries, fraud, arson, etc.)
- Computer Aided Dispatch (CAD) & Calls for Service (CFS) Data
- License Plate Reader (LPR) Data
- Crash Data
- Intelligence Data
- Offender Data
- ShotSpotter Data

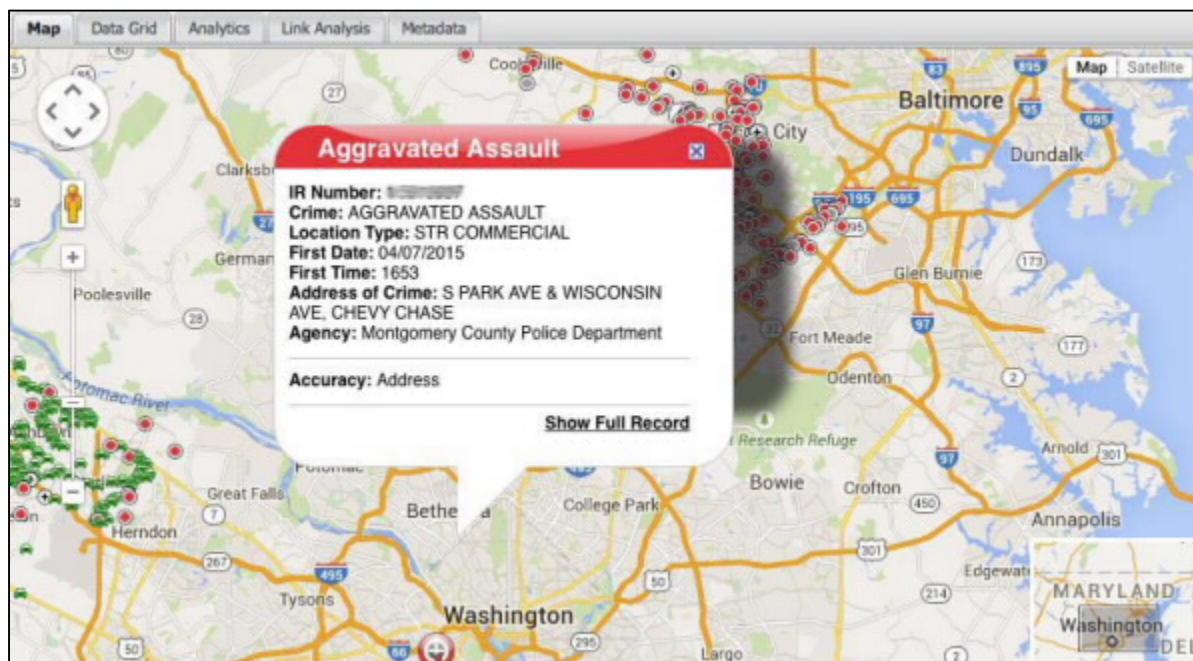

Figure 4: Quickly identify crimes/calls of interest and retrieve associated details.

# Accurint Crime Analysis

Multiple disparate data sources can be displayed concurrently alongside crime information. Users can view all of the information from an incident, including detailed offense information, suspect and victim descriptions, and descriptions of any vehicles related to the incident.

## **National Data Sharing**

Accurint Crime Analysis lets agencies view their own crime data alongside data from all participating agencies. Agencies have full control on what data is shared and can restrict access to certain crime types they do not want other agencies to have access to. Accurint Crime Analysis automatically geo-codes and analyzes crime data as it is imported into the system. Crime data is pushed from agency computers and cleaned to present a single, standardized format for use by agencies, without affecting the data integrity of the original data. Standardization of format in this manner supports improving data quality standards and promotes multi-agency collaboration.

## **Integrates with any RMS or CAD System**

Accurint Crime Analysis combines data from disparate data sources into a seamless, standardized data set that makes it easy to view, analyze, and share data. Accurint Crime Analysis is updated through an automated data feed that works with any type of source: Computer Aided Dispatch (CAD), Records Management Systems (RMS), License Plate Reader (LPR), vehicle collision, and other types of data. The extracted data is saved locally within your agency, then the data is pushed into the Accurint Crime Analysis system. No action is necessary on the part of the user. Accurint Crime Analysis is never directly connected to your CAD or RMS system.

The entire process is automated to reduce the need for IT support and to ensure that MPDC's data is always up-to-date in Accurint Crime Analysis. Once the process has been adapted to fit the needs of an agency, updating can be achieved either periodically or manually. If the user chooses periodic updates, they select the frequency (day(s) or week(s)) and the LexisNexis solution will automatically refresh the data as directed.

## **Offender Module**

The Accurint Crime Analysis Offender Module lets users view offender data from various sources over existing data such as Calls for Service and Events (crimes). Data types available in the Offender Module include Sex Offenders, Gang Members, Parolee/Probationers, Warrants, and Prolific Offenders. These sources of data are instrumental in suspect generation and identification.

# Accurint Crime Analysis

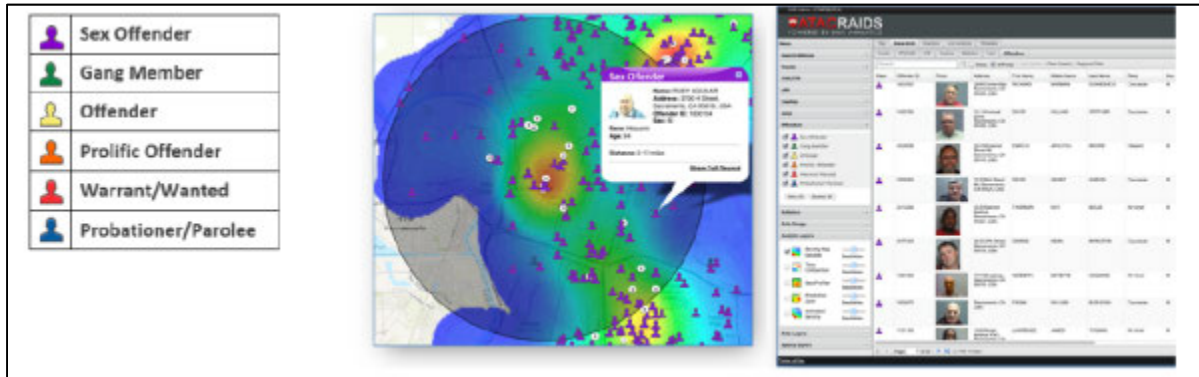

Figure 5: Quickly generate leads identify offenders using the ATACRAIDS Offender Module.

## Predictive Analytics & Geographic Profiling

Accurint Crime Analysis can predict future hot areas with Predictive Zones, the latest in predictive policing. Stop responding to where crime has happened and start deploying resources to where crime will likely happen. Powered by proprietary algorithms and perfected at the Department of Defense, Predictive Zones aim to put officers “in the right place at the right time.” Accurint Crime Analysis also supports Geographic Profiling (GP) – helping investigators prioritize areas where they should look for suspects. With Accurint Crime Analysis GP function, geographically profile any set of data to determine optimal areas to prioritize searches and investigative leads.

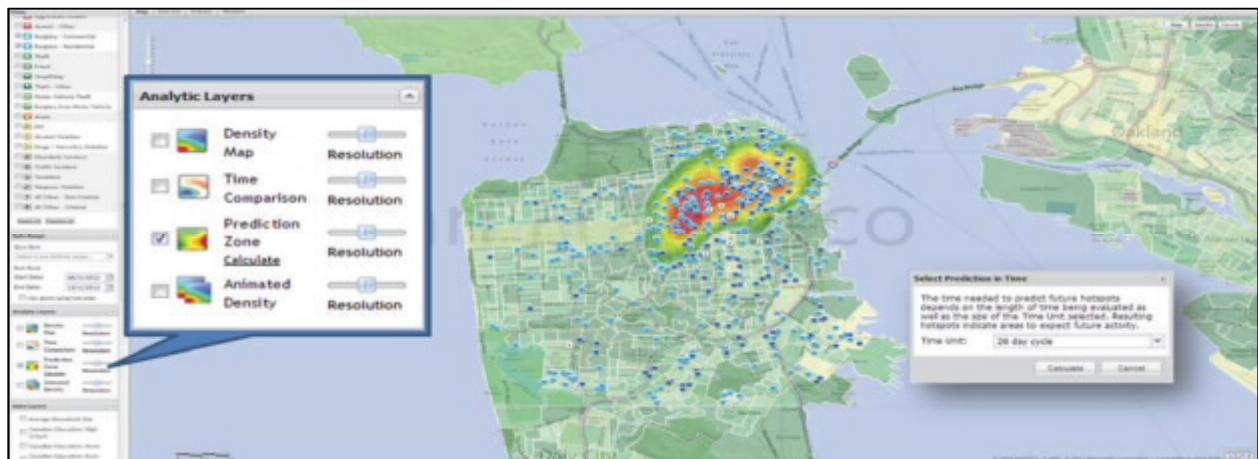

Figure 6: Use intuitive analytic layer functionality to pinpoint the events and trends that matter most.

# Accurint Crime Analysis

## Time Comparisons

The Time Comparison analytic shows how crime or calls have changed between two time periods. The red areas on a density map highlight where events have increased from the first to the second time period. Conversely, the blue areas show where events have decreased. The Time Comparison maps allow agencies to discover temporal trends within any set of data. For instance, this analytic can be used to evaluate whether an initiative is working to decrease crime while measuring any resulting displacement.

## Translation Services

Using software, our Translation Service copies selected data from an agency's system and pushes it to a local Analytical Warehouse and/or to the secured web-based RAIDS Warehouse. Data is automatically extracted from the data source, converted to literal values, cleaned and analyzed. This service includes:

- Installation of the Translation Software on the import server or workstation.
- Creation of a custom data extract that automatically extracts data from the selected data source(s).
- Configuration of lookup tables that convert code values to literal values for more efficient analysis.
- Configuration of data cleaning and processing to improve data quality.
- Scheduling and automation of translation to improve data standardization and save time.

Translated data is compatible with Accurint Crime Analysis, Microsoft Access, Microsoft Excel, GIS programs and other applications. This service is completed via remote-access by database administrators.
